INTRODUCTION

Legislative Basis for the INCSR

The Department of State's International Narcotics Control Strategy Report (INCSR) has been prepared in accordance with section 489 of the Foreign Assistance Act of 1961, as amended (the "FAA," 22 U.S.C. § 2291). The 2005 INCSR, published in March 2005, covers the year January 1 to December 31, 2004 and is published in two volumes, the second of which covers money laundering and financial crimes. It is the 19th annual report prepared pursuant to the FAA. In addition to addressing the reporting requirements of section 489 of the FAA (as well as sections 481(d)(2) and 484(c) of the FAA and section 804 of the Narcotics Control Trade Act of 1974, as amended), the INCSR provides the factual basis for the designations contained in the President's report to Congress on the major drug-transit or major illicit drug producing countries initially set forth in section 591 of the Kenneth M. Ludden Foreign Operations, Export Financing, and Related Programs Appropriations Act, 2002 (P.L. 107-115) (the "FOAA"), and now made permanent pursuant to section 706 of the Foreign Relations Authorization Act, Fiscal Year 2003 (P.L. 107-228) (the "FRAA").

Section 706 of the FRAA requires that the President submit an annual report no later than September 15 identifying each country determined by the President to be a major drug-transit country or major illicit drug producing country. The President is also required in that report to identify any country on the majors list that has "failed demonstrably . . . to make substantial efforts" during the previous 12 months to adhere to international counternarcotics agreements and to take certain counternarcotics measures set forth in U.S. law. U.S. assistance under the FY 2004 FOAA may not be provided to any country designated as having "failed demonstrably" unless the President determines that the provision of such assistance is vital to the U.S. national interests or that the country, at any time after the President's initial report to Congress, has made "substantial efforts" to comply with the counternarcotics conditions in the legislation. This prohibition does not affect humanitarian, counternarcotics, and certain other types of assistance that are authorized to be provided notwithstanding any other provision of law.

The FAA requires a report on the extent to which each country or entity that received assistance under chapter 8 of Part I of the Foreign Assistance Act in the past two fiscal years has "met the goals and objectives of the United Nations Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances" (the "1988 UN Drug Convention"). FAA § 489(a)(1)(A).

Although the Convention does not contain a list of goals and objectives, it does set forth a number of obligations that the parties agree to undertake. Generally speaking, it requires the parties to take legal measures to outlaw and punish all forms of illicit drug production, trafficking, and drug money laundering, to control chemicals that can be used to process illicit drugs, and to cooperate in international efforts to these ends. The statute lists action by foreign countries on the following issues as relevant to evaluating performance under the 1988 UN Drug Convention: illicit cultivation, production, distribution, sale, transport and financing, and money laundering, asset seizure, extradition, mutual legal assistance, law enforcement and transit cooperation, precursor chemical control, and demand reduction.

In attempting to evaluate whether countries and certain entities are meeting the goals and objectives of the 1988 UN Drug Convention, the Department has used the best information it has available. The 2004 INCSR covers countries that range from major drug producing and drug-transit countries, where drug control is a critical element of national policy, to small countries or entities where drug issues or the capacity to deal with them are minimal. The reports vary in the extent of their coverage. For key drug-control countries, where considerable information is available, we have provided comprehensive reports. For some smaller countries or entities where only sketchy information is available, we have included whatever data the responsible post could provide.

The country chapters report upon actions-including plans, programs, and, where applicable, timetables-toward fulfillment of Convention obligations. Because the 1988 UN Drug Convention's subject matter is so broad and availability of information on elements related to performance under the Convention varies widely within and among countries, the Department's views on the extent to which a given country or entity is meeting the goals and objectives of the Convention are based on the overall response of the country or entity to those goals and objectives. Reports will often include discussion of foreign legal and regulatory structures. Although the Department strives to provide accurate information, this report should not be used as the basis for determining legal rights or obligations under U.S. or foreign law.

Some countries and other entities are not yet parties to the 1988 UN Drug Convention; some do not have status in the United Nations and cannot become parties. For such countries or entities, we have nonetheless considered actions taken by those countries or entities in areas covered by the Convention as well as plans (if any) for becoming parties and for bringing their legislation into conformity with the Convention's requirements. Other countries have taken reservations, declarations, or understandings to the 1988 UN Drug Convention or other relevant treaties; such reservations, declarations, or understandings are generally not detailed in this report. For some of the smallest countries or entities that have not been designated by the President as major illicit drug producing or major drug-transit countries, the Department has insufficient information to make a judgment as to whether the goals and objectives of the Convention are being met.

Unless otherwise noted in the relevant country chapters, the Department's Bureau for International Narcotics and Law Enforcement Affairs (INL) considers all countries and other entities with which the United States has bilateral narcotics agreements to be meeting the goals and objectives of those agreements.

Information concerning counternarcotics assistance is provided, pursuant to section 489(b) of the FAA, in sections entitled "FY 2003-2004 Fiscal Summary and Functional Budget" and "Other USG Assistance Provided."

Major Illicit Drug Producing, Drug-Transit, Significant Source, Precursor Chemical, and Money Laundering Countries

Section 489(a)(3) of the FAA requires the INCSR to identify:

- (A) major illicit drug producing and major drug-transit countries,
- (B) major sources of precursor chemicals used in the production of illicit narcotics; or
- (C) major money laundering countries.

These countries are identified below.

Major Illicit Drug Producing and Major Drug-Transit Countries

A major illicit drug producing country is one in which:

- (A) 1,000 hectares or more of illicit opium poppy is cultivated or harvested during a year;
- (B) 1,000 hectares or more of illicit coca is cultivated or harvested during a year; or
- (C) 5,000 hectares or more of illicit cannabis is cultivated or harvested during a year, unless the President determines that such illicit cannabis production does not significantly affect the United States. FAA § 481(e)(2).

A major drug-transit country is one:

(A) that is a significant direct source of illicit narcotic or psychotropic drugs or other controlled substances significantly affecting the United States; or

(B) through which are transported such drugs or substances. FAA § 481(e)(5).

The following major illicit drug producing and/or drug-transit countries were identified and notified to Congress by the President consistent with section 706(1) of the Foreign Relations Authorization Act, Fiscal Year 2003 (Public Law 107-228):

Afghanistan, The Bahamas, Bolivia, Brazil, Burma, China, Colombia, Dominican Republic, Ecuador, Guatemala, Haiti, India, Jamaica, Laos, Mexico, Nigeria, Pakistan, Panama, Paraguay, Peru, Venezuela, and Vietnam.

Major Precursor Chemical Source Countries

The following countries have been determined to be major sources of precursor or essential chemicals used in the production of illicit narcotics:

Argentina, Brazil, Canada, China, Germany, India, Mexico, the Netherlands, and the United States.

Information is provided pursuant to section 489 of the FAA in the section entitled “Chemical Controls.”

Major Money Laundering Countries

A major money laundering country is defined by statute as one “whose financial institutions engage in currency transactions involving significant amounts of proceeds from international narcotics trafficking.” FAA § 481(e)(7). However, the complex nature of money laundering transactions today makes it difficult in many cases to distinguish the proceeds of narcotics trafficking from the proceeds of other serious crime. Moreover, financial institutions engaging in transactions involving significant amounts of proceeds of other serious crime are vulnerable to narcotics-related money laundering. This year’s list of major money laundering countries recognizes this relationship by including all countries and other jurisdictions, whose financial institutions engage in transactions involving significant amounts of proceeds from all serious crime. The following countries/jurisdictions have been identified this year in this category:

Antigua and Barbuda, Australia, Austria, the Bahamas, Brazil, Burma, Canada, Cayman Islands, China, Colombia, Costa Rica, Cyprus, Dominica, the Dominican Republic, France, Germany, Greece, Guernsey, Haiti, Hong Kong, Hungary, India, Indonesia, the Isle of Man, Israel, Italy, Japan, Jersey, Lebanon, Liechtenstein, Luxembourg, Macau, Mexico, Nauru, the Netherlands, Nigeria, Pakistan, Panama, Paraguay, Philippines, Russia, Singapore, Spain, Switzerland, Taiwan, Thailand, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Uruguay, and Venezuela.

Further information on these countries/entities and United States money laundering policies, as required by section 489 of the FAA, is set forth in Volume II of the INCSR in the section entitled “Money Laundering and Financial Crimes.”

Presidential Determination

White House Press Release
Office of the Press Secretary
Washington, DC
September 16, 2004

Presidential Determination No. 2004-47

Memorandum for the Secretary Of State: Presidential Determination on Major Drug Transit or Major Illicit Drug Producing Countries for FY05

Pursuant to section 706(1) of the Foreign Relations Authorization Act, Fiscal Year 2003 (Public Law 107-228) (FRAA), I hereby identify the following countries as major drug-transit or major illicit drug producing countries: **Afghanistan, The Bahamas, Bolivia, Brazil, Burma, China, Colombia, Dominican Republic, Ecuador, Guatemala, Haiti, India, Jamaica, Laos, Mexico, Nigeria, Pakistan, Panama, Paraguay, Peru, Venezuela, and Vietnam.**

The Majors List applies by its terms to “countries.” The United States Government interprets the term broadly to include entities that exercise autonomy over actions or omissions that could lead to a decision to place them on the list and, subsequently, to determine their eligibility for certification.

A country’s presence on the Majors List is not necessarily an adverse reflection of its government’s counternarcotics efforts or level of cooperation with the United States. Consistent with the statutory definition of a major drug-transit or drug-producing country set forth in section 481(e)(5) of the Foreign Assistance Act of 1961, as amended (FAA), one of the reasons that major drug-transit or illicit drug producing countries are placed on the list is the combination of geo-graphical, commercial, and economic factors that allow drugs to transit or be produced despite the concerned government’s most assiduous enforcement measures.

Pursuant to section 706(2)(A) of the FRAA, I hereby designate Burma as a country that has failed demonstrably during the previous 12 months to adhere to its obligations under inter-national counternarcotics agreements and take the measures set forth in section 489(a)(1) of the FAA. Attached to this report is a justification (statement of explanation) for the determination on Burma, as required by section 706(2)(B).

I have removed Thailand from the list of major drug-transit or major illicit drug producing countries. Thailand’s opium poppy cultivation is well below the levels specified in the FRAA; no heroin processing laboratories have been found in Thailand for several years, and Thailand is no longer a significant direct source of illicit narcotic or psychotropic drugs or other controlled substances significantly affecting the United States; nor is it a country through which such drugs or substances are transported.

In contrast to the Government of Haiti’s dismal performance last year under the Aristide regime, the new Interim Government of Haiti (IGOH), headed by Prime Minister Latortue, has taken substantive—if limited—counternarcotics actions in the few months it has been in office.

Nevertheless, we remain deeply concerned about the ability of Haitian law enforcement to reorganize and restructure sufficiently to carry out sustained counternarcotics efforts.

The decreased use of MDMA (Ecstasy) among young people in the United States is a hopeful sign, but we continue to place priority on stopping the threat of club drugs, including MDMA, of which The Netherlands continues to be the dominant source country. The Government of The Netherlands is an enthusiastic and capable partner, and we commend its efforts. We continue to be concerned, however, by obstacles to mutual legal assistance and extradition from The Netherlands. There is a need to work more deliberately to disrupt the criminal organizations responsible for the production and trafficking of synthetic drugs.

Specifically, we urge enhanced use of financial investigation, including full exploitation of anti-money laundering statutes and financial investigators to identify and dismantle trafficking organizations, and to seize and forfeit the assets acquired from the drug trade.

While the vast majority of illicit drugs entering the United States continue to come from South America and Mexico, we remain concerned about the substantial flow of illicit drugs from Canada. I commend Canada for its successful efforts to curb the diversion of precursor chemicals used in methamphetamine production.

We are now working intensively with Canadian authorities to address the increase in the smuggling of Canadian-produced marijuana into the United States; however we are concerned the lack of significant judicial sanctions against marijuana producers is resulting in greater involvement in the burgeoning marijuana industry by organized criminal groups. Canada has expressed concern to us about the flow of cocaine and other illicit substances through the United States into Canada. United States and Canadian law enforcement personnel have collaborated on a number of investigations that have led to the dismantling of several criminal organizations. The two governments will continue to work closely in the year ahead to confront these shared threats.

Nigeria put measures in place to increase the effectiveness of the National Drug Law Enforcement Agency, and also arrested a trafficker wanted by the United States, which met the agreed-upon interdiction targets. However, Nigeria must take significant and decisive action to investigate and prosecute political corruption, which continues to undermine the transparency of its government. President Obasanjo took steps to address corruption at the G-8 meetings in Sea Island, Georgia, by entering into a Compact to Promote Transparency and Combat Corruption. Positive transparent measures will in turn benefit Nigeria's counternarcotics efforts, the rule of law, and all democratic institutions.

Despite good faith efforts on the part of the central Afghanistan government, we are concerned about increased opium crop production in the provinces.

We are deeply concerned about heroin and methamphetamine linked to North Korea being trafficked to East Asian countries. We consider it highly likely that state agents and enterprises in North Korea are involved in the narcotics trade.

While we know that some opium poppy is cultivated in North Korea, reliable information confirming the extent of opium production is currently lacking. There are also clear indications that North Koreans traffic in, and probably manufacture, methamphetamine. In recent years, authorities in the region have routinely seized shipments of methamphetamine and/or heroin that had been transferred to traffickers' ships from North Korean vessels. The April 2003 seizure of 125 kilograms of heroin smuggled to Australia aboard the North Korean-owned vessel "Pong Su" is the latest and largest seizure of heroin pointing to North Korean complicity in the drug trade. Although there is no evidence that narcotics originating in or transiting North Korea reach the United States, we are working closely with our partners in the region to stop North Korean involvement in illicit narcotics production and trafficking.

We appreciate the efforts of China, Hong Kong, Taiwan, and others in the region to stop the diversion of pseudoephedrine and ephedrine used to manufacture methamphetamine. However, considering the

growing methamphetamine problem in North America and Asia, additional collaborative efforts to control these precursor chemicals are necessary.

You are hereby authorized and directed to submit this report under section 706 of the FRAA, transmit it to the Congress, and publish it in the Federal Register

GEORGE W. BUSH

Annual Presidential Determinations of Major Illicit Drug-Producing and Drug-Transit Countries

Statement by the Press Secretary

President Bush has authorized the Secretary of State to submit to Congress the annual report listing major illicit drug-producing and drug-transit countries (known as the “Majors List”). The same report contains Presidential determinations of the countries that have “failed demonstrably to make substantial efforts” during the previous 12 months to adhere to international counternarcotics agreements and take the counternarcotics measures specified in U.S. law.

As in previous years, this year’s certification determinations required the President to consider each country’s performance in areas such as reducing illicit cultivation, interdiction, and law enforcement cooperation; extraditing drug traffickers; and taking legal steps and law enforcement measures to prevent and punish public corruption that facilitates drug trafficking or impedes prosecution of drug-related crimes. The President also had to consider efforts taken by these countries to stop production and export of, and reduce the domestic demand for, illegal drugs.

In his report, the President identified as major drug-transit or major illicit drug-producing countries: **Afghanistan, The Bahamas, Bolivia, Brazil, Burma, China, Colombia, Dominican Republic, Ecuador, Guatemala, Haiti, India, Jamaica, Laos, Mexico, Nigeria, Pakistan, Panama, Paraguay, Peru, Venezuela, and Vietnam.**

The President removed Thailand from the list of major drug-transit or major illicit drug-producing countries. Thailand’s opium poppy cultivation is well below the levels specified in Section 706(1) of the Foreign Relations Authorization Act, FY 2002-2003(P.L.107-228)(the FRAA); no heroin processing laboratories have been found in Thailand for several years, and Thailand is no longer a significant direct source of illicit narcotic or psychotropic drugs or other controlled substances significantly affecting the United States; nor is it a country through which are transported such drugs or substances.

The President also reported to Congress his determination that Burma failed demonstrably, during the previous 12 months, to adhere to its obligations under international counternarcotics agreements and to take the measures set forth in U.S. law.

The President noted that, in sharp contrast to the Government of Haiti’s dismal performance last year under the Aristide regime, the New Interim Government of Haiti headed by Prime Minister Latortue, has taken substantive—if limited—counternarcotics actions in the few months it has been in office. The President remains concerned, however, about the ability of Haitian law enforcement to reorganize and restructure sufficiently to carry out sustained counternarcotics efforts.

The President cited decreased use of MDMA (ecstasy) among young people in the United States as a hopeful sign, but continues to place priority on stopping the threat of club drugs, including MDMA, of which the Netherlands continues to be the dominant source country. He characterized the Government of the Netherlands as an enthusiastic and capable partner, and commended its efforts. He continues to be concerned, however, by obstacles to mutual legal assistance and extradition from the Netherlands

and cited a need to work more deliberately to disrupt the criminal organizations responsible for the production and trafficking of synthetic drugs. Specifically, he urged enhanced use of financial investigations, and anti-money laundering statutes to identify and dismantle trafficking organizations.

While the vast majority of illicit drugs entering the United States continues to come from South America and Mexico, the President expressed his continuing concerns about the flow of illicit drugs from Canada. He commended Canada for its successful efforts to curb the diversion of precursor chemicals used in methamphetamine production, and noted that we are now working intensively with Canadian authorities to address the increase in the smuggling of Canadian-produced marijuana into the United States; however, we are concerned the lack of significant judicial sanctions against marijuana producers is resulting in greater involvement in the burgeoning marijuana industry by organized criminal groups.

The President reported that, although Nigeria arrested a trafficker wanted by the United States; met the modest, agreed upon interdiction targets; and put measures in place to increase the effectiveness of the National Drug Law Enforcement Agency; counternarcotics efforts continue to be undermined by pervasive corruption. He said Nigeria must take significant and decisive action to investigate and prosecute political corruption, and to increase transparency if it is to combat corruption effectively.

Despite good faith efforts on the part of the central Afghanistan Government, the President reported his concerns about the increased opium crop production and the Government's lack of capacity to prevail in the provinces.

The President expressed deep concerns about heroin and methamphetamine linked to North Korea being trafficked to East Asian countries; the high likelihood state agents and enterprises in North Korea are involved in the narcotics trade; and that there are clear indications that North Koreans traffic in, and probably manufacture, methamphetamine.

POLICY AND PROGRAM DEVELOPMENTS

Overview for 2004

U.S. Government counternarcotics control achievements in 2004 show that persistence pays. Working with our allies, we significantly cut the size of the Western Hemisphere's illicit drug crops, conducted successful interdiction operations against drugs bound for the United States, and weakened major drug trafficking organizations. We provided our partners essential training assistance to strengthen their law enforcement and judicial systems, while working with them to reduce their domestic drug consumption. We persuaded a greater number of governments to use extradition laws to deny powerful drug criminals a national safe haven they could once count on. We also fostered closer international cooperation among governments and financial institutions to make difficult for the drug trade to legitimize its enormous profits through complex and sophisticated money laundering schemes.

The Global Threat

The illicit drug trade is a threat to national security and international stability. It is inextricably linked with transnational organized crime and many terrorist organizations. The billions of dollars generated by the drug trade pay for a significant portion of all international criminal activity. Drug trafficking organizations in countries as far apart as Afghanistan, Colombia, Burma, and Mexico, direct the drug flows that poison societies, foster corruption, and finance international crime and terrorism. Cocaine revenues not only sustain the decades-old insurgency in Colombia, but also provide the operating funds for the networks of criminal organizations that move drugs to the U.S. through Central America, Mexico and the Caribbean. Afghan poppies, once the mainstay of the Taliban regime, have become the principal source of heroin for the international underworld and potentially help groups opposed to Afghanistan's democratic government. On a world scale, illegal drug revenues are so great that it is likely that most large international criminal enterprises rely to some extent on drug money to finance part of their operations.

Drug Threat to the United States

The principal imported drugs that directly threaten the United States are cocaine, heroin, marijuana, and synthetic amphetamine-type stimulants (ATS). Since all of the cocaine and heroin, much of the marijuana, and the greater part of the ATS drugs come from abroad, stemming their flow requires a coordinated international effort. Cocaine, though less prevalent today than a decade ago, remains our primary drug threat. An estimated 300 metric tons or more of cocaine enter the U.S. every year. It feeds addiction, fuels crime, and saps the social and economic health of the nation. Fortunately, it is also vulnerable to crop control and interdiction operations.

Coca and Cocaine

Unlike heroin, which can come from various geographical sources, all of the world's cocaine comes from coca grown in the Andean countries of Colombia, Peru, and Bolivia. Colombia dominates the trade by a wide margin. Colombian drug syndicates cultivate over 70 per cent of the world's coca and refine roughly 90 of the cocaine on the international market. By comparison, Peru and Bolivia cultivate about 20 percent and 10 percent respectively. It is obvious that we cannot expect a meaningful reduction in the overall cocaine supply without drastic reductions in Colombia. We have therefore directed the bulk of our counternarcotics resources to eliminating Colombian coca cultivation, disrupting cocaine production and flows, and keeping the drug from reaching our borders.

Constant pressure on the Colombian coca growers over the past three years has shown results. The joint Colombian-U.S. eradication campaign, carried out under the aegis of the Andean Counterdrug

Initiative, has inflicted serious damage on the crop. Although final USG cultivation estimates for 2004 had not been completed at the time of publication, the preliminary data are heartening. The U.S.-supported Anti-Narcotics Police Directorate sprayed over 136,000 hectares of coca, 3,000 hectares more than the 2003 record. They also aerially eradicated over 3,000 hectares of opium poppy.

With between 213 and 256 hectares required to produce a metric ton of finished cocaine (cocaine HCl), the hectares sprayed represent between 520 and 625 metric tons of cocaine that did not enter the supply chain. Using an average U.S. retail street price of \$100 per gram, a metric ton of cocaine is worth \$100 million. Spray operations thus theoretically kept between \$50 and \$60 billion out of international criminal channels.

Though Peru and Bolivia also carried out successful coca eradication campaigns in 2004, the governments of both countries faced increasingly strong opposition from cocalero (coca-grower) unions that link coca cultivation with national identity and sovereignty. Unlike Colombia, where coca has had few if any cultural roots, Peru and Bolivia have long traditions of coca consumption dating to pre-Columbian times. The coca plant is an icon in indigenous traditions. The cocaleros, quietly backed by trafficking interests, have equated coca eradication with the destruction of a sacred ancestral tradition that is an integral part of both countries' cultural identity. As formerly silent indigenous groups have become politically assertive, such appeals to ancient values have gained popular resonance and inspired caution in the governments of both countries. We can expect to see coca eradication campaigns continue, but at a pace tempered by local political and economic realities.

Interdiction

Interdiction operations in the Western Hemisphere region were remarkably successful in 2004. . In addition to direct U.S. Government action, Latin American governments seized more than 213 metric tons of cocaine and inflicted damage on several key drug trafficking organizations. Colombian Antinarcotics Police and Military Units broke all previous interdiction records by seizing over 178 Metric Tons of Cocaine HCl and cocaine base, and destroying 150 HCl processing laboratories. In Bolivia, counternarcotics forces seized over 8 metric tons of cocaine and destroyed 2,120 cocaine base labs. Peruvian authorities seized over 12 metric tons of cocaine base and HCl. Venezuelan and Mexican operations netted 19 metric tons and 25 metric tons of cocaine HCl respectively.

Mexican enforcement agencies, working closely with Colombian authorities, dismantled a major cocaine trafficking ring led by Juan Pablo “El Halcon” Rojas Lopez. They captured two senior lieutenants of the Arellano Felix Organization (AFO), Jorge “El Macumba” Aureliano Felix and Efrain “El Efra” Perez Arciniega, suspected respectively of handling security operations counterintelligence and “enforcement” activities for the drug group. They also arrested Gilberto “El Gilillo” Higuera Guerrero—a top-tier operator long affiliated with the AFO—outside of Mexicali, Baja California. The U.S. State Department Narcotics Rewards Program played a key role in bringing these three to justice.

These successes are tempered by sobering reports that the drug cartels continue to be directed by leaders incarcerated in Mexican maximum-security prisons. Continued power struggles have led to numerous murders in Northern Mexico. The cartels' reach is extensive: A member of Mexican President Fox's security staff was dismissed and is accused of selling information to the Juarez cartel.

Opium and Heroin

Eradicating opium poppy, the source of heroin, presents a different set of challenges. In contrast to coca, which is concentrated in one geographical area, opium poppy will grow in nearly every region of the world. It is an easily sown annual crop with as many as three harvests per year. Farmers often plant it in small patches in remote locations in mountainous terrain, making eradication operations

dangerous and difficult. Though most of the world's illicit opium poppy grows in Afghanistan and Southeast Asia, the bulk of heroin consumed in the United States comes from Colombian and Mexican poppies. Between them the two countries account for less than six percent of estimated world opium production, but they produce enough to satisfy most of the heroin demand in the United States.

Geography is an important factor in deciding the destination. In general, Mexican drug rings supply much of the U.S. heroin west of the Mississippi River, while Colombian syndicates supply states east of the Mississippi. Since eliminating opium poppies on the ground in Colombia and Mexico obviously can limit the flow of U.S.-bound heroin, we have long-standing joint eradication programs in both countries.

Colombian authorities eradicated 3,855 hectares of opium poppy in 2004, slightly surpassing the last year's figure of 3,830 hectares. Of these, 3,060 hectares were sprayed and 795 hectares uprooted via forced and voluntary manual eradication programs. The 2004 cultivation and production data were not available at the time of publication.

During the first 11 months of 2004, the Government of Mexico (GOM) reported eradicating almost 14,575 hectares of opium poppy, less than the 19,000 hectares reported for the same period in 2003, but an impressive number nonetheless. Full-year data could increase this figure. The 2004 cultivation and production data were not available at time of publication.

The remaining 90-plus percent of the world's estimated opium gum production occurs in Afghanistan and Burma, with Afghanistan accounting for over 80 percent of that figure. Afghan opium alone could probably satisfy world heroin demand. The area devoted to poppy cultivation in 2004 in Afghanistan set a new record: 206,700 hectares. Global heroin traffic cannot be reduced unless there are important reductions in Afghan opium poppy cultivation. Poppy eradication, however, is physically difficult and politically sensitive. Rugged terrain, and attacks by remnants of the Taliban regime present daily obstacles to the exercise of central government authority throughout the country. After decades of war, political misrule and economic chaos, a young democracy must now try to reconstruct a country with a prosperous, legitimate economy based on commodities other than opium,

Reducing opium poppy cultivation will not be easy. It will require both time and patience and developing alternative crops that will give farmers a decent income. For more than a decade, opium poppy has been Afghanistan's largest and most valuable cash crop. The old Taliban regime encouraged opium production, using taxes on the opium and trade as a revenue source to compensate for its other economic failures. Instead of legitimate crops, farmers were encouraged to plant opium poppy to raise operating funds for the regime. The economy became heavily dependent on opium. When, at the end of its tenure, the Taliban announced an opium ban-most likely to relieve a glut that had depressed heroin income-it was too late to restore a legitimate agricultural economy. With illicit opium sales accounting for between 40 and 60 per cent of the country's GDP (IMF data), the task of creating a viable, legitimate economy has fallen to Afghanistan's newly elected democratic government. It faces the daunting challenge of weaning the economy off opium revenues and finding viable economic alternatives without provoking violent uprisings in the areas of opium cultivation. The U.S. and its allies are working with the Afghan government to achieve this goal.

Because the drug trade is by nature clandestine, it is difficult to estimate precisely how much money it generates. The total \$400 billion value attributed to global drug trafficking is an educated guess. The world financial community has only limited ability to track money that moves through the underground hawala system. However, given the street price of these drugs in Europe and further east, estimates of hundreds of millions of dollar are not out of order. Some of these proceeds may help fund elements hostile to the governments of Afghanistan and the United States.

Synthetic Drugs

Amphetamines. Demand for Amphetamine-Type Stimulants, such as methamphetamine, amphetamine, and MDMA (“Ecstasy”), is high throughout both the industrialized and the developing world. Amphetamines have displaced cocaine as the stimulant of choice in many parts of the globe, primarily in Central and Northern Europe, and Southeast Asia. The relative ease and low cost of manufacturing amphetamines from readily available chemicals appeals as much to small drug entrepreneurs as to the large international syndicates. Synthetics allow individual trafficking organizations to control the whole process, from manufacture to sale on the street. Synthetics can be made anywhere and offer enormous profit margins. And since they use fairly common chemicals also used for a multitude of legitimate medical and industrial purposes, it is hard to control them.

Methamphetamine abuse is a one of the fastest-growing drug threats in the United States today. Highly effective drug trafficking organizations, based in Mexico and California, control a large percentage of the U.S. methamphetamine trade. Though Mexico is still the principal foreign supplier of methamphetamine and principal transit country for ATS precursors-especially pseudoephedrine (PSE)-for the United States, U.S. counternarcotics authorities assess that a portion of the PSE imported into Canada continues to be diverted to the United States for the production of illicit drugs. Since the Government of Canada enacted new regulations controlling PSE and other precursor and essential chemicals in 2002, however, the numbers of both PSE imports and seizures have declined substantially.

Methamphetamine now dominates much of the drug trade in Burma and Thailand, displacing heroin as the principal trafficking drug. Methamphetamine production in the U.S. is also widespread and active, as demonstrated by DEA’s National Clandestine Drug Data reporting of the seizure of several thousand U.S. methamphetamine laboratories in 2004, with the largest numbers in Missouri (2,707), and Tennessee (1,259).

Ecstasy. There continues to be substantial global demand for MDMA (Ecstasy), the amphetamine analogue 3, 4-methylenedioxymethamphetamine. Clandestine laboratories in the Netherlands, and to a lesser extent in Belgium, remain major suppliers of MDMA to the international market. There is also an emerging problem of MDMA production in Canada. In 2004, a joint operation between the U.S. and Canadian governments dismantled a major ring producing MDMA in Canada and marketing it in both countries. Labs in Poland are major suppliers of amphetamines to the European market, with the United Kingdom and the Nordic countries among the heaviest consumers of amphetamine. In the United States, however, over the past three years Ecstasy use has plummeted among the teenage population most at risk. Past year and current use were each cut in half, while lifetime use dropped by almost two thirds.

Cannabis (Marijuana)

Cannabis (marijuana) production and consumption is a serious problem in many countries—including the United States, where it is by far the most widely used illicit drug. More than 10,000 metric tons of domestic marijuana and more than 5,000 metric tons of marijuana cultivated and harvested in Mexico and Canada is marketed to more than 20 million users in the United States. Colombia, Jamaica, and Paraguay also export marijuana to the U.S. The high-potency, indoor-grown marijuana, which is produced on a large scale in Canada (and has also been found within the United States), is a particular concern. This is not the “pot” of the 1970’s. It is grown in laboratory conditions—with specialized timers, ventilation, moveable lights on tracks, nutrients sprayed on exposed roots and special fertilizer—all designed to maximize the THC levels in the marijuana. The resulting drug is particularly powerful, dangerous and addictive. Although in the past some have suggested that marijuana was harmless, the latest scientific information indicates that marijuana produces withdrawal symptoms and is associated with learning and memory disturbances. The good news for the United States is that, according to the

December 2004 Monitoring the Future Study; marijuana use by U.S. teenagers has been declining since 1996, most likely because of a growing awareness of its dangers. Nonetheless, there is no dearth of potent marijuana on the market.

Attacking Trafficking Organizations.

Drug distribution depends upon well-organized, sophisticated trafficking organizations. Our common strategy targets the leadership of the main trafficking groups, focusing on the operations along the network that bring drugs to the United States. Working with our international counterparts, our goal is not simply disruption, but the eventual dismantling of these organizations—their leadership, the facilitators who launder money and provide the chemicals needed for the production of illicit drugs, and their networks. In addition to hampering the organizations' effectiveness, capturing key traffickers demonstrates—to the criminals and to the governments fighting them alike—that even the most powerful drug syndicates are vulnerable to joint action by U.S. and host-government authorities.

Mexican drug syndicates oversee much of the drug trafficking in the United States. They have a strong presence in most of the primary distribution centers in the United States, directing the movement of cocaine, heroin, ATS drugs, and marijuana. U.S. and Mexican officials developed a common targeting plan against major drug trafficking organizations in Mexico and the United States and developed secure mechanisms for data sharing. Mexican Federal enforcement and military authorities damaged several important trafficking syndicates.

Institutional Reform

An important component of our international drug control policy has been to help governments strengthen their judicial and banking systems to narrow the opportunities for their exploitation by the drug trade. Law enforcement agencies in many key drug source and transit countries have arrested prominent traffickers, only to see them released by the decision of a single judge on questionable legal grounds. But the situation is gradually changing. In 2004, a number of countries continued to modernize their laws and professionalize their court systems through reforms ranging from installing more modern equipment to major changes in the way judges are appointed. Though there are still instances of judges arbitrarily dismissing evidence against or releasing well-known drug traffickers, the number of such cases is declining, as governments make basic reforms, such as giving judges better pay and greater personal protection.

Extradition

Extradition is one of the most powerful law enforcement weapons in our arsenal. It is the sanction the drug trade and terrorist organizations fear most. The long list of prominent drug criminals serving long prison terms in the U.S. is a sober reminder to even the most powerful cartel bosses of what can happen when they are powerless to manipulate the judicial process through intimidation and bribery. In 2004, the United States continued to encourage other countries to facilitate extradition to the United States. Though the laws of several states still prohibit the extradition of their nationals, that situation is changing, as governments fighting the drug trade realize that extradition is a boon to their own law enforcement effectiveness. The number of drug-related extraditions to the U.S. from Colombia has increased dramatically. Over the past two and a half years, the Colombian government has extradited 180 drug criminals to the United States.

In 2004, Mexico extradited 34 fugitives to the United States in 2004 (up from the record numbers of 25 in 2002 and 31 in 2003). However, extraditions on drug charges have not increased: The 2001 Mexican Supreme Court decision prohibiting extradition in cases with a potential life sentence remains an important obstacle to the extradition of some major drug traffickers and other criminals.

Disappointingly, on April 13, 2004, the Mexican Supreme Court reaffirmed its 2001 decision. This makes extradition illegal, and therefore impossible for crimes with potential life imprisonment without parole sentences, unless the United States provides adequate assurances that this sentence will not be imposed. (Extradition was granted in 2004 in most state cases in which the possible sentence is life imprisonment with a possibility of parole.) However, there is no parole in federal cases and U.S. conviction in cases involving more than five kilograms of cocaine, one kilogram of heroin, or fifty grams of pure methamphetamine carries a penalty of a minimum of 10 years and a maximum of life.

Controlling Drug Processing Chemicals

Cocaine, heroin and synthetic drugs cannot be manufactured without certain critical chemicals, many of which are subject to governmental control. Cocaine and heroin refining operations generally require widely available “essential chemicals.” Substitutes for unavailable chemicals can be used for most of the chemicals used in the manufacturing process; but there are some chemicals—potassium permanganate for cocaine and acetic anhydride for heroin—for which there are few easily obtainable substitutes. Synthetic drug manufacture requires even more specific “precursor chemicals,” such as ephedrine, pseudoephedrine, or phenylpropanolamine. These chemicals, used mainly for pharmaceutical purposes, have important but specific legitimate uses. They are commercially traded in smaller quantities to discrete users. Governments must, therefore, have efficient legal and regulatory regimes to control such chemicals, without placing undue burdens on legitimate commerce. The United States, other major chemical trading countries, and the UN’s International Narcotics Control Board worked in 2004 to improve controls on cocaine and heroin processing chemicals, and those used for manufacturing synthetic drugs.

Controlling Supply

Our goal is to cut off the flow of illegal drugs to the United States. We target drug supply at critical points along a five-point grower-to-user chain that links the consumer in the United States to the grower in a source country. In the case of cocaine or heroin, the chain begins with the growers cultivating coca or opium poppies, for instance, in the Andes or Afghanistan. It ends with the cocaine or heroin user in a U.S. town or city. The intermediate links are the processing (drug refining), transit (transport), and wholesale distribution stages.

Our international counternarcotics programs target the first three links of the grower-to-user chain: cultivation, processing, and transit. The closer we can attack to the source, the greater the likelihood of halting the flow of drugs altogether. Crop control is by far the most cost-effective means of cutting supply. If we destroy crops or force them to remain unharvested, no drugs will enter the system. It is the equivalent of destroying a hornets’ nest before the hornets escape. Theoretically, with no drug crops to harvest, cocaine or heroin cannot enter the distribution chain—reducing or eliminating the need for costly enforcement and interdiction operations.

The obvious solution, however, is not always feasible. Broad-scale (aerial and chemical) eradication is illegal in many countries. Even when eradication is possible, destroying a lucrative illicit crop carries enormous political, economic and social consequences for the producing country. Frequently it means attacking the livelihood of a large-and often the poorest-sector of the population. Elected governments that take away vital, if illegal income, without providing viable alternatives do not last long in office. Such market development can take decades. Therefore, law enforcement targets subsequent links in the supply chain: laboratory processing and interdiction of drug shipments in transit.

Essential to success is the flexibility to shift resources to those links where we can achieve both an immediate impact and long-term results. We have seen in Bolivia and Peru that the proper combination of effective eradication, law enforcement actions and alternative development programs

can deliver remarkable results. We work closely with the governments of the coca-growing countries to find the best way to eliminate illegal coca within the context of each country's unique situation—a difficult task given the high price of coca and generally depressed markets for many replacement crops.

Alternative development programs play a vital role in countries seeking to liberate important parts of their agricultural sector from reliance on the drug trade. They offer farmers opportunities to abandon illegal activities and become part of the legitimate economy. In the Andean region, these programs provide funds and technical assistance to strengthen public and private institutions, expand rural infrastructure; improve natural resources management, introduce alternative legal crops, and develop local and international markets for these products.

Despite a host of obstacles, alternative development programs in Colombia were responsible for the manual eradication of more than 2,300 hectares of coca and 800 hectares of poppy in 2004. To encourage farmers to abandon the production of drug crops, the USG has supported the cultivation of over 55,000 hectares of legal crops and completed 874 social and productive infrastructure projects since 2001. A total of 44,015 families have also benefited from these programs in 17 Departments. In Peru, alternative development programs are making coca reduction sustainable through improving local governance, strengthening rule of law and increasing the economic competitiveness of coca-growing areas. Since October 2002, over 27,000 families have voluntarily eradicated 7,271 hectares of coca including almost 2,500 hectares of coca in 2004. In Bolivia, USAID alternative development assistance complemented coca reduction efforts in the Chapare by strengthening licit livelihoods, community development, legal land tenure, and access to justice. Through FY-04, USAID helped some 28,290-farm families with AD support, and licit cultivation increased to 143,887 hectares. Though the full impact of many alternative development programs will not be felt for years, progress to date suggests that eventually legitimate, economically viable agriculture can replace today's illicit cultivation in many places.

Illegal Drugs, Spraying, and the Environment

The debate continues over the environmental risks of regular spraying of illegal drug crops. Colombia is at this time the only country that allows regular aerial spraying of coca and opium poppy. The Colombian government has authorized the herbicide that is used to conduct aerial eradication in the growing areas. The active ingredient in the herbicide used in the aerial eradication program is glyphosate, one of the most widely used agricultural herbicides in the world, including Colombia. It has been tested widely in the United States, Colombia, and elsewhere in the world. The U.S. Environmental Protection Agency (EPA) approved glyphosate for general use in 1974 and re-registered it in September 1993. The EPA has approved its use on food croplands, forests, residential areas, and around aquatic areas. It is one of the top five pesticides, including herbicides, used in the United States.

Environmental Consequences of Illicit Coca Cultivation

One must weigh the environmental impact of approved herbicides against the devastating potential of all aspects of coca cultivation. Over more than two decades, coca cultivation in the Andean region has led to the destruction of approximately six million acres of rainforest. Working in remote areas beyond settled populations, coca growers routinely slash and burn virgin forestland to make way for their illegal crops. Tropical rains quickly erode the thin topsoil of the fields, increasing soil runoff, depleting soil nutrients, and, by destroying timber and other resources that would otherwise be available for more sustainable uses, decreasing biological diversity. As growers regularly abandon non-productive parcels to prepare new plots, the destructive cycle continues. Traffickers destroy

jungle forests to build clandestine landing strips and laboratories for processing raw coca and poppy into cocaine and heroin.

Illicit coca growers frequently are negligent in their use of fertilizers and pesticides. Largely ignorant about the consequences of indiscriminate use of strong chemicals, they dump large quantities of highly toxic herbicides and fertilizers on their crops. These chemicals include paraquat and endosulfan, both of which qualify under the U.S. Environmental Protection Agency's highest classification for toxicity (Category I) and are legally restricted for sale within Colombia and the United States.

Most destructive are the toxic chemicals that are used at each stage of cocaine production. USG studies conducted in the early 1990s in Bolivia and Peru indicated that one kilogram of cocaine base required the use of three liters of concentrated sulfuric acid, 10 kilos of lime, 60 to 80 liters of kerosene, 200 grams of potassium permanganate, and one liter of concentrated ammonia. These toxic pesticides, fertilizers, and processing chemicals are then dumped into the nearest waterway or on the ground. They saturate the soil and contaminate waterways, poisoning water systems, and dependent species in the process.

Interdiction in the Transit Zone

Despite the international community's best efforts to attack the drug supply within source countries, the United States and our allies must continue to provide an effective presence in the transit zone, specifically for cocaine moving north out of South America. This has required a well-coordinated effort between transit zone countries and USG agencies including DOD, DHS, and DOJ. Source country intelligence combined with post seizure intelligence has improved dramatically in the last several years to yield better actionable intelligence within the transit zone. The Joint Inter-Agency Task Force-South with billeted international partners from throughout the Caribbean Basin has focused that intelligence to detect and monitor maritime drug movements while maneuvering interdiction assets into position to effect a seizure. The USG's efforts to create and expand authorities based on bilateral agreements with Caribbean and Latin American countries have eased the burden on these countries' law enforcement assets to conduct at sea boardings and search for contraband. These bilateral agreements have also allowed the USG to gain jurisdiction of cases and remove the corrosive pressure from large Trafficking Organizations on some foreign governments. This team effort led to unprecedented success by removing over 160 metric tons of cocaine from the transit zone in 2004 by USG assets. Continued success will depend on the allocation of tightly constrained resources to improve on the inroads and agreements reached in the last several years.

The Battle Against Corruption

The fight against the drug trade is also part of a broader struggle against corruption. The drug trade thrives on corruption in the way that an opportunistic disease flourishes amid conditions of social and moral decay. Drug organizations wield a powerful instrument for spreading corruption: the enormous sums of money generated by drug trafficking. In terms of weight and availability, there is currently no commodity more lucrative than illegal drugs. In most cases, drugs are relatively cheap to produce and offer enormous profit margins that allow the drug trade to generate criminal revenues on a scale without historical precedent. The revenues have become a mainstay of transnational organized crime and terrorists. At an average U.S. retail street price of one hundred dollars a gram, a metric ton of pure cocaine is worth a \$100 million on the streets of the US; twice as much if the drug is cut with additives. By this measure, the 100 or so metric tons of cocaine that the USG typically seizes each year could theoretically be worth as much as \$10 billion to the drug trade—more than the gross domestic product of many countries. Although only a portion of these profits may return directly to the drug syndicates, we are nonetheless speaking of hundreds of millions, if not billions, of dollars going into underworld channels. To put the magnitude of these sums into perspective, in FY 2005 the State

Department's budget for international drug control operations was approximately \$ one billion. That equates to roughly ten metric tons of cocaine; the drug syndicates have lost that much in a few shipments without any evidence that they felt the loss.

Wealth on this scale gives large trafficking organizations a practically unlimited capacity to corrupt, particularly in countries where government and law enforcement officials are poorly paid. For Colombia, where insurgents from Foreign Terrorist Organizations control and feed upon income from the drug trade, the threat is obvious. In economically weak countries without revolutionary movements, the drug trade's wealth makes it as great a threat to democratic government as an armed insurgency. Guerrilla armies or terrorist organizations overtly seek to topple governments by force; drug syndicates, like termites, prefer to destroy them surreptitiously from within. In theory, when a country's interior or defense minister, attorney general, or even president, is on its payroll, the drug trade can count on a secure operating environment. And the longer established the drug organization, the stronger its capacity to corrupt. The ultimate fear of all democratic leaders in drug-affected countries should be that one day traffickers might take de facto control of a country by putting a majority of elected officials, including the president, on the payroll. While this has not yet occurred, recent instances of drug syndicates' penetration of a Western Hemisphere country's President's office show that it is a real and immediate possibility. The more we deprive the drug trade of its capacity to corrupt, the less likely are we to see a true "narcocracy" spring up in our hemisphere.

Next Steps

The drug trade is nothing if not adaptable. It learns quickly from its mistakes, each time becoming a slightly more astute and dangerous enemy. Our past successes have forced it to become more sophisticated in order to survive. We have seen this already in the difficulty of targeting the hundreds of small, hard-to-target drug syndicates that filled the void left by the destruction of Colombia's two dominant cartels.

Yet the drug trade is also vulnerable. Its survival depends on an extensive infrastructure that is difficult to conceal and subject to attack at every stage. It needs raw materials, processing chemicals, means of transportation, and some way to move illegal cash into legitimate channels. Though drug syndicates are powerful in their underworld milieu, they lose their advantage when they have to operate in the legitimate world. They are most vulnerable when it comes to cashing in their profits. The drug trade's ability to generate vast amounts of cash is both its strength and its weakness. To stay in business it needs a steady flow of drugs to generate revenue; at the same time it requires a steady stream of money to buy the drugs. Like a legitimate enterprise, the drug syndicates partially finance future growth by borrowing against future earnings. So every metric ton of drugs that does not make it to market represents a potential loss of tens of millions of dollars in essential revenue. On the revenue end of the process, criminal proceeds are useless unless they can be legitimized and reinvested in new drug crops, arms, bribes, etc. to keep the syndicates operating. If we can cut off the flow of money and drugs long enough, we can choke off the lifeblood of the drug trade.

As one of the countries most affected by illegal drugs, the United States will continue to provide leadership and assistance to its partners in the global counternarcotics effort. Though we have the resources to play a key role, we alone will not determine the success or failure of this effort. Equally, if not more important are the actions, commitment, and cooperation of the other major drug-affected governments. We can help provide resources, but these are only as effective as the cooperative effort between those fighting the drug trade. In democracies, the drug trade flourishes only when it can divide the population and corrupt institutions. It cannot withstand a concerted, sustained attack by a coalition of democratic nations individually committed to its elimination.

Demand Reduction

Drug “demand reduction” refers to efforts to reduce worldwide use and abuse of, and demand for narcotic drugs and psychotropic substances. The need for demand reduction is a fundamental and critical part of controlling the illicit drug trade. Escalating drug use and abuse continue to take a devastating toll on the health, welfare, safety, security, and economic stability of all nations. Recognizing this problem, the National Security Presidential Directive (NSPD#25) on International Drug Control Policy addressed rising global demand for illicit drugs as the principal narcotics-related threat to the U.S. A key objective of that policy urged the Secretary of State to expand U.S. international demand reduction assistance and information sharing programs in key source and transit countries. The NSPD also noted that international drug trafficking organizations and their linkage to international terrorist organizations constitutes a serious threat to U.S. national security. Demand reduction efforts aimed at reducing worldwide drug consumption therefore took on increased importance and served the national interest due to its potential for reducing the income that criminal and terrorist organizations derive from narcotics trafficking and for reducing crime/strengthening security in foreign countries that are key strategic allies of the United States.

Foreign countries are requesting technical and other assistance from the USG to address their problems, citing long-term U.S. experience and efforts on this issue. Our response has been a comprehensive and coordinated approach in which supply control and demand reduction reinforce each other. Such assistance plays an important role in helping to preserve the stability of societies threatened by the narcotics trade.

Our demand reduction strategy encompasses a wide range of initiatives to address the needs and national security threat posed by the illicit drug trade. These include efforts to prevent the onset of use, intervention at “critical decision points” in the lives of vulnerable populations to prevent both first use and further use, and effective treatment programs for the addicted. Other aspects encompass education and media campaigns to increase public awareness of the deleterious consequences of drug use/abuse and community-coalition building. This latter effort involves the development of coalitions of private/public social institutions, the faith community, and law enforcement entities to mobilize national and international opinion against the drug trade and to encourage governments to develop and implement strong counternarcotics policies and programs. The demand reduction program also provides for evaluations of the effectiveness of these efforts and for “best practice” research studies to use these findings to improve similar services provided in the U.S. and around the world.

In 2004, INL continued to fund bilateral training at various locations throughout the world on topics such as community/grassroots coalition building and networking, U.S. policies and programs, science-based drug prevention programming, and treatment within the criminal justice system. INL funded two regional demand reduction symposiums in Malaysia that resulted in the commitment of 800 Afghanistan mullahs to cooperate with the United States on providing mosque-based drug prevention and intervention services. Also as a result of the symposiums, leading Indonesian mullahs developed a plan to collaborate with the United States on providing drug prevention and outreach services through mosques and madrassahs. INL is also funding the establishment of drug prevention outreach centers and drug treatment aftercare centers in Muslim regions of southern Philippines and southern Thailand.

INL funding has provided new updated curricula to 24 Drug Abuse Resistance Education (D.A.R.E.) programs in Latin America and Asia. Countries in South America continued to implement their own national-level, counternarcotics media campaigns based on technical assistance funded by INL, school-based programs based on INL-funded training were established in Brazil and Chile. INL funding was also used to provide drug treatment training in Ecuador for Department of Correction officials. Funds were used to organize the regional Latin American Therapeutic Communities

Conference in Ecuador where over 50 workshops were offered on science-based drug treatment and rehabilitation principles.

INL funded comprehensive multi-year scientific studies on pilot projects and programs developed from INL-funded training to learn how these initiatives can help assist U.S.-based demand reduction efforts. Research to assess the long-term impact of INL-funded drug-treatment training in Peru was completed in 2004. Results of that study showed that drug use among those who received treatment had declined in every category. Specifically it showed that in the 30 days prior to treatment 90 percent of the clients had used drugs and at the 6 month follow-up after treatment only 34 percent were found to have used drugs; in the 30 days prior to treatment 30 percent reported using cocaine and at 6 month follow-up after treatment only 8 percent had used cocaine; in the 30 days prior to treatment 37 percent of those studied reported using cannabis and at 6 month follow-up after treatment only 13 percent had used cannabis; 72 percent of those who received treatment were employed; and over 90 percent had no further contact with the criminal justice system (i.e., arrests) after treatment.

Following publication and dissemination of an INL-funded, research-based demonstration program for high-risk youth in Peru, the Italian government contributed over \$800,000 to the project while the Government of Luxembourg contributed nearly \$500,000 to extend the project to adolescent girls. Research on selected prevention programs in Bolivia, Jamaica, Peru and Brazil that have developed promising prevention and antiviolence modalities from INL-funded training were completed in 2004. Additional programs in other regions will be studied in 2005 and results for all countries are expected to be published at the end of 2005.

Methodology for Estimating Illegal Drug Production

How Much Do We Know? The INCSR contains a variety of illicit drug-related data. These numbers represent the United States Government's best effort to sketch the current dimensions of the international drug problem. Some numbers are more certain than others. Drug cultivation figures are relatively hard data derived by proven means, such as imagery with ground truth confirmation. Other numbers, such as crop production and drug yield estimates, become softer as more variables come into play. As we do every year, we publish these data with an important caveat: the yield figures are potential, not final numbers. Although they are useful for determining trends, even the best are ultimately approximations.

Each year, we revise our estimates in the light of field research. The clandestine, violent nature of the illegal drug trade makes such field research difficult. Geography is also an impediment, as the harsh terrain on which many drugs are cultivated is not always easily accessible. This is particularly relevant given the tremendous geographic areas that must be covered, and the difficulty of collecting reliable information over diverse and treacherous terrain.

What We Know With Reasonable Certainty. Cultivation--the number of hectares under cultivation during any given year--is our most solid statistic. For nearly twenty years, the United States Government has estimated the extent of illicit cultivation in a dozen nations using proven statistical methods similar to those used to estimate the size of licit crops at home and abroad. We can therefore estimate the extent of cultivation with reasonable accuracy.

What We Know With Less Certainty. How much of a finished product a given area will produce is difficult to estimate. Small changes in factors such as soil fertility, weather, farming techniques, and disease can produce widely varying results from year to year and place to place. To add to our uncertainty, most illicit drug crop areas are not easily accessible to the United States Government,

making scientific information difficult to obtain. Therefore, we are estimating the potential crop available for harvest. Not all of these estimates allow for losses, which could represent up to a third or more of a crop in some areas for some harvests. The value in estimating the size of the potential crop is to provide a consistent basis for a comparative analysis from year to year.

Harvest Estimates. We have gradually improved our yield estimates. Our confidence in coca leaf yield estimates, as well as in the finished product, has risen in the past few years, based upon the results of field studies conducted in Latin America. In all cases, however, multiplying average yields times available hectares indicates only the potential, not the actual final drug crop available for harvest. The size of the harvest depends upon the efficiency of farming practices and the wastage caused by poor practices or difficult weather conditions during and after harvest. Up to a third or more of a crop may be lost in some areas during harvests.

In addition, mature coca (two to six years old) is more productive than immature or aging coca. Variations such as these can dramatically affect potential yield and production. Additional information and analysis is allowing us to make adjustments for these factors. Similar deductions for local consumption of unprocessed coca leaf and opium may be possible as well through the accumulation of additional information and research.

Processing Estimates. The wide variation in processing efficiency achieved by traffickers complicates the task of estimating the quantity of cocaine or heroin that could be refined from a crop. Differences in the origin and quality of the raw material used, the technical processing method employed, the size and sophistication of laboratories, the skill and experience of local workers and chemists, and decisions made in response to enforcement pressures obviously affect production.

Figures Change as Techniques and Data Quality Improve. Each year, research produces revisions to United States Government estimates of potential drug production. This is typical of annualized figures for most other areas of statistical tracking that must be revised year to year, whether it be the size of the U.S. wheat crop, population figures, or the unemployment rate. For the present, these illicit drug statistics represent the state of the art. As new information becomes available and as the art improves, so will the precision of the estimates.

International Training

International counternarcotics training is managed/funded by INL and carried out by the DEA, U.S. Customs and Border Service, and U.S. Coast Guard. Major objectives are:

- Contributing to the basic infrastructure for carrying out counternarcotics law enforcement activities in countries which cooperate with and are considered significant to U.S. narcotics control efforts;
- Improving technical skills of drug law enforcement personnel in these countries; and
- Increasing cooperation between U.S. and foreign law enforcement officials.

INL training continues to focus on encouraging foreign law enforcement agency self-sufficiency through infrastructure development. The effectiveness of our counternarcotics efforts overseas should be viewed in terms of what has been done to bring about the establishment of effective host country enforcement institutions, thereby taking drugs out of circulation before they begin their journey toward the United States. U.S. law enforcement personnel stationed overseas are increasingly coming to see their prime responsibility as promoting the creation of host government systems that are compatible with and serve the same broad goals as ours.

The regional training provided at the ILEA's consists of both general law enforcement training as well as specialized training for mid-level managers in police and other law enforcement agencies.

INL-funded training will continue to support the major U.S. and international strategies for combating narcotics trafficking worldwide. Emphasis will be placed on contributing to the activities of international organizations, such as the UNODC and the OAS. Through the meetings of major donors, the Dublin Group, UNODC and other international fora, we will coordinate with other providers of training, and urge them to shoulder greater responsibility in providing training, which serves their particular strategic interests.

INL will maintain its role of coordinating the activities of U.S. law enforcement agencies in response to requests for assistance from U.S. Embassies. This will avoid duplication of effort and ensure that presentations represent the full range of USG policies and procedures.

International Law Enforcement Academies (ILEAs)

The mission of the ILEAs has been to support emerging democracies, help protect U.S. interests through international cooperation and to promote social, political and economic stability by combating crime. To achieve these goals, the ILEA program has provided high-quality training and technical assistance, supported institution building and enforcement capability and has fostered relationships of American law enforcement agencies with their counterparts in each region. ILEAs have also encouraged strong partnerships among regional countries, to address common problems associated with criminal activity.

The ILEA concept and philosophy is a united effort by all of the participants-government agencies and ministries, trainers, managers, and students alike-to achieve the common foreign policy goal of international law enforcement. The goal is to train professionals that will craft the future for rule of law, human dignity, personal safety and global security.

The ILEAs are a progressive concept in the area of international assistance programs. The regional ILEAs offer three different types of programs: the Core course, specialized training courses and regional seminars tailored to region-specific needs and emerging global threats. The Core program typically includes 50 participants, normally from three or more countries. The Specialized courses, comprised of about 30 participants, are normally one or two weeks long and often run simultaneously with the Core course. Topics of the Regional Seminars include transnational crimes, counterterrorism and financial crimes.

The United States has amended the money laundering portion of the Core course presented at each ILEA to address terrorist financing, significantly increasing the number of instruction hours dedicated to this critical topic. The ILEA program partner agencies (see below) are working on finalizing a new Specialized course that would focus specifically and in detail on terrorist financing, to be offered at all the ILEAs.

The ILEAs help develop an extensive network of alumni that exchange information with their U.S. counterparts and assist in transnational investigations. These graduates are also expected to become the leaders and decision-makers in their respective societies. The Department of State works with the Departments of Justice, Homeland Security and Treasury, and with foreign governments to implement the ILEA programs. To date, the combined ILEAs have trained over 13,000 officials from 68 countries in Africa, Asia, Europe and Latin America. The annual ILEA budget averages approximately \$16-17 million.

Africa. ILEA Gaborone (Botswana) opened in 2001. The main feature of the ILEA is a six-week intensive personal and professional development program, called the Law Enforcement Executive Development Program (LEEDP), for law enforcement mid-level managers. The LEEDP brings together approximately 45 participants from several nations for training on topics such as combating transnational criminal activity, supporting democracy by stressing the rule of law in international and domestic police operations, and by raising the professionalism of officers involved in the fight against crime. ILEA Gaborone also offers specialized courses for police and other criminal justice officials to enhance their capacity to work with U.S. and regional officials to combat international criminal activities. These courses concentrate on specific methods and techniques on a variety of subjects, such as counterterrorism, anticorruption, financial crimes, border security, drug enforcement, firearms and many others.

Instruction is provided to participants from Angola, Botswana, Lesotho, Malawi, Mauritius, Mozambique, Namibia, Seychelles, South Africa, Swaziland, Tanzania and Zambia. This area of focus was expanded to include key countries (Djibouti, Ethiopia, Kenya, Uganda) in East Africa and Nigeria in West Africa. Eventually this gradual expansion will reach other sub-Saharan African countries. United States and Botswana trainers provide instruction. ILEA Gaborone has offered specialized courses on money laundering/terrorist financing related topics such as Criminal Investigation (presented by FBI) and International Banking & Money Laundering Program (presented by DHS/FLETC). ILEA Gaborone trains approximately 450 students annually.

Asia. ILEA Bangkok (Thailand) opened in March 1999. The ILEA focuses on enhancing the effectiveness of regional cooperation against the principal transnational crime threats in Southeast Asia—illicit drug trafficking, financial crimes, and alien smuggling. The ILEA provides a Core course (the Supervisory Criminal Investigator Course or SCIC) of management and technical instruction for supervisory criminal investigators and other criminal justice managers. In addition, this ILEA presents one Senior Executive program and 12 to 14 specialized courses—lasting one to two weeks—in a variety of criminal justice topics. The principal objectives of the ILEA were the development of effective law enforcement cooperation within the member countries of the Association of Southeast Asian Nations (ASEAN) plus China and the strengthening of each country's criminal justice institutions to increase their abilities to cooperate in the suppression of transnational crime.

Instruction is provided to participants from Brunei, Cambodia, China, Hong Kong, Indonesia, Laos, Macau, Malaysia, Philippines, Singapore, Thailand and Vietnam. Subject matter experts from the United States, Thailand, Japan, Netherlands, Australia, Philippines and Hong Kong provide instruction. ILEA Bangkok has offered specialized courses on money laundering/terrorist financing related topics such as Computer Crime Investigations (presented by FBI and DHS/BCBP) and Complex Financial Investigations (presented by IRS, DHS/BCBP, FBI and DEA). Total annual student participation is 550.

Europe. ILEA Budapest (Hungary) opened in 1995. Its mission has been to support the region's emerging democracies by combating an increase in criminal activity that emerged against the backdrop of economic and political restructuring following the collapse of the Soviet Union and its former satellite regimes. ILEA Budapest offers three different types of programs: an eight-week Core course, Regional Seminars and Specialized courses in a variety of criminal justice topics. Instruction is provided to participants from Albania, Armenia, Azerbaijan, Bulgaria, Croatia, Czech Republic, Estonia, Georgia, Hungary, Kazakhstan, Kyrgyz Republic, Latvia, Lithuania, Macedonia, Moldova, Montenegro, Poland, Romania, Russia, Serbia, Slovakia, Slovenia, Tajikistan, Turkmenistan, Ukraine and Uzbekistan.

Trainers from 17 federal agencies and local jurisdictions from the United States and also from Hungary, Canada, Germany, Great Britain, Holland, Ireland, Italy, Russia, Interpol and the Council of Europe provide instruction. ILEA Budapest has offered specialized courses on money laundering/terrorist financing related topics such as Investigating/Prosecuting Organized Crime and Transnational Money Laundering (both presented by DOJ/OPDAT). ILEA Budapest trains approximately 950 students annually.

Global. ILEA Roswell (New Mexico) opened in September 2001. This ILEA offers a curriculum comprised of courses similar to those provided at a typical Criminal Justice university/college. These four-week courses have been designed and are taught by academicians for foreign law enforcement officials. This Academy is unique in its format and composition with a strictly academic focus and a worldwide student body. The participants are mid-to-senior level law enforcement and criminal justice officials from Eastern Europe, Russia, the Newly Independent States (NIS), Association of Southeast Asian Nations (ASEAN) member countries and the People's Republic of China (including the Special Autonomous Regions of Hong Kong and Macau); and member countries of the Southern African Development Community (SADC) plus other East and West African countries. The students are drawn from pools of ILEA graduates from the Academies in Bangkok, Budapest and Gaborone and other selected participants mainly from Latin American and the Caribbean. ILEA Roswell trains approximately 400 students annually.

Drug Enforcement Administration

The primary responsibility of the Drug Enforcement Administration (DEA) is to reduce the threat posed to our nation by illicit narcotics. The majority of illegal drugs impacting American society are produced outside of the United States and smuggled into our country. These illegal drugs are smuggled from their country of origin and often transit other nations before arriving in the United States. Thus, a strong international commitment to counternarcotics law enforcement is required to effectively blunt this menace. In cooperation with other U.S. agencies and foreign law enforcement counterparts, DEA strives to disrupt the illicit narcotics distribution chain; arrest and prosecute those involved in all aspects of the illegal drug trade and seize their profits and assets.

DEA's contribution to our nation's international counternarcotics strategy is accomplished through the 80 offices located in 58 nations that DEA maintains worldwide. The DEA overseas mission is comprised of the following components:

- Conduct bilateral investigative activities;
- Coordinate intelligence gathering;
- Coordinate training programs for host country police agencies;
- Assist in the development of host country drug law enforcement institutions and engage in foreign liaisons.

The emphasis placed on each component is determined by conditions and circumstances within the host nation. In nations where the law enforcement infrastructure is advanced and well developed, the DEA office may tailor its activities to specific areas that best support host nation efforts. In countries lacking a robust law enforcement capability, DEA personnel may provide assistance in all four of the mission areas annotated above. The following sections highlight the assistance that DEA provided during 2003 to host nation counterparts in support of the four established mission components.

Bilateral Investigations

Historical Operations

Operation Alcatraz. Operation Alcatraz is a SOD supported multi-national, multi-jurisdictional OCDETF wire intercept operation targeting North Coast of Colombia-based drug transportation organizations headed by Freddy Witt-Rodriguez, Gabriel Zuniga, both Colombian Nationals, and Jamaica-based drug transportation organizations headed by CPOT Norman Ramcharan and his brother RPOT Leebert Ramcharan, Norris Nembhard and Robroy Williams, all Jamaican Nationals. The Colombian organizations have been linked to the Autodefensas Unidas De Colombia (AUC) and are responsible for transporting multi-ton quantities of cocaine via go-fast vessels from the North Coast of Colombia to the Caribbean for subsequent transshipment to the United States. This operation, which has utilized 230 Colombian wire intercepts, has required a high level of multi-national cooperation and coordination between the governments of Colombia, Jamaica, Panama, the United Kingdom, and the U.S. As of December 31, 2004, this operation has resulted in the arrests of 59 defendants, including CPOT Norman Ramcharan (UK), and the seizure of 10,710 kilograms of cocaine and \$513,000 in U.S. currency. An additional \$5,000,000 in assets related to the traffickers in this operation has been targeted for forfeiture.

Operation Busted Manatee. On June 23, CPOT Elias COBOS-Munoz and 56 associates were arrested at the culmination of Operation Busted Manatee, a 29-month, multi-jurisdictional Organized

Crime Drug Enforcement Task Force (OCDETF) investigation. Arrests occurred in the United States, Canada, Colombia, Panama, Jamaica, and the Bahamas. The investigation, coordinated by the DEA Special Operations Division, was conducted by DEA offices in New York, Miami, Nassau, Kingston, Panama, Bogotá, Cartagena, and Ottawa. According to intelligence information, COBOS-Munoz has been the leader of a Colombian-based drug trafficking organization responsible for the importation of more than 13,000 pounds of cocaine per month from Colombia to the United States since 2000. The supply and transportation networks targeted by this effort were responsible for approximately 10 percent of the cocaine available in the United States. As of December 31, 2004, Operation Busted Manatee had resulted in 96 arrests and the seizure of 6,354 kilograms of cocaine, 1,165 pounds of marijuana and \$28,877,755 in assets. This investigation was conducted with Immigration and Customs Enforcement, the Internal Revenue Service, the Florida Highway Patrol, the New York Police Department, the Royal Canadian Mounted Police, the Royal Bahamas Police Force, the Colombian National Police, the Jamaican Constabulary and Defense Force, the Panama Judicial Police, and Her Majesty's Customs and Excise.

Operation Brain Drain. On September 15-22, 2004, an 18-month multi-jurisdictional OCDETF/PTO investigation targeting ephedrine and methamphetamine trafficking organizations in the United States and Canada culminated in the arrest of 59 individuals. Armando Solis, the leader of a central California methamphetamine trafficking organization, and Rodger Bruneau, who supplied ephedrine through a Canadian pharmaceutical company since 2000, were among those arrested. According to investigative information, Bruneau is responsible for the illegal sale of 10 tons of ephedrine since 2001. As of December 31, 2004, Operation Brain Drain had resulted in 101 arrests and the seizure of two clandestine labs (including a "super lab"), more than .6 metric tons of ephedrine powder, 1.7 million ephedrine tablets, .04 metric tons of methamphetamine, \$479,257 in U.S. currency, 21 vehicles, 30 weapons, and \$3.5 million in Canadian currency. If converted, the seized ephedrine would produce over .5 metric tons of methamphetamine. This investigation was coordinated by the DEA Special Operations Division (SOD) and conducted by DEA offices in Sacramento, California, Buffalo, New York, Miami, Florida, the DEA Vancouver Resident Office, the Internal Revenue Service (IRS), Immigration and Customs Enforcement (ICE), and the Royal Canadian Mounted Police (RCMP).

Operation Candy Box. Operation Candy Box was a three-year investigation that targeted a Vietnamese MDMA and marijuana distribution organization operating in the United States and Canada. The target organization imported MDMA powder from the Netherlands and in clandestine laboratories in Canada, pressed it into approximately one million MDMA tablets per month for distribution in the United States and Canada. Approximately \$5 million per month in drug proceeds were transported to Canada in bulk currency and/or laundered through a network of Vietnamese-owned money remitters and travel agencies in both the United States and Canada.

Operation Candy Box concluded on March 31, 2004 with dismantlement of the organization and the arrest of 161 individuals in Canada and throughout the United States. As of December 31, 2004, Operation Candy Box had resulted in a total of 224 arrests and the seizure of \$8.9 million in U.S. currency, 409,300 MDMA tablets, 1,546 pounds of MDMA powder, 1,976 pounds of marijuana, 6.5 pounds of methamphetamine, 62 weapons, and 38 vehicles.

Caribbean Initiative. The Caribbean Initiative was a series of investigations coordinated by the Special Operations Division that targeted Colombian cocaine trafficking organizations utilizing the Caribbean corridor to transport drugs destined for the United States. These organizations were responsible for distributing three metric tons of cocaine in the United States every month, amounting to at least 10 to 20 per cent of the U.S. cocaine supply. Through use of electronic eavesdropping techniques, DEA worked with foreign law enforcement counterparts to identify and attack the most significant drug traffickers impacting this region as well as their command and control infrastructure and financial operations.

The Caribbean Initiative included eight successful investigations which each dismantled large-scale organizations. The four-year initiative concluded in June 2004 and as of December 31, 2004 resulted in a total of 354 arrests, including five Consolidated Priority Organization Targets (CPOTs) and the seizure of 26,584 kilograms of cocaine, 7,196 pounds of marijuana, and more than \$86 million in currency and other assets.

Operation Caso M. Operation Caso M was an SOD supported multi-jurisdictional, multi-national OCEDEF targeting the Dominican Republic-based Colombian cocaine trafficking organization, headed by CPOT Jose Arismendy Almonte-Pena, a Dominican National. The ALMONTE-Pena organization was one of the most significant cocaine transportation and distribution organizations operating in the Caribbean, transporting approximately 2,000 kilograms of cocaine each month from South America to Puerto Rico and the Caribbean for distribution in the continental United States. Operation Caso M which was initiated in October 2002, by the DEA and the Federal Bureau of Investigation (FBI), encompassed investigations in seven domestic judicial districts and the countries of Colombia, Dominican Republic and Venezuela and demonstrated a high level of cooperation among multi-national partners in the Caribbean. Operation Caso M culminated in November 2003, and as of December 31, 2004, resulted in 23 arrests including CPOT ALMONTE-Pena, the seizure of 193 kilograms of cocaine and \$4,464,000 in assets/U.S. currency.

Operation Choque. This OCEDEF and Special Operations Division (SOD) coordinated investigation has produced 94 arrests and the seizure of 1,407 kilograms of cocaine, 523 pounds of marijuana, 10 pounds of methamphetamine, and \$10.6 million in U.S. currency. More significantly Operation Choque has dismantled a money transportation organization associated with Joaquin Guzman-Loera and Vicente Carrillo-Fuentes responsible for moving over \$87 million in drug proceeds from the U.S. to Mexico since December 2002. Operation Choque has also disrupted a significant international drug distribution cell based in Guatemala, headed by CPOT Jorge Mario Paredes-Cordova that was supplying cocaine to the New York and Chicago areas. DEA agents employed the use of 50 court-authorized wiretaps during the course of the investigation. Operation Choque encompasses investigations in 11 judicial districts (Colorado, Chicago, New York, Greensboro, NC, Albuquerque, NM, Indianapolis, IN, Detroit, MI, Amarillo, TX, El Paso, TX, Houston, TX, Phoenix, AZ, Wilmington, DE and four countries (United States, Mexico, Guatemala, and Colombia).

Operation Containment. Operation Containment is an intensive, multinational, law enforcement initiative that was congressionally mandated in 2002 and is led by DEA. It involves countries in Central Asia, the Caucasus, the Middle East, Europe, and Russia.

The following 18 countries are participating in Op Containment:

Afghanistan, Armenia, Azerbaijan, Bulgaria, Germany, Greece, India, Kazakhstan, Kyrgyz Republic, Pakistan, Tajikistan, Turkey, Turkmenistan, Russia, Ukraine, Uzbekistan, United States, and the United Kingdom.

The following are the goals of Operation Containment.

- Implement a coordinated post-Taliban heroin counternarcotics strategy to reduce the production of opium through the prevention of poppy cultivation and destruction of known opium stockpiles and heroin laboratories.
- Diminish the availability of heroin and morphine base in countries surrounding Afghanistan and along the Balkan and Silk Road trafficking routes.
- Deny safe havens to criminal organizations involved in drug trafficking, drug related terrorist activities, and money laundering. To deprive these organizations of their financial basis for their activities.

- Engage in proactive enforcement and intelligence gathering operations targeting the command and control structure of heroin trafficking organizations operating in Afghanistan and the greater Southwest and Central Asian region.
- Continue implementing administrative, diplomatic, and investigative measures needed to reduce the flow of Afghan heroin into world markets and prevent Afghanistan from becoming a major heroin supplier to the United States.
- In order to accomplish these goals DEA has enhanced the staffing levels of the Kabul CO to seven special agents, three intelligence analysts, and two support personnel. The intelligence analysts will be assigned to the following locations: the CFC-A Intelligence Fusion Center in Kabul, the CJTF-76 at Bagram Air Base, and the other government agency fusion center on the Embassy compound.
- Further office enhancements have already taken place with increased special agent positions at the Ankara, Turkey CO, Istanbul, Turkey RO, London, England CO, and Moscow, Russia CO. An IA and Admin position is also in place in the Ankara, Turkey CO.
- DEA also plans to enhance the special agent staffing levels at the Tashkent, Uzbekistan CO and Brussels, Belgium CO. In addition, DEA plans to open up a new DEA Country Office in Bishkek, Kyrgyz Republic.
- In a response to a request by the Administration and the U.S. Ambassador to Afghanistan, DEA detailed its Assistant Administrator for Intelligence to serve as the Counter Narcotics Coordinator (CNC) in Afghanistan. The CNC has been in Kabul since mid-August 2004, and is responsible for overseeing all U.S. Government counternarcotics programs in Afghanistan.
- In May of 2003, DEA established a SIU in Tashkent, Uzbekistan—a country critical to containing the threat of Afghan opium.
- The Kabul CO's primary counterpart in Afghanistan is the Counter Narcotics Police—Afghanistan (CNP-A). DEA has established the National Interdiction Unit (NIU), which are CNP-A officers who have been selected to work narcotic enforcement operations with the Kabul CO and later assisting the FAST program agents. DEA will advise, train, and mentor these NIU officers. On October 28, 2004, the first class of CNP-A NIU, graduated from their six-week training program. The class of 28 graduating officers included 2 women. On December 16, 2004, the second NIU class of 24 officers, including two women, graduated and is operationally deployed. It is expected that by April of 2005 100 NIU officers will have completed their training and will work directly with Kabul CO and FAST program agents.

On September 28 and 29, 2004, the DEA Ankara, Turkey CO and the Turkish National Police co-hosted delegates from the above 18 partner countries. This action oriented conference resulted in proactive initiatives designed to counter the threat from Afghanistan opiates within the region. Four initiatives were developed in order to accomplish the above-mentioned goals.

- Collective identification and targeting of five major Drug Trafficking Organizations (DTOs).
- Promotion of international money laundering investigations against regional DTOs.
- Participants agreed to develop a target list of DTOs actively involved in the illicit distribution of acetic anhydride (AA) and other precursor chemicals. In addition, they agreed on the collective identification of Heroin Chemists operating in the region.

- All agreed on increased sharing of investigative leads and intelligence since DTOs operate across national boundaries. Participants agreed to forward these leads and intelligence to the Regional Drug Intelligence Initiative in Tashkent, Uzbekistan. Leads and intelligence will also be shared with the Intelligence Fusion Centers in Kabul, Afghanistan comprised of various government agencies.

In FY 2004, Operation Containment resulted in the seizures of 14.9 metric tons of heroin, 7.7 metric tons of morphine base, 5.9 metric tons of opium gum, 77 metric tons of cannabis, approximately 3.6 tons of precursor chemicals, 498 arrests, and the seizure of 11 heroin labs, and led to the dismantlement or disruption of major distribution and transportation organizations involved in the Southwest Asian heroin drug trade. In the first quarter FY 2005, Operation Containment resulted in the seizure of 2.4 metric tons of heroin, 985 kilograms of morphine base, 3.0 metric tons of opium gum, 152.9 tons of cannabis, and 195 arrests.

Some of the noteworthy seizures for the first quarter of FY 2005 are listed below:

- In November and December 2004, the Kabul CO and CNP-A arrested three Afghan National drug traffickers in Kabul, Afghanistan. All three defendants were part of a Kabul CO initiated undercover operation, which resulted in the seizure of four kilograms of heroin. The defendants were indicted within the Southern District of New York for conspiracy to import 200 kilograms of heroin into the U.S. All three traffickers are in Afghan custody pending their extradition and or lawful surrender to the U.S. for prosecution.
- On December 4, 2004, the Istanbul, Turkey RO and the Turkish National Police (TNP) seized 566 kilograms of heroin concealed inside hollow pieces of marble in Mersin, Turkey. Four Turkish Nationals were arrested and approximately 100,000 Euro (\$133,263 USD) was seized. The heroin originated in Afghanistan and was destined for markets in the Netherlands.
- On November 28, 2004, the Kabul CO and the CNP-A NIU raided two mountainous compounds in Lowgar Province, Afghanistan and seized approximately 140 metric tons of marijuana. The marijuana was in the process of being converted into hashish.
- On November 9, 2004, the Istanbul RO and TNP seized 110 kilograms of heroin in a stash location in Istanbul, Turkey. A total of eight (8) Turkish Nationals and two foreign nationals were arrested. The heroin originated in Afghanistan and was destined for markets in Western Europe.
- On October 20, 2004, the Istanbul RO and TNP seized 60 kilograms of heroin from a vehicle in Istanbul, Turkey. Five (5) Turkish Nationals were arrested. The heroin originated in Afghanistan and was destined for markets in the Netherlands.
- On October 19, 2004, the Istanbul RO and TNP seized 82 kilograms of heroin from the trunk of a vehicle in Istanbul, Turkey. Twelve (12) Turkish Nationals were arrested and nine (9) illegal firearms seized. The heroin originated in Afghanistan and was destined for markets in Western Europe.

Operation Cyber-Pharming. On August 26, 2004, the DEA Bangkok Country Office and DEA Newark Division completed Operation Cyber-Pharming, an eight-month investigation, with the dismantlement of a pharmaceutical controlled-substance Internet trafficking organization in Thailand. The Royal Thai Police arrested Achitphon Khonseechai, the leader of the organization, and seven associates on charges that could result in a sentence of more than 20 years to life imprisonment. Khonseechai operated a Bangkok-based Internet website and pharmacy that shipped millions of dosage units of various pharmaceutical controlled substances, including Valium®, Xanax®,

phenobarbital, and codeine combination drugs, to at least 36 states since 2003. Customers of the website were only required to complete an online questionnaire prior to receiving drugs. As of December 31, 2004, Operation Cyber-Pharming has resulted in eight arrests and the seizure of approximately 500,000 dosage units of various pharmaceutical controlled substances. This investigation was conducted in coordination with the following Thai agencies: Customs Department, Bangkok Intelligence Center, Office of the Narcotics Control Board, Postal Inspectors, Food and Drug Administration, and Express Mail Service.

Operation Double Talk. Operation Double Talk is a SOD supported multi-jurisdiction, multi-national OCDETF wire-intercept operation targeting Bahamian-based cocaine trafficking organization headed by Melvin Maycock and Sean Adderly, both Bahamian nationals operating in Jamaica and the Bahamas. Initially, NYFD T-43 conducted T-IIIs against cocaine/heroin trafficking cells run by Juan CESPEDES. As a result of the New York operations, not only was a cocaine distribution cell (moving 500 kilogram shipments) disrupted but also a Heroin mill capable of distributing approximately 30-50 kilograms per month was seized and assets worth more than \$5,000,000 are being forfeited by the Southern District of New York and DEA. Additionally, The Miami Field Division working in conjunction with The New York Field Division conducted the first non-consensual intercepts of Satellite telephones in the U.S. This organization is responsible for transporting multi-hundred kilograms of cocaine via maritime methods from Jamaica to the United States via the Bahamas. These loads of cocaine were being transported into Miami, Florida from the Bahamas and then further trucked up to New York for distribution. The inherent violence of these traffickers became clearly established when in February 2004, one of the primary targets, Sean Adderly was brutally murdered in Negril, Jamaica as a result of drug related activities. As of December 31, 2004, Operation Double Talk had resulted in 31 arrests and the seizure of 285 kilograms of cocaine, 1, 500 pounds of marijuana, and \$8,409,200 in assets.

Operation Lucky Mai. On June 7, 2004, DEA culminated a one-year OCDETF/ PTO investigation, Operation Lucky Mai, with the dismantlement of an international marijuana trafficking and money laundering organization. The operation resulted in the arrest of 31 individuals in the United States and Canada, including leaders of the organization Oanh Phan and Trong Nguyen. According to intelligence information, since 2002, the organization operated several large-scale indoor marijuana cultivation sites in Canada. The resulting high potency marijuana was subsequently exported to distribution cells in the United States. During a six-month period in 2003, the organization produced approximately 9.1 metric tons of marijuana per month. An estimated \$70 million in drug proceeds was laundered by the organization from the United States to Toronto, Canada. As of December 31, 2004, Operation Lucky Mai had resulted in 41 arrests and the seizure of over \$5 million in U.S. currency, 5 metric tons of marijuana, and 3,000 MDMA tablets. This investigation was supported by the SOD and conducted with the Michigan State Police, ICE, IRS, the Canadian Customs and Revenue Agency, and the RCMP.

Operation Mapale. From November 21-December 5, the Bogotá CO, the Colombian National Police, and the Colombian military executed Operation Mapale II, targeting laboratories controlled by the Autodefensas Unidas de Colombia (AUC), the Fuerzas Armadas Revolucionarias de Colombia (FARC), and the North Valley Cartel in southwest Colombia. Results include the seizure of 800 kilograms of cocaine HCl, 70 kilograms of cocaine base, 13 kilograms of heroin, 9560 gallons of liquid precursor chemicals, 1,540 kilograms of precursor chemicals, \$40,454 U.S. currency, and the destruction of 22 cocaine laboratories and 103 hectares of coca plants. Ten arrests were made. Results of Operation Mapale and Operation Mapale II combined include the seizure of 1,297 kilograms of cocaine HCl, 12,941 kilograms of cocaine base, 13 kilograms of heroin, 54,629 gallons of liquid precursor chemicals, 38,002 kilograms of solid precursor chemicals, \$55,839 U.S. currency, the destruction of 81 cocaine laboratories and 103 hectares of coca plants, and 16 arrests.

Operation Northern Star. Operation Northern Star was an 18-month investigation targeting the illegal importation of pseudoephedrine, an essential chemical used in the production of methamphetamine. The investigation revealed that three Canadian chemical companies sold bulk quantities of pseudoephedrine to a trafficking organization that smuggled the chemical across the U.S.-Canadian Border and transported the substance to the west coast where it was sold to methamphetamine “super lab” operators. Operation Northern Star concluded in April 2003 and resulted in a total of 97 arrests and the seizure of more than 17 metric tons of pseudoephedrine (which could produce approximately 10.4 metric tons of methamphetamine) and \$3.9 million in U.S. currency. The trafficking organization and one of the Canadian companies were dismantled. The two remaining Canadian companies were disrupted.

Operation Panama Express. Operation Panama Express is a joint operation designed to disrupt and dismantle major maritime drug smuggling organizations operating from the Pacific and Caribbean coasts of Colombia. The operation is conducted by DEA and several other federal, state, and local law enforcement authorities, including the Federal Bureau of Investigation, Immigration and Customs Enforcement, and the Joint Interagency Task Force (JIATF). Begun in February 2000 as a Special Enforcement Operation known as “Operation Privateer,” the effort was renamed Panama Express in October 2003. As of December 31, 2004: 236,800 kilograms of cocaine seized; 102,714 kilograms scuttled; 775 arrests.

Operation Uprising. Operation Uprising is a Special Operations Division (SOD) supported multi-jurisdictional, multi-national investigation targeting members of the Fuerzas Armadas Revolucionarias de Colombia (Revolutionary Armed Forces of Colombia or FARC), including CPOTs Pedro Antonio Marin (a.k.a. Manuel Marulanda Velez), Jorge Briceño Suarez (a.k.a. Mono Jojoy), Jose Benito Cabrera Cuevas (a.k.a. Fabian Ramirez), and Tomas Molina Caracas (a.k.a. Negro Acacio), and the independent drug trafficking organizations supplied by the FARC.

1st Quarter, FY 2005. In October 2004, Venezuelan National Guard, DEA Caracas, and SOD Bilateral Case Group (BCG) agents arrested Corredor Ibague without incident in Venezuela. In November 2004, Carlos Ivan Mendes Mesquita, his son, and five additional defendants were arrested at a ranch in Northeastern Paraguay. During the execution of the warrant, the officers seized a twin-engine aircraft with a suspected load of 500 kilograms of cocaine. Several other important associates of Corredor Ibague also have been arrested.

In October 2004, the Colombian Military reported the capture of Jorge Enrique Rodriguez (a.k.a. Ivan Vargas), commander of the FARC 24th Front. Monies to finance the activities of the Front were generated from drug trafficking and kidnapping in the Southern Bolivar region of Colombia. Colombian authorities also captured Rodriguez’ girlfriend, Laura Emilise Rueda (a.k.a. Alejandra). Rueda reportedly was the Finance Chief of the FARC 24th Front. Colombian authorities assert that Rueda was in charge of coordinating the sale of cocaine produced by the FARC as well as acquiring supplies, weapons and munitions.

The continued success of Operation Uprising has been the result of the joint efforts of the Bogota Country Office, Panama City Country Office, Brasilia Brazil Country Office, Sao Paulo Resident Office, Foreign Operations Group of the Caribbean Field Division operating in Suriname, Caracas Country Office, Asuncion Country Office, Curacao Country Office, The Hague Country Office and the BCG.

As of December 31, 2004, Operation Uprising has resulted in 98 arrests and the seizure of 7,733.5 kilograms of cocaine and 205.5 kilograms of cocaine base. The most current phase of Operation Uprising is targeting the FARC 14th Front and the upper leadership of the entire FARC organization.

Operation United Eagles. In August 2003, the DEA Mexico Country Office initiated Operation United Eagles, a fugitive apprehension effort to apprehend Consolidated Priority Organization Targets

operating or living in Mexico. A fugitive apprehension team was created and as currently consists of 50 members of the Mexican Agencia Federal de Investigaciones (AFI) trained by DEA, U.S. Marshals and FBI.

Initially, Operation United Eagles has focused on locating and apprehending key leaders of the ARRELLANO-Felix Organization. As of December 31, 2004, Operation United Eagles has resulted in the arrest of 19 members of the AFO, including 5 “Tier I” members: Efran PEREZ, Jorge Aureliano-Felix, Gilberto HIGUERA-Guerrero, Giberto Camacho Valle, and Marco Antonio SIMENTAL-Garcia.

Operation Web Tryp. On July 21, 2004, Operation Web Tryp, an 18-month OCDETF and Priority Target investigation, resulted in the arrest of 10 individuals, including the operators of five internet websites. The individuals were arrested in California, Arizona, Louisiana, Georgia, and Virginia on charges of conspiracy and trafficking in drug analogues. Charges were filed utilizing the Controlled Substance Analogue Enforcement Act (CSAEA). Prior to the CSAEA, alterations to the chemical structure of a controlled substance would render the drug legal. The websites operated for an average of 2-3 years and had thousands of customers. Two fatal and 14 non-fatal overdoses have been connected with these internet operations.

After the July take down, DEA provided customer lists to the United Kingdom (UK) National Crime Squad for intelligence purposes. On December 15, the UK National Crime Squad and local UK police arrested 24 individuals in the UK for receiving drug analogues. Those arrested were customers of the five U.S.-based internet websites dismantled as a result of Operation Web Tryp. As of December 31, 2004, Operation Web Tryp had resulted in a total of 36 arrests. This investigation was coordinated by the DEA Special Operations Division (SOD) and conducted by DEA offices in San Diego and Riverside, California; Las Vegas, Nevada; Phoenix, Arizona; Albuquerque, New Mexico; Fargo, North Dakota; Baton Rouge, Louisiana; Macon, Georgia; Norfolk, Virginia; New York, New York; and London. Other agencies that also participated in the investigation include the Federal Bureau of Investigation (FBI), Immigration and Customs Enforcement (ICE), Food and Drug Administration (FDA), Internal Revenue Service (IRS), U.S. Postal Inspection Service (USPS), Naval Criminal Investigative Service, and the U.S. Forestry Service (USFS).

Operation White Dollar. On May 4, 2004, DEA, in cooperation with law enforcement entities in Canada, Colombia, Great Britain, New York, and Florida, culminated a two-year, multi-jurisdictional OCDETF investigation with the dismantlement of an international money laundering organization. Operation White Dollar resulted in the arrests of 27 individuals in the United States, Colombia, and Canada, including leaders Gabriel and Nicholas Otalvaro-Ortiz. Four Colombian companies involved in the scheme were also indicted and their common owner has agreed to the forfeiture of \$20 million from a seized bank account. The Otalvaro-Ortiz money laundering organization used the Colombian Black Market Peso Exchange to purchase drug proceeds from the United States and Canada at a reduced rate. This investigation was coordinated by the DEA’s SOD and the Office of Financial Operations with assistance from the IRS, the New York Police Department, the Office of the Special Narcotics Prosecutor for the City of New York, the Manhattan District Attorney’s Office, the South Florida Money Laundering Strike Force, the RCMP, the British National Crime Squad, and the Colombian Departamento Administrativo De Seguridad. As of December 31, 2004, Operation White Dollar resulted in the following:

- arrests: 27;
- value of assets seized: \$22,838,684.08;
- amounts laundered: \$7,465,659.00;
- amount of commissions received: \$449,045.15;

- total number of Transactions: 30.

1st Quarter FY2005 (October 1, 2004-December 31, 2004)

Arrest of Norte Valle Cartel (NVC) Lieutenant Dagoberto FLOREZ-Rios in Colombia. On December 28, the DEA Bogotá Country Office reported the arrest of NVC lieutenant Dagoberto FLOREZ-Rios by the Colombian National Police, Sensitive Investigative Unit, at a farm near Medellín, Colombia. One of five NVC fugitives being sought in Colombia, FLOREZ-Rios was indicted in April 2004 for cocaine trafficking and money laundering in the U.S. District Court, Eastern District of New York. FLOREZ-Rios was responsible for laundering drug proceeds for the NVC utilizing real estate investments, wire transfers, and money exchange houses.

Consolidated Priority Organization Target (CPOT) WONG Moon-chi Extradited to Hong Kong. On December 22, CPOT WONG Moon-chi was extradited from Cambodia to Hong Kong to face charges of trafficking in marijuana, amphetamine, and heroin. WONG was arrested on December 8 in Cambodia by the Cambodian National Police in a coordinated effort with the DEA Hong Kong and Canberra Country Offices and the Australian Federal Police. A member of the 14K Triad, the largest Hong Kong based ethnic Chinese organized crime group, WONG was one of the first CPOTS designated in September 2002. According to Chinese authorities, WONG is the organizer of a 1996 shipment of 1,300 pounds of heroin seized in China destined for the United States. WONG is also responsible for a 1996 seizure in China of four tons of marijuana destined for Japan and a 2002 seizure of 75 pounds of heroin en route from Cambodia to China.

Financial Consolidated Priority Organization Target (CPOT) Gilberto RODRIGUEZ-Orejuela Extradited to the United States. On December 4, Financial CPOT Gilberto RODRIGUEZ-Orejuela was extradited from Bogotá, Colombia to the United States to face charges of drug trafficking and money laundering. RODRIGUEZ-Orejuela was indicted in December 2003 in the U.S. District Court for the Southern District of New York and in January 2004 in the U.S. District Court for the Southern District of Florida as the result of OCDETF investigations conducted by the DEA New York and Miami Divisions and the DEA Bogotá Country Office. RODRIGUEZ-Orejuela and his brother Miguel founded and directed the notorious Cali cartel that became the world's chief supplier of cocaine in the 1990s and earned an estimated \$8 billion in annual profits.

Financial Consolidated Priority Organization Target (CPOT) Lino Antonio SIERRA-Vargas arrested in Colombia. On December 1, Financial CPOT Lino Antonio SIERRA-Vargas was arrested by the Colombian National Police in Colombia as the result of an eighteen-month OCDETF investigation conducted by the DEA Miami Division and the DEA Bogotá Country Office. SIERRA-Vargas was indicted in June on charges of conspiracy and money laundering in the U.S. District Court for the Southern District of Florida. Since 1997, SIERRA-Vargas was responsible for the distribution of 4.4 tons of cocaine and the laundering of more than \$5 million in drug proceeds. SIERRA-Vargas is awaiting extradition to the United States.

Afghanistan Heroin Trafficker Arrested. On November 27, as the result of a four-month investigation conducted by the DEA Kabul Country Office, Haji BAHRAM was arrested by the Counter Narcotics Police-Afghanistan. BAHRAM, aka Haji Bahram KHAN, a member of the Misri KHAN Afghanistan-based heroin trafficking organization, was indicted in September for conspiracy and heroin trafficking in the U.S. District Court, Southern District of New York. Misri KHAN was previously arrested in Afghanistan on November 4. According to the indictment, BAHRAM and KHAN negotiated the shipment of 440 pounds of heroin from Afghanistan to the United States. BAHRAM and KHAN are awaiting extradition to the United States.

Shipment of 1,900 Pounds of Opium Seized in Afghanistan. On November 17, 2004, the DEA Kabul Country Office (KCO) reported the seizure of 1,900 pounds of opium by the Counter Narcotics

Police-Afghanistan in Kabul, Afghanistan. The opium was being transported in a tanker-trailer truck. According to intelligence information, the opium originated in Northern Afghanistan and was being shipped to Kandahar, Afghanistan. The KCO is assisting the Counter Narcotics Police in development of investigative leads in an attempt to identify the organization responsible for shipping the opium.

Consolidated Priority Organization Target (CPOT) Zeev ROSENSTEIN Arrested. On November 8, 2004, the DEA Miami Division reported the arrest of CPOT Zeev ROSENSTEIN by the Israeli National Police in Tel Aviv, Israel. The arrest is the result of a three-year investigation and September indictment of ROSENSTEIN for trafficking MDMA in the U.S. District Court, Southern District of Florida. According to intelligence information, ROSENSTEIN is the leader of an Israeli criminal organization responsible for financing, coordinating and smuggling multi-million tablet shipments of MDMA from Belgium and Holland to the United States, Israel and Europe. Investigative information has linked ROSENSTEIN to a 2001 seizure in New York of 700,000 MDMA tablets and \$187,000 in U.S. currency. Extradition of ROSENSTEIN to the United States is pending.

Leader of Afghanistan Heroin Trafficking Organization Arrested. On November 5, 2004, the four-month investigation of an Afghanistan-based heroin trafficking organization by the DEA Kabul Country Office and the Afghan Counter Narcotics Police resulted in the arrest of Misri KHAN in Kabul, Afghanistan. KHAN, the leader of the drug trafficking organization, and four associates were indicted for conspiracy to import 440 pounds of heroin into the United States in September 2004 in the U.S. District Court, Southern District of New York. According to intelligence information, KHAN's organization manufactured and exported large shipments of heroin from Afghanistan and Pakistan to the United States, Asia, and Europe. KHAN's extradition to the United States is pending.

Top Lieutenant of CPOT Osiel CARDENAS-Guillen Arrested in Mexico. On October 29, 2004, the DEA Monterrey, Mexico Resident Office reported the arrest of Rogelio PIZANA-Gonzalez—a top lieutenant in the CPOT Osiel CARDENAS-Guillen drug trafficking organization—by the Mexican Agencia Federal de Investigaciones in Matamoros, Tamaulipas, Mexico. A Mexican federal agent was killed and two local police officers injured during a shoot-out that occurred during the arrest. Two of PIZANA-Gonzalez's bodyguards were also killed. In April 2002, PIZANA-Gonzalez was indicted on charges of conspiracy to import and distribute cocaine in the U.S. District Court, Southern District of Texas. According to intelligence information, PIZANA-Gonzalez was in charge of cocaine and marijuana transportation for the CARDENAS-Guillen organization and controlled a rural land corridor and a river crossing into the United States. PIZANA-Gonzalez has been linked to over 60 drug-related murders in Mexico. His extradition to the United States is pending.

Seizure of 2.2 Tons of Opium in Afghanistan. On October 25, 2004, the DEA Kabul Country Office (KCO) reported the seizure of 2.2 tons of opium in Nangarhar Province, Afghanistan. The opium was seized at a market and a nearby residential compound during a joint operation conducted by the KCO, the British Task Force 333, the British Drug Liaison Office, and the Counter-Narcotics Police—Afghanistan. Seventy-five individuals were detained for questioning and two were arrested. The operation was carried out with the support of the Combined Forces Command—Afghanistan Intelligence Fusion Center.

Seizure of 2.2 Tons of Opium in Afghanistan. On October 25, 2004, the DEA Kabul Country Office (KCO) reported the seizure of 2.2 tons of opium in Nangarhar Province, Afghanistan. The opium was seized at a market and a nearby residential compound during a joint operation conducted by the KCO, the British Task Force 333, the British Drug Liaison Office, and the Counter-Narcotics Police—Afghanistan. Seventy-five individuals were detained for questioning and two were arrested. The operation was carried out with the support of the Combined Forces Command—Afghanistan Intelligence Fusion Center.

Operation Money Clip, Phase 1 Resulted in Dismantlement of Money Laundering and Poly-Drug Trafficking Organization. On October 19, 2004, a one-year multi-jurisdictional Organized

Crime Drug Enforcement Task Force (OCDETF) investigation coordinated by the DEA Special Operations Division resulted in the dismantlement of a Mexican-based money laundering and poly-drug trafficking organization. Eighty-three individuals were arrested during this operation that involved investigations in several U.S. cities and Mexico. As of December 31, 2004, Operation Money Clip has resulted in seizures of \$4.4 million in U.S. currency, 2,552 kilograms of cocaine, 74 pounds of crystal methamphetamine, 40,295 pounds of marijuana, and 3 pounds of heroin. The organization laundered as much as \$200 million in drug proceeds and was responsible for the distribution of approximately 1,100 pounds of cocaine, 200 pounds of methamphetamine, 44 pounds of heroin, and 10,000 pounds of marijuana per month since 2002. This investigation was conducted with the Department of Homeland Security, Immigration and Customs Enforcement, and numerous U.S. state and local enforcement agencies.

Seizure of More Than 180 Pounds of Heroin and Arrest of 11 in Turkey. On October 19, 2004, investigations conducted by the DEA Istanbul Resident Office and the Turkish National Police resulted in seizures of more than 180 pounds of heroin in Istanbul, Turkey. A total of 11 Turkish nationals from two drug trafficking organizations were arrested as a result of the operations. According to intelligence information, one of the organizations involved is supplied by an Afghanistan source of supply identified and targeted in September as part of the Operation Containment targeting initiative.

Operation Sierra Mist. Operation Sierra Mist, is a Special Operations Division (SOD) supported multi-jurisdictional, multi-national Organized Crime Drug Enforcement Task Force (OCDETF) investigation targeting the communications of Auto Defensas De Colombia (AUC) Para military leaders Consolidated Priority Target (CPOT) Hernan Giraldo-Serna, Rodrigo Tovar-Pupo, and their supporting lieutenants.

On October 16, 2004, AUC lieutenant Alvaro PADILLA-Redondo was arrested in Colombia by the Colombian National Police, Antinarcotics Unit, as part of a four-year multi-jurisdictional investigation conducted by the DEA Cartagena Resident Office, the DEA Miami and New York Divisions, and the DEA Las Vegas District Office. In June 2004, PADILLA-Redondo, a member of the Consolidated Priority Organization Target Hernan GIRALDO-Serna drug trafficking organization, was indicted for conspiracy to import cocaine into the United States in the U.S. District Court, District of Columbia. According to intelligence information, PADILLA-Redondo was responsible for the security of maritime cocaine loading operations on the North coast area of Colombia. Extradition of PADILLA-Redondo to the United States is pending. As of December 31, 2004, Operation Sierra Mist has resulted in 20 arrests and the seizure of 17 cocaine laboratories, 8, 140 kilograms of cocaine, 20,590 gallons of precursor chemicals, and \$1.9 million in assets.

Operation Escandalo, Airline Chief of Security Arrested for Cocaine Smuggling. On October 14, 2004, the DEA Fort Lauderdale District Office arrested Stephanie AMBROISE in Miami, Florida, based on a criminal complaint issued in the Southern District of Florida on October 12, 2004. AMBROISE was the chief of security for American Airlines at the Port-au-Prince International Airport in Haiti. AMBROISE is the latest individual arrested in an investigation of cocaine smuggling under ousted Haitian President Jean-Bertrand Aristide. According to investigative information, AMBROISE was associated with several traffickers and used her position at the Port-au-Prince airport to bypass security. Intelligence indicates that she was responsible for the shipment of over 1,300 pounds of cocaine from Haiti to the United States per month from 2001-2003 and received \$2,000 in payment for each kilogram of cocaine smuggled. Other individuals arrested during this investigation include former Haitian Senator Flourel CELESTIN, former Chief of Palace Security Oriel JEAN, former Haitian National Police Commissaire Romaine LESTIN, former Chief of the Haitian National Police Narcotics Unit Evitz BRILLIANT, former Director General of the Haitian National Police Jean Nesley LUCIEN, and former Haitian National Police Commander Rudy THERASSAN. In addition, Consolidated Priority Organization Target Jean Eliobert JASME, Regional Priority Organization

Target Carlos OVALLE, and Haitian traffickers Beaudouin Jacques KETANT and Wista LOUIS have also been arrested. With the exception of AMBROISE who is currently out on bond, as of December 31, 2004, all of the aforementioned defendants were incarcerated in the United States. The investigation is being conducted with Immigration and Customs Enforcement, the Federal Bureau of Investigation, and the Internal Revenue Service.

Arrest of Financial CPOT Gabriel PUERTA-Parra in Colombia. On October 8, 2004, the DEA Bogotá Country Office reported the arrest of Financial CPOT Gabriel PUERTA-Parra by the Colombian National Police Sensitive Investigative Unit at a ranch in La Vega, Colombia. PUERTA-Parra, a former attorney for the Departamento Administrativo de Seguridad, the Colombian equivalent to the FBI, was indicted in the U.S District Courts for the District of Columbia and the Southern District of Florida. Charges included violation of the Racketeer Influenced and Corrupt Organization Act, conspiracy, cocaine trafficking, and money laundering. According to intelligence information, PUERTA-Parra was a key counselor and advisor to the North Valley Cartel since the 1980's and an attorney for former Medellín Cartel leader Pablo ESCOBAR. PUERTA-Parra utilized a large range of legitimate businesses including investment and real estate companies, agricultural enterprises, and currency exchanges to launder drug proceeds through the United States, Mexico, Colombia, Ecuador, and Vanuatu. Extradition of PUERTA-Parra to the United States is pending.

4th Quarter FY2004 (July 1, 2004-September 30, 2004)

\$500 Million Pharmacy Chain Controlled by Financial CPOTs Miguel and Gilberto RODRIGUEZ-Orejuela Seized in Colombia. On September 22, the DEA Bogotá Country Office (BCO) reported the seizure in Colombia of 463 pharmacies and a pharmaceutical laboratory controlled by financial CPOTs Miguel and Gilberto RODRIGUEZ-Orejuela. The real property and inventory have been valued at an estimated \$500 million, the largest asset seizure in Colombia to date. The seizures were made by the Colombian National Police based on a two-year money laundering investigation conducted with the BCO, the DEA New York Division Strike Force, and the Office of Foreign Asset Control. Seizures occurred simultaneously in 28 of 32 regions in Colombia and involved the coordination of 3,200 law enforcement officers country-wide. The investigation revealed that the first pharmacy was purchased by Gilberto RODRIGUEZ-Orejuela in 1972. The brothers have utilized drug profits to develop the franchise and until the seizures, used the stores to launder drug proceeds. The Colombian government has replaced the company's top executives and future profits will be used to fund counternarcotics programs. Miguel and Gilberto RODRIGUEZ-Orejuela are currently incarcerated in Colombia as a result of drug-trafficking convictions.

CPOT Rodrigo MURILLO-Pardo Extradited to the United States. On September 21, CPOT Rodrigo MURILLO-Pardo was extradited from Colombia to the United States to face charges of trafficking in cocaine. MURILLO-Pardo is one of 25 traffickers and the second CPOT extradited from Colombia during September. MURILLO-Pardo was indicted in September 2002 in the U.S. District Court for the Southern District of California after a two-year investigation conducted by the DEA San Diego Division and the Bogotá Country Office. He was arrested in November 2002 by the Colombian National Police. At the time of MURILLO-Pardo's arrest, over \$4.9 million in U.S. currency was seized from his residence. According to investigative information, MURILLO-Pardo was responsible for the attempted importation of 20 tons of cocaine in 2001 that were seized in the Pacific Ocean by U.S. authorities. MURILLO-Pardo's cocaine and marijuana trafficking organization was dismantled in 2002.

Operation Choque OCDETF Investigation Resulted in Arrest of CPOT Associate in Mexico. On September 16, the DEA Ciudad Juarez and Colorado Springs Resident Office reported the arrest of Miguel ARRIOLA-Marquez and two individuals by the Mexican Agencia Federales de Investigaciones, Sensitive Investigative Unit, in Mexico. ARRIOLA-Marquez, a leader in a Saucillo,

Chihuahua, Mexico-based cocaine and money laundering organization, is an associate of CPOT Joaquin GUZMAN-Loera. Miguel and his brother Oscar ARRIOLA-Marquez were indicted in the U.S. District Court for the District of Colorado in December 2003 after a one-year OCDETF and DEA Special Operations Division supported investigation for trafficking in cocaine and money laundering. According to intelligence information, the ARRIOLA-Marquez organization was responsible for the importation of 18 tons of cocaine from Mexico into the United States and the transportation of approximately \$10 million to Mexico per year since 1999. As of October 1, 2004, this investigation has resulted in 97 arrests, the seizure of 1,407 kilograms of cocaine and \$10.6 million.

CPOT Jose Maria HENAO-Mejia Extradited to the United States. On September 10, CPOT Jose Maria HENAO-Mejia was extradited from Colombia to the United States to face charges of conspiracy and trafficking in cocaine. HENAO-Mejia was indicted in June 2002 in the U.S. District Court for the Southern District of New York after a one-year investigation conducted by the DEA New York, Miami, and Newark Divisions, the Bridgeport Resident Office, and the Bogotá Country Office. HENAO-Mejia was arrested in Colombia in September 2002 pursuant to a provisional arrest warrant. According to intelligence information, HENAO-Mejia was the leader of a Medellín, Colombia based drug trafficking organization responsible for the importation of 60 tons of cocaine into the United States per year since 1999, or a total of 360 tons during that time period. The HENAO-Mejia organization was one of eight different CPOTs dismantled in 2003.

Seizure of 11,200 MDMA Tablets and 300 Pounds of Marijuana at the United States-Canada Border. On September 10, the DEA Spokane Resident Office reported the seizure of 11,200 MDMA tablets and 300 pounds of high-potency marijuana by the U.S. Border Patrol at the United States border with Canada in eastern Washington State. Two U.S. citizens were arrested while attempting to enter the United States with the drugs. Subsequent investigation resulted in the arrest of a Vietnamese national in Seattle, Washington. Investigative information indicates the pair were acting as couriers for a Vancouver, British Columbia based organization and had made three trips to the United States within the past two months. The MDMA and marijuana were intended for distribution in the Seattle area. This investigation was conducted with Immigration and Customs Enforcement, the Internal Revenue Service, the Washington Highway Patrol, the Spokane County Sheriff's Office, the Spokane Police Department, and the Royal Canadian Mounted Police.

Consolidated Priority Organization Target (CPOT) Itzhak ABERGIL Arrested. On September 7, the DEA Brussels Country Office reported the arrest of CPOT Itzhak ABERGIL in Amsterdam, Holland. ABERGIL, the leader of an international drug trafficking organization based in Israel, was detained for further investigation by Dutch law enforcement authorities at the request of the Belgian Federal Police. ABERGIL's organization is being investigated by United States authorities for numerous criminal activities including trafficking in cocaine and MDMA, money laundering, kidnapping, murder, extortion, and illegal gambling. His organization operates in the United States, Europe, and other countries.

Cooperative Operation Resulted in Seizure of 33 Pounds of Heroin and Weapons in Afghanistan. On August 31, the DEA Kabul Country Office in conjunction with the newly formed Afghanistan Counter Narcotics Police, Narcotics Interdiction Unit (NIU), seized 33 pounds of heroin and a weapons cache at a remote rural residence in Kunduz Province, Afghanistan. The weapons included assault rifles, a machine gun, and a rocket propelled grenade launcher with multiple rounds. One Afghan national was arrested. The operation involved 16 hours travel one way by a convoy of police vehicles to reach the target site and was the first raid operation conducted by the NIU outside of the Kabul area.

Seizure of One Ton of Opium and Weapons in Afghanistan. On August 30, the DEA Kabul Country Office reported the seizure of one ton of opium, a cache of weapons, and a rocket launcher in an operation conducted jointly with the Afghanistan Counter Narcotics Police in Helmand Province,

Afghanistan. The opium and weapons were seized from two adjacent rural residences and included six AK-47 rifles, a rocket propelled grenade (RPG) launcher, and several RPG rounds. Two individuals were arrested during the operation.

Operation Cyber-Pharming, Pharmaceutical Controlled Substance Internet Trafficking Organization Dismantled in Thailand. On August 26, the DEA Bangkok Country Office and DEA Newark Division culminated an eight-month investigation with the dismantlement of a pharmaceutical controlled substance internet trafficking organization in Thailand. The Royal Thai Police arrested Achitphon KHONSEECHAI, the leader of the organization, and seven associates on charges that could result in a sentence of more than 20 years to life imprisonment. According to intelligence information, KHONSEECHAI operated a Bangkok-based internet website and pharmacy that shipped millions of dosage units of various pharmaceutical controlled substances, including Valium, Xanax, phenobarbital, and codeine combination drugs, to at least 36 states since 2003. Customers of the website were only required to complete an on-line questionnaire prior to receiving drugs. Seized during the operation were approximately 500,000 dosage units of various pharmaceutical controlled substances, a credit card processing machine, computers and hard drives. This investigation was conducted in coordination with the following Thai agencies: Customs Department, Bangkok Intelligence Center, Office of the Narcotics Control Board, Postal Inspectors, Food and Drug Administration, and Express Mail Service.

Arrest of Fuerzas Armadas Revolucionarias de Colombia (FARC) Associate in Panama. On August 6, Miguel OSORIO-Castaño, a FARC associate and drug transportation broker, was arrested in Panama as part of a two-year investigation conducted by the DEA Special Operations Division Bilateral Case Group. OSORIO-Castaño was indicted in April 2004 in the United States District Court, District of Columbia, for conspiracy and intent to import cocaine into the United States. According to intelligence information, OSORIO-Castaño is a member of the Jose RODRIGUEZ cocaine trafficking organization associated with FARC leader and CPOT Jose Benito CARBRERA-Cuevas. The RODRIGUEZ drug trafficking organization is responsible for the importation of approximately five tons of cocaine monthly to the United States from Colombia since 2003. OSORIO-Castaño was expelled from Panama and transported to the United States by DEA aircraft. This investigation was conducted with DEA County Offices in Bogotá, Panama City, Brasilia, Caracas, Asuncion, Curacao, and The Hague, the DEA Sao Paulo Resident Office, and the Panamanian National Police.

Operation Tornado, Seizure of Fuerzas Armadas Revolucionarias de Colombia (FARC) Cocaine Laboratory in Colombia. On August 5, in coordination with the DEA Bogota Country Office, the Colombian National Police Anti-Narcotics Jungla Group seized an active cocaine hydrochloride (HCL) laboratory operated by the FARC. The laboratory was located near the town of Pisanda in the Narino region of Colombia. Production capacity of the laboratory is estimated at 1.6 tons of cocaine per week. Total seizures included 1.6 tons of cocaine HCL, 1,300 pounds of solid processing chemicals, and 5,000 gallons of liquid chemicals

Operation Cold Remedy/Aztec Flu, Seizure of 11.5 Million Pseudoephedrine Tablets in Mexico. On July 31, based on information provided by the DEA Guadalajara Resident Office, the Agencia Federal de Investigaciones (Mexican Federal Police) seized 11.5 million tablets of pseudoephedrine at the port of Manzanillo. The tablets were sent by a Hong Kong pharmaceutical manufacturer for delivery to a fictitious company in Mexico. If converted, the pseudoephedrine would have yielded approximately 1,000 pounds of methamphetamine or 96 million dosage units. On July 8, the Agencia Federal de Investigaciones seized another of 4 million tablets of pseudoephedrine in Mexico City. These tablets were also sent by a Hong Kong pharmaceutical manufacturer for delivery to a fictitious company in Mexico. If converted, the pseudoephedrine would have yielded approximately 33.6 million dosage units of methamphetamine. The investigations were conducted in coordination with the Subprocuraduria de Investigaciones Especializada en Delincuencia Organizada (Mexican Prosecutor's

Office). As of December 31, 2004, Operation Aztec Flu/Operation Cold Remedy has resulted in the seizure of more than 67 million pseudoephedrine tablets.

Operation Bulldozer, Arrest of CPOT Transportation Officer. On July 29, the DEA Bogotá Country Office reported the arrest of Mauricio JARAMILLO-Correa, a transportation officer for the Colombia-based Victor and Miguel MEJIA-Munero CPOT drug trafficking organization. JARAMILLO-Correa was arrested by the Colombian National Police Sensitive Investigative Unit at a ranch near Medellín, Colombia. In August 2003, JARAMILLO-Correa was indicted in the U.S. District Court, Southern District of Texas, for conspiracy and importation of cocaine from Panama into the United States. As of October 1, 2004, this investigation has resulted in 42 arrests and the seizure of 2,226 kilograms of cocaine, 5 kilograms of heroin, and \$2.8 million in U.S. currency. This investigation was coordinated by the DEA Special Operations Division and conducted by the DEA Corpus Christi Resident Office, Panama and Mexico City Country Offices, Panama's Policia Tecnica Judicial, and the Mexican Agencia Federal de Investigaciones.

Operation Streamline, Arrest of Proposed CPOT Juan Carlos CRESPO-Ballesteros. On July 27, a two-year Organized Crime Drug Enforcement Task Force (OCDETF) investigation conducted by the DEA Bogotá Country Office resulted in the arrest of proposed Colombian heroin CPOT, Juan Carlos CRESPO-Ballesteros, and four bodyguards by the Colombian National Police. CRESPO-Ballesteros was indicted during June 2004 in U.S. District Court, Southern District of Florida, for conspiracy to import heroin into the United States. According to intelligence information, CRESPO-Ballesteros is linked to the Fuerzas Armadas Revolucionarias de Colombia (FARC) and was responsible for the importation of approximately 1,000 pounds of heroin per year from Colombia to the United States since 2002. The drugs have an estimated street value of more than \$100 million. Investigative efforts revealed that drug proceeds were returned to Colombia by body couriers and wire transfers. Ten individuals who regularly received drug proceeds from the organization are being prosecuted in Colombia. As of October 1, 2004, this investigation has resulted in 32 arrests and the seizure of over 130 pounds of heroin. The investigation was coordinated by the DEA Special Operations Division and conducted with the DEA New York, Newark, Philadelphia and Miami Divisions and the DEA Charlotte District Office.

Operation Rio Tuluá, Seizure of Three Fuerzas Armadas Revolucionarias de Colombia (FARC) Cocaine Laboratories in Colombia. On July 18 and 26, in coordination with the DEA Bogotá Country Office, the Colombian National Police (CNP) Anti-Narcotics Jungla Group seized three active cocaine hydrochloride (HCL) laboratories operated by the FARC. The laboratories were located in the Tuluá, Valle del Cauca area of Colombia. Total seizures from the laboratories included over 3 tons of cocaine HCL, 16.5 tons of solid processing chemicals, and 3,000 gallons of liquid chemicals. These seizures are part of a DEA and CNP cooperative effort initiated in July 2004 to target cocaine processing laboratories in the region

\$979,000 Seized from Bank Accounts of Consolidated Priority Organization Target (CPOT) Hernan PRADA-Cortez. From July 19 to July 26 as the result of a four-year Organized Crime Drug Enforcement Task Force (OCDETF) investigation, the DEA Orlando District Office seized a total of \$979,000 from bank accounts used to launder drug proceeds for the CPOT Hernan PRADA-Cortez cocaine trafficking organization. According to intelligence information, these U.S. bank accounts were utilized to wire money for PRADA-Cortez and other drug trafficking organizations from the United States to Colombian-based money brokers. Investigative information identified the laundering of over \$3.6 million in drug proceeds from August 2000 through April 2004. To date, this investigation has resulted in the December 2003 arrest of Regional Priority Organization Target Carlos OVALLE, the seizure of over \$3 million, and the identification of over 50 domestic and international bank accounts used to launder drug proceeds.

Operation Synergy, Heroin Trafficking Organization Dismantled. On July 8, a one-year multi-jurisdictional OCDETF investigation culminated with the dismantlement of a Colombian heroin trafficking organization. Based on an indictment obtained in U.S. District Court in the Southern District of Florida, Luis Alfonso ALAYON-Cortes, the leader of the organization, and 23 associates were arrested in the United States, Colombia, and the Dominican Republic. According to intelligence information, the ALAYON-Cortes organization imported more than 60 pounds of heroin into the United States per month since 2003. During the investigation, a clothing factory operated by the organization was discovered in Ecuador where kilogram quantities of heroin were sewn in clothing for smuggling by couriers. To date, the investigation has resulted in 58 arrests and the seizure of 225 pounds of heroin. This Priority Target investigation, entitled Operation Synergy, was coordinated by the DEA Special Operations Division and conducted by DEA offices in New York; Boston; New Haven; Cleveland; Orlando; Tampa; Miami; Bogotá, Colombia; Caracas, Venezuela; and Quito, Ecuador. The Federal Bureau of Investigation, Immigration and Customs Enforcement, and the Colombian National Police also participated in this investigation.

2nd & 3rd Quarter FY2004 (January 1, 2004-June 30, 2004)

\$2.1 Million Seized at Cali Airport. On June 21, the DEA Bogotá Country Office (BCO) reported a total of over \$2.1 million in seizures of U.S. currency at the Cali International Airport. The seizures were accomplished by the DEA trained and equipped Colombian National Police, Cali Airport Interdiction Unit (CAIU). Seizures were made on two separate dates in June from four couriers arriving in Colombia from Mexico. Initiated in April 2004 to detect passengers engaged in drug trafficking or currency smuggling, the CAIU is part of an overall Colombian airport interdiction program started by the BCO in 2003.

Operation Lemony, Seizure of 1,400 Pounds of Cocaine from Sailing Vessel. On June 20, 2004, as the result of an investigation conducted by the DEA Santo Domingo Country Office and the DEA Special Operations Division Bilateral Case Group, the Spanish National Police seized over 1,400 pounds of cocaine from a sailing vessel located off the coast of Spain. The captain and a crew member were arrested. Seven additional arrests were made at two locations in Spain. According to intelligence information, the vessel was utilized by a cocaine trafficking organization based in the Dominican Republic to transport cocaine from Colombia to the United States and Europe. The investigation, also conducted with Her Majesty's Customs and Excise, has resulted in a total of 30 arrests and the seizure of 3,488 kilograms of cocaine.

OCDETF Investigation Culminated with Dismantlement of a Marijuana Trafficking Organization. On June 17, a one-year OCDETF and Priority Target investigation conducted by the DEA Albany District Office culminated in the dismantlement of a high-potency marijuana trafficking organization operating in the United States and Canada. The leader of the organization, Lawrence MITCHELL, and 26 associates were arrested. One of the individuals arrested was a dispatcher with the New York State Police. According to intelligence information, since 2002, the MITCHELL organization imported over 800 pounds of marijuana per month from Canada to the United States. MITCHELL, a Native American, resided on the Canadian side of the Akwesasne-Mohawk Indian Reservation and utilized the remote nature of the area to insulate his trafficking activities. This investigation was coordinated by the DEA Special Operations Division and conducted with the Internal Revenue Service, Immigration and Customs Enforcement, the U.S. Border Patrol, the Royal Canadian Mounted Police, the St. Regis Mohawk Tribal Police, and the New York State Police.

OCDETF Investigation Culminated with Dismantlement of a Marijuana Trafficking Organization. On June 17, a one-year OCDETF and Priority Target investigation conducted by the DEA Albany District Office culminated in the dismantlement of a high-potency marijuana trafficking organization operating in the United States and Canada. The leader of the organization, Lawrence

MITCHELL, and 26 associates were arrested. One of the individuals arrested was a dispatcher with the New York State Police. According to intelligence information, since 2002, the MITCHELL organization imported over 800 pounds of marijuana per month from Canada to the United States. MITCHELL, a Native American, resided on the Canadian side of the Akwesasne-Mohawk Indian Reservation and utilized the remote nature of the area to insulate his trafficking activities. This investigation was coordinated by the DEA Special Operations Division and conducted with the Internal Revenue Service, Immigration and Customs Enforcement, the U.S. Border Patrol, the Royal Canadian Mounted Police, the St. Regis Mohawk Tribal Police, and the New York State Police.

International Crystal Methamphetamine Trafficking Organization Dismantled, Third “Super-Laboratory” Seized. On June 9, based on information provided by the DEA Kuala Lumpur Country Office, the Royal Malaysian Police Narcotics Department culminated an 18-month investigation with the dismantlement of a crystal methamphetamine trafficking organization in Malaysia. The leader of this organization, Kwok Hung LAM, and seven senior members were arrested. According to intelligence information, LAM is associated with Chinese organized crime and operated several crystal methamphetamine laboratories in Asia. Simultaneous with the arrest of LAM, a crystal methamphetamine “super laboratory” operated in Fiji by the LAM organization was seized as the result of a six-month DEA Canberra Country Office cooperative investigation with the Fijian National Police. Seven additional individuals were arrested at that time. The laboratory had a production capacity of 50 pounds of crystal methamphetamine per batch. This is the third crystal methamphetamine “super laboratory” seized on the Island of Fiji. These investigations were also conducted with the assistance of the Australian Federal Police and the New Zealand National Police.

Organized Crime Drug Enforcement Task Force (OCDETF) Investigation Culminated with the Dismantlement of an International Marijuana Trafficking and Money Laundering Organization. On June 7, the DEA Detroit Division culminated a one-year Priority Target OCDETF investigation with the dismantlement of an international marijuana trafficking and money laundering organization. The operation resulted in the arrest of 31 individuals in the United States and Canada, including leaders of the organization Oanh PHAN and Trong NGUYEN. According to intelligence information, since 2002, the organization operated several large-scale indoor marijuana cultivation sites in Canada. The resulting high potency marijuana was subsequently exported to distribution cells in the United States. During a six month period in 2003, the organization produced approximately 10 tons of marijuana per month. An estimated \$70 million in drug proceeds was laundered by the organization from the United States to Toronto, Canada. To date, the investigation has resulted in 41 arrests and the seizure of over \$2 million in U.S. currency. This investigation was supported by the DEA Special Operations Division and conducted with the Michigan State Police, Immigration and Customs Enforcement, the Internal Revenue Service, the Canadian Customs and Revenue Agency, and the Royal Canadian Mounted Police.

Two Pharmaceutical Companies, 350,000 MDMA Tablets, and 1.4 Tons of Methaqualone Seized in India. On June 5, the DEA New Delhi Country Office reported the seizure of two pharmaceutical manufacturing companies, 350,000 MDMA tablets, and 1.4 tons of methaqualone (Quaaludes) by the Indian Directorate of Revenue Intelligence. This is the largest seizure of MDMA ever in India. Mohan MANKANI, owner of a pharmaceutical company in Bidar, India, and Anil TYAGI, owner of a pharmaceutical company in Jeedimetla, India, were among the five individuals arrested. According to intelligence information, MANKANI is the leader of an India-based trafficking organization with ties to the United Arab Emirates. The MDMA and methaqualone were manufactured at MANKANI’s company and tableted at TYAGI’s firm.

Seizure of 6.2 Tons of Cocaine and Arrest of Six in Venezuela. On June 11, as the result of an investigation conducted by the DEA Caracas Country Office, the Cuerpo de Investigaciones Cientificas Peanles y Criminalisticas (Venezuelan Federal Police) seized 6.2 tons of cocaine from three ranches located in the city of Valle de la Pascua, Venezuela. Five Venezuelans and one

Colombian national were arrested during the operation. According to intelligence information, the ranches were utilized by a Colombian drug trafficking organization to store cocaine prior to shipment to Mexico and the United States. This investigation was conducted with the State of Guarico Police and the Direccion Investigaciones Servicios Inteligencia Policial (Venezuelan Intelligence Service).

Organized Crime Drug Enforcement Task Force (OCDETF) Investigation Dismantled Marijuana Trafficking and Money Laundering Organization. On June 3, a 17-month Priority Target investigation conducted by the DEA Seattle Field Division culminated in the dismantlement of a marijuana trafficking and money laundering organization in Seattle, Washington. Five individuals, including the leader of the organization Tri Duc PHAN, were arrested and charged with conspiracy to distribute marijuana, money laundering, and bulk cash money smuggling. According to intelligence information, since 2002, the PHAN organization was distributing approximately 800 pounds of high-potency marijuana per month from Canada to Washington State for distribution in the United States. An estimated \$1 million in drug proceeds per month were subsequently transported to Canada in bulk cash shipments. To date, the investigation has resulted in the seizure of \$360,000 in U.S. currency with an anticipated additional forfeiture of \$1.26 million. This investigation was conducted in coordination with Immigration and Customs Enforcement and the Royal Canadian Mounted Police.

Five Arrested in Mexican Pseudoephedrine Trafficking Investigation. On May 26, a 14-month investigation conducted by the DEA Hong Kong Country Office (HKCO) and the DEA Mexico City Country Office (MCCO), resulted in the arrest of five Mexican nationals by the Agencia Federal de Investigaciones (Mexican Federal Police). The individuals were arrested after taking possession of a shipment of pharmaceutical pseudoephedrine sent from Hong Kong to Mexico. According to intelligence information, from December 2001 through December 2003, 85 shipments of pseudoephedrine, totaling over 422 million dosage units, were sent by Hong Kong pharmaceutical companies to fictitious businesses in Mexico. If converted, the pseudoephedrine would yield approximately 19 tons of methamphetamine, or 3.5 billion dosage units. Since March 2003, this operation has resulted in 21 arrests and the seizure of approximately 40 million tablets of pseudoephedrine in the United States, Panama and Mexico. This investigation was conducted in coordination with the Subprocuraduria de Investigaciones Especializada en Delincuencia Organizada (Mexican Prosecutor's Office).

Seizure of 264 Pounds of Heroin in Afghanistan. On May 24, based on information obtained by the DEA Kabul Country Office and the U.S. Marine Corps Anti-Terrorist Intelligence Cell, the Afghanistan Ministry of the Interior Counter Narcotics Police and the Kabul City Gates Team seized 264 pounds of heroin in Kabul, Afghanistan. One Afghan national was taken into custody. According to intelligence information, the heroin had a wholesale value of \$500,000.

10.2 Tons of Marijuana Seized in Mexico. On May 21, based on information provided by the DEA Guadalajara Resident Office, the Mexican Ministerio Publico Federal Office (Federal Prosecutor's Office) seized 10.2 tons of marijuana from a commercial tanker-trailer truck as it was preparing to depart Guadalajara, Mexico. The driver of the truck was arrested. According to intelligence information, the marijuana, with a wholesale value of \$500,000, was destined for the United States.

Organized Crime Drug Enforcement Task Force (OCDETF) Investigation Results in \$20 Million Forfeiture and Dismantlement of an International Money Laundering Organization. On May 4, the DEA New York and Miami Divisions, in conjunction with the DEA Bogotá Country Office, culminated a two-year, multi-jurisdictional OCDETF investigation with the dismantlement of an international money laundering organization. The operation resulted in the arrests of 25 individuals in the United States, Colombia and Canada including leaders Gabriel and Nicholas OTALVARO-Ortiz. Four Colombian companies involved in the scheme were also indicted and their common owner has agreed to the forfeiture of \$20 million from a seized bank account. Warrants have been issued for an additional \$1 million from more than 20 other bank accounts. The OTALVARO-Ortiz money

laundering organization utilized the Colombian Black Market Peso Exchange to purchase drug proceeds from the United States and Canada at a reduced rate. This investigation was coordinated by the DEA Special Operations Division and the Office of Financial Operations and conducted with the assistance of the Internal Revenue Service; the New York Police Department; the Office of the Special Narcotics Prosecutor for the City of New York; the Manhattan District Attorney's Office; the South Florida Money Laundering Strike Force; the Royal Canadian Mounted Police; the British National Crime Squad; and the Colombian Departamento Administrativo De Seguridad.

Newly Constructed Cocaine Processing Laboratory Dismantled in Peru. On April 25, the DEA Lima Country Office and the Peru Sensitive Investigative Unit culminated a two-month investigation with the dismantlement of a new 1,200 square foot cocaine processing laboratory in a remote area of Peru. Four Peruvian nationals were arrested at the time. According to investigators on-site, the laboratory was fully equipped but had not yet been utilized. Based on the amount of raw material present, the laboratory had a production capacity of 2 metric tons of finished cocaine. Seized during the operation were 350 pounds of cocaine base; large quantities of processing chemicals, including approximately 4,000 gallons of hydrochloric acid and 220 pounds of potassium permanganate; a 20-ton hydraulic press; and rectangular aluminum molds to form cocaine "bricks." To date, this investigation has resulted in the seizure of over 1,200 pounds of cocaine base and the arrests of 15 individuals. The operation was conducted with the assistance of the Peruvian National Police.

Seizure of Two Fuerzas Armadas Revolucionarias de Colombia (FARC) Cocaine HCL Laboratories in Colombia. On April 25 and 28, in coordination with the DEA Bogotá Country Office, the Colombian Military Counter Drug Brigade seized two cocaine laboratories operated by the Revolutionary Armed Forces of Colombia (FARC). Located in the Narino region of Colombia, one of the labs had a production capacity of five metric tons of cocaine per month. The other, also in Narino, was capable of producing three metric tons of cocaine per month. These seizures were part of an ongoing cooperative effort that has resulted in the destruction of six cocaine HCL labs, over 200 cocaine base labs, approximately 160 pounds of cocaine HCL and 1000 pounds of cocaine base.

Colombian Heroin Trafficking Organization Dismantled. On April 23, the DEA Bogotá Country Office and DEA New York Division culminated a seven-month investigation of a Pereira, Colombia heroin trafficking organization with the arrest of 21 individuals. The organization has been effectively dismantled by this operation. Twenty of the arrests, including organization leaders and brothers Omar DIAZ-Betancur and Hernan DIAZ-Betancur, occurred in Colombia and one in New Jersey. According to intelligence information, the DIAZ-Betancur drug trafficking organization was responsible for the monthly importation of 10 to 20 pounds of heroin from Colombia to New York since 2003. This investigation was coordinated by the DEA Special Operations Division and conducted with the Colombian National Police. To date, the investigation has resulted in the seizure of over 600 pounds of heroin and the arrest of 31 persons.

Arrest of Consolidated Priority Organization Target (CPOT) Otto Roberto HERRERA-Garcia. On April 21, based on an indictment obtained by the DEA SOD Bilateral Case Group, the Mexican Agencia Federal de Investigaciones (AFI) assisted by the DEA Mexico City Country Office, arrested CPOT Otto Roberto HERRERA-Garcia at the Mexico City airport. HERRERA-Garcia is the leader of a Guatemalan-based drug transportation organization responsible for the importation of cocaine from Colombia to the United States through El Salvador, Guatemala and Mexico. Intelligence information indicates the organization transported between five and seven metric tons of cocaine monthly since 2001. HERRERA-Garcia was indicted in October 2003 in the District of Columbia for conspiracy and importation of cocaine. HERRERA-Garcia is being detained by Mexican authorities pending extradition to the United States. To date, this two-year investigation has resulted in four arrests in El Salvador, Guatemala and Panama and the seizure of over \$14 million dollars in U.S. currency.

Results of First United States/Mexico Sanction-Based Demand Reduction Initiative Announced.

On April 13, the DEA San Diego Division released the results of a 60-day methamphetamine initiative which for the first time, coordinated sanction-based demand reduction efforts in the United States and Mexico. The program, known as “Operation Speed Bump,” was designed to combine law enforcement with treatment, raise public awareness, and foster cooperation in the San Diego, California and Tijuana, Mexico areas. The operation resulted in a total of 834 trafficking arrests in both countries. Over 40 pounds of methamphetamine was seized and three clandestine methamphetamine laboratories in Mexico were located and dismantled. In addition, 75 methamphetamine abusers were referred for drug treatment, 17 demand reduction presentations were given to school and civic groups and 11 “drug-endangered” children were placed into the protective custody of California’s child welfare service. The bi-lateral effort included local, state and Federal law enforcement, in conjunction with health officials, in the United States and Mexico.

Shipment of 4.4 Tons of Methamphetamine Precursor to Mexico Blocked. On April 5, the DEA Office of Diversion Control, Chemical Control Section, blocked the shipment of 4.4 tons of bulk pseudoephedrine powder destined for Mexico. If used in a clandestine laboratory, the pseudoephedrine could make over 2.5 tons of methamphetamine. Originating in India and intended for a pharmaceutical company in Guadalajara, Mexico, the pseudoephedrine was to be brought into the United States for re-export. Based on an agreement between the Government of India and DEA, India will not export pseudoephedrine to the United States without authorization from DEA. According to intelligence information, approximately 80 percent of the Mexican company’s customers were either fictitious or ordered lesser amounts of pseudoephedrine than shipment records indicated. In light of the intelligence, DEA declined to authorize the shipment and India refused to export the pseudoephedrine. Information concerning this action was referred to the Mexican Attorney General’s Office. This investigation was conducted with the assistance of the DEA Mexico City Country Office and the Mexican Federal Commission for the Protection against Sanitary Risks.

Sicilian Organized Crime Drug Trafficking Organization Dismantled. On April 4, as a result of a three-year investigation conducted by the DEA Rome Country Office, the Spanish National Police arrested Sicilian Organized Crime members and Priority Targets Roberto and Alesandro PANNUNZI in Spain. The drug trafficking activities of the PANNUNZI organization have been documented for over 30 years. According to intelligence information, in 2001 and 2002 the organization arranged shipments of cocaine totaling over eight tons from Colombia to be distributed to Italian crime groups in Europe. The PANNUNZI organization operated in Colombia, Peru, Venezuela, Portugal, Spain, Greece, South Africa, Switzerland, and the Netherlands. The arrests completed the dismantlement of the organization. To date, this investigation has resulted in a total of 42 arrests in three countries.

Seizure of 4.4 Tons of Morphine Base in Turkey. On March 29, the Turkish National Police (TNP) in coordination with the DEA Istanbul Resident Office (IRO) arrested five Turkish nationals and seized approximately 4.4 tons of morphine base from a truck located in an industrial complex in Istanbul, Turkey. Information obtained from the TNP has indicated this seizure is associated with the Atilla OZYILDIRIM Priority Target Organization. OZYILDIRIM was arrested in March 2002, at which time 7.5 tons of morphine base was seized. Investigative efforts revealed OZYILDIRIM and his criminal associates comprised a major international narcotics trafficking organization that was involved in not only the production of heroin but its distribution as well. To date, the investigation has resulted in 33 arrests, the seizure of approximately 12 tons of morphine base, 1,942 pounds of heroin, 660 gallons of acetic anhydride, a chemical precursor necessary for the production of heroin, and two operational heroin conversion laboratories.

Consolidated Priority Organization Target (CPOT) Linked Money Laundering Cell Dismantled.

On March 25, an 18-month multi-jurisdictional OCDETF investigation conducted by the DEA Los Angeles Division with the assistance of the DEA Miami Division and supported by the DEA Special Operations Division dismantled an international money laundering organization linked to CPOT

Itzhak ABERGIL. ABERGIL is the head of an Israeli criminal organization operating in Israel, Europe, the United States and other countries. Arrested on charges of extortion and money laundering were six individuals in Los Angeles, California; Miami, Florida; and Toronto, Canada to include Priority Targets Hai WAKNINE and Gabriel BEN-HAROSH. WAKNINE and BEN-HAROSH were responsible for the financing and facilitating of MDMA trafficking from Belgium and Holland into the United States. To date, the investigation has resulted in 46 arrests, the seizure of 2.8 million tablets of MDMA and over \$2 million dollars.

Extradition of Consolidated Priority Organization Target (CPOT) Juquin Mario VALENCIA-Trujillo. On March 18, CPOT Juquin Mario VALENCIA-Trujillo was extradited to the United States from Colombia to face cocaine and money laundering charges in the Middle District of Florida. VALENCIA-Trujillo was the head of a Colombian cocaine trafficking and money laundering organization that, according to intelligence estimates, was responsible for smuggling more than 100 metric tons of cocaine per year into the United States from 1991 through 1999. The organization transported the cocaine from Colombia through Mexico for distribution in Tampa and Miami, Florida; Houston, Texas; Los Angeles, California and New York City. The January 2003 arrest of VALENCIA-Trujillo preceded the seizure by the Colombian Government of an estimated \$25 million of his assets. The arrest and seizure resulted from Operation Panama Express, an ongoing nine-year Organized Crime and Drug Enforcement Task Force (OCDETF) investigation being conducted by the Tampa District Office, in conjunction with the Federal Bureau of Investigation, the Bureau of Immigration and Customs Enforcement and the United States Coast Guard. Thus far, Operation Panama Express has resulted in a combined total of more than 500 arrests and the seizure of 260 metric tons of cocaine from February 2000 to date.

Two Organized Crime and Drug Enforcement Task Force (OCDETF) Investigations Resulted in Arrests of 20 Airline Employees for Cocaine Smuggling. On March 11, the DEA Caribbean Division culminated two multi-jurisdictional OCDETF reverse undercover investigations with the arrests of 20 current and former airline ramp workers employed at the Luis Munoz Marin International Airport (LMMIA) in Puerto Rico. An additional employee later surrendered to authorities. Initiated in 2002, these Priority Target Organization investigations targeted the cocaine trafficking activities of two groups of airline ramp employees that facilitated the transportation of cocaine originating in Central and South America past security checkpoints at LMMIA for distribution to airports located in Pennsylvania, Texas, Florida, New Jersey and New York. These individuals have been charged with conspiracy and trafficking of a combined total of 528 pounds of cocaine. An additional 390 pounds of cocaine were seized during the course of both investigations. These investigations were conducted with the assistance of the Puerto Rico Police Department and the Puerto Rico Port Authority.

Colombian Money Laundering Organization Dismantled. On March 5, the Colombian National Police, Judicial Police Section, the DEA Bogotá Country Office and the DEA New York Division culminated an eighteen-month investigation that dismantled the Andres TRUJILLO-Botero Priority Target money laundering organization. The investigation revealed that since 2002, TRUJILLO-Botero and his associates were responsible for the transfer of approximately \$300,000 per week in heroin distribution proceeds from New York City to Medellin, Colombia. In order to evade law enforcement detection, the organization wired money to over 100 different recipients in Colombia. The organization paid the recipients to transfer the money to Luis Fernando ZAPATA-Ospina, head of the heroin trafficking organization. A total of 16 arrests were made in Colombia and New York, including TRUJILLO-Botero and ZAPATA-Ospina. According to intelligence information, the ZAPATA-Ospina heroin trafficking organization was responsible for the monthly distribution of approximately 33 to 44 pounds of heroin from Colombia to the United States since 2002.

Colombian Terrorist Associated Cocaine Trafficking Organization Dismantled. On March 5, a one-year, multi-national effort culminated in the complete dismantlement of a significant international cocaine trafficking organization headquartered in Colombia. The investigation resulted in the arrest of

Nayibe ROJAS-Valderama, the organization's U.S. distribution cell head and 21 associates in Colombia and Panama. The Jose Benito CABRERA trafficking group, an arm of the Fuerzas Armadas Revolucionarias de Colombia (FARC), was responsible for the monthly distribution of approximately 15 to 20 metric tons of cocaine from Colombia through Panama to the United States since 2002. Colombian President Alvaro Uribe commented that the operation could be the most significant blow inflicted on the FARC in recent times. Outstanding investigative efforts by the DEA Bogotá and Panama City Country Offices, DEA Special Operations Division (SOD) and the Colombian and Panamanian Attorney Generals' Office resulted in the December 2003 combined indictment of the entire Jose Benito CABRERA trafficking organization.

Organized Crime and Drug Enforcement Task Force (OCDETF) Investigation Culminated in 12 Arrests and the Dismantlement of a Cocaine Trafficking Organization. On March 4, a multi-jurisdictional OCDETF investigation of a Priority Target Organization trafficking in cocaine was culminated by the DEA Caribbean Division with the arrests of 12 individuals, including Aureliano GIRAUD-Pineiro. Arrests occurred in Puerto Rico, Maryland and Florida. The investigation revealed that the cocaine trafficking organization of Antonio ROBLES-Ramos was responsible for the distribution of approximately 11 tons of cocaine to the United States since 1996. The cocaine was transported from Colombia to the Virgin Islands or the Dominican Republic to Puerto Rico by "go fast" boats and then shipped to the United States for distribution. ROBLES-Ramos was arrested by the Caribbean Division in 1999. Follow-up investigation revealed that GIRAUD-Pineiro utilized fictitious and legitimate businesses to launder drug proceeds on behalf of the ROBLES-Ramos organization. Other agencies participating in this investigation included the Internal Revenue Service; Bureau of Immigration and Customs Enforcement; the Puerto Rico Police Department and Treasury Department; and the State Bureau of Investigation. To date, this investigation has resulted in 69 arrests, the seizure of over 1,700 pounds of cocaine and approximately \$2 million dollars in assets.

Arrest of Consolidated Priority Organization Target (CPOT) Jose Arismendy ALMONTE-Pena. On February 28, the Dominican Republic National Directorate for Drug Control, Sensitive Investigative Unit, with the assistance of the DEA Santo Domingo Country Office, arrested CPOT Jose Arismendy ALMONTE-Pena. ALMONTE-Pena is the head of a cocaine trafficking organization that since 2000 was responsible for transporting approximately 4,400 pounds of cocaine per month from Colombia and Venezuela through Puerto Rico and the Caribbean for distribution in Miami, Florida, Washington, D.C. and New York City. Shipments of cocaine were primarily transported by "go-fast" boats, capable of reaching "drop" or transfer points without refueling. The arrest stems from a 13-month joint DEA and Federal Bureau of Investigation OCDETF investigation.

Violent Heroin and Cocaine Trafficking Organization Dismantled. On February 21, based on information provided by the DEA New York Division Task Force, the Dutch National Police, with the assistance of the DEA Curacao Country Office, arrested Regional Priority Organization Target Luis Alberto IBARRA at the Curacao, Netherlands Antilles International Airport. With the previous arrest of 17 associates, the arrest of IBARRA, a Venezuelan national, has effectively dismantled a violent heroin and cocaine trafficking organization. The IBARRA organization purchased heroin in Cucuta, Colombia, transported it to Caracas, Venezuela, then couriers would smuggle the heroin into the United States. The heroin was then distributed in Miami, Florida, Houston, Texas and Newark, New Jersey. According to intelligence information, since assuming the leadership of the organization in 2003, IBARRA has been responsible for the distribution of approximately 220 pounds of heroin to the U.S. per month. Intelligence information shows the organization transported several hundred pounds of cocaine from Venezuela to Amsterdam each month. It has been reported that this organization relied on corruption, torture, murder and intimidation to further its objectives.

Discovery of Underground Tunnel Leads to Indictments of Consolidated Priority Organization Target (CPOT) Linked Trafficker and Former Mexican Law Enforcement Official. On February 18, CPOT linked Rigoberto GAXIOLA-Medina and former Regional Director of the Mexican

Agencia Federal de Investigaciones (AFI) Juan Luis GUZMAN-Enriquez, as well as eight additional individuals were indicted in the United States and charged with conspiracy to distribute marijuana. The indictments are connected with the September 2003 discovery of a sophisticated underground tunnel linking Nogales, Arizona to Nogales, Sonora, Mexico. The tunnel was constructed and utilized by GAXIOLA-Medina to smuggle marijuana from Mexico to the United States. Two marijuana seizures made in 2003, totaling 1,237 pounds, have been linked to the tunnel. GAXIOLA-Medina and GUZMAN-Enriquez are currently in Mexican custody, pending extradition to the United States. GAXIOLA-Medina has been associated with fugitive CPOT Joaquin GUZMAN-Loera, a major trafficker of cocaine from Colombia through Mexico to the United States. The success of this bi-lateral investigation can be attributed to the outstanding cooperation between the DEA Nogales and Hermosillo Resident Offices and the Mexican AFI Sensitive Investigations Unit.

Autodefensas Unidas de Colombia (AUC)-Linked Terrorist Extradited to the United States. On February 13, Edgar Fernando BLANCO-Puerta was extradited from San Jose, Costa Rica to the United States, as a result of a three-year joint DEA Houston Division and Federal Bureau of Investigation Houston Field Office OCDETF investigation. BLANCO-Puerta and four associates were actively seeking to purchase Soviet manufactured arms in exchange for a combination of cocaine and cash totaling \$25 million dollars. On February 4, the Colombian National Police arrested BLANCO-Puerta's associate, Fany Cecilia BARRERA, in Medellin, Colombia. During undercover discussions, BARRERA described herself as an agent of the AUC's "purchasing department," as she negotiated the acquisition of military weapons. Subsequent to the extradition of BLANCO-Puerta and the anticipated extradition of BARRERA, all five members of this organization will face charges in the Southern District of Texas for conspiracy to distribute controlled substances and conspiracy to provide material support to a terrorist organization.

Extradition of Two Consolidated Priority Organization Targets (CPOT) from Thailand. On February 9, CPOTs Zalmi IBRAHIMI and Khalid Mohammad AZIZI, as well as three associates, were extradited to the United States from Bangkok, Thailand and were charged with conspiracy to distribute heroin. This Organized Crime Drug Enforcement Task Force (OCDETF) investigation determined that the IBRAHIMI and AZIZI international heroin distribution and money laundering organization, which was based in Peshawar, Pakistan, was responsible for the distribution of 2.25 metric tons of heroin into the United States and Canada on a yearly basis since 2000. The DEA Mid-Atlantic Laboratory determined the purity of heroin distributed by this organization was as high as 95 percent. To date, this investigation has resulted in the arrest of 13 individuals and the seizure of \$3 million in Bangkok, Thailand and \$1 million in the United States. This OCDETF investigation was a cooperative effort between the DEA Washington Division and the Federal Bureau of Investigation's Calverton, Maryland Office.

Bulgarian Amphetamine Trafficking Organization Disrupted. On February 4, the Bulgarian National Service for Combating Organized Crime, with the support of the DEA Athens, Greece Country Office, disrupted an amphetamine trafficking organization in Sofia, Bulgaria. The eight-month investigation resulted in the seizure of approximately 500 pounds of amphetamine tablets and the arrest of three Bulgarian nationals. Also seized were two tableting machines and binder material for making tablets.

Multi-National Investigation Dismantles Major International Cocaine Network. On January 28, a three-year multi-national investigation culminated in the dismantlement of a major international cocaine network based in Italy. The investigation, which targeted a maritime cocaine trafficking organization headed by Santo SCIPIONE, resulted in the arrest of 78 individuals in Italy, 15 in Colombia and one in Spain as well as the seizure of 5,838 pounds of cocaine. Evidence indicated SCIPIONE would provide direction to members of the organization in Colombia, Italy, Spain and Venezuela regarding shipments of cocaine sent from South America to Europe. SCIPIONE has been identified as a member of the N'Drangheta, an Italian organized crime syndicate based in Calabria,

Italy. Italian authorities have stated that the dismantlement of the SCIPIONE organization will significantly impact the ability of the N'Drangheta to organize cocaine shipments and to operate on an international scale. The success of this multi-national investigation can be attributed to the outstanding cooperation between the DEA Cartagena Resident Office, the DEA Rome Country Office, the Special Operations Division, Italian counterparts with the Central Anti-Drug Directorate and the Carabinieri Special Investigative Division, as well as law enforcement counterparts from Colombia, Spain, Australia, Holland and Venezuela.

Disruption of Transportation Organization Linked to Consolidated Priority Organization Target (CPOT). On January 27, the Nassau Country Office, in conjunction with the Bahamian Police Force, Miami Field Division and the Miami Office of the Bureau of Customs and Immigration Enforcement, culminated an investigation that resulted in the arrest of two members of a CPOT-linked transportation organization. The enforcement action was supported by Operation Bahamas, Turks and Caicos Island (OpBAT). The organization, which has been linked to CPOT Elias COBOS-Munoz, is responsible for transporting shipments of cocaine and marijuana from Jamaica through the Bahamas, with an ultimate destination of the United States. It is estimated that CPOT COBOS-Munoz is coordinating combined monthly shipments of approximately 2,200 and 2,640 pounds of cocaine and marijuana to locations within Jamaica, Canada or the United States. The two individuals were arrested in possession of 836 pounds of cocaine and 506 pounds of marijuana, as they attempted to enter the U.S. through Port Everglades in Fort Lauderdale, Florida.

Arrest of a Top Lieutenant in the Ismael ZAMBADA-Garcia CPOT Organization. On January 27, Javier TORRES-Felix was arrested by the Mexican military at a roadblock near Cuilican, Sinaloa, Mexico, based on evidence developed by the DEA Mexico Country Office and the Special Operations Division. TORRES-Felix is a top lieutenant in the Ismael ZAMBADA-Garcia CPOT organization, a major Mexican drug transportation and distribution organization operating in the United States. According to intelligence information, the organization transports 2,200 to 11,000 pounds of cocaine on a monthly basis from Colombia to the United States via Central America and Mexico using a fleet of fishing vessels and various types of airplanes. On January 8, 2003, TORRES-Felix, CPOT ZAMBADA-Garcia and others were named in a multi-count indictment returned by a grand jury in Washington, D.C. The Government of Mexico has agreed to honor the provisional arrest warrants requested by the Department of Justice. The arrest of TORRES-Felix has caused significant disruptions to the ZAMBADA-Garcia organization as TORRES-Felix was responsible for managing important drug transportation routes to Chicago, Los Angeles, New York and New Jersey.

Seizure of One Metric Ton of Heroin and arrest of seven Turkish Nationals in Istanbul, Turkey. On January 26, the Turkish National Police (TNP) Narcotics Division assisted by DEA culminated a two-month investigation of the Abdulmenaf DINC organization with the seizure of one metric ton of heroin and the arrest of seven individuals, including DINC. The heroin was concealed in an underground storage facility of a sugar factory in Istanbul, Turkey. This seizure has been described by the TNP as the largest heroin seizure ever in Turkey. The DEA Istanbul Resident Office and the DEA Ankara Country Office are assisting the TNP to develop and pursue international investigative leads in an attempt to identify the organization responsible for the importation of the heroin.

Discovery of 12 Bodies Leads to Arrest of 13 Mexican Police Officials. During the period of January 24-30, Mexican Agencia Federal de Investigaciones authorities (Mexican equivalent to the FBI) with assistance provided by the DEA Ciudad Juarez Resident Office and the Bureau of Immigration and Customs Enforcement discovered the bodies of 12 victims of a violent Mexican drug trafficking organization buried behind a house in Ciudad Juarez, Mexico. The ensuing investigation resulted in the arrest of 13 Mexican police officers for their participation in the murders. Evidence revealed the house is owned by Heriberto SANTILLAN-Tabares, a lieutenant in the CPOT Vicente CARRILLO-Fuentes cocaine and marijuana trafficking organization. On January 15, SANTILLAN-Tabares was arrested by the Bureau of Immigration and Customs Enforcement after his December

2003 indictment for conspiracy to import and distribute cocaine into the United States. The CARRILLO-Fuentes organization is believed to be responsible for transporting approximately 8,000 pounds of cocaine and 48,000 pounds of marijuana per year from Mexico to the United States. CPOT CARRILLO-Fuentes remains a fugitive on both U.S. and Mexican drug trafficking and money laundering charges.

Colombian Cocaine Initiative results in the disruption of the Pablo Andes ROMERO-Gomez Organization. On January 22, the Colombian National Police Special Investigative Unit, in coordination with the DEA Bogotá, Colombia Country Office, arrested 10 members of the Pablo Andes ROMERO-Gomez Organization operating in Medellín, Bogotá, Pereira, Puerto Nare, and Antioquia, Colombia. Intelligence developed during this 12-month operation indicated that the ROMERO-Gomez organization was responsible for the annual distribution of 24,000 pounds of cocaine to the United States since 2000. The arrested individuals have been charged with drug trafficking and money laundering.

Arrest of DEA Priority and OCDETF Target Arcangel HENAO-Montoya in Panama. On January 10, the Panamanian Judicial Police (PTJ) assisted by the DEA Panama City Country Office (PCCO) and Bogotá Country Office (BCO) along with the Special Operation Division's (SOD) Bilateral Case Group arrested Arcangel HENAO-Montoya, a DEA Priority and OCDETF target, at a farm outside Torti, Panama. A Colombian National and significant leader in the North Valley Cartel, HENAO-Montoya is on the Treasury Department's list of Specially Designated Narcotics Traffickers. The PTJ also arrested Lorena HENAO, sister to HENAO-Montoya who handles financial matters for the HENAO-Montoya family, and Lucio QUIENTERO-Marin, his bodyguard. All three were detained and await further action by Panamanian authorities. It is anticipated that HENAO-Montoya will be expelled from Panama and transported by a DEA aircraft to the United States.

Institution Building/Foreign Liaison

France

U.S. and GOF counternarcotics law enforcement cooperation remains excellent, with an established practice of information sharing. Since October 2001, the DEA's Paris Country Office (CO) and OCRTIS have been working together on an operation that has resulted in the seizure and/or dismantling of 17 operational, or soon-to-be-operational clandestine MDMA (Ecstasy) laboratories, and the arrests of more than 30 individuals worldwide. International Controlled Deliveries have resulted in nine lab seizures in the United States, two each in France, Germany, and Australia, and one each in New Zealand and Spain.

Vietnam

The Government of Vietnam (GVN) continued to make progress in its counternarcotics efforts during 2004. Specific actions included: sustained efforts of counternarcotics law enforcement authorities to pursue drug traffickers; increased attention to interagency coordination; continued cooperation with the United Nations Office on Drugs and Crime (UNODC); increased attention to both drug treatment and harm reduction; an increased tempo of public awareness activities; and additional bilateral cooperation on HIV/AIDS. Additionally, in March, the U.S.-Vietnam counternarcotics Letter of Agreement (LOA), which was negotiated to permit the United States to provide counternarcotics assistance to Vietnam, entered into force, and the two sides completed the first of the LOA projects. However, real operational cooperation between Vietnamese law enforcement and DEA's Hanoi Country Office (HCO) was minimal. Vietnam is a party to the 1988 UN Drug Convention, the 1961

UN Single Convention as amended by the 1972 Protocol and the 1971 UN Convention on Psychotropic Substances.

All international law enforcement representatives in Vietnam acknowledged that real operational cooperation on counternarcotics cases is minimal or nonexistent due to legal prohibitions against foreign security personnel operating on Vietnamese soil. Without changes in Vietnamese law to permit foreign law enforcement officers to work on drug cases in Vietnam, “cooperation” will remain a function of information exchange and Vietnamese police carrying out law enforcement activities on behalf of foreign agencies on a case-by-case basis. During 2004, GVN law enforcement authorities did not provide meaningful cooperation to DEA’s Hanoi country office. DEA agents have not been permitted to work with GVN counternarcotics investigators officially. Cooperation was limited to receiving information from DEA and holding occasional meetings. Thus far, the counternarcotics police have declined to share information with DEA or cooperate operationally. GVN officials explain that drug information is subject to national security regulations and not releasable to foreigners. To date, there has been nothing concrete to indicate that the GVN has any intention of taking the necessary administrative or legislative steps to permit DEA to expand beyond its current liaison role.

During 2004, the USG made contributions to two projects: “Measures to Prevent and Combat Trafficking in Persons in Vietnam,” and “Interdiction and Seizure Capacity Building with Special Emphasis on ATS and Precursors.” The ATS project achieved its main goals in 2004 with the signing of an interagency MOU and the establishment of six interagency task forces at key border “hotspots” around the country.

Syria

In meetings with Syrian officials, DEA officials continue to stress the need for diligence in preventing narcotics and precursor chemicals from transiting Syrian territory; the need to work with the Lebanese government on crop eradication programs and on dismantling drug laboratories in Syrian-controlled areas of Lebanon; and the necessity of terminating any involvement, active or passive, of individual Syrian officials in the drug trade.

DEA officials based in Nicosia maintain an ongoing dialogue with Syrian authorities in the Counternarcotics Directorate. In February, DEA officials based in Nicosia and Syrian Anti-Narcotics Department coordinated efforts, which led to the seizure of 18.8 kilograms of cocaine at Damascus Airport. Syrian Ministry of Interior officials characterize cooperation with the Nicosia DEA office as excellent.

South Africa

U.S. law enforcement officers from the DEA, FBI, DHS (Customs/Immigration), the Secret Service and the State Department successfully cooperate with their South African counterparts. The U.S. also urges the SAG to strengthen its legislation and its law enforcement system and thus become able to prosecute more sophisticated organized criminal activities, including drug trafficking. The Scorpions, with U.S. training, have targeted organized crime and high-profile crime of all sorts. Some training has also been provided to the national police, the metropolitan police forces of Johannesburg and Tshwane, the Special Investigating Unit, the Department of Home Affairs, the Customs and Revenue Service, and others.

Lithuania

USG and GOL law enforcement cooperation is very good. In 2004, the U.S. continued to support GOL efforts to strengthen its law enforcement bodies and improve border security. To strengthen regional cooperation in the fight against HIV/AIDS in the Baltic States and Russia, the U.S. funded “The

Network of Excellence” project. In June 2004, a U.S. court in Florida acquitted 11 Lithuanian sailors apprehended in June 2003 of drug trafficking charges following the seizure of 3.5 tons of cocaine aboard the merchant vessel Yalta. In December 2003, Lithuania extradited an American citizen wanted for narcotics trafficking. In 2003, the Lithuanian State Security Department discovered a package suspected of containing counterfeit U.S. currency that was being sent to Minneapolis, Minnesota. The package also contained 100 tablets of Ecstasy. A joint investigation by the State Security Department and U.S. Secret Service resulted in arrests in both countries, including that of a major organized crime figure in the city of Kaunas. His trial is ongoing.

Kazakhstan

In 2004 the U.S. Government assisted Kazakhstan’s counternarcotics effort in several ways:

- In August 2004, the State department sponsored two UK Customs agents who provided training on drug profiling as well as pedestrian, rail and vehicular searches to selected MIA and Border Guard units as well as to the academies of both the Ministry and the Border Guards.
- State continued to assist the National Forensics Laboratory in Almaty. One gas chromatograph as well as numerous drug test kits and “Drug ID Bibles” were delivered to the Laboratory in March 2004.
- State also continued to sponsor the Committee on Combating Drugs. As part of a larger project aimed at combating narcotics trafficking in Kazakhstan Approximately one-third of the funds provided by the U.S. were used to acquire equipment needed to search vehicles for contraband, especially illegal narcotics. The remainder of the money is being used to provide specialized training to the unit in a variety of areas including drug identification, the search of vehicles using the equipment provided under the project, and Kazakh legal statutes pertaining to illegal narcotics and the arrest and detention of criminal suspects. The legal training also includes the principles of asset forfeiture (principles of legal seizure, custody, cooperation with prosecutors and judges, and transfer to GOK authorities responsible for the sale of forfeited assets.)
- Training and equipment was provided to the Statistics Committee of the Prosecutor’s Office, which targets drug trafficking organizations operating in Kazakhstan. The project also covered the costs of modernizing the Statistics Division of the Prosecutor’s Office. The first field offices to be modernized under the project were those contiguous to the Kazakh-Kyrgyz border between Kordai and Taraz, the field office in the town of Sarishagan near Lake Balkash, and the field offices contiguous to the Kazakh-Russian border in the towns of Aul and Zheshkent. In total, \$117,000 worth of technical equipment was given to the Prosecutor’s Office of the GOK under this project, including computers, printers, monitors, and copy machines. In November 2004, computer equipment was distributed throughout Kazakhstan to 17 different branches within the Criminal Statistics Unit and the State Department sponsored 25 training courses in 2004, during which a total of 687 GOK officials were trained.

Jordan

In March 2004, DEA Nicosia and DEA’s International Training Section sponsored a regional International Drug Enforcement Seminar in Amman. The DEA also plans to sponsor a one-week Asset Forfeiture and Financial Investigations Seminar in Amman during the month of July 2005. DEA

Country Attaché in Cyprus and Embassy Amman officials maintain a close working relationship with Jordanian authorities on narcotics related matters.

Hungary

The USG focuses its support for GOH counternarcotics efforts on training and cooperation through the ILEA and a small bilateral program developed especially for Hungary by the U.S. Embassy in Budapest. DEA maintains a regional office in Vienna that is accredited to Hungary and works with local and national authorities. The UCSD (University of California, San Diego, US, performed training for 200 drug treatment professionals in Budapest at the end of 2003 in the Ministry of Health, in order to acquainted them with the American experiences in the field of diagnosis and treatment of drug addict offenders in the criminal justice system.

Germany

German law enforcement agencies work closely and effectively with their U.S. counterparts in narcotics-related cases. Close cooperation to curb money laundering continues between DEA, the Federal Bureau of Investigation (FBI), the Internal Revenue Service (IRS), the U.S. Customs Service, and their German counterparts, including the BKA, the AKA, and the state criminal police (LKAs). German agencies routinely work very closely with their U.S. counterparts in joint investigations using the full range of investigative techniques, such as undercover operations. German-U.S. cooperation to stop diversion of chemical precursors for cocaine production also continues to be close (e.g., Operations “Purple” and “Topaz”). A DEA liaison officer is assigned to the BKA headquarters in Wiesbaden to facilitate cooperation and joint investigations. Two DEA offices, the Berlin Country Office and the Frankfurt Resident Office, facilitate information exchanges and operational support between German and U.S. drug enforcement agencies. BKA and DEA also participate in a tablet exchange program to compare samples of Ecstasy pills.

Croatia

Police reform efforts begun in 2001 to provide technical assistance to the Interior Ministry have begun to show fruit. The first class of police recruits graduated from a completely revamped basic police school in July 2004. This class will be the first to proceed from graduation to probationary assignments with specially trained, senior police officers as coaches and mentors. A new police policies and procedures field manual was issued to all police officers in fall 2004. In addition, Croatian police have been regular participants in training programs at the U.S.-funded International Law Enforcement Academy in Budapest as well as follow-on training in Roswell, New Mexico. Under the Export Control and Border Security (EXBS) program, police and customs officers have been trained on risk analysis methodologies and new equipment has been donated to help improve at-the-border detection of smuggled contraband.

Azerbaijan

In 2004 the Export Control and Related Border Security (EXBS) program continued to provide assistance to the Azerbaijan State Border Guards and Customs services. EXBS training and assistance efforts, while aimed at nonproliferation of weapons of mass destruction, directly enhance Azerbaijan’s ability to interdict all contraband, including narcotics. During 2004, EXBS sponsored numerous courses for the Border Guard Maritime Brigade. These courses included “Advanced International Border Interdiction Training” which introduced the participants to real-time, hands-on inspections and Border Patrol tactics in the field. EXBS also hosted the “US-Azerbaijan Legal Technical Forum III” which provided assistance to the GOAJ in strengthening its legal framework for an export control

system in Azerbaijan that is consistent with international standards. In addition, in 2004, EXBS Conducted a Counter-Narcotics Instructor Course and reorganized the Border Guards conscript and officer training programs.

U.S. and European experts participated in a three-day workshop on “Implementing the norms of international law on extradition and mutual legal assistance related to drug offences into national law and practice.” During this workshop, U.S. and European legal experts provided training to and shared advice and practical experience with relevant Azeri legal professionals (police, prosecutors, judges and parliament) on the implementation of Azerbaijan’s international legal obligations related to drug offences.

Key Azerbaijani law enforcement officials participated in a U.S.-based study tour which provided them with a first hand look at how the U.S. criminal justice system operates in practice, with a particular focus on issues related to reforms currently underway in Azerbaijan. The participants were introduced to various investigative and forensic techniques and the concept of vetted units of police and prosecutors working as a team.

Australia

U.S. counternarcotics activities in Australia feature strong ongoing U.S.-Australian collaboration in investigating, disrupting, and dismantling international illicit drug trafficking organizations. In mid-2002, the U.S. and Australia signed a Memorandum of Understanding to outline these objectives. Cooperation between U.S. and Australian authorities is excellent.

Angola

In 2004, 17 Angolan police officers participated in State Department-sponsored regional training course, which included segments on counternarcotics.

Saudi Arabia

Saudi officials actively seek and participate in U.S.-Sponsored training programs and are receptive to enhanced official contacts with DEA. The U.S. will continue to arrange regular visits of DEA officers to Saudi Arabia. It will also explore opportunities for additional bilateral training and cooperation.

Sri Lanka

In 2004, the USG began implementing, primarily with the PNB, a law enforcement development program. Over 200 officers throughout the police force participated in training seminars. Pursuant to bilateral letters of agreement between the USG and the GSL, the Sri Lanka police are fulfilling their obligations. USG-trained Sri Lanka police are replicating the seminars and scheduling training for colleagues of the original police trainees at the training academies and stations throughout the island. Regional U.S. government officials, primarily DEA, conducted narcotics officer training for their local counterparts in seminar, organized by the Colombo Plan.

Mexico

Bilateral counternarcotics cooperation was close and represented one of the most positive aspects of the bilateral relationship. U.S. law enforcement confidently shared sensitive information with Mexican counterparts, resulting in the capture and conviction of drug traffickers, as well as seizures of illicit narcotics.

The Binational Commission (BNC) continued to serve as the main venue where cabinet level officials of both countries meet to discuss an array of bilateral issues, including counternarcotics and related law enforcement topics. The BNC also guided bilateral discussions carried out through its Law Enforcement Working Group. Under the umbrella of the BNC, the Senior Law Enforcement Plenary (SLEP) met twice during the year to evaluate and guide bilateral actions at the operational level. The SLEP comprised several working groups, including those dealing with major drug trafficking organizations, money laundering, demand reduction, arms trafficking, extradition, interdiction, training, and precursor chemicals.

The U.S. Interdiction Coordinator (USIC) led the U.S. delegation at several meetings of the Bilateral Interdiction Working Group (BIWG), complemented by the participation of the Director of Joint Interagency Task Force—South (JIATF—South). The Mexican delegation visited JIATF-South and gained a better understanding of the operational capabilities related to information exchange. Post-seizure analysis and information sharing have increased, but will require more attention. To better target the cross-border activities of drug traffickers, the United States and Mexico regularly prepared joint border threat assessments. These assessments served to develop a stronger mutual understanding of threats on both sides of the border.

As a result of close bilateral cooperation, implementation of major border projects progressed impressively during 2004. The Advanced Passenger Information System (APIS) entered into operation in April 2004, permitting authorities to compare airline passenger manifests against criminal databases. The U.S. Government arranged for the procurement and installation of Portal Vehicle and Cargo Inspection Systems (VACIS) at ports of entry at Colombia (Nuevo Leon), Nuevo Laredo (Tamaulipas), Piedras Negras (Coahuila), Nogales (Sonora), and Mexicali (Baja California). U.S. officials also supported the installation of a railroad VACIS unit at Mexicali and a pallet VACIS at Mexico City's International Airport. Contractors made important progress in preparing design drawings for new or expanded SENTRI (Secure Electronic Network for Traveler's Rapid Inspection) Lanes at Tijuana (Baja California), Mexicali, Nogales, Nuevo Laredo, Matamoros (Tamaulipas), and Ciudad Juarez (Chihuahua). Completion of these new or expanded SENTRI lanes should occur during 2005, which will facilitate the cross-border movement of travelers who have enrolled in the program and undergone background investigations. Tax Administrative Service (SAT) personnel continued to operate three Mobile X-Ray Vans (donated to the GOM in December 2003) at three airports, contributing to the detection and seizure of bulk smuggling of millions of dollars in drug-related currency. Software engineers developed a test version of Border Simulation software and collected data at various ports of entry. This software will help Mexican officials to evaluate needs and plan infrastructure and staffing changes at ports of entry along the United States-Mexico border. While designed primarily to deter terrorist acts and facilitate cross-border movement of bona fide visitors, goods, and services, border security projects also help authorities to identify and arrest drug traffickers, detect and seize drugs, and confiscate other illicit contraband.

Institutional Development was a top priority program that enjoyed the full support of the Fox Administration. The Embassy's Law Enforcement Professionalization and Training Program successfully integrated Embassy Law Enforcement Committee (LEC) training requests with local, state, and federal training and technical assistance programs with positive results in 2004. The Narcotics Affairs Section (NAS) provided 100 training courses to over 4,000 police, investigators, and prosecutors at all levels. In late 2004, NAS initiated a five-week Police Investigations School (EIP) for all new AFI candidates, as well as current investigators. Roughly 175 AFI personnel graduated from the EIP, and the PGR Police Training Academy has taken over full responsibility for operating the EIP. Future U.S. support will be limited to equipment donations, technical consultations and other developmental innovations.

The Embassy worked closely with the PGR Office of Professionalization and Training on all aspects of training to build on successes of the past three years. In 2005, working jointly with PGR officials,

NAS programs will emphasize infrastructure development and enhancing self-sufficiency within the training institutions. Training will continue to play a major role in the transition to infrastructure development by increasing the number of Train-the-Trainer courses and other selective training to enhance the overall efficiency, effectiveness and quality of the curriculum, as well as the training institutions and instructors.

The Embassy anticipates sponsoring as many as 10 separate, five-week, Train-the-Trainer courses during 2005 for PGR, INM, and SFP personnel. It will dedicate seven of the courses to PGR personnel to fully staff the PGR Police Training Academy for the EIP and to assume instructional duties at the PGR Police Academy. Training will benefit not only investigative personnel, but also PGR prosecutors. Courses will include Ethics in Government, Management and Leadership, Anti-Corruption Investigations, as well as investigative courses to enhance prosecutors' overall case handling and presentation ability.

Building on this bilateral cooperation, GOM efforts to professionalize law enforcement institutions continued to produce tangible results. The PGR established a School of Criminal Investigation, entailing course work on basic crime investigation techniques. PGR leaders are planning to create a more universal basic law enforcement curriculum aimed at producing competent law enforcement officers at the state and local levels capable of carrying out professional criminal investigations leading to prosecutions. To strengthen the prosecutorial element, the PGR initiated a prosecutor training program to upgrade prosecutorial skills and permit better understanding of the investigation process.

Bilateral counternarcotics cooperation hit a historic high-water mark in 2004 and represented one of the most positive aspects of the bilateral relationship. Law enforcement personnel of both countries routinely shared sensitive information to capture and prosecute leaders of major drug trafficking organizations and seize important shipments of cocaine, heroin, marijuana, and methamphetamine. President Fox and Attorney General Macedo strove to identify and reduce corruption within federal police entities. Despite only three years in existence, the re-invented and reformed principal federal police, AFI, has developed into a premier police institution. Control of precursor chemicals has improved considerably since October 2002.

There are many new opportunities during these last two years of the Fox Administration to enhance the extremely positive and productive cooperation that both governments enjoy and to institutionalize the resulting close personal and operational relationships. The U.S. Government now enjoys an historic window in which to act. We must support Mexico's efforts in building institutions to reinforce and make permanent this unprecedented cooperation. Even with the remarkable progress made to date, Mexican police and prosecutors still need improved equipment, training, and investigative tools. We must continue to share intelligence and promote teamwork to fight money laundering, stop diversion of precursor chemicals towards drug production, and insure successful prosecutions of criminal.

Philippines

In the largest single raid of a clandestine lab in Philippine history, Philippine authorities in September, acting on intelligence developed from a joint USG-RP-Hong Kong (SAR) investigation, raided a methamphetamine mega-lab located in Cebu. GRP authorities arrested eleven people from the Philippines, Taiwan, the PRC (including Hong Kong)—all of them ethnic Chinese—and seized 498 kilograms of chlorophedrine and 80 gallons of liquid methamphetamine. The raid and arrests highlighted the Philippines' transition into a major methamphetamine producer and the role of transnational criminal group in production.

Russia

In 2002, the U.S. Department of State, Bureau of International Narcotics and Law Enforcement Affairs (INL) negotiated a Letter of Agreement (LOA) with the GOR allowing direct assistance to the GOR in the area of counternarcotics and law enforcement. In 2004, DEA's International Training teams provided State Department-funded instruction to its Russian counterparts in Basic Drug Enforcement, Airport Interdiction, and Vehicle Interdiction. Progress continued on the Southern Border Project, a joint INL/DEA effort that will lead to the establishment of three mobile drug interdiction task forces based in Orenburg, Chelyabinsk, and Omsk along the Russian-Kazakh border. Also, the U.S. and Russia worked together to provide canine training to counternarcotics law enforcement officials from four Central Asian countries. The U.S. also provided technical assistance in support of institutional change in the areas of criminal justice reform, mutual legal assistance, anticorruption and money laundering.

Turkey

U.S. counternarcotics agencies report excellent cooperation with Turkish officials. Turkish counternarcotics forces have developed technically, becoming increasingly professional, in part based on the training and equipment they received from the U.S. and other international law enforcement agencies.

Switzerland

On March 15, 2004 Switzerland and the U.S. joined forces to curb the rise in illegal sales of prescription drugs over the Internet. The two countries called for international action in a resolution presented at the annual session of the UN Commission on Narcotic Drugs in Vienna. The joint resolution states that every country should introduce and enforce laws against the sale of narcotics and psychotropic drugs over the Internet. Swiss Medic, the Swiss Agency for Therapeutic Products, estimates that 4,000 to 8,000 packages containing medicines with narcotic drugs or psychotropic substances come across the border into Switzerland. The latest annual report by the UN's International Narcotics Control Board (INCB) highlighted that Switzerland had seen a large increase in seizures of narcotic drugs bought over the Internet, many of these originating from Pakistan. Pakistani authorities are said to be working with their Swiss counterparts to resolve the problem.

Ukraine

U.S. objectives are to assist Ukrainian authorities in developing effective counternarcotics programs in interdiction (particularly of drugs transiting the country), investigation, and demand reduction, as well as to assist Ukraine in countering money laundering. Officers from the Drug Enforcement Administration, the Department of Treasury, and the Department of Justice have conducted a number of training courses and conferences funded by the Department of State in the areas of drug interdiction, forensic science, money laundering and management training.

United Arab Emirates

The USG will continue to support the UAE's efforts to devise and employ bilateral/ multilateral strategies against illicit narcotics trafficking, border/export control and money laundering. The USG and UAE are starting discussions on MLAT and extradition treaties, which would facilitate the exchange of information related to drug and financial crimes. The USG will encourage the UAEG to focus enforcement efforts on dismantling major trafficking organizations and prosecuting their leaders, and to enact export control and border security legislation.

Saudi Arabia

Saudi officials actively seek and participate in U.S.-Sponsored training programs and are receptive to enhanced official contacts with DEA.

Iceland

DEA will continue to support Icelandic requests for U.S.-sponsored training. The DEA office in Copenhagen and the Regional Security Office in Reykjavik have developed good contacts in Icelandic law enforcement circles for the purpose of cooperating on narcotics investigations and interdiction of shipments. The USG's goal is to maintain the good bilateral law enforcement relationship that up until now has facilitated the exchange of intelligence and cooperation on controlled deliveries. The USG will continue efforts to strengthen exchange and training programs in the context of mission effort to strengthen law enforcement, homeland security, and counterterrorism ties with Iceland.

Egypt

The U.S. counternarcotics policy in Egypt is to engage the GOE in a bilateral program to reduce narcotics transshipments and decrease opium poppy and cannabis cultivation. The policy includes the following specific objectives: increase training to ANGA and other government offices responsible for narcotics enforcement; assist with the identification of illegal crop eradication targets; improve narcotics interdiction methodology; improve intelligence collection and analysis.

In fiscal year 2005, the U.S. Government plans to increase its joint operations with ANGA, moving beyond a previously predominant focus on monitoring the problem. This will involve the DEA country office continuing to work closely with ANGA on joint investigations, as well as improving interdiction and eradication techniques and developing additional sources of information on trafficking and production. The U.S. Government also plans to provide additional training in financial investigations, drug interdiction, anticorruption measures, border control operations, and chemical identification and control.

Turkey

U.S. Policy Initiatives and Programs: U.S. policy remains to strengthen Turkey's ability to combat narcotics trafficking, money laundering and financial crimes. Through fiscal year 1999, the U.S. Government extended \$500,000 annually in assistance. While that program has now terminated, during 2004-05 the U.S. Government anticipates spending approximately \$100,000 in previously-obligated funds on counternarcotics programs.

U.S. counternarcotics agencies report excellent cooperation with Turkish officials. Turkish counternarcotics forces have developed technically, becoming increasingly professional, in part based on the training and equipment they received from the U.S. and other international law enforcement agencies.

Ukraine

U.S. objectives are to assist Ukrainian authorities in developing effective counternarcotics programs in interdiction (particularly of drugs transiting the country), investigation, and demand reduction, as well as to assist Ukraine in countering money laundering. Officers from the Drug Enforcement Administration, the Department of Treasury, and the Department of Justice have conducted a number of training courses and conferences funded by the Department of State in the areas of drug interdiction, forensic science, money laundering and management training.

Argentina

Cooperation between the USG and Argentine authorities, both federal and provincial, continued to be excellent in 2004. During 2004, USG assistance supplied a wealth of equipment and training programs for Argentine law enforcement personnel. Examples of USG-funded programs in 2004 include: Two law enforcement tactical training courses provided by DEA; a money laundering course sponsored by the Department of Homeland Security (ICE); an airport narcotics interdiction course sponsored by DEA/INL; and a prevention seminar held in conjunction with SEDRONAR sponsored by PAS (Public Affairs Section) and INL. DEA/INL also sponsored several GOA law enforcement professionals, participation in regional training programs. In addition to providing valuable training opportunities, Post's DEA detachment supports the Northern Border Task Force (NBTF), Group Condor, and starting in 2004, the Mendoza Airport Task Force. The DEA-supported task forces demonstrate the benefits of interagency cooperation, and GOA officials have expressed interest in expanding the program to develop task forces in other narcotics trafficking hot spots.

Ecuador

Ecuadorian Government officials met frequently with their Colombian counterparts concerning border issues. Ecuadorian police operational and intelligence communications systems now being developed provide for compatibility with other police agencies in the region to facilitate a rapid exchange of information.

Chile

During 2004, the U.S. Government pursued numerous initiatives based on the above priorities. These include: 1) a two-part training series on the nationwide drug intelligence computer network for carabineros; 2) the first Intellectual Property Rights week including a workshop for law enforcement and prosecutors, public awareness campaign and youth concert; 3) the first presentation on drug abuse prevention programs by students from four communities as a result from the launch of PRIDE in 2003; 4) an INL-funded judicial reform intensive training program for prosecutors and defenders, preceded by Digital Video Conferences with the University of the Pacific; 5) an INL-funded seminar for judges on DNA Forensic Technology; 6) a workshop for Chilean authorities on how to investigate Intellectual Property Rights crimes; 7) a DOJ-funded course on cybercrime for prosecutors, law enforcement and government officials from five countries; 8) a public affairs section grant to Fundacion Paz Ciudadana to implement ADAM (Arrestee Drug Abuse Monitoring); 9) five CHIPRED representatives participated in a voluntary visitor program on managing drug abuse prevention programs; 10) one IVP on the Financial Intelligence Unit; 11) two U.S. speakers on drugs in the workplace and drug courts; 12) INL-funded support of the police to provide equipment for counternarcotics operations; 13) two IVPs on drug prevention and drug prosecution; 14) a series of radio programs on drug prevention recorded and distributed to more than 80 radio stations; 15) continued discussions towards updating the 1900 U.S./Chile extradition treaty.

Venezuela

The INL program in Venezuela is grouped into five projects: interdiction, administration of justice, chemical control, money laundering control, and public awareness.

Components of the interdiction project include seaport security, airport security, and border security, with a particular emphasis on shutting down the Tachira-Puerto Cabello cocaine transit corridor. A state-of-the-art cargo inspection facility is under construction at Puerto Cabello and should be fully operational by mid-2005. Two permanent U.S. Customs and Border Protection inspectors were assigned as advisors to the interdiction project in 2004. The expansion of this team's area of

responsibility to include the Cuccuta (Colombia)-San Antonio de Tachira border point of entry on the Pan-American Highway documented the seizure of over half a ton of cocaine in early December 2004.

The interdiction project also focuses on reducing the flow of heroin and cocaine through Maiquetia International Airport to the U.S. and Europe. X-ray equipment provided by post's INL/Narcotics Affairs Section resulted in near-daily drug seizures at Maiquetia, including a record heroin seizure of 66 kilograms in May 2004.

Components of the administration of justice project include extensive support for the Prosecutor's Drug Task Force, training, and the purchase of 160 computers to run the Prosecutor General's new Case Management System at field offices around the country. Extensive work was also done under this project to install two interconnected local area networks of computers at the Venezuelan drug czar's offices in Caracas.

Also in 2004, the embassy's INL/Narcotics Affairs Section undertook a landmark study to document and analyze Venezuela's 2003 cocaine and heroin seizures. A number of deficiencies and limitations in the current law enforcement and judicial system were discovered or better understood, and seizure report errors for 2003 were corrected.

Mozambique

The USG sends Mozambican law enforcement officials and prosecutors to regional training programs through the International Law Enforcement Academy (ILEA) for Africa in Botswana. Law enforcement officials have also received training at ILEA New Mexico. The State Department's Bureau for International Narcotics and Law Enforcement Affairs (INL) provides support to the attorney general's anticorruption unit and the police sciences academy (ACIPOL) near Maputo. The funds have provided for training, specialized course instruction, instructor development, and curriculum development for ACIPOL. The anticorruption unit, which began operations in November 2002, has received specialized training and advisor visits through the Department of Justice OPDAT (Overseas Prosecutorial Development Assistance and Training) program. With USAID assistance, the anticorruption unit was able to open fully equipped offices in Beira and Nampula in 2004, expanding operations that were formerly based only out of Maputo.

Netherlands

Despite excellent operational cooperation between U.S. and Dutch law enforcement agencies, concern remains over the Netherlands' role as the key source country for MDMA/Ecstasy entering the U.S. Embassy The Hague continues to make the fight against the Ecstasy threat one of its highest priorities. Although the Dutch and U.S. agree on the goal, we differ over which law enforcement methodology is most effective in achieving it. The Dutch continue to resist criminal undercover "sting"-type operations in their investigations of drug traffickers. Manpower constraints also prevent them from pursuing international and organized crime aspects of each Ecstasy investigation. The third bilateral law enforcement talks, which were held in The Hague in March 2004, resulted in additional points included in the "Agreed Steps" list of actions to enhance law enforcement cooperation in fighting drug trafficking. Since 1999, the Dutch Organization for Health Research and Development (ZonMw) has been working with the U.S. National Institute on Drug Abuse (NIDA) on joint addiction research projects.

Malaysia

U.S. counternarcotics training continued in 2004 via the International Law Enforcement Academy (ILEA) in Bangkok and the "Baker-Mint" program sponsored by the U.S. Department of Defense. Baker-Mint aims to raise the operational skill level of local counternarcotics law enforcement officers.

The Department of State Assistant Secretary, International Narcotics and Law Enforcement, visited Malaysia in May 2004, meeting with senior police officials and community drug treatment leaders.

Macedonia

DEA officers work closely with the Macedonian police, support coordination of regional counternarcotics efforts, and organize specialized training for Macedonian police officers in the United State. Macedonian police and customs officers benefited in 2004 from a two-month specialized law enforcement course, which also covered counternarcotics issues, at the U.S.-funded ILEA regional training facility in Budapest. MOI police, financial police, customs officers, prosecutors, and judges received State Department-financed training in specialized anti-organized crime operations and techniques. U.S. Customs officials continued to provide technical advice and assistance to Macedonian Customs and the MOI's Border Police.

China

Counternarcotics cooperation between China and the United States continues to develop in a positive way. This cooperation is yielding significant operational results. The information shared by China is leading to progress in attacking drug-smuggling rings operating between the two countries. Chinese authorities continue to share drug samples with U.S. colleagues on a case-by-case basis. In August 2004, the DEA, in conjunction with the NNCC, convened two conferences on precursor chemical control in Shanghai and Nanling, Guangxi Province to provide training to law enforcement officers from China police and customs.

Czech Republic

Czech police consider cooperation with the U.S., German, Austria, Israel, Switzerland and the UK as very good. Czech and German police continue to cooperate in Operation Crystal to combat Pervitine trafficking.

Cambodia

U.S.-Cambodia bilateral counternarcotics cooperation is hampered by restrictions on official U.S. assistance to the central government of Cambodia that have remained in place since the political disturbances of 1997. Cambodia regularly hosts visits from DEA personnel based in Bangkok, and Cambodian authorities cooperate actively with DEA. U.S. officials raise narcotics-related issues regularly with Cambodian counterparts at all levels, up to and including the Prime Minister. DEA provided basic narcotics training to Cambodian counternarcotics police in December 2004. During this same month, DOD conducted the first in a series of Joint Interagency Task Force—West (JIATF-West) training missions. The three-week mission trained personnel from the Cambodian police, military, and the Immigration Department. The training was conducted in Koh Kong province and was designed to increase the capacity of Cambodian security forces that are charged with controlling the Thai-Cambodian border. In 2004, the U.S. provided support for a UNODC project to conduct a national survey to collect baseline data on illicit drug use and the associated HIV/AIDS risk. This is the first such study to be conducted in Cambodia and will provide key information needed to develop an effective counternarcotics/HIV Treatment/Prevention strategy for the country.

Belgium

The United States and Belgium frequently share counternarcotics information. Officials in the Federal Police, Federal Prosecutor's Office, and Ministry of Justice who work on counternarcotics in the GOB are fully engaged with their U.S. counterparts.

Austria

Austrian cooperation on U.S.-interest drug cases is excellent. In the past, Austrian interior ministry officials have exchanged lessons-learned with the FBI, DEA and Department of Homeland Security to improve enforcement techniques. Austria and the U.S. operate a joint "contact office" in Vienna that serves as a key facilitator for flexible and speedy anticrime cooperation. The U.S. Embassy regularly sponsors speaking tours of U.S. narcotics experts in Austria.

Israel

DEA officials characterize cooperation between the DEA and the INP as outstanding. All DEA investigations related to Israel are coordinated through the DEA Nicosia Country Office.

Pakistan

Through the State Department-funded Counternarcotics Program and Border Security Projects, the United States provides operational and commodity assistance to ANF, as well as funding for demand reduction activities and training. The State Department also funds alternative crop, small-scale development, and road building projects in Bajaur, Mohmand and Khyber Agencies of the FATA. The roads, which open up inaccessible areas, allow forces to eradicate poppy crops, while facilitating farm-to-market access for legitimate crops. The U.S. also funds Narcotics Coordination Cells in both the Home Department NWFP and the FATA Secretariat to help coordinate counternarcotics efforts in the province and tribal areas. In addition, the USG provided commodity assistance to Frontier Corps NWFP and Balochistan, who perform counternarcotics missions along the border. The State Department-supported MOI Air Wing program will provide significant benefits to counternarcotics efforts as well, while advancing its primary counterterrorism goal.

The DEA provides operational assistance and advice to ANF's SIC. The ANF continues to cooperate effectively with DEA to raise investigative standards. New investigative equipment, vehicles, and surveillance motorcycles were provided this year. The unit continues to perform work throughout Pakistan, and their DEA-supported expansion began, including the equipping of a new facility and ongoing training.

Bulgaria

DEA operations are managed from Embassy Athens. The USG also supports various programs through the State Department, USAID, Department of Justice (DOJ) and the Treasury Department to address problems in the Bulgarian legal system. These initiatives address a lack of adequate equipment (e.g., in the Customs Service), the need for improved administration of justice at all levels and inadequate cooperation among Bulgarian agencies. A DOJ resident legal advisor works with the Bulgarian government on law enforcement issues, including trafficking in drugs and persons. An American Bar Association/Central and East European Law Initiative criminal law liaison advises Bulgarian prosecutors and investigators on cyber-crime and other issues. A Treasury Department representative enhances the capacity of the Bulgarian justice sector to investigate and prosecute financial crimes, including money laundering. USAID provides assistance to strengthen Bulgaria's

constitutional legal framework, enhance the capacity of magistrates and promote anticorruption efforts.

Brazil

Bilateral cooperation on counternarcotics between the USG and the GOB has never been better. Brazil and the U.S. are seeking to meet all goals set forth in the bilateral Letter of Agreement (LOA) on counternarcotics. As agreed to by Brazil and the U.S., programs implemented in 2004 included: cooperation with the Regional Intelligence Center of Operation COBRA; expansion of COBRA prototype to other areas of the country, a country-wide conference on money laundering in Brasilia; and a SENAD project that involves a partnership with the Ministry of Education to provide long distance drug prevention training to over 5,000 teachers nation wide via the educational television network.

Brazil continues to be actively involved in the International Drug Enforcement Conference (IDEC). Worldwide conferences are held annually, and sub-regional conferences are held approximately six months after the general conference. These conferences, sponsored and supported by DEA, bring law enforcement leaders from Western Hemisphere countries together to discuss the counternarcotics situations in their respective countries and to formulate regional responses to the problems they face. Brazil participates in both the Andean and Southern Cone Working Groups.

Operation Seis Fronteras (Six Borders) is part of a highly-successful regional exercise involving Brazil, Bolivia, Colombia, Ecuador, Peru, Venezuela, and the U.S. DEA to concentrate counternarcotics law enforcement efforts in the area of precursor chemicals.

A number of conferences, training programs, and seminars took place during in 2004. Brazilian Federal and State Police were sent for training to the U.S. on various occasions. USG representatives—DEA, DHS, FBI, U.S. Coast Guard and others—and others visited Brazil to train GOB counternarcotics units.

Bolivia

The GOB and Embassy meet routinely at all levels and across several functional entities to coordinate policy, to implement programs/operations and to resolve issues. INL, through the Embassy's Narcotics Affairs Section (NAS) and its Air Wing, supports and assists all interdiction and eradication forces. USAID represents the largest of all international donors in supporting GOB policy and programs in AD. This support is defined by Letters of Agreement (LOAs) signed annually with the GOB.

Dominican Republic

Cocaine and heroin trafficking, money laundering, institutional corruption, and reform of the judicial system remain the U.S.' primary counternarcotics concerns in the DR. The USG and the GODR cooperate to develop Dominican institutions that can interdict and seize narcotics shipments and conduct effective investigations leading to arrests, prosecutions, and convictions. The USG will continue to urge the GODR to improve its asset forfeiture procedures and its capacity to regulate financial institutions, develop and maintain strict controls on precursor chemicals, and improve its demand reduction programs.

During 2004, the U.S. provided essential equipment and training to expand the counternarcotics canine units, supported the DNCD's vetted special investigation unit, and funded assessments of airport and port security against narcotics trafficking and terrorism. The U.S. Transportation Security Agency (TSA) gave Santo Domingo's Las Americas Airport ninety days to improve deficient aspects of security, and airport authorities succeeded, through considerable effort, in avoiding penalties.

The U.S. delivered one thirty-foot rigid hull inflatable boat and one landing craft to the Dominican Navy to help counternarcotics trafficking and illegal migration. The U.S. also assisted the Dominican Navy with its equipment maintenance and training programs and assessed requirements to outfit the Navy shore detachments.

The U.S. has funded training to the DNCD Fugitive Surveillance Unit, helping it locate, apprehend, and extradite individuals wanted on criminal charges in the U.S. Enhanced computer training, database expansion, and systems maintenance support were provided to the DNCD.

The Dominican Navy and Air Force have a direct communications agreement with the U.S. Coast Guard's regional operations center (Sector San Juan) in San Juan, Puerto Rico. Dominican Navy vessels have participated in a few maritime drug seizures, and Navy shore patrols have disrupted illegal migration voyages, another favorite method for smuggling drugs.

USAID's "Strengthened Rule of Law and Respect for Human Rights" program continues to work with the Dominican court, public defender, and prosecutorial systems to improve the administration of justice, enhance access to justice, and support anticorruption programs. Improvements achieved to date include implementation of a new criminal procedures code which better protects the rights of the accused and requires a stricter adherence to the due process of law, and speedier, more transparent judicial processes managed by better trained, technically competent, and ethical judges. The USAID program provides training to prosecutors and public defenders in applicable basic criminal justice legal advocacy skills and has offered training in complex criminal case investigations and prosecutions.

The U.S. Department of Justice and Department of State provided advanced management training to senior police officers, including two from DNCD, at the International Law Enforcement Academy (ILEA) in Roswell, NM. DEA offered a basic drug intelligence course for the DNCD in December. Five DNCD officers attended FBI training focused on high risk arrest tactics.

The U.S. Department of Homeland Security worked closely with Dominican business associations to establish a Dominican chapter of the Business Anti-Smuggling Coalition (BASC). This voluntary alliance of manufacturers, transport companies, and related private sector entities has agreed to meet stringent security standards to prevent smuggling by means of their operations and to receive surprise inspections at any time. The BASC approach has proven successful in other Latin countries in minimizing contraband and promoting honest business activity. In 2004, five Dominican companies met the strict criteria for BASC certification.

The DNCD, with U.S. and Dutch support, made plans to establish a canine unit for narcotics detection at Puerto Plata International Airport, bringing that facility, allegedly a smugglers' favorite, into line with units at Santo Domingo, Santiago, Punta Cana, and La Romana airports.

The U.S. is planning to deploy a U.S. mobile training team for the DNCD's border units and provide increased support for Dominican naval patrols of the Mona Passage.

With U.S. Department of Homeland Security leadership and DEA support, the Dominican Port Authority and the DNCD maintained good security at the formerly chaotic Santo Domingo terminal of the ferry to Puerto Rico. A 2003-04 project has improved passenger processing and established controls to detect and prevent smuggling of drugs and other contraband. U.S. agents also provided advice on the prevention of smuggling to the owners of the new Caucedo container terminal, which commenced full operation in 2004.

The Drug Enforcement Administration (DEA)-funded Caribbean Center for Drug Information at DNCD headquarters permits real-time sharing and analysis of narcotics-related intelligence among all the nations of the Caribbean Basin. Similar centers are established in Mexico, Colombia, and Bolivia.

Bahamas

During 2004, the U.S. State Department's Bureau of International Narcotics and Law Enforcement Affairs, Bahamas Country Program, administered by the U.S. Embassy's Narcotics Affairs Section (NAS), funded training, equipment, travel and technical assistance for a number of law enforcement and drug demand reduction officials. In February 2004, NAS and the GCOB agreed to discontinue the Bahamian Customs Department's canine unit at the Freeport Container Port due to its high maintenance cost and its failure to produce expected results. NAS has been working closely with Customs officials to identify other cost efficient programs to protect the Container Port from drug traffickers. NAS procured computer and other equipment to improve Bahamian law enforcement capacity to target trafficking organizations through better intelligence collection and more efficient interdiction operations. In recent years, NAS donated three interceptor boats to the GCOB. These boats have been deployed around Bahamian waters and have participated in a number of significant seizures of "go-fast" drug smuggling vessels. This year, NAS assisted in providing them with vital maintenance and parts not available in the country. In addition, NAS funds continued to be used to cover important operational expenses, such as utilities, repairs and maintenance for three OPBAT bases in George Town, Great Exuma; Matthew Town, Great Inagua; and at the Atlantic Undersea Test and Evaluation Center (AUTEK,) Andros Island. NAS also provided funding to The National Drug Council and the Drug Action Service to extend their demand reduction education campaign to the Family Islands.

Jamaica

The U.S. and Jamaica cooperate in a variety of areas, including maritime interdiction, the apprehension of fugitives, and initiative relating to community-police relations. U.S. law enforcement agencies note that cooperation with the GOJ is generally good and is steadily improving.

The JDF Coast Guard (JDFCG) engages in cooperative operational planning with the U.S. Coast Guard on an intermittent basis associated with joint military operations in or near Jamaica's territorial waters. During 2004, Jamaica participated in two deployments of Operation Rip Tide, a continuing U.S./Jamaica/Cayman Islands/UK effort to deny smugglers the use of maritime smuggling routes into Jamaica and the Cayman Islands. The bilateral maritime counternarcotics agreement was successfully exercised on several occasions during 2004. In July, the U.S. and Jamaica negotiated, but have not yet signed, a protocol to the bilateral agreement that would add provisions for operations from third party platforms, enhancement of safety for civil aircraft in flight, contiguous zone jurisdiction, and technical assistance. On October 15, the GOJ signed the Caribbean Regional Maritime Agreement.

The JDF currently lacks the force projection capabilities (fixed-wing aircraft and off-shore patrol boats) required to make continuous joint operations with the U.S. a practical activity. One of the three 44-foot fast patrol boats donated in 2003 is now operational, giving JDF more operational flexibility. Three JDFCG crew members, assigned to the U.S. Coast Guard Caribbean Support Tender in 2002, a U.S. Coast Guard vessel with a multi-national crew that provides training and assistance in ship maintenance and repairs to Caribbean maritime forces, will be on board until August 2005. As part of this program, on December 15th, the USCG delivered a refurbished Eduardono, a 38-foot high-speed pursuit boat, to the JDF/CG along with other spare parts necessary to maintain an operational status for most of the current JDF/CG fleet.

In 2004, the U.S. funded participation by Jamaican police, immigration, customs, defense force and other personnel in several in-country and regional training courses. The U.S. continues to fund an advisor to the National Intelligence Bureau and a Law Enforcement Development Advisor to assist the JCF's strategic planning and reform efforts. Members of the highly effective Jamaica Fugitive Apprehension Team (JFAT), with guidance from U.S. Marshals, received specialized training, equipment and operational support. The JFAT is actively working on over 195 cases, the majority of

which involve drug or homicide charges. Since January 2004, 15 fugitives were extradited to the U.S. Jamaican authorities are receptive to and cooperative with U.S. requests for extradition, and continue to work with U.S. authorities to accelerate the extradition process. Nonetheless, contested extradition requests can take two to five years to litigate fully.

The U.S.-funded International Office of Migration (IOM) Border Control Project, designed to strengthen the GOJ's ability to monitor the flow of persons into and through Jamaica, was officially launched on November 1, 2004. This pilot project, which has modernized the computer infrastructure at the ports of entry, is now functional. USAID is continuing with a program of assistance to the JCF in community-police relations that will focus on strategies to reduce crime and violence.

United States Coast Guard

Overview

The Coast Guard's multiyear campaign plan to combat the dynamic maritime drug trafficking threat, Campaign Steel Web, is continually evolving to reflect changes in drug trafficking trends.

Steel Web 2005 is fully aligned with the National Drug Control Strategy (NDCS), the National Interdiction Command and Control Plan (NICCP), national security and other directives complementing the contributions of our law enforcement (DOJ/DEA, DHS/ICE, CIS, CBP and local LEAs) and DoD partners in this effort.

Three pillars form the foundation of Steel Web 2005:

- Denial of maritime drug smuggling routes by developing a dynamic interdiction presence in the transit and arrival zones, in response to tactical intelligence information, focusing limited resources to maximize the removal of cocaine being smuggled via three major smuggling vectors: Eastern Caribbean, Western Caribbean and Eastern Pacific.
- Strengthening ties with source and transit zone nations to increase their capabilities in maritime law enforcement, reduce drug-related activities, and enhance legitimate commerce within their territorial limits. Support local, state and federal interagency efforts to combat drug smuggling through coordinated operations planning and execution.
- Implement the latest research and development (R&D) and off-the-shelf technologies available, to better equip Coast Guard assets to detect, monitor and interdict suspect vessels, and to locate contraband during boardings and searches.

The key to success of Steel Web 2005 is adherence to the concept of centralized operational planning and decentralized execution, which includes maintaining the flexibility to respond to tactical intelligence and information. Pursuit of international engagement opportunities also is necessary, which occurs at the tactical, theater and strategic levels. Partnering with law enforcement officials of other nations helps develop indigenous interdiction forces, and enhances the cumulative impact of interdiction efforts directed at drug traffickers in the region. Maintenance and training support through exportable training and the Caribbean Support Tender make for more effective Counternarcotics partners. The fruits of R&D and off-the-shelf technology are enabling more effective deployment of assets.

Combined Operations

The Coast Guard conducted several maritime counternarcotics operations in 2004 in coordination and/or cooperation with military and law enforcement forces from: the French West Indies, United Kingdom and its Overseas Territories, Netherlands and Netherlands Antilles, and Jamaica. Recently a combined U.S. and Colombian surge operation featured for the first time ever a Coast Guard HU-25 Guardian jet flying directly in support of Colombian forces, providing over-the-horizon targeting of drug laden go-fast vessels.

International Agreements

Increasing the number of bilateral agreements to 30 between the U.S. and our Central, South American and Caribbean partner nations is moving toward our goal of eliminating safe havens for drug smugglers. In June 2004, the United States and The Bahamas signed the Comprehensive Maritime Agreement (CMA) addressing cooperation in maritime law enforcement across a spectrum of missions. The CMA is a more flexible and sustainable approach to law enforcement operations, replacing a patchwork of dated agreements.

International Cooperative Efforts

In 2004, the Coast Guard prosecuted 104 narcotics smuggling events, which resulted in the seizure of 71 vessels, the arrest of 326 suspected smugglers, and the seizure of 241,713 pounds of cocaine and 25,915 pounds of marijuana. Many of the 104 events involved some type of foreign support or cooperation, either through direct unit participation, exercise of bilateral agreements, granting permission to board, or logistics support.

U.S. Customs and Border Protection

The Department of Homeland Security, Customs & Border Protection (CBP) processes goods, merchandise, and people entering and exiting the United States. CBP officers intercept contraband, illicit goods, and unreported currency as it crossing our borders. Interdiction efforts are targeted in order to minimize impact on legitimate trade by utilizing techniques of selectivity to identify high-risk shipments for intensive examination. CBP now incorporates the additional border control functions of passport control and agriculture inspections to provide seamless border control processing termed, "One Face at the Border." CBP has jurisdiction between ports of entry under the authority of the Border Patrol. CBP responds to the nation's terrorism priorities by developing strategic programs to increase port security. CBP is an integrated border control agency that operates at a high level of efficiency and integrity. On the average day, CBP examines 1.3 million arriving passengers, 410,000 arriving conveyances, seizes \$500,000 in currency and 4 tons of narcotics, arrests 2600 fugitives or violators, while facilitating commercial trade and collecting \$52 million in duty. The State Department Bureau for International Narcotics and Law Enforcement Affairs and CBP promote international cooperation through interagency agreements providing training and assistance programs throughout the world. The agreements enable CBP to deliver a variety of training, high-tech tools, and management strategies for combating transnational crime, thereby promoting international law enforcement.

International Training and Assistance

CBP provided technical training and assistance in support of the International Law Enforcement Academy (ILEA) programs currently operating in Bangkok, Budapest and Gaborone in 2004. The mission of the ILEA is to promote social, political, and economic stability by combating crime. To achieve this goal, ILEA provides high-quality training and technical assistance, supports institution building and enforcement capability and fosters improved relationships between American law enforcement agencies and their counterparts in the region. ILEA encourages strong partnerships among regional countries to address common problems associated with criminal activity. CBP has developed and conducted specialized training on topics which include: International Controlled Deliveries and Drug Investigation conducted jointly with DEA; Complex Financial Investigations conducted jointly with IRS; Intellectual Property Rights conducted with the FBI; and a Customs Forensics Lab Course. CBP provided assistance for 14 ILEA programs.

In 2004 CBP officials conducted textile production verification teams (TPVT) in South Africa, Lesotho, Madagascar and Swaziland. The team in South Africa was following up on close to \$4 million in seizures for counterfeit certificates of origin for apparel in which South African origin claims were made. No African Growth and Opportunity Act (AGOA) claims were made for these shipments. Over 40 factories were found to be fictitious and a number of legitimate factories had their names used on commercial invoices for goods that were falsely claiming South Africa origin. CBP also participated in free trade negotiations with the South African Customs Union (SACU) in Namibia and provided some instructions on the rules of origin proposed under the U.S./SACU free trade agreement to the participants there (South Africa, Namibia, Botswana, Lesotho and Swaziland).

Industry Partnership Programs

Currently, CBP manages the Customs-Trade Partnership Against Terrorism (C-TPAT) designed to deter and prevent the entry of contraband and WMD into the United States via commercial cargo and conveyances. CBP enlists the support of the trade community in supply chain security-related activities, both domestic and abroad.

C-TPAT developed from previous industry partnership programs such as the Carrier Initiative Program, the Business Anti-Smuggling Coalition, and the Americas Counter Smuggling Initiative. C-TPAT builds on the success of these programs in securing the cooperation of the trade to be alert to anomalies in commercial transactions.

Under the C-TPAT initiative, CBP is working with importers, carriers, brokers, and other industry sectors to develop a seamless security-conscious environment throughout the entire commercial process. By providing a forum in which the business community and CBP can exchange antiterrorism ideas, concepts, and information, both the government and business community will increase the security of the entire commercial process from manufacturing through transportation and importation to ultimate distribution. This program underscores the importance of employing best business practices and enhanced security measures to eliminate the trade's vulnerability to terrorist actions.

C-TPAT is a cooperative endeavor. The program calls upon the trade community to establish procedures to enhance their existing security practices and those of their business partners involved in the supply chain. Once these procedures are in effect, imports of C-TPAT members may qualify for expedited CBP processing and reduced exams at ports of entry.

Port Security Initiatives

In response to increased threats of terrorism, CBP developed innovative programs that seek to identify high-risk shipments to the United States before they reach our ports. Outlined are the Container Security Initiative (CSI) and Plan Colombia.

The Container Security Initiative (CSI) addresses the threat to border security and global trade posed by the potential for terrorist use of a maritime container. The Initiative proposes a security regime to ensure all containers that pose a potential risk for terrorism are identified and inspected at foreign ports before they are placed on vessels destined for the United States. DHS's U.S. Customs and Border Protection (CBP) is now stationing multidisciplinary teams of U.S. officers from both CBP and the Bureau of Immigration and Customs Enforcement (BICE) to work together with their host government counterparts. Their mission is to target and pre-screen containers and to develop additional investigative leads related to the terrorist threat to cargo destined to the United States.

Through CSI, CBP officers work with host customs administrations to establish security criteria for identifying high-risk containers. Those administrations use non-intrusive technology to quickly inspect the high-risk containers before they are shipped to U.S. ports. Additional steps are taken to enhance the physical integrity of inspected containers while en route to the U.S. Worldwide, 33 ports were CSI operational at the end of 2004 with plans to increase that number in 2005.

Under Plan Colombia, CBP developed and implemented an initiative focusing on narcotics interdiction efforts, combating the Black Market Peso Exchange, intelligence gathering, and bilateral cooperative efforts between the governments of the U.S. and Colombia. In support of Plan Colombia, CBP provided training and assistance focusing on integrity, border interdiction, trade fraud, intelligence collection, industry partnership programs, and financial crimes issues in Colombia. In addition, an Andean Regional Initiative was developed to counter the effects of Plan Colombia in the Andean Region. Since its inception, Plan Colombia has provided about \$1.3 million in basic tools, vehicles, high-tech equipment, and training to the Colombian National Police and Colombia Customs.

Customs Mutual Assistance Agreements

The United States has CMAAs with most of our major trading partners and with many other strategically important governments. CMAAs provide for mutual assistance in the enforcement of custom-related laws, and U.S. Customs and Border Protection utilizes these agreements to assist in

evidence collection for criminal cases. U.S. courts have rules that evidence gathered via these executive agreements is fully admissible in U.S. court cases.

Training in the U.S.

International Visitors Program (IVP). Visiting foreign officials consult with appropriate high level managers in CBP Headquarters, and conduct on-site observational tours of selected ports and field operations. The focus includes narcotics enforcement policies, port security issues, counterterrorism programs and intelligence operations. The IVP was delivered to 1305 participants for 225 programs to benefit 150 countries during 2004.

Canine Training (U.S.-Based). Designed to assist countries in the use of detector dogs the training center provides a variety of training, including handlers, trainers, and supervisors. The training center also provides support to countries in the development evaluation and enhancement of detector dog programs. In 2004 4 students, 2 each from Trinidad and Guam trained at the canine academy in the U.S. In the same period, 3 technical trainers traveled to Guam, Curacao, and St. Maarter to provide technical assistance with detector dog programs in those jurisdictions. In addition, training and operational development were provided to Bolivia, Ecuador and Venezuela.

Training in Host Countries

Overseas Enforcement Training. Program combines formal classroom training and field exercises for border control personnel. The curriculum includes narcotics interdiction, identifying falsified travel documents, targeting search techniques, WMD and hazardous materials identification in the border environment. The curriculum was recently updated to include an overview on the topic of antiterrorism. In 2004, training was delivered to 240 participants in 10 countries.

Short Term Advisory. Commits an on-site U.S. Customs expert to assist the host government agencies with selected projects of institution building and improved interdiction capabilities. These may focus on specific narcotics threats, port security, and counterproliferation of WMD. Advisors are also fielded for strategic planning, commercial processing, investigations, automation and border/trade facilitation. In FY2004, approximately 25 short term advisors were fielded to various countries in Latin America and the Caribbean.

Integrity/Anti-Corruption. Course is designed to promote professionalism and integrity within the workforce of agencies particularly vulnerable to bribery and corruption. Focus is on integrity awareness training and development of internal investigation organizations. The course was delivered to 200 participants in 8 countries in 2004.

Looking Ahead

The Department of Homeland Security began operations in January 2003. CBP, with its tradition in revenue collection and border protection, took its place with other agencies designated to combat terrorism. The long-standing mission of CBP in providing security to its citizens through targeted examination and interdiction play a major role in the new organization. Port security functions continue to be in the forefront focused on enforcement activities promoting domestic security and fighting the threat of international terrorism.

In the year 2005 border security will be strengthened through initiatives designed to examine containerized cargo prior to lading aboard ships destined for the U.S. CBP international missions will focus efforts to design training specifically designed for the needs identified for the countries, and emphasis will be placed on evaluating the effectiveness of our programs with objective measurement

techniques. Advisors, short- and long-term, will be fielded to assist countries to improve operations to meet recognized international standards for security and reporting.

CHEMICAL CONTROLS

Summary

The extraction of pseudoephedrine from over-the-counter pharmaceutical preparations for use as a precursor chemical in the manufacture of methamphetamine became an even greater concern in 2004. These preparations can be purchased at retail with little difficulty in sufficient quantities to manufacture drugs in small “mom and pop” laboratories. Since they fall under an exemption under international counternarcotics conventions, the preparations can also be traded in large quantities, in excess of legitimate requirements, and diverted to use in large-scale laboratories. The National Synthetic Drug Action Plan issued in October 2004 identified and made recommendations to address this major problem.

The explosive growth in Afghan opium poppy cultivation has emphasized the importance of denying Afghan traffickers the precursor chemicals they require to convert opium to heroin. Current conditions in Afghanistan, porous borders, and a tradition of smuggling make this a difficult task, but concerned governments are working together to identify the sources and methods traffickers use to obtain chemicals in order to stop the supplies.

Traffickers continue to shift their procurement of the key cocaine and heroin chemicals, potassium permanganate and acetic anhydride, to countries not participating in Operations Purple and Topaz, the multilateral tracking operations designed to prevent diversion of these chemicals, re-emphasizing the importance of expanding participation in the operations

Background

Chemicals are essential to the manufacture of narcotic drugs, either for the processing of coca and opium into cocaine and heroin respectively, or as an integral component in the case of synthetic drugs. Only marijuana, of all the major illicit drugs of abuse, is available as a natural, harvested product.

Chemicals used in drug manufacture are divided into two categories, precursor and essential chemicals, although the term precursors is used to identify both. Precursor chemicals are used in the manufacture of synthetic drugs and become part of the final product. They are sold commercially in relatively small quantities. Essential chemicals are used in the refining of coca and opium into cocaine and heroin. Although some remain in the final product, the basic raw material is the coca or opium. Many essential chemicals required for illicit drug manufacture have extensive commercial applications, are widely traded, and are available from numerous source countries.

Chemical diversion control is a proactive and straightforward strategy to deny traffickers the chemicals they must have. It involves the regulation of licit commerce in the chemicals most necessary for drug manufacture to ensure that transactions are permitted to proceed only after legitimate end-uses for the chemicals involved have been established. This requires verifying that both the chemicals and the quantities ordered are appropriate for the needs of the buyer. Chemical control is a cost-effective strategy to prevent the manufacture of illicit drugs through the regulation of licit chemical commerce.

Chemical control, as a strategy to prevent a crime, requires the examination of proposed commercial chemical transactions, the large majority of which are legitimate, to identify and stop those liable to diversion to illicit drug manufacture. Chemical producers and traders must provide transaction details to their national authorities. In the case of export transactions, at least a portion of this information must be shared with importing governments so they can ascertain the legitimacy of the proposed end-uses of the chemicals. When transactions are denied, this information must be shared with third

countries to prevent traffickers from turning to alternative chemical source countries. To avoid hindering legitimate commerce, the information exchange and the decision-making must be rapid.

Governments approach chemical control from different perspectives. Some consider it a health issue to be handled by health ministries, with a primary interest in protecting public health. Others consider it a trade issue to be handled by trade ministries/agencies with a bias towards promoting, not regulating trade. If these ministries do not allow sufficient scope for regulatory and law enforcement measures in support of chemical control, they may unwittingly undermine this effective counternarcotics strategy. Trade ministries can also reinforce the reluctance of companies to provide information that needs to be shared with other governments for fear that it will reach competitors. This concern is unfounded. There is no evidence that the multilateral chemical information exchange now occurring is being abused by governments or firms to gain competitive advantage.

The U.S. has found a combination of regulation and law enforcement to be the most effective approach to chemical control. The regulatory component controls commerce in chemicals subject to diversion, authorizing legitimate transactions and identifying diversion attempts. The law enforcement component provides the capability to apprehend criminals seeking to divert chemicals, and to track back cases of successful diversion.

All countries having commerce in precursor and essential chemicals—exporting, trading, transit, and importing—must exchange information to prevent their diversion throughout the transaction chain and to investigate successful diversions. The information exchange must include feedback from countries receiving information, particularly importing countries, on actions they have taken in response to it. The U.S. continues to seek implementation of effective multilateral mechanisms for this information exchange.

Participation in multilateral chemical control mechanisms requires the promulgation of national chemical control regimes, the regulatory structures to implement them, and the law enforcement structures to enforce them. The national regimes must include provisions for the multilateral information exchange, while respecting the legitimate commercial interests of the businesses involved.

International Framework for Chemical Control

The need for chemical control has been internationally recognized. Article 12 of the 1988 United Nations Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances (1988 UN Drug Convention) establishes the obligation and international standards for parties to the Convention to control their chemical commerce to prevent diversion to illicit drug manufacture, and to cooperate with one another. The two tables of the Annex to the Convention list 23 chemicals as those most necessary for drug manufacture and, therefore, subject to control. The Convention contains provisions for adding and deleting chemicals from the tables. Signatories to the Convention accept the obligation to enact national laws and regulations to carry out its provisions.

The Inter-American Drug Abuse Control Commission of the Organization of American States (CICAD) has approved Model Regulations for the control of drug-related chemicals that set a high standard for government action. The Model Regulations cover all the chemicals included in the 1988 UN Drug Convention. Many Latin American countries have adopted chemical control laws and regulations based on the CICAD Model Regulations.

The European Union has chemical control regulations binding on all Member States. The European Council approved new updated regulations on November 25, 2004. The new regulations attack new drugs, establish an early warning system to identify new drugs and precursors, and control additional precursors. The EU regulations meet the chemical control provisions of the 1988 UN Drug Convention. EU Member States implement the regulations through national laws and regulations.

The 1988 UN Drug Convention and national legislation and regulations provide the framework for chemical control. They do not provide the mechanisms for the multilateral information exchange required for their successful implementation. The United States and other governments use the annual meetings of the UN Commission on Narcotic Drugs (CND) to forge agreement on information exchange mechanisms and to highlight emerging chemical control concerns.

The CND is also used to focus international attention on the use by traffickers of substitute chemicals in place of those controlled under the 1988 UN Drug Convention, particularly in the manufacture of synthetic drugs. In 1996, the United States introduced a resolution which was adopted by the CND requesting the UN International Narcotics Control Board (INCB), with the UN International Drug Control Program, to establish a limited international special surveillance list of chemicals not included in the Convention for which substantial evidence exists of their use in illicit drug manufacture. In 1998, the INCB, drawing on contributions of different governments, established the list to alert governments to the chemicals.

The June 1998 “United Nations General Assembly Special Session Devoted to Countering the World Drug Problem Together” (UNGASS) was an important vehicle for promoting chemical control. Two of the five action plans adopted by the Special Session—those dealing with amphetamine-type stimulants and their precursors and the control of precursors—were directly connected to chemical control. In April 2003, CND members reviewed progress in achieving the ten-year goals and objectives established by the UNGASS and reaffirmed their commitment to meeting them.

The U.S. has a chemical control agreement with the European Union, signed on May 28, 1997. It is particularly valuable in that it involves a 25-Member State organization representing some of the world’s largest chemical manufacturing and trading nations. It also importantly provides for the exchange of information on chemical transactions with third countries.

Informal, voluntary arrangements targeting specific chemicals or classes of chemicals are proving invaluable in facilitating control of the chemicals included in the 1988 UN Convention. They allow countries to exchange information rapidly in support of chemical control operations. By focusing on “choke point” chemicals, these arrangements allow authorities to concentrate resources on denying traffickers chemicals that are difficult to substitute in the drug production process without adverse impacts on product quality and the expense and ease of drug manufacture. The three major current operations are Operation Purple tracking trade in potassium permanganate, a key cocaine precursor chemical, Operation Topaz tracking trade in acetic anhydride, a key heroin precursor chemical, and Project Prism, concentrating on stricter tracking of trade in the chemicals and equipment required to manufacture synthetic drugs. The International Narcotics Control Board plays a central coordinating role in the operations

How Traffickers Obtain Chemicals

Chemicals are traded in vast quantities from multiple sources, both domestically and internationally, offering many opportunities for their diversion to illicit drug manufacture. In a few cases, traffickers will manufacture chemicals, when diversion is successfully curbed through effective enforcement. The exploitation of non-prescription drugs containing easily extractable pseudoephedrine is becoming a major source of that key chemical used in the illicit manufacture of methamphetamine. The following are some of the more common diversion and other methods used to obtain chemicals.

- Chemicals are diverted from domestic chemical production to illicit in-country drug manufacture. This requires the domestic capacity to manufacture the needed chemicals, coupled with poor domestic controls on them.

- Chemicals are imported legally into drug-producing countries with official import permits and subsequently diverted. The failure of importing countries to investigate legitimate end-use adequately before issuing import permits, and the acceptance by exporting countries of import permits as sufficient proof of legitimate end-use without any effort at independent verification, make this possible.
- Chemicals are manufactured in or imported by one country, diverted from domestic commerce, and smuggled into neighboring drug-producing countries. Inadequate internal and import controls and weak border security make this type of diversion possible.
- Chemicals are mislabeled or re-packaged and sold as non-controlled chemicals. In this case, diversion takes place at the manufacturer or distributor level. Poor controls that permit the initial diversion, coupled with the inability of enforcement officials to determine the true nature of the chemicals, permit this form of diversion.
- Chemicals are shipped to countries or regions where no systems exist for their control. This occurs because some chemical source countries do not insist that exports of controlled chemicals be only to countries that have in place viable, countrywide regulatory systems.
- New drugs (“designer drugs”) are developed that have physical and psychological effects similar to controlled drugs, but which can be manufactured with non-controlled chemicals.
- Traffickers manufacture the controlled chemicals they require from unregulated raw materials, a costly and difficult process.
- Traffickers extract chemicals, particularly pseudoephedrine, from pharmaceutical preparations. The 1988 UN Convention does not control pharmaceutical preparations, allowing them to be traded internationally without regard to legitimate requirements unless exporting and importing countries impose such controls.

These tactics are masked by the use of front companies, false invoicing, multiple transshipments, use of free trade zones, and any other device that will conceal the true nature of the product, its ultimate recipient or its final end-use.

There is some recycling of the solvents used in illicit drug manufacture; recycling cannot be used for acids, alkaline materials or oxidizing agents. Since recycling requires some sophistication, and there is a loss of chemical with each recycling process, it is not a preferred method for unsophisticated heroin and cocaine laboratories. The precursor chemicals used in the manufacture of synthetic drugs such as methamphetamine and Ecstasy cannot be recycled.

2004 Chemical Diversion Control Trends and Initiatives

The surge in Afghan opium cultivation and the problem of synthetic drug abuse were the major factors impacting chemical control in 2004, while on-going programs to prevent the diversion of cocaine and heroin chemicals continued unabated.

Preventing the diversion of precursor chemicals used to process Afghan opium into heroin is complicated by the lack of an administrative structure in the country to regulate chemicals, and porous borders in the region that facilitate smuggling. Since there are no legitimate requirements for a key heroin chemical, acetic anhydride, in Afghanistan, international attention has focused on preventing this chemical from reaching the country. The feasibility of backtracking acetic anhydride seized in Afghanistan heroin laboratories to its manufacturer is being explored. And the UN Office of Drugs

and Crime is conducting USG-supported chemical training programs in the Central Asian states to better prevent the diversion of chemicals in those countries that can be smuggled into Afghanistan. On a broader level, Operation Topaz, the multilateral acetic anhydride tracking initiative, is being used to stem the diversion of the chemical from legitimate international commerce.

Synthetic drug chemicals present a different challenge. Cocaine and heroin are dependent on coca and opium as their basic raw materials. Both are grown in relatively restricted areas, coca primarily in Colombia and other Andean Region countries, and opium poppy in Afghanistan and Burma. Their manufacture usually takes place near the source of the coca or opium.

Synthetic drug manufacture does not have these constraints. It requires no plant raw materials and can be accomplished in small labs wherever the chemicals are available. Furthermore the quantities of chemicals required are smaller (1.5 kilograms of ephedrine and other chemicals can produce 1 kg of amphetamine, or approximately 30,000 street doses). One of the most serious emerging problems is the extraction of sufficient ephedrine and pseudoephedrine from non-prescription medications to manufacture significant quantities of amphetamine and methamphetamine. This is done in large-scale laboratories, primarily on the U.S. West Coast and in Northern Mexico, and in small-scale laboratories that are spreading throughout the U.S.

The major source countries for potassium permanganate and acetic anhydride participate in Operations Purple and Topaz. However, traffickers continue to evade the reach of these initiatives by turning to non-participating countries to obtain these key cocaine and heroin chemicals. Many of these countries lack the legal, administrative, and law enforcement infrastructure to control the chemicals. Central Asian countries bordering Afghanistan are particularly worrisome in this regard as Afghanistan regains its position as the world's largest opium producer, with about 75 percent of the global production.

The Road Ahead

Multilateral procedures for controlling the most important precursor and essential chemicals have been developed. The objective now is to make them work more effectively. The most pressing elements are improving information exchange, expanding participation in existing operations, stemming the flow of heroin chemicals to Afghanistan, and addressing the problem created by traffickers using non-prescription drugs as a source of synthetic drug chemicals.

Information exchange is the key to effective chemical control. To improve information exchange, the misconception that sharing commercial information in regulatory and law enforcement channels can compromise it and cause commercial disadvantage needs to be dispelled. Expanded participation in Operations Purple and Topaz and Project Prism, is the best way to achieve this. It also closes a gap in the system whereby traffickers obtain their chemicals from non-participating countries. Information on proposed transactions needs to be more widely shared, beyond the bilateral exchanges between exporter and importer to expand the intelligence available to identify suspect transactions, and to prevent traffickers from shopping among potential suppliers.

The two-way nature of information exchange needs to be emphasized. In too many cases exporting countries are not receiving replies to pre-export notifications sent to importing countries. The purpose of the pre-export notification is to enable importing country authorities to verify the legitimacy of the transaction and reply to the exporting country, approving or denying the transaction. The system breaks down without replies, allowing shipments to proceed without verification and leading to a situation where exporting countries no longer bother with pre-export notifications. One option selectively employed by the U.S. and some other countries is to agree that the exporting country will

not allow shipment of chemicals until the importing country issues either a “letter of no objection” to the proposed shipment or an import permit.

Stopping diversion of precursor chemicals is an important element of the National Synthetic Drugs Action Plan, issued in October 2004. The extraction of precursor chemicals from pharmaceutical preparations is a specific target. Sales of many of these preparations are controlled in some, but not all other countries. Furthermore, the 1988 UN Drug Convention has been generally interpreted to exclude pharmaceutical preparations from its requirements. This makes developing an international consensus in support of better controls difficult. However, there are things that can be done. Mindful of the extraction of precursor chemicals from pharmaceutical products, countries can be urged to apply the full provisions of article 12 of the 1988 UN Convention to monitor exports of pharmaceutical preparations containing ATS precursor chemicals. Moreover, governments can urge manufacturers to develop formulations of these pharmaceuticals that make it more difficult to extract ATS precursor chemicals. More importantly, major exporting countries for these pharmaceutical products must be urged to use some rule of reason in authorizing exports to regions where illicit methamphetamine production is surging, and where the population density could not realistically justify the quantities being shipped.

These issues will continue to be major themes in our policy dialogue with international partners in chemical control. The problem of misuse of pharmaceutical preparations will be stressed at the March 2005 UN Commission on Narcotic Drugs and will be included in our regular bilateral contacts.

Major Chemical Source Countries

The countries included in this section are those with large chemical manufacturing or trading industries that have significant trade with drug-producing regions, and those countries with significant chemical commerce susceptible to diversion domestically for smuggling into neighboring drug-producing countries. Designation as a major chemical source country does not indicate a country lacks adequate chemical control legislation and the ability to enforce it. Rather, it recognizes that the volume of chemical trade with drug-producing regions, or proximity to them, makes these countries the sources of the greatest quantities of chemicals liable to diversion. The United States, with its large chemical industry and extensive trade with drug-producing regions, is included in the list.

Many other countries manufacture and trade in precursor chemicals, but not on the same scale, or with the broad range of precursor chemicals, as the countries in this section. These designations are reviewed annually.

Article 12 of the 1988 UN Drug Convention is the international standard for national chemical control regimes and for international cooperation in their implementation. The annex to the Convention lists the 23 chemicals most essential to illicit drug manufacture. The Convention includes provisions for the Parties to maintain records on transactions involving these chemicals, and to provide for their seizure if there is sufficient evidence that they are intended for illicit drug manufacture.

The Americas

Argentina

Argentina has an advanced chemical industry that manufactures almost all the chemicals necessary for cocaine and heroin manufacture. Many of these are liable to smuggling into neighboring Bolivia. Cocaine manufacture has also increased in Argentina using smuggled cocaine base, indicating domestic precursor chemical diversion. Argentina is a party to the 1988 UN Drug Convention, and has laws meeting the Convention's requirements for record keeping, import and export licensing, and the authority to suspend shipments. Presidential decrees have placed controls on precursor and essential chemicals, requiring that all manufacturers, importers or exporters, transporters, and distributors of these chemicals be registered with Secretariat for the Prevention of Drug Addiction and Narcotics Trafficking (SEDRONAR).

During 2004, SEDRONAR implemented its own computer database that allows cross checking of registrants, and hired additional personnel to analyze the data. More on-site inspections of chemical operators were conducted during 2004 than ever before, resulting in a record number of civil sanctions against rouge chemical operators.

From November 2003 until October 2004, the DEA-funded Northern Border Investigations seized 54,910 kilograms of precursor chemicals. While down considerably from the previous period, the seizures indicate that chemical diversion remains a serious problem.

Argentina needs to enhance its legal provisions to provide a real deterrent to chemical diverters. The current Argentine chemical control legislation does not appropriately address civil and criminal sanctions against firms and/or individuals who violate the established chemical control regulations. Existing legislation only sanctions violations that are carried out within 100 kilometers of the northern border. SEDRONAR has submitted legislation that will give it the power to issue severe civil penalties to firms that violate chemical control

regulations. The legislation has been reviewed by the Chamber of Representatives and is awaiting approval by the Senate

Argentina is a participant in Operation Topaz and Operation Seis Fronteras. Argentine authorities willingly share chemical control information with U.S. authorities. The Government of Argentina has requested that the USG designate a Diversion Investigator to assist in improving chemical controls and conducting operations.

Brazil

Brazil is a party to the 1988 UN Drug Convention. It has South America's largest chemical industry, and also imports significant quantities of chemicals to meet its industrial needs.

Brazilian law requires registration with the Federal Narcotics Police of all producers, transporters and distributors of precursor chemicals. In August 2003, the Justice Ministry issued a regulation to prevent the manufacture of illegal drugs that requires the control of approximately 150 chemicals. Any person or company involved in the purchase, transportation, or use of these chemicals must have a certificate of approval of operation, real estate registry and other documents issued by the Federal Police. Companies are required to keep records and submit audits and reports on a monthly basis. The chemical section of the Drug Enforcement Division of the Federal Police has the authority to add or delete chemicals to the list of chemicals under control.

Brazil borders the three major cocaine-producing countries, Colombia, Peru and Bolivia, making Brazilian chemicals liable for diversion from the domestic market and smuggling across remote borders into these countries. There are indications of cocaine labs on Brazilian territory for processing coca and partially processed cocaine smuggled from these countries into cocaine HCL, using domestically diverted chemicals. Securing these borders is a major challenge to Brazilian authorities.

Brazil continues to support and participate in international initiatives targeting chemical diversion, such as Operations Purple and Topaz, and Project Prism. It also participates in Operation Seis Fronteras, a regional exercise involving Argentina, Brazil, Colombia, Ecuador, Peru, Venezuela, and DEA to concentrate counternarcotics law enforcement efforts on chemical control. The USG supports Operation Seis Fronteras and a chemical control task force in the port of Santos.

Brazil has established procedures under which records of transactions in precursor and essential chemicals can be made available to other countries' law enforcement authorities. The 1995 bilateral U.S./Brazil Counternarcotics Agreement provides the formal basis for information sharing with U.S. authorities. DEA has a Diversion Investigator assigned to its Brasilia office.

For two years ending December 2004, Brazil chaired the OAS-CICAD experts working group on precursor chemicals. Brazil hosted two meetings of that group in Brasilia.

Canada

Canada is a transit and producer country for precursor chemicals and over-the-counter drugs used to produce synthetic drugs, particularly methamphetamine. The chemical most widely used for this purpose is pseudoephedrine, a regulated chemical included in Table 1 of the 1988 UN Drug Convention. Other precursor chemicals available in Canada used in synthetic drugs manufacture include ephedrine, sassafras oil, piperonal and gamma butyrolactone. Canada is a party to the 1988 UN Drug Convention.

New Canadian regulations strengthening the chemical control provisions of the Controlled Drug and Substances Act came into force on January 9, 2003. The new regulations provide for control of the 23 chemicals listed in the 1988 UN Drug Convention, and for the proper licensing of companies in order to import, export, produce, or distribute controlled chemicals. The agency with primary responsibility for implementing the new regulations is Health Canada, but lead enforcement responsibility lies with the Royal Canadian Mounted Police. At the request of Health Canada, DEA sent a Diversion Investigator and a Program Analyst in early 2003 to advise on U.S. experience in implementing chemical controls. Since the new regulations went into effect, the amount of Canadian-sourced pseudoephedrine discovered in clandestine U.S. methamphetamine laboratories has decreased significantly.

Cooperation between U.S. and Canadian law enforcement agencies is excellent. Canadian law enforcement agencies share available information on chemical transactions with U.S. law enforcement. In 2004, DEA and the RCMP led a joint investigation, Operation Brain Drain, targeting Canadian bulk ephedrine distributors and their U.S. associates, as well as U.S.-based Mexican methamphetamine manufacturers and distributors. The operation resulted in 90 arrests, including five major traffickers, and the seizure of 2,735 pounds of ephedrine and nearly 1.7 million ephedrine pills.

Mexico

Mexico has major chemical manufacturing and trading industries that produce, import or export most of the chemicals necessary for illicit drug manufacture. The country is a party to the 1988 UN Convention and has laws and regulations meeting its chemical provisions.

Chemical diversion, however, does occur. In September, Colombia reported the seizure of 18,000 kilograms of the cocaine chemical potassium permanganate that originated in Mexico. In June, Mexican authorities reported the theft of approximately 3,500 kilograms of pseudoephedrine powder from Mexico City International Airport.

Mexico is a good example of the problem created by traffickers using non-prescription pharmaceuticals containing easily extractable pseudoephedrine as a source of this precursor for the manufacture of methamphetamine. In 2004, Mexico took steps combat this situation, including limiting the importation of pseudoephedrine and ephedrine to 3 tons per transaction, limiting distribution of pseudoephedrine and ephedrine combination pharmaceuticals exclusively to pharmacies, and establishing a moratorium in the approval of new products containing more than 240 milligrams of pseudoephedrine.

Another significant step taken by Mexico in 2004 was the designation and training of several prosecutors by the Attorney General's Office to handle diversion cases. These prosecutors have been instrumental in leading investigations referred to it. They work well with the Commission Federal Para la Prevencion de Riesgos Sanitarios (COFEPRIS), the agency responsible for regulating chemicals, and with U.S. counterparts.

U.S. and Mexican authorities cooperate in law enforcement. A formal mechanism for cooperation is the U.S-Mexico Bilateral Chemical Control Working Group, but day-to-day contact is handled by the DEA Country Office, notably by two Diversion Investigators posted to Mexico City. In 2004, Mexican authorities conducted, in coordination with DEA, several controlled deliveries that resulted in the seizure of three shipments originating in Hong Kong totaling approximately 16.5 million 60 mg tablets of pseudoephedrine. Mexico participates in the multilateral chemical control initiatives, Operations Purple and Topaz and Project Prism.

The United States

The United States manufactures and/or trades in all 23 chemicals listed in the Annex to the 1988 UN Drug Convention. It is a party to the Convention and has laws and regulations meeting its chemical control provisions.

The basic U.S. chemical control law is the Chemical Diversion and Trafficking Act of 1988. This law and three subsequent chemical control amendments were all designed as amendments to U.S. controlled substances laws, rather than stand-alone legislation, and are administered by the Drug Enforcement Administration (DEA). In addition to registration and record keeping requirements, the legislation requires traders to file import/export declarations at least 15 days prior to shipment of regulated chemicals. DEA uses the 15-day period to determine if the consignee has a legitimate need for the chemical. Diversion Investigators are assigned to DEA offices in 10 key countries and one at INTERPOL to assist in determining legitimate end-use. In other countries, DEA agents perform this task. The Diversion Investigators and agents work closely with host country officials in this process. If legitimate end-use cannot be determined, the legislation gives DEA the authority to stop shipments.

U.S. legislation also requires chemical traders to report to DEA suspicious transactions such as those involving extraordinary quantities, unusual methods of payment, etc. Close cooperation has developed between the U.S. chemical industry and DEA in the course of implementing the legislation.

Criminal penalties for chemical diversion are strict; they are tied to the quantities of drugs that could have been produced with the diverted chemicals.

The U.S. has had a leadership role in the design, promotion and implementation of cooperative multilateral chemical control initiatives. It co-chairs the steering committee for Operations Purple; it is on the steering committee for Operation Topaz and the task force coordinating Project Prism. It also has established close operational cooperation with counterparts in major chemical manufacturing and trading countries. This cooperation includes information exchange in support of chemical control programs and in the investigations of diversion attempts.

Asia

China

China has a large and developed chemical industry and is a major producer of acetic anhydride, potassium permanganate, ephedrine, and pseudoephedrine, all chemicals on Table 1 of the 1988 UN Drug Convention. The country is a party to the 1988 UN Drug Convention and has regulations for record keeping and import/export controls on the 23 chemicals included in it. Several provinces, including Yunnan (which shares a border with Burma), have more stringent controls than called for in the convention. In 2004, Zhejiang Province, one of the largest chemical producing areas in China, announced strict controls over precursor chemicals, requiring special approval from two offices with dual oversight to ship these products.

The Chinese Public Security Bureau maintains a small chemical control unit in Beijing to investigate chemical diversion and to verify the legitimacy of chemical handlers and transactions. In the provinces, provincial police only address controlled chemicals when they are discovered at a clandestine laboratory. China also requests "letters of no objection" from importing countries prior to authorizing exports of methamphetamine precursor chemicals.

Despite the adequate legislation, China remains a significant source country for chemicals diverted worldwide for the illicit production of cocaine, heroin, methamphetamine, and Ecstasy. The country lacks the infrastructure to monitor adequately its large chemical production capacity and its international trade in chemicals.

U.S. and Chinese cooperation in chemical control is good, within the limits of Chinese capabilities. China is a participant in Operations Purple and Topaz, and Project Prism. Information is exchanged through these operations and in the course of normal counternarcotics cooperation. China is also a participant in Operation Icebreaker, an effort to combat diversion of precursor chemicals for the production of crystal methamphetamine. DEA has Diversion Investigator positions in its Beijing and Hong Kong offices.

India

India's large chemical industry manufactures a wide range of chemicals, including the precursor chemicals acetic anhydride, ephedrine, pseudoephedrine, which can be diverted for illicit drug manufacture.

India is a party to the 1988 UN Drug Convention, but it does not have controls on all the chemicals listed in the Convention. The GOI controls acetic anhydride, N-acetylanthranilic acid, anthranilic acid, ephedrine, pseudoephedrine, potassium permanganate, ergotamine, 3,4-methylenedioxyphenyl-2-propanone, 1-phenyl-2propanone, piperonal, and methyl ethyl ketone, all chemicals listed in the convention. Indian law allows the government to place other chemicals under control. Violation of any order regulating controlled substance precursors is an offense under the Narcotics Drugs and Psychotropic Substances Act, the key law controlling trafficking and is punishable with imprisonment of up to ten years. Intentional diversion of any substance, whether controlled or not, to illicit drug manufacture is also punishable under the act.

The Indian Government in partnership with the Indian Chemical Manufacturing Association imposes controls on acetic anhydride, a key heroin chemical. Chemical manufacturers visit customers to verify the legitimacy of their requirements, and shipments are secured with specially fabricated sealing systems to prevent diversion. Domestic and export sales of acetic anhydride require a letter of no objection from the government.

Indian authorities cooperate with U.S. authorities on letters of no objection and verification of end-users, especially with regard to ephedrine and pseudoephedrine. Information is shared between Indian and U.S. authorities and India is a participant in Operations Purple and Topaz and Project Prism. India co-chairs the steering committee for Operation Topaz.

DEA has a Diversion Investigator assigned to its New Delhi office.

Europe

Chemical diversion control within the European Union (EU) is regulated by EU regulations binding on all Member States. This includes the ten new Member States, expanding these regulations into Eastern Europe. The European Council approved new regulations on November 25, 2004. The new regulations attack new drugs, establish an early warning system to identify new drugs and precursors, and control additional precursors. The EU regulations meet the chemical control provisions of the 1988 UN Drug Convention, including provisions for record keeping on transactions in controlled chemicals, a system of permits or declarations for exports and imports of regulated chemicals, and authority for

governments to suspend chemical shipments. EU member states implement the regulations through national laws and regulations.

The EU regulations govern the regulatory aspects of chemical diversion control. Member States are responsible for the criminal aspects, investigating and prosecuting violators of the national laws and regulations implementing the EU regulations.

A Joint Unit on Precursors has been established, located at and supported by Europol in The Hague, the Netherlands. This has improved cooperation and the exchange of chemical control information between the Netherlands, Belgium, France, Germany, Austria, and the United Kingdom.

The U.S.-EU Chemical Control Agreement, signed May 28, 1997, is the formal basis for U.S. and EU Member State cooperation in chemical control. The agreement calls for annual meetings of a Joint Chemical Working Group to review implementation of the agreement and to coordinate positions in other areas. The annual meeting has been particularly useful in coordinating national or joint initiatives such as resolutions at the annual UN Commission on Narcotic Drugs.

Bilateral chemical control cooperation is also good between the U.S. and EU Member States, and many are participating in and actively supporting voluntary initiatives such as Operations Purple and Topaz, and Project Prism.

Germany and the Netherlands, with large chemical manufacturing or trading sectors and significant trade with drug-producing areas, are considered the major European chemical source countries. Other European countries have important chemical industries, but the level of chemical trade with drug-producing areas is not as large and broad-scale as these countries.

Germany

Germany's large chemical industry manufactures and sells most of the precursor and essential chemicals used in illicit drug manufacture. The country is a party to the 1988 UN Drug Convention and has chemical control laws and regulations, based on the EU regulations, meeting the Convention's requirements. The federal Precursor Control Act criminalizes the diversion of controlled chemicals for the illicit manufacture of drugs. The 1994 code was amended in 2002, and a regulation for criminalizing violations of the EU chemical regulations was adopted.

Precursor control as a preventative measure is a major focus in combating drug crime in Germany. The country has an effective and well-respected chemical control program that monitors the chemical industry, as well as chemical imports and exports. Cooperation between chemical control officials and the chemical industry is a key element in Germany's chemical control strategy. The Federal Criminal Police and German Customs Police have a very active Joint Precursor Chemical Unit, based in Wiesbaden, devoted exclusively to chemical diversion investigations. A total of 34 cases involving precursor chemicals were investigated in 2003. Authorities prevented the export of eighteen tons of precursors chemicals.

Germany has been in the forefront of international cooperation in chemical control. It developed and promoted the concept that led to Operation Purple and co-chairs its Steering Committee. Germany was one of the leaders in the organization of Operation Topaz and is now actively participating in its implementation. It strongly supports Project Prism. In January 2005, the Federal Criminal Police hosted a multilateral meeting in Wiesbaden to develop strategies to prevent the diversion of the key heroin chemical acetic anhydride to Afghanistan.

German chemical control officials and DEA counterparts maintain a close working relationship. A senior DEA Diversion Investigator in DEA's Frankfurt Resident Office spends at least one day a week with the Joint Precursor Chemical unit, working on chemical issues of

concern to both countries. This arrangement allows for the real-time exchange of information. German and U.S. delegations regularly support joint positions on chemical control in multilateral meetings such as the Commission on Narcotic Drugs. Information exchange during special operations has also been excellent.

The Netherlands

The Netherlands is a major chemical trading country. There are large chemical storage facilities, and Rotterdam is the world's busiest port. These combine to make the country attractive to criminals seeking chemicals for illicit drug manufacture.

The Netherlands is a party to the 1988 UN Drug Convention and has legislation meeting its chemical control requirements and those of the EU regulations. Trade in precursors is governed by the 1995 Act to Prevent Abuse of Controlled Substances. The law seeks to prevent the diversion of chemicals to illicit drug manufacture. Violations of the law can lead to prison sentences (maximum of six years), and fines (up to 50,000 Euros), or asset seizures. The Fiscal Information and Investigative Service and the Economic Control Service oversee implementation of the law.

The Netherlands supports and participates in multilateral chemical control initiatives such as Operations Purple and Topaz. It is taking an active role in Project Prism, and it hosted an important organizational meeting for the project in December 2002. The Netherlands and the U.S. (DEA) have co-chaired Project Prism's Chemicals Working Group since its inception in 2002.

Large quantities of Ecstasy are manufactured in the Netherlands. The government has taken a pro-active stance in meeting this threat. It concluded that many of the important precursor chemicals used in local Ecstasy manufacture came from China. The joint participation of the Netherlands and China in Project Prism resulted in their signing a memorandum of understanding on October 22, 2004 governing the sharing of information regarding shipments of precursor chemicals to prevent their diversion from licit trade.

The Dutch continue to work closely with the U.S. on precursor controls and investigations. This cooperation includes formal and informal arrangements for information exchange. U.S. and Dutch authorities cooperate closely in multilateral operational initiatives and in international meetings such as the Commission on Narcotic Drugs.

Major Drug Countries

Drug manufacture requires significant quantities of chemicals. Most major illicit drug manufacturing countries do not produce all the required chemicals, and traffickers must meet their chemical requirements from external sources. This section summarizes the sources of chemicals used in major drug manufacturing countries and their initiatives to control these chemicals.

Asia

Afghanistan

Afghanistan is the world's largest opium grower. There are labs in Afghanistan capable of processing the opium to opiates in all forms, from morphine base to fully refined white heroin.

With no domestic chemical industry, the chemicals required for heroin processing must come from abroad. The principal sources are believed to be Europe, the Central Asian States and India, but the traffickers skillfully hide the sources of their chemicals by re-packaging and false labeling. There are no legitimate requirements in Afghanistan for most of the chemicals used in heroin manufacture, and the bulk are smuggled through the Central Asian States, the Persian Gulf and Pakistan, after being diverted elsewhere.

Afghanistan is a party to the 1988 UN Drug Convention and it has joined Operation Topaz, directed at controlling the heroin chemical acetic anhydride. However, it lacks the legal, regulatory and enforcement infrastructure to comply with the Convention's chemical control provisions, or to actively participate in Operation Topaz. Until the infrastructure is developed, Afghanistan will require regional cooperation to prevent the transit of chemicals for smuggling into the country.

Burma

Burma is a primary source of amphetamine-type-stimulants (ATS) in Asia, producing hundreds of millions of tablets annually, and is the world's second largest illicit opium producer, though opium poppy cultivation is decreasing. Burma does not have a significant chemical industry and does not manufacture ephedrine, pseudoephedrine, acetic anhydride, or any of the other chemicals required for ATS or heroin production. Most of the chemicals required for illicit drug manufacture are smuggled into Burma from neighboring countries.

Burma is a party to the 1988 UN Drug Convention, but it does not have laws and regulations to meet all its chemical control provisions. In 1998, Burma established a Precursor Chemical Control Committee responsible for monitoring, supervising and coordinating the sale, use, manufacture, and transportation of imported chemicals. In 2002, the Committee identified 25 substances as precursor chemicals, including two not in the 1988 UN Convention (caffeine and thionyl chloride) and prohibited their import, sale or use in Burma.

In January 2003, Burma held its first trilateral conference with India and China on precursor chemicals. In 2004, the conference expanded to include Laos and Thailand. As a result, India and China have taken steps to divert precursor chemicals away from Burma's border areas and India has added ephedrine to the 100-mile wide exclusion zone for acetic anhydride along its border with Burma. In addition, Burma is one of six countries (Burma, Cambodia, China, Laos, Thailand, and Vietnam) that are parties to the UN Office of Drugs and Crimes sub-regional action plan for controlling precursor chemicals and reducing illicit narcotics production and trafficking in the highlands of Southeast Asia.

Burmese seizures of precursor chemicals declined substantially during the first ten months of 2004. Over this period, authorities seized 183 kilograms of ephedrine, 7 gallons of acetic anhydride, and 17, 286 liters of other precursor chemicals.

Latin America

Bolivia

Bolivia does not have a large chemical industry and virtually all the chemicals required for illicit drug manufacture are smuggled in from neighboring countries. One of the continuing focuses of Bolivian counternarcotics policy is the interception of smuggled chemicals and the detection and destruction of the organizations that smuggle chemicals into the country.

Bolivia has a professional chemical interdiction program led by the Special Group for Investigations of Chemical Substances (GISUQ), an elite group within the Bolivian counternarcotics police. The historically weak Bolivian Directorate of Controlled Substances (DGSC), a civilian agency, is responsible for registering and tracking industrial chemicals, including drug precursors. A UN Office of Drugs and Crime-supported project provided a computerized registration database for both the DGSC and GISUQ. With Embassy and DEA assistance, GISUQ will obtain real-time access to the system by mid 2005. GISUQ also has sought revisions to DGSC regulations that would provide GISUQ with clearer authority to support prosecution of offenders. These draft revisions have been reviewed by the private sector, and DGSC is expected to continue consultations and finalize changes in the first quarter of 2005.

Although GISUQ has succeeded in making precursor chemicals more difficult and expensive to obtain, Bolivian traffickers have been able to adapt by substituting inferior chemicals and recycling. The average purity of Bolivian cocaine base has remained consistent over recent years: the purity of samples taken in the fourth quarter of 2003 and 2004 showed an average purity level of 73.9 percent and 73.3 percent respectively; in 2001 and 2002 the average purity level was 74 percent. GISUQ's strategy now focuses more aggressively on sulfuric acid and sodium bicarbonate, which are difficult to substitute in Bolivia.

During 2004, GISUQ continued to improve its performance. Seizures of solid precursors increased 210.8 percent, and liquid precursors rose 24.3 percent over the same period in 2003.

Bolivia is a party to the 1988 UN Drug Convention, and has the legal framework for implementing its chemical control provisions. Bolivia participates in chemical control initiatives such as Operation PH-7 (national) and Operation Seis Fronteras (multilateral), and cooperates closely with U.S. officials. DEA has a Diversion Investigator assigned to its La Paz office.

Colombia

Colombia does not have the domestic capacity to produce all the chemicals required for the illicit manufacture of cocaine and heroin in the country. These chemicals are either imported into the country with valid import licenses and subsequently diverted or smuggled in from neighboring countries, Brazil, Ecuador and Venezuela. There have been reports of large quantities of chemicals reaching Colombia that originated in China and transited Mexico. Chemical traffickers and clandestine laboratories are also using non-controlled chemicals to replace controlled chemicals that are difficult to obtain. Some chemicals are recycled.

A major problem in Colombian chemical control continues to be the system for issuing import permits. They are not reliable proof that the legitimate end-use for the chemicals has been verified prior to issuance. The Colombian National Police Chemical Special Investigative Unit (SIU) focuses on investigative work as opposed to regulatory inspections. The goal of the SIU is to dismantle large-scale precursor trafficking organizations.

Colombia is a party to the 1988 UN Drug Convention and has chemical control laws meeting or exceeding its requirements. Colombia participates in Operations Purple and Topaz, and Operation Seis Fronteras. DEA has a Diversion Investigator assigned to its Bogota office.

Peru

Chemicals required for illicit drug manufacture are either diverted from domestic production and legal imports, or smuggled in from neighboring countries. The Peruvian National Police

(PNP) proactively cooperate with neighboring countries and the U.S. to conduct regional chemical control operations that resulted in record seizures of over 1,200 metric tons of precursor chemicals in 2004.

The Peruvian Congress in 2004 passed a new law to better control cocaine precursor chemicals. The law will go into effect in early 2005. In February 2004, Peru, Colombia and Brazil signed a border cooperation agreement that targets illegal border activity, including trafficking in drugs and precursor chemicals.

Peru is a party to the 1988 UN Drug Convention and has laws meeting its chemical control provisions. U.S. and Peruvian authorities cooperate closely in chemical control. Peru is a strong supporter of Operation Seis Fronteras and participates in Operation Purple.

SOUTH AMERICA

[*This text has been revised since its original posting to the website; see version as [released to Congress.](#)]

Argentina

I. Summary

Argentina is not a major drug producing country, but it is a transit country for cocaine flowing from neighboring Bolivia, Peru and Colombia primarily destined for Europe. Argentina is also a transit route for Colombian heroin en route to the U.S East Coast (primarily New York). Due to its advanced chemical production facilities, Argentina continues to be a source for precursor chemicals. According to Argentine Government (GOA) statistics, there was more cocaine seized in the first three quarters of 2004 than in the entire 2003 calendar year. In addition to Argentine traffickers, there is evidence that Colombian drug traffickers have greatly increased their presence in all aspects of the Argentine drug trade. In 2004 there was an increase in domestic cocaine production using coca base imported from Bolivia. In November 2004 the Federal Police in Buenos Aires seized 32.5 kilograms of cocaine from a Colombian-run cocaine laboratory in the Buenos Aires area. This may signal a new chapter in the global war on drugs, as Colombian narcotics traffickers search out alternative bases of operations and transit routes in response to the increased pressure of Plan Colombia. Also of concern is that according to GOA statistics, domestic drug use continues on the upswing. The dangerous trends of increased domestic drug consumption and production coupled with the increased activity of Colombian drug traffickers are indications that the situation in Argentina is at a crucial point.

The GOA recognizes the increase in narcotics trafficking and consumption, and during 2004 has taken concrete steps toward combating these growing problems. In September, following ten years of negotiations, the GOA signed an INL Letter of Agreement (LOA) with the U.S., both demonstrating its increased willingness to work with the U.S. on narcotics related issues, and enabling the U.S. to begin providing assistance to the GOA. In December, the Ministry of the Interior started developing a National Security Plan targeting specifically the area of drug trafficking along its border area with Bolivia and Paraguay, and has requested DEA assistance in both the planning and execution phases of this vital process. Also in December, the GOA cabinet office in charge of prevention issues (SEDRONAR) announced plans to create the first ever national drug prevention plan emphasizing youth education and public awareness. SEDRONAR has asked Post's INL representative to be involved in the project and to assist in obtaining regional expertise from neighboring countries. Narcotics use and trafficking are important issues in Argentina, and the GOA's relationship with the USG in narcotics-related issues is extremely close and positive. Argentina is a party to the 1988 UN Drug Convention.

II. Status of Country

While cocaine production is increasing, Argentina is not a major drug producing country. Because of its advanced chemical production facilities, it is one of South America's largest producers of chemicals used to manufacture almost all the precursors necessary to process cocaine and heroin. Marijuana remains the most commonly smuggled and consumed drug, with cocaine HCl and inhalants ranked second and third. Recently the use of Paco, coca base mixed with toxic chemicals, has increased in Argentina. Paco is a relatively inexpensive and addictive drug similar to crack, and is popular among low-income youth. Bolivia is the primary source of narcotics entering Argentina, but narcotics also enter via Paraguay and Brazil. The trafficking of Colombian heroin through Argentina to the U.S. East Coast has decreased in 2004 due to the capture of a well-organized heroin trafficking ring in December 2003, but heroin trafficking via commercial air carriers remains a concern. Seizures of amphetamines and ecstasy (MDMA), a synthetic stimulant with hallucinogenic properties, are increasing.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The government actively targets the trafficking, sale, and use of illegal narcotics. Internal Security is one of the highest profile issues in Argentina today, and the fight against crime in Argentina is synonymous with the fight against drug traffickers and drug use. In September 2004, President Nestor Kirchner moved the Security Secretariat from the Justice Ministry back to the Ministry of the Interior, a move that is widely seen as significantly raising the profile of security related issues. In December 2004, the Interior Minister announced plans to develop a national security plan to deal with the drug trafficking problem. The Interior Ministry is working with SEDRONAR, the Gendarmeria National (border guards), Aduanas (Customs), the Federal Police and Provincial leadership and law enforcement on this issue.

Accomplishments. From November 2003 to October 2004, the DEA-funded Northern Border Task Force (NBTF) seized in excess of 54,910 kilograms of illicit chemicals, down significantly from 153,569.50 kilograms during the same period in 2003. While the amount of illicit chemicals seized was down in 2004, the amount seized indicates that chemical diversion remains a serious problem. The NBTF and Group Condor seized 691 kilograms of cocaine, including base, and arrested 139 traffickers in FY2004 as compared with 507.88 kilograms of cocaine and 207 traffickers in 2003. A major benefit derived from these operations has been the enhanced cooperation between the agencies in the conduct of joint investigations.

According to statistics provided by SEDRONAR, in the first nine months of 2004, GOA law enforcement seized 12 clandestine cocaine laboratories capable of processing an estimated 565 kilograms of cocaine. Not included in SEDRONAR's statistics is the November 2004 GOA seizure of the largest cocaine lab ever discovered in Argentina, reportedly capable of producing more than half as much cocaine as all the other labs seized in 2004 combined. In comparison, eight labs were seized in 2003, and only 15 small labs were seized between 1999 and 2002.

According to SEDRONAR, 2,155 kilograms of cocaine were seized in the first three quarters of 2004, compared to 1,918 kilograms of cocaine for all of 2003. Also according to SEDRONAR, 43,920 kilograms of marijuana were seized in the first three quarters of 2004, compared to 45,553 kilograms during the same period in 2003. SEDRONAR also reports that 29.8 metric tons of coca leaf was seized during the first three quarters of 2004, down sharply from the 39.5 metric tons seized during the same period in 2003. Seizure totals for the last three years are considerably lower than the 91.3 metric tons seized in 2001.

Law Enforcement Efforts. The Ministry of the Interior, in coordination with SEDRONAR, directs federal counternarcotics policy. The primary federal forces involved are the Federal Police, the Gendarmeria, Aduanas, National Air Police (PAN), and the Prefectura Naval (Coast Guard). Provincial police forces also play an integral part in counternarcotics operations. The GOA has recently signaled an increased dedication to combating both narcotics trafficking and consumption and is actively taking measures to increase coordination between the various law enforcement agencies.

All of Argentina's security forces face continuing severe counternarcotics budget limitations that have hampered investment in training and equipment. Also, weak coordination between law enforcement agencies continues to lessen GOA effectiveness. The GOA recognizes these problems and has taken steps to alleviate them. The Gendarmeria, for example, has been authorized to recruit an additional 2,000 members in 2004 and one of the primary goals of the proposed National Security Plan is to seek methods to greatly increase interagency cooperation.

Corruption. Corruption remains a high profile issue in Argentina and the GOA continues to make efforts to eliminate corruption and prosecute those implicated in corruption investigations. The GOA has created the Anti-Corruption Office within the Executive Branch that is responsible for investigating suspected instances of corruption. Since its inception, the office has initiated more than

1,000 investigations, some of which in recent months have either gone or are heading to trial. In 2004, the former Environment Secretary Maria Julia Alsogaray was convicted on corruption charges and is currently incarcerated. The GOA does not facilitate illicit production or distribution of narcotic or psychotropic drugs or other controlled substances or the laundering of proceeds from illegal drug transactions.

Agreements and Treaties. Argentina remains very active in multilateral counternarcotics organizations such as the Inter American Drug Abuse Commission, the International Drug Enforcement Conference (IDEC), and the United Nations Drug Control Program. The GOA hosted the IDEC in 2000 and played an active role in IDEC 2001-4. In 2004, Argentina continued to urge MERCOSUR (Common Market of South American Nations) to play a larger role in money laundering and chemical precursor diversion investigations.

Argentina is a party to the UN convention Against Transnational Organized Crime and its protocols against trafficking in persons and alien smuggling. The GOA has bilateral narcotics cooperation agreements with many neighboring countries. The United Kingdom, Germany, Australia, France and Italy provide limited training and equipment support. In 1998, a witness protection program for key witnesses in drug-related prosecutions was created. In 1997, the U.S. and Argentina signed a new extradition treaty, which entered into force on June 15, 2000. In 1990, Argentina and the USG signed a mutual legal assistance treaty that entered into force in 1993. Argentina is a party to the 1988 UN Drug Convention.

Cultivation/Production. Illicit cultivation of marijuana remains negligible, and no other narcotics are cultivated in Argentina. There was a large increase in both the number and size of clandestine cocaine laboratories seized in 2004 that indicates an increase in domestic narcotic production, but the amount of cocaine produced annually in Argentina is still small when compared to other nations in the region.

Drug Flow/Transit. Most Argentine officials agree that drug trafficking is a growing problem. The bulk of cocaine and marijuana enters Argentina via Bolivia utilizing the remote and often rugged land border between Bolivia and the provinces of Salta and Jujuy. Narcotics smugglers also move cocaine and marijuana across the river border between Paraguay and the provinces of Misiones and Corrientes. Heroin and some cocaine enter Argentina via commercial aircraft. Increasingly, GOA officials are becoming concerned about the use of small private aircraft to carry loads of narcotics into Argentina from Bolivia and Paraguay. GOA officials acknowledge that only a small percentage of Argentine airspace is covered by radar and, in the absence of effective radar information, it is simply impossible to gauge the number of aircraft entering Argentina undetected. The GOA recognizes the lack of radar coverage and is actively pursuing the purchase of several mobile radar units. Based upon intelligence reporting, Post's DEA Attaché believes the highest volume method of narcotics transportation from Argentina is via containers passing through Argentina's maritime port system. As a member of MERCOSUR, Argentina cannot open and inspect sealed containers from another member state that pass through the country without direct intelligence on a specific container. These uninspected containers are considered to be a high trafficking threat. Narcotics also are shipped out of Argentina using commercial aircraft, and in some cases, by cruise ship passengers. Couriers of cocaine from Argentina are primarily destined for Europe. Couriers of heroin are primarily destined for the United States.

Domestic Programs (Demand Reduction). SEDRONAR is charged with coordinating the GOA's demand reduction efforts and in December the newly-appointed head of SEDRONAR directed his staff to develop a comprehensive demand reduction plan focusing on youth education and public awareness. Drug use is treated as a medical problem and addicts are eligible to receive federal government-subsidized treatment. Buenos Aires province, the most heavily populated province and also the one with the largest number of regular drug users, has its own well-established demand reduction program.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. The September 2004 signing of the LOA has allowed Post to receive an INL budget for the first time since 1995 and begin providing much needed training and assistance. However, as Argentina remains under Brooke Amendment Sanctions for failure to make payments on a bilateral loan, this may affect Post's ability to provide assistance. As mentioned above, the GOA is embarking on the creation of both a national security plan focusing on narcotics interdiction and a national drug prevention plan. The GOA has asked for Post's input and assistance with both plans.

Bilateral Cooperation. Cooperation between the USG and Argentine authorities, both federal and provincial, continued to be excellent in 2004. During 2004, USG assistance supplied a wealth of equipment and training programs for Argentine law enforcement personnel. Examples of USG-funded programs in 2004 include: Two law enforcement tactical training courses provided by DEA; a money laundering course sponsored by the Department of Homeland Security (ICE); an airport narcotics interdiction course sponsored by DEA/INL; and a prevention seminar held in conjunction with SEDRONAR sponsored by PAS (Public Affairs Section) and INL. DEA/INL also sponsored several GOA law enforcement professionals, participation in regional training programs. In addition to providing valuable training opportunities, Post's DEA detachment supports the Northern Border Task Force (NBTF), Group Condor, and starting in 2004, the Mendoza Airport Task Force. The DEA-supported task forces demonstrate the benefits of interagency cooperation, and GOA officials have expressed interest in expanding the program to develop task forces in other narcotics trafficking hot spots.

The Road Ahead. The GOA is taking concrete steps to combat both narcotics trafficking and drug use, and Post will continue to assist and encourage the GOA in this process. The signing of the LOA has created a window of opportunity for even greater cooperation, and Post will diligently seek out still more opportunities to constructively engage the GOA on narcotics issues. Possible areas of further cooperation include expanding the task force program to include the creation of a Tri-border task force in the province of Misiones and a Port of Buenos Aires task force to control narcotics trafficking between Buenos Aires and Uruguay. Post will also continue encouraging the GOA to work toward improving its radar system in the border area.

Bolivia

I. Summary

In 2004, the Government of President Mesa reaffirmed its commitment to long-standing counternarcotics policies, exceeding its international commitment to eradicate 8,000 hectares of coca cultivation and continuing the steady increase in seizures of drugs and precursor chemicals. However, Bolivian coca cultivation increased 6 percent overall. President Mesa and a strengthened Counternarcotics Control Board (CONALTID) endorsed a new five-year drug strategy for 2004-2008 that shifted the focus from the Chapare (where the previous Plan Dignidad significantly reduced coca levels through forced eradication) to the Yungas (where the present growth in coca cultivation exceeds historic trends and what is allowed by law). Alternative development (AD) programs, which have significantly raised the income levels of AD farmers in the Chapare, shifted to a more integrated approach, with emphasis on sustainability and increased participation by municipalities in developing, implementing and monitoring programs, but had no effect on coca reduction in the Yungas.

Political challenges to democratic governance in Bolivia severely limited the ability of the Government of Bolivia (GOB) to curb increases of coca cultivation in the Yungas. The besieged Mesa Administration, at times, seemed more concerned with containing possible confrontations with coccaleros through negotiation and concessions than with the consistent application of the rule of law. It also failed to give political support to GOB programs advocating drug prevention and to undertake an effective social communication program to explain the dangers that excess coca production, drug production and consumption pose to Bolivian society.

II. Status of Country

For centuries, Bolivia has produced coca leaf for traditional uses, and Bolivian law permits up to 12,000 hectares of legal coca cultivation for this market, mostly in the Yungas. The GOB will soon launch a study to gauge the current licit demand, which many suspect has declined as Bolivian society has urbanized.

By the mid-1990's, the Chapare region was the principal supplier of cocaine to the U.S. market—with the potential to produce 255 metric tons of cocaine. Through forced eradication under Plan Dignidad, the GOB reduced cultivation countrywide to its lowest levels and potential cocaine to 60 metric tons. From 2001 to 2004, however, there has been a steady increase in coca cultivation, due partially to the inability of the GOB to conduct forced eradication in non-traditional zones in the Yungas, where Chapare coca growers have migrated. In 2004, coca cultivation increased 6 percent from 2003 to 24,600 hectares and potential cocaine production to 65 metric tons. Bolivia is also now a significant transit country for Peruvian and Colombian cocaine, since its borders run along the most remote and least controlled territories of its five neighboring countries.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Former President Banzer (1997-2001) moved Bolivian policy from one of inaction to one of serious confrontation of the coca/cocaine circuit. Despite recent social and political crises, the GOB policy of forced eradication in the Chapare and of interdiction of illicit drugs and precursors has continued. However, the GOB has responded to efforts by coca growers (“coccaleros”) to stop eradication with short-term agreements of convenience that appear to undercut the GOB's commitment to its forced eradication policy.

Following violent confrontations that led to two deaths, an October 3 agreement with coccaleros in the Chapare enabled eradication to continue, allowing the GOB to meet its international eradication goal of 8,000 hectares. The agreement allowed 3,200 hectares of illegal coca to remain exempt from eradication for a year until a seminal study by the GOB of the legal demand for coca is completed. There was a 10 percent increase in Chapare cultivation in 2004. Moreover, by year's end, the GOB had not undertaken any major public affairs initiatives against the threats excess coca production, drug trafficking, and drug consumption pose to Bolivian society.

President Mesa assumed personal chairmanship of CONALTID, the ministerial committee that coordinates the GOB's counternarcotics policy, and approved a new five-year drug strategy, 2004-2008. Interdiction statistics remain on an upward trend (factoring out the extraordinary "Luz de Luna" seizure in August 2003 of 5.1 metric tons of cocaine.). A new, integrated Alternative Development approach provides for participation by municipalities in GOB decisions on development, implementation, and monitoring of programs.

The principal challenge facing Bolivia today remains the unconstrained expansion of coca cultivation in the Yungas and surrounding areas. Violent coccalero opposition and an extreme geographic terrain make forced eradication in the Yungas difficult. Consequently, the GOB's strategy is based on alternative development, voluntary coca reduction, and interdiction. Alternative development has spread rapidly through specific areas within the Yungas—but has not resulted in any voluntary eradication. Interdiction efforts have worked to channel the movement of leaf, precursors and illicit drugs through control checkpoints.

Accomplishments. According to recalculated CNC cultivation levels for 2003 and 2002 in the Yungas (see "Cultivation/Production" section) the Bolivian coca cultivation increased by 6 percent, only slightly less than in 2003, but potential cocaine production was reported as increasing to 65 metric tons as coca matured. Interdiction statistics increased significantly.

Law Enforcement Efforts. The GOB and USG continue to work cooperatively to develop the capabilities of the Bolivian Special Counternarcotics Police (FELCN) and its highly specialized units, through training, upgrading of existing physical infrastructure, and construction of new bases at strategic locations. As a direct result, interdiction seizures improve yearly, and statistics for 2004 show an 11.8 percent increase in cocaine seizures compared to the same period in 2003 (leaving aside the anomalous 5.1 metric tons "Luz de Luna" seizure in August 2003). The quality of the investigative work by FELCN units also has improved.

Corruption. There is no evidence that Bolivia's trafficking organizations exercise a major corruptive influence at the higher levels of the GOB. Recent governments have neither condoned, nor encouraged nor facilitated any aspect of narcotics trafficking. In February, President Mesa signed a Supreme Decree ratifying the establishment of the Office of Professional Responsibility (DNRP) within the Bolivian National Police. This establishes clear rules and mechanisms governing investigations of insubordination, civil disobedience and misconduct, including allegations of corruption. Coupled with the establishment of internal investigation units in the FELCN in 2003 to monitor and investigate allegations of police misconduct and human rights violations, the GOB has instituted a greater climate of professional responsibility and reduced the level and frequency of abuses. President Mesa also established a Technical Unit for Combating Corruption to coordinate the efforts of government organs legally mandated to investigate and prosecute corruption and track the results. However, a package of six draft anticorruption measures still languishes in Congress. In 2004, there were no prosecutions of narcotics-related cases involving senior level officials, although four judges have been removed and are under prosecution for misuse of office. In addition, three former BNP high-ranking officers involved in a case of armored car robbery were tried and convicted in December. A former deputy BNP commander is currently appealing his 2003 sentence of two years for forgery, and a former BNP commander is under investigation by the Attorney General's Office for misuse of funds.

Agreements and Treaties. Bolivia is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention on Narcotic Drugs (as amended by the 1972 Protocol); the 1971 UN Convention on Psychotropic Substances, the 2000 Protocol to Prevent, Suppress and Punish Trafficking in Persons; the Inter-American Convention Against the Illicit Manufacturing of and Trafficking in Firearms, Ammunition, Explosives, and Other Related Materials; and the 1996 Inter-American Convention Against Corruption. Bolivia has signed, but not yet ratified, the UN Convention against Transnational Organized Crime, the Protocol against the Smuggling of Migrants; the UN Convention against Corruption; and the Inter-American Convention Against Terrorism. Bolivia has not signed the Inter-American Convention on Mutual Assistance in Criminal Matters. Implementing legislation for many of these treaties remains pending in the Congress.

Extradition. Bolivia and the U.S. signed a bilateral extradition treaty in 1995, which entered into force in 1996 and mandates the extradition of nationals for most serious offenses, including drug trafficking. There were no extraditions from Bolivia to the U.S. in 2004, nor were any sought. The last drug trafficking related extradition from Bolivia was in August 2001.

Cultivation/Production. The GOB continued forced eradication of coca cultivation principally in the Chapare (including the national parks), but also in areas of new cultivation. Despite eradicating just over 8,000 hectares, coca cultivation in the Chapare increased 10 percent. In 2004 CNC revised its statistical analysis of previous Yungas cultivation figures and included for the first time and estimated 1,000 hectares of cultivation in the province of Caranavi. This revision indicated that there was no statistically significant increase in the Yungas in 2004, following a 15-percent increase in 2003. Overall, coca cultivation in Bolivian increased by 6 percent in 2004. Small but worrisome new coca cultivation was discovered in 2004 well outside the three zones tracked by international imagery estimation. Law 1008 authorizes up to 12,000 hectares of legal coca cultivation to supply the licit market; a study soon to be undertaken by the GOB will measure licit demand for coca. GOB interdiction also documented a dramatic rise in marijuana production throughout the country for internal consumption, possibly indicating drug traffickers' efforts to develop new markets for financing their operations.

Drug Flow/Transit. The GOB continues to focus on intercepting illicit drugs and chemicals, as well as on detecting and disrupting organizations that bring precursors into Bolivia or transfer cocaine out of Bolivia. Although the FELCN did not achieve another multiple-ton seizure to match "Luz de Luna," all their interdiction statistics increased compared to the previous year. In 2004, the GOB seized 395 metric tons of coca leaf, 8.7 metric tons of cocaine and 28.2 metric tons of cannabis, in addition to 678,750 liters of liquid precursor chemicals (acetone, diesel, ether, etc.) and 1,672 metric tons of solid precursor chemicals (sulfuric acid, bicarbonate of soda, etc.). It also destroyed 2,254 cocaine base labs and made 4,138 arrests in 5,836 operations. Cocaine seizures rose 11.8 percent over the same period in 2003 (not counting "Luz de Luna"); marijuana seizures rose 231.4 percent; seizures of liquid and solid precursor chemicals rose 24.3 and 210.8 percent respectively.

A significant amount of Peruvian cocaine, and increasing amounts of Colombian cocaine traverse Bolivia to enter Brazil. An increasing proportion of the cocaine both transiting and produced within Bolivia is destined for Europe, Argentina, Brazil, Chile and Paraguay. Moreover, internal consumption levels appear to be increasing in Bolivia itself.

Alternative Development. In the Chapare, INL-funded, USAID alternative development (AD) assistance complemented coca reduction efforts by strengthening licit livelihoods, community development, legal land tenure, and access to justice. Through FY-04, USAID helped a cumulative total of 28,290 farm families with AD support, and licit cultivation increased from 135,342 in 2003 to 143,887 hectares. The average income of families assisted by AD increased from \$2,275 in 2003 to \$2,390 in 2004 and the number of licit jobs rose to 62,304, up from 53,000 in 2003. New programs in land titling, health, environment and democracy have shown positive results. The National Institute for

Agrarian Reform was working on 15,000 land titles in various stages and had completed the delivery of 641 titles as of the end of FY 2004. To support community health, a total of 29 new infrastructure units (clinics, living quarters, incinerators) have been built. USAID also financed an Integrated Justice Center, which assisted residents in nearly 300 legal cases.

The Yungas Development Initiative's (YDI) Community Alternative Development Fund completed 93 small-grant, community-prioritized projects for water and sanitation, as well as post-harvest and community development. USAID continued to build social capital through scholarships for 55 regional university students in the fields of agronomy, veterinary medicine, nursing and primary education, and its health program has reached over 3,000 patients for treatment of tuberculosis, malaria and leishmaniasis. Related programs have trained over 40,000 Yungas residents in 434 communities in disease prevention and health awareness courses. Road infrastructure saw 168.7 km of roads maintained, 156 km of road improvement, 12.3 km of stone paving, and the construction of 8 bridges. In addition, coffee assistance has so far reached more than 9,000 families and helped increase their incomes by over 40 percent. A rural electrification program in the Yungas has completed two out of four sub-projects intended to provide over 11,000 families with electricity. In 2004, 331 km of distribution lines were completed benefiting 3,700 families in 112 communities in Palos Blancos and Caranavi. However, no voluntary eradication of coca resulted from AD activities in the Yungas.

A USG-supported Organization of American States project to modernize organic cacao and banana cultivation in the Yungas was transferred to GOB control in December. There are now 2,500 families participating in the project, each averaging 2 hectares of cultivation, and enjoying revenues of between \$1,470 and \$1,821 per year, in addition to income from subsistence crops grown for food and market.

Domestic Programs (Demand Reduction). The new five-year drug strategy includes demand reduction and rehabilitation as one of its four pillars, and, in November, CONALTID approved an inter-ministerial committee to coordinate policies and programs. Nevertheless, in 2004 the GOB undertook few significant efforts to combat a perceived increase in drug consumption other than to expand the BNP's DARE program (financed by the USG and now including FELCN officers) and two consumption studies in the school-age population and households. Strategies for implementing demand reduction and rehabilitation have been developed, but neither approved nor implemented.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. The USG works through various programs to promote institutional reform and to strengthen the elements within the GOB dedicated to addressing counternarcotics-related goals in Bolivia. These include: removing Bolivia as a major producer of coca leaf for the production of cocaine; promoting licit economic development to provide viable options to cultivating coca; disrupting the production of cocaine within Bolivia; interdicting and destroying illicit drugs and precursor chemicals moving within and through the country; reducing and combating domestic abuse of cocaine and other illicit drugs; and, institutionalizing a professional law enforcement system.

Bilateral Cooperation. The GOB and Embassy meet routinely at all levels and across several functional entities to coordinate policy, to implement programs/operations and to resolve issues. INL, through the Embassy's Narcotics Affairs Section (NAS) and its Air Wing, supports and assists all interdiction and eradication forces. USAID represents the largest of all international donors in supporting GOB policy and programs in AD. This support is defined by Letters of Agreement (LOAs) signed annually with the GOB.

Road Ahead. Bolivia continues to experience significant political instability and economic insolvency. Throughout 2004, President Carlos Mesa led an "apolitical" government, whose ministers served without links to political parties; however, he governed under the perpetual threat of renewed popular protest, and made numerous concessions to cocaleros to keep counternarcotics programs

afloat. Meanwhile, demands for basic changes in Bolivia's political system are currently focused on calls for regional autonomy and for a Constituent Assembly, which is tentatively planned for late-2005 or 2006.

The impact of political instability on the GOB's ability—or even its willingness—to fulfill its obligations over the coming years under the 1988 UN Convention and its LOA with the USG is difficult to predict. To date, the Mesa Administration solidly supports both forced eradication in the Chapare and aggressive interdiction. Yet, it remains unclear whether the Mesa Administration's new five-year coca plan can successfully address its most pressing problem—the rapid growth of illicit cultivation in the Yungas, where coca growing is a centuries-old tradition, where demarcating transitional from traditional coca can be ambiguous, and where cocaleros have forcefully demonstrated their willingness to fight to protect coca crops.

Bolivia Statistics

(1996–2004)

	2004	2003	2002	2001	2000	1999	1998	1997	1996
Coca									
Net Cultivation ¹ (ha)	24,600	23,200	21,600	19,900 ²	14,600	21,800	38,000	45,800	48,100
Eradication (ha)	8,437	10,000	11,839	9,435	7,653	16,999	11,621	7,026	7,512
Leaf: Potential Harvest ³ (mt)		29,083	19,800	20,200	13,400	22,800	52,900	70,100	75,100

Seizures									
Coca Leaf (mt)	395	152	102	65.95	51.85	56.01	93.72	50.60	76.40
Coca Paste (mt)	—	—	—	—	—	—	—	0.008	—
Cocaine Base (mt)	8.2	6.4	4.7	3.95	4.54	5.48	6.20	6.57	6.78
Cocaine HCl (mt)	0.53	6.5	0.4	0.51	0.72	1.43	3.12	3.82	3.17
Combined HCl & Base (mt)	8.7	12.9	5.1	4.46	5.26	6.91	9.32	10.39	9.95
Agua Rica ⁴ (ltrs)	—	—	—	20,240	15,920	30,120	44,560	1,149	2,275
Arrests/Detentions	4,138	—	1,422	1,674	2,017	2,050	1,926	1,766	955
Labs Destroyed	—								
Cocaine HCl	4	2	2	1	2	1	1	1	7
Base	2,254	1,769	1,420	877	620	893	1,205	1,022	2,033

¹ The reported leaf-to-HCl conversion ratio is estimated to be 370 kilograms of leaf to one kilograms of cocaine HCl in the Chapare. In the Yungas, the reported ratio is 315:1.

² As of 06/01/2001.

³ Most coca processors have eliminated the coca paste step in production.

⁴ Agua Rica (AR) is a suspension of cocaine base in a weak acid solution. AR seizures first occurred in late 1991. According to DEA, 37 liters of AR equal one kilograms of cocaine base.

Brazil

I. Summary

Brazil's key counternarcotics development in 2004 was the implementation of a shoot-down law that the Brazilian Congress passed in 1998, but that was only put into effect on October 17 after President Lula signed the implementing decree. Also in 2004, the Government of Brazil (GOB) adopted a new national strategy document to combat money laundering. A principal aim of the strategy is to better coordinate disparate federal and state level anti-money laundering efforts. Operation COBRA, a project on Brazil's border with Colombia, has been functioning now for nearly four years and is showing positive results. Similar operations on the Venezuelan and Peruvian borders are up and running, and another one is also being developed with Bolivia.

Brazil is a major transit country for illicit drugs shipped to Europe and, to a lesser extent, the United States. Brazil continues to cooperate with its South American neighbors in an attempt to control the remote and expansive border areas through which illicit drugs are transported. Brazil is a party to various counternarcotics agreements and treaties, including the 1988 UN Drug Convention, the 1995 bilateral U.S.-Brazil counternarcotics agreement, and the annual Memorandum of Understanding (MOU) with the U.S.

II. Status of Country

Brazil is not a significant drug-producing country. It is, however, a conduit for cocaine base and cocaine HCL moving from Andean source countries to Europe and Brazil's urban centers. Crack cocaine is used among urban youths, particularly in Sao Paulo and Rio de Janeiro. Smaller amounts of heroin also move through Brazil to the U.S. and Europe. Organized drug gangs, located principally in Rio de Janeiro and Sao Paulo, are heavily involved in narcotics and drug-related arms trafficking.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Brazil has undertaken various bilateral and multilateral efforts to meet the objectives of the 1988 UN Drug Convention, implemented adequate law enforcement measures, and achieved significant progress in the war against drugs.

After extensive discussions with the USG on the ramifications of a Brazilian shoot-down program and the elements of a Presidential Determination that would address certain liability issues under U.S. law, the GOB implemented its air bridge denial (ABD) ("shoot-down") law to enter into effect on October 17, 2004. Brazil's law and program permits the Brazilian Air Force to use lethal force against civilian aircraft reasonably suspected to be primarily engaged in trafficking of illegal drugs. The U.S. President determined that drug trafficking posed an extraordinary threat to Brazil's national security, and also concluded that Brazil's program had appropriate operational safety procedures in place to justify the U.S. Presidential Determination. This determination is similar to the one in place for Colombia's ABD program, though unlike Colombia, Brazil independently administers its own program. The determination must be renewed annually by the USG. To date, the Brazilian Air Force has not shot down any suspect aircraft.

The GOB forged closer ties with its neighbors in the war against drugs as a result of the "joint commission" (CM) formed in 2003. The Brazilian Foreign Ministry, with representatives from the Federal Police, National Antidrug Secretariat (SENAD), SENASP (National Public Safety Secretariat), ANVISA (National Agency of Health Monitoring), Health Ministry, and ABIN (National

Intelligence Agency) make up the CM. Brazil's creation of an intelligence center in the Tri-Border area with Paraguay and Argentina has also increased regional cooperation.

Brazil's Unified Public Safety System (SUSP), which was created in 2003, is now fully functional and showing results. SUSP, which is administered by SENASP, is a national system to integrate diverse state civil and military police forces. Each state has formulated its own public safety plan, in accordance with SENASP's national plan. SUSP assists the GOB in ensuring a unified approach to law enforcement and statistical crime and narcotics seizures reporting.

Accomplishments. In 2004, the GOB exercised a regional counternarcotics leadership role. In June, "Operation Six Borders" was carried out to disrupt the illegal flow of precursor chemicals in the region. The GOB continued its support of "Operation Alliance" with Brazilian and Paraguayan counternarcotics interdiction forces in the Paraguayan-Brazilian border area.

Illicit Cultivation/Production. With the exception of some cannabis grown in the interior of the northeast region, which is primarily consumed domestically, there is no significant evidence of illicit drug cultivation in Brazil. Brazil's Federal Police believe that drug trafficking organizations could increase the number of cocaine processing laboratories in Brazil. However, a steady supply from Bolivia and to a lesser extent Colombia, could explain why this has not happened.

Distribution. Federal counternarcotics police and state authorities continue to investigate and disrupt extensive domestic distribution networks in Brazil's major and secondary cities.

Sale, Transport And Financing. The Federal Police took measures to identify significant drug trafficking trends, patterns, and traffickers in 2004. Although one or two monthly deliveries of large amounts of Colombian cocaine may be shipped to Brazil's urban centers of Rio de Janeiro and Sao Paulo, Federal Police analyses indicate that Bolivian cocaine and Paraguayan marijuana generally dominate those markets.

Asset Seizure. The GOB seized many ill-gotten assets in 2004, particularly motor vehicles that the Federal Police immediately made available for law enforcement officials' use. The GOB auctioned other assets and distributed the proceeds, based on court decisions. Federal Police recorded the following seizures in 2004: one airplane, 554 motor vehicles, 39 motorcycles, 4 boats, 253 firearms, and 984 cell phones.

Extradition. No extraditions to the United States were carried out during 2004. At year's end, there were three pending narcotics-related extradition cases of non-Brazilian citizens. There were three extraditions from Brazil to the U.S. in 2003, one of which was narcotics-related.

According to the Brazilian Constitution, no Brazilian citizen shall be extradited, except naturalized citizens for a common crime committed before naturalization, or unless there is sufficient evidence of participation in the illicit trafficking of narcotics and related drugs, under the terms of the law. Brazil cooperates with other countries in the extradition of non-Brazilian nationals accused of narcotics-related crimes. Brazil and the U.S. are parties to a bilateral extradition treaty signed in 1961.

Training Assistance. In 2003, various USG agencies—including the Department of State, Department of Homeland Security (DHS), Drug Enforcement Administration (DEA), Federal Bureau of Investigation (FBI), and others—provided training in Brazil covering a wide variety of law enforcement issues. These included combating money laundering, cyber-crime, community policing, port security, crisis management, and demand reduction programs. Brazilian Law Enforcement also eagerly accepted opportunities to attend training programs in the U.S. on money laundering, drug courts, and operation of the FBI academy.

Law Enforcement and Transit Cooperation. Brazil's Federal Police, SENAD, and SENASP continued to express their interest in active cooperation, particularly intelligence sharing and coordination, with the U.S. in drug control activities.

Brazil cooperates with authorities in neighboring countries to strengthen regional coordination against illicit drugs, particularly Colombia, Peru, and Bolivia. In June 2004, for instance, 13 law enforcement officers attended a training seminar in Bolivia. A head of the training section of the Brazilian Federal Police academy also attended a high-level planning meeting in Panama City to discuss the proposed establishment of an International Law Enforcement Academy (ILEA). In January 2004, a group of 12 Brazilian police officers (9 Federal, 2 state military, and one civilian) attended the ILEA advanced management course in New Mexico. Also, seven policemen from the state of Minas Gerais participated in a community policing exchange in Austin, Texas. This program also gave the same opportunity for police from Texas to visit Brazil.

Demand Reduction. The DARE (Drug Abuse Resistance and Education) program (known as PROERD in Brazil) is now active in all 26 states of Brazil and the Federal District. Brazil has the largest DARE program outside of the U.S. Through SENASP and SENAD, the USG assisted in financing and logistics, and Embassy personnel visited several training sessions. The DARE program reinforces a positive image of local police forces, while providing a strong message concerning demand reduction. Embassy Brasilia is also collaborating with several NGOs and the U.S. Consulate in Sao Paulo to establish additional demand reduction programs that target urban youth at risk of drug use, crime, and violence. USG funding for SENAD and the Ministry of Education resulted in thousands of teachers receiving training and a counternarcotics curriculum via the educational television network. In addition, a SENAD toll-free number on drug information is currently being upgraded so that it may handle more calls and provide counseling.

Law Enforcement Efforts. The Federal Police estimate that in 2004 they seized 7.7 metric tons of cocaine HCl and 120 kilograms of crack. Marijuana (cannabis) seizures totaled 149.2 metric tons in 2004. Three cocaine drug laboratories were dismantled in 2004. These numbers are incomplete, however, as they only include statistics from the Federal Police, and not those of local police forces. Federal Police sources estimate they record perhaps 75 percent of seizures and detentions.

Corruption. Fighting corruption remains a high priority for Brazilian law enforcement. As a matter of policy, the GOB does not condone, encourage, or facilitate production, shipment, or distribution of illicit drugs or money laundering. The Federal Police have carried out a number of high profile investigations of public officials and State Police involved in money laundering and/or narcotics trafficking.

Agreements and Treaties. Brazil became party to the 1988 UN Drug Convention in 1991. Bilateral agreements based on the 1988 convention form the basis for counternarcotics cooperation between the U.S. and Brazil. Brazil also has a number of narcotics control agreements with its South American neighbors, several European countries, and South Africa. Brazil cooperates bilaterally with other countries and participates in programs conducted by the UN Office on Drug and Crime (UNODC) and the Organization of American States/Anti-drug Abuse Control Commission (OAS/CICAD).

Drug Flow/Transit. Paraguayan marijuana and Bolivian cocaine are smuggled into Brazil across remote border areas and are destined primarily for domestic consumption. Brazil's Federal Police indicate that cocaine leaving Colombia and entering Brazil by air is destined mostly for Europe, where it arrives in containerized cargo. According to the Federal Police, smaller amounts of cocaine leave Colombia via Brazil's waterway networks in the Amazon region and are mainly destined for the Brazilian domestic market. Smaller quantities of heroin have been detected moving through Brazil from source countries to the U.S. and Europe. While the GOB and Brazilian press assess that Brazil's recently enacted shoot-down law has had a deterrent effect on clandestine flights, it is too soon to tell what real and lasting impact the law will have on illegal aerial drug trafficking.

VI. U.S. Policy Initiatives and Programs

U.S. counternarcotics policy in Brazil focuses on liaison with and assistance to Brazilian authorities in identifying and dismantling international narcotics trafficking organizations and reducing money laundering. U.S. policy also is to increase awareness of the dangers of drug abuse, drug trafficking, and related issues such as organized crime and arms trafficking. Supporting Brazil to develop an effective legal structure for narcotics and money laundering control and enhancing cooperation at the policy level are key goals. Bilateral agreements provide for cooperation between U.S. agencies, the National Anti-Drug Secretariat and the Ministry of Justice.

Bilateral Cooperation. Bilateral cooperation on counternarcotics between the USG and the GOB has never been better. Brazil and the U.S. are seeking to meet all goals set forth in the bilateral Letter of Agreement (LOA) on counternarcotics. As agreed to by Brazil and the U.S., programs implemented in 2004 included: cooperation with the Regional Intelligence Center of Operation COBRA; expansion of COBRA prototype to other areas of the country, a country-wide conference on money laundering in Brasilia; and a SENAD project that involves a partnership with the Ministry of Education to provide long distance drug prevention training to over 5,000 teachers nation wide via the educational television network.

Brazil continues to be actively involved in the International Drug Enforcement Conference (IDEC). Worldwide conferences are held annually, and sub-regional conferences are held approximately six months after the general conference. These conferences, sponsored and supported by DEA, bring law enforcement leaders from Western Hemisphere countries together to discuss the counternarcotics situations in their respective countries and to formulate regional responses to the problems they face. Brazil participates in both the Andean and Southern Cone Working Groups.

Operation Seis Fronteiras (Six Borders) is part of a highly-successful regional exercise involving Brazil, Bolivia, Colombia, Ecuador, Peru, Venezuela, and the U.S. DEA to concentrate counternarcotics law enforcement efforts on precursor chemical control.

A number of conferences, training programs, and seminars took place during in 2004. Brazilian Federal and State Police were sent for training to the U.S. on various occasions. USG representatives—DEA, DHS, FBI, U.S. Coast Guard and others—and others visited Brazil to train GOB counternarcotics units.

The Road Ahead. The biggest challenge Brazil faces in the war against narcotics trafficking is to secure its borders by increasing interdiction efforts against criminal organizations that exploit a vast border area to smuggle illegal goods. Fully functional border operations like COBRA (Colombia) and others that are still in their initial start-up phase, such as Vebra (Venezuela), PEBRA (Peru), and BRABO (Bolivia), are key programs for strengthening Brazil's border control. The planned opening of a joint intelligence center in early 2005 in the Tri-Border area will be a step forward in the fight against narcotics trafficking and other illegal activities. The center will include representatives from Argentina and Paraguay, which will strengthen regional cooperation. Brazil's shoot-down law is another crucial development that should reduce the number of illegal flights over the country's expansive borders and increase seizures of illicit goods.

Chile

I. Summary

While not a center of illicit narcotics production, Chile remains a transit country for cocaine and heroin shipments destined for the U.S. and Europe. Chile also has an internal cocaine and marijuana consumption problem, with Ecstasy continuing to grow in popularity. Chile is a source of essential chemicals for use in coca processing in Peru and Bolivia. Chile is a party to the 1988 UN Drug Convention.

II. Status of Country

Transshipment of cocaine from the Andean region is a problem for Chile, as is the persistent transit of heroin destined for the U.S. and Europe. Cocaine hydrochloride consumption has increased, although cocaine base abuse is more prevalent. Chilean authorities discovered some cocaine and amphetamine labs two years ago, but Chile is not a major source of refined cocaine. Marijuana also continues to be widely used in Chile, a drug supplied primarily by Paraguay and a handful of production farms in Chile.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The Chilean Congress continues to work on a comprehensive revision of Chile's 1995 drug laws, a project pending since 1999. In an effort to combat money laundering, the Financial Intelligence Unit was created in June of 2004. The National Drug Control Commission (CONACE) develops and coordinates the National Drug Control Strategy. The current plan covers the years 2003-2008. CONACE also coordinates all demand reduction programs.

Accomplishments. In January 2004, five representatives from the Chilean Coalition on Drug Prevention (CHIPRED) participated in a Voluntary Visitor program on managing drug abuse prevention programs. Embassy Santiago, in conjunction with CONACE, organized the launch of CHIPRED, a network of Chilean NGOs working on drug issues, in August 2003. CHIPRED allows better coordination of programs to prevent drug abuse and reduce demand, and is a member of the Drug Prevention Network of the Americas (DPNA).

In June 2004, the Financial Intelligence Unit (FIU) was launched with a mandate to investigate money laundering activity. While current laws do not provide adequate authority for the FIU, amendments are expected to be approved in 2005 to increase the investigative authority of the unit.

The DEA Santiago Country Office, together with the Policia de Investigaciones de Chile ("PICH," roughly equivalent to the FBI) and the Carabineros (national uniformed police), initiated Operation Seis Fronteras VI on March 1, 2004. This operation is a six-country initiative to combat the diversion of legal chemicals in the production of cocaine. As a follow-up, the DEA Santiago Country Office and the Carabineros de Chile hosted Operation Seis Fronteras VI After-Action Conference on June 9-10, 2004. DEA and police representatives from Colombia, Venezuela, Ecuador, Brazil, Peru, Bolivia, Argentina and Chile attended the conference, which focused on analyzing the results of the three-month Seis Fronteras VI operation.

Chile continues to implement its multi-year criminal justice reform project. As of January 2004, all of Chile's 12 regions have adopted the new adversarial judicial system, leaving only the metropolitan area of Santiago operating under the old system. The new system involves oral trials rather than document-based legal proceedings and should generally result in a faster resolution of cases. The

Santiago metropolitan region, which accounts for almost 40 percent of Chile's population, will present special challenges. The transition in Santiago is scheduled to occur in June 2005.

Law Enforcement Efforts. Chilean authorities are successfully interdicting narcotics transiting through and destined for Chile. As a result of increased U.S. support for interdiction efforts in the Andean source nations, narcotics traffickers are using Chile as a transshipment point for cocaine and heroin with more frequency.

Traffickers assume Chile's clean reputation with authorities in the U.S. and Europe means that vessels and aircraft originating from Chile are less closely scrutinized.

In 2004, Chilean authorities seized 2,697 kilograms of cocaine hydrochloride, 8.8 kilograms of heroin, and over fifty-six million Chilean pesos (approximately USD\$90,000). Law enforcement agencies also arrested 9400 persons for drug-related offenses, an increase from 8343 in 2003. Chilean authorities are also addressing the domestic distribution sources of cocaine, marijuana, and ecstasy.

Corruption. Narcotics-related corruption among police officers and other government officials is not a major problem in Chile. The government actively discourages illicit production and distribution of narcotic and psychotropic drugs and the laundering of proceeds from illegal drug transactions. No current Chilean senior officials have been accused of engaging in such activities. The high-profile scandals related to Pinochet's activities provide an example of the gravity and attention that Chile attaches to corrupt behavior by former or current government officials. Transparency International's Annual Corruption Perception Index ranked Chile 20th in 2004, three positions down from last year.

Agreements and Treaties. The U.S.-Chile Extradition Treaty was signed in 1900. In late 2002, Chile expressed interest in updating the current treaty, and exploratory meetings took place in March 2004. The U.S. and Chile do not have a bilateral mutual legal assistance treaty (MLAT), but both countries are party to the OAS Inter-American MLAT, which Chile ratified in April 2004. Chile is party to the Inter-American Convention Against Corruption. Chile ratified the UN Convention against Transnational Organized Crime in November 2004.

The September 2002 letter of agreement between Chile and the U.S. remains the most recent accord for cooperation and mutual assistance in narcotics-related matters. U.S. assistance programs are implemented under this agreement. Although the GOC and the DEA signed an agreement in 1995 to create a Special Investigative Unit (SIU) within the Carabineros, no SIU currently operates in Chile. Due to the very low level of corruption and the resulting professionalism in the ranks of Chilean law enforcement, there is currently no pressing need for an SIU. Chile has bilateral narcotics cooperation agreements in force with Argentina, Austria, Bolivia, Brazil, Colombia, Costa Rica, Croatia, Cuba, Ecuador, El Salvador, Mexico, Panama, Paraguay, Peru, Russia, Singapore, South Africa, Uruguay and Venezuela.

Cultivation/Production. There is no known major cultivation or production of drugs in Chile, and the Department of State does not identify Chile as a "major" drug-transit country. Very small amounts of marijuana are cultivated in Chile to meet domestic demand.

Drug Flow/Transit. Increasing amounts of drugs are transshipped from Andean source countries through Chile, destined for the U.S. and Europe. Chile's extensive and modern transportation system makes it attractive to narcotics traffickers. Maritime and land route trafficking has increased; the most recent trend is to traffic drugs via Chile's road system and out of the country via maritime routes. The Santiago International Airport is also used to transit particularly heroin to the U.S. and Europe. Most narcotics arrive by land routes from Peru and Bolivia, but some enter through Argentina. The efforts of Chilean authorities are hampered by treaty provisions allowing cargo originating in Bolivia and Peru to transit Chile without inspection to the ports of Arica and Antofagasta.

No labs producing synthetic drugs have been found in Chile to date. Ecstasy enters the country primarily in small amounts via couriers traveling by air.

Demand Reduction Programs. The Chilean government has expressed concern about domestic drug use. The most recent study, completed in 2002 and released by CONACE in July 2003, demonstrates that the existing treatment infrastructure in Chile is insufficient. According to the survey, 5.7 percent of Chileans had used drugs in 2002, a slight decrease from 6.3 percent recorded in 2000. Prevalence of marijuana dropped from 5.8 percent in 2000 to 5.2 percent in 2002, although current information indicates marijuana use is significantly higher than the numbers suggest. The report also states the use of cocaine base fell from 0.7 percent to 0.5 percent, but use of refined cocaine rose slightly from 1.5 percent to 1.6 percent. Current indications suggest an increase in use of both types of cocaine. The 2002 survey also found that 22.9 percent of respondents had used illegal drugs at least once in their lives. CONACE continues to work with NGOs, community organizations, and schools to develop demand reduction programs. With the launch of CHIPRED last year, the network of NGO prevention and treatment organizations, CONACE is able to cooperate more effectively with the NGO community.

IV. U.S. Policy Initiatives and Programs

U.S. Policy Initiatives. U.S. support to Chile in 2004 reinforced ongoing priorities in five areas: 1) Training for prosecutors, police, judges, and public defenders in their roles in the criminal justice system reform; 2) Demand reduction; 3) Enhanced police investigation capabilities; 4) Police intelligence capability; and 5) Money laundering.

Bilateral Cooperation. During 2004, the U.S. Government pursued numerous initiatives based on the above priorities. These include: 1) a two-part training series on the nationwide drug intelligence computer network for carabineros; 2) the first Intellectual Property Rights week including a workshop for law enforcement and prosecutors, public awareness campaign and youth concert; 3) the first presentation on drug abuse prevention programs by students from four communities as a result from the launch of PRIDE in 2003; 4) an INL-funded judicial reform intensive training program for prosecutors and defenders, preceded by Digital Video Conferences with the University of the Pacific; 5) an INL-funded seminar for judges on DNA Forensic Technology; 6) a workshop for Chilean authorities on how to investigate Intellectual Property Rights crimes; 7) a DOJ-funded course on cybercrime for prosecutors, law enforcement and government officials from five countries; 8) a public affairs section grant to Fundacion Paz Ciudadana to implement ADAM (Arrestee Drug Abuse Monitoring); 9) five CHIPRED representatives participated in a voluntary visitor program on managing drug abuse prevention programs; 10) one IVP on the Financial Intelligence Unit; 11) two U.S. speakers on drugs in the workplace and drug courts; 12) INL-funded support of the police to provide equipment for counternarcotics operations; 13) two IVPs on drug prevention and drug prosecution; 14) a series of radio programs on drug prevention recorded and distributed to more than 80 radio stations; 15) continued discussions towards updating the 1900 U.S./Chile extradition treaty; 16) three USCG resident courses on maritime law enforcement and security.

The Road Ahead. In 2005, the U.S. Government will continue to support Chilean efforts to combat the narcotics-related problems listed above. The U.S. plans to continue to provide capacity-building assistance to the on-going criminal justice system reform. Efforts to enhance the counternarcotics capabilities of both the Carabineros and the Investigations Police pursuant to the Letter of Agreement will also continue.

Colombia

I. Summary

Despite impressive progress against narcotics trafficking during 2004, Colombia remains a major drug producing country. The country's Public Security Forces prevented hundreds of tons of illicit drugs from reaching the world market through interdiction, spraying of coca and poppy crops, and manual eradication. A record 178 metric tons of cocaine were captured through the efforts of Colombia's police and military forces. The U.S.-supported Anti-Narcotics Police Directorate (DIRAN) sprayed a record 136,555 hectares of coca and 3,060 hectares of opium poppy during the year. Manual eradication accounted for the destruction of an additional 10,991 hectares of coca and 1,497 hectares of opium poppy. Colombia's military forces are beginning the second year of "Plan Patriota," a major offensive in the former demilitarized zone ("zona de despeje"), the heart of territory historically controlled by the Revolutionary Armed Forces of Colombia (FARC). The FARC continues to use the drug trade as its major financing source. The paramilitary United Self Defense Forces (AUC), also largely financed by the drug trade, continues to challenge the FARC for control of key coca and poppy cultivation areas throughout the country, in spite of also being involved in an ongoing peace process with the Colombian Government. The AUC reached an agreement with the government to demobilize its fighters (estimated by the AUC itself to be 20,000) by December 2005. Thus far over 4,600 AUC militants have demobilized. Colombia is a party to the 1988 UN Drug Convention.

II. Status of Country

Colombia is the source of over 90 percent of the cocaine and 50 percent of the heroin entering the U.S. It is also a leading user of precursor chemicals and the focus of significant money laundering activity. Developed infrastructure like ports on both the Pacific and the Atlantic and the Pan American Highway, provide the narcotics terrorists with many options. The normal problems associated with the narcotics trafficking are compounded in Colombia by the presence of various illegal armed groups that are fighting with the government and involved in narcotics trafficking. These groups include the Revolutionary Armed Forces of Colombia (FARC), the United Self Defense Forces of Colombia (AUC), and, to a lesser extent, the National Liberation Army (ELN). They control areas within Colombia with high concentrations of coca and opium poppy cultivation, and their involvement in narcotics is a major source of violence and terrorism in Colombia. Drug use in Colombia is increasing and Colombia has a very active demand reduction program. The judicial system is transitioning to an oral accusatorial system, in which the roles and responsibilities of the judges, prosecutors, and criminal investigators are changed. A criminal case has a confidential investigatory stage where evidence is collected and then a charging and trial stage by the judge and an oral public trial with witnesses is conducted. To date, as the transition has begun in Bogota and three other municipal regions, the new system has proven to be efficient and effective. A total of 10,727 prosecutors, judges and criminal investigators received intensive training in the new accusatory system by the end of 2004. The system is expected to be nationwide by 2008.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In 2004, President Uribe initiated a program to give land expropriated from narcotics traffickers to landless campesinos (peasants). In a September press conference, President Uribe announced that asset seizure and forfeiture would be applied to small farms as well as large ones. Since the announcement, the police and courts have taken preliminary steps to implement the

process as a deterrent to growing illicit crops and as a complement to government eradication programs.

Demand Reduction. The Colombian government lacks a national Demand Reduction Strategy. The Ministry of Social Protection is currently conducting a comprehensive survey of school age drug use, funded by the Organization of American States, the results of which will be announced by the end of March 2005. The OAS will then work with the Government of Colombia (GOC) to develop a national Demand Reduction Strategy. Meanwhile, the USG continues to work with various non-governmental organizations (NGOs) to prevent drug use.

Culture of Lawfulness. The USG continues to support respect for law and civic responsibility. The Culture of Lawfulness (COL) program currently teaches more than 6,000 ninth-grade students the importance of lawfulness in society and is developing a curriculum for integration into various Colombian National Police (CNP) training programs. The U.S. National Strategy Information Center (NSIC) develops curricula and implements the program with funding from a grant from the Narcotics Affairs Section (NAS) of the U.S. Embassy in Bogota. This program receives active support from the highest levels of the GOC, including President Uribe. In 2004, the COL program expanded beyond its initial trial schools in Bogota and Medellin to include other major cities.

Port Security. The USG is party to a three-way agreement with the DIRAN and private seaport operators. DIRAN provides police to work with port officials to prevent narcotics from being exported. The port authorities work to improve their own security and fund the DIRAN units, and the USG provides coordination, technical assistance, and training. During 2004, over 1.26 metric tons of narcotics were captured in the four principal Colombian ports. The USG works separately with DIRAN and Airport Police to prevent Colombia's international airports from being used as export points for drugs. In 2004, U.S. Customs provided scanners that were installed at major airports to check incoming baggage for contraband.

Elements of Colombia's private sector are active participants in a Business Anti-Smuggling Coalition (BASC) program, an initiative of the U.S. Department of Homeland Security. This program seeks to increase the effectiveness of law enforcement offices by enhancing private sector security programs in their efforts to deter narcotics smuggling in commercial cargo shipments and conveyances. Hundreds of Colombian companies, organized into BASC chapters, participate in the program to eliminate the infiltration of drugs into legitimate commercial shipments to U.S. markets.

Environmental Safeguards. Since 2001, the DIRAN has processed approximately 5,500 complaints of crop damage by spray planes. Some 2,725 complaints were processed in 2004 alone. Since the complaints tracking program began in 2001, 12 complaints of accidental spraying of food crops or pastureland have been verified and compensation paid, with four more claims in the process of completion. To date, the program has paid less than U.S. \$20,000 in total compensation for damaged crops.

Regarding claims of health damage, during the past 10 years there has not been a single case verified by the Colombian National Institute of Health of adverse health effects from the aerial spray program. The spray program follows all laws and regulations of the Colombian Environmental Management Plan. The program has also been favorably reviewed by the U.S. Environmental Protection Agency.

Extradition and Mutual Legal Assistance. The number of drug-related extraditions from Colombia to the United States has increased significantly over the years. So far in President Uribe's administration, extraditions have increased dramatically with 173 Colombian nationals and 8 non-nationals extradited (total: 181 extraditions) by the end of 2004.

On December 3, Colombia extradited Gilberto Rodriguez Orejuela to the United States. Rodriguez Orejuela was the head of the Cali Cartel and is one of the most important drug trafficking figures ever extradited from Colombia to the United States. On December 31, 2004, Colombia extradited FARC

leader Juvenal Ovidio Ricardo Palmera Pineda, alias “Simon Trinidad,” to the U.S. on drug trafficking and terrorism charges.

There is no bilateral mutual legal assistance treaty between the U.S. and Colombia, but the two countries rely on mutual legal assistance provisions in multi-lateral agreements and conventions, such as the OAS Convention on Mutual Legal Assistance, to effectuate cooperation. During 2004, 75 mutual legal assistance requests were submitted and over 35 responses have been received.

Demobilization. During President Uribe’s administration, over 4,600 militants belonging to illegal armed groups have demobilized, individually or collectively, including AUC leader Salvatore Mancuso. Mancuso is wanted in the United States on narcotics trafficking charges. The Colombian government presently does not have an established mechanism to prosecute demobilized AUC members accused of drug trafficking or other serious crimes, such as murder or kidnapping. However, legislation has been introduced in the Colombian Congress to rectify this gap.

Public Security. During 2004, the Colombian government finished establishing a police presence in the 158 municipalities that had not had public security at the beginning of the Uribe Administration. There are now police in every one of the 1098 municipalities in the country, helping to close down illegally armed groups’ mobility corridors. Entire FARC fronts have reportedly been forced to live off the land, thereby contributing to their increasing desertion rates—which for the FARC are up by one third. Other security indicators were very positive in 2004: homicides down by 15 percent, massacres down by 48 percent, kidnapping down by 35 percent, overall terrorist attacks down by 42 percent, the number of Internally Displaced Persons down by 41 percent.

Law Enforcement Efforts. The DIRAN broke all interdiction records in 2004, with over 75 metric tons of processed cocaine (HCl) and coca base seized and 150 HCl laboratories destroyed. In addition, combined public forces (Army, Navy, Air Force, and Police) seized a total of 178 metric tons of cocaine HCl/coca base and destroyed 200 HCl laboratories. DIRAN also conducted numerous joint operations with the Colombian military against high-value narcotics terrorist targets.

The CNP’s Carbineros (EMCAR) reported impressive final results for CY2004. Last year, EMCAR Squadrons captured 275 narcotics trafficking and 1,639 guerrillas (815 FARC/ELN & 824 AUC). The squadrons also captured 3,127 common criminals. They seized 1,655 weapons, 8.47 metric tons of coca base, 46,600 gallons of liquid precursors and 142.5 metric tons of solid precursors. Overall, EMCAR Squadrons and the new Municipio CNP units were largely responsible for the significant improvement in public security throughout rural Colombia.

Kingpin or “Cabecillas” Group. In August, the DIRAN established a permanent Task Force to target the “Cabecillas,” or the leadership of the narcotics terrorist organizations. Special police teams have been assigned to gather intelligence against some 300 Cabecillas, and the DIRAN created an intelligence fusion center to analyze intelligence and participate in operational planning. Since the group was formed, four special operations have been conducted, resulting in the capture of nine leadership targets.

Operations “Mapale” I and II. DIRAN worked closely with the Colombian Navy (COLNAV), the Colombian Marines (COLMAR), Colombian Air Force (COLAF), and the U.S. Drug Enforcement Administration (DEA) in two major operations executed in Colombia’s southwest Pacific coast area. Operations Mapale I and Mapale II were conducted against both FARC and AUC narcotics trafficking infrastructure and base camps, in order to disrupt and dismantle cocaine and heroin laboratories associated with these organizations, as well as against the Norte del Valle Cartel (NVC) operating near the Pacific Coast of Colombia.

These operations destroyed 21 HCL/base labs, seized 12 metric tons of coca paste, 27 metric tons of coca leaves, 7 speedboats, and 150 metric tons of precursor chemicals.

High-Value Targets. On January 2, 2004, Juvenal Ovidio Ricardo Palmera, alias “Simon Trinidad,” commander of the FARC Caribbean Front and a member of the FARC senior command, was captured in Ecuador and deported to Colombia. Simon Trinidad, the most senior FARC commander ever captured, was extradited to the United States on December 31st.

On February 10, Omaira Rojas Cabrera alias “Anayibe Rojas Valderrama”, alias “Sonia,” the chief of finances for the FARC Southern Bloc, was captured in a U.S.-supported dawn air assault. The extradition request for “Sonia” is pending before the Colombian Supreme Court.

Corruption. The GOC does not encourage or facilitate illicit production or distribution of narcotic or psychotropic drugs or other controlled substances or related money laundering. The GOC has enacted appropriate legislation to combat money laundering and related illegal financial flows associated with narcotics trafficking, and established a unit made up of officials of the Ministries of Justice and Finance that tracks the illegal flow of money. Allegations of corruption within the Office of the Prosecutor General (Fiscalia) are now being vigorously pursued by a special internal commission (an inspector general-like unit).

Corruption is more a problem in regional departments than at a national level. A specialized Anti-Corruption Task Force Unit has been established to investigate and prosecute public corruption crimes. Corruption clearly plays a major role in the continued diversion of precursor chemicals. Rogue Colombian policemen allegedly collaborate, and on occasion they have been implicated in the illicit importation, transportation, and/or diversion of controlled chemicals (see separate section on Chemical Control). Colombia is party to the Inter-American Convention Against Corruption. Colombia has also signed and is in the process of ratifying the UN Convention Against Corruption.

Agreements and Treaties. Colombia is a party to the 1988 UN Drug Convention, and the GOC’s national counternarcotics plan of 1998 meets the strategic plan requirements of that convention. Recent reforms have generally brought the GOC into line with the other requirements of the convention. In September 2000, Colombia and the United States signed an agreement formally establishing the Bilateral Narcotics Control Program. This effort provides the framework for specific counternarcotics project agreements with the various Colombian implementing agencies.

Colombia and the U.S. are signatories to the OAS Convention on Mutual Legal Assistance. The GOC and the USG are also parties to a Maritime Shipboarding Agreement signed in 1997, providing faster approval for shipboarding in international waters and setting guidelines for improved counternarcotics cooperation with the Colombian Navy and the U.S. Coast Guard.

In August of 2004, Colombia became a party to the UN Convention against Transnational Organized Crime, along with the protocol on trafficking in persons.

Cocaine. Based on the most recent CNC cultivation estimates, along with the DEA coca yield and laboratory efficiency data, Colombia had the potential to produce 460 Metric Tons (MT) of 100 percent pure cocaine base/HCl from locally grown coca plants. This was a 21 percent decrease from the previous year. Based on average purities of bulk seizures in the United States, this equates to approximately 560 metric tons of “export quality” cocaine HCl.

Heroin. According to the latest USG estimates based on new opium yield data, Colombia had the potential to produce 7.8 metric tons of 100 percent pure heroin. Based on average purities of bulk seizures in the United States, this equates to approximately 10 metric tons of “export quality” heroin.

Synthetic Drugs. The availability and consumption of Ecstasy in Colombia are steadily rising. The majority of Ecstasy found in Colombia is brought from Europe in powder form and locally pressed into pills. There has been no evidence of Ecstasy being smuggled from Colombia to the United States, and it is believed that most—if not all—is for local consumption. Actual Colombian production of Ecstasy is believed to be very limited, as only two laboratories have been discovered to date. The

Colombian National Police have active investigations into Ecstasy trafficking organizations, and take part in the multi-national program against synthetic drugs, Operation Aquarius.

Drug Flow/Transit. Cocaine is transported by road, river and small civilian aircraft from the Colombian Source Zone to the Colombian Transit Zone north and west of the Andes Mountains. Primary transportation nodes include the larger airports, clandestine airstrips, and seaports from which small go-fast type vessels can transport cocaine. A smaller, but growing cocaine smuggling method is to use small civilian aircraft from clandestine airstrips in eastern and southeastern Colombia to fly cocaine to Brazil, Suriname, or Guyana. From these countries the cocaine is either consumed locally, as in Brazil, or transferred to maritime vessels for shipment to the United States or Europe.

Colombia's coastal regions are major transshipment points for bulk maritime shipments of cocaine and marijuana. The vast majority of the drugs shipped from the coastal regions originate from production areas in the south central portion of the country as well as other less prolific growing areas in the northern third of Colombia. Most shipments are organized by well-established trafficking organizations, which are based in Cali, Medellin, Bogota, and elsewhere.

Go-fast boats are then regularly used to on/off-load drugs onto fishing vessels or other "mother" ships at sea. Go-fast boats also transport drugs to Central American and Caribbean transshipment countries, using refueling ships to extend their range. Fishing vessels and commercial cargo ships continue to be used to transport large quantities of drugs via both Atlantic and Pacific routes. Fishing vessels usually travel to Mexico or other transshipment countries, while cargo ships can go directly to the United States or Europe. The drugs are hidden in container cargo, bulk cargo, or hidden compartments built into ships.

Cocaine is also transported from Colombia to the United States and other countries via commercial air cargo or concealed aboard commercial aircraft. The use of "mules" (couriers) traveling as passengers on commercial airlines is frequent, though the quantities of cocaine transported in this manner are relatively small.

Heroin is often concealed in the lining of clothing or secreted within the lining of luggage. There is also ingestion by airline passengers, or "swallowers." The CNP/Airport Interdiction Group has experienced great success in identifying and arresting "swallowers" at the international airports in Bogota, Cali, and Medellin. There are also significant quantities of heroin being shipped from Colombia's Pacific Coast, particularly from Buenaventura. There are increasing instances of heroin shipments being combined with cocaine shipments on go-fast boats departing from the Atlantic coast.

Colombian heroin transportation organizations use trafficking routes through Venezuela, Argentina, Ecuador, Panama, and Mexico to move heroin to the United States. In many cases, couriers depart from Colombia through the international airports in Bogota, Medellin, Cali, and to a lesser extent, Barranquilla, and then transit one or more countries before arriving in Mexico. From Mexico, the heroin is typically transported across the border into the United States and transported by courier to its final destination.

IV. U.S. Policy Initiatives and Programs

U.S. Policy Initiatives. The U.S.-supported aerial eradication spray program had another banner year. Some 136,555 hectares of coca and 3,060 hectares of poppy were sprayed by the DIRAN during 2004, surpassing last year's record numbers. Closer intelligence coordination and more intensive utilization of the Colombian Army's (COLAR) U.S.-supported Counternarcotics Brigade, which provides on-the-ground security for eradication operations has resulted in a dramatic reduction in the number of hostile fire impacts on our spray aircraft. In addition to enhancing security, this measure has helped to sustain the operational tempo of eradication operations by reducing time lost to repair damaged aircraft. During the year only one spray aircraft was lost, with no fatalities.

The USG constructed a satellite imagery laboratory and trained counternarcotics police to operate the equipment and analyze data collected to improve coca field detection and mapping. This facility, in conjunction with the intelligence fusion center, has greatly increased the ability of the counternarcotics police to locate illicit crops.

The Plan Colombia Helicopter Program (PCHP), consisting of UH-1N, UH-1H II, UH-60, and K-MAX helicopters, continued to provide dedicated support to the Counternarcotics Brigade and, when available, provided other support to human rights-certified COLMIL and Public Security Forces. In 2004, PCHP aircraft flew 19,600 hours, carried 30,110 passengers, transported 2,148,389 pounds of cargo and conducted 110 medical evacuation missions for both military and civilian personnel. This year the program lost one UH-1H II and suffered extensive damage to a UH-1N. Operational highlights include participation in four high value target (Cabecilla) missions, including one resulting in the capture of Omaira Rojas Cabrera, alias “Sonia.” In April 2004, the Embassy’s country team developed a nationalization plan. The plan laid out an aggressive timeline for the completion of both pilot and maintenance personnel training. The plan’s objectives were met for 2004, and the majority of resources are in place to meet 2005 objectives.

U.S. Customs and Border Protection provides training and technical assistance to improve the ability of border control agencies in Colombia to combat money laundering, contraband smuggling and commercial fraud. Several Customs disciplines support the national effort in the region through Plan Colombia. To date \$1.3 million in training and technical assistance has been provided through the program.

The USG supports DIRAN’s aviation unit (ARAVI), comprised of 20 fixed-wing and 62 rotary-wing aircraft. In addition to counternarcotics missions, ARAVI has, with Embassy approval, used USG-supported assets for humanitarian missions, targeted intelligence gathering, antiterrorism, antikidnapping, and public order missions. The USG also helped ARAVI reach an agreement with the Colombian Air Force (COLAF) to train ARAVI pilots at the Bogotá-based COLAF simulator, thereby eliminating the need to send ARAVI pilots to the United States for instrument training. The USG has initiated in-country high-altitude training for ARAVI and has worked with ARAVI to explore possibly reintroducing the use of night vision goggles in 2005.

The Air Bridge Denial (ABD) program completed 16 months of operations. ABD operations in 2004 contributed to the destruction of thirteen aircraft, the capture of three aircraft in Colombia and eight others in Central America, and the seizure of almost three metric tons of cocaine.

USG and GOC joint efforts are having a major impact on illicit agriculture. To encourage farmers to abandon the production of drug crops, INL funding apportioned to USAID has supported the cultivation of over 60,000 hectares of legal crops and completed 874 social and productive infrastructure projects. More than 50,000 families in 17 Departments have benefited from these programs.

In addition to combating drug production and trafficking, INL funding apportioned to USAID is assisting Colombians in areas that have been most ravaged by the drug trade. For example, the USG has improved the delivery of public services in 35 municipalities, including the delivery of potable water and sewage treatment. To date, the USG has provided non-emergency support for over two million Colombians internally displaced by narcotics terrorism, including aid for over 2,000 former child soldiers. A total of seven peaceful-coexistence centers have been created in small municipalities to provide onsite administrative and legal assistance, educational opportunities, and a neutral space for community meetings, discussions, and events. Additionally, the GOC’s presence in rural areas was expanded by the creation of 37 Justice Houses, which offer access to justice and peaceful conflict resolution.

The USG has entered into an agreement with the GOC to provide a laboratory for soil and water analysis in support of the aerial spray program. NAS has also entered into a similar agreement with the Colombian National Institute of Health on a laboratory for blood and urine analysis in support of public health monitoring for potential chemical poisoning from agricultural chemicals.

The USG, through the Justice Sector Reform Program and rule of law assistance, is helping in the reform and strengthening the criminal justice system in Colombia. DOJ and USAID have provided training, technical assistance, and equipment to enhance the capacity and capabilities of the Colombian system and to make it more transparent to the public at large.

The Road Ahead. The GOC, with substantial USG support, has had significant successes since its Plan Colombia was instituted in late 1999. If the effort is sustained and assistance bolstered for the next few years, the trend of decreased cultivation and increased interdictions will continue. That, combined with the improving governance and decreasing criminality, and general economic and developmental improvement, should cripple the illicit drug producing industry and reduce the flow of drugs into the U.S. and diminish the power and influence of narcotics trafficking organizations.

Colombia, bravely led by President Alvaro Uribe, has demonstrated the political will to deal with the scourge of narcotics terrorism. Success in Colombia will increasingly hinge on maintaining the political will, combined with USG assistance, to solidify the gains already made and to lock in long-term results. The benefits of our efforts in Colombia are not limited to law enforcement and counternarcotics successes. Democracy, economic stability, respect for the rule of law and human rights, and security have all been enhanced by Colombian and U.S. counternarcotics programs in Colombia.

Colombia Statistics

Ecuador

I. Summary

Sharing porous borders and a contiguous seacoast with Colombia and Peru, Ecuador is a major transit country for illicit drugs and chemicals. The violent conflict in Colombia complicates drug interdiction on Ecuador's northern border but drug seizures in the northern border area increased in 2004 thanks to improved police and military activity. Most drugs leave Ecuador by sea. Ecuadorian authorities are seeking to improve port cargo inspections. Three of Ecuador's public ports met ISPS standards on time. The use of advanced inspection technology increased in 2004. Cocaine seizures through November 2004 were at levels substantially below those of 2003, while seizures of heroin and precursor chemicals continued at a high level. Uneven implementation of the new criminal procedures code, a faulty judicial system and conflicting laws hamper prosecutions. The USG provides equipment, infrastructure and training to help improve counternarcotics performance.

Ecuador is a party to and has enacted legislation to implement the provisions of the 1988 UN Drug Convention.

II. Status of Country

Weak public institutions, widespread corruption and a poorly regulated financial system make Ecuador vulnerable to organized crime. Border controls of persons and goods are undependable. Much of the population lives in poverty. Scanty government presence in a large portion of the country contributes to lawlessness. The National Police (ENP) and military forces are inadequately equipped and trained.

There is no evidence that significant illicit crops or drugs are produced in Ecuador. However, coca base, cocaine hydrochloride and heroin from Colombia and Peru are distributed internationally through Ecuador's sea and airports in volumes ranging from a few hundred grams to multi-ton loads. Detected shipments of drugs via international mail and messenger services continued to increase in 2004. The USG is helping the Government of Ecuador (GOE) to strengthen the rule of law and to improve civil security.

III. Country Actions Against Drugs in 2004

Ecuadorian laws implementing the 1988 UN Drug Convention include criminalization of the production, transport, and sale of controlled narcotic substances; the import, transport and/or use of precursor chemicals without an appropriate permit from the Ecuadorian National Drug Council (CONSEP); any attempt to conceal the profits from narcotics trafficking activities; the intimidation or corruption of judicial and public authorities in respect to drug crimes; and illicit association related to drug trafficking and profiteering.

Policy Initiatives. The Ecuadorian Government published a new national drug strategy and its implementation plan in 2004. The documents call for the strengthening of institutions and laws related to drug trafficking and promise the revitalization (including adequate budget support) of the National Drug Council, CONSEP. According to the implementation plan, a new multi-institutional action committee will be constituted to plan and prepare technical initiatives to carry out the national strategy. The reorganization and re-staffing of CONSEP, begun in 2003, continued through 2004. Some confiscated property was sold by CONSEP in 2004, the first such sales in several years. CONSEP activity against trafficking in controlled precursor chemicals continued at the high level initiated in 2003, though other planned CONSEP improvements lagged because of insufficient

funding. Military and police forces generally cooperated at the local level, conducting some joint operations in 2004 to destroy illicit crops and seize precursor chemicals. The GOE continued to reinforce its security presence in the northern border area.

Accomplishments. The Counternarcotics Directorate (DNA) of the National Police, established in 1999, was increased from 1229 to 1305 members in 2004. Using the trainers and curriculum developed in 2001-2002 with USG assistance, training in implementation of the new code of criminal procedures was expanded to 698 police and other judicial operators throughout the country.

The USG-built cargo inspection facility in Manta port was opened early in 2004. Other USG-financed infrastructure projects are in construction or design phases in Esmeraldas, Carchi, Sucumbios and El Oro provinces. Further improvements were made in the National Police intelligence data and voice communications networks. The management of the Quito and Guayaquil airports provided space for advanced technical inspection equipment, including digital x-rays that began service in 2004. The GOE's 2005 national budget includes no earmarked administrative funds for the DNA. The National Police allocated seven additional new vehicles to the DNA fleet in 2004.

Total cocaine seizures through November 2004 were 3.44 metric tons. Heroin seizures in this period totaled 262.34 kilograms. Cannabis seizures were 576 kilograms.

The improvement in chemicals control begun in the second half of 2003 continued through 2004 with a high level of seizures but no prosecutions to date.

The new Code of Criminal Procedures promulgated in 2001 is still applied unevenly. An extensive revision of the new code, correcting numerous shortcomings in the original revised law, was pending Congressional debate at the end of 2004.

Law Enforcement Efforts. Ecuadorian law enforcement agencies cooperate well with U.S. and other foreign law enforcement agencies. There are occasional delays in obtaining GOE permission to board and seize Ecuadorian vessels engaged in illicit activities at sea. Cooperation between the USG and GOE in 2004 resulted in several successful drug interdiction operations and the dismantling of some international trafficking organizations.

Arrests and prosecutions. A total of 1632 Ecuadorians and foreigners were arrested for drug trafficking from January through November 2004. While many arrests result in convictions, prosecutions in general are impeded by the dysfunctional judicial system and persistent confusion over proper implementation of the 2001 Code of Criminal Procedures.

Corruption. Ecuadorian law criminalizes the illicit production or distribution of drugs or other controlled substances, as well as the laundering of drug money. The 1990 drug law (Law 108) provides for prosecution of any government official who deliberately impedes the prosecution of anyone charged under that law. Some elements of other official corruption are criminalized in Ecuadorian laws but there is no comprehensive anticorruption law. There were no known allegations of, or prosecutions for drug-related official corruption in 2004. Cesar Fernandez, the former Governor of Manabi Province and prominent politician arrested in October 2003 while personally packaging a large shipment of cocaine for export, was convicted in October 2004 and sentenced to sixteen years in prison. His principal Mexican and Colombian co-defendants received sentences of twenty-five years.

Agreements and Treaties. Ecuador and the United States signed a customs mutual assistance agreement in 2002. Ecuador is a party to the UN Convention against Transnational Organized Crime and its protocols dealing with migrant smuggling and trafficking in persons.

The United States-Ecuador extradition treaty is outdated. There has been informal dialogue about its possible revision, but no action has been taken. Ecuador has cooperated with the USG to deport or extradite non-Ecuadorian nationals. The Ecuadorian constitution prohibits the extradition of

Ecuadorian nationals. However, the negotiation of a new extradition treaty depends on whether Ecuador is ready to amend its constitution to permit the extradition of Ecuadorian nationals.

Ecuador is a party to the 1988 UN Drug Convention and has a narcotics law that incorporates its provisions. The UNODC has conducted counternarcotics law enforcement projects in Ecuador for several years.

The GOE agreed in 1999 to permit the USG to operate a forward operating location (FOL)—also known as a cooperative security location (CSL)—for counternarcotics surveillance at the Ecuadorian Air Force base in Manta. The FOL is in full operation.

The Government of Ecuador has signed bilateral counternarcotics agreements with Colombia, Cuba, Argentina and the United States, as well as the Summit of Americas money laundering initiative and the OAS/CICAD document on an Anti-Drug Hemispheric Strategy.

In 1991, the GOE and the USG entered into an agreement on measures to prevent the diversion of chemical substances. In 1992, the two governments concluded an agreement to share information on currency transactions over USD 10,000.

The GOE has met the requirements of annual agreements with the United States concerning the provision of assistance for counternarcotics activities. The U.S. and Ecuadorian governments are cooperating to improve interdiction of illicit drugs and chemicals and to improve Ecuadorian safeguards against terrorism and illegal migration. USAID's Andean Missions (Bogota, Quito, Lima and La Paz) are collaborating on a study of the macro- and micro-economic impacts of narcotics production, processing, transportation, and money laundering within each country and cross-border.

Cultivation/Production. Ecuadorian security forces located and destroyed about 3,300 mature cultivated coca plants and 14,000 seedlings in scattered locations near the northern border in 2004. The absence of significant cultivation and of processing laboratories suggests that drug production is not now a serious problem in Ecuador, although the threat is always present due to Ecuador's geographic location and widespread poverty.

Drug Flow/Transit. Law enforcement officials generally believe that the illicit traffic in chemicals in Ecuador is greater than indicated by the relatively small volume of chemicals seized. The U.S. Government, other cooperating governments and the United Nations are working with the Ecuadorian Government to correct deficiencies in the chemical control regime. Ecuador continues to meet 1988 UN Drug Convention objectives regarding chemicals, and has signed a cooperative agreement with the European Union.

Petroleum ether or "white gas," declared a controlled substance by CONSEP in June 2003, continues to be trafficked from Sucumbios Province to neighboring Putumayo Department, Colombia. GOE security forces, primarily the Army, closed down the principal diversion points in 2003 but continue to make substantial seizures of the chemical. CONSEP is investigating possible continuing sources of illicit petroleum ether in more remote oil fields near the Colombian border.

The USG and the Government of Ecuador have a bilateral agreement under which the Drug Enforcement Administration (DEA) notifies CONSEP in advance of pending chemical shipments. These notices are passed on to port inspectors, who seize all controlled chemicals which enter the country without proper documentation or when the quantity surpasses that which was authorized by CONSEP. Both CONSEP and police records are available to DEA as they relate to narcotics or controlled chemical seizures.

Domestic Programs (Demand Reduction). Prevention of domestic drug abuse has long been an important part of the Ecuadorian government's drug strategy and receives greater emphasis in the revised strategy published in 2004. Coordination of abuse prevention programs is the responsibility of CONSEP, whose new management is seeking to reinvigorate a multi-agency national prevention

campaign. National prevention activities currently are conducted primarily through the schools and supported by the USG. All public institutions, including the armed forces, are required to have abuse prevention programs in the workplace. The counternarcotics police conduct an abuse prevention program in selected communities.

Asset seizure. By law, seized assets cannot be forfeited until the owner is convicted of a drug offense and a judge orders their forfeiture. Judges commonly are tardy in issuing forfeiture orders. Problems arise in relation to the safeguarding of assets pending forfeiture. Real estate, vehicles and other personal property have historically been used by government agencies or officials and depreciated during the interim. The responsible governmental agency, CONSEP, is trying to curb this practice by establishing new inventory controls. CONSEP recently sold a relatively small amount of forfeited property, primarily vehicles.

Alternative Development. UDENOR, the Ecuadorian agency for northern border development established in 2000 to coordinate economic and social development programs in the country's vulnerable northern border region, continued its implementation of the government's USD 465 million northern development master plan. The plan, critically dependent on the support of foreign donors, aims at "preventive" rather than "alternative" development, since illicit crop cultivation is not currently significant in the area but is a severe problem in the immediately adjacent region of Colombia. Broadly stated, the plan seeks to increase citizen satisfaction with the performance of local democratic institutions, increase availability of basic infrastructure (potable water, sanitation, bridges, farm-to-market roads) and to increase licit income and employment for small and medium farmers in Ecuador's northern border provinces.

USAID Directors in Quito and Bogota have initiated exchange of information on alternative development, decentralization and environmental activities in the Provinces along the Ecuador-Colombia border.

IV. U.S. Policy Initiatives and Programs

U.S. Policy Initiatives. U.S. counternarcotics assistance to Ecuador aims at improving the professional capabilities, equipment and integrity of police, military and judicial agencies to enable them to counter illicit drug activities more effectively. An initiative begun in 2001 and continuing through 2004 seeks to improve the staffing, mobility and communications of military and police forces in the northern border region. Resources are being provided to the Ecuadorian Navy for expanded patrol and interdiction operations on Ecuador's northwestern coast.

In 2002, the USG funded a Judicial Police training program whose purpose was to educate the judicial police on the new penal code. Trainers who successfully completed that first course are now training their colleagues. A revised law correcting some inadequacies of the reform was scheduled for debate in Congress at year's end.

Communications equipment, ground vehicles and the canine program continue to be areas supported through USG assistance and for which recent successful operations can be credited. Digital x-rays and ion scanners provided by the USG are being used for cargo and passenger inspections in many locations.

USG-funded counternarcotics "preventive alternative development" programs are contributing strongly to the Ecuadorian Government's Northern Border plan. To increase citizen satisfaction and demonstrate the legitimacy of democratic institutions, a large social and productive infrastructure program has built dozens of water and sanitation systems, bridges and small irrigation projects. To complement the infrastructure program, a new Northern Border local government development program was initiated in July 2004 to strengthen local governments and citizen participation in 10 priority municipalities.

Licit income and employment activities focus on competitive rural industries within “clusters” (including distributors, wholesalers, processors, post-harvest agents, producers, raw material suppliers, etc), working in unison to identify and overcome constraints to greater productivity, stronger competitiveness and sustainability. The initial priority sub-sectors being supported are cacao, coffee and vegetables.

Elements of Ecuador’s private sector are active participants in the U.S. Customs Service’s Business Anti-Smuggling Coalition (BASC) program, particularly on the coast. This program seeks to increase the effectiveness of law enforcement officers in their efforts to deter narcotics smuggling in commercial cargo shipments and conveyances by enhancing private sector security programs. Many Ecuadorian companies, organized into two BASC chapters, participate in the program to eliminate the infiltration of drugs into their legitimate commercial shipments to U.S. markets. BASC is part of DHS’s Americas Counter-Smuggling Initiative (ACSI).

All initiatives and strategies are jointly planned and coordinated with the GOE and are formalized in annual letters of agreement under which the USG grants assistance to the GOE.

Bilateral Cooperation. Ecuadorian Government officials met frequently with their Colombian counterparts concerning border issues. Ecuadorian police operational and intelligence communications systems now being developed provide for compatibility with other police agencies in the region to facilitate a rapid exchange of information.

The Road Ahead. The USG will seek improved performance in military/police collaboration, seaport and coastal control, police intelligence and land route interdiction through the provision of training and essential infrastructure and equipment. Special emphasis will be given to the detection and prosecution of money laundering, expanded training of police, prosecutors and judges and the interdiction of illicit chemical precursors. USAID will continue to improve communications and coordination between implementing organizations to improve service delivery and increase public awareness about USG and GOE efforts. In addition, it will intensify USG support to civil society efforts in the oversight of judicial performance and independence.

Paraguay

I. Summary

In 2004, the Government of Paraguay's (GOP) Anti-Drug Secretariat (SENAD) completed the final phase of a restructuring program approved by President Duarte in 2003 to bring the remaining SENAD agents into the semi-vetted unit program. The Major Violators Unit (MVU) carried out successful operations to disrupt cocaine trafficking networks—increasing cocaine seizures over last year, and arresting several Brazilian drug fugitives, including the head of a major international drug trafficking organization with connections to the Revolutionary Armed Forces of Colombia (FARC). The GOP also submitted a new money laundering law for consideration by the Congress. SENAD's new internal affairs section is now operational. It completed further training and developed a new policies and procedures manual. Paraguay is a party to the 1988 UN Drug Convention.

II. Status of Country

Paraguay remains a transit country for between 40 and 60 metric tons of Colombian, Bolivian and Peruvian cocaine destined for Argentina, Brazil, Europe, and Africa. Brazilian nationals, some of whom purchase cocaine from the FARC with currency and weapons, head most trafficking organizations in Paraguay. Paraguay is also a source country for high-quality marijuana that is not trafficked to the U.S.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Under Minister Hugo Ibarra's five-year leadership, SENAD has become more effective in targeting major narcotics traffickers operating in Paraguay. In November, Minister Ibarra announced the final phase of a reorganization to expand the semi-vetted program and remove all Paraguayan National Police from its ranks. Under this initiative, the remaining police officers working for SENAD will return to police ranks and the remaining SENAD agents who were previously not part of the semi-vetted unit will be included, bringing the total number of agents in the semi-vetted unit to approximately 100. Additional personnel will form a container and precursor chemical investigations group and support counternarcotics operations. In 2005, DEA plans to bring SENAD's money-laundering investigations group into the semi-vetted unit program.

In October 2004, SENAD participated, for the first time, in a meeting of the countries that make up the Seis Fronteras ("Six Borders"), which was first formed in 2000 by Colombia, Peru, Bolivia, Venezuela, Ecuador, Argentina, Brazil and Chile to exchange intelligence and coordinate narcotics trafficking operations. The group now includes all South American countries. As a result of information gained from this meeting, SENAD made plans to formally establish a precursor chemical diversion group and began conducting inspections of imports. In November, SENAD agents discovered and seized a tanker filled with 10,000 liters of toluene, a precursor chemical used to make cocaine.

Accomplishments. The capture of Brazilian fugitive and accused arms/drug trafficker Ivan Carlos Mendes-Mesquita was a significant accomplishment in 2004. Mesquita, a Brazilian national with FARC connections, headed the Mesquita Drug Trafficking Organization operating in Paraguay and Brazil. SENAD MVU officers and Paraguayan Military Special Forces, with the support of the Brazilian Federal Police, and DEA conducted a successful operation at Mesquita's ranch, in the Chaco, in western Paraguay, which resulted in the arrest of Mesquita and seven members of his drug trafficking organization. Over 262 kilograms of cocaine were seized during this operation. The United

States has initiated an extradition request for Mesquita, and the GOP has indicated its willingness to expedite the process. Additionally, Paraguay has been successful in either expelling or securing extradition orders for five more Brazilian drug traffickers: Sandro Mendonca do Nascimento, Silvio Barri, Odacir Antonio Dametto, Mauro Alberto Parra, and Rogerio Learti Antonello of the Beira Mar organization, who had been living as fugitives in Paraguay for a number of years. This is a further indication of increased cooperation between Brazil and Paraguay.

Joint Paraguayan-Brazilian counternarcotics “Alliance” exercises continued in 2004 with an operation in December in which approximately 40 SENAD Special Forces officers participated and destroyed approximately 237 hectares of marijuana.

In 2004 SENAD seized 453 kilograms of cocaine, 27,084 kilograms of marijuana, 16 weapons, 16 vehicles and five planes. According to SENAD figures, the total financial loss to narcotics traffickers this year from these seizures was over \$22.8 million.

Law Enforcement Efforts. Paraguay continues to strengthen SENAD’s counternarcotics and investigative operational units and inaugurated its first forensic laboratory in 2004. According to SENAD, 189 persons, including drug producers and distributors, were arrested in 2004. The Attorney General’s office designated one prosecutor for narcotics cases and the Supreme Court reaffirmed the assignment of two magistrates as special narcotics judges. SENAD’s canine program continued successful operations in 2004, discovering 92.4 kilograms of cocaine and 176 kilograms of marijuana during airport and bus terminal searches, resulting in 30 arrests. INL plans to expand the program in 2005 by purchasing four additional canines to be placed in SENAD’s regional offices, for a total of 14.

Asset Forfeiture. In 2004, the GOP received approximately \$14,500 in proceeds as the result of the auction of an aircraft seized in 2002. SENAD will use this money on much-needed resources, including computers, printers, and software. Another \$100,000 is expected from the planned auction of a seized twin-engine aircraft. SENAD plans to allocate \$35,000 for weapons purchases.

Corruption. While there is no evidence that the government or any senior official facilitates the distribution or production of narcotics or other controlled substances, SENAD operations continue to be negatively affected by corruption within the Paraguayan National Police (PNP) and corruption and inefficiency within the Attorney General’s office and the judiciary. There is strong evidence that high-ranking PNP officials have compromised planned counternarcotics operations and provided protection to narcotics traffickers.

SENAD has developed an internal policies and procedures manual, with the help of the Department of Justice Inspector General’s Office, to be used in guiding its recently established internal affairs unit formed to handle cases of corruption within the agency. Polygraph tests have continued to play a major role in the integrity of SENAD—all SENAD agents passed the most recent administration of polygraph tests in October.

Agreements and Treaties. Paraguay is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention on Narcotic Drugs, the 1972 Protocol amending the Single Convention, and the 1971 UN Convention on Psychotropic Substances. It ratified the UN Convention against Transnational Organized Crime, Inter-American Convention Against Corruption and the Inter-American Convention Against Terrorism. It also signed the OAS/CICAD Hemispheric Drug Strategy. Paraguay has law enforcement agreements with Brazil, Argentina, Chile, Venezuela, and Colombia. The U.S.-Paraguay Extradition Treaty entered into force on March 9, 2001, and permits the extradition of nationals. The 1987 bilateral letter of agreement, under which the U.S. provides counternarcotics assistance to Paraguay, was extended in 2004.

Cultivation/Production. Marijuana is the only illicit crop cultivated in Paraguay, and it is harvested throughout the year. Driven by a weak economic situation and the relatively high price paid by traffickers for cultivation, marijuana production has increased, spreading to non-traditional areas of the

country. SENAD destroyed 753 hectares of marijuana plants in 2004 (enough to produce 2,259,000 kilograms of marijuana) out of an estimated 5,500 hectares under cultivation. Also, in 2004, SENAD discovered that traffickers had developed a new hybrid of marijuana that can grow during the dry winter months. This has resulted in a more stable production of marijuana crops year-round, versus the decline in production that used to occur during the winter months.

Drug Flow/Transit. U.S. law enforcement officials estimate that 40-60 metric tons of Colombian, Bolivian, and Peruvian cocaine continue to transit Paraguay annually enroute to Brazil, Argentina, Europe and Africa. There is anecdotal evidence that the Brazil Air bridge Denial program is causing more traffickers to use Paraguay as a staging area for smaller shipments of cocaine via land into Brazil.

None of the marijuana produced in Paraguay is trafficked to the U.S.—SENAD estimates that nearly 85 percent is destined for the Brazilian market, 10-15 percent for other Southern Cone countries and between 2-3 percent consumed domestically.

Demand Reduction Program. According to a national study on drug consumption carried out by SENAD in partnership with OAS/CICAD and published in August, marijuana continues to be the most commonly abused drug by adults (alcohol excepted) in part due to ease of access. Abuse of cocaine remains minimal with only 0.7 percent of the population surveyed having tried it once in their lifetime. Among children 6-14 years old, glue continues to be the most abused drug and its use is increasing. The SENAD's Office of Demand Reduction does a significant amount of outreach work, primarily in schools. SENAD has the principal coordinating role under the National Program Against Drug Abuse and works with the Ministries of Health and Education and several NGOs. In 2004, over 20,000 people received SENAD's counternarcotics message through formal training, informal discussions, and informational materials.

A feasibility study was conducted in 2004 to examine the potential for growing stevia (a herb native to Paraguay that can be used as a sugar substitute) as a crop replacement for marijuana. The study found that there was potential to produce stevia in the marijuana-growing regions of Paraguay, however, it is not yet known the extent to which this will serve as a successful replacement of marijuana due to insufficient market demand.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. The disruption of narcotics trafficking through training and equipping of an effective investigative and interdiction force, a strong GOP institutional effort against money laundering, and a decrease in public corruption continue to be USG priorities in Paraguay. To accomplish these goals, the USG will continue to support professional development and institutionalization of SENAD to promote more effective counternarcotics and organized crime investigative and operational capability through training, technical assistance, equipment, and other support. The recent reorganization of SENAD will also facilitate greater focus on shipping containers and the prevention of pre-cursor chemical diversion. Once the new anti-money laundering legislation is passed, the USG will work closely with judicial and law enforcement agencies on its implementation to make progress against trafficking networks.

In October, INL sponsored two SENAD agents' attendance of a four-week training course for police narcotics supervisors and investigators in Guatemala. Topics covered included profiling of drug traffickers, asset seizures, processing of information and intelligence, and chain of custody. INL plans to make the information gained from this course a standard part of SENAD's training curriculum.

The Road Ahead. SENAD now has the legislative and operational tools to track and bring down drug trafficking organizations and prosecute them. The GOP now needs to take measures to enable effective investigations leading to the arrest and prosecution of major drug traffickers and corrupt officials and

their associates. Combating official corruption remains a considerable challenge for the GOP. The next phase of the counternarcotics program involves improving the technical abilities of the agents to support operations. INL will support the development of a centralized database for storing and sharing intelligence data that will greatly enhance SENAD's ability to conduct investigations. DEA continues to work with SENAD, providing guidance on operations and investigations.

Peru

I. Summary

Drug traffickers continue to move coca products out of Peru by land, air, and sea, as well as opium latex and morphine across northern land borders, to U.S., South American and European markets. Maritime smuggling of larger cocaine shipments is the primary method of transporting multi-ton loads of cocaine base and cocaine hydrochloride (HCl). In 2004, record-breaking cocaine seizures included four tons of cocaine base intercepted at sea and almost two tons of cocaine HCl packed in frozen squid from Peruvian seaports. Mexican trafficking organizations are implicated in using Peru as a primary source of cocaine base and HCl. Dense coca cultivation is increasing in new areas outside the traditional source zones of Monzon and Apurimac/Ene Valleys. With United States Government support, Peru eradicated almost 10,000 hectares of coca in CY 2004: almost 7,500 through conventional eradication, and 2,500 through alternative development (ADP)/voluntary eradication. ADP supported legal productive activities on almost 20,000 hectares. Increased opium latex seizures are one indication of an upward trend in poppy cultivation along Peru's Andean ridge, although the Government of Peru (GOP) has not been able to determine the exact location or amount of land used for opium poppy fields. Peruvian National Police (PNP) eradicated almost 100 hectares of opium poppy in 2004. In a positive move, Congress passed a new law to control precursor chemicals used in cocaine processing, which will go into effect in early 2005. Less positive is the increased support by members of Congress for cocalero demands for more permissive coca laws. In July, the U.S. Government designated Fernando Zevallos as a drug kingpin and froze his assets in the United States, including those of his airline Aerocontinente, which has since gone out of business.

II. Status of Country

Trafficking organizations continue to use all available methods to move coca products out of Peru via air, river, land and maritime routes to Mexico, Bolivia, Brazil, Colombia, Ecuador, Chile and other transshipment points. Opium latex and morphine moved overland north into Ecuador and/or Colombia, where they are collected and converted to heroin for subsequent export to the U.S. and Europe. Maritime smuggling of larger cocaine shipments has become the primary method of transporting multi-ton loads of cocaine base and cocaine hydrochloride (HCl).

Historically, Peruvian and Colombian traffickers sent multi-ton quantities of cocaine base from Peru to Colombia for conversion to cocaine HCl. Colombian traffickers' demand for Peruvian coca has diminished in recent years as they relied more on coca cultivation and base production in Colombia. Mexican traffickers, however, have begun to utilize Peru as a primary source of cocaine base and HCl. Several significant cocaine seizures in Peru in 2004 were linked to Mexican trafficking organizations.

Beyond changes in trafficking patterns, there are indications that the coca cultivation landscape in Peru is also changing. Coca growers have established new areas of dense coca cultivation outside of the traditional source zones of the Upper Huallaga/Monzon and Apurimac/Ene Valleys. Areas of new growth include the regions of Puno, Pasco, La Libertad, Cajamarca and Amazonas. Satellite imagery and overflights of Peru's Putumayo region indicate only scattered concentrations of coca plants. Coca in these new areas is young, dense, and surrounded by seedbeds for more expansion.

Apart from expanding coca cultivation and the threat of increased cocaine production, anecdotal evidence and latex seizures indicate an upward trend in opium poppy cultivation in Peru. This illicit activity, originally introduced by Colombian traffickers, has resulted in widely dispersed cultivation of opium poppy in northern Peru. This year, the Peruvian National Police (PNP) has eradicated almost 100 hectares of opium poppy and have seized several shipments of low quality opium latex and some

morphine base. Intelligence indicates that opium latex is being shipped overland to Ecuador and Colombia for morphine base and ultimate heroin production.

In 2004, separate national and high school student drug-use surveys revealed that Peruvians view drugs as the second most serious problem for Peru after the state of the economy. The national survey found that over 91 percent link coca cultivation and narcotics trafficking, yet a majority view coca growers as victims rather than as accomplices of narcotics traffickers. The national survey reports that four percent of the population between the ages of 12-64 has used cocaine at least once in their lives, up from two percent in 2002. Consumption of cocaine base and marijuana nearly doubled as well. Among students marijuana is the most commonly used drug (6.7 percent), followed by inhalants (gasoline and glue) (4.7 percent), cocaine (3.9 percent), and cocaine base (3.6 percent). The first reported use of cocaine or cocaine base starts at 13 years of age. Eighty percent of the students say they have received counternarcotics messages in school but only half of those students have participated in formal drug prevention classes, events, or activities.

III. Country Actions Against Drugs in 2004

Law Enforcement Efforts. In 2004, the GOP made significant strides in the investigation and dismantlement of major drug trafficking organizations and attacking drug-processing sites in key growing valleys of the Upper Huallaga/Monzon and Apurimac/Ene. The Peruvian National Police Narcotics Directorate (DIRANDRO) mounted several successful operations in the Monzon and Apurimac Valleys destroying almost 800 rustic cocaine labs and 845 metric tons of coca leaf. To further complement these and other chemical enforcement successes, DIRANDRO has re-initiated road interdiction operations in support of broader interdiction operations in the coca growing regions of Peru.

The U.S. Embassy helped DIRANDRO successfully identify and disrupt major international cocaine trafficking organizations responsible for maritime and air shipment of metric tons of cocaine to U.S., South American, and European markets. In 2004, approximately 5.7 metric tons of cocaine base and 7.11 metric tons of cocaine HCl were seized. The USG and GOP have cooperated to improve port security and to address increased maritime smuggling at key Peruvian port locations (see Section IV).

Eradication of Illicit Coca Cultivation. Peru eradicated 10,500 hectares of coca in CY 2004. Almost 8,000 hectares were conventionally eradicated, while 2,500 hectares were voluntarily eradicated, for a total of 10,500. Voluntary eradication programs were directed at consolidating the work of the previous year but were unable to expand into the more hard core growing areas. Conventional eradication targeted areas of coca expansion, eradicating 3,586 hectares in the jungle near Pucallpa, 1,806 near Ciudad Constitution on the border between Huanaco and Pasco, and 1,300 in Puno, adjacent to Bolivia. Along with the dense, young coca, the GOP eradication agency (CORAH) eradicated 34,042 square meters of seedlings, enough to plant 2,270 hectares. CORAH plans to return to Puno in 2005 to finish eradicating another 2,000 hectares of illegal coca.

Licit Use Study. In 2004, the National Commission for Development and a Life Without Drugs (DEVIDA) and the National Statistics and Information Institute (INEI) published a rigorous scientific study of traditional use of coca: chewing, ceremonial, and divination. The study established important parameters that have framed the domestic policy debate over coca that would serve as a basis for an effective coca law. They are that licit demand for coca leaf in Peru is 8,800 tons, and 84 percent of coca leaf harvested in Peru goes to production of illicit drugs. Moreover, Empresa Nacional de La Coca (ENACO), the GOP agency that registers, buys, and sells legal coca leaf, purchases only 33 percent of the leaf destined for legal consumption in Peru. The rest is sold via informal markets. One result of this study was closer GOP scrutiny of ENACO in 2004. Internal auditors uncovered corruption and other problems in ENACO that the GOP is working to resolve. Cocalers (coca growers) also lobbied to dismantle ENACO for not buying enough coca leaf. While the GOP is

working to develop a more modern database of those who sell to ENACO and clarify existing commercialization mechanisms, ENACO has failed in its mandate to establish strict controls of the licit coca leaf market and, thereby, to effectively deter illegal coca production.

Congress and Legislation. Congress unanimously passed a new law to tighten controls over precursor chemicals used to process coca into cocaine. The law will go into effect in early 2005. However, an increasing number of members of Congress have expressed sympathy for coca grower aims. While most Peruvian voters do not appear to sympathize with coca growers or traffickers, cocaleros have been a vocal and strident political voice; Congress established a Multi-Party Commission in mid-2004 to study the coca issue after a series of cocalero demonstrations in the first five months of 2004; many of the Commission members were supportive of cocaleros. Much of the public discourse, including that of many political leaders, is for a new coca law that would diminish controls and enlarge the rolls of “licit” coca growers. Several Peruvian Congressmen introduced differing versions of a new coca law that would be inimical to efforts to reduce coca cultivation. The GOP is developing its own draft law that seeks to limit coca production to the 9,000 metric tons needed to supply the legitimate domestic demand for coca leaf.

Peru, Brazil, and Colombia signed a border cooperation agreement in February that targets, among other types of illegal border activity, trafficking in drugs and precursor chemicals.

Extradition. A new U.S.-Peru extradition treaty went into effect in August 2003. In 2004, Peruvian authorities approved requests to extradite two narcotics traffickers from Peru to the United States. One is serving a sentence in a Peruvian prison and will be extradited upon completion of his sentence. The other is a fugitive. Department of Justice teams visited Peru in 2004 to assist Peruvian extradition experts in preparing effective documentation, with the result that processing time is decreasing.

Agreements and Treaties. Peru is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention as amended by its 1972 Protocol. Peru also is a party to the UN Convention against Transnational Crime and its three protocols. Peru also is a party to the Inter-American MLAT Convention and the Inter-American Corruption Convention. An extradition treaty is in force between the United States and Peru.

Corruption. As a matter of policy, the GOP does not encourage or facilitate the illicit production or distribution of narcotic or psychotropic drugs or other controlled substance, or the laundering of the proceeds from illegal drug transactions. No senior official of the GOP is known to engage in, encourage, or facilitate the illicit production or distribution of such drugs or substances, or the laundering of proceeds from illegal drug transactions. The U.S. Department of the Treasury in July designated Fernando Zevallos—founder of the Peruvian airline AeroContinente—as a narcotics kingpin. Alleged connections between Zevallos and GOP officials are under investigation.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. The USG continues to encourage the GOP to focus its counternarcotics operations in the major drug source zones in the Upper Huallaga/Monzon Valley and Apurimac/Ene Valley. The Peruvian National Police receive USG assistance to increase police presence and their operational activity in these areas by fortifying existing police bases and establishing two police training academies.

Peru has held joint border counternarcotics operations with its neighboring countries including Chile, Bolivia, and Brazil. The 2004 International Drug Enforcement Conference held in Peru brought together law enforcement representatives from 65 countries to work on money laundering, regional chemical initiatives, and the use of the Internet to carry out drug trafficking.

With U.S. Embassy support, DIRANDRO commanders and field elements have participated in extensive mid-level operations-management training. In August 2003, two basic training academies were established at the Mazamari and Santa Lucia police bases in the source zones. Candidates for these schools are recruited from local communities. Each school will train classes of approximately 200 cadets a year. The first class will graduate in March 2005. Graduates will be assigned to DIRANDRO units in the source zones. These schools have already increased police presence in the Upper Huallaga/Monzon and Apurimac/Ene Valleys.

Riverine/Port Security Programs. Law enforcement efforts in 2004 focused on maritime and port investigations/interdictions that produced record-breaking cocaine seizures, including a fishing vessel with approximately four (4) tons of cocaine base intercepted at sea in March and 700 kilograms of cocaine HCl packed in frozen squid in a cargo container destined for Mexico in November. Additional information identified other cargo containers previously shipped out in the same manner to Mexico, with a linked seizure in December of 900 kilograms of cocaine in squid shipped from another Peruvian port. The USG is continuing to work with the GOP to enhance its capability to identify and inspect suspect cargo shipments.

The fledgling National Port Authority (APN) made very significant advances in promoting the timely attainment of International Ship and Port Security (ISPS) requirements. The GOP will need to extend this effort into 2005 in order to complete port security audits and re-certifications and pursue the U.S. Customs and Border Protection (USCBP) container security initiative (CSI). The GOP is working closely with the USG to develop a Customs Mutual Assistance Agreement (CMAA) and a viable and sustainable port and cargo security program in the Port of Callao and other seaports.

U.S. support for the Riverine Program is currently limited to maintenance support for existing infrastructure. The lack of effective cooperation among the Peruvian National Police (PNP) and the Peruvian Coast Guard (PCG) and prosecutors undercut the program.

USAID Alternative Development Efforts. The Alternative Development portfolio (ADP) is a multi-sector approach to making coca reduction sustainable through improving local governance, strengthening rule of law, and increasing the economic competitiveness of coca-growing areas. Since October 2002, over 27,000 families have voluntarily eradicated 7,271 hectares of coca including almost 2,500 hectares of coca in 2004.

This past year, the ADP supported legal productive activities on almost 20,000 hectares, increased local sales by over \$3.4 million, built or rehabilitated 134 schools, health posts and water systems, 205 kilometers of road, 12 bridges and irrigation projects, and brought electrification to six communities and is continuing work on over 100 other projects. In addition, the more than \$30 million rehabilitation and maintenance of 170 km of the Fernando Belaunde Highway has already reduced transportation time for legitimate agricultural products by 8 hours between the Huallaga Valley and national markets. Over 2005, the ADP will continue to employ voluntary eradication to expand contiguous coca-free geographic areas via voluntary eradication agreements. More than ever, these efforts will be closely coordinated with law enforcement efforts in order to ensure that program expansion is achieved within the context of the broad counternarcotics strategy. Concurrently, the ADP will initiate activities to facilitate the transition of recently coca-free areas to sustainable legal development based on private sector activity and local/central GOP commitment to establish and maintain an appropriate level of state presence and investment in the areas.

Uruguay

I. Summary

Uruguay is not a major narcotics producing or transit country, but increased poverty due to an economic recession which ended in mid-2003, and its strategic location, make it vulnerable to increased trafficking. Drug seizures went up geometrically from 2003 to 2004. Efforts to fight trafficking and domestic consumption are relatively effective, although law enforcement agencies and drug programs have limited resources. Current areas of concern include increased marijuana, heroin, and cocaine seizures, and consumption of highly addictive, cheap cocaine paste from Bolivia. Although port security and customs services are being slowly upgraded, limited inspection of containers at maritime ports, and the possible use of free trade zones for the movement of drugs, precursors, and other contraband remain vulnerabilities. Uruguay is a party to the 1988 UN Drug Convention.

II. Status of Country

Uruguay is not a major narcotics producing or transit country, but increasing poverty is making it prone to infiltration by foreign drug traffickers. Colombian, Argentine, and Brazilian traffickers are increasingly using the international airport to smuggle heroin, while European traffickers are using the local mail to smuggle small quantities of cocaine. Cruise ship passengers and merchant marine sailors are also suspected of smuggling small quantities of narcotics. Some Uruguayans have integrated into Paraguayan drug gangs involved in trafficking marijuana and cocaine paste, and Uruguayans are increasingly being used as couriers. The tri-border area of Paraguay, Argentina and Brazil, which has long been a haven for narcotics traffickers, affects Uruguay, and the long porous border with Brazil lends itself to infiltration. Limited inspection of airport and port cargo is a problem, with Uruguay serving as a transit point for contraband, possibly including chemical precursors, to Paraguay and elsewhere. Although chemical precursor controls exist, they are difficult to enforce.

Domestic drug consumption consists mainly of marijuana that arrives in small planes or overland from Paraguay. However, Bolivian cocaine paste, smuggled through Argentina and Brazil, is increasingly in evidence, and some is being transformed to cocaine in small local laboratories.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The Government of Uruguay (GOU) continues to make counternarcotics policy a priority. President Batlle, whose term ended February 28, 2005, has increased military involvement in anticontraband and trafficking actions, and personally worked to get new anti-money laundering legislation approved in 2004. Uruguay is an active member of the Southern Cone Working Group of the International Conference for Drug Control, and other international organizations fighting narcotics, corruption and crime. In August 2004 Uruguay held the first meeting of the Mixed Counternarcotics Commission agreed on in a broad counternarcotics cooperation agreement signed with Brazil in 1991. The countries vowed to continue police cooperation, analyzed their legislation, and agreed to exchange information on chemical precursors. Uruguay continues to cooperate with the “Gran Chaco” and “Seis Fronteras” initiatives to limit traffic in precursors, and is starting to enter data in the National Data System (NDS) to track chemical precursor trade.

Accomplishments. In 2004, Uruguayan authorities made significant heroin seizures at the international airport, dismantled three cocaine paste laboratories in Montevideo, and broke up a cocaine and cocaine paste distribution network between Uruguay and Paraguay. In addition, Uruguay

arrested Brazilian drug lord Arcanjo, who was attempting to set up residence in Montevideo. His extradition to Brazil is pending. In September 2004, the Uruguayan Congress passed new, more effective money laundering legislation.

Law Enforcement Efforts. The expertise of the different groups responsible for narcotics-related law enforcement has improved, and they are generally effective. They include Customs, the Police, the Directorate General for the Repression of Illicit Drug Trafficking (DGRTID), the National Directorate for Intelligence and Information (DNII), the Prefectura Naval (Coast Guard), the Military Intelligence Agency (DGID), and the National Drug Secretariat. Coordination remains difficult, however, since most law enforcements agencies report to different ministries. The DNII is now under the direct supervision of the Minister of the Interior and has expanded its assignment to include combating organized crime, contraband, terrorism, and financial crimes. In early 2005, the GOU will award a contract for container scanners at the main port, which will help interdiction efforts. In addition, the consortium that won the contract to operate the main airport plans to build new passenger and cargo terminals that meet international security and safety standards.

Corruption. Transparency International rates Uruguay as the least corrupt country in Latin America, and there are no indications that senior GOU officials have engaged in drug production, trafficking, or money laundering. The Transparency Law of 1998 criminalizes various abuses of power by government office holders and requires high-ranking officials to comply with financial disclosure regulations. Public officials who do not act on knowledge of a drug-related crime may be charged with a “crime of omission” under the Citizen Security Law. In April 2003, Public Prosecutor Carlos Garcia Altolaguirre was convicted on bribery charges for receiving money from drug traffickers and suspected money launderers in exchange for early release from jail. One of his colleagues, Pedro Miguel Milano, was imprisoned under similar charges.

Agreements and Treaties. Uruguay is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, the 1961 UN Single Convention on Narcotic Drugs, the 1972 Protocol amending the Single Convention, and has signed, but not yet ratified, the UN Convention against Transnational Organized Crime. It is also a member of the OAS Inter-American Drug Abuse Control Commission (CICAD). The United States and Uruguay are parties to an extradition treaty (1984) and a mutual legal assistance treaty (1994), and have signed annual Letters of Agreement under which the U.S. funds International Narcotics and Law Enforcement (INL) programs. Uruguay has signed drug-related bilateral agreements with Brazil, Paraguay, Bolivia, Chile, Mexico, Panama, Peru, Venezuela and Romania. Uruguay is a member of the regional financial action taskforce, Grupo de Accion Financiera de Sudamerica (GAFISUD), of which it held the presidency in 2003.

Cultivation and Transit of Drugs. There is no known large-scale cultivation or production of drugs in Uruguay. However, several small marijuana plots were discovered in 2004, as well as small laboratories processing cocaine paste into cocaine. Uruguay is being increasingly used as a drug-transit country. Limited law enforcement presence along the Brazilian border and increased U.S. pressure on traffickers in Colombia, Bolivia and Peru is shifting some smuggling routes south—by private vehicle, bus, and small airplanes. Drug seizures are increasing, but would be even greater if the GOU had more funding for law enforcement equipment.

Domestic Programs (Demand Reduction). The GOU remains committed to education and prevention. In 2004, to improve its tracking of drug consumption, the GOU funded studies on the social costs of drug use, drug use in prisons, and the link of drug use to emergency room visits. It also started a register for tracking drug offenses in the prison population. Uruguay’s demand reduction efforts focus on developing prevention programs, rehabilitation and treatment. They are based on a strategy developed cooperatively in 2001 between the National Drug Secretariat, public education authorities, and the Ministries of Interior and Public Health, and include INJU (The National Institute of Youth), the Ministry of Sports and Youth Affairs, INAME (The National Institute of Minors),

municipalities and NGOs. Specific projects are: 1) the “Adventure of Life” program aimed at teaching values and healthy habits to elementary school children, which reached 90 schools in 2004; 2) the “Espacio de Encuentro”—a web page chat forum of the National Drug Council; and 3) the “Centro de Referencia de Drogas”—an NGO program that works with addicted children, adolescents and young adults. The authorities have designated one of the public hospitals as the National Drug Rehabilitation Center, and in 2004 held two training seminars for health professionals on working with drug users. The National Drug Secretariat has sponsored teacher training, public outreach, and programs in community centers and clubs, and in 2004 published a brochure on preventive measures in schools.

IV. U.S. Policy Initiatives and Programs

U.S. Policy Initiatives. U.S. strategy is to prevent Uruguay from becoming a major narcotics transit and consumption country. In addition, given Uruguay’s pre-recession success as a regional financial center, the U.S. provides assistance to combat money laundering. U.S. support complements GOU counternarcotics efforts. In 2003 and 2004, State Department INL Bureau funds were used for training in money laundering, corruption, and counternarcotics enforcement, and drug education, and for upgrading immigration controls. In previous years, the U.S. provided computers, software, passport scanners, vehicles and other equipment to the GOU to enhance its counternarcotics and anti-money laundering efforts. The U.S. has also funded training on canine handling, and community policing.

The Road Ahead. The incoming Broad Front (Frente Amplio) government, set to take office on March 1, 2005, is not expected to significantly alter Uruguay’s drug control strategy. Post will establish a rapport with the new authorities handling counternarcotics issues and highlight to them cooperation efforts to date. We are confident that they will seek USG assistance and continue the productive cooperation of their predecessors. Our emphasis in 2005 will be to continue to tighten Uruguay’s sea, air, and land border controls, educate the public about drugs, and providing counternarcotics enforcement training. For this, INL resources at least at previous year levels will be necessary.

Venezuela

I. Summary

Cocaine seizures during the first six months of 2004 equaled the amount seized in Venezuela during all of 2003, thanks in large part to two multi-ton seizures made by Venezuelan task forces that worked closely with USG law enforcement. The GOV also carried out some 400 cocaine and heroin seizures during the first half of the year. Several important cocaine and heroin trafficking organizations were effectively attacked during 2004, and several important extraditions were made.

The essential Organized Crime Bill, for a second straight year, failed to see any progress whatsoever, notwithstanding promises from the National Assembly to complete its second reading and forward the bill to the president of Venezuela by mid-2004. Corruption in law enforcement facilitated some narcotics trafficking; at the judicial level, it sometimes impeded investigations and prosecutions.

Venezuela is a party to the 1988 UN Drug Convention.

II. Status of Country

A remote and poorly secured 2,200-kilometer border is all that separates Venezuela from Colombia—the world’s primary source of cocaine and South America’s top producer of heroin. Colombian cartels and other smugglers routinely exploit a variety of routes and methods to move hundreds of tons of illegal drugs into Venezuela every year. These routes include the Pan-American Highway, the Orinoco River, the Guajira Peninsula, and hundreds of clandestine airstrips.

On the outbound side, cocaine is smuggled from Venezuela to the U.S. and Europe in multi-hundred kilo to multi-ton lots via maritime cargo containers, fishing vessels, and “go-fast” boats. Multi-kilo loads of cocaine and heroin are routinely smuggled through Venezuela’s commercial airports and mailed through express delivery services to the United States. Colombian guerrilla organizations, such as the FARC, ELN, and AUC, move through parts of Venezuela without significant disruption by the Venezuelan security forces.

III. Country Actions Against Drugs in 2004

Policy Initiatives. A majority of the Mini-Dublin Group ambassadors met with the GOV Vice President, Minister of Interior and Justice, and National Assembly members in January 2005 to discuss the status of the pending Organized Crime bill, which has been frozen in the second reading since November 2002. National Assembly Deputies committed to completing the second reading and forwarding the bill to the president for signature before the end of the first half of 2004. By year’s end, however, the National Assembly had failed to approve any of the bill’s pending 53 articles (the first 97 of the bill’s 150 articles were approved during 2002). In December 2004, the National Assembly declined to accept an invitation to attend, participate in, or to address a regional conference on transnational organized crime in Caracas attended by representatives from six neighboring countries. The Organized Crime Law, which was first proposed in 1999, would resolve the lack of legislation on money laundering, terrorist financing, judicial corruption, and conspiracy, to name a few.

The GOV last year introduced three antiterrorism bills, but much of their content is highly politicized (e.g., defining labor stoppages, pot-and-pan banging by political protesters, and other forms of non-violent political protest to be a form of terrorism). None of these bills will fulfill the requirements of either the UN International Convention for the Suppression of the Financing of Terrorism (1999) or the UN Convention Against Transnational Organized Crime (the Palermo Convention—2000).

The 1999 Penal Procedures Code (COPP) changed the legal system from inquisitorial to adversarial. However, with little support from the GOV or within the judicial system and with a public perception that the COPP favored the rights of the accused over those of the victim, the COPP was reformed in 2001. The reformed COPP eliminated some jury trials, facilitated pre-trial confinement, and lessened the “in fraganti” (reasons for arrest) requirements.

Accomplishments. **Illicit Cultivation.** In October 2004, the Venezuelan National Guard flew CONACUID (la Comision Nacional Contra el Uso Ilicito de las Drogas) and UNODC (United Nations Office on Drugs and Crime) observers over the Serrania de Perija mountain range on Venezuela’s northwestern border with Colombia. The group detected several small fields of coca and what appeared to be a cocaine base lab, based on similarities to structures and layouts typically observed at Colombian base labs. No eradication operations were conducted in 2004; the last significant eradication operation was conducted in May 2001. Based on historic cultivation patterns and current illicit cultivation on the Colombian side of the Perija, Venezuelan coca and poppy fields probably do not exceed a few hundred hectares each.

Production. Over the past few years, a handful of cocaine base processing labs have been detected near Venezuela’s border with Colombia, including one such possible lab in 2004. However, no operations were mounted in 2004 to seize or destroy such labs.

Transport. The Government of Venezuela has a strong record on interdicting the transport of cocaine, heroin, and other drugs. Building on consecutive record seizures of cocaine in 2002 and 2003, cocaine seizures for the just first half of 2004 (over 19 metric tons) equaled those for all of 2003.

Extradition. Although the Venezuelan constitution precludes the extradition of its citizens to stand trial abroad, the Venezuelan Prosecutor’s Drug Task Force (PDTF) participated in investigations, which led to the indictment, arrest, and extradition from Curacao of Venezuelan heroin trafficker Luis Alberto Ibarra. Ibarra is accused of masterminding the smuggling of over 700 kilograms of heroin from Venezuela to the United States since 2001 and was formally extradited from Curacao and arraigned in the New York in November 2004. In what has become one of the largest joint heroin prosecutions ever, 17 members of Ibarra’s organization, including his chief manager Liddy Moya, have pleaded guilty and are awaiting sentencing in the United States.

On December 7, 2004, the Venezuelan Supreme Court approved the extradition to the United States of two Colombians arrested in Caracas on charges of drug smuggling. One of the criminals, José Maria Corredor Ibaguë, aka “El Chepe Boyaco,” is one of the most-wanted Andean Ridge drug traffickers. Extraditions are awaiting resolution of sentence assurances.

Mutual Legal Assistance. Venezuela has signed a mutual legal assistance treaty with the United States, but it has not yet entered into force.

Law Enforcement and Drug Transit Cooperation. With the assistance of DEA advisors and INL/NAS logistical support, the Venezuelan Prosecutor’s Drug Task Force (PDTF) conducted successful investigations and operations throughout 2004.

Developing information first obtained in February 2004, the PDTF conducted a successful operation against the Hasbun narcotics trafficking organization, responsible for multi-ton shipments of cocaine from Colombia to the United States, via Venezuela and Mexico. After four months, the PDTF launched a series of raids in June 2004, seizing a total of over 5.9 metric tons of cocaine from six farms in the state of Guarico, Venezuela. Six traffickers were arrested and 5.5 metric tons of cocaine were seized in the first of three raids on June 9-10. On June 16, an additional 300 kilograms of cocaine were seized from other Hasbun-associated ranches. A third raid on two additional ranches was conducted on June 20, during which PDTF members came under fire from 25 heavily armed traffickers. Seven traffickers were killed in the exchange, 18 captured, and 85 kilograms of cocaine and an assortment of weapons were seized.

In a separate investigation of the Ibarra heroin trafficking organization, the PDTF coordinated the collection of evidence, obtained controlled delivery orders, conducted surveillance, arrested a number of organizational members who gave testimony against Ibarra, and tracked the movements of Ibarra. During the investigation, nine of Ibarra's couriers were arrested at various U.S. destination airports as they transported a total of more than 30 kilograms of heroin.

A similar counternarcotics task force conducted investigations and raids which led to the seizure of 7.6 metric tons of cocaine in February 2004 from a farm in the southern state of Bolivar.

Precursor Chemical Control. The GOV participated in Operation Seis Fronteras VI (Operation Six Borders VI) in 2004 and, with assistance from DEA, audited 82 companies for possible diversion of precursor chemicals. Five interdiction checkpoints were also manned. In all, 15 seizures were made, totaling approximately 410 metric tons of chemicals. Seventeen cases were forwarded to the prosecutor general for action.

Demand Reduction. The GOV recognizes that drug consumption is high in Venezuela and is working hard to reduce it. There are dozens of private, state, and NGO demand reduction and treatment groups in Venezuela. These are organized into larger associations that meet and cooperate on a regular basis. By law, all private companies employing more than 200 workers must donate one percent of their profit to public awareness and demand reduction programs. There is no shortage of resources in Venezuela for demand reduction.

Law Enforcement Efforts. DEA works closely with vetted GOV counternarcotics units. These units continue to be very successful, not only in seizing multi-ton loads of cocaine, but also in breaking apart the organizations that traffic drugs in and through Venezuela. The GOV affords complete operational latitude to these vetted units.

Numerous shortcomings of the judicial system have been identified. At the police investigator level, police are not generally competent to control a crime scene or carry out investigations. At the prosecutor level, many cases cannot be won in the courts because neither the police nor the prosecutors are capable of completing or supervising an investigation. There is a resulting breakdown in public faith in prosecutors due to ineffective criminal prosecutions and corruption. Prosecutors sometimes shrink from taking new cases, wary that political motives or connections may be involved. At the judicial level, prisoners miss their hearings if unable to pay guards to escort them. Missed hearings typically delay cases by months. Incompetence is common among judges in the criminal courts. Judges may delay or request removal from cases with political interest. The closed nature of the legal system encourages judicial corruption, since there is no effective watchdog. The Supreme Court has taken no steps during 2004 to ensure judicial independence or to reduce the number of "provisional" judges.

Corruption. Public corruption continued to plague Venezuela in 2004. Two aspects of this problem are particularly damaging to the GOV's narcotics control efforts. First is the complicity of mid-level military officers in the smuggling of drugs through Maiquetia International Airport and possibly other ports of embarkation. Notwithstanding an impressive record of heroin and cocaine seizures, GOV security personnel at Maiqueta are well known for taking bribes in exchange for facilitating drug shipments. Seizures are most likely to occur when pay-offs have not been made.

In one case of particular notoriety in August 2004, three innocent travelers, including a U.S. citizen, were framed and imprisoned for over a month when a surprise inspection detected 189 kilograms of cocaine in unchecked luggage that had been escorted into the plane's cargo hold by Venezuelan National Guardsmen assigned to the Anti-Drug Command. In order to divert suspicion from themselves, they switched the airline baggage tags with those of the suitcases of three innocent travelers. The courts ordered the release of the passengers after more than a month in jail. Several of

the National Guard officials implicated in this case were arrested less than a month later while loading half a ton of cocaine onto a private plane at Maiqueta International Airport.

Some judges dismiss apparently valid cases against narcotics traffickers for seemingly frivolous reasons. The GOV's practice of assigning temporary stand-in judges to narcotics trafficking cases at key points of the trial has resulted in the dismissal of cases and release of numerous narcotics traffickers under suspicious, if not farcical, circumstances.

Agreements and Treaties. Venezuela is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention on Narcotic Drugs, the 1972 Protocol amending the Single Convention, and the 1971 UN Convention on Psychotropic Substances. Venezuela is a party to the UN Convention against Transnational Organized Crime, the Protocol to Prevent, Suppress and Punish Trafficking in Persons, and its protocol on migrant smuggling. The GOV has also signed a number of important bilateral agreements with the U.S., including a ship-boarding agreement from 1991 (updated with a new protocol in 1997), a Memorandum of Understanding concerning cooperation in narcotics, and a customs mutual assistance agreement. Venezuela's 1999 "Bolivarian" constitution expressly prohibits the extradition of Venezuelan citizens. Previously, Venezuela had only a statutory bar to the extradition of nationals. Given the current political environment, this is unlikely to change in the foreseeable future.

Venezuela is also party to numerous bilateral and multilateral narcotics control agreements, including bilateral agreements with 15 other Latin American and Caribbean nations, as well as one Asian and three European countries. Venezuela is a party to the Inter-American Convention Against Corruption and in 2001 signed the consensus agreement on establishing a mechanism to evaluate compliance with the Convention. Additionally, Venezuela has entered into two agreements with the European Union. The scope of these agreements ranges from suppression of trafficking and demand reduction to specific controls on money laundering and precursor chemicals.

Elements of Venezuela's private sector are active participants in the U.S. Customs Service's Business Anti-Smuggling Coalition (BASC) program. This program seeks to increase the effectiveness of law enforcement officers in their efforts to deter narcotics smuggling in commercial cargo shipments and conveyances by enhancing private sector security programs. Hundreds of Venezuelan companies, organized into two BASC chapters, participate in the program to eliminate the infiltration of drugs into their legitimate commercial shipments to U.S. markets. BASC is part of DHS's Americas Counter-Smuggling Initiative (ACSI).

Cultivation/Production. CONACUID has requested and received help from the United Nations Office of Drugs and Crime (UNODC) to locate and measure the extent of opium poppy and coca crops along Venezuela's Colombian border. An aerial reconnaissance mission in October 2004 detected a **small amount of coca cultivation and what appeared to be a cocaine base lab.**

Drug Flow/Transit. Venezuelan authorities reported that cocaine seizures rose: from 14 metric tons in 2001, to 17 metric tons in 2002, and to more than 19 metric tons in 2003. During the first six months of 2004, 353 individual seizures (two per day on average) totaled more than 19 metric tons of cocaine. Heroin seizures have also been strong over the past four years: from 196 kilograms in 2000, to 228 kilograms in 2001, to 563 kilograms in 2002, to 443 kilograms in 2003. During the first six months of 2004, 50 individual seizures totaled 276 kilograms of heroin.

Domestic Programs (Demand Reduction). The Venezuelan private sector's extensive participation in demand reduction activities is laudable. The country's largest advertising agencies create, without charge, drug education and prevention messages. The time and space to transmit these messages has been donated by Venezuela's most important media firms. Some 160 messages and US\$90,000,000 of airtime have been provided free of charge by the private sector since 1996.

IV. U.S. Policy Initiatives and Programs

U.S. Policy Initiatives. Ultimately, the diverse manifestations of narcotics trafficking—cultivation, chemical diversion, production, transportation, smuggling, market development, sale, money laundering—are all operations of organized crime, without which this illegal activity could not be sustained on such a massive scale. The overall USG counternarcotics goal in Venezuela is to disrupt and dismantle narcotics trafficking organizations through numerous policy, law enforcement, and institutional development efforts. Interdiction, in this context, is viewed as a precursor to obtaining and exploiting intelligence information, which in turn may be used to direct criminal investigations and, ultimately, prosecutions and convictions.

Bilateral Cooperation. The INL program in Venezuela is grouped into five projects: interdiction, administration of justice, chemical control, money laundering control, and public awareness.

Components of the interdiction project include seaport security, airport security, and border security, with a particular emphasis on shutting down the Tachira-Puerto Cabello cocaine transit corridor. A state-of-the-art cargo inspection facility is under construction at Puerto Cabello and should be fully operational by mid-2005. Two permanent U.S. Customs and Border Protection inspectors were assigned as advisors to the interdiction project in 2004. The expansion of this team's area of responsibility to include the Cucuta (Colombia)-San Antonio de Tachira border point of entry on the Pan-American Highway documented the seizure of over half a ton of cocaine in early December 2004.

The interdiction project also focuses on reducing the flow of heroin and cocaine through Maiquetia International Airport to the U.S. and Europe. X-ray equipment provided by post's INL/Narcotics Affairs Section resulted in near-daily drug seizures at Maiquetia, including a record heroin seizure of 66 kilograms in May 2004.

Components of the administration of justice project include extensive support for the Prosecutor's Drug Task Force, training, and the purchase of 160 computers to run the Prosecutor General's new Case Management System at field offices around the country. Extensive work was also done under this project to install two interconnected local area networks of computers at the Venezuelan drug czar's offices in Caracas.

Also in 2004, the embassy's INL/Narcotics Affairs Section undertook a landmark study to document and analyze Venezuela's 2003 cocaine and heroin seizures. A number of deficiencies and limitations in the current law enforcement and judicial system were discovered or better understood, and seizure report errors for 2003 were corrected.

The Road Ahead. In 2005, the USG plans to expand its support into several new areas, including the development of a drug intelligence fusion and analysis center, the initiation of riverine interdiction operations on the Orinoco, and the construction of a centralized storage and incineration facility for the safeguarding and destruction of seized drugs.

In order to demonstrate success in adhering to its international counternarcotics agreements, Venezuela needs to make substantial efforts to improve in five critical areas:

- **Pass the Organized Crime Law.** This is fully in the hands of the National Assembly, which has not progressed in the second reading of the bill beyond article 97 out of 150 since November 2002. When passed, the Ley Organica Contra la Delincuencia Organizada (LOCDO) will define and criminalize such activities as money laundering, conspiracy, official corruption, illicit enrichment, trafficking in persons and terrorist financing, as well as authorize such law enforcement tactics as undercover operations and controlled deliveries.
- **Effectively Attack Corruption.** Eliminate the culture of corruption at Maiqueta Airport. Procedural improvements need to be made to guard against officials seeking

profit from drug trafficking and alien smuggling, but the real solution lies in Venezuelan leadership and political will. A vetted airport unit with U.S. advisors would help. Areas of particular concern to the USG involve drug trafficking, document falsification, migrant trafficking, framing of innocent American citizens and other nationalities, and the potential for smuggling terrorist munitions aboard aircraft departing Maiquetia Airport for the U.S. and other destinations. Reduce the potential for judicial corruption by abolishing the practice of bringing in temporary stand-in judges to narcotics trafficking cases at critical junctures of the trial. Temporary judges (known as “jueces accidentales”) should not have authority to dismiss cases or release defendants in drug trafficking cases.

- **Crack Down on Document Fraud.** Venezuela needs to create a law enforcement branch within its immigration service (DIEX) to investigate document fraud and trafficking in persons. Venezuela also needs to automate the process of passport applications and issuance with a system that provides audit trails and which is cross-linked with the citizen identification card database, installed on a wide area network (WAN) to permit queries from around the country.
- **Enforce Court-Ordered Wiretaps.** The GOV currently has legal authority to order wiretaps, but has consistently failed to enforce its court orders with reluctant cellular phone companies.
- **Eradication.** Conduct opium poppy and coca eradication operations at least annually

**Venezuela Statistics
(1996–2004)**

	2004*	2003	2002	2001	2000	1999	1998	1997	1996
Arrests/Detentions	-	2,187	2,711	3,069	2,616	6,630	7,531	5,379	-
Seizures									
Cocaine Total (mt)	19.07*	19.46**	17.79	14.18	15.17	13.10	8.60	16.18	7.20
Heroin (mt)	.276*	.364***	.56	.28	.13	.04	.04	.11	.07
Cannabis (mt)	5.115*	6.125	20.92	14.43	12.43	19.69	4.50	5.52	5.30

*Numbers valid through 30 June 2004 only; no second semester figures are available at this time.

**The 2003 reported amount of 27.70 metric tons of cocaine has been downward revised to 19.46 MT, based on an independent verification of seizures on a case-by-case basis. Most of the discrepancy can be explained by the misreporting of a seizure of 9,573 kilograms of cocaine, reportedly made by the Venezuelan Coast Guard. In reality, the seizure was made in international waters by the Spanish Navy, with cooperation from the Venezuelan Coast Guard.

***The 2003 reported amount of 443 kilograms of heroin has been downward revised to 364 kilograms, based on an independent verification of seizures on a case-by-case basis.

CANADA, MEXICO AND CENTRAL AMERICA

Belize

I. Summary

Belize, part of the major transit zone for narcotics moving towards the U.S., was removed from the Majors list in 1999. At the time, declining seizure rates and lack of hard evidence that drugs were transiting through Belizean waters and air space supported this decision. New evidence that Belize is a regular transshipment point continues to emerge.

The Government of Belize (GOB) recognizes that the transit of cocaine and other drugs is a serious matter, but provides little financial assistance to support police units tasked with narcotics investigations. The GOB continues to work closely with the United States on international crime issues and has been extremely helpful in the extradition of U.S. fugitives over the last year. The Belize Police Department (BPD) was recently praised by the Assistant Secretary of State for Diplomatic Security at the International Chief of Police Conference in Los Angeles for being one of the countries with the highest rates of return for U.S. fugitives. Although the Police Department continues to process classes of new recruits into the Belize Police Department (BPD), the force has not grown; because of internal corruption and reprimands, the number of officers remains steady (slightly less than 1000, nationwide). The BPD, the Belize Defence Force (BDF), and the International Airport Security Division continue to provide counternarcotics efforts. The Police Department successfully seized a plane packed with 700 kilograms of cocaine and a variety of automatic weapons in 2004. The BPD has participated in two gun battles involving transshipment of cocaine this past year as well. The recent U.S. Southern Command deployment of a Counter Narcotics Electronic Intelligence Surveillance (CNEIS) System to Belize has provided data necessary to track and interdict suspicious airplanes within Belize's airspace. Belize participated in a regional collaborative effort to track and interdict a suspicious airplane, ending in successful seizure across the Guatemalan border. Since 1996, Belize has been a party to the 1988 UN Drug Convention.

II. Status of Country

Belize is a potentially significant transshipment point for illicit drugs between Colombia and Mexico. It continues to cultivate a small amount of marijuana, primarily for local consumption. The BDF and the BPD have led successful eradication efforts over the past few years. Contiguous borders with Guatemala and Mexico, large tracts of unpopulated jungles and forested areas, a lengthy unprotected coastline, hundreds of small cayes (islands), and numerous navigable inland waterways, combined with the country's rudimentary infrastructure, add to its appeal for drug trafficking. Officials continue to find a number of abandoned suspect boats and airplanes in Belizean waters and in clandestine areas.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The Anti-Drug Unit (ADU), part of the BPD, has decreased in size over the past year and currently consists of 33 officers designated to do counternarcotics work both on land and at sea. Presently, 12 officers are stationed in the ADU office in Belmopan and 21 are stationed in the Belize City Office.

The new civilian Crime Scene Unit was successfully established. Thirty-three Crime Scene Technicians participated in a two-month internship, in cooperation with the Panamanian Police, focusing on latent fingerprinting and evidence collection. All 33 technicians successfully completed the course at the end of October 2004. Arlington County (Virginia) Police Department will be providing a specialized two-week training course covering evidence collection skills and chain of

custody issues in early 2005. The FBI is planning an advanced fingerprint course to follow up the Panamanian internship program.

Accomplishments. The Ministry of Home Affairs was tasked in 2004 with the establishment of a Belize National Coast Guard. The Coast Guard Legislation passed both the House and the Senate in December 2004, and the Ministry expects to begin staffing the Coast Guard in April of 2005. Thirty-four individuals will be assigned to the new Coast Guard Unit. Candidates will be recruited from the Belize Defence Force (BDF) Maritime Wing, and vacancy announcements will be published for outside recruits. The current BDF Commandant has been named the Commandant for the Coast Guard. The U.S. Coast Guard will conduct a site survey in January of 2005 and a full evaluation in February to assist the fledgling Belize Coast Guard Unit, which will be tasked with all law enforcement efforts at sea.

The Belize Police Department has successfully begun a Wide Area Network project, which will include computerization of all records including police reports, fingerprints, and drivers' licenses.

The GOB fully cooperated in one joint GOB/USG counternarcotics operation in July 2004 utilizing Joint Task Force Bravo assets.

Illicit Cultivation/Production. The GOB successfully carried out many independent marijuana eradication missions in 2004. By October 2004, 53,203 marijuana plants had been eradicated. Illicit cultivation continues to occur at reduced levels from the widespread cultivation of a decade ago. Belize has a dense rainforest canopy, and farmers often grow crops in remote areas. Marijuana remains the most popular drug crop grown in Belize, but there is no evidence that it has any significant effect on the U.S. The BDF and BPD conduct manual marijuana eradication missions on a regular basis using their own aerial reconnaissance program.

Precursor Chemical Control. Although Belize has had very limited signs of precursor chemical production, the GOB, in keeping with the goals and objectives of the 1988 UN Drug Convention, has an existing precursor chemical program. The Medical Department at Karl Heusner Hospital keeps track of all statistics on precursor chemicals. Legislation for precursor chemical control was written, but is still in draft form with no specific date for presentation to the House. The legislation covers a variety of aspects including control, enforcement and registration of all precursor chemicals.

Domestic Programs/Demand Reduction. GOB demand reduction efforts are coordinated by the National Drug Abuse Control Council (NDACC), which provides drug abuse education, information, counseling, rehabilitation and outreach. NDACC also operates a public commercial campaign, complete with radio advertisements and billboards, designed to dissuade youths from using drugs.

Law Enforcement Efforts. Authorities seized 734.5 kilograms of cocaine in 2004. Authorities also seized 198 kilograms of cannabis, 9 kilograms of cannabis seed, 183 grams of crack cocaine, and 500,000 synthetic drug tablets. The Anti-Drug Unit has been solely dedicated to handling narcotics cases and counternarcotics operations throughout the year. To this end, 525 arrests were made on drug-related charges stemming from possession of or trafficking in marijuana, cocaine, crack cocaine, and heroin. Additionally, 15 go-fast boats originating from Colombia and six aircraft were seized. Finally, the Belize police arrested two local high-level narcotics traffickers, one of whom has been successfully prosecuted in the U.S. and is awaiting sentencing.

The GOB's most serious internal drug problem in Belize is rooted in drug-associated criminality. Obtaining convictions remains difficult, since the Office of the Public Prosecutor remains under-trained and under-paid. The GOB has refurbished its fingerprinting program with the assistance of the Panamanian government and the FBI. The program is expected to be the key factor in obtaining convictions in the future. The Government also exceeded expectations by funding 33 civilian Crime Scene Technicians rather than the 14 originally planned.

Corruption. There is no evidence of specifically narcotics-related corruption within the GOB. However, there are allegations of general corruption within some government agencies. There were a number of police officers dismissed for wrongdoing in 2004 by the Internal Affairs Division. Police officers were banned from the Free Trade Zone in the Corozal District because of corruption-related issues. There is increasing evidence and information suggesting that the GOB suffers from serious corruption problems at all levels. Belize is a party to the Inter-American Convention on Corruption.

Agreements and Treaties. Belize has been a party to the 1988 UN Drug Convention since 1996. Belize completed a stolen vehicles treaty with the U.S. that entered into force in September of 2004. Although many vehicles have been identified as stolen, no vehicles were returned under this treaty in 2004. In September 1997, the GOB signed the National Crime Information Center Pilot Project Assessment Agreement, which allows for sharing of information and data between the U.S. and Belize. In 1992, Belize set the standard for maritime counternarcotics cooperation in the region by signing the first Maritime Counter Drug Agreement with the U.S. The GOB and the U.S. signed an Over-flight Protocol to the 1992 Maritime Agreement in April 2000, and requested more joint operations under the Sea Rider Agreement in June 2003, one of which is finally being planned for 2005. The U.S. and Belize have an extradition treaty and an MLAT in force. One kidnapped child was returned, and 20 U.S. fugitives were detained and sent back to the U.S. by extradition or deportation. Belize is a party to the UN Convention Against Transnational Organized Crime and its protocol on trafficking in persons.

Drug Flow/Transit. Maritime routes along Belize's lengthy coastline, remote border crossings, and navigable inland waterways are the suspected means for trafficking narcotics through Belize to Mexico, Guatemala, and the U.S. The major narcotics threat in Belize is cocaine transshipment through its territorial waters for onward shipment to the U.S. Armed Mexicans and Colombians protect shipments of cocaine and are considered extremely dangerous. These circumstances, coupled with the lack of visibility at night and the dense vegetation in the mangroves, makes sea duty hazardous. The primary means for smuggling drugs are go-fast boats transiting the reef system; traffickers can operate in relative safety due to numerous hiding spots and shallow water. Often the drugs are off-loaded on the ocean side near the barrier reef to smaller vessels. These vessels freely transit inside Belize waters due to the lack of adequate host nation resources and interdiction capabilities, including equipment, vessels, personnel, and other items, as well as a lack of critical information, such as locations and times of delivery.

Once cocaine is delivered to Belize, it moves northward—often along the northern highway. This highway leads to the Corozal commercial free zone as well as the Santa Elena Belize/Mexico border crossing. Trafficker exploitation of several unguarded remote border crossings and lax customs enforcement contribute to cross-border operations.

Six deserted airplanes suspected of hauling large drug shipments were found over the past year. One twin engine King Air was seized after a lengthy gunfight in a village near Orange Walk. Police seized 700 kilograms of cocaine and confiscated several automatic weapons. These incidents signal that air trafficking has continued to increase in Belizean airspace. Although there is little evidence, officials suspect that river “wet drops” also have increased over the past year.

Intelligence suggests that the Colombian drug cartels have established partnerships with Mexican drug cartels, leading to increased Mexican drug trafficking in Belize. These Mexican cartels have been masterminding clandestine aircraft and sea vessel drug operations within Belize. The local Belizean drug trafficker merely provides resources and assists in the transit of drugs through Belizean territory into Mexico, while the Mexicans are fully in charge and responsible for the operation's success.

IV. U.S. Policy Initiatives and Programs

U.S. Policy Initiatives and Bilateral Cooperation. The U.S. strategy in Belize continues to focus on assisting the GOB in developing a sustainable infrastructure to combat its drug problems effectively. In 2004, USG support included counternarcotics and law enforcement assistance, providing the host nation with equipment and training for the Belize Defense Force as well as the Belize Police Department's Anti-Drug Unit, canine branch, and other branches. Additional training was provided for the Department of Immigration, the Customs and Excise Department, the Magistrate Courts, the Supreme Court, and the Director of Public Prosecution's Office. The USG also funded all training initiatives for the new Civilian Crime Scene Unit. The U.S. Southern Command, including Joint Interagency Task Force South, among others, has responded to GOB requests for training and logistics support for counternarcotics activities.

The Road Ahead. Given frequent changes in trafficking routes, and Belize's lack of maritime and air assets, the potential remains for Belize to become a point for ever-increasing transshipment of cocaine. Local marijuana cultivation necessitates continual monitoring and periodic eradication. After six years in power, the People's United Party continues to advocate combating drug trafficking and associated crime as a top priority, but has avoided providing resources to the appropriate units. U.S. Mission support should continue to focus on assisting police counternarcotics units and all units involved with crime scene investigation, and on improving Belize's Rule of Law infrastructure. Projects should include developing basic communication and technology infrastructure and providing training for all law enforcement branches. Improvements in communications, collection of crime scene evidence and forensic examination, and increased training within the Prosecution Office are currently being pursued, and seem to point the way toward a stronger criminal justice system in Belize.

Canada

I. Summary

The Government of Canada had an active and productive year in counternarcotics in 2004. The national “Canadian Addiction Survey” that was made public in November indicated that substance abuse among Canadians has significantly increased over the past decade, especially among youth. While alcohol and cannabis remained the most commonly abused substances, there were worrisome trends in abuse of other illicit substances. The Royal Canadian Mounted Police (RCMP) estimates that the overall drug trade in Canada generates criminal proceeds in excess of \$3 billion at the wholesale level and \$13.5 billion at the street level. Marijuana production is a thriving industry in Canada with production estimated by the RCMP at somewhere between 960 and 2400 metric tons. This is a particular concern of the USG because of increased seizures in the U.S. of Canadian-sourced marijuana, much of which appears to be in the higher-potency/higher-profit “bud” form. Canadian law enforcement has responded with a nation-wide marijuana task force to target large-scale grow operations run by organized crime.

Bilateral counternarcotics cooperation with the United States continued to be excellent. At the October U.S./Canada Cross-Border Crime Forum, the two governments announced the establishment of four new intelligence exchange sites to support the International Border Enforcement Team (IBET) program. They also released an updated “Border Drug Threat Assessment” which was produced to enhance our understanding of the two-way flow of illicit drugs and precursor chemicals (http://www.psepc.gc.ca/publications/policing/drug_threat_e.asp). The study highlighted the emerging problem of MDMA (“Ecstasy”) production in Canada. In 2004, through an intensive bi-national investigation—dubbed “Candy Box” in the U.S. and “Okapi/Codi” in Canada—the two governments dismantled a major MDMA (“Ecstasy”) ring producing MDMA in Canada and marketing it in both countries. This will continue to be a major law enforcement focus in 2005.

Canadian efforts over the past two years to curb the diversion of precursor chemicals such as pseudoephedrine (used to manufacture methamphetamine) appear to have had an impact as the U.S. noted a marked decrease in seizures of such chemicals linked to Canada. Both governments will continue to watch this closely though, to ensure that traffickers are not shifting to substitute chemicals or different methods.

Multilaterally, Canada held the chairmanship of the Inter-American Drug Abuse Control Commission (CICAD), the counternarcotics arm of the Organization of American States (www.oas.cicad.org).

II. Status of Country

Canada is a significant narcotics-consuming country. In November 2004, Health Canada, the Canadian Executive Council on Addictions and the Canadian Center on Substance Abuse published highlights from the Canadian Addiction Survey, the first major survey on the use of substance abuse among Canadians in a decade. This survey suggests that reported use of alcohol, cannabis and other drugs has increased in Canada over the past decade, nearly doubling in some cases (see Domestic Programs).

The RCMP estimates that the drug trade in Canada generates criminal proceeds in excess of \$3 billion at the wholesale level, and \$13.5 billion at the street level. Drug-related crime is an increasingly serious concern to Canadian authorities. British Columbia has had the highest provincial drug-related crime rate for the past 20 years. It was the only province to show an increase (by 6 percent) in reported drug charges in 2003, including a 3 percent hike in prosecutions of cannabis possession. The Correctional Service of Canada suggests that almost 70 percent of offenders entering federal

institutions have problems with alcohol and/or other drugs and that more than half of all offenders were under the influence of alcohol or drugs when they committed their offense.

Canada remains a significant producer and transit country for precursor chemicals and over-the-counter pharmaceuticals used to produce illicit synthetic drugs. U.S. and Canadian authorities have focused in particular on bulk shipments of pseudoephedrine (PSE), a common cold remedy used to manufacture methamphetamine. It is legally imported into Canada from China, India, and Germany. Until 2003, the diversion of large quantities of PSE from Canada to methamphetamine “Super Labs” in the United States was a serious problem. PSE seizures in the U.S. linked to Canada have dropped significantly in 2004, indicating Canadian regulation efforts, combined with bilateral enforcement efforts, were deterring the movement. Nevertheless, authorities are watching carefully the flow of ephedrine, another methamphetamine precursor, because there has been an increase in Canadian imports from China and India and an increase in U.S. seizures at the border. (See Chemical Chapter)

Law enforcement reports indicate that some limited smuggling of methamphetamine occurs in both directions across the U.S.-Canada border. According to the RCMP the bulk of methamphetamine available in the Canadian illicit market derives from domestic supply. The RCMP also reported that clandestine methamphetamine laboratories seized in Canada were 24 in 2000, 13 in 2001, 25 in 2002, and 37 in 2003. In 2004, 46 pounds of methamphetamine were seized entering the U.S. from Canada by U.S. law enforcement officials.

The RCMP estimates that annual Canadian marijuana production ranges between 960 and 2400 metric tons. While viewed as a nationwide problem, marijuana is heavily cultivated in British Columbia, Ontario and Quebec. (See Production and Cultivation) In 2004, 40,064 pounds of marijuana were seized entering the U.S. from Canada. U.S. experts estimate that Canada is the third largest foreign supplier of marijuana consumed in the United States. Although Canadian-produced marijuana accounts for a very small amount of overall U.S. marijuana seizures at its borders, the two governments are very concerned about an upward trend in seizures, which have increased 259 percent since 2001. Some U.S. experts have estimated the value of Canadian-grown marijuana entering the United States at \$5 billion or more. In addition to extensive domestic production in Canada, there is considerable smuggling of foreign-produced marijuana into Canada. Canadian authorities seized 7.8 metric tons of marijuana at ports of entry between 2000-2003 arriving from the United States, Mexico, Colombia, the Caribbean, the Middle East, and, to a lesser degree, Thailand and Morocco. The RCMP estimates that approximately 11 metric tons of hashish a year and 6-8 metric tons of liquid hashish are smuggled into Canada. In 2004, 22 pounds of hashish were seized entering the U.S. from Canada by U.S. law enforcement officials.

Outlaw motorcycle gangs and Asian, Colombian, and Italian-based criminal organizations cooperate with one another to varying degrees in the trafficking and distribution of illegal drugs. According to the RCMP, Colombian drug trafficking organizations and Italian organized crime groups are the most influential smugglers of cocaine into eastern Canada. Over the past few years, the importation of hundred kilogram quantities of cocaine into Canada is increasingly being carried out via sailing or fishing boats. This trend departs from earlier trends when the preferred smuggling method involved the use of marine containers. The RCMP estimates that 15 to 24 tons of cocaine enters Canada annually; from 2000 to 2003, Canadian authorities seized 4.7 metric tons of cocaine at Canadian ports of entry. Approximately 25 percent of the cocaine shipments seized en route to Canada transited or was intended to transit the United States. Law enforcement reporting indicates that very little cocaine is smuggled from Canada into the United States.

Asian-based organized crime dominates the trafficking of heroin from Southeast Asia to Canada. The RCMP estimates that one to two tons of heroin are required annually to meet the demand of Canada’s estimated 25,000 to 50,000 heroin users. Canadian authorities seized a total of 305 kilograms of heroin at Canadian ports of entry in 2003.

Also in 2003, Canadian authorities reported seizing 5.64 million ecstasy (MDMA) tablets at ports of entry, representing a 213 percent increase over 2002. Members of Asian, Eastern European and Israeli organized crime groups, as well as organized motorcycle gangs (OMGs), particularly the Hells Angels Motorcycle Club, are involved in cross-border MDMA trafficking. Asian crime groups based in Canada are known to be extensively involved in the production and importation of MDMA for the North American market. According to the RCMP and Health Canada, the demand for MDMA in Canada is increasing, and the drug appears to be preferred among adolescents and young adults.

In addition, law enforcement intelligence indicates that the abuse of methamphetamine has increased, particularly in western Canada. According to the RCMP, the domestic production and trafficking of methamphetamine has dramatically increased while its distribution and use have reportedly skyrocketed in some regions in Canada. As in the United States, methamphetamine use has reached alarming proportions in western regions. The number of methamphetamine labs dismantled by Canadian law enforcement has varied each year since 2000 with 24 labs seized in 2000, 13 in 2001, 25 in 2002 and 39 in 2003. Between 2000 and 2003, Canadian authorities seized a total of 6,510 pills and 14.1 kilograms of methamphetamine at Canadian ports of entry.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Health Canada has responsibility for overall coordination of the nation's drug strategy although other departments, as well as municipal and provincial/territorial governments, are equally involved in addressing the domestic use of illicit drugs.

In May 2003, the Government of Canada (GoC) announced the renewal of its comprehensive drug strategy. Health Canada committed \$186 million over five years to reducing both the demand for, and the supply of illegal drugs in Canada. (Note: All monetary figures in this report are in U.S. dollars.) The renewed strategy will attempt to accomplish its goals through education, prevention, and health promotion initiatives, as well as stronger enforcement efforts. The strategy also provided new funding for statistical research on Canadian drug trends to enable more informed decision-making.

On November 1, 2004, the GOC re-introduced cannabis reform legislation that proposes changes to the penalties associated with marijuana-related offenses. The draft bill proposes a graduated sentencing criteria for the cultivation of cannabis, based on the number of plants seized (a fine for cultivating 1-3 plants; a maximum five years imprisonment for cultivating 4-25 plants; a maximum ten years for cultivating 26-50 plants; and a maximum of 14 years for cultivating 51 or more plants). It would also punish possession of small amounts of marijuana for personal use with fines rather than criminal penalties. Should it pass in its current form, an adult caught with 15 grams or less of marijuana could receive a fine of \$115; youth caught with 15 grams or less of marijuana could receive a fine of \$75. A companion bill, also introduced on November 1, would give Canadian police authorities the powers to arrest and charge individuals found driving under the influence of drugs. It could also make resources available to law enforcement officers for training in the detection of automobile drivers operating their vehicles while under the influence of narcotic substances and marijuana. Neither current law, nor the proposed cannabis legislation, requires Canadian judges to impose mandatory minimum sentences on major drug producers or traffickers. Canadian law currently provides for the legal use of marijuana for medical purposes and Health Canada makes marijuana available to some 700 Canadians with medical authorization.

In September 2003, the first supervised drug injection site in North America opened in Vancouver. This site costs approximately \$1.5 million a year to operate, is located in the downtown Eastside of Vancouver, and services an estimated 4,000 injection drug users. The provincial government of British Columbia is financing the project; however, Health Canada commits about \$1.15 million for research as to the site's viability and public good.

Accomplishments. Under the renewed Comprehensive Drug Strategy, the GOC developed a plan to address the organized crime element behind the proliferation of marijuana grow operations in Canada. In January, the RCMP established dedicated investigative teams to target and dismantle marijuana grow operations as well as clandestine laboratories that produce synthetic drugs such as methamphetamine. These teams are currently active in British Columbia, Alberta, and Quebec, provinces where organized crime operations are most prevalent. A National Coordinator was selected to oversee their efforts. Further, in late 2004, the RCMP organized a conference with private sector representatives in the real estate, insurance, and hydropower industries to both facilitate the identification of existing marijuana grow operations and to deter the establishment of new ones.

In November, health-care workers, police and social service providers from western Canada met in Vancouver to discuss the prevalence of methamphetamine and develop approaches to counter its use and availability. In early 2005, the GOC is expected to designate Colombian drug traffickers and money launderers in Canada as law enforcement intelligence targets.

Law Enforcement Efforts.

- In January 2004, Canadian law enforcement uncovered a large indoor grow operation inside a former brewery in Barrie, Ontario and seized 20,100 marijuana plants.
- In March 2004, as a result of Operation “Candy Box”/ Project Okapi / Project Codi, Canadian and U.S. law enforcement jointly dismantled a large criminal network producing MDMA and marijuana in Canada and distributing it throughout the United States. Over 130 individuals in 19 cities were arrested, and more than 877,000 MDMA pills, 120 kilograms of MDMA powder, over \$6 million in currency, and more than 1,000 marijuana plants were seized by U.S. and Canadian law enforcement.
- Also in March 2004, Toronto police seized over 800 marijuana plants being grown on the 18th floor of a high-rise apartment building. Several apartments reportedly contained some \$40,000 in specialized growing equipment.
- In June, DEA announced the arrest of 50 drug traffickers in Colombia, Panama, Jamaica, the Bahamas, the U.S. and Canada believed responsible for the U.S. distribution of three metric tons of cocaine every month.
- Also in June, Canadian police made a series of arrests in the Toronto and Windsor area resulting in 157 charges with 49 counts under the Controlled Drugs and Substances Act and the Criminal Code of Canada against 24 individuals.
- In July, the York Regional Police seized two MDMA labs in Markham, Ontario approximately 100 kilograms of ecstasy, 2 pill presses, and Canadian currency.
- In August, U.S. Coast Guard officials seized a Canadian flag vessel in the Caribbean and interdicted 350 kilograms of cocaine.
- In September, RCMP and DEA enforcement officials conducted Operation Brain Drain and executed 53 search warrants in western Canada and the U.S. and the RCMP obtained arrest warrants for 25 individuals in Canada. Resulting illegal substance seizures in Canada included approximately 1.5 million tablets of ephedrine, 600 kilograms of bulk ephedrine and between \$1.5 and \$2.5 million in currency. Additionally, a third MDMA facility was seized in Markham, Ontario with over 200 kilograms of MDMA and precursor chemicals that could have produced an additional 300 kilograms.

- From October 15 through November 7, a Canadian police task force seized 15,000 marijuana plants, with a street value of some \$15 million, in Southern Alberta. During this operation, 42 search warrants were issued (41 residences and one warehouse). Canadian law enforcement believed that most of the seized drugs were heading to the U.S.
- In November local police authorities seized 116 pounds of MDMA from three Toronto residences.

Corruption. Canada holds its officials and law enforcement personnel to a very high standard of conduct and has strong anticorruption controls in place. The GOC has strong anticorruption controls in place. Government personnel found to be engaged in malfeasance of any kind are removed from office and are subject to prosecution. Investigations into accusations of wrongdoing and corruption by government officials are thorough and credible. As a matter of government policy, Canada neither encourages nor facilitates illicit production or distribution of narcotic or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal drug transactions.

Cultivation/Production. Cannabis cultivation, because of its profitability and relatively low risk, is a thriving industry in Canada. In 2004, the RCMP estimated that annual Canadian marijuana production ranges between 960 and 2400 metric tons. While viewed as a nationwide problem, marijuana is heavily cultivated in British Columbia, although significant production levels are now reported in Ontario and Quebec. According to RCMP seizure data, 1,102,198 marijuana plants were seized in 2000, 1,367,321 in 2001, 1,275,738 in 2002, and 1,400,026 in 2003.

In January 2004, Canadian law enforcement uncovered a record-sized indoor grow operation to date inside a former brewery in Barrie, Ontario, and seized 20,100 marijuana plants. Though outdoor cultivation continues, use of indoor grow operations is increasing because it allows production to continue year-round; they are also becoming larger and more sophisticated. The RCMP reports that Vietnamese organizations may have mastered technologically-advanced organic grow methods and that hydroponic hothouse operations in Canada are now producing marijuana with elevated THC levels. Canadian law enforcement officials have also seized a few aeroponic installations, where roots are suspended in mid-air and sprayed regularly with a fine mist of nutrient-enriched water.

Domestic Programs (Demand Reduction). Canada is clearly a significant narcotics-consuming country, but the scope of this problem was not well understood until recently. In November 2004, Health Canada, the Canadian Executive Council on Addictions, and the Canadian Center on Substance Abuse published the highlights from the Canadian Addiction Survey, the first major survey on the use of substance abuse among Canadians in a decade. This survey found that use of alcohol, cannabis and other drugs has increased significantly in Canada. While alcohol and cannabis remained the most commonly-abused substances, the report suggests that 14 percent of all Canadians have used cannabis in the past year, nearly double the rate reported in 1989. Among youth, the cannabis consumption rate was nearly 30 percent for 15 to 17 year olds and over 47 percent for 18 to 19 year olds. Almost 70 percent of Canadians aged 18 to 24 have used cannabis in their lifetime.

The Statistics Canada study also revealed increases in the number of Canadians taking other illegal drugs: cocaine or crack cocaine, Ecstasy (MDMA), LSD and other hallucinogens, amphetamines (“speed”) and heroin. It found that 2.4 per cent of the survey’s almost 37,000 respondents, all aged 15 or older, reported using at least one of these other drugs in the previous year, up from 1.6 percent in 1994. And 1.3 percent—an estimated 321,000 Canadians—had used cocaine or crack. The results of a provincial-level survey in Ontario indicated that 4.8percent of secondary school students (up from 3.4percent in 1999) and 3percent of young adults (up from 2percent) had used cocaine in the past year; the rate rose to 4percent among young adults in Toronto (up from 1percent in a 2003 survey). An Ontario Student Drug Use Survey, published in 2003, indicated that adolescent MDMA use increased from 0.6 percent in 1993 to 6 percent in 2001.

Health Canada is the focal point for the nation's drug control policy and emphasized demand reduction as an integral component of its drug control strategy. In an effort to decrease demand, Health Canada has financed a number of public education campaigns, many with a specific focus on youth. The results of these campaigns are not yet clear. Recent Canadian qualitative studies have revealed a significant amount of confusion among Canadian youth regarding the effects, harms and even legal status of marijuana. The GOC, along with NGOs, also offers extensive drug abuse prevention programs. Drug treatment courts in Vancouver and Toronto offer alternatives to jail for convicted drug abusers facing incarceration for nonviolent drug possession offenses.

Agreements and Treaties. Canada is party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention on Narcotic Drugs as amended by the 1972 Protocol. Canada is also a party to the Inter-American Convention on Mutual Legal Assistance in Criminal Matters and the Inter-American Convention Against the Illicit Manufacturing of and Trafficking in Firearms, Ammunition, Explosives and Other Related Materials. Canada has also signed the Inter-American Convention Against Corruption. Canada is a party to the UN Convention against Transitional Organized Crime and its protocols on migrant smuggling and trafficking in persons. Canada has ratified all 12 United Nations Security Council Resolutions pertaining to terrorist financing. Canada actively cooperates with international partners; for example, the GOC has signed 30 bilateral mutual legal assistance treaties and 87 extradition treaties with other nations. Judicial assistance and extradition matters between the U.S. and Canada are made through an MLAT and an extradition treaty and protocols. The U.S. and Canada have shared forfeited assets through a bilateral asset sharing agreement.

Canada actively participates in numerous international activities aimed at reducing illicit drug use. From November 2003 until November 2004, Canada held the Chairmanship of the Organization of American States' Inter-American Drug Abuse Control Commission (CICAD). During Canada's chairmanship, CICAD expanded its work promoting active cross-border cooperation and combating transnational organized crime. The GOC likewise increased funding to CICAD for support of the Multilateral Evaluation Mechanism (MEM) and projects such as developing partnerships between health and law enforcement agencies to confront drug-related problems in a more comprehensive manner. The GOC also participates actively in the Dublin Group of international program donors and the Commission on Narcotic Drugs (CND) of the UN Office on Drugs and Crime (UNODC).

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. Canada and the United States enjoy a close and dynamic law enforcement relationship. The two countries cooperate closely at the federal, state/provincial, and local levels, and this collaboration also extends into the multilateral arena. The annual U.S./Canada Cross-Border Crime Forum engages policy-makers and senior operational directors in a joint effort to guide the relationship strategically, to develop a common agenda, and to enhance operational coordination. The Forum's technical working groups continue to identify priorities and areas for increased cooperation, such as intelligence sharing. For instance, at the October 2004 Forum, the U.S. Department of Justice and the Department of Public Safety and Emergency Preparedness Canada (PSEPC) released a joint interagency-produced threat assessment on the cross-border illegal drug trade. In addition, Project North Star is an ongoing mechanism for law enforcement operational coordination at the state and local level. North Star oversees, for example, the highly-successful joint International Border/Maritime Enforcement Teams (IBETs) that have helped to ensure that criminals cannot to exploit the international border to evade justice.

Because of the high level of mutual confidence, the RCMP and U.S. law enforcement agencies provide reciprocal direct access to each other's criminal databases, including the Canadian Police Information Center (CPIC), a firearms identification database, and a unique automotive paint chip

database. Canadian law enforcement benefits from access to the El Paso Intelligence Center (EPIC) and the National Drug Intelligence Center (NDIC). However, some aspects of Canada's criminal justice system, such as Canada's strict privacy laws, limit timely information exchange in some areas.

The two governments also have a broad array of agreements in place to facilitate cooperation in legal matters, such as the extradition and mutual legal assistance treaties, an information-sharing agreement, and an asset sharing agreement. Canada is the USG's principal extradition partner.

The Road Ahead. In early 2005, the Government of Canada is expected to designate Colombian drug traffickers and money launderers in Canada as law enforcement intelligence targets. In late 2004, the GOC reintroduced legislation (now Bill C-10) to change the penalties associated with cannabis-related crimes, including provisions that would impose fines rather than criminal penalties on possession of small amounts of marijuana for personal use.

The emerging threat of MDMA production in Canada, and the potential for Canada to become a major U.S. supplier of this dangerous drug, will make this a priority area for U.S.-Canada bilateral cooperation in 2005. The USG will also continue to follow with interest Canada's ongoing efforts to strengthen its chemical control regulations and enforcement efforts to stem the diversion of precursor chemicals into illicit drug production in Canada, the United States or other countries. Given the already significant amount of Canadian-produced marijuana entering the U.S., the USG welcomed the GOC's establishment of the special investigative units targeting criminal organizations involved in cannabis cultivation, processing and distribution. Finally, the U.S. has expressed its concern that some aspects of Canada's proposed cannabis reform legislation could fuel not only drug consumption in Canada, but smuggling into the U.S. Effective bilateral efforts to combat transborder drug smuggling, as well as domestic production and consumption of illicit drugs in both countries, are essential to our parallel efforts to keep our shared border open to legitimate goods, services, and travelers.

To further improve cooperation with Canada, the USG plans to:

- expand two-way intelligence sharing to include the timeliness and relevance of the information provided;
- expand professional exchanges and cooperative training activities between our law enforcement agencies;
- work with the GOC to increase the risks and penalties for criminals engaged in drug production and trafficking as well as other organized criminal activity;
- maintain joint cross-border investigations and operations, and expanding these to include joint operations on the Great lakes and Saint Lawrence Seaway; and
- provide technical support, based on U.S. experience, to support Canadian efforts to implement its chemical control legislation and strengthen its regulatory practices, consistent with international standards and practices; and
- actively promote awareness of the short and long-term health consequences of drug consumption, particularly among our young people.

Costa Rica

I. Summary

Costa Rica serves as a transshipment point for narcotics from South America to the United States and Europe. The bilateral Maritime Counterdrug Cooperation Agreement, which entered into force in late 1999, continues to improve the overall maritime security of Costa Rica and serves as an impetus for the professional development of the Costa Rican Coast Guard. Costa Rican law enforcement officials continue to demonstrate growing professionalism and reliability as USG partners in combating narcotics trafficking and dealing with ever-changing drug smuggling methods. The volume of illicit narcotics seized in Costa Rica increased dramatically in 2004, after almost doubling in 2003. In Costa Rica's Eastern Pacific waters alone, 4,700 kilograms of cocaine were seized in 2004. Heroin seizures, which had doubled every year since 1999, were substantially lower with 68 kilograms seized in 2004 compared to 146 in 2003. The Government of Costa Rica (GOCR) continued to implement a 2002 narcotics control law that criminalized money laundering. The Counternarcotics Institute, created in 2003, enhanced its coordination efforts in the areas of intelligence, demand reduction, asset seizure, and precursor chemical licensing. Costa Rica is a party to the 1988 UN Drug Convention.

II. Status of Country

Costa Rica's location astride the Central American isthmus makes the country an attractive transshipment area for South American-produced cocaine and heroin destined primarily for the United States. The difficulty of maritime interdiction in Costa Rican waters is exacerbated by a total maritime jurisdiction that is more than eleven times the size of Costa Rica's land mass. These territorial waters are used for the transshipment of illegal drugs in small go-fast boats refueled by larger vessels posing as fishing vessels. Traffickers along northbound maritime routes continued to use routes through Costa Rica's Pacific Exclusive Economic Zone and those further out to sea in the Eastern Pacific. For the first time, and as a result of joint maritime operations, the Costa Rican Coast Guard (SNGC) interdicted three go-fast vessels in 2004 and seized a total of 625 kilograms of cocaine. The GOCR runs an effective airport interdiction program aimed at passengers. The Embassy has worked with its counterparts to extend that success to cargo inspection at the Juan Santamaria International Airport. A similar effort is underway in the seaports of Limon and Caldera; however, clear legal authority for onboard inspection of containers and ships has yet to be established. This legal impediment and a lack of sufficient export control procedures for effective identification and inspection of high-risk cargo continue to present challenges. Costa Rica has a stringent governmental licensing process for the importation and distribution of controlled precursor and essential chemicals and prescription drugs. Local consumption of illicit narcotics, including crack cocaine and "club drugs," along with the violent crimes associated with such drug use, are growing concerns to Costa Ricans.

Authorities seized 1,622 ecstasy pills in 2004, up slightly from the 1,321 seized during 2003. These seizures suggest increasing consumption in Costa Rica and the potential use of Costa Rica as a transshipment point for "club drugs." Two indoor hydroponics cannabis facilities were seized in 2004, but the small size of these operations indicates domestic consumption only, despite potential for export due to high THC content. The GOCR is directing more resources to address the serious threats posed by narcotics trafficking, but budgetary limitations continue to constrain the capabilities of law enforcement agencies.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The 1999 bilateral Maritime Counterdrug Cooperation Agreement and the Coast Guard Professionalization Law passed in 2000 have continued to provide impetus for the professional development of the Costa Rican Coast Guard and have been instrumental in improving the overall maritime security of Costa Rica. The Costa Rican Coast Guard Academy, established in 2002, has thus far graduated 125 officials. Costa Rica is the depository for the multilateral “Agreement Concerning Cooperation in Suppressing Illicit Maritime and Aeronautical Trafficking in Narcotics Drugs and Psychotropic Substances in the Caribbean Area” signed in 2003 in San Jose. Throughout 2004, the Pacheco Administration pressed for domestic ratification and spearheaded an active international lobbying effort, including sponsorship of a high-level multilateral seminar in San Jose, to help bring the agreement into force. Other regional cooperation initiatives include co-hosting with the DEA of two International Drug Enforcement Conferences (IDEC’s). The Costa Rican Counternarcotics Institute develops an annual counternarcotics plan; however, resource limitations frustrate full implementation of the plan.

Accomplishments. Relations between U.S. law enforcement agencies and GOCR counterparts, including the Judicial Investigative Police Narcotics Section, the Ministry of Public Security Drug Control Police, the Coast Guard, and the Air Surveillance Section, remain close and productive, resulting in regular information-sharing and joint operations. Costa Rican counternarcotics officials confiscated over \$1.2 million in currency and 38 vehicles in 2004. In addition, they destroyed over 3,000 kilos of seized cocaine in close cooperation with U.S. law enforcement officials. U.S. DEA Agents and Coast Guard Officers have worked closely with GOCR counterparts and prosecutors in developing cases against narcotics traffickers, all of whom have been sentenced or remain in pre-trial detention. Since the inauguration in 2004 of the Mobile Enforcement Team (MET)—an interagency team consisting of canine units, drug control police, customs police, and specialized vehicles—the MET participated in coordinated cross-border operations with Nicaragua and Panama and increased its internal patrols.

Law Enforcement Efforts. The primary counternarcotics agencies in Costa Rica are the Judicial Investigative Police (OIJ), under the Supreme Court, and the Ministry of Public Security’s Drug Control Police. The Judicial Investigative Police operate a small, but highly professional, Narcotics Section that specializes in investigating international narcotics trafficking. The Drug Control Police investigate both domestic and international drug smuggling and distribution, and are responsible for airport interdiction as well as land-based interdiction at the primary ports of entry. Both entities routinely conduct complex investigations of drug smuggling organizations, resulting in arrests and the confiscation of cocaine and other drugs, using the full range of investigative techniques permitted under the country’s counternarcotics statutes.

Agents of the Drug Control Police, through the effective use of canines and contraband detectors/density meters at both northern and southern borders, have increased seizures of cocaine hidden within tractor-trailers. Inauguration in April 2004 of the USG-funded Penas Blancas Border Control Checkpoint, located at a natural chokepoint on the border with Nicaragua, was an important milestone in efforts to battle the growing threat from overland narcotics transportation. The frequency of seizures at the Penas Blancas inspection facility is already twice that of the Paso Canoas station on the border with Panama, although the quantity seized at the southern border was slightly higher.

Corruption. During 2004, unprecedented corruption scandals provoked the worst political crisis of the last 50 years in Costa Rica. The scandals, involving apparent kickbacks to officials at the highest levels of the government, severely tested Costa Rica’s legal system. Although the implications are still unfolding, with two ex-presidents currently in jail awaiting trial, Costa Rica’s commitment to combat public corruption appears to have been strengthened by the recent challenges. In October 2004, the

Legislative Assembly passed a strict new anticorruption law that punishes “illicit enrichment” on the part of public officials.

Costa Rica signed the Inter-American Convention Against Corruption in March 1996 and ratified it in May 1997. In March 2004, the Attorney General for Public Ethics (Procuraduría de la Ética Pública) was established, and in May that office was designated the central authority for channeling resources and technical assistance related to the Convention. U.S. law enforcement agencies continue to consider the public security forces and judicial officials to be full partners in counternarcotics investigations and operations. To the best of these agencies’ knowledge, no senior official of the GOCR engages in, encourages, or facilitates the illicit production or distribution of such drugs or substances, or the laundering of proceeds from illegal drug transactions.

Agreements and Treaties. The six-part bilateral Maritime Counterdrug Cooperation Agreement continues to serve as the model maritime agreement for Central America and the Caribbean. The Agreement has promoted closer cooperation in the interdiction of maritime smuggling and was responsible for the interdiction of 25,369 kilograms of illicit drugs in Costa Rica’s Exclusive Economic Zone by U.S. Coast Guard and Navy vessels since 1999. Results of the Agreement in 2004 include five maritime counternarcotics interdictions, 25 U.S. law enforcement ship visits to Costa Rica in support of Eastern Pacific and Caribbean counternarcotics patrols, and a number of search and rescue cases by USG assets. The United States and Costa Rica have had an extradition treaty in force since 1991. The treaty is actively used for the extradition of U.S. citizens and third-country nationals, but Costa Rican law does not permit the extradition of its own nationals. Costa Rica has ratified the Inter-American Convention Against Corruption and is a signatory to the UN Convention Against Corruption. Costa Rica ratified a bilateral stolen vehicles treaty in October 2002. Costa Rica is a party to the 1988 UN Drug Convention, the 1961 Single Convention on Narcotic Drugs, as amended by its 1972 Protocol, and the 1971 Convention on Psychotropic Substances.

Costa Rica and the United States are also parties to bilateral drug information and intelligence sharing agreements dating from 1975 and 1976. Costa Rica is a member of the Caribbean Financial Action Task Force and the Egmont Group. It is also a member of the Inter-American Drug Abuse Control Commission of the Organization of American States (OAS/CICAD). Costa Rica is a party to the UN Convention against Transnational Organized Crime and its three protocols.

Cultivation/Production. Marijuana cultivation is relatively small-scale and generally occurs in remote mountainous areas near the Panamanian border, in the Caribbean region near Limón and Talamanca, and the Valle del General on the southern Pacific Coast. Such cultivation is sometimes intermixed with legitimate crops. Joint U.S.-Costa Rican eradication operations are periodically carried out under the auspices of “Operation Central Skies,” utilizing U.S. Army air assets. Over six and a half million marijuana plants have been destroyed to date during these operations. Costa Rican authorities continued to conduct eradication operations independent of USG assistance, seizing 553,000 plants in 2004. The quantity of plants eradicated suggests that marijuana is not being exported from Costa Rica. Costa Rica does not produce other illicit drug crops. We have no indications to date of any synthetic drug manufacturing in Costa Rica.

Drug Flow/Transit. 2004 witnessed a continuation of the trend detected late last year toward frequent, smaller (50-500 kilograms) overland shipments transiting Costa Rica in truck compartments, dump truck loads and car compartments that were characteristic of trafficking trends before 1999. GOCR officials have made numerous seizures at the international airport in San José, typically from departing passengers. The recent trend of increased trafficking of narcotics by maritime routes has also continued, with indications that maritime traffickers use Costa Rican-flagged fishing vessels to serve as logistical support vessels for northbound go-fast boats in the Costa Rican exclusive economic zone. During 2004, several vessels, allegedly carrying far too much fuel for their purported needs, caught fire.

Domestic Programs (Demand Reduction). Costa Ricans have become increasingly concerned over local consumption, especially of crack cocaine and Ecstasy. Abuse appears to be highest in the Central Valley (including the major cities of San Jose, Alajuela, Cartago, and Heredia), the port cities of Limon and Puntarenas, the north near Barra del Colorado, and along the southern border. All but 30 of the 1,622 Ecstasy tablets seized in 2004 were confiscated in San Jose. The Prevention Unit of the Costa Rican Counternarcotics Institute oversees drug prevention efforts and educational programs throughout the country, primarily through well-developed educational programs for use in public and private schools and community centers. In 2004, the Institute continued its country-wide campaign against Ecstasy use with billboards posted in high schools, universities, and pharmacies. 2004 also saw a large-scale print, television and radio demand reduction campaign aimed at heads of households entitled "Impose Limits."

The Institute and the Ministry of Education distribute demand reduction materials to all public school children. The MET often visits local schools in the wake of a deployment. The team's canines and specialized vehicles are effectively used to deliver demand reduction messages. The Costa Rican Drug Abuse Resistance Education (DARE) Foundation, modeled after its U.S. counterpart, conducts drug awareness programs at over 500 public and private schools and graduated its millionth alumnus in 2004.

IV. U.S. Policy Initiatives and Programs

U.S. Policy Initiatives. The principal U.S. counternarcotics goal in Costa Rica is to reduce the transit of drugs to U.S. markets. Means of achieving that goal include: reducing the flow of illicit narcotics through Costa Rica; enhancing the effectiveness of the criminal justice system; reducing the use of Costa Rica as a money laundering center by encouraging stricter controls and strengthening enforcement; supporting efforts to locate and destroy marijuana fields; and the continued targeting of high-level trafficking organizations operating in Costa Rica. Specific initiatives include: continuing to implement the bilateral Maritime Counterdrug Cooperation Agreement; enhancing interdiction of drug shipments by improving the facilities and training personnel at the northern border crossing of Penas Blancas; enhancing the ability of the Air Section of the Public Security Ministry to respond to illicit drug activities by providing equipment and technical training; improving law enforcement capacity by providing specialized training and equipment to the Judicial Investigative Police Narcotics Section, the Drug Control Police, the Intelligence Unit of the Costa Rica Counternarcotics Institute, the National Police Academy, and the Customs Control Police; and increasing public awareness of dangers posed by narcotics trafficking and drug use by providing assistance to Costa Rican demand reduction programs and initiatives.

Bilateral Cooperation. The Department of State allocated \$1.9 million appropriated under Title III, Chapter 2, of the Emergency Supplemental Act, 2000, as enacted in the Military Construction Appropriations Act (P.L. 106-246) for expanded assistance to the Costa Rican Coast Guard consistent with the MOU on Maritime Assistance and the Maritime Agreement. This assistance is designed to enhance Costa Rican and U.S. maritime security through the development of a professional Coast Guard. In 2004, USG assistance included numerous U.S. Coast Guard training programs, overhaul and spare parts for the three U.S.-donated 82-foot patrol boats, furniture and computer equipment for the new Coast Guard Station in Quepos and for the, furniture and computer equipment for the Penas Blancas inspection facility, and two vehicles for the OIJ. The U.S. also provided increased information on suspect vessel and air traffic movements near Costa Rica. The U.S. Embassy hosted a series of seminars on the law of maritime interdiction and boarding procedures that brought together Costa Rican Coast Guard officers, prosecutors, and judges. The Embassy used the same inter-agency approach to provide a training series on law enforcement techniques related to border control and cargo inspection. In addition, the USG acquired computer equipment, software and other equipment for the Ministry of Public Security's Drug Control Police and Migration Section, the Judicial

Investigative Police Narcotics Section, the Public Prosecutor's Economic Crimes Section and Sex Crimes Section, the Costa Rica Counternarcotics Institute's Financial Intelligence Unit, and the inter-agency MET unit. Additional training and equipment were donated to the Ministry of Public Security's Canine Section.

The Road Ahead. The U.S.-sponsored \$2.2 million Costa Rican Coast Guard Development Plan was completed in 2003. Subject to the availability of funds, the United States will continue to provide technical expertise, training, and funding to professionalize Costa Rica's maritime service and enhance its capabilities to conduct U.S. Coast Guard-style maritime law enforcement, marine environmental protection, and search and rescue operations within its littoral waters in support of the bilateral Maritime Counterdrug Cooperation Agreement. The United States seeks to build upon the on-going successful maritime experience by turning more attention and resources to land interdiction strategies, including expanded coverage of airports and seaport facilities. The United States will continue to cooperate closely with the GOCR in its efforts to professionalize its public security forces and implement and expand controls against money laundering.

El Salvador

I. Summary

El Salvador is a transit country for narcotics, mainly cocaine and heroin. In 2004, the National Police seized 2,703 kilograms (Kg) of cocaine (a 20-percent increase over 2003 levels) and 3.84 kilograms of heroin. The Forward Operating Location facilities contributed to the seizure of 2.2 metric tons (MT) of illicit narcotics in Salvadoran territory and disrupted the delivery of 71 metric tons narcotics to the rest of the region. Salvadoran law enforcement agencies cooperated with U.S. authorities on cases that led to the U.S. indictments of 12 major drug traffickers. Although El Salvador is not a major financial center, assets forfeited and seized as the result of drug-related crimes amounted to \$554,113 dollars. Salvadoran authorities complied with resolutions regarding terrorist assets and did not find assets from individuals or entities on the terrorism lists. El Salvador is a party to the 1998 Drug Convention.

II. Status of Country

Located in the isthmus between the United States and the major drug producing nations, El Salvador is a transit point for illicit narcotics trafficking. Cocaine and heroin are the most commonly trafficked drugs. Climate and soil conditions are unfavorable for coca cultivation. Precursor chemical production, trading, and transit are not significant problems.

III. Country Actions Against Drugs in 2004

Policy Initiatives. According to the Salvadoran Anti-Drug Commission, progress in achieving the 2002-2008 counternarcotics master plan of the Salvadoran Government (GOES) was made in the categories of: 1) the sale and transport of narcotics within El Salvador; 2) bilateral law enforcement and drug-transit cooperation; and 3) prevention, treatment, rehabilitation, and social reintegration. The GOES implemented Plan Super Heavy Hand (“Super Mano Dura”) and Plan Friendly Hand (“Mano Amiga”) to address issues related to street gangs, including narcotics trafficking, substance abuse, and social reinsertion.

Accomplishments. Several significant developments during the year demonstrated the GOES commitment to achieving compliance with the objectives of the 1988 UN Drug Convention. Armed with a new counternarcotics law that came into effect in November 2003, the National Civilian Police (PNC) interdicted 20 percent more cocaine over the preceding year. Using the same comparison, the PNC arrested 49 percent more individuals for drug trafficking offenses. The GOES seized US\$554,113 in assets linked to narcotics trafficking, representing an exponential increase over the US\$33,749 seized in 2003. Once convictions are realized, seized assets are used to fund law enforcement, drug treatment, and drug prevention efforts.

The Embassy-supported Containerized Freight Tracking System (CFTS) at the Amatillo border crossing with Honduras began operations in July 2004. The purpose of the facility is to permit the GOES to inspect commercial and passenger vehicles arriving from Honduras. In the last half of 2004, PNC personnel at the CFTS seized 4.1 kilograms of marijuana, 2.1 kilograms of cocaine, and 2.2 kilograms of heroin.

Aircraft deployed to the Forward Operation Location (FOL) at the Salvadoran Air Force base in Comalapa track aircraft and sea vessels moving north towards the United States. FOL aircraft report their findings to U.S. law enforcement agencies, which then notify regional governments. In 2004, cooperation between the FOL, the Embassy, the Salvadoran Air Force, and the PNC resulted in the seizure of 2,968 kilograms, and the arrest of nine narcotics traffickers by Salvadoran officials. The

presence of the FOL in El Salvador contributed to an additional total seizure of 2.2 metric tons of cocaine by U.S. law enforcement agencies and other regional governments.

In July 2004, the GOES implemented Plan Super Heavy Hand in response to rising street gang violence. Although the plan addresses all gang related activity (to include kidnapping, rape, extortion, murder, fraud, aggravated theft, human trafficking), it also aims to disrupt narcotics trafficking and distribution controlled by gangs. During the year, the PNC arrested 332 and convicted 35 gang members for drug trafficking and distribution offenses.

The GOES actively cooperated with the United Nations Drug Control Program. The obstacles that prevented El Salvador from fully achieving all of the objectives of the 1988 UN Drug Convention included legal impediments and limited resources, as discussed below.

Law Enforcement Efforts. Salvadoran law enforcement efforts are still hindered by constitutional prohibitions against using some investigative tools, such as wiretapping. Salvadoran authorities have encountered difficulties obtaining judicial authorization to destroy clandestine airstrips situated on private property and used by drug traffickers. The GOES gives a very high priority to counternarcotics law enforcement, but its available resources are inadequate to achieve all of its counternarcotics objectives.

Nonetheless, law enforcement efforts in 2004 were adequate, given resource constraints and legal impediments. These efforts were primarily focused on priority targets of mutual interest to both the United States and the GOES. Salvadoran police investigators and prosecutors traveled to the United States on numerous occasions throughout the year to share intelligence and coordinate operations. Joint cooperation led to the U.S. indictments of 12 major drug traffickers in El Salvador. Apart from joint operations, the PNC seized 402 kilograms of marijuana, 2,703 kilograms of cocaine, and 3.84 kilograms of heroin. PNC officers arrested 1,561 individuals for drug related offenses, 1,015 of which resulted in convictions.

Corruption. Under Salvadoran law, using one's official position in relation to the commission of a drug offense is an aggravating circumstance that can result in an increased sentence of up to one-third of the statutory maximum. This includes accepting or receiving money or other benefits in exchange for an act or omission in relation to one's official duties. The PNC's Internal Affairs Unit and the Attorney General's Office (FGR) investigate and prosecute GOES officials for corruption and abuse of authority.

The FGR's Anti-Corruption Unit is investigating several important cases of public corruption, including one involving a public water utility (ANDA) in a multimillion-dollar fraud. Although none of these cases is directly related to narcotics, they illustrate that the GOES is making efforts to enforce its laws against corruption.

In 2004, the INL-supported and U.S.-based National Strategic Information Center, in cooperation with the Salvadoran Ministry of Education, began implementing the Culture of Lawfulness program in Salvadoran schools. The program focuses upon the advantages that accrue to the individual and to society if everyone follows the rule of law. Special emphasis is placed on the social costs of corruption and bribery. Thus far, 10 teachers have been trained in the mechanics of presenting the program. The program will begin being taught in public schools in 2005.

As a matter of policy, the GOES does not encourage or facilitate illicit production or distribution of narcotics or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal drug transactions. No senior official is known to engage in, encourage, or facilitate the illicit production or distribution of such drugs or substances, or the laundering of proceeds from illegal drug transactions. The GOES has no INL-provided aircraft, nor has it misused any other equipment purchased with INL funds.

El Salvador is a party to the Inter-American Convention Against Corruption. Consistent with the country's obligations under that Convention, the law criminalizes soliciting, receiving, offering, promising, and giving bribes, as well as the illicit use and concealment of property derived from such activity.

Agreements and Treaties. El Salvador is a party to the following international agreements: the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances; and the 1961 UN Single Convention as amended by the 1972 Protocol; the Central American convention for the Prevention of Money Laundering Related to Drug-Trafficking and Similar Crimes; and the UN Convention against Transnational Organized Crime and its three protocols.

An extradition treaty is in force between the United States and El Salvador. Narcotics offenses are covered as extraditable crimes by virtue of the 1988 UN Drug Convention, to which El Salvador is a party.

Mutual legal assistance in narcotics cases is available to the United States and El Salvador under Article 7 of the 1988 UN Drug Convention. The Inter-American Convention on Mutual Assistance in Criminal Matters, to which El Salvador is a party, provides further tools to facilitate legal cooperation between the United States and the GOES.

Cultivation/Production. The climate and soil conditions of El Salvador do not favor the cultivation of coca plants. Small quantities of cannabis are produced in the mountainous regions along the border with Guatemala and Honduras. However, the cannabis, which is consumed domestically, is of poor quality. There were no gains or setbacks in controlling cannabis cultivation and production because the small quantity and poor quality of the crop does not justify the expenditure of a systematic campaign against it. There is no local methodology for determining cannabis crop size and yields. Cannabis is detected due to tips, routine foot patrols, and air surveillance.

Drug Flow/Transit. Cocaine from Colombia typically transits El Salvador via the Pan-American Highway and via maritime routes off the country's Pacific coast. Heroin from Colombia usually goes through Panama, then via courier on a commercial passenger flight to El Salvador, with another commercial flight to Honduras, and then by bus to Guatemala. The Pan-American and Littoral Highways are the land routes preferred by traffickers. As in the rest of Central America, there has been a notable increase in the amount of heroin transiting both the international airport and land ports of entry. Both heroin and cocaine also transit by sea off the Salvadoran coast as well as through Salvadoran airspace.

Domestic Programs (Demand Reduction). The GOES manages its demand reduction program through several government agencies. The Ministry of Education presents lifestyle and drug prevention courses in the public schools, as well as providing after school activities. The PNC operates a D.A.R.E. program modeled on the U.S. program of the same name. The Ministries of Governance and Transportation have antidoping units that advocate drug-free lifestyles. The Public Security Council (Consejo Nacional de Seguridad Publica) is actively involved in demobilization and substance abuse prevention within Salvador's gang communities.

The Salvadoran NGO FundaSalva works with the GOES to provide substance abuse awareness, counseling, rehabilitation, and reinsertion services (job training) to the public. In 2004, FundaSalva provided demand reduction services to over 3,000 individuals. Other less comprehensive rehabilitation programs exist, usually faith-based and run by recovering addicts.

In addition, as part of Plan Friendly Hand, FundaSalva operates a USG-donated laser tattoo removal machine. Former gang members who meet the stringent requirements of gang demobilization (leaving the gang life behind) and successful substance abuse treatment are eligible to have their gang tattoos removed for free. Removing tattoos decreases the possibility of gang recidivism while increasing the

prospect of finding gainful employment, both of which reduce the likelihood of future drug consumption. In 2004, FundaSalva provided tattoo removal services for 251 individuals.

A national survey conducted last year by FundaSalva reveals that substance abuse in El Salvador is significant and growing. According to the survey results, seven percent of the population (ages 12 to 45) used illicit narcotics in the past year, with four percent using drugs within the past month. Fourteen percent of those surveyed admitted to ingesting pharmaceutical stimulants and depressants in the past year. First use of alcohol or drugs occurs between the ages of twelve and fourteen years old. Fifty percent of all minors surveyed indicated that they had used drugs or alcohol on at least one occasion. Relative to the size of the at-risk and addicted populations, demand reduction programs are inadequate.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. U.S. assistance focuses upon developing El Salvador's law enforcement agencies, increasing the GOES ability to combat money laundering and public corruption, and ensuring a transparent criminal justice system.

Bilateral Cooperation. The United States provided funding for operational support of Grupo Cuscatlan and the high-profile crimes unit (GEAN) within the Anti-Narcotics Police. The United States also funded training and travel related to airport security, money laundering, maritime boarding operations, and antigang measures. Officers from the Drug Enforcement Agency and State's Bureau of International Narcotics and Law Enforcement work closely with the PNC counternarcotics unit, the PNC financial crimes unit, the Financial Investigations Unit of the federal prosecutors office, and the federal banking regulators on issues relating to drug trafficking and money laundering.

Road Ahead. The United States will continue to provide operational support to Salvadoran law enforcement institutions, anti-money laundering training, and essential investigative tools. In partnership with the GOES, the United States plans to finance the completion of construction modifications at the CFTS in Amatillo, the new headquarters for the PNC Joint Intelligence Coordination Center, and the new kennels for the PNC's narcotics detection canine unit.

Guatemala

I. Summary

Guatemala remains a major drug-transit country for cocaine, heroin and illicit narcotics in route to the United States and Europe. In spite of substantial counternarcotics efforts by the Government of Guatemala (GOG) in 2004, large shipments of cocaine continue to move through Guatemala by air, road, and sea.

Acute lack of resources, weak leadership at the middle management level of the GOG, widespread corruption and frequent personnel turnover continue to affect the GOG's ability to deal with narcotics trafficking and organized crime. However, there are substantial accomplishments. Most notably, the GOG has pursued numerous public corruption cases against former public officials, army officers and police. The attorney general commenced corruption cases against 383 individuals during 2004, including the former vice president and finance minister, who are both awaiting trial; the former president fled to Mexico when it became evident he was about to be arrested. Similarly, 2088 cases have been opened against police officers accused of offenses ranging from homicide to extortion and robbery (including 23 command level officers), and half the officers (325) of the criminal investigation division have been fired.

The GOG has seized every opportunity to cooperate with the USG in CN operations. The first major legislative action of the Berger government was to renew the legislative authority for joint U.S./Guatemalan military and law enforcement operations to take place in Guatemala. Since that time, six successful Mayan Jaguar operations have taken place under the Central Skies operational framework. The GOG also enthusiastically implemented the CN bilateral maritime agreement. During 2004, the GOG authorized boarding of a Guatemalan-flagged vessel in international waters and 3.2 metric tons of cocaine were seized. The GOG also agreed to three transfers of third country alien prisoners through Guatemalan territory under the terms of the maritime agreement. A total of 44 drug traffickers arrested by the USCG in international waters were thus transferred to the U.S. for prosecution, allowing USCG assets to remain on station to pursue drug interdiction/homeland security missions.

The Anti-Narcotics Analysis and Information Services (SAIA, the Guatemalan counternarcotics police) seized 4481 kilograms of cocaine in 2004, less than last year, largely due to the grounding of their A-37 fleet and most of their helicopters. This has severely limited GOG capability to pursue suspected narcotics trafficker air tracks, or to transport police to air-track termination points in time to disrupt drug off-loading. As a result, the GOG has not been able to make sizable drug seizures in the extreme northern part of Guatemala where traffickers prefer to operate. The GOG was more successful in domestic eradication in 2004, eradicating over 5.4 million poppy plants, or 181 hectares. These eradications were accomplished in the remote and mountainous west of the country without helicopter support, and with support costs paid entirely by the GOG. Guatemala is a party to the 1988 UN Drug Convention and the OAS Inter-American Corruption Convention.

II. Status of Country

Guatemala is a preferred transit point in Central America for onward shipment of cocaine to the United States. USG estimates indicate that up to 400 metric tons of cocaine are shipped annually through, over and around the Central American corridor to Mexico and the United States. Guatemalan law enforcement agencies interdicted 4.5 metric tons of cocaine in 2004, down significantly from the previous year's 8.8 metric tons. With their A-37 fleet and most of their helicopters grounded, Guatemala has limited capability to project force into the extreme northern area of the country where

the traffickers operate, and where the bulk of the previous year's seizures were made. Narcotics traffickers continue to pay for transportation services with drugs, which enter into local markets leading to increased domestic consumption and crime.

Guatemala has a strong anti-money laundering law, which provides for sentences of up to 20 years, with augmentation of up to one-third the sentence if the accused is a public official. This law has served as one basis for many of the numerous public corruption cases that were brought by the GOG in 2004. Guatemala was also removed from the Financial Action Task Force (FATF) list of non-cooperating countries and territories (NCCT) in 2004, after undertaking a long list of financial sector reforms.

Cultivation of opium poppy is a problem that has returned to Guatemala. In 2004, 181 hectares of opium plants were eradicated in Guatemala, up from only one hectare in 2003. It is suspected that much of this opium is being processed into heroin in Guatemala, for smuggling north through Mexico to the U.S. Marijuana is also grown, but only for local consumption. It is unknown if any quantities of club drugs are processed in Guatemala. Diversion of precursor chemicals is, at present, an unquantified problem in Guatemala; the registration and control of these substances has just begun. Precursor chemical control legislation was enacted in 1999, and implementing regulations were approved in 2003, but have resulted in no meaningful law enforcement effort, largely due to lack of resources.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In 2004, Guatemala signed four Letters of Agreement (LOAs) with the USG on control of organized crime and narcotics trafficking, law enforcement institution building and demand reduction.

The GOG continues to use a multi agency-working group to focus their counternarcotics efforts. This mechanism allowed Guatemala to make good progress on each of the 13 benchmarks for 2004.

In January, the first major legislative action of the Berger government was to reauthorize the law permitting joint U.S./Guatemalan military and law enforcement operations to take place in Guatemala. Since then, seven such operations (known as "Mayan Jaguar") were held under the Central Skies operational framework (an operation involving Central American countries and Joint Interagency Task Force South), including three operations to implement the bilateral maritime agreement.

Illicit Cultivation, Production and Distribution. There is growing opium poppy cultivation. During the spring 2004 poppy cultivation season, Guatemala eradicated more than 5.4 million poppy plants, or about 181 hectares (using a conversion factor of 30,000 plants to one hectare); it should be noted that lack of air assets for reconnaissance and transportation of personnel make manual eradication very difficult in a country with mountainous terrain and limited infrastructure. To address the need for reliable reconnaissance, the GOG allowed U.S.-funded Regional Aerial Reconnaissance and Eradication (RARE) deployments in December and July. The December mission observed extensive poppy cultivation, estimated at 12 hectares. Target packages developed from the December RARE mission will be incorporated into the next major GOG manual poppy eradication operation.

Guatemala has significant cannabis cultivation, all of which is consumed locally, and continues a robust eradication program, with an increase of better than 64 percent over 2003 (102 hectares vs. 62). Most of the marijuana plants were eradicated in the remote northern area of the country.

Past seizures at processing labs indicate that shipments of cocaine transiting Guatemala are reprocessed to reduce purity, prior to repackaging for onward shipment to the U.S. Seizures of heroin at the points on the Guatemala/Mexico border near to Guatemala's western highlands suggest that

opium poppy being cultivated there is being processed into heroin within Guatemala for smuggling north through Mexico to the U.S.

Sale, Transport, and Financing. Cocaine seizures in Guatemala were made from land, air and sea transportation.

The Pan-American Highway is a major conduit for drugs traveling north to Mexico and eventually the U.S. The trend continued of individuals transiting Guatemala being arrested in U.S. airports with cocaine and heroin. This year the trend for delivery to Guatemala shifted away from aircraft towards more use of go-fast boats and commercial fishing vessels, particularly during the second half of the year.

Commercial containers, both on land and through seaports, continue to offer the best opportunity for smuggling larger quantities of drugs through Guatemala's ports of entry. Other than one major seizure in April of 979 kilos at Puerto Santo Tomas, this is an area that has had little interdiction success. Guatemala's Port Security Program (PSP) is trying to improve counternarcotics interdiction at the seaports. PSP is self-financed by a fee levied on shipping companies and provides monetary and technical assistance to the SAIA agents who operate in the ports. The USG provides technical assistance, logistical support, and training. Seizures have been very low due to continuing corruption in the seaports. However, the new Director General of the National Civilian Police (PNC) wants to see improvement, and is using the electronic manifest system to supervise, through his office, the issuance of container inspection orders. He has also ordered SAIA to inspect all non-manifested containers. Thus far, these new procedures have yielded no drug seizures.

Law Enforcement and Transit Cooperation. Guatemalan law enforcement representatives work with U.S. personnel and organizations to curtail the flow of drugs through Guatemala in instances where the USG can provide intelligence, funding and technical assistance. U.S. law enforcement agencies continue to have collaborative relationships with Guatemalan law enforcement authorities, and Guatemala exchanges limited information and maintains links with other Joint Intelligence Coordination Centers (JICCs) in South and Central America.

Guatemala actively participated in the Central Skies combined counternarcotics campaign plan that included DEA and the U.S. Army. Guatemala has also been very cooperative in allowing the U.S. permission to enter its airspace and territorial waters in connection with counternarcotics missions, and in granting requests for prisoner transfers under the bilateral maritime agreement. The GOG granted all three requests made by the USCG in 2004, allowing U.S. Department of Justice aircraft to transport 44 third-country nationals arrested in international waters for drug trafficking.

Demand Reduction. The GOG continues to support counternarcotics education and rehabilitation programs pursuant to the country master plan. Guatemala's demand reduction agency, SECCATID, implemented a variety of projects, including hosting an International Drug Prevention Conference. Experts from twelve countries discussed program strategies based on the results of the first-ever nationwide drug consumption survey results conducted in 2002. In Guatemala, the study found that between 1998 and 2002, alcohol use among youths has increased by 50 percent, cocaine by 40 percent, marijuana by 55 percent, and tranquilizers (primarily by young females) 380 percent.

Through the National Program of Preventive Education, SECCATID trained 6,285 instructors this year, an increase of about 450 percent compared to last year's 1,138, throughout the country using the "train the trainer" concept with the participation of the Ministries of Health and Education. SECCATID also provided training and education to 1,661 parents, who trained 34,784 other parents, as agents of preventive education. More than 70,000 Guatemalan students received drug awareness from SECCATID and trained teachers. SECCATID also provided training to more than 4,651 NGO reps, private company reps, soldiers, prison guards, nurses, doctors and other adults. The DARE program provided training to 5,569 students and teachers. In 2004, SECCATID developed and

distributed counternarcotics educational materials, including 400,000 pamphlets, 6,860 t-shirts and caps, 25,000 school agendas and over 130,000 notebooks with drug preventive messages. The month-long public awareness media campaign during the 2004 International Drug Prevention Day approximately reached half a million listeners and viewers.

Law Enforcement Efforts. Cocaine seizures were down in 2004, largely due to the grounding of Guatemala's A-37 fleet and most of their helicopters. There is close cooperation between the USG and the Guatemalan Air Force (GAF), particularly during Mayan Jaguar exercises. When it can, the GAF provides air assets for interdiction missions and airlift for police and prosecutors conducting drug interdiction and eradication operations. Ageing aircraft and lack of money for fuel continue to be constraints.

The SAIA has the potential to become an honest and credible threat to narcotics trafficking. However, GOG law enforcement agencies must function with limited resources, as the GOG is having trouble paying salaries and utilities for all of its agencies. Significant resources, training and support from the USG will be needed to prepare and support the GOG to effectively engage in counternarcotics operations, particularly against major organized crime figures.

The Public Ministry's narcotics prosecutors receive USG training and assistance, and continue to try cases and achieve convictions, but success in prosecuting major organized crime figures, including narcotics traffickers, has been limited. Lack of resources in the judiciary, as well as an absence of criminal conspiracy laws in Guatemala, are important reasons for the lack of success in prosecuting and convicting major traffickers.

High turnover of law enforcement personnel and poor leadership also frustrate GOG law enforcement efforts.

Corruption. Corruption remains a large obstacle to overall efficiency of all USG sponsored programs in Guatemala. No one is immune from the corruption, and there are frequent allegations of police, prosecutors, and judges being corrupt. High levels of impunity and intimidation only exacerbate the problem.

However, the GOG is making substantial efforts against corruption. Currently, new entries to the SAIA undergo a background investigation, polygraph exam, and urinalysis testing. On average, this process eliminates in excess of 60 percent of new candidates. This program has been institutionalized and extended to the Anti-Corruption, Money Laundering and Narcotics prosecutor's offices and includes the periodic re-testing of all active members of the SAIA.

More importantly, the GOG has moved aggressively against all forms of public corruption. This year, the anticorruption prosecutor (a NAS-supported program) has brought cases against 383 individuals, including many high-ranking former public officials, army officers and police. These cases include the former vice president and finance minister. The former president fled to Mexico when it became evident he was about to be arrested.

The Director General of the police has established a "zero tolerance" policy on corruption. During 2004, there have been 2,088 cases opened against police officers, including 23 command-level officers. Half (325) of the criminal investigation division has been fired. The charges cover a range of serious crimes, including murder, kidnapping, extortion, bank robbery, tractor-trailer theft, robbery, home invasions and attempted theft of drugs from evidence storage. The 11 police arrested last year for attempting to steal 10 kilograms of cocaine from the drug warehouse are still in jail awaiting trial.

Finally, a counternarcotics prosecutor who solicited a bribe from a drug defendant was sentenced to 13 years imprisonment.

Guatemala is a party to the Inter-American Corruption Convention and is a signatory to the UN Corruption Convention.

Agreements and Treaties. Guatemala is a party to the 1961 UN Single Convention and its 1972 Protocol; the 1971 UN Convention on Psychotropic Substances; the 1988 UN Drug Convention; the Central American Commission for the Eradication of Production, Traffic, Consumption and Illicit Use of Psychotropic Drugs and Substances; and the Central American Treaty on Joint Legal Assistance for Penal Issues. Guatemala is a party to the UN Convention Against Transnational Organized Crime and its three protocols.

Guatemala has also signed bilateral counternarcotics agreements, including information exchanges, with Mexico (1989), Venezuela (1991), Argentina (1991), Colombia (1992), Ecuador (1992), Peru (1994), and Spain (1999).

While most GOG law enforcement efforts have been consistent with the goals and objectives of the 1988 UN Drug Convention, some aspects of the Convention, such as the provisions on extradition, have not been codified into law. The extradition treaty between the GOG and the USG dates from 1903. A supplementary extradition treaty adding narcotics offenses to the list of extraditable offenses was adopted in 1940. When a Guatemalan citizen is involved, an extradition request will usually involve a significant expenditure of effort and time due to the required legal procedures. U.S. citizen fugitives are usually expelled to U.S. custody on the basis of violations of Guatemalan immigration laws, a much shorter process. During 2004, the GOG agreed to consolidate all U.S. requests for extradition in drug and organized crime cases in specialized courts located in Guatemala City. The new procedures are expected to expedite processing of extradition requests. In 2003, the GOG signed the OAS multilateral Mutual Legal Assistance Treaty, to which the U.S. is a party.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives and the Road Ahead. In spite of the difficulties, the U.S. strategy in Guatemala continues to focus on strengthening the GOG law enforcement and judicial sector through training, technical assistance, and the provision of equipment and infrastructure, especially for the units directly involved in combating narcotics trafficking and other international organized criminal activity that directly affects the U.S.

Special emphasis has been directed toward management skills, leadership, human rights, investigative techniques, and case management issues.

The U.S. strategy also is aimed at reducing the level of corruption in Guatemala by implementing training, education, and public awareness programs.

Future efforts will focus on investigations, interdiction, corruption, money laundering, task force development, and successfully implementing the maritime agreement. A successful interdiction and maritime strategy will necessarily involve close cooperation with units of the Guatemalan military that have a clean human rights record, within the limits of existing U.S. law and policy.

The USG will also continue to assist the GOG in improving the successful Regional Counternarcotics Training Center.

Bilateral Cooperation. The USG supports a wide range of law enforcement assistance and counternarcotics programs in Guatemala. We work with the office of the Vice President to support Guatemala's demand reduction agency, SECCATID, to provide technical assistance in education, training and public awareness programs.

The USG also works with the Public Ministry and the Attorney General to support three task forces dealing with narcotics, corruption and money laundering investigations. This cooperation takes the form of training, technical and logistical support on case management and specialized legal subjects.

We also support the specialized drug police, the SAIA, through an agreement with the Ministry of Government. This support is designed to create a professional and capable force through training and development of infrastructure for units involved in counternarcotics operations.

An important part of this program is the Regional Anti-Drug School. The school primarily teaches the basic entry course for new SAIA agents, narcotics investigations and canine narcotics detection. They also offer regional courses in polygraph, false documents, intelligence analysis, and canine explosive detection, among others. This year we had student participation from Bolivia, Colombia, Venezuela, Uruguay and all of Central America.

The International Criminal Investigation Training Assistance Program (ICITAP) (now a part of the Narcotics Affairs Section) in Guatemala continued to focus on law enforcement areas not specifically related to narcotics trafficking, such as the unification of police and prosecutor forensic laboratories, establishment of an Internal Affairs Unit in the Public Ministry, computerization of police case files, and the continued development of a model precinct that includes offices for prosecutors and judges to increase successful case investigation and closure.

Honduras

I. Summary

The transshipment of cocaine through Honduras by air, land, and maritime routes continued in 2004. While seizures were slightly down in 2004 compared to last year's record levels, Honduran authorities did successfully disrupt one of the most active trafficking organizations in the country, dealing a significant setback to organized crime in the region. Corruption within the police, Public Ministry (PM), and the judiciary, however, continues to hamper law enforcement efforts.

Limited resources remain the largest obstacle to Honduras' ability to implement its national counternarcotics policy, yet the Government of Honduras (GOH) remains committed to stemming the flow of illegal narcotics transiting its territory. Both the police and military take an active part in Honduras' counternarcotics strategy, with the Honduran Navy responding particularly well given its limited resources. While many arrests are made, the PM has had little success in prosecuting these individuals. Drug abuse in Honduras appears to be on the rise, with availability and usage up in 2004. Honduras is a party to the 1988 UN Drug Convention.

II. Status of Country

Honduras's geographic location and the GOH's limited interdiction resources contribute to the continued transshipment of drugs, primarily cocaine, through Honduras at an alarming rate. Transshipment is facilitated by direct air and maritime links to U.S. cities and the Pan-American Highway, which crosses southern Honduras. While the police and military lack sufficient assets to comprehensively attack drug trafficking in Honduras, there were nonetheless significant drug seizures this year. Honduras is not a significant producer of drugs or precursor chemicals.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The GOH continued a joint police and military counternarcotics initiative launched in April 2003 to discourage traffickers from using Honduras as a transit point. This initiative includes the use of the Honduran Air Force to interdict illicit flights entering Honduran airspace. A Honduran Frontier Police presence at Honduras' Pan-American Highway checkpoint also provides a deterrent to the flow of narcotics into Honduras from its southern border with Nicaragua.

A new draft counternarcotics law under review in the National Congress would significantly expand the authority of law enforcement agencies to initiate undercover operations. Current law prohibits law enforcement agencies from using these types of operations to conduct investigations mandating the arrest of anyone participating in the purchase and/or sale of narcotics, including police conducting sting operations.

Honduras is also in the process of considering revisions to its Criminal Procedures Code that took effect on February 20, 2002. Proposed revisions include increased penalties for crimes related to drug trafficking and/or possession.

Accomplishments. As of December 1, 2004, Honduran authorities have seized 3,866 kilograms of cocaine, 1,611 pounds of marijuana, one kilogram of heroin, and destroyed approximately 71,152 marijuana plants during the year. The GOH seized \$2,058,803 in cash (setting a new national record) plus numerous other assets, including property, aircraft, go-fast boats, and vehicles worth well over \$2,000,000. Honduran authorities also made 751 narcotics-related arrests.

The Honduran Frontier Police have been largely responsible for these successes, drawing on intensive counternarcotics training, and U.S. technical assistance and equipment. In 2004, cooperation among all elements of the police, military, and other special investigative units increased. The Honduran Navy participated in a number of regional counternarcotics efforts that led to large seizures in international waters.

On July 14, Pedro Garcia Montes was killed in Cartagena, Colombia. Montes, a Honduran citizen, was considered to be the head of a major trafficking organization in Honduras. Upon Montes' death, police raided numerous properties belonging to him, resulting in seizures of weapons, cash, and other contraband. They also arrested Ethalson Mejia Hoy, a key Montes associate. Montes' death effectively decapitated his organization and was a significant blow to organized crime in the country.

Law Enforcement Efforts. Counternarcotics law enforcement is a priority for the Maduro Government, although limited resources, corruption, and inexperienced personnel hinder GOH efforts to stop traffickers using Honduras as a transit country. Police, constrained by lack of adequate transportation, rarely patrol some areas of the country, particularly in the isolated northeast. Despite these constraints, Honduran law enforcement agencies made many drug-related arrests. The Honduran judicial system, however, has a poor track record of turning these arrests into convictions.

Corruption. Endemic corruption continues to impede effective counternarcotics law enforcement in Honduras. Corruption within the judicial system particularly has been problematic (a judge released Ethalson Mejia on bail after police had arrested him on a valid INTERPOL notice). In 2004, Honduras amended its constitution to strip high-level government officials' immunity from prosecution. To date, the National Congress has not passed implementing legislation that many GOH officials believe is necessary, and there have been no prosecutions of formerly immune individuals. Honduras is a party to the Inter-American Convention Against Corruption, but has fallen short of fully implementing the Convention's recommendations. Honduras also is a signatory to the UN Corruption Convention.

Agreements and Treaties. Honduras has counternarcotics agreements with the United States, Belize, Colombia, Jamaica, Mexico, Venezuela, and Spain. Honduras is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention as amended by its 1972 Protocol. Honduras recently certified its major public maritime ports in compliance with International Ship and Port Facility Security codes and is an active member of the Inter-American Drug Abuse Control Commission (CICAD). Honduras is a party to the UN Convention Against Corruption, but it has yet to be approved by the National Congress. A U.S.-Honduras maritime counternarcotics agreement entered into force in 2001 and a bilateral extradition treaty is in force between the U.S. and Honduras. Honduras is one of ten nations to sign the Caribbean Maritime Counterdrug Agreement, but has not yet ratified it.

Cultivation/Production. Cannabis is the only illegal drug known to be cultivated in Honduras. The GOH does not permit the use of aerial eradication; however upon detection, marijuana plants are cut down and destroyed.

Drug Flow/Transit. In 2004, there was a noticeable increase in the number of detected suspect maritime vessels transiting through Honduran territorial waters en route to southern Mexico and the United States. Suspect air-tracks, however, decreased. Cocaine and heroin are smuggled overland by commercial and private vehicles. Approximately 90 percent of all drugs transiting Honduras are destined for the United States. There is evidence of the existence of an illicit trade in "arms for drugs," with arms from these deals presumably destined for use by terrorist groups in Colombia.

Domestic Programs/Demand Reduction. Drug abuse in Honduras appears to be on the rise and illegal drugs are becoming increasingly available, particularly along the Caribbean coast. The Maduro Administration launched a pilot program directed at Honduran youth to fight drug abuse and the National Anti-Narcotics Council is making demand reduction a major part of Honduran

counternarcotics efforts. This effort reflects the government's appreciation that drug trafficking through Honduras is not only a national security threat, but a major public policy problem as well.

IV. U.S. Policy Initiatives and Programs

U.S. counternarcotics assistance to Honduras is intended to augment GOH efforts to strengthen the rule of law, increase police, judicial, and investigative efficiency, reduce corruption, and build strong counternarcotics institutions. In 2004, assistance was primarily directed to the Frontier Police, Ministry of Public Security, and the Public Ministry, although the U.S. also provided limited funds to assist Honduras in demand reduction efforts. The GOH has made a firm commitment to combat drug trafficking and the U.S. will continue to assist Honduras in its fight to reduce narcotics trafficking in the region and associated corruption.

Mexico

I. Summary

As a result of the serious threat that drug trafficking poses to its national security and public safety, the Mexican Government (GOM) has sustained an intensive counternarcotics and law enforcement effort throughout 2004. The administration of Mexican President Vicente Fox continued its unprecedented cooperation with the United States in fighting drug trafficking and other serious trans-border crimes menacing the citizens of both countries. Despite its intense law enforcement efforts, Mexico is the leading transit country for cocaine and a major producer of heroin, methamphetamine, and marijuana destined for U.S. markets.

During the year, Mexican authorities arrested numerous drug kingpins and principal lieutenants in a continuing attack aimed at dismantling major international crime organizations operating in the U.S. and Mexico. Through November, the GOM had seized over 25 metric tons of cocaine, nearly 300 kilograms of heroin, and over 2,000 metric tons of marijuana. The leadership of the Secretariat of National Defense (SEDENA) and the Attorney General's Office (PGR) continued to act forcefully against personnel who engaged in corrupt practices. These two federal entities carried out robust eradication programs against marijuana and opium poppy crops, with the army deploying up to 35,000 troops for manual eradication missions and the PGR using helicopters for aerial spray eradication of illicit drug cultivation. Several entities of the PGR, including the Federal Investigative Agency (AFI), the National Center for Analysis, Planning, and Intelligence Against Organized Crime (CENAPI), and the Forensics Laboratory, continued initiatives to develop first-rate cadres of professional investigators, analysts, and technicians.

The Fox administration's counternarcotics policies derive from the acceptance that illicit drug trafficking and related crimes pose serious direct threats to the national security and public health of the country. President Fox and his cabinet pressed forward with reforms aimed at professionalizing law enforcement agencies and promoting greater transparency and accountability. The administration proposed ambitious justice sector reforms to re-organize federal law enforcement agencies, introduce oral testimony at criminal trials, and create a more professional public defender system. These reforms have not been enacted. Extraditions reached an all-time high, with the GOM extraditing 34 fugitives to the U.S., compared to 31 in 2003; nevertheless, no active drug kingpin has been extradited. Numerous extradition requests were denied based on the prohibition against life sentences and on a failure by the U.S. to satisfy newly-imposed technical requirements. There remain many opportunities during the final year of the Fox administration to institutionalize this historic cooperation, enhance ongoing drug interdiction, and continue improving the capacities and capabilities of Mexican federal law enforcement institutions.

II. Status of Country

As much as 90 percent of the cocaine sold in the U.S. is smuggled through Mexican territory from South America. Mexico is also one of the largest producers of marijuana and heroin consumed in the U.S. Most cocaine smuggled through Mexico arrives by maritime means, including commercial shipping, with ocean vessels moving large quantities along the eastern Pacific and through the Gulf of California, and fishing vessels and go-fast boats operating in the Pacific between the northern coast of South America and the southern coast of Mexico. While the Pacific coast of Mexico remained the preferred smuggling route for Andean cocaine, there is increased trafficking through the western Caribbean—possibly a response to the success of Mexican and regional interdiction operations. In

addition, traffickers used air cargo, couriers, and mail parcels through Mexico and Central America as alternate smuggling routes.

Mexico's proximity to the U.S. has made it the second principal supplier of heroin, despite the country's relatively small percentage (less than five percent) of global production. Mexico was the largest foreign source of marijuana sold in the U.S. Marijuana and opium poppy growers used small, widely dispersed plots in remote, inaccessible regions of Mexico, including in the Sierra Madre mountains, to avoid having their crops detected and eradicated. Favorable climate and terrain make it possible to have up to three poppy and two marijuana harvests a year in primary growing regions.

Mexico is a major producer and transit point for methamphetamines, its precursors, and other synthetic drugs, principally concentrated in Mexican border areas with Texas, Arizona, and California. Criminal organizations have established several methamphetamine laboratories in northwestern Mexico to supply U.S. markets. As a result of the huge traffic in drugs, Mexican criminal organizations dominate operations, controlling most of the thirteen primary drug distribution centers in the U.S. The violence of warring Mexican cartels has spilled over the border from Mexico to U.S. sites on the other side. U.S. and Mexican law enforcement authorities worked closely to attack these operations on both sides of the border. Mexican domestic drug consumption continued to increase in 2004. Consequently, drug traffickers continued in 2004 to expand their operations into major cities, the northern border, and tourist zones.

III. Country Actions Against Drugs in 2004

Policy Initiatives. To promote a more transparent, professional, and accountable law enforcement and judicial system, President Fox submitted a judicial reform proposal to the Mexican Congress that would substitute written proceedings with public trials, including oral testimony, and incorporate the concept of presumption of innocence. The bill is designed to enhance the professionalism of law enforcement entities, placing greater reliance on forensic evidence and credible investigations than on confessions. Other elements of the proposed reform include re-organization of public security institutions to create a unified police force with strong investigative powers. The proposal would also create a more autonomous federal prosecutor's office and enhance the public defender system. However, the reforms do not appear to allow for a confidential investigative stage, an important provision in effective organized crime legislation.

President Fox and Attorney General Rafael Macedo de la Concha continued to reform law enforcement offices and promote the creation of professional investigative entities to fight drug trafficking, terrorism, and other organized crimes. In the process, Mexico invested considerable human and material resources in counternarcotics and law enforcement efforts. During 2004, AFI agents and investigators figured prominently in the investigation and arrests of drug traffickers, violent kidnapers, and corrupt officials. Only three years since its inception, AFI has become the centerpiece of GOM efforts to promote more honest, professional, and effective law enforcement institutions. AFI leaders established a rational and institutionalized career path for all agents—characterized by upward mobility, job stability, periodic salary increases, and promotions based on performance and seniority. However, the PGR prosecutors still do not have a career or civil service system.

Accomplishments. In an initiative to disrupt organized crime by attacking its operational chain of command and leadership, AFI personnel continued to arrest or detain impressive numbers of drug kingpins, lieutenants, "hit men," operators, and money launderers. Major drug traffickers arrested included Guatemalan trafficker Otto Roberto Herrera Garcia, Gilberto Higuera Guerra, Jaime Herrera Herrera, Gulf Cartel lieutenant Ramiro Hernandez Garcia, and Arellano Felix Organization (AFO) enforcer Carlos Ignacio Acosta Ibarra. Cumulatively, AFI detentions of traffickers accounted for half of the arrests of over 36,000 drug traffickers during the first four years of the Fox Administration.

Despite occasional setbacks, Mexico pushed forward its ambitious program to make federal law enforcement institutions more professional. Building on earlier initiatives, such as the development of a law enforcement career path, PGR leaders established the groundwork for sound, harmonized basic police training, including a self-sustaining system employing the train-the-trainer approach.

Law Enforcement Efforts. Mexican counternarcotics enforcement actions included arrests of major drug traffickers, increasingly sophisticated organized crime investigations, aggressive marijuana and poppy eradication, and bilateral cooperation on air, land, and maritime drug interdiction. The PGR, other police agencies, and the military services continued to target successfully major drug-trafficking organizations in Mexico.

Mexican authorities seized over 25 metric tons of cocaine hydrochloride through November 2004. Marijuana interdiction continued at an impressive pace, with authorities confiscating nearly 2,000 metric tons. In addition, authorities confiscated 300 kilograms of heroin, 435 kilograms of opium gum, and 590 kilograms of methamphetamine. They seized 1,885 vehicles, 39 maritime vessels, and 28 aircraft.

Authorities arrested 10,252 persons on drug-related charges, including 10,106 Mexicans and 146 foreigners, according to statistics from CENAPI. Cumulatively, Mexican officials arrested over 36,946 drug traffickers during the first four years of the Fox Administration, including 2004. The most prominent detentions of the past year included:

- In January, SEDENA troops, in an effort to halt a wave of violence in Sinaloa at the start of 2004, detained Javier “El J.T.” Torres Felix in Culiacan following a shoot-out. Torres is accused of being the area’s senior operator for kingpin Ismael Zambada. Torres, who remained in custody at the end of 2004, had been arrested twice before, but saw little jail time.
- In January, AFI, working closely with Colombian authorities, dismantled a major cocaine trafficking ring led by Juan Pablo “El Halcon” Rojas Lopez. Police suspected Rojas of moving an estimated two metric tons of cocaine monthly through Mexico to the U.S. and supplying retail drug dealers in Mexico City. Authorities arrested Rojas along with 14 associates and seized two metric tons of cocaine in Mexico City ready for shipment to the United States.
- In June, AFI captured two senior lieutenants of the Arellano Felix Organization, (AFO), Jorge “El Macumba” Aureliano Felix and Efrain “El Efra” Perez Arciniega. Authorities suspected that Aureliano had handled security operations for the drug group, while Perez oversaw counterintelligence and “enforcement” activities. The U.S. State and Justice Departments narcotics award program played a principal role in bringing these two to justice.
- In the summer, authorities jailed several AFO gunmen, including veteran enforcers Mario “El Cris” Rivera Lopez and Carlos “El Big Boy” Acosta Ibarra, together suspected of dozens of murders.
- In August, a PGR-SEDENA operation outside Mexico City resulted in the arrest of Ramiro “El Mati” Hernandez Garcia, “El Mati,” who had allegedly served as the Gulf Cartel’s liaison with Colombian suppliers, along with 13 of his associates. This operation resulted in the discovery and destruction of a cocaine-processing laboratory in an upper-class neighborhood in Mexico City and the seizure of 154 kilograms of cocaine, along with several weapons, vehicles, and properties.
- In August, AFI arrested Gilberto “El Gilillo” Higuera Guerrero—a top-tier operator long affiliated with the AFO—outside of Mexicali, Baja California. State and Justice

Departments had offered a reward of up to two million dollars for information leading to the capture of this trafficker.

- In October, SEDENA soldiers captured Carlos “El Tisico” Rosales Mendoza, a senior lieutenant in the Osiel Cardenas organization (the Gulf Cartel). Authorities believed that Rosales, detained in Morelia, Michoacan, oversaw the drug group’s operations and was planning an operation to free Cardenas from jail.

Sensitive Investigative Units (SIUs—specialized investigative teams that undergo a full vetting process) continued to serve as effective mechanisms for sharing sensitive intelligence data in both directions without compromise. As a result, SIUs have played important roles in successful investigations against drug trafficking organizations on both sides of the border.

A Mexican court sentenced drug kingpins Jose de Jesus Amezcua and his brother Adan Amezcua, whose extradition to the U.S. had previously been denied, to long jail terms in September. Jose de Jesus, known as the “amphetamine king,” received 53 years in prison and Adan received 22 years in prison and a US\$6,500 fine for money laundering and criminal association. The sentences represented two of the stiffest meted out in recent memory to drug traffickers. In November, a federal court sentenced Jorge Solis Hernandez to ten years in prison for laundering money for the Juarez Cartel.

Corruption. The Fox Administration placed high priority on combating police and judicial corruption during 2004. Mexican leaders made significant efforts to investigate and punish instances of corruption among federal law enforcement officials and military personnel. President Fox, Attorney General Macedo, and other Cabinet members repeatedly warned that they would punish public servants engaged in corruption. The Organizational Law for the Attorney General’s Office, which became effective in August 2003, outlines requirements for employment within the organization, standards of conduct, and procedures for dismissal from service of corrupt officials. Provision of better pay and benefits and dismissal and prosecution of corrupt officials have served as deterrents to corrupt behavior.

The Secretariat of Public Service (SFP) and the PGR led day-to-day efforts, coordinating anticorruption initiatives and implementing policy for the entire government. The PGR conducted more than 1,300 investigations into possible malfeasance of 2,200 PGR officers from the outset of the Fox Administration through May 2004. These investigations resulted in 418 legal cases against 711 officers (including 267 prosecutors and 335 AFI agents, many of whom represented holdovers from the now-disbanded Federal Judicial Police) for offenses ranging from abuse of authority to criminal collusion to kidnapping. Highlights include the following:

- Drug-corruption scandals forced the resignation of senior law enforcement officers in several states during 2004, including in the states of Sonora, Veracruz, and Chihuahua. As the year drew to a close, the PGR conducted an investigation into alleged drug trafficking links by PGR and AFI officers in the state of Quintana Roo as well as possible complicity in the executions of three AFI agents.
- Authorities also continued to seek an AFI officer suspected of accepting large bribes from Juarez cartel figures.
- The killing of drug figure Rodolfo Carrillo Fuentes in Culiacan, Sinaloa, in September revealed possible police protection. These charges were directed against the then commander of the Sinaloa State Police (now a fugitive) and a former police commander who served as Carrillo’s bodyguard while under state salary.
- In March, federal authorities brought a two-year alien smuggling investigation to a close with the arrests of 42 serving and former officials of the National Migration Institute (INM) and the municipal police force of Ciudad Jimenez, Chihuahua.

- Authorities implicated the State Police Commander in Ciudad Juarez, Chihuahua, and a dozen underlings in a string of murders. Their criminal ties and activities came to light with the grisly discovery of more than ten graves in a residential neighborhood. Nearly all men remained fugitives by year's end.

Extradition and Mutual Legal Assistance. Mexico extradited 34 fugitives to the United States in 2004 (up from the record numbers of 25 in 2002 and 31 in 2003). These included 19 Mexican citizens (a record) and 17 narcotics defendants (down from 19 in 2003). There was also an important decision that allowed the re-submission of an extradition request, allowing for the extradition of a fugitive, even if the initial extradition is denied. This decision also confirmed the 2001 decision precluding extradition if a life sentence might be imposed upon conviction.

There were four extradition denials of major narcotics cases in 2004, fewer than in 2003 and 2002. However, these losses included the extradition requests for Miguel Caro Quintero and Jesus Hector Palma Salazar, significant traffickers who have operated with impunity for many years. The request for Palma Salazar's extradition has been resubmitted; the request for Caro Quintero's extradition will be resubmitted by both the Districts of Arizona and Colorado. The fact remains that no major Mexican drug trafficker has ever been extradited to the United States.

In addition to the extraditions, the National Migration Institute (INM), the International Police Organization (INTERPOL), the United States Marshal's Service and the Embassy Legal Attaché have coordinated closely to deport or expel more than 135 fugitives to the United States (almost double the number in 2003). The Marshals Service, DEA, FBI and Mexican PGR also worked effectively together to develop a specialized unit in the AFI to locate and apprehend fugitives. A workshop will be held in 2005 in Mexico to assist Mexico's prosecutors and law enforcement officers in ascertaining the most efficient methods of locating their fugitives in the United States and in adequately and properly identifying the fugitives. This workshop should benefit both the United States and Mexico when accused felons are returned to Mexico to face justice.

On April 13, 2004, the Mexican Supreme Court reaffirmed its October 2001 decision, finding life imprisonment unconstitutional under Mexican law. This makes extradition impossible for crimes with potential life imprisonment without parole sentences unless the United States provides adequate assurances that this sentence will not be imposed. (The United States succeeded in its request for extradition in 2004 in most state cases in which the possible sentence is life imprisonment with a possibility of parole.) However, there is no parole in federal cases and cases from several U.S. states, U.S. conviction in cases involving more than five kilograms of cocaine, one kilogram of heroin, or fifty grams of methamphetamine carries a penalty of a minimum of 10 years and a maximum of life. To provide the required assurances to Mexico, the U.S. prosecutor must agree, in spite of the facts of the case, to charge an amount less than the above-specified amounts or submit a jury finding that does not expressly exceed the specified amounts. Because the maximum sentence for lesser amounts is 40 years and sentences may be stacked, such assurances have been provided in major narcotics cases presented in 2004 (Arellano Felix, Palma Salazar).

On October 8, 2004 a panel of the Supreme Court held that Article 10 of the Mexican International Law of Extradition sets "procedural norms" for extraditions—and therefore must be followed under Article 13 of the Mexico-U.S. Extradition Treaty. This decision put at risk all pending cases, at whatever stage of the extradition proceedings, and led to major triage work in the last three months of the year. The United States has devised a standard diplomatic note that addresses the Court's holding that the United States must provide assurances that: there must be reciprocity in extraditions; the fugitive cannot be prosecuted for crimes other than for those for which extradition was granted; the fugitive must be tried by a court of competent jurisdiction; the fugitive has the right to present a defense and have legal counsel; the fugitive cannot be sentenced to a penalty of death; the fugitive

cannot be extradited to a third country except in specific circumstances; and the U.S. must provide a copy of the judgment of acquittal or conviction at the conclusion of the case.

Cultivation and Production. Mexico is the leading foreign source of marijuana consumed in the United States. It continues to be a principal cultivator of drug crops, despite continuing government efforts to control production through eradication. Farmers planted large amounts of opium poppy and marijuana in small, widely dispersed plots in remote, inaccessible zones of the western Sierra Madre Mountains in an effort to thwart GOM eradication programs. They also hung cables across fields and shot at spray aircraft. Mexico's favorable climate and terrain produces two to three harvests yearly in the primary growing regions of each drug crop.

Military and PGR personnel maintained vigorous eradication efforts. SEDENA officials deployed up to 35,000 troops in the field to eradicate drug crops manually, and the PGR employed helicopters to spray herbicides. The army accounted for some 80 percent of the eradication results with the PGR Air Services Section accounting for the other 20 percent.

Drug Flow and Transit. Cocaine flow to the United States became more concentrated through Mexico in 2004. Approximately ninety percent of South American cocaine sold in U.S. markets passed through Mexico territory. Mexico was also a major producer and transit zone for marijuana, heroin, and methamphetamine destined for the U.S. Methamphetamine traffic was concentrated in Mexican/U.S. border area and drug groups established methamphetamine laboratories in northwestern Mexico, with production for exported to the U.S. Mexican criminal organizations dominated drug trafficking operations in the U.S., controlling most of the primary distribution centers. U.S. and Mexican authorities have cooperated closely to dismantle these operations on both sides of the border.

With the sharp increase in Mexican domestic drug abuse, traffickers expanded operations into major Mexican cities, along Mexico's northern border, and in major tourist zones to complement smuggling to the United States and diversify their markets.

Domestic Programs. The National Council Against Addictions (CONADIC) of the Secretariat of Health reported in October that some 1.3 million Mexicans suffered from addiction to some form of illicit drug. Mexican leaders are increasingly concerned over the ever-younger age at which drug experimentation begins, with evidence that ten-year-old children are beginning to use drugs. Mexico also confronted increased abuse of synthetic drugs by young women, particularly along the U.S. border and in large metropolitan areas, with use rates reaching twice the national average. CONADIC reported that 15 of every 100 inhabitants of Mexico City aged 12 to 65 had at one time tried illegal drugs.

In 2004, President Fox named Dr. Cristobal Ruiz Gaitan as Technical Secretary of CONADIC. Observers applauded the appointment of a medical professional to lead CONADIC, a move that may help regain some of the organization's earlier stature and influence within the government. CONADIC coordinates prevention, treatment, and rehabilitation programs through the use of state organizations and federal entities, such as the Social Service and Child Welfare Agency and private foundations. The U.S. collaborates to complement CONADIC's programs through support to non-governmental organizations (NGOs) and youth councils involved in counternarcotics abuse and rehabilitation programs.

Agreements and Treaties. Mexico is Party to the 1988 UN Drug Convention, the 1961 UN Single Convention Drugs as amended by the 1972 Protocol and to the 1971 UN Convention on Psychotropic Substances. Mexico also subscribes to regional counternarcotics commitments, including the 1996 Anti-Drug Strategy in the Hemisphere and 1990 Declaration of Ixtapa, which committed signatories to take strong actions against drug trafficking, including controlling money laundering and preventing diversion of precursor chemicals. Mexico also is a party to the UN Convention against Transnational Organized Crime and its three protocols, and to the UN Convention against Corruption.

Mexico is Party to the Inter-American Convention Against Corruption, and, in July 2004, ratified its membership to the United Nations Convention Against Corruption. President Fox hosted the signing of the United Nations Convention Against Corruption in Merida in December 2003.

The United States-Mexico Extradition Treaty entered into force in 1980. A Protocol to the Extradition Treaty requested by Mexico, which became effective in May 2001, permits the temporary surrender for trial of fugitives serving a sentence in one country but wanted on criminal charges in the other. Neither country has made a request under the Protocol. The United States and Mexico have continued to improve implementation of the Mutual Legal Assistance Treaty.

In October 2004, Mexico and Guatemala signed a Protocol for the Establishment of Bilateral Coordination on Early Warning and Response. The pact is intended to bolster earlier bilateral efforts to improve border security and calls for joint planning of operations against the drug trade, organized crime, and possible terrorist threats. Mexican officials continued in 2004 to participate actively in the Inter-American Drug Abuse Control Commission (CICAD) of the Organization of American States.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. Bilateral counternarcotics cooperation was close and represented one of the most positive aspects of the bilateral relationship. U.S. law enforcement confidently shared sensitive information with Mexican counterparts, resulting in the capture and conviction of drug traffickers, as well as seizures of illicit narcotics.

The Binational Commission (BNC) continued to serve as the venue where cabinet level officials of both countries meet to discuss an array of bilateral issues, including counternarcotics and related law enforcement topics. The BNC also guided bilateral discussions carried out through its Law Enforcement Working Group. Under the umbrella of the BNC, the Senior Law Enforcement Plenary (SLEP) met twice during the year to evaluate, guide, and work to overcome obstacles to bilateral progress at the operational level. The SLEP comprised several working groups, including those dealing with major drug trafficking organizations, money laundering, demand reduction, arms trafficking, extradition, interdiction, training, and precursor chemicals. Most of our bilateral progress is attributable to these working groups and to working-level, one-on-one cooperation.

The U.S. Interdiction Coordinator (USIC) led the U.S. delegation at several meetings of the Bilateral Interdiction Working Group (BIWG), complemented by the participation of the Director of Joint Interagency Task Force—South (JIATF—South). The Mexican delegation visited JIATF-South and gained a better understanding of the operational capabilities related to information exchange. Post-seizure analysis and information sharing have increased, but will require more attention. To better target the cross-border activities of drug traffickers, the United States and Mexico regularly prepared joint border threat assessments. These assessments served to develop a stronger mutual understanding of threats on both sides of the border.

As a result of close bilateral cooperation, implementation of major border projects progressed well during 2004. The Advanced Passenger Information System (APIS) entered into operation in April 2004, permitting authorities to compare airline passenger manifests against criminal databases. The U.S. Government arranged for the procurement and installation of Portal Vehicle and Cargo Inspection Systems (VACIS) at ports of entry at Colombia (Nuevo Leon), Nuevo Laredo (Tamaulipas), Piedras Negras (Coahuila), Nogales (Sonora), and Mexicali (Baja California). U.S. officials also supported the installation of a railroad VACIS unit at Mexicali and a pallet VACIS at Mexico City's International Airport. Contractors made important progress in preparing design drawings for new or expanded SENTRI (Secure Electronic Network for Traveler's Rapid Inspection) Lanes at Tijuana (Baja California), Mexicali, Nogales, Nuevo Laredo, Matamoros (Tamaulipas), and Ciudad Juarez (Chihuahua). Completion of these new or expanded SENTRI lanes should occur during

2005, which will facilitate the cross-border movement of travelers who have enrolled in the program and undergone background investigations. Tax Administrative Service (SAT) personnel continued to operate three Mobile X-Ray Vans (donated to the GOM in December 2003) at three airports, contributing to the detection and seizure of bulk smuggling of millions of dollars in drug-related currency. Software engineers developed a test version of Border Simulation software and collected data at various ports of entry. This software will help Mexican officials to evaluate needs and plan infrastructure and staffing changes at ports of entry along the United States-Mexico border. While designed primarily to deter terrorist acts and facilitate cross-border movement of bona fide visitors, goods, and services, border security projects also help authorities to identify and arrest drug traffickers, detect and seize drugs, and confiscate other illicit contraband.

Institutional Development. Institutional Development was a top priority program that enjoyed the full support of the Fox Administration. The Embassy's Law Enforcement Professionalization and Training Program successfully integrated Embassy Law Enforcement Committee (LEC) training requests with local, state, and federal training and technical assistance programs with positive results in 2004. The Narcotics Affairs Section (NAS) provided 100 training courses to over 4,000 police, investigators, and prosecutors at all levels. In late 2004, NAS initiated a five-week Police Investigations School (EIP) for all new AFI candidates, as well as current investigators. Roughly 175 AFI personnel graduated from the EIP, and the PGR Police Training Academy has taken over full responsibility for operating the EIP. Future U.S. support will be limited to equipment donations, technical consultations and other developmental innovations.

The Embassy worked closely with the PGR Office of Professionalization and Training on all aspects of training to build on successes of the past three years. In 2005, working jointly with PGR officials, NAS programs will emphasize infrastructure development and enhancing self-sufficiency within the training institutions. Training will continue to play a major role in the transition to infrastructure development by increasing the number of Train-the-Trainer courses and other selective training to enhance the overall efficiency, effectiveness and quality of the curriculum, as well as the training institutions and instructors.

The Embassy anticipates sponsoring as many as 10 separate, five-week, Train-the-Trainer courses during 2005 for PGR, INM, and SFP personnel. It will dedicate seven of the courses to PGR personnel to fully staff the PGR Police Training Academy for the EIP and to assume instructional duties at the PGR Police Academy. Training will benefit not only investigative personnel, but also PGR prosecutors. Courses will include Ethics in Government, Management and Leadership, Anti-Corruption Investigations, as well as investigative courses to enhance prosecutors' overall case handling and presentation ability.

Building on this bilateral cooperation, GOM efforts to professionalize law enforcement institutions continued to produce tangible results. The PGR established a School of Criminal Investigation, entailing course work on basic crime investigation techniques. PGR leaders are planning to create a more universal basic law enforcement curriculum aimed at producing competent law enforcement officers at the state and local levels capable of carrying out professional criminal investigations leading to prosecutions. To strengthen the prosecutorial element, the PGR initiated a prosecutor training program to upgrade prosecutorial skills and permit better understanding of the investigation process.

The Road Ahead. In many respects, bilateral counternarcotics cooperation hit a historic high-water mark in 2004 and represented one of the most positive aspects of the bilateral relationship. Law enforcement personnel of both countries routinely shared sensitive information to capture and prosecute leaders of major drug trafficking organizations and seize important shipments of cocaine, heroin, marijuana, and methamphetamine. President Fox and Attorney General Macedo strove to identify and reduce corruption within federal police entities. Despite only three years in existence, the

re-invented and reformed principal federal police, AFI, has developed into an excellent police institution. Control of precursor chemicals has improved considerably since October 2002.

On the negative side, the extradition relationship has been frayed by Mexican court rulings, including the April 2004 Mexican Supreme Court decision. The production and flow of drugs with its huge illicit profits continues to flourish, directed by captured kingpins from within maximum security prison.

There are many new opportunities during these last two years of the Fox Administration to enhance the extremely positive and productive cooperation that both governments enjoy and to institutionalize the resulting close personal and operational relationships. The U.S. Government plans to continue to support Mexico's efforts in building institutions to reinforce and make permanent this unprecedented cooperation. Even with the remarkable progress made to date, Mexican police and prosecutors still need improved equipment, training, and investigative tools. The U.S. intends to promote increasing and improving of intelligence sharing; enhance bilateral teamwork to fight money laundering; encourage the increase of opium poppy and marijuana eradication programs; support GOM and bilateral efforts to attack criminal organization and disrupt their activities; improve interdiction efforts on both sides of the border; decrease the diversion of precursor chemicals towards drug production; and improve the successful prosecutions of criminal.

Nicaragua

I. Summary

Nicaragua is not a major drug producing country. However, the country is a transit zone for narcotics trafficked from South America to the United States and Europe. Major trafficking routes are found on both coasts and drugs pass through the country on the Pan American Highway. The isolation of the country's Atlantic Coast (where drug trafficking and consumption are highest), its vulnerable banking system, its endemic poverty, and the fact that many in the population remain well-armed from the 1980s civil war—all make Nicaragua a rich target for drug traffickers. The GON is making a determined effort to fight both the domestic use of illegal drugs and the international narcotics trade, but the Nicaraguan National Police (NNP) and the Nicaraguan Armed Forces require USG help to make significant gains against the well-financed and well-armed drug traffickers.

In 2001, Nicaragua approved a six-part bilateral maritime counternarcotics agreement with the United States. On the basis of this agreement, Nicaraguan and U.S. law enforcement authorities engaged in several joint maritime counternarcotics operations in 2004, including several seizures of thousands of kilograms of cocaine. In previous years, a number of high seas prisoner transfers took place under the accord, but the USCG did not request any such transfers in CY2004. The U.S. also continued to assist the NNP's counternarcotics efforts during the year. Working with the DEA office in Managua, the NNP seized significant amounts of cocaine and heroin. The Nicaraguan National Assembly still has not passed new legislation on money laundering that would set up an operational, technically capable Commission of Financial Analysis to help the banking sector identify and track suspicious deposits over \$10,000. Nicaragua is a party to the 1988 UN Drug Convention.

II. Status of Country

Colombian drug traffickers move illegal narcotics through Nicaragua by land, sea, and air. DEA and the NNP have noted continued movements of illegal drugs by air, which the GON is powerless to intercept. Advances in maritime interdiction by the governments of Panama and Costa Rica have pushed drug traffickers northward in their search for refueling areas and Colombian drug boats now enter Nicaraguan waters via the Colombian islands of Providencia and San Andres. Nicaragua is also in danger of becoming a target for money laundering due to a vulnerable banking sector.

The NNP is a relatively capable law enforcement organization. From December 2003 through November 2004, the DEA office in Managua and the NNP conducted joint investigations that resulted in the capture of 63 kilograms of heroin and 6,250 kilograms of cocaine, a slight decrease in heroin seizures but nearly a 600 percent increase in cocaine seizures over last year. Despite these achievements, resource constraints and an inefficient and corrupt legal system continue to limit the effectiveness of police operations. Consumption of illegal drugs (especially crack cocaine) remains a serious problem, particularly along the Atlantic Coast. Although the NNP is responsible for law enforcement, the Army, of which the Navy is a part, is increasingly playing an important support role in counternarcotics efforts on the Atlantic coast.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The GON continues efforts to revamp the country's legal system. In December 2002, the new Criminal Procedures Code went into effect. The Code requires oral testimony and presentation of evidence through witnesses, a change that should allow more impartial and transparent processing of cases. The GON prosecutors, with USAID and INL/RLA (Resident Legal Advisor)

training, are learning how to use this new system effectively. The National Assembly is currently stalled on passing reforms to the major statute that covers illegal drugs. The draft reforms include important provisions related to money laundering. There is also a proposal to make money laundering an autonomous crime, as opposed to only being a component of drug trafficking cases. Unfortunately, this proposal is tied to the political fortunes of former president Aleman, who was convicted--and is appealing--under the original money-laundering statute.

Accomplishments. Nicaraguan authorities continued to destroy domestically-grown marijuana plants in 2004. They also carried out major seizures of transshipped cocaine and heroin. During the year, several joint maritime operations were carried out between the Nicaraguan military, the NNP, and U.S. law enforcement vessels under the auspices of the U.S.-Nicaraguan bilateral maritime counternarcotics agreement that went into force in 2001. The NNP has conducted operations against local drug distribution centers and large shipments transiting the country, gathering intelligence on their locations and making arrests.

Law Enforcement Efforts. From December 1, 2003 through November 30, 2004, the NNP arrested 78 international traffickers (including at least 24 foreigners), and several hundred small-time street drug dealers. During the same period, DEA statistics show that Nicaraguan authorities (NNP and Navy) seized 6,250 kilograms of cocaine, 63 kilograms of heroin, 41,427 marijuana plants and 850 pounds of cleaned marijuana, plus 11,626 crack "rocks." In 2002, 19,860 tablets of Ecstasy were seized; in contrast, in 2004, the NNP did not make a single Ecstasy seizure. The GON also seized \$1,040,240 in drug-related currency. Within the totals listed above, the Nicaraguan Navy seized 4,266 kilograms of cocaine and one kilogram of heroin, compared to 121 kilograms of cocaine and one kilogram of heroin in 2003. (Note: In a fourth USCG/Nicaraguan Navy pursuit, another 1,900 kilograms of jettisoned cocaine was recovered from a fleeing--and later captured--drug boat. Since the drugs were then turned over to the USCG, this amount is not reflected in the DEA statistics. Therefore, Nicaraguan naval forces were actually instrumental in capturing 6,166 kilograms of cocaine in 2004. End Note). One noteworthy arrest involved the seizure of a boat carrying USD 210,940 in drug money being repatriated to Colombia. The Nicaraguans also seized 17 fast boats, some of which had already jettisoned or delivered their cargo. The Navy also broke up affiliated alien smuggling and arms smuggling rings. Despite this record, resource limits continue to plague both the NNP and the Navy. The Narcotics Unit has only 116 officers, including administrative support, to cover all of Nicaragua. The 850-man Nicaraguan Navy, with INL help, is only now developing a long range patrol capability that will enable it to maintain a presence at sea for days at a time.

Corruption. The NNP rotates officers to prevent conflicts of interest from developing at the local level. The NNP also issues numbered badges in order to make it easier for the public to identify abusive police officials. Finally, the Narcotics Unit answers only to the two top ranking officials in the NNP, a measure that maintains the integrity of confidential information. However, low salaries make it difficult to eliminate corruption. A new Nicaraguan police officer earns about USD 120 a month. Judges' official salaries run about USD 500 month. Corrupt judges often let detained drug suspects go free after a short detention, a practice that puts drug traffickers back on the streets, undercutting police morale. In a recent "drugs for guns" case, the judge released the suspects for "lack of evidence," in spite of the seizure of over 100 kilograms of cocaine, many automatic weapons and tens of thousands of rounds of ammunition.

From 2000-2003, with funding provided by INL and using expertise provided by the Department of Justice's International Criminal Investigative Training Assistance Program (ICITAP) in Guatemala, the NNP developed an Anti-Corruption Unit (UAC) to investigate cases of abuse of government power. The unit has contributed to cases that have resulted in a number of arrests for corruption and misuse of government funds. ICITAP programs terminated at the end of 2003, but INL plans, as part of the new Resident Legal Advisor program, to maintain support for the GON under a new multi-

agency anticorruption initiative for the police anticorruption unit, the Attorney General's office, and the Superintendent of Banks.

Agreements and Treaties. Nicaragua is a party to the 1961 UN Single Convention, as amended by the 1972 Protocol, the 1971 UN Convention on Psychotropic Substances, and the 1988 UN Drug Convention. A U.S.-Nicaragua extradition treaty has been in effect since 1907. Nicaragua is a member of the Caribbean Financial Action Task Force (CFATF). The United States and Nicaragua signed a bilateral counternarcotics maritime agreement in November 2001. Nicaragua is a party to the UN Convention against Transnational Organized Crime and its protocol on trafficking in persons, and is a member of the Inter-American Drug Abuse Control Commission (CICAD) of the Organization of American States (OAS). Nicaragua is a party to the Inter-American Convention Against Corruption and in 2001 signed the consensus agreement on establishing a mechanism to evaluate compliance with the Convention. Nicaragua also ratified the Inter-American Mutual Legal Assistance Convention in 2002, an agreement that facilitates the sharing of legal information between countries.

Cultivation/Production. With the exception of marijuana, illegal drugs are not cultivated in Nicaragua. The marijuana grown in Nicaragua is dedicated to local consumption.

Drug Flow/Transit. Nicaragua's location in the isthmus of Central America, the deep poverty of a large proportion of the population, the lack of government presence in large sections of the country, and the paucity of government monies that can be dedicated to law enforcement make the country an attractive transit zone for drug traffickers. Nicaragua's isolated Atlantic Coast is the most vulnerable part of the country. This region's many islands and inlets provide way stations for drug smugglers moving between Colombia and points farther north. Many Atlantic Coast residents, the majority of whom are ethnically and culturally distinct from residents of the rest of Nicaragua, support the traffickers by refueling their vessels, storing drugs, and serving as lookouts. In some communities drug smuggling has become the principal economic activity, creating concern that an incipient "narcotics culture" is emerging. In a recent case, people in the port town of Puerto Cabezas rioted in an attempt to recover a ton of cocaine that had just been captured by the Navy. Drugs also move north along the Pan-American Highway and in "go-fast" boats that run along the Pacific Coast. Multiple unidentified small aircraft transit Nicaraguan airspace at night and at least one aircraft has utilized an unmarked airfield to make a delivery. On occasion, drug shipments have been "dropped" on the Atlantic coast for further surface transshipment. The GON has no capability to intercept narcotics trafficking flights. At this time, the GON has little capability to monitor or prevent the diversion of precursor chemicals that are utilized in drug manufacturing in neighboring countries.

Domestic Programs (Demand Reduction). Drug consumption in Nicaragua continues to be a problem. Atlantic Coast leaders in particular have become concerned about increasing levels of crack cocaine use in that region. The Atlantic coast is the poorest part of Nicaragua and suffers from chronic 60-70 percent unemployment. Narcotics traffickers pay for help from locals by distributing drugs, a practice that augments the number of addicts in the local population. In addition, drug shippers threatened by interdiction in the Caribbean Sea toss their cargoes overboard. The drug packages then wash ashore in communities where residents divide and sell them. Both trends reinforce local use. The GON has responded to its growing domestic drug problem. The Ministries of Education and Health, the NNP, and the Nicaraguan Fund for Children and Family (FONIF) have all undertaken limited demand reduction campaigns. In February 2001, the USG established the D.A.R.E. Program in Nicaragua. Since its inception, approximately 150 NNP officers have received training as D.A.R.E. instructors. In 2004, the USG sponsored the retraining of these instructors in the newest D.A.R.E. pedagogical techniques. During 2001-2003, over 14,125 Nicaraguan schoolchildren were awarded certificates of participation in the D.A.R.E. program. During 2004, nearly 6,000 additional students received D.A.R.E. training.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. Nicaragua and the United States are strong allies in counternarcotics activities. The police have done much to professionalize their force since Nicaragua returned to the democratic fold in 1990. The NNP established formal relations with the DEA in 1997. From that time, cooperation between the two organizations has been ongoing and effective. During 2004, the U.S. continued to provide significant counternarcotics and law enforcement assistance to the NNP through the DEA, State/INL, and the U.S. Department of Justice. A new bilateral anticorruption initiative will bring additional USG resources to bear in improving the judicial system, the postal system, and the customs service. The Nicaraguan military has also proven to be an effective and reliable partner in the counternarcotics field and has committed ground, air, and naval forces to support law enforcement operations. INL is refurbishing several large and numerous smaller patrol boats to carry out interdiction activities on both the Atlantic and Pacific coasts. Nicaragua is also cooperating with the U.S. in efforts to cut off terrorist financing. The USG shares information on suspect persons or organizations whose assets should be frozen with the Superintendent of Banks as well as the Ministry of Finance and the Foreign Ministry. Nicaragua is a party to the 2002 International Convention on the Suppression of the Financing of Terrorism.

The Road Ahead. Nicaragua's leaders and its people recognize the threat that illegal drugs pose to Nicaraguan society and sovereignty. The Nicaraguan military and the NNP are committed to the counternarcotics effort. But Nicaragua does not possess the resources to wage this war alone and will require continued assistance. If the country is to become a successful partner with the U.S. in fighting the narcotics trade, it also needs urgent internal reforms, particularly the professionalization of the judiciary and the passage and application of stronger statutes to combat crimes like corruption and money laundering.

Panama

I. Summary

By virtue of its geographic position and well-developed transportation infrastructure, Panama is a major transshipment point for narcotics from the Andean Region to the United States and Europe. Cooperation between United States and Panamanian law enforcement agencies to stem the flow of narcotics, illegal firearms, and money is excellent. Since taking office September 1, 2004, the Torrijos Administration has built upon its predecessor's policies of close cooperation with the United States on security and law enforcement issues. At the same time, Panama's critical fiscal situation has placed increased pressure on the budgets of law enforcement agencies, hampering their ability to fulfill their respective missions. As a result, assistance provided by the United States remains crucial to ensuring effective Panamanian law enforcement. Panama is a party to the 1988 United Nations drug convention.

II. Status of Country

Panama's geographic proximity to the Andean cocaine- and heroin-producing regions makes it an important transshipment point for narcotics destined for the United States. Although security in the Darien region bordering Colombia has improved in recent years, smuggling of weapons and drugs across the border continues. Panama is also a major drug-transit hub due to its containerized seaports, the Pan-American Highway, an international hub airport, numerous uncontrolled airfields, and vast unguarded coastlines on both the Atlantic and Pacific oceans. The steady flow of cheap illicit drugs has taken a toll on Panamanian society by increasing domestic drug abuse, particularly among young people. The lucrative drug trade has also contributed to pervasive public corruption, thereby undermining the GOP's criminal justice system. Panama is not a significant producer of drugs or precursor chemicals. Cannabis is cultivated for local consumption, primarily within the Pearl Islands in the Gulf of Panama.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In 2004, the GOP continued to implement 81 projects the Panamanian National Commission for the Study and Prevention of Drug-Related Crimes (CONAPRED) outlined in a 2002 report. The GOP also established an inter-agency task force to coordinate narcotics enforcement at Tocumen International Airport. Since taking office in September 2004, the Torrijos Administration has adopted a broad policy of enhanced inter-agency coordination related to narcotics interdiction activities.

Accomplishments. During the year, Panama launched an interagency narcotics information-sharing network under the coordination of the Drug Prosecutor's Office. During 2004, Panama and the United States co-hosted a Key Leaders Conference, attended by law enforcement officials from the hemisphere as part of the effort to create a Latin America International Law Enforcement Academy (ILEA).

Law Enforcement Efforts. USG law enforcement entities enjoy a healthy and cooperative relationship with GOP counterpart agencies in every aspect of narcotics-related criminal matters. In January 2004, Colombian kingpin Jesus Henao Montoya was apprehended in Panama and deported to the U.S. for prosecution. DEA-monitored statistics through November 2004 indicate seizures of 7,068 kilograms of cocaine, 91.4 kilograms of heroin, 2,751 kilograms of cannabis, 0 kilograms of MDMA, 3,006,430 tablets of Pseudoephedrine, 0 tablets of Amphetamines, \$1,946,645.00 in currency seizures,

and 224 arrests for international drug-related offenses. Cocaine, heroin, MDMA, Pseudoephedrine, Amphetamines, currency seizures, and international drug-related arrests have declined slightly since last year, while seizures of cannabis have risen. Some of the decrease in seizures can be attributed to a temporary hiatus in operations during the transition between governments in September 2004. As in recent years, many narcotics operations are intelligence-driven movements and are usually cooperative ventures between the GOP and the USG.

The Public Ministry's Drug Prosecutor's Office (DPO) remains a respected entity for combating narcotics-related crimes and a principal coordinator of Panama's Public Forces' counternarcotics investigative resources. DPO cooperation with U.S. law enforcement agencies is excellent and extensive. The PNP's Directorate of Information and Intelligence (DIIP) and its Anti-Drug Sub-Directorate (DAD) are effective drug investigative units.

The NAS-funded and DEA-supported Public Ministry/PTJ sensitive investigative unit, with authority to conduct investigations relative to major drug and money laundering organizations, continues to grow and regularly carries out operations. The PNP Mobile Inspection Unit and Paso Canoas Interdiction Enhancements, the International Airport Drug Task Force, and the Canine Unit continue to operate with USG support and have fielded major arrests and seizures.

The National Maritime Service (SMN) is a professional and capable agency that enjoys good relationships with USG counterparts. The SMN responds to USG requests for boarding and interdictions, assisting the U.S. Coast Guard (USCG) with verifying ship registry data, and transferring prisoners and evidence to Panama for air transport to the United States. The USCG and JIATF-S hosted two joint exercises (CONJUNTOS) with the SMN in 2004 and hope to host a follow-on exercise in early 2005. Despite the SMN's successes and cooperation, operations are threatened by a lack of resources, particularly fuel. There is concern that without USG assistance the SMN operational status may erode significantly. The SMN and National Air Service (SAN) have positive relations and annually team together to eradicate cannabis fields in the Pearl Islands.

The National Air Service is continually plagued by limited air assets, but provides excellent support for counternarcotics operations when their resources are available. The SAN, like other Panama Police Forces (PPF), had its budget cut for 2005, which may threaten future operations. The SAN continues to respond to U.S. law enforcement requests to over-fly and photograph suspect areas and to identify suspect aircraft in flight or on the ground. The SAN provides logistical support in the transfer of detainees and drug evidence through Panama to U.S. jurisdiction. The SAN-SMN relationship continues to grow in a positive direction. Both forces were involved in operations to burn cannabis fields on the Pearl Islands.

Cultivation and Production. Joint DEA-SAN aerial reconnaissance efforts indicate small-scale coca cultivation increased in July 2004. Reports of cocaine laboratories in the Darien are unconfirmed and have not been confirmed since 1993-94. GOP resource constraints, triple-canopy jungle, and the presence of heavily armed Colombian insurgents in the region have prevented crop eradication. Limited cannabis cultivation, principally for domestic consumption, exists in Panama, particularly in the Pearl Islands. The SMN, SAN, and PNP cooperate effectively to eradicate these crops.

Precursor Chemicals. Panama is not a significant producer or consumer of chemicals used in processing illegal drugs. However, it is believed that a significant volume of chemicals transits the Colon Free Zone for other countries. Legislation to strengthen Panama's chemical control regime has been drafted with U.S. assistance and presented to the National Assembly for approval. Seizures of pseudoephedrine by November 2004 totaled 3 million tablets. Until new legislation is signed into law, Panamanian chemical regulatory and enforcement infrastructure will remain inadequate and will continue to threaten USG success against regional narcotics production.

Drug Flow/Transit. Panama remains an integral territory for the transit and distribution of South American cocaine, heroin, and Ecstasy. These drugs are moved in a variety of modes: traffickers primarily use fishing vessels, cargo ships, small aircraft, and go-fast boats. These vehicles often refuel or exchange goods in or near Panama. Goods exchanged from sea borne mediums to land are loaded onto trucks for a northbound journey via the Pan-American Highway or placed in sea-freight containers near the Panama Canal for transport on cargo vessels. Illegal airplanes utilize hundreds of abandoned or unmonitored legal airstrips for refueling, pickups, and deliveries. Couriers transiting Panama by commercial air flights continued to move cocaine, as well as heroin, to the United States and Europe during 2004.

Domestic Programs (Demand Reduction). CONAPRED's five-year counternarcotics strategy identifies 29 demand reduction, drug education, and drug treatment projects to be funded between 2002 and 2007 at a cost of U.S. \$6.5 million. During 2004, five projects were funded under this strategy, with a total cost of \$790,000. The Ministry of Education and CONAPRED—supported by U.S. funding—promoted demand reduction through training for teachers and information programs. NAS is assisting with the implementation of an August 2003 law that created a national drug prevention education program, which mandates inclusion of drug prevention in school curriculum. CONAPRED and the Embassy's NAS also supported the Ministry of Education's National Drug Information Center (CENAID). The PNP Juvenile Police, with NAS funding, implemented the DARE Program in Panama City public schools.

Corruption. Corruption emerged as one of the primary issues in the 2004 Presidential campaign. As a result of the public's opinion on corruption, current President Martin Torrijos ran a campaign based on purging corruption from the government. The new administration made several strides towards accomplishing this goal since taking office in September 2004, including auditing government accounts and launching investigations into major public corruption cases. The GOP has also revoked the Moscoso Administration's implementing decree that limited public requests for government information. Panama has created a national anticorruption commission in the Ministry of the Presidency that is charged with coordinating the government's anticorruption activities.

Agreements and Treaties. Panama is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention on Narcotics Drugs, as amended by the 1982 Protocol, and the 1971 UN Convention on Psychotropic Substances. A mutual legal assistance treaty and an extradition treaty are in force between the United States and Panama, although the Panamanian constitution does not permit extradition of Panamanian nationals. A Customs Mutual Assistance Agreement and a stolen vehicles treaty are also in force. In 2002, a comprehensive maritime interdiction agreement between the USG and GOP entered into force. Panama has bilateral agreements on drug trafficking with the United Kingdom, Colombia, Mexico, Cuba, and Peru. Panama is a party to the UN Convention Against Transnational Organized Crime and its three protocols, and is a signatory to the UN Convention Against Corruption. Panama is a member of the Organization of American States and is a party to the Inter-American Convention on Mutual Assistance in Criminal Matters and the Inter-American Convention Against Corruption.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. The United States provided crucial equipment, training, and information to enhance the performance of GOP counternarcotics, public force, and law enforcement institutions in 2004. These U.S.-supported programs are aimed at improving Panama's ability to intercept, investigate, and prosecute illegal drug trafficking and other transnational crimes; strengthening Panama's judicial system; assisting Panama to implement domestic demand reduction programs; encouraging the enactment and implementation of effective laws governing precursor chemicals and corruption; improving Panama's border security; and ensuring strict enforcement of existing Panamanian laws.

NAS is implementing a law enforcement modernization project that has the goal of professionalizing the Panamanian National Police. The key pillars of the project involve implementing community policing in Panama, expanding existing crime analysis technology and promoting managerial change to allow greater autonomy and accountability to develop best practices among local police commanders.

Years of support to the SMN, including donations of equipment and regular USCG training, contributed to the 2004 SMN successes. The SMN accounted for 17 percent of Panama's total cocaine seizures last year. Aside from equipment for the 180-foot SMN ship, NAS also continued refurbishing "go fast" boats for the SMN.

The United States has provided Panamanian Customs with training, operational tools, and a canine program that has become a linchpin of the Tocumen International Airport Drug Interdiction Law Enforcement Team. A U.S.-funded X-Ray machine also became operational at the airport during 2004.

In 2004 the USG, through the NAS, assisted the GOP in upgrading the Public Ministry's Anti-Corruption Unit. NAS supplied computers, office equipment, and other necessary gear. NAS also purchased several vehicles for the PTJ Vetted Unit.

NAS continued to support the Ministry of Education's teacher training programs in demand reduction.

Bilateral Cooperation. The Torrijos Administration continues to maintain close cooperation with the U.S. by sustaining joint counternarcotics efforts with the DEA and by strengthening national law enforcement institutions. The maritime interdiction agreement has facilitated enhanced cooperation in maritime interdiction efforts, with Panama playing a vital role in facilitating the transfer of prisoners and evidence to the United States.

The Road Ahead. The GOP continues to demonstrate its commitment to build strong law enforcement institutions and deter the flow of narcotics northward. The U.S. will continue to encourage Panama to devote sufficient resources to enable its forces to patrol fully the land borders, the Panamanian coastline, and the adjacent sea-lanes, rendering them inhospitable to illicit arms and narcotics traffic. The U.S. is encouraging the development of a multi-agency Panamanian Port Security Boarding Unit, which is scheduled to start operations in 2005.

In 2004, multinational maritime border operations yielded a 2.6MT cocaine seizure and turned around or chased 4 other go-fast boats. Continuing this operation should be a priority for 2005. The USG will continue to work with the GOP to help strengthen Panama's ability to deter trafficking in drugs by providing training and equipment. The United States will also continue to work with the GOP to help strengthen Panama's law enforcement and public forces institutional capacity and will provide assistance to Panama to support criminal justice reform, as well as anticrime and anticorruption efforts.

THE CARIBBEAN

The Bahamas

I. Summary

Because of its geographic location, The Bahamas continues to be utilized as a major transit country for cocaine and marijuana bound for the U.S. from South America and the Caribbean. The Government of the Commonwealth of The Bahamas (GCOB) cooperates closely with the United States Government (USG) to stop the flow of illegal drugs through its territory, to target Bahamian drug trafficking organizations, and to reduce the domestic demand for drugs within the Bahamian population.

An important bilateral milestone was achieved in June 2004 with the signing of a Comprehensive Maritime Agreement to provide law enforcement officers a legal framework for their operations. This agreement replaced a patchwork of practice, old jurisprudence, and antiquated treaties. Also in June, the Bahamian Government published its first National Anti-Drug Plan. This plan would provide the basis for ongoing action by the government for the next five years. There has been no legislation introduced to implement recommendations of an OAS/CICAD assessment of the Bahamas precursor chemical control system. The Bahamas is a party to the 1988 United Nations Drug Convention.

II. Status of Country

The Bahamas is a country of an estimated 320,665 inhabitants and 700 islands and cays distributed over an area similar in size to that of California. The Bahamas' strategic location on the maritime and aerial routes between Colombia and the U.S. makes it an attractive location for drug transshipments of Colombian cocaine, Jamaican marijuana and other illegal drugs. It is currently estimated that a minimum of 20 metric tons of the cocaine trafficked to the U.S. passes through the Jamaica-Cuba-Bahamas vector. Although small plots of marijuana plants have been found in Grand Bahama, Abaco, Eleuthera, Andros and Cat Island, The Bahamas is considered neither a significant drug producer nor a producer or transit point for drug precursor chemicals.

The Bahamas participates actively as a partner in "Operation Bahamas and Turks and Caicos" (OPBAT), a multi agency international drug interdiction cooperative effort established in 1982. OPBAT is the largest and oldest cooperative effort overseas by any government involved in drug enforcement. OPBAT brings together on the U.S. side, the Drug Enforcement Administration (DEA), the U.S. Army (DOD), U.S. Coast Guard, the Department of Homeland Security, and the Department of State (DOS) and, on the Bahamian and Turks and Caicos side, counterparts from the Royal Bahamas and Turks and Caicos Police Forces. During 2004 (up to November), OPBAT seized 1.973 metric tons of cocaine and 6.173 metric tons of marijuana.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In June 2004, the GCOB published a comprehensive National Anti Drug Plan. The Plan will provide for ongoing action by the Government in addressing the drug problem at the National, Regional and International level over the next five years. During the first half of 2005, the GCOB intends to establish a National Drug Secretariat, which will be headquartered in the Ministry of National Security. Work on a National Anti-Drug Plan (NADP) began in 2001 with the assistance of the OAS/CICAD. In 2004, there was no legislative movement to implement the recommendations of an OAS/CICAD assessment of the Bahamas precursor chemical control legislation.

Accomplishments. The Drug Enforcement Unit (DEU) of the Royal Bahamas Police Force (RBPF) cooperated closely with the U.S. and foreign law enforcement agencies on drug investigations in 2004. In June, the DEU participated in the takedown of the Maycock/Smith trafficking organization as part

of DEA's Caribbean-wide "Operation Busted Manatee." This is the third major drug ring the DEU has dismantled since 2001. DEU's enhanced investigative and interdicting capabilities resulted in 1,596 drug-related arrests. Several indictments have been issued and more than 24 requests for extradition on drug-related charges are pending action from the Bahamian courts.

In October 2001, a magistrate committed Samuel Knowles, one of the Caribbean's most prolific drug traffickers, and several co-conspirators, including Frank Cartwright, Jr., for extradition to the United States to stand trial on drug charges. Knowles and Cartwright successfully applied to the Supreme Court for a writ of habeas corpus. In January 2003, the Court of Appeal reversed the Supreme Court's order, and Knowles and Cartwright were again committed for extradition. Knowles and Cartwright subsequently appealed to the Privy Counsel in London and in February 2004 the Privy Counsel affirmed the Court of Appeal's decision. As a result, in April 2004 Cartwright was extradited to the U.S. Knowles, however, successfully applied for another writ of habeas corpus on the ground that his designation as a "drug kingpin" would deprive him of a fair trial. The Attorney General's office has appealed that decision.

Law Enforcement Efforts. The RBPF continued to participate actively in OPBAT. Alerted by U.S. Department of Homeland Security surveillance aircraft, and on some occasions by members of the Cuban Border Guard, U.S. Army and Coast Guard helicopters intercepted maritime drug smugglers and seized airdrops of drugs into Bahamian territory. Law enforcement officers have taken note of a developing trend involving Haitian sloops. Commingling drug trafficking networks with illegal migrant smuggling organizations, the Haitian traffickers have been using methods of concealing their shipment in hidden compartments.

OPBAT assets are located in three bases strategically located on Andros, Great Exuma, and Great Inagua. Officers of the DEU and the Royal Turks and Caicos Islands Police fly on all OPBAT missions and are responsible for making arrests and seizures. A DEA agent accompanies the crew to provide assistance and coordination. RBPF personnel use three USG-donated interceptor boats to interdict the drug smuggling go-fast vessels detected by OPBAT helicopters. Seizures of drugs and traffickers captured by OPBAT assets in international waters are taken to the U.S., while those taken in Bahamian or Turks and Caicos territory are turned over to those jurisdictions.

The DEU is an elite vetted group of 97 officers that works closely with the USG on drug investigations and interdictions. The DEU staff includes a 19-member strike force which participates in OPBAT missions, a 10-member marine unit which crews and services the Police Harbor Patrol, 8-member tracing and forfeiture unit, 22-member general investigation unit, 14-member intelligence and surveillance unit, with a 9-member unit in Freeport and 3 commanders. The drug canine units in Nassau (4 officers) and Freeport (2 officers) are also attached to the DEU.

During 2004, the DEU seized 741 kilos of cocaine and 1.8 metric tons of marijuana. (Note: DEU seizures are included in OPBAT's total). The DEU arrested 1,606 persons on drug related offenses and seized drug-related assets valued at \$590,764 in addition to aircrafts and boats. Cocaine and marijuana seizures decreased compared to 2003 levels. In addition to the unusual weather patterns in the region during the 2004 hurricane season, this decrease is the direct result of the continued vigilance and precise targeting actions by law enforcement agencies. In particular, the infiltration of major drug organizations in the last years is paying off, as well as the arrest and incarceration of major key traffickers. To enhance the results of drug interdiction missions, the USG in collaboration with the GCOB established the Bahamas Rapid Response Team. The Bahamas Rapid Response Team gathers selected members of the Royal Bahamas Defense Force (RBDF), as well as the Customs Department and Immigration, to assist the Police Force in conducting contraband searches on a short notice basis. The USG is assisting the team members with training and equipment to facilitate the groups' deployments. Unfortunately, RBDF's participation in drug interdiction events is hampered since their vessels are typically not available to participate in OPBAT's requests for assistance in pursuits. The

RBDF continues to assign three marines to the Caribbean Support Tender (the U.S. Coast Guard cutter *Gentian*).

Corruption. As a matter of government policy, The GCOB does not encourage or facilitate illicit production or distribution of narcotic or psychotropic drugs or other controlled substances, nor the laundering of proceeds from illegal drug transactions. The GCOB is a party to the 1996 Inter American Convention Against Corruption. No senior official in the GCOB was convicted of drug related offenses in 2003. The RBPF proactive approach to educating the public and providing more supervision to newer officers seemed to bear fruit during this year. Police reported a reduction in the number of corruption allegations brought against police officers last year. There were only seven corruption related matters reported in 2004 compared to 20 in 2003. The RBPF continued using an internal committee to investigate allegations of corruption against police officers.

The GCOB completed a long-promised investigation into the suspicious disappearance of confiscated drugs in the custody of the RBDF. In August 2004, the Commission of Inquiry presented its findings of the 1992 incident in which 50 packages of cocaine disappeared from the vessel “The Lorequin” while in the custody of the RBDF. In their Report, the Commissioners concluded that “the most reasonable explanation” for the missing cocaine was that some or all of the RBDF members who were detailed to bring the vessel The Lorequin to RBDF headquarters were responsible for the disappearance of the drugs. However, while persuaded of certain individuals’ complicity in the theft, the Commission concluded that the evidence that emerged from the investigation was insufficient to support a criminal prosecution. The Commission also specifically criticized the conduct and performance of several Police and Defense Force personnel and made a series of policy and their operational recommendations. The Government has expressed its commitment to implement the Commission’s recommendations.

Agreements and Treaties. The Bahamas is a party to the 1961 UN Single Convention and its 1972 Protocol, the 1971 Convention on Psychotropic Substances, 1988 UN Drug Convention, and the 1990 U.S.-Bahamas-Turks and Caicos Island Memorandum of Understanding concerning Cooperation in the Fight Against Illicit Trafficking of Narcotic Drugs. As noted, the GCOB is also a party to the 1996 Inter-American Convention Against Corruption. The GCOB works with the USG to achieve the objectives of a continuing U.S.-Bahamas counternarcotics and law enforcement project designed to enhance the capability of the GCOB to suppress criminal activity and promote local demand reduction.

The U.S.-Bahamas mutual legal assistance treaty facilitates the bilateral exchange of information and evidence for use in criminal proceedings. U.S. MLAT requests seek to secure financial information and evidence for use in criminal investigations and prosecutions in U.S. courts. A separate unit was created within the Attorney General’s Office to process international requests for assistance, including MLAT requests.

A 1994 U.S.-Bahamas extradition treaty permits the extradition of Bahamian nationals to the U.S. GCOB prosecutors pursue USG extradition requests vigorously and, at times, at considerable expense. However, in the Bahamian justice system, defendants can appeal a magistrate’s decision, first domestically and ultimately to the Privy Council in London. This process often adds years to an extradition procedure. In June 2004, the GCOB and the USG signed the Comprehensive Maritime Agreement that replaced a patchwork of law enforcement agreements and arrangements, including the shiprider and overflight agreements, dating back to 1964. The CMA is already being used in migrant and drug interdiction operations.

Drug Flow/Transit. Although the documented cocaine flow to the United States from South America through the Jamaica-Cuba-Bahamas vector declined during the year, it is estimated a minimum of 20 metric tons of cocaine transited this route. Most of the cocaine flow from Colombia and arrives in The Bahamas via “go-fast” boats or small aircraft from Jamaica and Haiti. The “go-fast” boats are the

vehicles of choice for traffickers as they are a more elusive means of transportation, and the reduced load size keeps the losses due to interdiction or otherwise to a minimum. During 2004, law enforcement officials identified on average, a suspicious “go-fast” type boat on Bahamian waters every 5 days. In addition, there were 90 drug smuggling aircraft detected over Bahamian territory. Small amounts of drugs were found on individuals transiting through the international airports in Nassau and Grand Bahama Island and the transatlantic cruise ship ports. In 2004 Bahamian law enforcement officials identified shipments of drugs in Haitian sloops, fishing boats, small aircraft and pleasure vessels. Also significant amounts of illegal drugs have been found in transiting cargo containers stationed at the Port Container facility in Freeport. DEA/OPBAT estimates that there are a dozen major Bahamian drug trafficking organizations.

Demand Reduction. The GCOB continues to make a modest monetary and “in kind” contribution to demand reduction initiatives, especially in prevention and education. The quasi-governmental National Drug Council coordinates the demand reduction programs of the various governmental entities such as Sandilands Rehabilitation Center, and of NGO’s such as the Drug Action Service and the Bahamas Association for Social Health. Schools and youth organizations are the primary target of prevention/education program. Anecdotal data from a survey that the Council recently conducted in the Family Islands seems to confirm that marijuana use is increasing among Bahamian youth. The results of the survey will be presented early in 2005. Other drug prevention programs and presentations have been organized by RBPF’s Community Relations Section in schools and churches in Nassau.

IV. U.S. Policy Initiatives and Programs

The goals of USG assistance to The Bahamas are to dismantle drug trafficking organizations, stem the flow of illegal drugs through The Bahamas to the United States, and strengthen Bahamian law enforcement and judicial institutions to make them more effective and self sufficient in combating drug trafficking and money laundering. In June 2004, Bahamian law enforcement in unison with USG law enforcement participated in the largest takedown operation in the Caribbean, “Caribbean Initiative,” resulting in the dismantling of three important drug trafficking organization and hundreds of arrests. In the Bahamas, fifteen individuals were arrested under this initiative.

Bilateral Cooperation. During 2004, the U.S. State Department’s Bureau of International Narcotics and Law Enforcement Affairs, Bahamas Country Program, administered by the U.S. Embassy’s Narcotics Affairs Section (NAS), funded training, equipment, travel and technical assistance for a number of law enforcement and drug demand reduction officials. In February 2004, NAS and the GCOB agreed to discontinue the Bahamian Customs Department’s canine unit at the Freeport Container Port due to its high maintenance cost and its failure to produce expected results. NAS has been working closely with Customs officials to identify other cost efficient programs to protect the Container Port from drug traffickers. NAS procured computer and other equipment to improve Bahamian law enforcement capacity to target trafficking organizations through better intelligence collection and more efficient interdiction operations. In recent years, NAS donated three interceptor boats to the GCOB. These boats have been deployed around Bahamian waters and have participated in a number of significant seizures of “go-fast” drug smuggling vessels. This year, NAS assisted in providing them with vital maintenance and parts not available in the country. In addition, NAS funds continued to be used to cover important operational expenses, such as utilities, repairs and maintenance for three OPBAT bases in George Town, Great Exuma; Matthew Town, Great Inagua; and at the Atlantic Undersea Test and Evaluation Center (AUTECC,) Andros Island. NAS also provided funding to The National Drug Council and the Drug Action Service to extend their demand reduction education campaign to the Family Islands.

Road Ahead. The Bahamas' location and the expanse of its territorial area, guarantees that it will continue to be a preferred route for drug trans-shipment and other criminal activity. The Bahamian Government is expected to continue its strong commitment to the U.S. in joint counternarcotics efforts. The U.S. looks forward to the establishment of the National Drug Secretariat, the signing and ratification of the Caribbean Regional Maritime Agreement, and the introduction to Parliament of precursor chemical control legislation. However, due to the growing drug trade and the nation's small population and its relatively limited budgetary base, the GCOB will continue to depend upon significant USG assistance to fight international narcotics trafficking and crime. Given the importance of maintaining an effective interceptor fleet in the Caribbean, NAS will continue to support RBPF efforts of converting some of the seized boats into interdiction boats. NAS plans to assist the Bahamians in identifying innovative technologies to obtain important intelligence to thwart the flow of drugs.

Cuba

I. Summary

The priority attention of the Cuban regime is on political control of the Cuban people. The primary focus of the regime's aggressive posture with respect to all activities deemed "illegal," including narcotics trafficking, has been the repression of political and economic activities permissible in most normal societies. Cuba's waters and airspace remain an attractive route for narcotics trafficking in the Caribbean. Cuba's refusal to implement an effective use of force policy continues to provide a corridor inside Cuban territorial waters and airspace for smugglers transiting northbound from South America and the Caribbean. Cuba's interdiction efforts also continue to be hampered by decaying infrastructure and limited operations budgets. Cuban government (GOC) authorities continue to choose to fund other security forces, in particular Cuba's political police, rather than adequately funding the decaying fleet of Border Guard patrol boats and detection and monitoring aircraft for counternarcotics interdiction operations. That narcotics trafficking through Cuban territory decreased measurably in 2004 is primarily due to an increased U.S. law enforcement presence in the Windward Passage.

The GOC maintains an aggressive internal enforcement, investigation and prevention program for its incipient drug market. The GOC continued Operation Hatchet III, a multi-agency counternarcotics interdiction operation, and Operation Popular Shield, a multi-agency counternarcotics investigative effort combined with a nationwide counternarcotics public awareness campaign, both of which started in 2003 and are part of the wider repressive campaign. The GOC claims to have seized or recovered 3,064 kilograms of illicit narcotics, 90 percent of which was marijuana, from January to November in 2004, down from 5,673 kilograms of illicit narcotics seized in 2003.

Limited, case-by-case coordination between the GOC and the USG on international drug trafficking issues has taken place during the past year. Cuban law enforcement authorities reported to U.S. authorities sightings of 28 suspect targets (14 aircraft and 14 go-fast) in 2004 transiting their airspace or territorial waters, a decrease from the 69 sightings (22 aircraft and 47 go-fast) in 2003. The U.S. Coast Guard seized three go-fast vessels that departed Cuban territorial waters with a combined total of 2,936 kilograms of illicit narcotics, as a result of detection information passed by the Cuban Border Guard. Cuba is a party to the 1988 UN Drug Convention.

II. Status of Country

The priority attention of the Cuban regime is on political control of the Cuban people. Regime security officials have taken a much more aggressive posture with respect to all activities deemed "illegal," including narcotics trafficking, since 2003. However, the primary focus of this stepped-up activity has been the repression of political activities, including the continuing arrest and detention of civil society activists, permissible in democratic societies. The regime also continues to take advantage of its broad crackdown on drug trafficking to repress illegal economic activities permissible in most normal societies.

Cuba's strategic location between Colombia, Jamaica, Bahamas and the U.S. make it a natural transshipment location for drug shipments of cocaine and marijuana. The country's geographic proximity to the U.S., 3,500 nautical miles of coastline and more than 4,000 sparsely populated islets and cays provide a favorable environment for both air and maritime smuggling. Cuba's territorial waters and airspace continue to serve as an attractive corridor for smugglers transiting northbound from South America and the Caribbean. The GOC has chosen not to adopt an effective use of force policy or to provide adequate resources to counternarcotics authorities to give them more than a limited ability to interdict go-fast vessels or aircraft. As a result of decisions to direct state resources to

other security areas—the GOC provides substantial budgets to other police authorities, especially the General Directorate of State Security, Cuba’s political police—the current inventory of decaying patrol boats and aircraft do not constitute a credible interdiction force. Given the scarce resources the GOC devotes to counternarcotics activities, Cuba’s drug interdiction efforts are largely limited to recovering jettisoned narcotics and providing information to the U.S. Coast Guard on suspect vessels and aircraft transiting their airspace and territorial waters. Cuba has not signed the Caribbean Maritime Counterdrug Agreement, despite participating in the negotiations.

Cuba does not appear to be a significant producer of drugs or precursor chemicals, although small plots of “criolla” marijuana plants continue to be detected around Havana and eastern Cuba according to Cuban officials. The GOC claims 75 tons of illicit narcotics have been seized inside Cuban territory since 1994, of which 48 tons, mostly marijuana, washed ashore.

According to the Cuban Government, the Border Guard interdicts ninety percent of the drugs that Cuban law enforcement authorities seize. The lead investigative law enforcement agency on drugs in Cuba is the Ministry of Interior’s National Anti-Drug Directorate (DNA). The DNA is comprised of a variety of law enforcement, intelligence, and youth affairs and education organizations.

The non-enforcement governing body for prevention, rehabilitation, and policy issues is the National Drug Commission, formed in 1989 after the scandal involving the conviction and execution of an Army major general, a Ministry of Interior colonel, and several other officials for purported involvement in narcotics trafficking. This interagency coordinating body headed by the Minister of Justice is comprised of the Ministries of the Interior, Foreign Relations, Public Health, Higher Education, Education and Culture. Also represented on the commission are the Attorney General’s Office, Customs and Border Guard Services and the National Sports Institute.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The Government of Cuba continued the enforcement of Decree 232 “On the Confiscation for Deeds Related with Drugs, Acts of Corruption and Other Illicit Behavior” which entered into effect in January 2003. The GOC continued its nation-wide crack down in order to “battle against international drug trafficking and the incipient internal market.” The decree authorizes arrests and confiscation of property of drug producers, traffickers or users, and those guilty of “corruption, pimping, pornography, corruption of minors, human trafficking and other similar crimes.” Led by the Ministry of Interior, they continue to investigate suspected narcotics traffickers, and maintain a nation-wide public awareness campaign to reduce drug trafficking and its associated crimes. However, the GOC continued to take advantage of its broad crackdown on drug trafficking to also repress economic and political activities considered permissible in most normal societies.

Law Enforcement Efforts. The GOC has continued Operation Hatchet III since its March 2003 inception. The ongoing counternarcotics interdiction operation focuses on disrupting maritime and air trafficking routes, recovering jettisoned narcotics, and promoting a nation-wide public affairs campaign to encourage citizens to report any drug trafficking or drug wash-ups to Cuban law enforcement authorities. Operation Hatchet III includes vessel, aircraft and radar surveillance from the Ministry of the Revolutionary Armed Forces (Navy and Air Force), coastal patrol vessel and radar surveillance from the Ministry of Interior Border Guard, and participants from the DNA, National Police, and the National Park Rangers. In addition, Cuban Customs and DNA maintain an active counternarcotics inspection program at the island’s national maritime ports and airports. Cuba INTERPOL re-established its office in Havana and commenced operations in June 2004 with five Cuban officials. Neither the extent nor the effectiveness of these programs can be verified.

Drug Seizures/Arrests. The GOC reported the seizure of 3,065 kilograms of illicit narcotics in 2004, which included 2,755 kilograms of marijuana, 295 kilograms of cocaine, 13 kilograms of hash oil, 2

kilograms of crack and other synthetic drugs, 1,676 plants of marijuana and 26,567 marijuana seeds. The GOC reported 962 kilograms of illicit drugs seized in Cuba in 2004 were from wash-ups, a significant decrease from the 4,448 kilograms of narcotics reported to have washed up on the Cuban shoreline in 2003. Cuban authorities reported Operation Popular Shield has resulted in the seizure of 53 kilograms of narcotics: 49 kilograms of marijuana; 3 kilograms of cocaine; and 1.6 kilograms of hash and crack. In addition, the GOC reported the detention of approximately 3,000 people, of whom 65 percent were sentenced to six or more years of imprisonment for trafficking drugs in the internal market since Operation Popular Shield began in January 2003. The Cuban Border Guard recovered 589 kilograms of marijuana following a failed air-drop off the north coast of Ciego de Avila province, the first air-drop narcotics recovery by GOC authorities since 2001. The Cuban Border Guard intercepted two go-fasts trafficking narcotics inside their territorial waters in 2004. The July event resulted in the seizure of 828 kilograms of marijuana and the arrest of one Bahamian and four Jamaican citizens. The November event resulted in the seizure of 610 kilograms of marijuana and the arrest of three Jamaican citizens.

The GOC reported 10 foreigners were arrested for narcotics trafficking in nine separate airport cases with a total seizure of 10 kilograms of cocaine and 195 stamps of LSD. Eight of the cases were at Jose Marti International Airport in Havana and one was at Juan Gualberto Gomez Airport in Matanzas. The GOC also reported a total of 181 foreign tourists and eight Cuban foreign residents were detected with narcotics for personal consumption at Cuban international airports in 2004. In all cases, the GOC reported the narcotics were confiscated and destroyed and the tourists were allowed to continue their visit. The GOC reported the detention of Luis Hernando Gomez Bustamante, a major figure within the Colombian North Valle Cartel, for entering Cuba on a falsified passport in June 2004. Mr. Gomez Bustamante is under indictment by the U.S. Attorney's Office in New York on narcotics trafficking and money laundering charges. The Government of Colombia has requested his extradition to Colombia, but the GOC has not publicly responded to its request.

Corruption. The U.S. does not have direct evidence of narcotics-related corruption among senior GOC officials, although regular anecdotal reports of corruption throughout all levels of Cuban society and government continue to circulate. No mention of GOC complicity in narcotics trafficking or narcotics-related corruption was made in the media in 2004; the media in Cuba is completely controlled by the state, which permits only laudatory press coverage on itself. Cuba has not signed the Inter-American Convention Against Corruption.

Agreements and Treaties. Cuba is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention on Narcotic Drugs, as amended by the 1972 Protocol. The GOC maintains bilateral narcotics agreements with 33 countries and less formal agreements with 16 others. The GOC signed a counternarcotics agreement with Jamaica in 2004. Counternarcotics coordination between the U.S. and Cuba occurs only on a case-by-case basis. The Cuban government has not signed the Agreement Concerning Co-operation in Suppressing Illicit Maritime and Air Trafficking in Narcotic Drugs and Psychotropic Substances in the Caribbean Area (Caribbean Regional Maritime Agreement) despite its participation in the agreement negotiations. Cuba has signed, but not ratified, the UN Convention against Transnational Organized Crime.

Cultivation/Production. There is no evidence that Cuba is a significant drug-producing country. Cuban narcotics officials say that small quantities of "criolla" marijuana are grown around Havana and Eastern Cuba for domestic use.

Drug Flow/Transit. As a result of increased U.S. law enforcement presence in the Windward Passage, narcotics trafficking through Cuban territory decreased measurably in 2004. Narcotics trafficking from Jamaica to the Bahamas, Haiti and to the U.S. normally occurs through Cuban territorial seas and airspace, with a majority of the narcotics being trafficked via maritime routes

around the eastern and western tips and via air routes over the eastern side of the island. Cuban law enforcement authorities reported sightings of 28 suspect vessels in 2004 (14 aircraft and 14 go-fast vessels) transiting their airspace or territorial waters, a decrease from the 69 sightings (22 aircraft and 47 go-fasts) in 2003. Small quantities of narcotics were trafficked via Cuba's international airports, in which drug couriers or "mules" carried narcotics to and from Europe. In the nine reported cases, the departure countries were Colombia, Venezuela, Panama, and Costa Rica and the destination countries were Denmark and Spain. There were five reported cases of individuals attempting to smuggle narcotics to Cuba from Costa Rica, Italy and Mexico for distribution inside Cuba.

Chemical Control. Based on available information, Cuba is not a source of precursor chemicals, nor have there been any incidents involving precursor chemicals reported in 2004.

Domestic Programs. The National Commission on Drugs (CND), created in 1989, has taken the lead on drug prevention programs. The majority of municipalities on the island have counternarcotics organizations. Prevention programs focus on education and outreach to groups most at risk of being introduced to illegal drug use. There is a counternarcotics action plan that encompasses the Ministries of Health, Justice, Education and Interior, among others, in coordination with the United Nations. The aim of the action plan is to implement their long-term prevention strategy that is included as part of the educational curriculum at all grade levels. The GOC reports that there are 195 mental health community centers in Cuba consisting of family doctors, psychiatrists, psychologists, occupational therapists, and social health workers dedicated to teaching drug prevention and offering rehabilitation programs.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. Narcotics cooperation occurs only on a case-by-case basis and Cuban interest in engaging with the U.S. Coast Guard Drug Interdiction Specialist (DIS) assigned to the U.S. Interests Section in Havana ebbs and flows according to the GOC's political priorities. The Cuban DNA and Border Guard have provided limited exposure to Cuban counternarcotics efforts, including a visit to the Port of Havana to observe their Customs container inspection program, attendance to observe a vessel boarding and inspection procedures at Marina Hemingway, a visit to the Cuban national canine training center in Havana, a meeting with the Chief of the newly opened INTERPOL office in Havana, and a visit to Holguin to meet with local narcotics investigators following the seizure of a go-fast vessel with 610 kilograms of marijuana. In addition, the Cuban DNA provided investigative case information on narcotics trafficking and the Border Guard provided information on suspect vessels and aircraft to the U.S. Coast Guard on 28 narcotics-related events.

The Road Ahead. Cuba's strategic geographic position and the regime's refusal to implement an effective use of force policy consistent with its detection and intelligence capabilities continue to provide a corridor inside the Cuban territorial waters and airspace for smugglers transiting northbound from South America and the Caribbean. Cuba's non-use of warning and disabling fire against suspected drug trafficking vessels continues to make Cuban territorial waters and airspace an attractive smuggling route. Cuba has indicated that it had no interest in signing the Caribbean Regional Agreement thereby abdicating its responsibility to take action to deny drug traffickers access to Cuban waters and airspace. A reduction of U.S. maritime law enforcement presence in the Windward Passage is likely to lead to increased narcotics smuggling through eastern Cuban territorial waters and airspace.

Dominican Republic

I. Summary

The Dominican Republic (DR) is a major transit country for South American drugs, mostly cocaine and heroin, moving to the U.S. and Europe. The Government of the Dominican Republic (GODR) continued to cooperate closely with the U.S. in counternarcotics matters. Last year (2004) saw an increase in heroin seizures, an increase in cocaine interceptions, and a decrease in seizures of MDMA (ecstasy); negligible cooperation between the GODR and the Haitian police; continued good results of the extradition process; and little progress in application of a strong anti-money laundering law to a major bank fraud case. Although the GODR strengthened its efforts to combat corruption in 2004, corruption and weak governmental institutions remained an impediment to controlling the flow of illegal narcotics through the DR. It is estimated that a minimum of 8 metric tons of cocaine from South America transited the DR on its way to U.S. markets. The DR is a party to the 1988 UN Drug Convention.

II. Status of Country

There is no significant cultivation, refining, or manufacturing of major illicit drugs in the DR. Dominican criminal organizations are increasingly involved in command and control of international drug trafficking operations, but the country's primary role in regional drug trafficking is as a transshipment hub.

Seizures in 2004 continued to indicate that cocaine, heroin, and marijuana destined for the U.S. and, to a lesser extent, Europe were being transshipped through the DR and its territorial waters. Ecstasy seized in the DR was most often being transported from Europe to the U.S. Puerto Rican authorities noted a low level of drug smuggling via the ferries operating between Puerto Rico and the DR, probably due to the continued activity of the counternarcotics canine unit at the Santo Domingo ferry terminal.

Dominican nationals play a major role in the actual transshipment of drugs. Many "go-fast" crews in the Caribbean include Dominican nationals, mostly fishermen recruited from the local docks. The crews speak Spanish, the language of the source country smugglers; move easily throughout the Caribbean; and are recruited for very small amounts of money.

The DR is not a producer of precursor chemicals, but there is continued concern about their importation.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The DR-initiated bilateral intelligence-sharing and interdiction efforts with Haiti, begun after Operation Hurricane in 2001, were discontinued in 2002. The DR has continued to participate in annual Caribbean-wide counternarcotics operations.

The National Directorate for Drug Control (DNCD), the law enforcement arm responsible for counternarcotics measures, and the National Drug Council (CND), the GODR's policy and planning organ, have adopted a computerized tracking system and are able to track seizures of assets in connection with drug-related offenses.

Following the collapse of three large Dominican banks in 2003, the Dominican Government struggled to implement anti-money laundering legislation passed in 2002. (See the Money Laundering section of this report.)

With U.S. and other international support, the DR implemented the revised criminal procedures code in 2004. This code changed the Dominican criminal system from a Napoleonic system, with a dossier of evidence evaluated by a judge, to an adversarial system of verbal process before a judge or a jury. At year's end, key procedures relating to extraditions and other bilateral processes were being defined: the new system will be subject to legal challenges until its provisions are more thoroughly applied.

Law Enforcement Efforts. The DNCD, in cooperation with DEA authorities, broke up two large international smuggling rings during 2004. In March 2004 the DR deported to the U.S. a smuggler who was a key target of U.S. enforcement. Quirino Ernesto Paulino Castillo, a former Army Captain and owner of extensive land holdings along the Haitian border, was arrested December 18 in connection with the seizure of 1,300 kilograms of cocaine near Santo Domingo.

The DNCD canine program unit commanders received new training, in cooperation with the U.S. and Dutch Governments, and supported the formation of a new explosives detection canine unit for the airport police. The DNCD upgraded its equipment, trained technicians, and developed new software in furtherance of a multi-year, U.S. Government-supported effort to share data among Dominican law enforcement agencies and to make information available on demand by field officers.

The DR Navy participated in a combined operation (Op CONGRI) with USCG and ICE from 13-20 January 2004 to combat the regional threat of narcotics trafficking in the approaches to Puerto Rico. The operation was conducted pursuant to existing U.S./DR bilateral agreements.

Cultivation/Production. There is no known cultivation of coca or opium poppy in the DR. Cannabis is grown on a small scale for local consumption. The GODR's investigations into possible in-country manufacture of MDMA (ecstasy) have produced no definitive evidence of such activity.

Drug Flow/Transit. It is estimated that a minimum of 8 metric tons of cocaine transited the DR in 2004. The DNCD increased its seizure rate, interdicting body-carried heroin and cocaine in the DR's international airports and larger quantities from vehicles and buildings. Through December 2004, with cooperation and assistance of the U.S. Drug Enforcement Administration (DEA), the DNCD seized 2,232 kilograms of cocaine, 68 kilograms of heroin, 20,546 units of MDMA, and 1,152 pounds of marijuana. The DNCD continued to focus interdiction operations on the drug-transit routes in the DR's territorial waters along the northern border and on its land border crossings with Haiti, while attempting to prevent air drops and sea delivery of illicit narcotics to remote areas. The DNCD and their DEA counterparts concentrated increasingly on investigations leading to takedown of large criminal organizations, and three international rings were broken up as a result.

In 2004, drugs were easily accessible for local consumption in most metropolitan areas. The DR attracted a growing number of tourists from Europe, the U.S., and Canada who provided a customer base for local drug sales, especially at the beachfront vacation resorts. Traffickers often used drugs to pay low-level couriers and distributors. Gang violence and settling of drug-related scores, especially in northern cities, were subjects of frequent headlines in the DR press.

The DNCD made 3,305 drug-related arrests in 2004; of these, 3,150 were Dominican nationals and 155 were foreigners. There were 624 fewer drug-related arrests in 2004 than in 2003, and 82 fewer foreigners were among those arrested on drug charges. Approximately 12 percent of the total cocaine and 85 percent of the total heroin seized in the Dominican Republic was seized in the airports.

Most of the significant seizures were made on land, in the big cities. There were some seizures made at the Haitian border in 2004, but quantities seized were limited. While the number of seizures made in Dominican airports was high, the actual amount of drugs seized was small. Maritime seizures remain a challenge for the DR, especially drugs hidden in commercial vessels for shipment to the U.S. and/or Europe and drugs arriving by "go-fast" boats from South America.

Extradition. The U.S.-Dominican Extradition Treaty dates from 1909. Extradition of nationals is not mandated under the treaty, and for many years Dominican legislation barred the extradition of Dominican nationals. Former President Fernandez signed legislation in 1998 allowing the extradition of Dominican nationals. In 2003, the U.S. Marshals Service assigned a marshal permanently to the DR. During 2004, the marshals continued to receive excellent cooperation from the DNCD's special Section for Fugitive Surveillance and other relevant Dominican authorities in locating fugitives and returning them to the U.S. to face justice.

Both the Mejia and Fernandez administrations maintained their records of cooperation in 2004. In 2004 the GODR extradited 26 Dominicans (subjects of U.S. extradition requests made in prior years) to the U.S. and arrested 18 fugitives in response to U.S. extradition requests made that same year. The National Police, working with the FBI, arrested and extradited five drug-related subjects and deported two.

Mutual Legal Assistance. The GODR cooperates with USG agencies, including the DEA, FBI, U.S. Customs Service, and U.S. Marshals Service, on counternarcotics and fugitive matters.

The DNCD housed and manned the DEA-sponsored Caribbean Center for Drug Information (CDI) at its facilities in Santo Domingo. An increasing number of Caribbean countries have found the CDI's intelligence analysis services useful and are now frequent contributors and beneficiaries of new information.

The Dominican Navy used its new patrol craft in early 2004 to patrol the Mona Channel and prevent illegal migration, principally by Dominicans, to Puerto Rico and hence to the U.S. mainland. Examination of captured smuggling vessels indicated a strong link between illegal migration and drug smuggling. On a typical voyage, several passengers carry backpacks containing one or two kilos of cocaine.

Corruption. The GODR does not, as a matter of government policy, encourage or facilitate illicit production or distribution of narcotics, psychotropic drugs, and other controlled substances, nor does it contribute to drug-related money laundering.

Dominican institutions remain vulnerable to influence by interest groups or individuals with money to spend, including narcotics traffickers. The GODR has not convicted any senior government official for engaging in, encouraging, or in any way facilitating the illicit production or distribution of illicit drugs or controlled substances, or the laundering of proceeds from illegal drug transactions.

The last Attorney General of the Mejia administration was strongly suspected of accepting payments and other favors to release persons who had been accused of drug-related crimes and requested for extradition to the U.S. He is currently under investigation by Dominican authorities.

Legislation remains pending that would strengthen enforcement of a 1979 law that requires senior appointed, civil service, and elected officials to file financial disclosure statements. In what may be a regional model for transparency and an indication of the seriousness of the Dominican judiciary to uphold the ethical quality of employees, the sworn financial disclosure statements for all Dominican judges can be found on the Internet at <http://www.suprema.gov.do/jueces/dj.htm>. Nonetheless, an effective system to verify these statements has not yet been implemented and there are no sanctions for false statements.

The GODR is a party to the Inter-American Convention Against Corruption and in 2001 signed the consensus agreement on establishing a mechanism to evaluate compliance with the Convention.

Precursor Chemical Control. The Secretariat of Health is responsible for the control of chemicals entering and departing the DR. The CND has prohibited the re-exportation of certain chemicals.

Demand Reduction. The DNCD conducted 108 youth events in various cities and neighborhoods, from basketball tournaments to chess matches, reaching over 134,000 young people, to encourage

competitive and recreational activities as better choices than drug abuse. A non-governmental organization, Foundation for Life (FUNVIDA), published, with U.S. Government assistance, a book entitled “Schools Without Drugs” and distributed it gratis at neighborhood meetings in cities outside the capital area.

Agreements and Treaties. In 1984, the U.S. and the GODR entered into an agreement on international narcotics control cooperation. In May 2003 the Dominican Republic entered into three comprehensive bilateral agreements with the U.S. on Cooperation in Maritime Migration Law Enforcement, Maritime Counter-Drug Operations, and Search and Rescue, granting permanent overflight provisions in all three agreements for the respective operations. The three agreements conclude a long bilateral effort to secure permanent overflight provisions; previous agreements provided only annual provisions. In addition, the Maritime Counter-Drug Agreement broadened the scope of operations agreed to by the parties. The GODR signed, but has not yet ratified, the Caribbean Regional Maritime Agreement.

In 2002, the DR became the first country in the Western Hemisphere to sign an Article 98 agreement exempting U.S. military personnel in the DR from the jurisdiction of the International Criminal Court (ICC) and has since ratified it. In 2001, the U.S. and the DR exchanged instruments of ratification of the Treaty for the Return of Stolen or Embezzled Vehicles. Attempts to implement the treaty have been hampered by organizational weaknesses within the Dominican bureaucracy, and in 2004 no vehicles were repatriated under this treaty.

The GODR has signed but not ratified the UN Convention against Transnational Organized Crime, the Protocol to Prevent, Suppress and Punish Trafficking in Persons, the Protocol against the Smuggling of Migrants, and the Protocol against the Illicit Manufacturing of and Trafficking in Firearms.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. Cocaine and heroin trafficking, money laundering, institutional corruption, and reform of the judicial system remain the U.S.’ primary counternarcotics concerns in the DR. The USG and the GODR cooperate to develop Dominican institutions that can interdict and seize narcotics shipments and conduct effective investigations leading to arrests, prosecutions, and convictions. The USG will continue to urge the GODR to improve its asset forfeiture procedures and its capacity to regulate financial institutions, develop and maintain strict controls on precursor chemicals, and improve its demand reduction programs.

During 2004, the U.S. provided essential equipment and training to expand the counternarcotics canine units, supported the DNCD’s vetted special investigation unit, and funded assessments of airport and port security against narcotics trafficking and terrorism. The U.S. Transportation Security Agency (TSA) gave Santo Domingo’s Las Americas Airport ninety days to improve deficient aspects of security, and airport authorities succeeded, through considerable effort, in avoiding penalties.

The U.S. delivered one thirty-foot rigid hull inflatable boat and one landing craft to the Dominican Navy to help counternarcotics trafficking and illegal migration. The U.S. also assisted the Dominican Navy with its equipment maintenance and training programs and assessed requirements to outfit the Navy shore detachments.

The U.S. has funded training to the DNCD Fugitive Surveillance Unit, helping it locate, apprehend, and extradite individuals wanted on criminal charges in the U.S. Enhanced computer training, database expansion, and systems maintenance support were provided to the DNCD.

The Dominican Navy and Air Force have a direct communications agreement with the U.S. Coast Guard’s regional operations center in San Juan, Puerto Rico. Dominican Navy vessels have

participated in a few maritime drug seizures, and Navy shore patrols have disrupted illegal migration voyages, another favorite method for smuggling drugs.

USAID's "Strengthened Rule of Law and Respect for Human Rights" program continues to work with the Dominican court, public defender, and prosecutorial systems to improve the administration of justice, enhance access to justice, and support anticorruption programs. Improvements achieved to date include implementation of a new criminal procedures code which better protects the rights of the accused and requires a stricter adherence to the due process of law, and speedier, more transparent judicial processes managed by better trained, technically competent, and ethical judges. The USAID program provides training to prosecutors and public defenders in applicable basic criminal justice legal advocacy skills and has offered training in complex criminal case investigations and prosecutions.

The U.S. Department of Justice and Department of State provided advanced management training to senior police officers, including two from DNCD, at the International Law Enforcement Academy (ILEA) in Roswell, NM. DEA offered a basic drug intelligence course for the DNCD in December. Five DNCD officers attended FBI training focused on high-risk arrest tactics.

The U.S. Department of Homeland Security worked closely with Dominican business associations to establish a Dominican chapter of the Business Anti-Smuggling Coalition (BASC). This voluntary alliance of manufacturers, transport companies, and related private sector entities has agreed to meet stringent security standards to prevent smuggling by means of their operations and to receive surprise inspections at any time. The BASC approach has proven successful in other Latin countries in minimizing contraband and promoting honest business activity. In 2004, five Dominican companies met the strict criteria for BASC certification.

The DNCD, with U.S. and Dutch support, made plans to establish a canine unit for narcotics detection at Puerto Plata International Airport, bringing that facility, allegedly a smugglers' favorite, into line with units at Santo Domingo, Santiago, Punta Cana, and La Romana airports.

The U.S. is planning to deploy a U.S. mobile training team for the DNCD's border units and provide increased support for Dominican naval patrols of the Mona Passage.

With U.S. Department of Homeland Security leadership and DEA support, the Dominican Port Authority and the DNCD maintained good security at the formerly chaotic Santo Domingo terminal of the ferry to Puerto Rico. A 2003-04 project has improved passenger processing and established controls to detect and prevent smuggling of drugs and other contraband. U.S. agents also provided advice on the prevention of smuggling to the owners of the new Caucedo container terminal, which commenced full operation in 2004.

The Drug Enforcement Administration (DEA)-funded Caribbean Center for Drug Information at DNCD headquarters permits real-time sharing and analysis of narcotics-related intelligence among all the nations of the Caribbean Basin. Similar centers are established in Mexico, Colombia, and Bolivia.

The Road Ahead. The immediate U.S. goal remains helping to institutionalize judicial reform and good governance. The GODR and U.S. are working to build coherent counternarcotics programs that can resist the pressures of corruption and can address new challenges brought by innovative narcotics trafficking organizations. The USG and the GODR will continue strengthening drug control cooperation through sharing of information and developing closer working relations among principal agencies. The U.S. will continue providing training and equipment for the DNCD, focusing its attention on the information technology and intelligence exchange necessary to disrupt narcotics smuggling at Dominican land and sea borders and at airports. Support for the retraining and recertification of the DNCD canine units will continue, as will establishment of new canine units in cooperation with DNCD. The DNCD's fugitive investigation teams will continue to receive hands-on U.S. support for their efforts pursuing Dominican fugitives from U.S. justice seeking refuge in the DR.

The USG will continue to provide support to Dominican government and private sector counternarcotics efforts, including provision of specialized technical equipment and support of business and civil society demand reduction efforts.

USAID and the U.S. Department of Justice's Office of Overseas Prosecutorial Development, Assistance and Training (OPDAT) will provide further training to prosecutors and investigators, increasing their professionalism and ensuring that they are prepared to continue to implement the new Criminal Procedures Code. U.S. support for civil society's and the Fernandez administration's efforts to prevent and prosecute corrupt activities will continue, through U.S.-funded programs to strengthen the Attorney General's Department for Prevention of Corruption and the Controller General's Office, and through monitoring and reporting GODR compliance with the Inter-American Convention Against Corruption.

Dutch Caribbean

I. Summary

Aruba, the Netherlands Antilles, and the Netherlands together form the Kingdom of the Netherlands. The two Caribbean parts of the Kingdom have autonomy over their internal affairs, with the right to exercise independent decision making in a number of counternarcotics areas. The Government of the Netherlands (GON) is responsible for the defense and foreign affairs of all three parts of the Kingdom and assists the Government of Aruba (GOA) and the Government of the Netherlands Antilles (GONA) in their efforts to combat narcotics trafficking. The Kingdom of the Netherlands is a party to the 1988 UN Drug Convention, and all three parts are subject to the Convention. Both Aruba and the Netherlands Antilles are active members of the Financial Action Task Force (FATF) and Caribbean Financial Action Task Force (CFATF).

II. Status

Netherlands Antilles. The islands of the Netherlands Antilles (NA) (Curacao and Bonaire off Venezuela and Saba, Saint Eustatius, and Sint Maarten east of the U.S. Virgin Islands) continue to serve as northbound transshipment points for cocaine and increasing amounts of heroin coming from South America; chiefly Colombia, Venezuela, and to a much lesser extent, Suriname. These shipments typically are transported to U.S. territory in the Caribbean by “go-fast” boats although use of fishing boats, freighters, and cruise ships is becoming more common. Direct transport to Europe, and at times to the U.S., is by “mules” (drug couriers) using commercial flights. Evidence in 2004 did not support a finding that drugs now entering the United States from the Netherlands Antilles are in an amount sufficient to have a significant effect on the United States, but the entire eastern and southern Caribbean is an area of U.S. concern. The DEA and local law enforcement saw continued go-fast boat traffic this year, much of which moved to Sint Maarten en route to Puerto Rico or the U.S. Virgin Islands. Additionally, there was a marked increase in sailing vessels and larger vessels that were used to clandestinely move multi-hundred kilogram shipments of cocaine under the guise of recreational maritime traffic.

The crackdown at Curacao’s Hato International Airport on “mules”—who either ingest or conceal on their bodies illegal drugs—which began in 2002 continued during 2004. Most of the courier traffic (current estimate is 95 percent) is destined for Europe. Since the inception of the “Hato Team” concept of interagency cooperation in April 2002, at least 13,000 persons have been denied boarding based on suspicion of drug trafficking under the GONA’s legal authority to prevent disruption on air carriers. Suspected traffickers may request an X-ray in order to clear themselves of suspicion and receive permission to board the plane, but only about 10 percent do so. Of those, about three percent are found to have ingested drugs. The previous year saw the intensification of regional law enforcement against this endemic problem. Dutch officials in The Netherlands initiated a “100 percent Check” on all passengers arriving at Amsterdam’s Schiphol Airport from the Antilles. The Antilles joined in the effort by initiating a program during July 2004 wherein Antilleans identified attempting to carry drugs to Europe automatically lost their passports for a period of two years. These changes were accompanied by an aggressive law enforcement stance to rid the airport of corruption within both civilian and law enforcement ranks; another example of the Antilles, with their Dutch partners, taking the responsibility to deal with their own internal matters. With the increased regional attention and local enforcement efforts, violence directed at law enforcement operating at the airport dissipated during 2004; a welcomed change from the 2003 reporting which indicated at least seven assaults by gunfire on the airport “Hato Team.” Consistent with the continued smuggling ventures, arrests were

frequent in 2004. Curacao's prison remains at capacity and management problems there persist. Aware of this problem, the GONA has taken measures to reduce the prison population by pre-trial diversion of non-violent offenders and by developing a new strategy for law enforcement wherein leaders of the responsible trafficking organizations are targeted in lieu of imprisoning the near endless flow of couriers.

As Hato airport maintained tightened control during the year, traffickers shifted their attention to other Antillean airports, challenging law enforcement control at those locations as well. Law enforcement reporting also noted a marked increase in alternate routes to Europe from neighboring countries like the Dominican Republic, Haiti, and French St Martin. Dutch Sint Maarten continued to detect increasing numbers of "mules" and moved forward with plans to improve its drug detection technology with Dutch assistance. In addition to go-fast boat activity and smuggling via commercial airlines, large quantities of narcotics moved through in containers, as indicated by seizures from containers in 2004. In October 2004, Antillean authorities seized approximately 150 kilograms of cocaine from a container after it arrived in Dutch St Maarten from French St Martin. This was the third time an event like this transpired during the year. Statistics on significant seizures in 2004 indicate that Dutch Sint Maarten continues to pose a serious threat as a staging ground for moving cocaine and heroin into the U.S. market. Officials at St. Maarten have taken this threat seriously by initiating joint U.S. cooperative investigations as well as adopting new law enforcement strategies to combat the problems.

The crime and homelessness stemming from drug abuse remained important concerns for the GONA. After Curacao experienced a stunning increase in drug-related homicides in 2002 with an additional moderate increase in 2003, reporting during 2004 saw a reduction of 45 percent to 13 total drug related homicides. This was attributed to successful regional enforcement operations, one of which was followed by a period of five weeks with no homicides. Because most of the victims were Colombians, beginning early in 2003, the GONA required visas of Colombians wishing to enter its territory. During 2004, the GONA further strengthen their visa requirements by adding several other countries to the visa requirement list. Peru, the Dominican Republic, Cuba, and other European markets topped the noteworthy list. These changes were paralleled by the GONA's re-prioritization of the "Zero Tolerance" teams whose primary mission is to identify illegal immigrants to the islands and deport them. This was accompanied by the Minister of Justice's arrangement with the Netherlands to support new law enforcement missions via loans to cover police overtime, prison reforms, and to station additional Dutch police in the Antilles. He continues to push initiatives such as improving intelligence networks, developing direct Antillean to other foreign country liaison, and acquiring tools like container scanning devices and ground based radar for the region.

Elected officials and all elements of the law enforcement and judicial community recognize that the NA, chiefly due to geography, faces a serious threat from drug trafficking. The police, who are understaffed and need additional training, have received some additional resources, including support from the National Guard. On March 12, 2004, the local parliament declared a state of emergency as it related to internal crime. This declaration allowed significantly more input and participation of Antillean and Dutch military units in the crime reduction effort. The rigorous legal standards that must be met to prosecute cases constrain the effectiveness of the police; nevertheless, local police made significant progress in 2004 in initiating complex, sensitive cases targeting upper-echelon traffickers. After law enforcement made the largest seizure ever of 2345 kilograms of cocaine and 28 kilograms of heroin, the court system (for the first time) approved the dismissal of a local prosecution in lieu of a U.S. extradition and prosecution of seven prominent targets involved in the regional organization. Additional noteworthy developments during 2004 also included the "first" extradition of targets from the Netherlands to the Antilles to face charges. These efforts demonstrated the effectiveness of cooperation with other law enforcement entities in the region.

The far-reaching restructuring of the police, started in 2000, continues to show limited results. During 2000, the police chief made the improvement of the Criminal Investigative Service (CID) his top priority. His second priority was, and continues to be improving the expertise of the financial investigation team. During 2004, the regional community took notice of the first successful joint Antillean/Dutch investigation that was conducted by the Hit and Run Money Laundering Team (HARM). This investigation was the culmination of a multi-jurisdictional money laundering investigation of a drug trafficking organization. For the first time in recent history, businesses operating with near impunity in the Curacao Free Trade zone were held accountable for their involvement in money laundering schemes. Thirteen individuals were arrested in Curacao and The Netherlands and two operating free zone businesses were seized.

As a result of a protocol signed in 2002 between the Justice Ministers of the Antilles and the Netherlands, the NA is now connected to the Police Information net to exchange information, particularly about international crime. The specialized Dutch police units (RSTs) that support law enforcement in the NA continued to be effective in 2004 and continued, as originally intended, to include local officers in the development of investigative strategies to ensure exchange of expertise and information. During the year, the RST took their place in the regional scheme of enforcement as a viable international partner for law enforcement matters.

In addition to these improvements in law enforcement, the GONA demonstrated its commitment to the counternarcotics effort by continued support for a U.S. Forward Operating Location (FOL) at the Curacao Hato International Airport. Under a ten-year use agreement signed in March 2000 and ratified in October 2001 by the Dutch Parliament, U.S. military aircraft conduct counternarcotics detection and monitoring flights over both the source and transit zones from commercial ramp space provided free of charge. A major expansion project at the airport that began in January 2002 and completed during September 2003 significantly increased the FOL's capacity.

The Netherlands Antilles and Aruba Coast Guard (CGNAA) scored a number of impressive successes in 2004. The CGNAA was responsible for several seizures of cocaine, heroin, and marijuana. As an example of their continued success, on October 11, 2004, the CGNAA helicopter identified an inbound go fast, conduct discreet aerial surveillance until the load was passed to a car, and then vectored local police into the location. A total of 336 kilograms of cocaine, 10 kilograms of heroin, and weapons were seized. The CGNAA's three cutters, outfitted with rigid-hull inflatable boats (RHIBs) designed especially for counternarcotics work in the Caribbean, demonstrated their utility against "go-fast" boats and other targets. They continue efforts to obtain new 'super' RHIBs for increased patrol patterns.

The CGNAA has developed a very effective counternarcotics intelligence service and is considered by the U.S. Coast Guard and DEA to be an invaluable international law enforcement partner. Authorities in both the NA and Aruba are intent on ensuring that there is a proper balance between the CGNAA's international obligation to stop narcotics trafficking through the islands, and its local responsibility to stop narcotics distribution on the islands. Under the continued leadership of the Attorney General, the GONA continued to strengthen its cooperation with U.S. law enforcement authorities throughout 2004. This cooperation extended to Sint Maarten, where the United States and the GONA continued joint efforts against international organized crime and drug trafficking.

Aruba. Aruba is a transshipment point for increasing quantities of heroin, and to a lesser extent cocaine, moving north, mainly from Colombia, to the U.S. and secondarily to Europe. Drugs move north via cruise ships and the multiple daily flights to the U.S. and Europe. While the transshipment of heroin is of growing concern, evidence in 2004 did not support a finding that drugs entering the U.S. from Aruba were in an amount sufficient to have a significant effect on the U.S., but the eastern and southern Caribbean is an area of concern to the U.S. The island attracts drug traffickers with its good infrastructure, excellent flight connections, and relatively light sentences for drug-related crimes

served in prisons with relatively good living conditions. This problem is further promulgated by the Netherlands Antilles' law enforcement successes in Curacao during 2004, which necessitated a change in route on the part of the traffickers in the region.

While Aruba enjoys a low crime rate, reporting during 2004 indicates that prominent drug traffickers are establishing themselves sporadically on the island. Additionally, Arubans worry about the easy availability of inexpensive drugs. The most visible evidence of a drug abuse problem may be the homeless addicts, called "chollars" who number about 300 and whose photographs routinely appear in publications to increase public awareness to drug abuse and to stem an increase in crime.

Drug abuse in Aruba remains a cause for concern. Personal use quantities of the various types of drugs are easily found within walking distance of Oranjestad's cruise pier and are frequently peddled to cruise ship tourists. Over the last year, cruise lines that visit Aruba have instituted strict boarding/search policies for employees in order to thwart efforts of the traffickers to establish regular courier routes back to the United States. The expanding use of MDMA in clubs by young people attracts increasing attention. Private foundations on the island work on drug education and prevention and the Aruban government's top counternarcotics official actively reaches out to U.S. sources for materials to use in his office's prevention programs. The police also work in demand reduction programs for the schools and visit them regularly. The government has established an interagency commission to develop plans and programs to discourage youth from trafficking between the Netherlands and the U.S. The Government has been very clear that it intends to pursue a dynamic counternarcotics strategy in close cooperation with its regional and international partners.

In 2004, Aruban law enforcement officials continued to investigate and prosecute mid-level drug traffickers who supply drugs to the endless parade of "mules." During 2004, there were several instances where Aruban authorities cooperated with U.S. authorities to realize U.S. prosecutions of American citizens arrested in Aruba while attempting to return to the United States with drugs in multi-kilogram quantities. Aruba also devotes substantial time and effort to the identification of the person's responsible for the importation of drugs to Aruba. During 2004, Aruba realized a successful investigation with Jamaican Police and U.S. authorities that targeted a substantial heroin trafficking organization.

The police were reorganized in 2002, establishing four instead of three districts, each autonomous with its own detectives' division and led by a District Commissioner. Officers rotate periodically through the police functions. The aim was to put more police on the streets to counter criticism that low-level street pushers enjoy virtually unimpeded freedom to sell cheap drugs to Aruban youth. Two new police stations were established. A new police unit was created for the tourist areas to provide focused coverage, including counternarcotics initiatives. The Attorney General, who was appointed in 2002, remains committed to international cooperation.

The GOA took additional steps in 2004 to demonstrate its commitment to the international effort to combat drug trafficking. After accommodating the placement of U.S. Customs aircraft at a Forward Operating Location (FOL) at Reina Beatrix International Airport in 1999, the GOA continued to make valuable commercial ramp space available to both U.S. military and U.S. Customs aircraft conducting aerial counternarcotics detection and monitoring missions. Further development of the FOL facilities on Aruba is underway.

The GOA hosts the Department of Homeland Security's (DHS) Bureau of Customs and Border Protection pre-inspection and pre-clearance personnel at Reina Beatrix airport. These officers occupy facilities financed and built by the GOA. DHS seizures of cocaine, heroin, and ecstasy were frequent in 2004. Drug smugglers arrested are either prosecuted in Aruba or returned to the U.S. for prosecution, if appropriate. Aruban jails remain critically overcrowded. The GOA established special cells in which to detain those suspected of ingesting drugs. Aruban officials regularly explore ways to

capitalize on the presence of the FOL and pre-clearance personnel, seeking to use resident U.S. law enforcement expertise to improve local law enforcement capabilities.

Aruba also continued to participate in the Coast Guard of the Netherlands Antilles and Aruba, which, for most of the year, continued to be plagued by labor disputes with the union related to employment benefits in a long-term confrontation with the GOA.

III. Actions Against Drugs in 2004

Agreements and Treaties. The Netherlands extended the 1988 UN Drug Convention to the NA and Aruba in March 1999, with the reservation that its obligations under certain provisions would only be applicable in so far as they were in accordance with NA and Aruban criminal legislation and policy on criminal matters. The NA and Aruba subsequently enacted revised, uniform legislation to resolve a lack of uniformity between the asset forfeiture laws of the NA and Aruba. The obligations of the Netherlands as a party to the 1961 UN Single Convention on Narcotic Drugs, as amended by the 1972 Protocol, apply to the NA and Aruba. The obligations of the Netherlands under the 1971 UN Convention on Psychotropic Substances have applied to the NA since March 10, 1999. The Netherlands's Mutual Legal Assistance Treaty (MLAT) with the United States applies to the NA and Aruba. Both Aruba and the NA routinely honor requests made under the MLAT and cooperate extensively with the United States on law enforcement matters at less formal levels. In April, the NA signed a Tax Information Exchange Agreement with the U.S. Aruba followed suit shortly thereafter. Aruba has limited legislation dating from May 1996 regulating the import and export of certain precursor and essential chemicals, consistent with the 1988 UN Drug Convention. In the Antilles, it is not clear if the pending legislation 2381 at Parliament relating to precursors is final, but the NA does cooperate in efforts to identify and destroy chemicals.

Cultivation/Production. Cultivation and production of illicit drugs are not issues.

Seizures. Available drug seizure statistics for calendar year 2004 are as follows:

Aruba seized 226.122 kilograms of cocaine, 16.901 kilograms of heroin, 91.838 kilograms of marijuana, 115 grams of hashish, and 1070 tablets of MDMA ("Ecstasy"), and 636 marijuana plants. Arrests: 222.

The NA seized 9,076.786 kilograms of cocaine, 25.340 kilograms of heroin, 237.926 kilograms of marijuana, and 50,143 tablets of MDMA ("Ecstasy"). Arrests: 1409.

Corruption. The effect of official corruption on the production, transportation, and processing of illegal drugs is not an issue for Aruba. During 2004, the NA continued an aggressive and notably successful program to identify certain links from prominent traffickers in the region to law enforcement officials, which prompted additional investigation in the region. The NA has been quick to address these issues through criminal investigations, internal investigations, new hiring practices, and continued monitoring of law enforcement officials that hold sensitive positions. To prevent such public corruption, there is a judiciary that enjoys a well-deserved reputation for integrity. It has close ties with the Dutch legal system including extensive seconding of Dutch prosecutors and judges to fill positions for which there are no qualified candidates among the small Antillean and Aruban populations.

Domestic Programs (Demand Reduction). Both the NA and Aruba have ongoing demand reduction programs, but need additional resources. Aruba, having identified and acquired a site, plans to open a comprehensive drug rehabilitation and shelter facility as early as March 2005. The Korps Politie of Curacao completed final training during February 2004 of its well-trained Demand Reduction staff to do presentations at local schools. St Maarten has followed suit with plans to complete a formal program during the coming months.

IV. U.S. Policy Initiatives and Programs

The United States encourages Aruban and NA law enforcement officials to participate in INL-funded regional training courses provided by U.S. agencies at the GOA and GONA's expense. Chiefly through the DEA and DHS/Immigration and Customs Enforcement, the United States is able to provide assistance to enhance technical capabilities as well as some targeted training. During 2004, the DEA directly sponsored law enforcement initiatives worth more than \$1 million in the NA and Aruba. The U.S. continues to search for ways in which locally assigned U.S. law enforcement personnel can share their expertise with host country counterparts.

Appreciation of the importance of intelligence to effective law enforcement has grown in the Dutch Caribbean. The USG is expanding intelligence sharing with GOA and GONA officials as they realize the mutual benefits that result from such sharing. Because U.S.-provided intelligence must meet the strict requirements of local law, sharing of intelligence and law enforcement information requires ongoing, extensive liaison work to bridge the difference between U.S. and Dutch-based law.

Eastern Caribbean

I. Summary

The seven Eastern Caribbean countries—Antigua and Barbuda, Barbados, Dominica, Grenada, St. Kitts and Nevis, St. Lucia, and St. Vincent and the Grenadines—form the eastern edge of the Caribbean transit zone for drugs, mostly cocaine and marijuana products, traveling from South America to the U.S. and other global markets. Approximately 30-35 metric tons of cocaine originate from, are destined for, or transit through the Eastern Caribbean (from Puerto Rico east and south) annually to the United States. Eight to nine times that amount transit the Eastern Caribbean to Europe annually. Illicit narcotics transit the Eastern Caribbean mostly by sea, in small go-fast vessels, larger fishing vessels, yachts and freight carriers.

South American traffickers deliver drug loads either over the beach or else they offload their illicit cargo to smaller local vessels for delivery ashore. Marijuana shipments from St. Vincent often come ashore via swimmer delivery. Smugglers also attempt to transport cocaine and marijuana by commercial air. An OAS study on maritime trafficking in the Western Hemisphere indicated that cocaine trafficked to Europe is transported primarily in commercial containerized cargo. There is little narcotics airdrop activity in the region.

The level of cocaine and marijuana trafficked through any individual Eastern Caribbean country to the U.S. does not reach the level needed to designate any one of them a major drug transit country.

Drug trafficking and related crimes—such as money laundering, drug use, arms trafficking, official corruption, violent crime, and intimidation—have the potential to threaten the stability of the small, democratic countries of the Eastern Caribbean and, to varying degrees, have damaged civil society in some of these countries. Regional and international drug trafficking organizations (DTO's) and various organized crime groups have infiltrated many of the Eastern Caribbean nations, corrupting officials and contracting the services of local criminal organizations, some of whom are now sufficiently trusted by major DTO's to be given narcotics on consignment. There are reports that Colombian nationals are residing in some Eastern Caribbean countries and organizing drug trafficking operations. Some of the Eastern Caribbean DTO's also have established contacts amongst themselves to facilitate drug distribution in the region. Local traffickers often pay for services with drugs and/or weapons to limit costs and to increase demand and markets. According to U.S. law enforcement officials, the infrastructure built by DTO's operating in the region and other vulnerabilities that exist in the region make it ripe for exploitation by terrorist organizations.

The seven Eastern Caribbean states are parties to the 1961 UN Single Convention, as amended by the 1972 Protocol, and the 1988 UN Drug Convention. All of the Eastern Caribbean countries are parties to the 1971 UN Convention on Psychotropic Substances. Six states are parties to the UN Convention Against Transnational Organized Crime. Two of the states have signed and two more have acceded to that Convention's protocols on trafficking in persons and migrant smuggling; one has signed and two have acceded to the firearms protocol. Six of the seven states are parties to the Inter-American Convention against Corruption; one has signed but not ratified. Two have ratified the Inter-American Convention on Extradition. One state has signed and six states are parties to the Inter-American Firearms Convention. Three states are parties to the Inter-American Convention on Mutual Assistance in Criminal Matters. Several Eastern Caribbean states have mutual legal assistance statutes that permit the exchange of mutual legal assistance with Commonwealth countries and states-parties to the 1988 UN Drug Convention. All seven governments have bilateral mutual legal assistance and extradition treaties in force with the U.S.

The U.S. Government has maritime drug law enforcement agreements with all seven of the Eastern Caribbean states. A Protocol to amend and update the maritime agreements was submitted to each country in April 2003. The Protocol would permit hot pursuit of maritime drug traffickers into the territorial waters of an Eastern Caribbean state by U.S. Coast Guard law enforcement detachments aboard third country ships (e.g., UK). The Protocol also would permit a law enforcement shiprider from any Regional Security System (RSS) member state (the seven Eastern Caribbean states comprise the RSS) aboard a U.S. Coast Guard or third country vessel to authorize drug law enforcement operations in the territorial waters of any RSS member state. Only Antigua and Barbuda has signed the Protocol.

Marijuana crops are grown in the greatest amounts in Dominica, St. Lucia, St. Kitts and Nevis, and St. Vincent and the Grenadines, primarily for local use or for export to other islands in the region and Europe. Marijuana is grown to a lesser extent in Antigua and Barbuda and in Grenada. The overall level of production is below the threshold for designating any of these countries as major drug producers under the FAA, yet the extent of marijuana production within St. Vincent and the Grenadines appears to make it a significant element of the Vincentian economy. Most Eastern Caribbean officials regard marijuana production and trafficking as serious offenses, although the question of legalization or decriminalization is being discussed in some quarters. The U.S. supports and encourages eradication campaigns as a means to combat marijuana use in the Eastern Caribbean.

In general, Eastern Caribbean law enforcement agencies are committed to controlling drug trafficking. They work closely with U.S. and UK law enforcement counterparts, who also collaborate closely with each other in the region. Eastern Caribbean states also participated in joint operations with French, Dutch, Belgian assets. Maritime interdiction in some of the islands has improved significantly as a result of two U.S.-provided and supported C-26 airborne maritime surveillance aircraft. This program, which is operated entirely by Eastern Caribbean RSS personnel, coupled with a recent significant interagency U.S. investment in maritime equipment and operational support, and a similar UK investment in maritime training, intelligence support, and joint operations command and control training, are beginning to reap increasing interdiction dividends. In 2004, all of the Eastern Caribbean countries were operating rigid-hull inflatable boats received from the U.S. as their principal maritime counternarcotics interceptor.

Eastern Caribbean coast guards endorsed standard operating procedures for the boats. All but one Eastern Caribbean state have functioning interagency operations centers, called National Joint Coordination Centers (NJCC's). The NJCC's also have access to the Regional Clearance System, administered by the Caribbean Customs Law Enforcement Council in St. Lucia, which registers small craft and crew movements in the Caribbean. Both the U.S. and the UK are encouraging and assisting efforts to improve NJCC effectiveness.

Aircraft, maritime interceptor and operations center personnel in the region all have been vetted for security reliability. With the aircraft providing over-the-horizon detection and surveillance, and the pursuit boats engaged in end-game interdiction prosecutions, the traffickers' ability to outrun and outmaneuver Eastern Caribbean maritime assets is diminishing.

Interdiction challenges remain, however. Eastern Caribbean maritime assets normally remain within their territorial sea and only venture beyond when favorable interdiction conditions exist. In the past, interdiction of ocean-going drug loads generally has been left to any UK, French, Dutch or U.S. assets that may have been in the region at the time. The U.S. and its European allies in the Caribbean are planning an Eastern Caribbean drug interdiction strategy that will incorporate where possible the capabilities of Eastern Caribbean jurisdictions.

Eastern Caribbean maritime establishments are chronically under-resourced and several have lost their U.S. security assistance funding as a result of not concluding with the U.S. bilateral International Criminal Court non-surrender agreements. Routine drug law enforcement patrolling, particularly at

night, is intermittent and the establishments as a whole do not have a reputation for consistent drug law enforcement aggressiveness or effectiveness. After-action reviews for the purpose of improving operations are infrequent.

However, there have been several operations during the past year when maritime units were required to defend against ramming by traffickers' vessels, and successfully effected arrests and seizures. (Most maritime traffickers jettison their drug loads and weapons when approached by law enforcement vessels.) With respect to effectiveness, coordination between air and maritime units during operations, a new requirement in the region since the advent of the airborne program, has improved. On a number of occasions, though, the C-26 aircraft have been able to guide maritime and land force units to successful interdictions. Barbados' standard operating procedures for joint maritime interdiction operations have resulted in several significant interdictions in 2004. The U.S. and UK will continue to partner closely with the airborne, maritime and land drug law enforcement units with the aim of improving interdiction coordination and effectiveness. The leading obstacles in most of the Eastern Caribbean states are a lack of funding and proper maritime training of personnel and equipment.

Police drug squad effectiveness in the region also suffers from a lack of resources, including in some cases insufficient equipment and vehicles or dispiriting office infrastructure. The U.S. continues to provide equipment, vehicles and operational support to regional drug law enforcement personnel. With the support of police commissioners, these personnel cooperate with U.S. and UK counterparts to develop drug intelligence and build cases against trafficking organizations. With assistance from the UK, several Eastern Caribbean countries have installed ionscan equipment at airports, thus strengthening their ability to seize narcotics entering or leaving the country.

Where the Eastern Caribbean states have had the least success is in the prosecution of organized drug crime. Conspiracy cases against DTO ringleaders, prosecutions for complex finance crimes and money laundering cases and significant asset forfeitures connected to cases developed within Eastern Caribbean jurisdictions remain almost non-existent. Some of the necessary criminal statutes to bring such cases exist in all Eastern Caribbean countries, such as conspiracy, criminal asset forfeiture and money laundering laws, but they are used infrequently. Other laws or practices that would allow law enforcement agencies to effectively penetrate or disrupt organized criminal groups, such as civil forfeiture, wiretapping, undercover buys, paying informants, controlled deliveries, witness protection and plea agreements have not been enacted or implemented. Moreover, sentences for drug possession or trafficking do not appear to act as a deterrent.

The U.S., UK and organizations such as the Caribbean Office of the UN Office on Drugs and Crime (UNODC), the Association of Caribbean Commissioners of Police (ACCP), and the Caribbean Anti-Money Laundering Program (CALP) all are providing encouragement and assistance to Eastern Caribbean states to improve the prosecutorial environment. CALP, however, ended its program December 31, 2004. In 2004 the U.S. sponsored a judicial exchange between a U.S. District Judge and the Eastern Caribbean Supreme Court. Both the U.S. and UK have encouraged the adoption of wiretapping legislation. CALP has circulated model civil forfeiture legislation and the ACCP President called for civil forfeiture, plea-bargaining, electronic surveillance and rackets legislation. The 1996 Barbados Plan of Action for Drug Control Coordination and Cooperation in the Caribbean, the 1997 U.S.-Caribbean Summit Justice and Security Action Plan, and the CARICOM Regional Task Force on Crime and Security, as well as Caribbean police authorities on a regular basis, all call for modern laws covering many of these areas.

Progress has been limited. Antigua and Barbuda has adopted civil forfeiture legislation. Several Eastern Caribbean states are considering wiretap legislation. There appears to be a growing recognition in the region among police and prosecutors that without such tools, trafficking organization leaders will remain immune from arrest and prosecution. In most Eastern Caribbean

states, an apparent lack of political will or leadership, and in others, resource shortages (e.g., of funds for informants or witness relocation, etc.) have effectively weakened such legal initiatives.

Some prosecutors do not have sufficient experience with complex conspiracy or financial crime cases; others may believe the judiciary is ill prepared to handle such cases. Without a serious, broad-based prosecution and law enforcement modernization effort, and a greater percentage of national resources given to narcotics law enforcement and prosecution, it is unlikely that the region will develop significant defenses against DTO's, as well as terrorist organizations, money launderers and other international and regional criminals and criminal groups.

In 2004, the seven Eastern Caribbean countries continued to support the treaty-based RSS. Barbados pays 40 percent of the RSS's budget. The RSS includes marijuana eradication exercises in its twice-yearly basic training course for police special services units. The RSS continued to operate a maritime training facility in Antigua for member-nation forces.

Local instructors, assisted primarily by resident British Royal Navy trainers, with some supplementary training provided by U.S. Coast Guard trainers, have provided various law enforcement and seamanship courses for several years. The C-26 program is fully funded by the USG and operates under the aegis of the RSS. The seven Eastern Caribbean islands that comprise the RSS should make an effort to start contributions before all USG funding is exhausted for the C-26 program.

With the amount of narcotics transiting the region and the presence in each of the Eastern Caribbean states of offshore financial institutions, the Eastern Caribbean has been vulnerable to money laundering for some time. By the end of 2003, the Eastern Caribbean states had met international standards for anti-money laundering legislation, regulations and law enforcement infrastructure (in the form of financial intelligence units). The need for effective and consistent implementation of anti-money laundering efforts remains. This phenomenon is addressed in detail in the money laundering section of this report.

Dominica and St. Kitts and Nevis have economic citizenship programs that are susceptible to abuse through inadequate due diligence checks. Unscrupulous individuals, including suspected members of criminal organizations, can take advantage of economic citizenship programs to ease travel and to modify and/or create multiple identities. Such individuals have also used these false identities to help create offshore entities used in money laundering, financial fraud, migrant smuggling and other illicit activities, as well as to facilitate the travel of the perpetrators of these crimes. Immigration and passport agencies in the Eastern Caribbean countries also are susceptible to corruption and that, combined with the lack of automated immigration records in the region, can facilitate ease of movement for criminals or terrorists. In 2003, a number of Eastern Caribbean states decided to undertake immigration automation efforts. Grenada is the first Eastern Caribbean state to have automated its immigration system.

In 2004, the Eastern Caribbean countries' continued their participation in the work of the Caribbean Community's (CARICOM) Regional Task Force on Crime and Security. In some respects, the Regional Task Force is a successor to the efforts undertaken in the region in connection with the 1996 Barbados Plan of Action and its follow-up 2001 high-level meeting on drugs and crime, and with the 1997 Caribbean-U.S. Summit Action Plan. The 1997 U.S.-Caribbean Action Plan had set out a comprehensive set of measures to combat transnational crime, particularly drug trafficking and money laundering. It called for collaboration also in strengthening criminal justice systems and interdiction efforts, combating small arms smuggling and corruption, developing a criminal justice protection program and reducing drug demand through education, rehabilitation and eradication. The CARICOM Task Force's recommendations, similar in many respects to previous recommendations, take into account also the need for counterterrorism efforts as a result of the September 11, 2001 attacks on the U.S. and would have the effect of improving drug law enforcement and prosecution efforts, if implemented. Eastern Caribbean countries are working on the recommendations given priority for

implementation by the CARICOM Heads of Government in 2003, including establishing a regional fingerprint and criminal record database, development of a regional anticrime plan, and conducting a drug policy review.

II. Status of Countries and Actions Against Drugs

Antigua and Barbuda. The islands of Antigua and Barbuda are transit sites for cocaine moving from South America to the U.S. and global markets. Some law enforcement officials believe that improved airport enforcement in Jamaica has prompted traffickers to seek other outbound locations in the Caribbean for transit by commercial air carrier.

An increase in airport arrests in Antigua following installment of ionscan equipment and implementation of modern profiling techniques indicates that this may be so. Reportedly, there are Colombian nationals in Antigua participating in trafficking operations.

Narcotics entering Antigua and Barbuda are transferred mostly from go-fast boats, fishing vessels, or yachts to other go-fasts, powerboats or local fishing vessels for delivery into Antigua and Barbuda. Secluded beaches and uncontrolled marinas provide excellent areas to conduct drug transfer operations.

Marijuana cultivation on the islands is not significant.

Marijuana imported for domestic consumption primarily comes from St. Vincent.

Antigua and Barbuda is a party to the 1961 UN Single Convention, as amended by the 1972 Protocol, the 1971 UN Convention on Psychotropic Substances, and the 1988 UN Drug Convention. The Government of Antigua and Barbuda (GOAB) is a party to the Inter-American Convention against Corruption, the Inter-American Convention on Extradition, the Inter-American Convention on Mutual Assistance in Criminal Matters, the Inter-American Convention against the Illicit Manufacturing of and Trafficking in Firearms, Ammunition, Explosives and Other Related Materials (Inter-American Firearms Convention), and the Inter-American Convention on Extradition. The GOAB has signed the UN Convention against Transnational Organized Crime, but has not signed any of its three protocols.

The USG and the GOAB signed a maritime drug law enforcement cooperation agreement in 1995 and an over-flight agreement in 1996. This agreement was amended in 2003 to facilitate broadened maritime law enforcement efforts. In 1999, the GOAB was the first Eastern Caribbean government to bring into force extradition and mutual legal assistance treaties with the U.S. In most cases, the GOAB is responsive to USG-initiated mutual legal assistance requests. The U.S. has made two extradition requests to Antigua and Barbuda since the treaty entered into force. One individual was extradited in 2003, and the remaining extradition was denied; the appellate court upheld the denial.

GOAB drug law enforcement efforts are shared by the police drug squad and the Office of National Drug Control and Money Laundering Policy (ONDCP), which received police powers in 2003. The ONDCP comprises the National Joint Coordination Center, the Financial Intelligence Unit, the Financial Investigations Unit, the Drug Intelligence Unit, and the Drug Control Policy Unit coordinator and two attorneys. In 2003, a national drug kingpin task force began operating out of the ONDCP under the leadership of a UK Customs and Excise Drug Liaison Officer. In 2004, GOAB forces seized 25 kilograms of cocaine and 7,120 kilograms of marijuana, arrested 171 persons on drug-related charges and eradicated 16,178 marijuana plants. Antigua and Barbuda has both conviction-based and civil forfeiture legislation; it is the only Caribbean country with the latter. With assistance from the OAS, the GOAB drafted a master drug control plan that was approved in 2002.

The rehabilitation center in Antigua and Barbuda is Crossroads, a 36-bed private drug treatment facility that offers treatment to international and a limited number of local clients who can take advantage of special payment and after-treatment work programs to cover the cost of treatment. In

2001, Crossroads and the GOAB established a halfway house for recovering substance abusers in the capital, St. John's. There are no public drug rehabilitation facilities in Antigua and Barbuda. Drug addicts are referred to the country's mental hospital. The ONDCP, in association with international donors, local organizations and the Ministry of Education, is initiating a "life skills" education program in schools. The police conduct a schools D.A.R.E. program.

Barbados. Barbados is a transit country for cocaine and marijuana products entering by sea and by air from South America and elsewhere in the region. Smaller vessels or go-fast boats transport marijuana from St. Vincent and the Grenadines and cocaine from South America. There have been several instances in which passengers on flights originating in Jamaica were found with marijuana on arrival in Barbados.

Barbados is party to the 1961 UN Convention, as amended by the 1972 Protocol, the 1971 UN Convention on Psychotropic Substances and the 1988 UN Drug Convention. Barbados has signed, but not ratified, the Inter-American Convention against Corruption, and is a party to the Inter-American Firearms Convention. Barbados has not signed the Inter-American Convention on Mutual Assistance in Criminal Matters or the Inter-American Convention on Extradition. The Mutual Assistance in Criminal Matters Act allows Barbados to provide mutual legal assistance to countries with which it has a bilateral mutual legal assistance treaty, Commonwealth countries, and states-parties to the 1988 UN Drug Convention. Barbados has signed but has not yet ratified the UN Convention against Transnational Organized Crime and its three protocols. Barbados has an asset-sharing agreement with Canada.

The GOB and the USG have brought into force three important agreements that facilitate counternarcotics cooperation: a maritime agreement with over-flight authority, an extradition treaty and a mutual legal assistance treaty. GOB agencies reported seizing 37 kilograms of cocaine and 2,278 kilograms of marijuana through early December 2004. The GOB brought drug charges against 201 persons during that same period.

The GOB tried twice in 2003 to convict two brothers accused of cocaine trafficking. Two trials resulted in a hung jury and an acquittal, respectively. One of the brothers, Frederick Chris Hawkesworth, was arrested again in 2003 on marijuana trafficking charges. In 2004, the USG sought extradition of Hawkesworth along with four others for attempting to import and distribute cocaine in the United States in July 2002. During an extradition hearing in September regarding the Hawkesworth case, a Magistrate Judge ruled that the Director of Public Prosecution (DPP) could not act as counsel for the USG. This ruling, which has been appealed to the High Court, contravenes the commitments made by the GOB in the U.S.-Barbados extradition treaty.

The GOB has in place a penal system that provides alternative sentencing options beyond prison and fines. The initiative allows community service orders, curfew orders, and other sentencing alternatives. The law was designed to reduce prison overcrowding and provide options for dealing with youthful offenders and drug-addicted criminals. The GOB plans to develop a drug court that will specialize in providing non-custodial sentences for drug offenders, if appropriate.

The Proceeds of Crime Act of 1990 provides for the confiscation of property shown to have been derived or obtained by a person, directly or indirectly, from the commission of certain offenses, including drug trafficking and money laundering, and enables law enforcement authorities to trace such proceeds, benefits or property. The GOB has shared in assets forfeited in U.S. legal proceedings and has seized property belonging to convicted drug traffickers. In November 2001, the GOB amended its law to shift the burden of proof to the accused to demonstrate that property in his/her possession or control is derived from a legitimate source. Absent such proof, the presumption is that the property was derived from the proceeds of crime. Barbados law also provides for freezing bank accounts and prohibiting transactions from suspected accounts for up to 72 hours. Under Barbados

law, anyone convicted of money laundering by the High Court is subject to a fine of \$1 million or 25 years in prison or both.

Following up on the recommendations of the CARICOM Regional Task Force on Crime and Security, the GOB formed a National Commission on Law and Order, which is an advisory body to the Attorney General's office. In the process of developing a National Plan of Action Against Crime drafted by the Attorney General's Office, the Commission held public hearings on the plan in 2003. Among the legislative reforms discussed in the plan are a wiretapping bill and an organized crime prevention bill. The plan also discusses plans to improve police technical capabilities and automation.

The GOB is taking a number of steps to improve its ability to fight crime, including transnational crime such as drug trafficking, money laundering and terrorism. In 2003 it installed ionscan equipment at the international airport and opened a forensics center. In 2004, Barbados embarked on an ambitious multi-million program to upgrade police communications.

The ruling party announced plans to develop a National Prosecution Service and a port police unit. Ground was broken in 2003 for the construction of a USD 35 million judicial center. The Barbados Port Authority stated it met the July 2004 IMO deadline to implement the International Shipping and Port Facilities Security Code.

Barbados is executing a national plan concerning supply and demand reduction for the period 2002-2006. The GOB's National Council on Substance Abuse (NCSA) and various concerned NGOs, such as the National Committee for the Prevention of Alcoholism and Drug Dependency, are very active and effective. NCSA works closely with NGOs in prevention and education efforts and skills-training centers. NCSA sponsored a "Drugs Decisions" program in 45 primary schools and continued its sponsorship of prison drug and rehabilitation counseling. Barbados's excellent D.A.R.E. and PRIDE programs remained active in the school system. The mental health hospital provides drug detoxification, while the Coalition Against Substance Abuse (CASA) opened a no-cost drop-in center in 2001. Staffed by volunteer counselors, the CASA center serves addicts and their families. The largest drug rehabilitation facility in Barbados, Verdun House, has 40 beds for in-patient treatment and 35 spaces for halfway care. Eighty-five percent of the facility's clients are there because of cocaine addiction. In 2003, the Ministry of Health announced that it had drafted revised regulations designed to enhance drug treatment options.

Commonwealth of Dominica. The Commonwealth of Dominica serves as a transshipment and temporary storage area for drugs, principally cocaine products, headed to the U.S. and to Europe, mostly via the French Departments of Martinique and Guadeloupe. Go-fast boats bring shipments from St. Vincent and the Grenadines and elsewhere. In addition, marijuana is cultivated in Dominica. The Dominica police regularly conduct ground-based marijuana eradication missions in rugged, mountainous areas.

Through November 2004, Dominican law enforcement agencies reported seizing 271 grams of cocaine, 246 pieces of crack cocaine, and 1035 kilograms of marijuana. They eradicated 167,553 marijuana plants (trees and seedlings), a portion of which was destroyed by the RSS in March 2004 as part of its basic training course. Dominican police arrested 179 persons on drug-related charges. Dominican law permits the forfeiture of drug traffickers' assets. Police resource shortages and Dominica's difficult terrain make drug law enforcement investigations difficult. Based on the recommendation of the CARICOM Regional Task Force on Crime and Security, the GCOD announced plans in 2003 to form a National Commission on Crime and Security.

The Ministry of Health oversees drug demand reduction efforts. The Ministry and its National Drug Abuse Prevention Unit have been successful in establishing a series of community-based drug use prevention programs.

Starting at age three and proceeding through age 15, school children receive drug use prevention education. The D.A.R.E. Program, a cooperative effort of the police force and the Ministry of Education, complements this effort in schools. There are no public sector drug rehabilitation facilities in Dominica; the psychiatric hospital provides limited detoxification services. The GCOD is seeking funding to revive a youth cadet corps, one of whose objectives will be drug demand reduction.

Dominica is a party to the 1961 UN Single Convention, as amended by the 1972 Protocol, the 1971 UN Convention on Psychotropic Substances and the 1988 UN Drug Convention. Dominica is a party to the Inter-American Convention on Mutual Assistance in Criminal Matters, the Inter-American Firearms Convention and the Inter-American Convention against Corruption. Dominica has not signed the UN Convention against Transnational Organized Crime.

Dominica and the U.S. have signed and brought into force a maritime agreement. However, Dominica has not yet agreed to expand the maritime agreement to include over-flight or order-to-land authority. An extradition treaty and an MLAT are currently in force between the U.S. and Dominica. Numerous MLAT requests and informal queries have been honored—particularly those submitted in the aftermath of the September 11 attacks in the U.S. The U.S. and Dominica continue to work through extradition requests, specifically the case of Randy Isidore, who remains on bail pending a decision of the Dominican court.

Grenada. South American cocaine traffickers pass through or stop in Grenada's coastal waters and its often un-policed islands and beaches to transship cocaine en route to U.S. and other markets, including by drug couriers on commercial aircraft and via yachts. The traffickers often transfer cocaine to Grenadian vessels to execute deliveries ashore, as the Grenadian police have had some success in disrupting over-the-beach deliveries.

In the aftermath of Hurricane Ivan, law enforcement officials of necessity turned their attention to restoring civil order and assisting in disaster relief. As a result, transshipments increased during this time. Previously the Grenada's police drug squad had dismantled a Trinidadian cocaine trafficking operation using Grenada as a transshipment point in 2003. Grenada's successes are now temporarily eclipsed by their lack of infrastructure as a result of Hurricane Ivan.

The police drug squad continues to collaborate closely with DEA officials in the targeting and investigation of a local cocaine trafficking organization, which has associations with South American and other Caribbean traffickers. Relatively small amounts of marijuana are grown in Grenada. Marijuana is imported from St. Vincent for domestic use.

Grenada is a party to the 1961 UN Single Convention, as amended by the 1972 Protocol, the 1971 UN Convention on Psychotropic Substances and the 1988 UN Drug Convention. Grenada also is a party to the Inter-American Convention against Corruption, Inter-American Firearms Convention and the Inter-American Convention on Mutual Assistance in Criminal Matters. Grenada is a party to the UN Convention on Transnational Organized Crime and its three protocols. The GOG and the USG signed a maritime law enforcement cooperation agreement in 1995 and an over-flight and order-to-land amendment to the maritime agreement in 1996. An extradition treaty and a Mutual Legal Assistance Treaty (MLAT) is in force between the U.S. and Grenada. Grenada's police and its financial intelligence unit have been extremely responsive to MLAT requests, particularly in the aftermath of the September 11 attacks in the U.S.

The Drug Control Secretariat of the National Council on Drug Control is very active and effective. Under a 2002 statutory mandate, and with the participation of many government agencies, including the police service, the National Council on Drug Control, headed by the Attorney General, guides and integrates national interdiction and demand reduction policy. Grenada, with OAS assistance, is working on a new national master plan for drug control to cover the period 2004-2009.

The Council effectively keeps drug prevention themes before the public. Drug use prevention education is incorporated into all levels of the educational curriculum. In 2002, the GOG issued a National Schools' Policy on Drugs. The D.A.R.E. program continues to function well. The Department of State and the Florida Association of Volunteer Agencies/Caribbean Action (FAVA/CA) have contributed to the development of self-sustaining, peer-to-peer drug prevention and "Safe Summer" programs for youth in Grenada since 2001. Grenada's sole drug and alcohol treatment center continues to receive about 50 patients per year. Most patients are admitted for alcohol abuse; all treatment costs are borne by the government. The psychiatric hospital also provides drug detoxification.

Law enforcement agencies in Grenada cooperate well on drug control. They meet regularly to plan joint operations, thereby maximizing available assets. The government opened its National Coordination Center for law enforcement in 2001. Through August 2004, Grenadian authorities reported seizing approximately 24 kilograms of cocaine, 719 pieces of crack cocaine, and 386 kilograms of marijuana. During that period, they arrested 311 persons on drug-related charges. Grenadian law enforcement authorities seized nearly ECD 31,856 (U.S. \$12,021) in connection with drug-related cases.

St. Kitts and Nevis. St. Kitts and Nevis is a transshipment site for cocaine from South America to the U.S. Drugs are transferred out of St. Kitts and Nevis primarily via small sailboats, fishing boats and go-fast boats bound for Puerto Rico and the U.S. Virgin Islands. Trafficking organizations operating in St. Kitts are linked directly to South American traffickers, some of whom reportedly are residing in St. Kitts, and to other organized crime groups. Marijuana is grown locally.

Since 1996, the USG has sought the extradition of two members of the Charles Miller trafficking organization. Miller surrendered to U.S. authorities in February 2000, and was convicted on felony trafficking charges in Florida in December 2000 and sentenced to life in prison. The UK Privy Council dismissed in June 2002 the appeal of Miller's associates against the upholding of their extradition by the St. Kitts High Court and remanded the case to the High Court for expeditious action. In 2003, both the High Court and subsequently the Eastern Caribbean Supreme Court upheld the extradition. The defendants are appealing once again to the UK Privy Council. In the meantime, the two individuals—Noel Heath and Glenroy Matthew—who have been named Specially Designated Narcotics Traffickers under the Foreign Narcotics Kingpin Designation Act—remain free on bail.

St. Kitts and Nevis is party to the 1961 UN Single Convention, as amended by the 1972 Protocol, the 1971 UN Convention on Psychotropic Substances and the 1988 UN Drug Convention. St. Kitts and Nevis is a party to the Inter-American Convention against Corruption and the Inter-American Firearms Convention, but has not signed the Inter-American Convention on Extradition or the Inter-American Convention on Mutual Assistance in Criminal Matters. St. Kitts and Nevis is a party to the UN Convention against Transnational Organized Crime and its three protocols.

The GOSKN signed a maritime law enforcement cooperation agreement with the U.S. in 1995 and an over-flight amendment to the maritime agreement in 1996. In 2000, the USG and the GOSKN brought into force extradition and mutual legal assistance treaties. The GOSK has been responsive to most U.S. MLAT requests. St. Kitts and Nevis developed a five-year master plan for drug control in 1996, which was refined and its implementation initiated in November 2000. The National Council on Drug Abuse Prevention coordinates implementation. The police operate a very successful D.A.R.E. program in the federation, positively affecting the lives of thousands of students and their families. Supported by the State Department's Bureau for International Narcotics and Law Enforcement Affairs (INL), the Florida Association of Volunteer Agencies/Caribbean Action (FAVA/CA) carried out in 2002-2003 a successful demand reduction and prevention sustainability program in St. Kitts.

The police drug unit on St. Kitts has been largely ineffective. Insufficient political will and the lack of complete independence for police to operate are contributing factors. The GOSKN Defense Force

augments police counternarcotics efforts, particularly in marijuana eradication operations. The government opened a National Joint Coordination Center in 2000. GOSKN officials reported seizing 7 kilograms of cocaine, 1373 grams of heroin, and approximately 365 kilograms of marijuana through November 2004. They arrested 24 people on drug charges and eradicated approximately 3,435 marijuana plants.

The high degree of drug trafficking activity through and around St. Kitts and Nevis and the presence of known, active traffickers in St. Kitts place this small country at great risk for corruption and money laundering activity.

St. Lucia. St. Lucia is a well-used transshipment site for cocaine from South America to the U.S. and Europe. Cocaine arrives in St. Lucia in go-fast boats, primarily from Venezuela, and is delivered over the beach or offloaded to smaller local vessels for delivery along the island's south or southwest coasts. Marijuana is imported from St. Vincent and the Grenadines and grown locally. Foreign and local narcotics traffickers are active in St. Lucia and have been known to stockpile cocaine and marijuana for onward shipment.

The GOSL police reported seizing 1142 kilograms of cocaine and 207 kilograms of marijuana through November 2004. They arrested 399 persons on drug charges and eradicated approximately 137,606 marijuana plants. The GOSL seized U.S. \$488,000 in drug related assets. The USG and the GOSL cooperate extensively on law enforcement matters. St. Lucia law permits asset forfeiture after conviction. The law directs the forfeited proceeds to be applied to treatment, rehabilitation, education and preventive measures related to drug abuse. In 2003, St. Lucia revised its criminal code. This revision modernized existing legislation to deal with wire-fraud and other modern finance-related offenses. The GOSL also announced plans to adopt wiretap legislation and civil forfeiture. It has also taken steps to strengthen its border controls and plans to automate its immigration control systems. St. Lucia does not have an operational National Joint Coordination Center.

St. Lucia is a party to the 1961 UN Single Convention, as amended by the 1972 Protocol and the 1988 UN Drug Convention, and the 1971 UN Convention on Psychotropic Substances. The GOSL signed a maritime agreement with the USG in 1995 and an over-flight amendment to the maritime agreement in 1996. An MLAT and an extradition treaty are in force between St. Lucia and the United States. St. Lucia is a party to the Inter-American Firearms Convention, the Inter-American Convention against Corruption, and the Inter-American Convention on Extradition. St. Lucia has signed but has not yet ratified the UN Convention against Transnational Organized Crime.

St. Lucia has instituted a centralized authority, the Substance Abuse Council Secretariat, to coordinate the government's national counternarcotics and substance abuse strategy. Various community groups, particularly the police public relations office, continue to be active in drug use prevention efforts, with a particular focus on youth. St. Lucia offers drug treatment and rehabilitation at an in-patient facility known as Turning Point, run by the Ministry of Health. The St. Lucian police report that the D.A.R.E. Program has been extremely successful.

St. Vincent and the Grenadines. St. Vincent and the Grenadines is the largest producer of marijuana in the Eastern Caribbean and the source for much of the marijuana used in the region. Extensive tracts are under intensive marijuana cultivation in the inaccessible northern half of St. Vincent. The illegal drug trade has infiltrated the economy of St. Vincent and the Grenadines and made some segments of the population dependent on marijuana production, trafficking and money laundering. However, cultivation does not reach the level to be designated as a major drug-producer, nor does it significantly affect the U.S. As such, despite the pervasive influence of the drug trade, the President has not designated St. Vincent and the Grenadines as a major illicit drug producing or a major drug transit country. Compressed marijuana is sent from St. Vincent and the Grenadines to neighboring islands via private vessels. St. Vincent and the Grenadines has also become a storage and transshipment point for

narcotics, mostly cocaine, transferred from Trinidad and Tobago and South America on go-fast and inter-island cargo boats.

Through November 2004, Government of St. Vincent and the Grenadines (GOSVG) officials reported seizing 28 kilograms of cocaine and approximately 2027 kilograms of marijuana. They arrested 375 persons on drug-related charges and eradicated approximately 175,025 marijuana plants. The police, Customs and Coast Guard try to control the rugged terrain and adjacent sea of St. Vincent and the chain of islands making up the Grenadines. Their reaction capability is limited, but the SVG Coast Guard has improved its performance as a result of receiving from INL two new rigid-hull inflatable interceptors.

St. Vincent and the Grenadines is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention, as amended by the 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances. The GOSVG is a party to the Inter-American Convention against Corruption, and has signed but not ratified the Inter-American Convention against Firearms. The GOSVG has signed but not yet ratified the UN Convention against Transnational Organized Crime and its protocols on trafficking in persons and migrant smuggling.

The GOSVG signed a maritime agreement with the USG in 1995, but it has not yet signed an over-flight amendment to the maritime agreement. An extradition treaty and an MLAT are currently in force between the U.S. and the GOSVG. USG law enforcement officials received good cooperation from the GOSVG in 2004. St. Vincent police were extremely cooperative in executing search warrants pursuant to a U.S. MLAT that resulted in approximately U.S. \$350,000 worth of confiscated property in 2004.

An advisory council on drug abuse and prevention, mandated by statute, has been largely inactive for several years. A draft national counternarcotics plan remains pending. The government mental hospital provides drug detoxification services. The family life curriculum in the schools includes drug prevention education and selected schools continue to receive the excellent police-run D.A.R.E. Program. Marion House, an enthusiastic and effective NGO, offers drug counseling in St. Vincent. Marion House also has developed and implemented an ambulatory outreach program and initiatives in prison officer training and prisoner rehabilitation. The OAS is assisting the GOSVG develop a drug demand reduction program for St. Vincent's prison.

French Caribbean

French Guiana, Martinique, Guadeloupe, the French side of St. Martin, and St. Barthelemy are all part of France and subject to French law, including all international anticrime conventions signed by France. (Not all French international agreements apply outside metropolitan France.) With the resources of France behind them, the French Caribbean Departments and French Guiana are meeting the goals and objectives of the 1988 UN Drug Convention. The French Judiciary Police, Gendarmerie, and Customs Service play a major role in narcotics law enforcement in France's overseas departments, just as they do in the rest of France. South American cocaine may move through the French Caribbean and from French Guiana to Europe, and, to a lesser extent, to the United States.

As in 2003, evidence in 2004 did not support a finding that drugs entering the United States from the French Caribbean had a significant effect on the United States; however, the United States considers the broad geographical area of the eastern and southern Caribbean, of which the French Caribbean is a part, as an area of concern. A small amount of cannabis is cultivated in French Guiana. However, officials are seeing an increase in cocaine coming directly to France from the French Caribbean, giving impetus to the creation of the Martinique Task Force.

In July, customs officials at Orly airport in Paris seized 92 kilograms of cocaine, valued at 4 million euros, hidden in a jet ski arriving from the French Antilles. The officers arrested seven people and seized cash as well. Later that month, customs officials in French Guiana seized almost 40 kilograms of cocaine from a Paris-bound air passenger; in August, customs officials at Rochambeau Airport in French Guiana seized 21 kilograms of cocaine each from two passengers, for a total of more than 40 kilograms and a street value of 1.7 million euros.

In October, customs officials at Orly seized over 11 kilograms of cocaine from the luggage of two passengers arriving from French Guiana, and later in the month, customs officials at Rochambeau seized another 20 kilograms of cocaine.

Many of the UN Conventions to which France is a party apply to the French Caribbean, including the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, the 1961 UN Single Convention, as amended by the 1972 Protocol, and the UN Convention Against Transnational Organized Crime and its protocols on migrant smuggling and trafficking in persons. Several bilateral treaties between the U.S. and France also apply to the French Caribbean, specifically the U.S.-France bilateral narcotics-related agreements, including a 1971 agreement on coordinating action against illegal trafficking, the Customs Mutual Assistance Agreement, a new mutual legal assistance treaty (MLAT) that entered into force in 2001, and a new extradition treaty that entered into force in 2001.

In addition to the above agreements and treaties, counternarcotics cooperation in the Caribbean is enhanced by a multilateral Caribbean customs mutual assistance agreement that provides for information sharing to enforce customs laws, including those relating to drug trafficking. The assignment of a French Navy liaison officer to the U.S. Joint Interagency Task Force-South (JIATF-S) at Key West, Florida, has also enhanced law enforcement cooperation in the Caribbean. The USG and the Government of France have been exploring a possible counternarcotics maritime agreement for the Caribbean for several years and an agreement was drafted in November 2001 on Cooperation in Suppressing Illicit Maritime and Air Trafficking in Narcotic Drugs and Psychotropic Substances in the Caribbean Area. Pending a final agreement, U.S. and French authorities have maintained good operational relations in the Caribbean and have participated in joint interdiction operations in the area.

Since November 2003, the DEA's Paris Country Office has been working with OCRTIS (the French counternarcotics department within the Ministry of the Interior) and the British National Criminal Intelligence Service on an investigation of a predominantly Guyanese cocaine-trafficking organization.

This organization had been sending couriers with kilo quantities of cocaine from the Caribbean through France to England, where the cocaine was distributed as crack. Approximately 30 people linked to this organization have been arrested in France, and over 40 kilos of cocaine have been seized. In Pennsylvania, a violent crack/cocaine organization associated with the Guyanese organization has been dismantled, with approximately 15 people having been arrested.

In early 2004, France established the liaison platform and multinational counternarcotics taskforce in Martinique envisioned in a quadrilateral agreement then-Minister of the Interior Sarkozy signed with Colombia, Spain and the United Kingdom in July 2003. Their cooperation aims to curb the back-haul shipments of cocaine from South America via the French Antilles into Europe. Among a variety of cooperative tools and measures put into place was this liaison platform and drugs task force of the OCRTIS. The task force brings together French National Police, Gendarmerie, and Customs officers alongside colleagues from Spain, the United Kingdom and Colombia. The French have asked the United States to participate in this program. Directors of DEA's Puerto Rico office and DEA's Paris Country Office met with the OCRTIS director in Martinique in late 2003 to arrange for a DEA liaison officer out of the Puerto Rico office to be assigned to the task force; the officer should assume the post early in 2005.

The task force's four main objectives are reinforcing operational capabilities, ensuring real coordination between all parties, enhancing foreign counterparts' understanding of the project, and implementing new law enforcement mandates assumed by the French Navy. The task force presence obviates the need for French police officers to travel from Paris separately for individual matters. In addition, the OCRTIS officer in charge of the Martinique Task Force oversees the OCRTIS liaison officers serving in Central and South America and other Caribbean countries.

In Martinique, the French inter-ministerial Drug Control Training Center (CIFAD) offers training in French, Spanish and English to officials in the Caribbean and in Central and South America, covering such subjects as money laundering, precursor chemicals, mutual legal assistance, international legal cooperation, coast guard training, customs valuation and drug control in airports. CIFAD coordinates its training activities with the UNDCP, the Organization of American States/CICAD, and individual donor nations. U.S. Customs officers periodically teach at CIFAD.

France supports EU initiatives to increase counternarcotics assistance to the Caribbean. The EU and its member states, the United States, and other individual and multinational donors are coordinating their assistance programs closely in the region through regular bilateral and multilateral discussions. The GOF participates actively in the Caribbean Financial Action Task Force (CFATF) as a cooperating and support nation (COSUN).

Guyana

I. Summary

Guyana is a transshipment point for South American cocaine destined for North America, Europe and the Caribbean. In 2004, interdictions and seizures of drugs being sent from Guyana to the U.S., Europe and the Caribbean have increased significantly. The economic, political and social conditions in Guyana make it a prime target for narcotics traffickers to exploit as a transit point. There has been an increase in crime believed to be linked to narcotics trafficking in the past year. The Financial Intelligence Unit, established in 2003, became operational in mid-2004. Guyana's law enforcement officers participated in U.S. funded training. However, joint U.S.-Guyana operations in combating narcotics were undertaken but quickly compromised due to corruption. Guyana is a party to the 1988 UN Drug convention but still needs to pass and implement additional legislation to meet its obligations under the Convention.

II. Status of Country

Guyana's ineffective drug interdiction capability makes the country an easy transit point for cocaine trafficking from South America to the U.S., Europe and the Caribbean. The volume of traffic passing through Guyana (based on seizures) appears to be significant in local terms and seems to be growing. The amount of drugs coming from Guyana into the U.S. does not yet appear to come in large shipments. However, a recent US\$54.5 million seizure of cocaine in the UK and a US\$20-40 million seizure of 155 kilograms of cocaine in Baltimore highlight the growing capabilities of Guyana's drug traffickers. The country's remote geographic location and limited law enforcement capabilities, as well as high levels of corruption, make the country a prime location for exploitation by drug traffickers.

The GOG's counternarcotics efforts are undermined by the lack of adequate resources for law enforcement, poor coordination among law enforcement agencies, corruption and weak legal and judicial systems. Crimes believed linked to narcotics trafficking are on the rise in Georgetown and the informal economy (believed to be fueled by drug proceeds) is suspected to be between 40-60 percent of the formal sector. DEA interest and involvement in the country has grown over the past year. The appointment of a new police commissioner has been a step forward in the fight against narcotics trafficking. However, a lack of political will and a National Drug Strategy within the government has hampered the implementation of needed reforms to the Guyana Police Force (GPF) and other law enforcement institutions. Guyana is not a producer of cocaine or precursor chemicals.

III. Country Actions Against Drugs in 2004

Drug Flow/Transit. Cocaine flows into and out of Guyana through its porous borders and along its coast. Numerous clandestine airstrips in the mostly inaccessible interior are used to facilitate trafficking from Venezuela and Colombia. Once inside the country, narcotics are carried to Georgetown by road, waterway or air and then sent on to the U.S., Europe and the Caribbean via commercial carriers. It is believed that most flights from Guyana to the U.S. carry illicit narcotics on board. In March, police at JFK International airport conducted an operation involving a major New York-Guyana drug ring that led to 13 arrests. Narcotics are also being sent via cargo ships either directly or through intermediate Caribbean ports to their destinations. In 2004, high profile seizures in the U.S., UK, and other countries involved drugs originating in Guyana. Cocaine was found in shipments of timber, frozen fish, molasses, rice and coconuts upon their arrival in the U.S., UK, Belgium and Guyana. Every commodity that Guyana exports has been used to ship cocaine out of the country.

Corruption. Guyana is party to the Inter-American Convention Against Corruption, but has yet to fully implement its provisions. Allegations of corruption are widespread, and reach to the highest levels of government, but continue to go uninvestigated. In November, a Cheddi Jagan International Airport official, apprehended upon his arrival at JFK International airport, was found to have eight pounds of cocaine. There is also corruption within the GPF and the Customs Anti-Narcotics Unit (CANU). However, the newly appointed Police Commissioner is said to be doing his best to eliminate corruption within the force and DEA is providing vetting for some counternarcotics personnel. There is a correlation between the increase in corruption and the increase in the narcotics trafficking.

Law Enforcement Efforts. GOG counternarcotics efforts are hampered greatly by the lack of adequate resources for law enforcement. The CANU is one of the main agencies responsible for drug-related law enforcement but has no real authority under the law. Officially, the CANU is still a department of Customs, although it operates with considerable autonomy. It is unclear who holds ultimate power over the unit. The scope of the CANU's operation is believed to be largely politically regulated and directed. Many CANU officers are afraid to take independent action for fear of losing their jobs, resulting in minor effective investigation. There is also a great deal of mistrust between CANU officers and the GPF and due to this, there is a lack of information/intelligence sharing. A 2004 DEA effort to work with CANU on a drug interdiction project was compromised before it could be made operational. It is believed that CANU has been penetrated and could be corrupt at every level.

In 2004, law enforcement activity was limited to numerous arrests of individuals with small amounts of marijuana, crack cocaine or powder cocaine on charges of possession of drugs or possession with intent to distribute. The GPF Narcotics Branch and CANU continued to arrest drug couriers at Guyana's international airport en route to the U.S. or Europe. GOG officials believe that GOG counternarcotics agencies interdict only a small percentage of the cocaine and coca paste that transit Guyana. The Guyana Defence Force Coast Guard (GDFCG) continued to conduct patrols with boats acquired from the U.S. There have not yet been any narcotics interdictions at sea.

Policy Initiatives. The GOG continues to express commitment to both domestic and international counternarcotics efforts. In 2003, at the invitation of the GOG, OAS/CICAD personnel visited Guyana to assist in the preparation of a national drug strategy, a project that was sidelined by the Minister of Home Affairs (who is currently on leave due to allegations of involvement in a rogue killing squad). By the end of 2004, the Acting Minister of Home Affairs reported that work on the project was complete and provided the Embassy with a draft copy. A finalized national drug strategy has not been submitted to OAS/CICAD. With material support from the USG, Guyana established a Financial Intelligence Unit (FIU) in late 2003. The FIU was not staffed and operational until July of 2004. Funding for operations is still being sought for the unit. By the end of 2004, the FIU had conducted preliminary investigations on approximately 28 cases and is preparing drafts of legislation related to money laundering.

Cultivation and Production. Cannabis cultivation takes place in Guyana's interior, but the volume is believed to be small. There are no reports of cocaine or precursor chemical production in Guyana.

Domestic Programs. Some marijuana is consumed domestically. The consumption of cocaine powder, crack cocaine, ecstasy and heroin is increasing. Social workers report that marijuana and cocaine are being sold almost openly.

Guyana has a national demand reduction strategy, developed in cooperation with the Pan-American Health Organization, the World Health Organization, and the UNDCP, but implementation has been minimal. Prevention programs are operated in the prisons and a few urban areas, but lack of resources limits the scope of these efforts. Guyana has no national drug rehabilitation program.

Agreements and Treaties. Guyana is party to the 1971 UN Convention on Psychotropic Substances, the 1988 UN Drug Convention, and the 1961 UN Single Convention, as amended by the 1972

Protocol. Guyana also is a party to the UN Convention Against Transnational Organized Crime and its protocol on trafficking in persons. Guyana is a member of the Organization of American States, and is a party to the Inter-American Convention Against Corruption. The 1931 U.S.-UK extradition treaty is applicable between the U.S. and Guyana. Guyana has an agreement to share narcotics intelligence with the UK. Guyana is also a member of OAS/CICAD. Guyana has a bilateral agreement with the U.S. on maritime counternarcotics cooperation.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. The U.S. continued to focus its effort on strengthening the GPF through U.S. funded training and the procurement of equipment. In 2004, the USG provided training to the GPF in Intelligence and Organized Crime. The USG also provided counternarcotics training to the Guyana Defense Force (GDF) as well. U.S. officials continued to encourage Guyanese participation in bilateral and multilateral counternarcotics initiatives. With the appointment of the new Police Commissioner in February 2004, DEA efforts in the country have resumed full force. The DEA, DHS, and DOD all provided training courses to both the Guyana Police Force and the Guyana Defense Force in the past year. Some examples include a Maritime Maintenance Subject Matter Expert Exchange and an Organized Crime Intelligence course.

The Road Ahead. Guyana's contentious and inefficient political environment and lack of resources significantly hampers its ability to pursue an effective counternarcotics campaign. The apparent increase in corruption and amount of drugs transiting Guyana will make combating narcotics a very tough challenge. Assistance in strengthening the GPF and GDF's counternarcotics and intelligence capabilities through U.S. funded training and equipment will be critical to GOG efforts. Also important, are U.S. democracy building programs that serve as a foundation for good governance in Guyana. Efforts in this area will need to include strengthening Guyana's weak judicial system, law enforcement infrastructure and reforming legislation to help in combating narcotics. The U.S., along with other international stakeholders, must continue to press for thorough reform. The U.S. will continue to encourage participation in bilateral and multilateral initiatives, as well as implementation of current international conventions and agreements.

Haiti

I. Summary

Haiti's geographical position, weak institutions, and extreme poverty have made it a key conduit for drug traffickers transporting cocaine from South America to the United States and, to a smaller degree, Canada and Europe. The Haitian National Police (HNP) lacks discipline and is riddled with corruption. The judicial system is dysfunctional, its prosecutors and judges susceptible to bribes and intimidation.

Corruption, weak law enforcement capability and lack of Haitian commitment combined to limit Haitian counternarcotics cooperation in general, although Haitian officials have cooperated in some specific cases. The Interim Government of Haiti's (IGOH) major achievement was the arrest and expulsion of Jean Eliobert Jasme and the dissolution of much of his drug organization. In addition, the IGOH has seen the installation of the Joint Information Coordination Center (JICC) and the Maritime Interdiction Task Force (MITF), which though still developing, are already proving useful tools against drug trafficking organizations. However, Haiti's ongoing political and economic crises continued to grip the country in 2004, eclipsing the fight against drug trafficking.

Haiti remains highly susceptible to money laundering due to its weak legal system and pervasive corruption. The money laundering law passed in 2002 has not been implemented. The anti-money laundering commission finally submitted candidate lists for Director General and Deputy Director General to the President and the Minister of Justice. On December 11, 2003, the GOH inaugurated the Financial Intelligence Unit (FIU) to serve as a clearinghouse for information relating to money laundering and other misuses of the financial system. The FIU will simultaneously serve as a conduit for the transfer of seized assets to the Ministry of Finance. Haiti is a party to the 1988 UN Drug Convention.

II. Status of Country

In early 2004, university students and civil society groups in Port-au-Prince came together peacefully to request the departure of President Aristide. They blamed Aristide's government and his "Lavalas" political party for the persistent corruption and mismanagement existing since the fraudulent legislative elections of 2000. Constant strikes were organized by the "Groupe des 184," a coalition of civic groups and the democratic platform of political parties. As thousands of protesters marched in the streets of Port-au-Prince, they were attacked by pro-Aristide gunmen. The clash between members of the opposition and Aristide followers resulted in the death of innocent students and civilians. On February 29, 2004, Aristide resigned, after four months of strikes and civil disobedience organized by university students, civil society, political parties, and the rebels (ex-soldiers from the army Aristide disbanded ten years previously).

In accordance with the Haitian Constitution, following Aristide's resignation, the President of the Haitian Supreme Court (Cour de Cassation), Boniface Alexandre, was designated to replace Aristide.

U.S. Marines, along with French and Canadian forces, landed on the island to restore order. U.S. and French diplomats worked with the United Nations Representative, the Organization of American States (OAS), and the Haitian Political Parties to set up a transitional government with a "Council of Elders", designated by the International Community, the Lavalas Party, and the Opposition Parties. The role of the Council of Elders was, in the absence of a Parliament, to choose a Prime Minister and a Government that would help to govern the country until the next elections in late 2005. The Prime

Minister was designated on March 12, 2004 and a new Interim Government was functioning on March 17, 2004.

III. Country Actions Against Drugs in 2004

After Aristide's departure, the newly formed IGOH moved to assist the Drug Enforcement Administration (DEA) in fulfilling its commitments made in the Letter of Agreement signed with former President Aristide. Two significant changes following Aristide's departure were the installation of the new Minister of Justice, Bernard Gousse, and the naming of a new Director General of the Haitian National Police, Leon Charles. With the assistance of the U.S. Government, these officials have begun the long process of retraining and re-equipping the HNP. Meanwhile, the HNP and United Nations Troops currently in Haiti have made some strides towards disarming pro-Aristide gangs. OAS support coupled with Narcotics Affairs Section (NAS) funding had bolstered the 'Bureau de la Lutte Contre le Trafic des Stupefiants' (BLTS), the counternarcotics police, to 48 agents by the end of 2004.

Additionally, the IGOH occasionally permitted U.S. air assets to chase drug planes into Haitian territorial waters and assisted in some pursuits in 2004. Between March and December 2004, more than 20 federal drug fugitives were returned to the U.S. by non-extradition means. However, while the IGOH made progress against narcotics traffickers, drug seizures remained low. Several investigations of official drug-related corruption were started, but none resulted in prosecutions by year-end. Pre- and post-Aristide, the DEA facilitated the arrest and expulsion of the following Haitian/Colombian drug cartel members: Chief of Palace Security, Oriel Jean; former BLTS Chief, Evintz Brillant; Haitian Senator Flurel Celestin; Haitian businessman Jean Salim Batrony; and narcotics traffickers Jean Ronald Veilot, Charles Maxime Lafontant, Jean Eliobert Jasme, Carlos Ovalle, Eddie Aurilien and Jacques Ketant.

Corruption. The IGOH has made a major attempt to curb drug-related official corruption. The IGOH reactivated the FIU that had been established during the Aristide regime, appointed new leadership, and provided it the political support necessary to investigate money laundering and corruption. To date, the FIU has launched 183 separate investigations and frozen or seized millions in illegal assets.

Law Enforcement Efforts. There were several joint large-scale U.S.-Haiti law enforcement counternarcotics operations in 2004. In these operations, the DEA seized 2.7 million dollars in Certificates of Deposit and more than one million dollars in U.S. currency. However, Haitian drug trafficking organizations continue to operate with relative impunity. Due to the HNP's lack of human and material resources, the arrival of cocaine from South America is essentially unimpeded. Haiti's roads are very poor, and the HNP has no air assets. The Haitian Coast Guard (HCG) has no presence on the southern coast. The new HCG station at Cap Haitien, on the north coast, was vandalized during periods of civil unrest. Even with substantial assistance from the U.S. Coast Guard, the HCG's ability to patrol is limited by frequent vessel breakdowns, and HCG vessels undergo frequent overhauls at U.S. Government expense. The BLTS has no permanent presence outside Port-au-Prince and no effective means of transport. The GOH does not provide the HCG or BLTS with necessary equipment, maintenance or logistical support to effectively combat drug trafficking in Haiti.

During the last quarter of 2004, the Airport Narcotics Task Force of the BLTS resumed daily patrols, including inspections of inbound and outbound passengers as well as monitoring all passenger baggage and airfreight. In conjunction with the BLTS, DEA spearheaded the interview and subsequent arrest of five individuals and the seizure of one fixed wing aircraft at the Port-au-Prince International Airport.

In recent years the Joint Information Coordination Center (JICC) has suffered from lack of functioning information systems and communications. Current plans are to revitalize the JICC, with USG assistance. Eventually the JICC will be staffed with nine Haitian analysts. The JICC is responsible for

coordinating and recording information and intelligence developed by ANTF and the Maritime Interdiction Task Force (MITF). In the past, Haiti's JICC has served as useful intelligence collection and coordination service for the DEA. The long-range goal entails equipping the Haitian JICC with the ability to receive and exchange intelligence and information with other JICCs and the El Paso Intelligence Center (EPIC). The DEA Country Office in Port au Prince is also negotiating with DEA headquarters to start a Sensitive Investigative Unit (SIU), which will further assist the Haitian counternarcotics program.

MITF activities are strategically planned and incorporated around Operation Blood Hound canine team activities. Random searches by the Haitian Narcotics Unit are performed daily and aided by the newly installed DEA Tips Hotline. Currently, eight MITF members, all BLTS agents, under the direction of the Haitian National Police, staff the office. Information provided by confidential sources has been helpful in identifying vessels and individuals associated with drug trafficking at the local seaport. MITF maintains crew and cargo lists for all vessels transiting the harbor in Port-au-Prince and forwards this information to the JICC for compilation and dissemination. This team is routinely augmented with members of the Haitian Port Authority, Haitian Customs, and the HCG. High-visibility port sweeps and cargo inspections are routinely conducted to deter trafficking.

Agreements and Treaties. Haiti is a party to the 1988 UN Drug Convention. Haiti's law on the control and suppression of illicit drug trafficking reflects most of the Convention's provisions; however, there has been no serious effort to implement it. Extradition is carried out under the 1905 U.S.-Haiti extradition treaty. Haitian law prohibits the extradition of its nationals. There were no extraditions pursuant to the treaty in 2004. The GOH has cooperated with specific requests for expulsion of non-Haitians and Haitian drug traffickers. There is no mutual legal assistance treaty with Haiti; in the past, requests for assistance have been made by letters rogatory. No formal requests for assistance were made by this method nor through the mutual legal assistance provision of the 1988 UN Drug Convention. A U.S.-Haiti maritime counternarcotics agreement entered into force in 2002, and the GOH routinely approves USCG requests for overflight of its territorial seas to detect and deter illegal migration. The GOH has signed, but not ratified, the OAS mutual legal assistance treaty, the Inter-American Convention Against Corruption, the Caribbean Regional Maritime Agreement, the UN Convention Against Transnational Organized Crime, and the UN Convention Against Corruption.

Cultivation and Production. Illicit cultivation in Haiti is limited to minor amounts of marijuana. There is no information on drug production or use of precursors.

Domestic Programs (Demand Reduction). There are no viable demand reduction or rehabilitation programs. Polling data indicate that domestic marijuana and cocaine use, while low, continues to rise.

Drug Flow and Transit. Haiti remains an important transit country for Colombian drug traffickers due to its geographic location between the U.S., Central and South America. Haiti functions as a command, control and communications center for cocaine transshipment activities destined for the United States. Haiti presents several problems for effective counternarcotics efforts, which include approximately 1,125 miles of unprotected shoreline; numerous uncontrolled seaports; numerous clandestine airstrips; a thriving contraband trade; weak democratic institutions; a fledging civilian police force and a dysfunctional judiciary system. These factors contribute to the use of Haiti by drug traffickers as a strategic transshipment point of distribution.

Drug trafficking by small aircraft increased in 2004. Intelligence indicates the reasons for the increase are the lack of governmental control throughout much of the country, reorganization of the Haitian National Police (HNP) and confusion surrounding efforts to coordinate Haitian activities with the UN troops. The most frequent method of transshipment is still via small coastal freighters departing the northern coast of Haiti to the Bahamas or directly to Southern Florida.

Go-fast boats traveling directly from the northern coast of Colombia to a variety of strategic locations on Haiti's southern coast continue to inundate the southern coast of Haiti with cocaine. These go-fast boats meet Haitian fishing vessels waiting offshore at coastal towns such as Les Cayes, Aquin, Cote de Fer, Jeremie, Port Salut, Belle Anse, Grand Gosier and Jacmel. Cocaine air shipments arriving from Colombia have been on the rise since the change of government.

Intelligence also indicates that multi-hundred kilogram loads are being sent to Haiti via cargo freighters arriving from Colombia, Venezuela, and Panama. Shipments are concealed within legitimate cargo (e.g., bags of cement) or inside the vessel structure itself (such as in ballast tanks, keel caches, and false water/fuel tanks). Sophisticated hidden compartments are also constructed deep within these freighters, and are extremely difficult to detect without inside information.

Shipments arrive at seaports such as Port-au-Prince, Gonaives, Miragoane, Saint Marc, Cap Haitien and Port de Paix. The loads are then often transported to Port-au-Prince, where they are broken down. Smaller loads are concealed on cargo and coastal freighters leaving Cap Haitien, Port de Paix, Miragoane and Gonaives for the United States. Smaller vessels carry loads of cocaine from Haiti's northern coast to the Bahamas for continued transport to Florida via fishing vessels or pleasure boats.

Some traffickers prefer to smuggle cocaine to the U.S. via commercial aircraft. Utilizing the Port-au-Prince International Airport, traffickers smuggle multi-kilogram loads placed in checked luggage with secret compartments. Couriers, strapping cocaine to their bodies, continue to smuggle smaller amounts of cocaine on board commercial flights to New York, Miami, Toronto and Montreal. Quantities of three to six kilograms are often body-carried, while larger amounts are sometimes concealed in artifacts and air cargo luggage carts.

Large quantities of cocaine are also being driven across the border to the Dominican Republic for eventual shipment to Puerto Rico or other destinations. The land border with the Dominican Republic is porous, due to difficult terrain, lack of control, and police corruption on both sides.

Marijuana is usually transported from Jamaica via go-fast boats to waiting fishing vessels and via cargo freighters to Haitian seaports along Haiti's southern coast. The marijuana is then shipped directly to the United States or transshipped through the Bahamas. One significant seizure near the Malpasse border during the fourth quarter captured approximately 76 kilograms.

Heroin usage for personal consumption is non-existent in Haiti. However, intelligence indicates that drug planes arriving in Haiti with cocaine cargo often contain smaller kilogram quantities of heroin on board. This heroin is usually moved to the United States and Europe in small kilogram amounts along with cocaine. No reported seizures of heroin were made during this quarter.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. The U.S. plan for combating illegal drug trafficking via Haiti remains one of interdiction along with police and judicial institution building. However, several factors work against successful implementation of that plan forewarned smugglers elude the HNP. The slow or nonexistent response by the HNP to DEA intelligence allows suspected air and sea deliveries to be completed without challenge. Slow implementation of Haitian enforcement efforts prevents counternarcotics interdiction and hinders significant achievement in the fight against trafficking.

The Road Ahead. Stemming the flow of illegal narcotics through Haiti remains a cornerstone of U.S. counternarcotics policy. Key preconditions to stemming the illegal flow are more effective GOH law enforcement and judicial institutions and stronger GOH ability to fund these institutions by means of an effective system for liquidating assets seized from arrested smugglers. The road ahead is obstructed by the politicization and corruption of the police and judiciary, and further obscured at this time by social disorder and political violence.

Jamaica

I. Summary

Jamaica is a major transit point for South American cocaine en route to the United States and also the largest Caribbean producer and exporter of cannabis. The Government of Jamaica (GOJ) has a National Drug Control Strategy in place that covers both supply and demand reduction. During 2004, the GOJ maintained existing counternarcotics law enforcement and interdiction programs and took several steps to strengthen its counternarcotics law enforcement capability. The GOJ introduced a new Customs arrival form in August 2003 that includes a currency declaration and a new immigration form in October 2004 that captures information in the border management/migration system that was implemented in November 2004. The Port Authority of Jamaica (PAJ) purchased closed-circuit television systems and non-intrusive inspection equipment to strengthen security at Jamaica's seaports. The Jamaica Constabulary Force (JCF) Narcotics Vetted Unit took significant steps to increase its evidential intelligence gathering capabilities in investigating major narcotics and crimes figures. Cooperation between U.S. and GOJ law enforcement agencies is considered excellent in most areas. The GOJ has taken steps to protect itself against drug trafficking and other organized crime, and has made significant strides towards intensifying and focusing its law enforcement efforts towards more effectively disrupting the trafficking of large amounts of cocaine in Jamaica and throughout Jamaica's territorial waters.

The GOJ cooperated on several major international narcotics law enforcement initiatives, which resulted in the arrest of a number of high profile Jamaican, Colombian, Bahamian, and Panamanian narcotics traffickers responsible for the manufacture, trans-shipment, and distribution of vast amounts of cocaine throughout the Central Caribbean region. However, areas of concern include the prosecution of significant drug traffickers operating in Jamaica, increasing the amount of Jamaican drug seizures, and eradication. The U.S. will continue to provide equipment, technical assistance, and training to assist the GOJ to strengthen its counternarcotics capabilities. Jamaica is a party to the 1988 UN Drug Convention and during 2004 made progress towards meeting the goals and objectives of the Convention.

II. Status of Country

Jamaica's 638 miles of coastline and over 110 unmonitored airstrips make it a major transit country for cocaine destined for the U.S. and European (primarily UK) markets as well as the largest producer and exporter of cannabis in the Caribbean. Jamaica is not a significant regional financial center, tax haven or offshore banking center, but with no effective legislation in place, some money laundering does occur, primarily through the purchase of real assets, such as houses and cars. Cash couriers are also a significant concern. Jamaica is neither a source of precursor or essential chemicals used in the production of illicit narcotics nor a significant conduit for the transit of precursor chemicals. A lack of regulations makes Jamaica vulnerable to the illegal diversion of such chemicals.

III. Country Actions Against Drugs in 2004

Despite Jamaica's scarce resources, the GOJ signed a contract worth more than USD 29,000,000 for the construction of three 42-meter patrol boats and the repair of one 37.5-meter vessel. A number of seized go-fast boats and one fixed wing aircraft have been placed into service with the JDF Coast Guard and JDF Air Wing respectively for counternarcotics operations. The PAJ procured and installed more than USD 21 million in non-intrusive inspection equipment, including mobile gamma imaging machines, x-ray machines for high-density cargo, and pallet machine and closed-circuit television

surveillance systems for the Kingston and Montego Bay ports. Electronic access controls should be in place shortly. PAJ also hired expert technical advisors to operate the equipment and provide oversight. Customs continued to implement its modernization plan, which, among other things, calls for the vetting of Customs officers and expansion of the Contraband Enforcement Team (CET) to a staff of 50 over the next two to four years. CET currently has a staff of 43 personnel. In 2003, the GOJ agreed to the establishment of an International Airport Interdiction Task Force comprised of Jamaican, US, UK, and Canadian law enforcement elements which will focus on narcotics trafficking and illegal migration at the country's two major international airports. However, the GOJ has not provided the infrastructure to support the project at either airport. The GOJ continued to fund the operating expenses for the Caribbean Regional Drug Law Enforcement Training Center. Jamaica continues to work to implement the provisions of its 2002-2007 National Anti-Drug Plan, which addresses both supply and demand reduction.

Policy Initiatives. GOJ officials publicly state the government's commitment to combating illegal drugs and drug-related crimes. Similar to a 2002 initiative, the Minister of National Security unveiled in late 2004 a broad-based operation "Kingfish", designed to attack the center of gravity of drug trafficking and criminal organizations and individuals and to stem the rising crime rate and gang violence in Jamaica. This operation supported by the U.S., UK, and Canada leaves no potential target group untouched. The Ministry of National Security (MNS) also placed a JCF officer in Miami at the Office of the Florida Department of Law Enforcement to enhance cooperation on drug matters. The GOJ has drafted several legislative measures such as the Proceeds of Crime Act, a Plea Bargaining Bill, a Terrorism Prevention Act and a Port Security Bill, all designed to rid the country of drug traffickers, and enhance the capabilities of law enforcement to successfully prosecute criminal organizations. These legislative measures are at various stages of legislative process.

The National Intelligence Bureau, established in 2003 to coordinate intelligence function and serve as a clearing house for intelligence information, is still fledgling, but has cleared a major bureaucratic hurdle, (agreeing to vet all members), towards becoming an integral part of the Jamaican law enforcement establishment.

Accomplishments. Collaborative efforts between local and international law enforcement agencies led to the arrest of several major drug traffickers in Jamaica, USA, Bahamas, Colombia and the dismantling of their organizations. Ten arrests were made in Jamaica, including two major traffickers designated drug kingpins by the U.S. President. Three have been ordered extradited to the United States while the others will have their extradition cases heard in Jamaican courts. Another high level Jamaican trafficker was arrested and sentenced in the UK. Business and personal assets such as motor vehicles, cash and property, were also seized. Other collaborative efforts (i.e. operations with JIATF/South) have resulted in large seizures of cocaine and numerous vessels used to transport illicit substances to the U.S., causing an increase in the price of cocaine and increases in cultivation and export of cannabis to fill the void.

Law Enforcement Efforts. Both the JCF and JDF assign a high priority to counternarcotics missions. The JDF Air Wing and Coast Guard are actively involved in maritime interdiction efforts. The JCF Narcotics Division is a competent and respected unit. The Narcotics Division is continuing its multi-year restructuring and expansion program, which will increase its staffing to 250 officers over the medium term and to work closely with DEA in investigating significant narcotics trafficking and money laundering organizations in Jamaica.

During 2004, the GOJ seized 1,736 kilograms of cocaine, 23,292 kilograms of cannabis and 38 kilograms of hashish oil, and more than 133,000 Ecstasy tablets. The appearance of Ecstasy on the local illicit narcotics scene is a new phenomenon, but virtually all of it was acquired in a single seizure. Cocaine seizures were slightly higher than 2003, hash oil seizures significantly less and approximately 30 percent less marijuana was seized in 2004 than in 2003. Intelligence-driven

operations, such as “Kingfish”, coordinated with DEA and the JCF vetted-unit continued to target major drug trafficking organizations. The JDF continued to work with USG’s Joint Inter-Agency Task Force/South throughout the year to successfully disrupt a number of planned go-fast deliveries. The GOJ eradicated 411.64 hectares of cannabis and destroyed more than 5 million cannabis seedlings at 403 nurseries. The JCF arrested 5,852 persons on drug charges, including 287 foreigners, in the first eleven months of 2004. Almost 400 of these arrests resulted from enhanced scrutiny, aided by the use of U.S.- and UK-provided drug detection equipment, of departing passengers at the two international airports.

Corruption. Corruption continues to undermine law enforcement and judicial efforts against drug-related crime in Jamaica, and is a major barrier to more effective counternarcotics actions. Jamaica is a party to the Inter-American Convention against Corruption and signed the consensus agreement on establishing a mechanism to evaluate compliance with the Convention. The GOJ does not encourage or facilitate the illicit production or distribution of narcotics or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal drug transactions. The GOJ has a policy of investigating credible reports of public corruption and prosecutes individuals who are linked by reliable evidence to drug-related activity but has not prosecuted any senior GOJ officials for facilitating the illicit production or distribution of such substances, or the laundering of proceeds from illegal drug transactions. The JDF has a “zero tolerance” policy on involvement in drug-related activity by its members. The JCF conducts drug testing of recruits at their initial physical exam, but does not have a random drug testing policy. Vetting of special units is conducted but only on a voluntary basis due to strong resistance to mandatory vetting by the police union.

Agreements and Treaties. Jamaica has a mutual legal assistance treaty (MLAT) and an extradition treaty with the U.S. Both countries utilize the MLAT to combat illegal narcotics trafficking and other crimes. The U.S. and Jamaica have a reciprocal asset sharing agreement that provides for the sharing of forfeited assets where law enforcement cooperation has made possible the forfeiture of proceeds from criminal activity. Jamaica is a party to the Inter-American Convention on Mutual Legal Assistance in Criminal Matters. A U.S.-Jamaica maritime counternarcotics cooperation agreement came into force in 1998; expanded Shiprider provisions were negotiated in July 2003 and has now been fully implemented. In September 2003, Jamaica ratified the UN Convention against Transnational Organized Crime and two of its protocols (migrant smuggling and firearms). Jamaica is a party to the 1961 UN Single Convention, the 1972 Protocol amending the Single Convention, the 1971 UN Convention on Psychotropic Substances, and the 1988 UN Drug Convention. On October 15, the GOJ signed, but has not yet ratified, the Caribbean Regional Maritime Agreement.

Cultivation/Production. Jamaica is the largest Caribbean producer and exporter of cannabis. There is no accurate estimate of the amount of cannabis under cultivation or the number of harvests per year. Lack of crop survey data and baseline figures makes it impossible to quantify the effect of GOJ eradication efforts on the total crop. The level of marijuana production has changed from large hectares to smaller plots nested in hilly and rocky terrain that proves to be inaccessible to vehicular traffic. A new strain of marijuana maturing to approximately three feet was recently discovered in Westmoreland. Very sophisticated cultivation methods, including portable irrigation systems, generators, floodlights etc, make the fields difficult to locate from the air. As a matter of policy, Jamaica does not use herbicides to eradicate cannabis nor does it have the capability. Manual cutting is the primary eradication method.

Drug Flow/Transit. The cocaine trade in Jamaica has been significantly affected as a result of two successful multinational coordinated counternarcotics enforcement initiatives conducted since March 2004, which have at least temporarily disrupted cocaine trafficking throughout Jamaica and the central Caribbean. The arrest of major Jamaican, Colombian, and Bahamian narcotics traffickers has further resulted in the current disruption of cocaine trafficking throughout Jamaica and much of the Central Caribbean. The successful counternarcotics operations in Jamaica have further led to an increase in

extortion, kidnappings and violence, as drug traffickers pursue alternative sources of income. Jamaican Police officials have reported an increase in the current price of cocaine, from \$7,500 per kilo in mid-2004, to \$9,000-\$10,000 per kilo in October 2004, due to a decrease in supply. Currently, the duration and geographic extent of this disruption is not yet known. Two of the most significant factors that will determine the long-term results of the recent counternarcotics operations will be the results of continuing extradition hearings in Jamaica and the affect that these operations have on drug transportation organizations operating off the North Coast of Colombia.

Cocaine is still being smuggled/transshipped from Colombia's north coast (but in smaller quantities) by major Colombian and Jamaican trafficking groups into and out of Jamaica primarily via maritime vessels (go-fast vessels) and to a lesser extent via private aircraft. Narcotics trafficking groups continue to utilize private aircraft to transport drugs from Jamaica to the Bahamas and then on to the United States. With one hundred and fourteen (114) identified landing strips/fields in Jamaica, these clandestine activities frequently occur undetected throughout the island. Smugglers also use concealment in commercial shipments, and couriers who board airlines or cruise ships with ingested or concealed drugs.

Domestic Programs (Demand Reduction). Cannabis is the drug most frequently abused in Jamaica. However, the use of both powder cocaine and crack cocaine still continues to increase, even though the availability of both forms of the drug on the island has decreased. Consumption of cocaine, heroin and cannabis is illegal. The possession and use of ecstasy (MDMA) is currently controlled under the Food and Drug Act and is subject to relatively light penalties. There is an effort underway to have ecstasy included under the Dangerous Drug Act. Jamaica has several active demand reduction programs including visible projects of the Ministry of Health/National Council on Drug Abuse and the NGO, Addiction Alert, that receive modest U.S. funding support. The UNODC works directly with the GOJ and NGOs to improve demand reduction efforts.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. The U.S. and Jamaica cooperate in a variety of areas, including maritime interdiction, the apprehension of fugitives, and initiative relating to community-police relations. U.S. law enforcement agencies note that cooperation with the GOJ is generally good and is steadily improving.

The JDF Coast Guard (JDFCG) engages in cooperative operational planning with the U.S. Coast Guard on an intermittent basis associated with joint military operations in or near Jamaica's territorial waters. During 2004, Jamaica participated in two deployments of Operation Rip Tide, a continuing U.S./Jamaica/Cayman Islands/UK effort to deny smugglers the use of maritime smuggling routes into Jamaica and the Cayman Islands. The bilateral maritime counternarcotics agreement was successfully exercised on several occasions during 2004. In February, the U.S. and Jamaica signed a protocol to the bilateral agreement that added provisions for operations from third party platforms, enhancement of safety for civil aircraft in flight, contiguous zone jurisdiction, and technical assistance.

The JDF currently lacks the force projection capabilities (fixed-wing aircraft and off-shore patrol boats) required to make continuous joint operations with the U.S. a practical activity. One of the three 44-foot fast patrol boats donated in 2003 is now operational, giving JDG more operational flexibility. Three JDFCG crew members, assigned to the U.S. Coast Guard Caribbean Support Tender in 2002, a U.S. Coast Guard vessel with a multi-national crew that provides training and assistance in ship maintenance and repairs to Caribbean maritime forces, will be on board until August 2005. As part of this program, on December 15th, the USCG delivered a refurbished Eduardono, a 38-foot high-speed pursuit boat, to the JDF/CG along with other spare parts necessary to maintain an operational status for most of the current JDF/CG fleet.

In 2004, the U.S. funded participation by Jamaican police, immigration, customs, defense force and other personnel in several in-country and regional training courses. The U.S. continues to fund an advisor to the National Intelligence Bureau and a Law Enforcement Development Advisor to assist the JCF's strategic planning and reform efforts. Members of the highly effective Jamaica Fugitive Apprehension Team (JFAT), with guidance from U.S. Marshals, received specialized training, equipment and operational support. The JFAT is actively working on over 195 cases, the majority of which involve drug or homicide charges. Since January 2004, 15 fugitives were extradited to the U.S. Jamaican authorities are receptive to and cooperative with U.S. requests for extradition, and continue to work with U.S. authorities to accelerate the extradition process. Nonetheless, contested extradition requests can take two to five years to litigate fully.

The U.S.-funded International Office of Migration (IOM) Border Control Project, designed to strengthen the GOJ's ability to monitor the flow of persons into and through Jamaica, was officially launched on November 1, 2004. This pilot project, which has modernized the computer infrastructure at the ports of entry, is now functional. USAID is continuing with a program of assistance to the JCF in community-police relations that will focus on strategies to reduce crime and violence.

The Road Ahead. The GOJ has taken steps to protect itself against drug trafficking and other types of organized crime. However, the GOJ needs to further intensify its law enforcement efforts and enhance international cooperation. The U.S. will continue to provide technical assistance and training to assist the GOJ to improve its drug interdiction, cannabis eradication, and demand reduction efforts. The U.S. will also work closely with the police and public prosecutors to enhance the GOJ's ability to identify, investigate, and successfully prosecute significant drug traffickers. The USG will continue to provide assistance and training to the JDFCG to strengthen Jamaica's maritime interdiction efforts. The USG is committed to on-going support for the JCF Narcotics vetted unit, the JFAT and the CET through the provision of specialized training and equipment.

Modern anticrime legislation, including passage of all of the proposed legislation contained in the 2002 reform package and amendments to strengthen the Interception of Communications Act, is essential in order to investigate, arrest and successfully prosecute drug traffickers and other criminals. The passage of a civil asset forfeiture law could materially assist GOJ counternarcotics operations by providing an alternate source of vehicles, small boats and aircraft for Jamaican law enforcement agencies and the military. The GOJ should also revise its drug legislation to provide adequate penalties for the trafficking and use of internationally controlled psychotropic substances and substances whose molecules have similar chemical properties. The USG is willing to provide technical assistance to the GOJ as it works to strengthen existing laws and draft new legislation.

Suriname

I. Summary

Suriname is a transit point for South American cocaine en route to Europe and the United States, and for MDMA (ecstasy) from Europe destined for the U.S. market. Evidence is insufficient, however, to establish that the quantity of drugs transiting Suriname has a significant effect on the U.S. A discovery of a drug laboratory in 2003 supports the belief that MDMA is being produced in Suriname. The Government of Suriname's (GOS) inability to control its borders and the lack of a law enforcement presence in the largely unmonitored interior allow traffickers to move drug shipments via sea, river, and air with little, if any, resistance. Nevertheless, GOS law enforcement had some success in interdicting cocaine shipments. In 2004, GOS law enforcement also took steps to expand cooperation with international partners, and a high level of cooperation exists between U.S. and GOS law enforcement officials. Domestic drug abuse reportedly continued to increase. The principal obstacles to effective counternarcotics law enforcement efforts are inadequate resources and limited training for law enforcement. These problems are compounded by inadequate legislation, with complicated and often time-consuming bureaucratic requirements; drug-related corruption; relative geographic isolation; lack of government control of the interior and borders; and lack of resources for law enforcement. Suriname is a party to the 1988 UN Drug Convention but has not implemented legislation bringing it into full conformity with the Convention.

II. Status of Country

Suriname is a transshipment point for cocaine originating in South America destined primarily for Europe and, to a lesser extent, the U.S. Suriname is also used to transship MDMA from Europe to the U.S. However, evidence available in 2004 did not support a finding that drugs entering the U.S. from Suriname were in an amount sufficient to have a significant effect on the U.S. The GOS is unable to detect the diversion of precursor chemicals for drug production, as it has no legislation controlling precursor chemicals. The lack of resources, limited law enforcement capabilities, along with inadequate legislation, drug-related corruption, and a complicated and time-consuming bureaucracy, inhibit the GOS's ability to identify, apprehend, and prosecute narcotics traffickers. In addition, Suriname's sparsely populated jungle interior together with weak border controls and infrastructure make narcotics detection and interdiction efforts difficult.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Suriname's current administration and GOS law enforcement officials consistently express concern regarding the extent of drugs transiting Suriname and point to the lack of resources as the primary obstacle to Suriname's counternarcotics efforts. In August 2002, the National Assembly passed a package of legislation aimed at criminalizing money laundering and amended Suriname's criminal code, code of criminal proceedings, and law on economic crimes. While certain amendments address the confiscation of illegally obtained assets, filing of criminal offenses against corporate entities, conspiracy, witness intimidation, and international requests for legal assistance, the GOS has not taken advantage of these provisions to assist law enforcement. Suriname has a Strategic Drugs Master Plan (2000-2005) that covers both supply and demand reduction but needs to update the plan and take steps to fully implement its provisions. The National Anti-Drug Council (NAR) is the national coordinating authority. In 2004 Suriname worked to increase its port security, coming into compliance with International Ship and Port Security (ISPS) port security obligations in October.

Law Enforcement Efforts. The Narcotics Brigade of Suriname's police force (KPS) benefits from high visibility within the police department, primarily due to the high-profile nature of counternarcotics issues both within the region and internationally. The Customs Service, despite its active and successful role in drug interdiction, does not consider itself a law enforcement body and receives fewer resources and less formal training. The Military Police, which is responsible for border control and immigration, has the primary role in drug interdiction efforts at ports of entry, particularly at the international airport. In 2004, GOS law enforcement made numerous arrests at the international airport of passengers, primarily on the five weekly flights to Amsterdam, who had either ingested or were carrying drugs on their bodies or in luggage. In one instance, cocaine was found being smuggled inside an automobile air filter. Many who evade detection in Suriname are arrested at the airport in Amsterdam, which in January 2004 began implementing a 100 percent inspection policy on all passengers and baggage arriving on inbound flights from Suriname.

As GOS Customs agents and Military Police have no investigative function, they tend to focus on individual smugglers and couriers rather than the organized trafficking kingpins and their networks, relying primarily on profiling and tips from informants. In 2004, however, a special unit within the police force continued cooperation with Dutch law enforcement to investigate drug organizations that actively smuggle drugs between Suriname and Holland. Over the course of few days in February, the KPS seized 379 kilograms of cocaine, 800 liters of airplane fuel believed to be involved in cocaine drops, and 82 kilograms of marijuana in eastern Suriname. The initial discovery of the airplane fuel at a police roadblock led to the unraveling of a more involved narcotics deal. Five Surinamers, two Brazilians, and one Columbian were arrested.

In June, a Surinamese judge sentenced four suspects to 7-10 years in prison for establishing an MDMA-producing lab in Suriname in 2003. The KPS Narcotics Brigade had seized 80 kilograms of MDMA in May 2003 and considerable amounts of precursor chemicals from that lab, which was capable of producing 500,000 tablets per day, which evidence suggested were destined for the U.S.

Through October 2004, the GOS seized 676 kilograms of cocaine, 196 kilograms of cannabis, and 2048 ecstasy pills. They also arrested 300 people for drug-related offenses.

According to a GOS official, members of the Colombian terrorist group, the Revolutionary Armed Forces of Colombia (FARC), are present in Suriname to coordinate arms-for-drugs activities. In September KPS forces seized a large weapons cache consisting of dozens of guns, thousands of rounds of ammunition, RPG equipment, TNT, grenades, and one kilogram of cocaine believed to be connected to a FARC arms-for-drugs deal. Thirteen suspects were arrested and are awaiting prosecution, including long-time suspected narcotics trafficker Dino Bouterse, the son of former military dictator and convicted drug dealer Desi Bouterse. Dino was previously arrested in 2003 for his alleged involvement in the theft of weapons from an armory of the Surinamese intelligence agency (CIVD), but was subsequently released when several witnesses either recanted previous testimony implicating him or refused to testify. KPS officials confirm that some of the weapons stolen from the CIVD in 2003 were found with the weapons seized in September.

Corruption. Public corruption is considered a serious problem in Suriname. Reports of money laundering, drug trafficking and associated criminal activity involving current and former government and military officials continue to circulate. According to customs reports, the GOS loses roughly \$45 million dollars annually in uncollected customs revenues due to corruption and false invoicing. Investigations show that false invoicing occurs daily, despite heavy fines. In 2004 the customs department initiated attempts to reduce this corruption, including the hiring of a British consultancy group to reorganize the department and the regulation and restriction of gratuities and gifts allowable to customs personnel.

In 2004, 12 police officers were arrested for misconduct ranging from drug charges to manslaughter, five were dismissed for cause, and 17 were suspended. Former military strongman Desi Bouterse

continued to serve in the National Assembly in 2004 despite his 1999 conviction in the Netherlands for narcotics trafficking. A former Minister of Finance and Natural Resources was convicted of corruption and sentenced to one year in prison in 2003 for forging minutes of a meeting in which the Council of Ministers purportedly granted approval for the purchase of a building for \$300,000 more than its appraised value. The Minister was granted a presidential amnesty and was released from prison in August after serving six months of his sentence. Suriname ratified the Inter-American Convention Against Corruption in 2002, but a comprehensive national anticorruption plan is still in the development stage. Suriname has not yet signed the UN Convention Against Corruption.

Agreements and Treaties. Suriname is party to the 1961 UN Single Convention on Narcotic Drugs, the 1972 Protocol amending the Single Convention, and the 1971 UN Convention on Psychotropic Substances. It is also a party to the 1988 UN Drug Convention, but has not yet implemented legislation bringing it into full compliance with the Convention. Suriname has passed legislation that conforms to the drug interdiction portion of the Convention. The GOS ratified the OAS Convention on Mutual Legal Assistance in Criminal Matters. Since 1976, the GOS has been sharing narcotics information with the Netherlands pursuant to a Mutual Legal Assistance Agreement. In August 1999, a comprehensive six-part bilateral maritime counternarcotics enforcement agreement with the U.S. entered into force. The U.S.-Netherlands Extradition Treaty of 1904 is applicable to Suriname. Suriname is a member of the Inter-American Drug Abuse Control Commission of the Organization of American States (OAS/CICAD).

Cultivation and Production. Suriname is not a producer of cocaine or opium poppy. While cannabis is cultivated in Suriname, there is no specific data on the number of hectares under cultivation or evidence that it is exported in significant quantities. The discovery of an MDMA lab in 2003 indicates that MDMA production may be taking place in Suriname.

Drug Flow/Transit. Much of the cocaine entering Suriname is delivered by small aircraft which land on clandestine airstrips located throughout the dense jungle interior where the lack of resources, infrastructure, law enforcement personnel and equipment makes detection and interdiction difficult. Following drug deliveries along interior roads and clandestine airstrips, the drugs are shipped to the ports from the interior via numerous river routes to the sea and overland for onward shipment to Caribbean islands, Europe and the U.S. Drugs exit Suriname via commercial air flights (by drug couriers or secreted in planes) and by commercial sea cargo. European-produced MDMA is transported via four weekly flights from the Netherlands to Suriname; drug couriers then transport the drugs to the U.S. on flights to Miami, via Curacao.

Domestic Programs (Demand Reduction). In October, the Suriname Epidemiology Network on Drug Use (SURENDU) was established by NAR through financial and technical support from the European Union. SURENDU is a multi-agency working group established to study the spread, growth and development of substance abuse in Suriname. Its preliminary assessments show an increased demand for cocaine, especially among people aged 30-50. Cocaine is readily available with a relatively low street price. NAR completed a survey in April of emergency room patients in Suriname's largest hospital to determine the number of drug-related emergencies and drug-use among patients. Results indicated a high amount of alcohol-related accidents but usage data for cocaine, marijuana and other narcotics were inconclusive. The study was a part of a larger Caribbean-wide research study of drug use that was undertaken by OAS/CICAD.

Suriname has a Drug Demand Reduction Strategy, incorporated in the Strategic Master Plan, but has not yet fully implemented it. The Bureau of Alcohol and Drugs, a department of the State Mental Health Institution, along with the NAR, police, and NGOs, emphasize drug education and rehabilitation in response to growing domestic drug consumption. The National Drugs Information System, created in 2001 to collect and distribute data to positively influence policy formation, has been largely ineffective.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. A high level of cooperation exists between U.S. and GOS law enforcement officials. In 2004, the U.S. provided both training and material support to several elements of the KPS and the military to strengthen their counternarcotics capabilities and promote greater bilateral cooperation. The Department of State, in cooperation with the DEA, continues to build on previous years' work by providing assistance to dedicated Surinamese law enforcement officials to increase their technical skills. Through temporary duty assignments, the DEA provided near continuous training and logistical support to the Narcotics Unit of the KPS. The DEA and the KPS have also been active in Caribbean-wide counternarcotics law enforcement operations. The USG and GOS continued to cooperate on counternarcotics matters—using USG funding provided in 2004 under an INL amended Letter of Agreement (LOA). In 2004, the F.B.I. conducted two courses on Organized Crime Task Force Development and Intelligence Analysis in Suriname with nationals from Guyana and Trinidad and Tobago also participating. USG funding also went for the purchase of a vehicle database, radios, vehicles, and computer systems. Suriname also has one crewman serving aboard the Caribbean Support Tender, a U.S. Coast Guard vessel with a multi-national crew that provides training and assistance in ship maintenance and repairs to Caribbean countries' Coast Guards.

The Road Ahead. The U.S. will continue to encourage the GOS to pursue large narcotics traffickers rather than focusing primarily upon swallows and body carriers. The U.S. will encourage the GOS to sign and ratify the Caribbean Regional Maritime Agreement. The U.S. will also urge the GOS to focus on port security, specifically seaports, which are seen as the primary conduits for large shipments of narcotics exiting Suriname. In 2005, DEA plans to provide the KPS and other law enforcement agencies with basic drug enforcement training. The U.S. will continue to provide equipment, training, and technical support to the GOS to strengthen its counternarcotics efforts.

Trinidad and Tobago

I. Summary

Trinidad and Tobago is a transit country for drugs from South America to the U.S. and Europe. The quantity of drugs transiting Trinidad and Tobago does not have a significant effect on the U.S. market, but it does have an impact on the U.S. transportation and law enforcement systems. Cannabis is grown in Trinidad and Tobago, but not in sufficient quantities to warrant the designation of Trinidad and Tobago as a major drug producing country. Trinidad and Tobago's petrochemical industry requires precursor chemicals that could be used for drug production. In addition, Trinidad and Tobago's well-developed economy creates the potential for money laundering. (See the money laundering section of this report for more details.)

The Government of Trinidad and Tobago (GOTT) continued to cooperate with the U.S. on counternarcotics issues and allocated significant resources to the fight against illegal drugs. U.S. bilateral efforts in 2004 focused on the provision of technical assistance, training, and materiel to help the GOTT strengthen all facets of its counternarcotics efforts. Organizations such as the Police Service's Organized Crime and Narcotics Unit (OCNU), the Counter-Drug/Crime Task Force (CDCTF), the Trinidad and Tobago Coast Guard (TTCG) and the Customs Marine Interdiction Unit carried out numerous drug interdiction and cannabis eradication operations during 2004, and these units remained very cooperative with their U.S. counterparts throughout the year.

II. Status of Country

Trinidad and Tobago is situated seven miles off the coast of Venezuela, making it a convenient transshipment point for illicit drugs, primarily cocaine and marijuana but also heroin, from South America destined for U.S. and European markets. While the drugs entering the U.S. from Trinidad and Tobago do not have a significant effect on the U.S. market, their steady entry into the U.S. occupies the resources of the transportation and law enforcement systems.

Trinidad and Tobago does not produce coca or opium poppy. While cannabis is grown in the country, it is primarily for domestic use and is not produced on a scale to make Trinidad and Tobago a major drug-producing country.

Trinidad and Tobago has an advanced petrochemical sector, which requires the import/export of precursor chemicals that can be diverted for the manufacturing of cocaine hydrochloride. Precursor chemicals originating from Trinidad and Tobago have been found in illegal drug labs in Colombia. However, the GOTT Ministry of Health can now track chemical shipments through the country with the help of U.S.-donated computers.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In 2004, the GOTT National Drug Council continued to implement counternarcotics policy initiatives from previous years, including elements of the country's counternarcotics master plan. This plan addresses both supply and demand reduction. In addition, the GOTT continued its support for the new Special Anti-Crime Unit (SAUTT), which has responsibility for both counternarcotics and antiskidnapping operations. The GOTT also amended its extradition act with the USG in April to remove legal loopholes and facilitate greater cooperation in the prosecution and extradition of criminals.

The GOTT also took initiatives at the sub-regional level to stem the flow of illegal drugs, including upgrading its coastal radar assets and providing disaster relief/security assistance to the hurricane-ravaged island of Grenada.

Accomplishments. In 2004, senior GOTT officials continued to support counternarcotics initiatives and allocated substantial resources for both new and ongoing programs, often in cooperation with the U.S. The GOTT continued to fund a three-person U.S. Customs Advisory Team that provides technical assistance to the Customs and Excise Division. This unit focuses on improving the effectiveness of the GOTT's passenger and cargo processing and enforcement capabilities. The GOTT also continued to fund an IRS Tax Assistance and Advisory Team that is working with the Bureau of Inland Revenue (BIR) to detect and prosecute financial crimes. The GOTT provided support for the Caribbean Financial Action Task Force (CFATF), which has its secretariat in Port of Spain, and began to implement several of its recommendations to combat money laundering.

The GOTT also maintained its support for the TTCG Air Wing, which has been conducting drug interdiction operations using two C-26 aircraft donated by the U.S. These aircraft, upgraded with sensor packages in 2002 at USG and GOTT expense, provide the GOTT with a maritime surveillance and drug interdiction capability. To enhance its coastal radar net, the GOTT procured an Israeli radar system in 2004.

Law Enforcement Efforts. Senior government officials have attributed rising crime to increased drug availability in Trinidad and Tobago. In response, the GOTT augmented the Ministry of National Security's budget by TT \$2.3 billion (U.S. \$383 million) in FY2004, purchased helicopters and radar systems to increase its intelligence and surveillance capabilities, and continued to support law enforcement hybrid units such as the SAUTT.

The TTCG, OCNU, CDCTF, SAUTT and other specialized policy/military units continued to effect drug interdiction and eradication operations throughout the year, sometimes in cooperation with DEA and U.S. Customs. In 2004, the GOTT seized 160 kilograms of cocaine, 75.6 kilograms of liquid cocaine, 11.6 kilograms of heroin, and 1,850 kilograms of cannabis. The GOTT also eradicated around one million cannabis plants and seedlings during the year.

While arrests and prosecutions focused on individual drug traffickers, there were no notable arrests in 2004 involving major traffickers or organizations. For instance, in January, members of OCNU arrested a member of the TTDF with 500 kilograms of cannabis. In July, officers of the Firearms Interdiction Unit (FIU) arrested two Trinidadians and three Venezuelans with 11.2 kilograms of cocaine, 600 grams of marijuana and assorted firearms. In November, members of the OCNU arrested a Trinidadian, a Venezuelan and a Colombian with 30 kilograms of pure cocaine.

Corruption. Trinidad and Tobago is a party to the Inter-American Convention Against Corruption and has signed the UN Convention Against Corruption. During 2004, there were no charges of drug-related corruption filed against GOTT senior officials, and neither the GOTT nor any of its senior government officials encourage or facilitate the illicit production or distribution of drugs or the laundering of drug money.

The 1987 Prevention of Corruption Act and the 2000 Integrity in Public Life Act address the responsibility and ethical rules for government personnel. The Integrity in Public Life Act requires public officials to declare and explain the source of their assets, and an integrity commission is authorized to initiate investigations into allegations of corruption.

At GOTT request, the USG has polygraphed police, and mid-and high-level officials going for training or entering elite units to ensure that reputable and reliable personnel were chosen.

Agreements and Treaties. Trinidad and Tobago is party to the 1988 UN Drug Convention, the 1961 UN Single Convention on Narcotic Drugs, the 1972 Protocol amending the Single Convention, and the

1971 UN Convention on Psychotropic Substances. Mutual legal assistance and extradition treaties with the U.S. entered into force in November 1999. A bilateral U.S.-GOTT maritime agreement is also in force.

The GOTT signed the UN Convention against Transnational Organized Crime, the Protocol to Prevent, Suppress, and Punish Trafficking in Persons, and the Protocol against the Smuggling of Migrants in 2001, but it has not yet ratified those instruments. Trinidad and Tobago is also a member of the Organization of American States' Inter-American Drug Abuse Commission (OAS/CICAD).

Cultivation and Production. Trinidad and Tobago is not a producer of cocaine or opium poppy. Cannabis, however, is cultivated year-round in the forest and jungle areas of northern, eastern, and southern Trinidad and, to a minor extent, in Tobago. The total amount of cultivation cannot accurately be determined because cultivation is done in small quarter-acre lots in remote areas. There have also been reports of cannabis being grown in plots with legal cash crops. Cannabis is eradicated by cutting and burning plants manually; crops are not sprayed with aerially applied herbicides.

Drug Flow/Transit. Illicit drugs arrive from the South American mainland, particularly Venezuela, on fishing boats, pleasure craft and commercial aircraft. Sizeable quantities of drugs also transit the country through commodities shipments from South America. Drugs are then smuggled out on yachts, in air cargo, and by couriers. Smuggling through the use of drug swallows ("mules") is also on the rise.

Cocaine has been found on airline flights from Guyana transiting Trinidad and Tobago en route to North America. Drug seizures reported by U.S. law enforcement officials at JFK International Airport and intelligence indicate that Guyanese-based smuggling organizations are increasingly using Trinidad and Tobago as a transshipment point for cocaine. In addition, DEA believes there has been a slight increase in the amount of heroin transiting the country. Some shipments are bypassing Trinidad and Tobago, however, in favor of other islands, due in large part to the counternarcotics efforts of GOTT security forces.

There is little to no manufacturing or distribution of synthetic drugs in Trinidad and Tobago.

Domestic Programs (Demand Reduction). The GOTT does not maintain statistics on domestic consumption or numbers of drug users. Trinidad's demand reduction programs are managed by government agencies such as the Ministry of Community Development and Gender Affairs, the National Drug Council in the Ministry of National Security, the Ministry of Education, and the Office of Social Services Delivery, often with assistance from NGOs. The GOTT also funds the National Alcohol and Drug Abuse Prevention Program, which coordinates the activities of NGOs to promote demand reduction. In addition, the GOTT promotes job skills training programs for high-risk youths, and supports police youth clubs with its community-policing branch. The GOTT also has a D.A.R.E. program.

The U.S. has provided funding to enable the NGO SERVOL to expand its program of early childhood education, and has supported demand reduction efforts in Trinidad and Tobago through the sponsorship of police youth clubs, football leagues and public awareness campaigns.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. The key U.S. policy objective is to assist the GOTT to eliminate the flow of illegal drugs through Trinidad and Tobago to the United States. Joint U.S./GOTT efforts focus on strengthening the GOTT's ability to detect and interdict drug shipments, bring traffickers and other criminals to trial, attack money laundering, and counter drug-related corruption. The U.S. also seeks to strengthen the administration of justice by helping to streamline Trinidad and Tobago's judicial process, reduce court backlogs, and protect witnesses from intimidation and murder.

Bilateral Cooperation. The U.S. has a cooperative relationship with the GOTT and continues to provide the Trinidadian law enforcement organizations with training, technical assistance, equipment and vehicles in support of their counternarcotics/anticrime efforts. The U.S. provided equipment and vehicles to the OCNU, drug detection dogs to the TTPS and is in the process of procuring fast interceptor boats and shallow draft interdiction boats for the TTCG and Customs and Excise Division. The U.S. continues to support the use of two C-26 aircraft for maritime counternarcotics interdiction operations and has cooperated with the British to increase the GOTT's ability to detect drug swallows transiting its airports.

The GOTT-funded U.S. Customs Advisory Team provides technical assistance to Customs and Excise in tracking and intercepting marine vessels, including cargo container ships, and improving drug detection. The team continued to work with the Customs Marine Interdiction Unit and Canine Unit to strengthen their counternarcotics capabilities. The team provided technical assistance, along with U.S.-funded computers and training, to help the GOTT establish a Passenger Analytical Unit (PAU) at Piarco International Airport to target passengers for interview and secondary inspection. The PAU, jointly run by the GOTT Customs & Excise and Immigration Divisions, became operational in the summer of 2004. The Unit will enhance drug interdiction and antiterrorist efforts of both the host government and of the U.S.

An IRS Tax Assistance and Advisory Team is helping the Inland Revenue Division detect and prosecute financial crimes. It assisted the GOTT in developing a Criminal Investigation/Tax Fraud Unit that tracks tax evasion and underreporting, which are usually associated with money laundering. The IRS team is also assisting in modernizing the GOTT's tax processing system to make better use of 3rd party sources of income information.

The GOTT, as a founding subscriber to the International Criminal Court, has not signed an Article 98 agreement with the USG. This has caused a suspension of International Military Education grant funds and all Foreign Military Financing effective July 1, 2003. Nonetheless, the GOTT continues to exhibit political and operational will to stem the flow of drugs through existing agreements.

The Road Ahead. The U.S. will continue to work closely with the GOTT's law enforcement agencies to strengthen their counternarcotics/anticrime capabilities. The U.S. will continue to provide training and operational support to the TTCG to enhance the GOTT's air surveillance and maritime interdiction capabilities. The GOTT and U.S. envision that the intelligence collection and analysis capability of the TTCG Air Wing will increase as training proceeds through 2005.

The U.S. will continue efforts to improve the rule of law by encouraging legal reforms, including improving evidentiary laws, and providing assistance aimed at reducing judicial delays. In addition, the U.S. will seek to engage GOTT officials and the Caribbean Financial Action Task Force in the enactment and implementation of effective asset forfeiture and anti-money laundering laws. The U.S. will urge the GOTT to sign and ratify the Caribbean Regional Maritime Agreement.

SOUTHWEST ASIA

Afghanistan

I. Summary

General political and economic circumstances in Afghanistan have improved since January 2004, but the narcotics situation continues to worsen, despite positive steps taken by both the government and international donors. Dangerous security conditions make implementing counternarcotics (CN) programs difficult and present a substantial obstacle to both poppy eradication efforts by the national government and to international efforts to provide related assistance. As a result of the profound destruction and disruption of normal life brought about by more than 25 years of conflict, the lack of legitimate income streams, and the limited enforcement capacity of the national government, the area devoted to poppy cultivation in 2004 set a new record at 206,700 hectares, more than three-times the area devoted to poppy last year. Opium gum production of 4950 metric tons in Afghanistan dwarfed opium gum production in second-place Burma (292 metric tons) by a factor of almost 17 times. Burma's heroin production potential at 28 metric tons is a small fraction (4.8 percent) of Afghanistan's heroin production potential of 582 metric tons. Afghanistan's illicit opium/heroin production can be viewed, for all practical purposes, as the rough equivalent of world illicit heroin production, and it represents an enormous threat to world stability.

With an estimated 40 to 60 percent of its GDP attributed to narcotics (IMF), Afghanistan is on the verge of becoming a narcotics state. Despite the many obstacles, the Government of Afghanistan (GOA) has undertaken major institutional and policy changes that have directly benefited its counternarcotics objectives and have established a sound structural basis to attack the problem. President Hamid Karzai, following his election victory in October, has repeatedly spoken out against the drug trade and has issued decrees banning drug cultivation and trafficking. International counternarcotics (CN) activities, following the overthrow of the Taliban, remain under a multilateral mandate, with the United Kingdom in the lead on CN measures. The international community is continuing to work with the GOA to determine how best to attack Afghanistan's drug problem in a more aggressive manner, including more widespread eradication and efforts against heroin refiners and traffickers. In light of the growing threat the drug trade poses to Afghanistan and the world, the U.S. adopted an enhanced counternarcotics policy in 2004 and a comprehensive program consisting of public information campaigns, alternative livelihood projects, law enforcement development, including justice reform, and interdiction and eradication.

II. Status of Country

Afghanistan remains a significant location for the cultivation, refining, and transit of all forms of unrefined (opium), refined (heroin) and semi-refined (morphine base) opiates. Drugs have been a major factor in the Afghan economy since the Soviet invasion of 1979. Criminal financiers and narcotics traffickers in and outside of Afghanistan take advantage of the ongoing instability. The process of reconstruction that began in 2002 continues to accelerate and is laying the basis for successful counternarcotics programs in the future. Some Afghan opiates reach the United States, but Colombia and Mexico remain the U.S.' largest source for heroin.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The U.S. and the international community, under the UK as lead nation on CN, and the country office of the UN Office on Drugs and Crime (UNODC), maintained an intense policy dialogue with President Karzai, the Afghanistan National Security Council, and various Afghan Ministries throughout the year on the subject of combating narcotics. Urged on by the international

community and recognizing the need for action on the counternarcotics front, the GOA has made significant structural, policy and institutional changes to combat narcotics cultivation, production, and trafficking in Afghanistan, including the following:

- A new Counternarcotics Ministry created in December 2004, replacing the Counternarcotics Directorate, to coordinate and oversee CN policies and other line ministries involved in aspects of counternarcotics policy. The CN Ministry will raise the profile of GOA CN activities and facilitate communication between CN policy makers and practitioners and the President.
- In November 2004, the position of Deputy Minister for Counternarcotics was created in the Ministry of Interior to oversee and coordinate CN enforcement activities.
- A Central Poppy Eradication Force was established in April 2004 to carry out centrally-directed, forced eradication across the country.
- In October 2004, the National Interdiction Unit, a special interdiction force trained by the U.S. Drug Enforcement Administration, was created under the existing Counternarcotics Police.
- The review and updating of the May 2003 National Drug Control Strategy is underway to better address the growing problem and reflect the higher priority the GOA places on CN activities.

The adoption of a new constitution in January 2004 and the presidential election in October 2004 further strengthened the government's authority. Establishment of a national government, legitimized through democratic elections, has created the necessary prerequisites for the series of difficult actions necessary to reverse the deteriorating situation on the narcotics front. Parliamentary and district elections, currently scheduled for spring 2005, will further legitimize the Afghan Government.

Law Enforcement Efforts. The most immediate concern of the GOA is to establish security and rule of law throughout the country. In the current difficult security environment significant drug enforcement work has not yet been possible, beyond a few limited areas. Efforts have been focused on planning and implementing near-term governmental reforms, which lay the groundwork for serious law enforcement actions against illicit cultivation and trafficking of narcotics in the near-term.

The GOA is reviewing a new basic drug law, the Anti-Narcotics Amendment. This revision of the country's basic narcotics law will bring it into compliance with international norms for counternarcotics laws and remove significant loopholes that constrain aggressive law enforcement and hinder the judicial process.

Over 33,000 Afghan National Police were trained in 2004 under an accelerated training program managed by the German government and supported by the U.S. Over the longer term, additional support to equip, mentor and train the border, highway and regular police force in the field will be required, as well as further institutional development of the Ministry of Interior MOI.

The MOI established a Counternarcotics Police department (CNP-A) in 2003 and has established, with help from the international community, three sections of the CNP-A: investigation, intelligence and interdiction. However, piece-meal training and limited funding have hampered development of these units. A new program to build a National Interdiction Unit (NIU) capable of undertaking low and mid-level targeted interdiction operations across the country, under the tutelage of the U.S. Drug Enforcement Administration, is underway. Eventually, this force will be integrated with the CNP-A's other units to build a unified force with regional headquarters around the country.

The same limitations that adversely affect interdiction of narcotics and enforcement of the ban on narcotics cultivation and trafficking hamper the interdiction of precursor substances and processing

equipment. The GOA has a sophisticated understanding of this issue, but action in this regard is dependent upon establishment of the necessary specialized police, and licensing arrangements. There are currently no registries or legal requirements for tracking, storing or owning precursor substances.

The U.S. is also providing support for justice reform and training in judicial and prosecutorial enforcement of counternarcotics laws. Aware that general justice reform is a long-term process, the U.S., UK and other donors established the “Counternarcotics Vertical Prosecution Task Force” in late 2004 to move expeditiously against narcotics criminals. The program, to be carried out under the auspices of the UNODC, includes initial training of a select group of judges, prosecutors, and police in specific counternarcotics issues; refurbishment of a secure prison facility; and establishment of a secure court to hold and try major drug offenders. The U.S. plans to assign experienced Federal prosecutors to the Task Force to assist their Afghani counterparts in building and trying cases.

Corruption. In general, most officials at the national level are believed to be free of direct criminal connection to the drug trade. At the provincial and district levels, however, drug-related corruption is pervasive. Involvement ranges from direct participation in the criminal enterprise, to benefiting financially from taxation or other revenue streams generated by the drug trade. The national government has officially condemned the illicit drug trade, but does not have sufficient power throughout the national territory to suppress it.

Agreements and Treaties. Afghanistan is a party to the 1961 UN Single Convention, the 1971 UN Convention on Psychotropic Substances and the 1988 UN Drug Convention. The GOA has no extradition or legal assistance arrangements with the U.S. Afghanistan is not a party to any treaties providing for mutual legal assistance between itself and any of its neighbors, the U.S., or any other major CN nation. Afghanistan is a party to the UN Convention against Transnational Organized Crime and a signatory to the UN Convention Against Corruption.

Illicit Cultivation/Production. Afghanistan contains the largest area of illicit opium poppy cultivation in the world. Poppy is grown commercially in all of its 34 provinces. In 2004, Afghanistan had an unprecedented 206,700 hectares of land planted to poppy. Opium production was an estimated 4950 metric tons. If all of Afghanistan’s opium production were refined into heroin, an estimated 582 metric tons of heroin could have been produced. None of these figures has any precedent. For example, the largest prior production of opium in Afghanistan was 3108 metric tons of opium in 2000; 2004’s production of opium exceeded this level by almost 60 percent. The largest area ever dedicated to growing opium was 165,800 hectares in Burma in 1993; the land devoted to poppy in Afghanistan last year exceeded Burma’s ‘93 cultivation by almost 25 percent. Only pitiful yields for South Asia of 24 kilograms of opium gum per hectare, caused by disease and drought, saved the world from even larger opium gum production in Afghanistan. If yields in 2004 had matched the yields achieved in 2003, Afghanistan would have produced 9715 metric tons of opium, with a potential yield of heroin in excess of 1000 metric tons.

With limited national enforcement reach, the GOA has not been able to enforce its decree banning opium production. The Central Poppy Eradication Force and provincial forces have undertaken only marginal crop destruction in a few locations. This eradication has had no material effect on the quantity of opium gum produced in Afghanistan. The aftermath of a quarter-century of warfare, multiple changes of government, and an embedded tradition of poppy cultivation has made it very difficult to implement eradication plans. Even a centrally-trained and directed Afghan force faces significant opposition by local people involved in the trade. The lack of sustainable alternative sources of income compounds the difficulty of reducing the opium poppy crop. Because so much of the rural economy is dependent on the opium trade, a major forced eradication campaign, without the provision of viable alternatives, could destroy the already fragile Afghan economy. Rebuilding the agricultural sector and rural economy is fundamental to reducing opium poppy cultivation in Afghanistan.

Drug Flow/Transit. Drug cultivation in Afghanistan is facilitated by both domestic and foreign individuals who lend money and/or provide agricultural inputs to Afghan farmers. These individuals then buy their crop at previously set prices, or accept repayment of loans “in kind”, i.e., with deliveries of raw opium. In many provinces there also are opium markets, under effective protection of regional strongmen, where opium is traded freely to the highest bidder and is subject to taxation by those strongmen. An increasingly large portion of Afghanistan’s raw opium crop is processed into heroin and morphine base by drug labs inside Afghanistan, reducing its bulk by a factor of 10 to 1, and thereby facilitating its movement to markets in Europe, Asia and the Middle East through Iran, Pakistan, and Central Asia. In the South, Southeast and Northeast border regions, Pakistani nationals play a very prominent role in all aspects of the drug trade. Distribution networks are frequently organized along regional and ethnic lines (i.e., Baloch tribesmen on both sides of Afghanistan’s borders with Iran and Pakistan, and the Tajiks in northern Badakhshan Province). Other organized criminal groups are also believed to be involved in transportation onwards to Turkey, Russia and the rest of Europe.

Demand Reduction/Domestic Programs. The GOA recognizes that it has a domestic drug use problem, particularly with opium. Its National Strategy includes demand reduction and rehabilitation programs for existing and potential drug abusers. However, in the context of the overall shortage of general medical services, very limited GOA resources are being directed to these programs. The UK, Germany, and the U.S., to a lesser degree, have funded specific demand reduction and rehabilitation programs. The GOA (collectively, the MOI, the President’s executive office, the National Security Council) has established public outreach campaigns to discourage drug abuse.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. The United Kingdom was designated as international lead country on CN activities in Afghanistan in 2002. In 2004, as the drug problem continued to grow out of control and evidence mounted that drug proceeds were supporting Taliban remnants and terrorist groups, the U.S. expanded its CN programs. CN is now one of the U.S.’s top priorities, as solving the narcotics problem is critical to achieving overall success in Afghanistan. The U.S., in coordination with the GOA and the UK, has crafted a comprehensive and integrated program and will provide substantial resources to achieve the following aims:

- Encourage popular support for the government’s CN programs through a broad public affairs campaign.
- Build sustainable alternative sources of income to poppy in rural areas.
- Build capacity to arrest, prosecute and incarcerate drug offenders.
- Destroy drug labs and stockpiles.
- Dismantle the drug trafficking/refining networks.
- Enforce the poppy ban through eradication.

The Road Ahead. The key elements affecting CN activities in Afghanistan are limited security and stability. Poppy cultivation is likely to continue until responsible governmental authority is established throughout the country and until rural poverty levels can be reduced via provision of alternative livelihoods and increased rural incomes. Sustained assistance to poppy-growing areas, diversification of crops, improved market access, and development of off-farm employment, combined with law enforcement, drug education, and eradication programs are expected to reduce the amount of opium produced in Afghanistan over time. However, drug processing and trafficking can be expected to continue until security is established and drug law enforcement capabilities can be increased. Political

stability and assistance by the donor community over many years will be required to help the Afghan government succeed.

Bangladesh

I. Summary

Because of its geographic location in the midst of major drug producing and exporting countries, Bangladesh is used by trafficking organizations as a transit point. Seizures of heroin, phensidyl (a codeine-based, highly addictive cough syrup produced in India), and pathedine (an injectable opiate with medical application as an anesthesia) point to growing narcotics abuse in Bangladesh. Phensidyl is popular because of its low price and widespread availability. While unconfirmed reports circulate of opium and cannabis cultivation along the border with Burma and cannabis cultivation in the southern delta region, there is no evidence that Bangladesh is a significant producer or exporter of narcotics. The Bangladesh government (BDG) officials charged with controlling and preventing illegal substance trafficking lack training, equipment, continuity of leadership, and other resources to detect and interdict the flow of drugs. Moreover, there is minimal coordination among these agencies. Corruption at all levels of government, and in particular law enforcement, hampers the country's drug interdiction efforts. Bangladesh is a party to the 1988 UN Drug Convention.

II. Status of Country

There are unsubstantiated allegations of opium and cannabis production in the Bandarban District along the Burmese border and cannabis production in the southern silt-island ("char") region. The country's porous borders make Bangladesh an attractive transfer point for drugs transiting the region.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The Department of Narcotics Control's (DNC) counternarcotics policy initiatives and program activities are seriously hampered by the ineffectiveness of the National Narcotics Control Board (NNCB), the highest governmental body, to fulfill the objectives of the Narcotics Control Act (NCA). Article 5 of the NCA directs the Board to formulate policies and monitor the production, supply, and use of illegal drugs in Bangladesh. The 19-member NNCB, made of up of 12 ministers, six elected members, and the DNC Director General, is charged to meet quarterly, but no meetings have been held since a single meeting was conducted in 2003. There is no master plan for combating drug trafficking and abuse in Bangladesh.

The BDG and USG signed a Letter of Agreement (LOA) in September 2002 to provide equipment and forensic technical assistance to the DNC and its central chemical laboratory. The LOA also provided for training, via the U.S. DOJ, to law enforcement personnel involved in counternarcotics activities. An amendment to the LOA for an increase in funds for training and equipment was signed in 2004. The forensic training project has begun and is projected to last several years, with the trainer making visits every three to four months. The law enforcement training program is also underway, with an established work plan, budget, and deliverables.

Accomplishments. The Department of Narcotics Control is the BDG agency most responsible for counternarcotics efforts in Bangladesh. It is housed within the Ministry of Home Affairs and is currently under the leadership of its third Director General since 2002, who has been in office for just over a year. The organization is chronically under-funded, understaffed, under-trained, and suffers from frequent personnel turnover. Construction has begun on a BDG funded 250-bed treatment facility in Dhaka. Unlike other, much smaller government facilities that only detoxify addicts without rehabilitating them, this facility will dedicate 100 beds to detoxification and treatment and 150 beds to rehabilitation. Completion is slated for 2006.

Law Enforcement Efforts. Law enforcement units engaged in counternarcotics operations include the police, the DNC, the border defense forces known as the Bangladesh Rifles (BDR), customs, the navy, the coast guard, and local magistrates. Elements of the BDR, responsible for land border security within a twelve-mile swath inside the country, are widely believed to abet the smuggling of goods, including narcotics, into Bangladesh. Regular police and the BDR are viewed as so corrupt and inept at combating everyday crime that a new “Rapid Action Battalion” (RAB) force was recently set up by the central government. Customs, the navy, the coast guard and the DNC all suffer from underfunding, under-equipping, understaffing, and lack of training. Customs officials also lack arrest authority. At ports of entry where customs officials are not stationed with police units, they have no capacity to detain suspected traffickers. Instead, they can only retain the contraband items found. There is no DNC presence at the country’s second largest airport, in Chittagong, which has direct flights to Burma and Thailand. To date, no random searches of crews, ships, boats, vehicles, or containers are being performed at the country’s largest seaport in Chittagong. These obstacles render the overall BDG counternarcotics system almost totally ineffectual. There is also no evidence that law enforcement efforts have any capacity to focus specifically on major traffickers.

According to the DNC, drugs seized by Bangladesh authorities from January through November 2004 are as follows: 12.3 kilograms of heroin (approximately 15 percent increase over the amount seized during all of 2003); 1,720.2 kilograms of marijuana (approximately a 10 percent decrease over the amount seized during all of 2003); 853 ampules of T.D. Jasick injection (approximately a 77 percent decrease over the amount seized during all of 2003); 248.8 liters of phensidyl (approximately a 34 percent decrease over the amount seized during all of 2003); and 2,094 ampules of pathedine injection (approximately a 57 percent increase over the amount seized during all of 2003). It is important to note that these statistics do not reflect all seizures made by all agencies in Bangladesh. However, the DNC believes them to be reflective of general trends in Bangladesh. When examining these DNC data from 1990 to the present, no overall trend emerges. It appears seizures are simply random.

Corruption. Corruption is a major problem at all levels of society and government in Bangladesh. Authorities involved in jobs that have an affect on the drug trade facilitate the smuggling of narcotics. Corrupt officials can be found throughout the chain of command. If caught, prosecuted, and convicted, most officials receive a reprimand at best and termination from government service at worst. Adjudicating authorities do not take these cases seriously.

An Anti-Corruption Commission was officially formed in November 2004 with a mandate to investigate corruption and file cases against government officials. However, serious questions remain about the Commission’s ability and commitment to operate effectively and independently of outside influences. The BDG does not, as a matter of government policy, encourage or facilitate illicit production or distribution of drugs or controlled substances or launder proceeds from their transactions. No senior official has been identified as engaging in, encouraging, or facilitating the production or distribution of drugs or controlled substances.

Agreements and Treaties. Bangladesh is a party to the 1988 UN Drug Convention. It has a memorandum of understanding on narcotics cooperation with Iran, an extradition treaty with Thailand, and an information-sharing relationship with the Government of Burma.

Cultivation/Production. The DNC strongly denies unsubstantiated reports from several NGO and local government officials that opium production takes place in the Bandarban district along the border with Burma. However, the DNC does acknowledge that a limited amount of cannabis is cultivated in the hill tracts near Chittagong, in the southern silt islands, and in the northeastern region, stating that it is for local consumption. The DNC also reports that as soon as knowledge of a cannabis crop reaches its officers, that crop is destroyed in concert with law enforcement agencies.

Drug Flow/Transit. Bangladesh is situated between the Golden Crescent to the west and the Golden Triangle to the east. Opium based pharmaceuticals and other medicinal drugs are being smuggled from India. White heroin comes in from Burma.

Domestic Programs (Demand Reduction). There is no consensus estimate of the number of drug addicts in Bangladesh. A recent DNC study estimated the addict population at two million and growing. Other BDG estimates put the figure as low as 250,000. The total number of drug cases and accused drug offenders doubled between 1999 and 2001 and continues to rise. Media and anecdotal reports suggest that drug abuse, while previously a problem among the ultra-poor, is becoming a major problem among the wealthy and well-educated young. The BDG sponsors rudimentary educational programs aimed at youth in schools and mosques, but there is little funding for these programs and no clear indication of their impact.

The BDG currently runs outpatient and detoxification centers in Dhaka, Chittagong, Khulna, and Rajshahi. These centers only remove the drug from the addict's system; they do not address the underlying causes of individual addiction. Hence, they are not successful in dealing with the addiction problem in Bangladesh. There are other, non-governmental centers with a variety of treatment therapies available. Unfortunately, most of these are quite expensive by Bangladeshi standards and therefore beyond the reach of most drug addicts. However, there is a drug addicts' rehabilitation organization, APON, which operates four long-term residential rehabilitation centers, the only such facilities in Bangladesh. While these four facilities only serve and house men, women's outpatient services are provided at an additional center and a land search has begun for a residential treatment center for female addicts. Anecdotal evidence indicates the number of female addicts is increasing.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. The USG continues to support Bangladesh's counternarcotics efforts through various commodities and training assistance programs. Pursuant to the 2002 U.S. LOA, equipment and law enforcement courses were provided in 2004, primarily to the police, but also to DNC laboratory technicians and officers, and members of the BDR. Other initiatives under consideration include the modernization of law enforcement training facilities in Bangladesh and further development of anticorruption programs within the government.

The Road Ahead. The USG will continue to provide law enforcement and forensic training for BDG officials and work with the BDG to construct a comprehensive strategic plan to develop, professionalize, and institutionalize Bangladesh counternarcotics efforts. This will include working with the BDG to stem drug trafficking before it reaches Bangladesh—primarily by improving maritime security but also by improving land border patrolling.

India

I. Summary

India is the only country authorized by the international community to produce opium gum for pharmaceutical use, rather than concentrate of poppy straw (CPS), the processing method used by the other producers of opiate raw material. India's strategic location, between Southeast and Southwest Asia, the two main sources of illicit opium, make it a heroin transshipment area. The northwestern state of Himachal Pradesh increasingly appears to be a center for cultivation and international trafficking of hashish, although most cannabis and hashish trafficked in India is smuggled from Nepal for export. India produces heroin from diverted licit opium for both the domestic addict market and is a modest, but growing, producer of heroin destined for the international market. In the past two years, Indian law enforcement authorities have dismantled two major laboratories—one set to produce methamphetamines and the other, Ecstasy. The Government of India (GOI) formally released the results of the 2001 National Drug Study (NDS) conducted in partnership with UNODC in 2004. Injecting drug use (IDU) of heroin, morphine base (brown heroin), and opiate pharmaceuticals continues to grow; while major metropolitan areas increasingly report the use of cocaine, Ecstasy, and other chemical drugs among the wealthy elite.

The Government of India (GOI) continually tightens licit opium diversion controls, but an unknown quantity of licit opium is diverted into illicit markets. In 2001 and 2003, the GOI and the United States conducted a Joint Licit Opium Poppy Survey (JLOPPS) to develop a methodology to estimate opium gum yield. The survey results confirmed the validity of the survey's yield prediction methodology, but lacked key data to apply the study's conclusions directly to India's 2002/03 licit opium crop. The data revealed that several widely used Indian poppy varieties have a low alkaloid yield.

India's large and fairly advanced chemical industry manufactures a wide range of chemicals, including the precursor chemicals acetic anhydride (AA), ephedrine, and pseudoephedrine and other chemicals which can be diverted for the manufacture of illicit narcotics. The GOI controls potential dual use chemicals, including the precursor chemicals AA and pseudoephedrine. Some chemicals are controlled both for import and export, while others are controlled only for import or for export. Violation of any order regulating controlled substance precursors is an offence under the Narcotics Drugs and Psychotropic Substances Act (NDPSA), the GOI's key law controlling drug trafficking, and punishable with imprisonment of up to 10 years. Intentional diversion of any substance (whether it is notified or not as a controlled substance) for illicit manufacture of narcotic drugs and psychotropic substances is also punishable under the NDPSA.

The GOI, in partnership with the Indian Chemical Manufacturing Association, imposes strict access controls on AA, a chemical used to process opium into heroin. These controls include specially fabricated sealing systems, which make it very difficult to tamper with the tankers' inlets and outlets, end-use certificates from the buyers, and special identity cards for drivers driving tankers containing AA. The GOI reviews its chemical controls annually and updates its list of "controlled substances" as necessary. India is a party to the 1988 UN Drug Convention.

II. Status of Country

Under the terms of international agreements, supervised by the International Narcotics Control Board, India must maintain licit opium production and carry-over stocks at levels no higher than those consistent with world demand to avoid excessive production and stockpiling, which could be diverted into illicit markets. India has complied with this requirement and succeeded in rebuilding stocks over the past three years from below-recommended levels. Opium stocks now exceed minimum

requirements, almost tripling between 1999 and 2003, from a stock of 509 metric tons (MT) in 1999/2000 TO 1,386 metric tons in 2003/04.

Licensed farmers are allowed to cultivate a maximum of 20 “ares” (1 “are” is 100 square meters, so 20 ares equals one-fifth of a hectare). “Opium years” straddle two calendar years. All farmers must deliver all the opium they produce to the government alone, meeting a minimum qualifying yield (MQY) that specifies the number of kilos of opium to be produced per hectare (HA) per state. The MQY is established yearly by the CBN prior to licensing. At the time CBN establishes the MQY, it also publishes the price per kilo the farmer will receive for opium produced that meets the MQY, as well as significantly higher prices for all opium turned into the CBN that exceeds the MQY.

The MQYs are based on historical yield levels from licensed farmers during previous crops. Increasing the annual MQY has proven effective in increasing average yields, while deterring diversion, since, if the MQY is too low, farmers could clandestinely divert excess opium they produce into illicit channels, where traffickers often pay up to ten times what the GOI can offer. Thus, an accurate estimate of the MQY is crucial to the success of the Indian licit production control regime.

During the 2002-2003 crop year, CBN began to estimate the actual acreage under licit opium poppy cultivation by using satellite imagery and then comparing it with exact field measurements. The survey was also used in conjunction with satellite imagery of weather conditions to compare cultivation in similar geo-climatic zones to estimate potential crop yields, assess storm damage, and determine whether opium was being diverted. The satellite results were then confirmed by on-ground CBN visits that measured each farmer’s plot size.

In 2004, CBN again tightened its controls against diversion, conducting 100 percent measurement of each cultivated area. The measurements were cross-checked by supervisory officers. Any cultivation in excess of five percent of the allotted cultivation area was not only uprooted, but the cultivator was also subject to prosecution. During the lancing period, the CBN appointed a village headman for each village to record the daily yield of opium from the cultivators under his charge. CBN regularly checked the register and physically verified the yield tendered at harvest. The CBN has also reduced the total procurement period of opium in order to minimize opportunities for diversion and deployed additional teams of officers from the Central Excise Department to monitor harvesting and check diversion.

The newest CBN administrative innovation is a project to issue microprocessor chip-based cards (Smart Identity Cards) to opium poppy cultivators. The card carries the personal details of the cultivator, the licensed area, the measured/test measured field area, and the opium tendered by him to the CBN. The card can also store previous years’ data. The information stored on the card is read with handheld terminal/read-write machines that will be provided to field divisions as part of the project. CBN personnel will enter cultivation data into the cultivators’ cards and the data will be uploaded to be transferred to computers at CBN HQs and regional offices. The cards were delivered to cultivators at the time of licensing. CBN has established a model center to begin implementing the project in Rajasthan before deciding whether to carry it out in all other production areas.

The CBN also conducts preventive checks and targeted raids based on intelligence to search for opium that might have been concealed by the cultivators. In the past during these raids, CBN officers discovered metric ton quantities (one year, 11 metric tons; the next, 7 metric tons) of concealed opium. The GOI periodically raises the official price per kilo of opium, but illicit market prices are four to five times higher than the base government price. Farmers who submit opium at levels above the MQY receive a premium, but premium prices can only act as a modest positive incentive. For the 2004/2005 opium harvest year, CBN has drastically lowered the number of hectares licensed (from 21,141 in 2003/2004 to 8,771 in 2004/2005) and the number of farmers licensed (from 105,697 in 2003/2004 to 87,682 in 2004/2005).

Although there is no reliable estimate of diversion from India's licit opium industry, clearly, some diversion does take place. However, it is not possible to pinpoint the amount accurately and there is no evidence that opium or its derivatives diverted from India's fields reaches the U.S. In 2004, the GOI discovered and shut down six morphine base laboratories in India's opium growing areas; four in Uttar Pradesh and two in Madhya Pradesh.

Poppies harvested using CPS are not lanced, and since the dried poppy heads cannot be readily converted into a usable narcotics substance, diversion opportunities are minimal. However, it is inherently difficult to control diversion of opium gum collection because opium gum is collected by hand-scraping the poppy capsule and the gum is later consolidated before collection. The sheer numbers of Indian farmers, farm workers, and others (over one million yearly) who come into contact with poppy plants and their lucrative gum make diversion appealing and hard to monitor. Policing these farmers on privately held land scattered throughout three of India's largest states is a considerable challenge for the CBN. All other legal producers of opium alkaloids, including Turkey, France, and Australia, produce narcotics raw materials using the CPS process. The GOI believes the labor intensive gum process used in India is appropriate to the large numbers of relatively small-scale farmers who grow poppy in India.

Processing opium gum is difficult because a residue remains after the narcotic alkaloids have been extracted, which must be disposed of with appropriate environmental safeguards. Because of this, pharmaceutical opiate processing companies prefer using concentrate of poppy straw (CPS) for ease of extracting the opiate alkaloids.

To meet this challenge, the GOI is exploring the possibility of converting some of its opium crop to the CPS method. In 2003, the Ministry of Finance visited several countries that produce CPS to observe CPS extraction methods. The GOI is also examining ways to expand India's opiate pharmaceutical processing industry and the availability of opiate pharmaceutical drugs to Indian consumers through ventures with the private sector. The GOI has invited major Indian pharmaceutical producers to submit proposals that would essentially privatize opium refining and pharmaceutical opiate production.

However, regardless of the GOI's interest in CPS, the financial and social costs of the transfer and the difficulty of purchasing an appropriate technology are daunting. Since alkaloid extraction requires highly specialized equipment, the only places where such equipment and technologies would be available are in the other countries licensed to produce legal opiate alkaloids and thus in countries in direct competition with India for licit opium sales.

Morphine base ("brown heroin" heroin) is India's most popularly abused heroin derivative, either through smoking, ("chasing", i.e., inhaling the fumes) or injecting. Most of India's "brown heroin" comes from diverted licit Indian opium and is locally manufactured. Indian "brown heroin" heroin is also increasingly available in Nepal, Bangladesh, Sri Lanka, and the Maldives. Since January 1999, Indian authorities have seized increasing amounts of domestically refined ("white") heroin, which has constituted as much as 80 percent of India's heroin seizures over the past year. Most seized "white" heroin is destined for West Africa and Europe. Heroin seizures on the India/Pakistan border, which had plummeted during the past few years due to the Indian/Pakistani border tensions, appear to be on the upswing.

III. Country Actions Against Drugs in 2004

Policy Initiatives. India's stringent Narcotic Drugs and Psychotropic Substances Act (NDPSA) of 1985 was amended in October 2001, bringing significant flexibility to the Indian sentencing structure for narcotics offenses. The amendments removed obstacles faced by investigation officers related to search, seizure, and forfeiture of illegally acquired property and provided for controlled deliveries to

facilitate investigation both within and outside the country. The amended NDPSA also made it more likely that drug traffickers would be refused bail, particularly those serious offenders who are more likely to flee before trial. Amendment of India's sentencing laws for drugs is expected to increase the conviction rate significantly for future violators. In 2003, 8,790 persons were prosecuted, resulting in 3,330 convictions for a conviction rate of 38 percent. For the first 3 quarters of 2004, 4,346 people were prosecuted for drug-related offences, of which 2,224 were convicted. In certain cases involving repeat offenders, who are dealing in commercial quantities of illegal drugs, the law allows for the death penalty. It should be noted that to date, no person has been given the death penalty for drug trafficking in India.

In April 2003, GOI moved the NCB from the Ministry of Finance to the Ministry of Home Affairs. The Ministry of Finance remains the GOI's central coordinating ministry for counternarcotics and continues to cooperate with the NCB. The move has enhanced the NCB's law enforcement capabilities and helped align the bureau with other GOI police agencies under the control of the Home Ministry. A number of proposals are also under consideration to bolster the professionalism of the NCB, such as increasing NCB'S staff and increasing the technical capacities of the NCB's officers.

Accomplishments. Indian authorities have established a continuous aerial/satellite-based system for monitoring licit and illicit opium cultivation nationwide, which became operational in early 2002 and was enhanced in 2003.

Law Enforcement Efforts. The GOI's decision to fence the India/Pakistan border, while not specifically designed to control drug trafficking, has effectively done so, leading to a drop in the amount of Afghan heroin trafficked through that border. Through October 2004, Indian law enforcement authorities seized 856 kilograms of heroin in 2,087 cases. The majority of this heroin was seized in South India. Indian law enforcement agencies also seized 1,616 kilograms of opium in 451 cases, 4,012 kilograms of hashish in 883 cases and 49 kilograms of morphine base in 137 cases. While hashish and marijuana seizures have increased from last year's seizures, other drug seizures, with the exception of opium, appear to be below last year's seizures. Cocaine seizures, while small, have doubled (from 1 kilogram to 2 kilograms)—confirming what news reports and law enforcement agencies have said for several years, that cocaine is available in India on the wealthy "party circuit," particularly in Mumbai and New Delhi.

Seizures of controlled substance pharmaceutical drugs are also up sharply. In 2003, law enforcement authorities in the states of Nagaland and Assam seized almost 104,087 tablets of diverted Proxyvan, a licit opiate pharmaceutical widely used in Northeast India. In 2003, Indian law enforcement authorities also seized 10.3 kilograms of diazepam in addition to 74,320 ampoules of diverted buprenorphine—a synthetic opiate widely used by injecting drug users throughout India, particularly in Chennai, New Delhi, and North India. Diverted Indian licit controlled pharmaceuticals have also been seized in the Gulf countries, in Afghanistan and in Bangladesh. The GOI does not maintain comprehensive, nationwide statistics on controlled pharmaceutical substance seizures.

On June 2004 the Indian Directorate of Revenue Intelligence (DRI) arrested five individuals who were involved in a poly-drug trafficking organization. In conjunction with the arrest, 350,000 tablets of MDMA (Ecstasy), 8 kilograms of amphetamine and 1.2 tons of Mandrax (methaqualone) were seized. This was the first significant seizure of MDMA in India. In addition, the investigation revealed that the MDMA was produced by the co-conspirators in India. The DRI believes, and DEA agrees, that the MDMA was intended for markets outside of India. The main target in this investigation was previously arrested by DEA in the United States on a drug trafficking case.

DEA New Delhi, in conjunction with NCB, has initiated a number of internet pharmaceutical cases with a nexus to the United States. The cases center around on-line prescriptions being obtained by U.S.-based customers from India in violation of Indian and U.S. laws. Large amounts of pharmaceuticals have been seized in India that were destined for the United States. The investigation

has revealed that the individuals operating the on-line pharmacy are generating hundreds of thousands, or even millions of dollars, in revenues. DHS and Indian Customs are working in coordination with DEA and NCB to investigate the use of courier mail to ship diverted licit pharmaceuticals from India to the U.S.

Corruption. The Indian media regularly report allegations of corruption against law enforcement personnel, elected politicians, and cabinet-level ministers of the GOI. The United States receives reports of narcotics-related corruption, but lacks the information to confirm those reports and the means to assess the overall scope of drug corruption in India. It is a reasonable assumption in a poor country like India that corruption does play some role in narcotics trafficking, despite the government's best efforts. Both the CBN and the NCB periodically take steps to arrest, convict, and punish corrupt officials within their ranks. The CBN frequently transfers officials in key drug producing areas. The CBN has increased the transparency of paying licensed opium farmers to prevent corruption and appointing village coordinators to monitor opium cultivation and harvest. These coordinators receive 10 percent of the total paid to the village for its crops, in addition to what they receive for their own crops, so it is advantageous to them to ensure that each farmer under their jurisdiction turns in the largest possible crop.

Agreements and Treaties. India is a party to the 1961 UN Single Convention on Narcotic Drugs and its 1972 Protocol, the 1971 UN Convention on Psychotropic Substances, and the 1988 UN Drug Convention. The United States and India signed a Mutual Legal Assistance Treaty (MLAT) on October 17, 2001, which was ratified by the U.S. Senate, but is awaiting GOI ratification. The change of government in May caused a delay in GOI consideration of the MLAT, but MEA sources indicate the treaty could be ratified soon. An extradition treaty is in effect between the U.S. and India. India has signed but has not yet ratified the UN Convention against Transnational Organized Crime. The USG and the GOI signed the long-awaited Customs Mutual Assistance Agreement on December 15, 2004.

Illicit Cultivation/Production. The bulk of India's illicit cultivation is now confined to Arunachal Pradesh, the most remote of northeastern states, which has no airfields and few roads. The terrain is mountainous, isolated jungle, requiring significant commodity and personnel resources. The need to combat the many insurgencies in the Northeast states has limited the number of personnel available for such time-consuming, labor-intensive campaigns. For those reasons, the GOI has not conducted any major poppy eradication campaigns in the Northeast in the past two years, although 417 acres of illicit poppy plant was destroyed in 2004. Current very rough estimates by the local drug control officials put opium cultivation in Arunachal Pradesh at 1,500 to 2,000 hectares, but there have not been any official GOI illicit crop surveys for over two years. There are no accurate estimates of opium gum yields, but CBN officials claim that the yields from illicit production in Arunachal Pradesh are very low, between two to six kilograms per hectare.

Drug Flow/Transit. Although trafficking patterns appear to be changing, India historically has been an important transit area for Southwest Asia heroin from Afghanistan and Pakistan and, to a lesser degree, from Southeast Asia-Burma, Thailand, and Laos. India's heroin seizures from these two regions continue to provide evidence of India's transshipment role. Most heroin transiting India appears bound for Europe. Seizures of Southwest Asian heroin made at New Delhi and Mumbai airports tend to reinforce this assessment. However, the bulk of heroin seized in the past two years has been of domestic origin (NCB estimates 80 percent), seized in South India and apparently destined to Sri Lanka. Trafficking groups operating in India fall into four categories. Most small seizures at the Mumbai and New Delhi international airports are from West African traffickers. Traffickers who maintain familial and/or tribal ties to Pakistan and Afghanistan are responsible for most of the smuggling of Pakistani or Afghan heroin into India. Ethnic Tamil traffickers, centered primarily in Southern India, are alleged to be involved in trafficking between India and Sri Lanka. Indigenous tribal groups in the northeastern states adjacent to Burma maintain ties to Burmese trafficking

organizations and facilitate the entry into Burma of precursor chemicals and into India of refined “white sugar” heroin through the porous Indo/Burma border.

Indian-produced methaqualone (Mandrax) trafficking to Southern and Eastern Africa continues. Although South Africa has increased methaqualone production, India is still believed to be among the world’s largest known clandestine methaqualone producers. Seizures of methaqualone, which is trafficked in both pill and bulk form have varied significantly, from a high of 11,130 kilograms in 2002 to 1,614 kilograms through September 2004. Cannabis smuggled from Nepal is mainly consumed within India, but some makes its way to western destinations. Interestingly, there was also a very large Mandrax seizure (18 metric tons) in China. The drugs appeared to be destined for the South African market.

India is also increasingly emerging as a manufacturer and supplier of licit opiate/psychotropic pharmaceuticals (LOPPS), both organic and synthetic, to the Middle East, Pakistan and Afghanistan. Some of the LOPPS are licitly manufactured and then diverted, often in bulk. Some of the LOPPS are illicitly manufactured as well. Indian-origin LOPPS and other controlled pharmaceutical substances are increasingly being shipped to the U.S. in multiple small quantities, making detection very difficult.

Domestic Programs (Demand Reduction). Newspapers frequently refer to Ecstasy and cocaine use on the Mumbai and New Delhi “party circuit,” but there is no information on the extent of their use. While smoking “brown heroin” (morphine base) and cannabis remain India’s principal recreational drugs, intravenous drug use (IDU) of LOPPS is rising in India, replacing, almost completely, “white” heroin. In parts of India where IDUs have been denied access to LOPPS, IDUs have turned to injecting “brown heroin.” Drug users in Mumbai have discovered that injecting “brown heroin” is much cheaper than “chasing”), leading to an explosion of “brown heroin” IDU in Mumbai. Various licitly produced psychotropic drugs and opiate painkillers, cough medicines, and codeine are just some of the substances that have emerged as the new drugs of choice. In 2004, the Ministry of Social Justice and Empowerment (MSJE) formally released what is likely the world’s largest drug abuse study, conducted in partnership with UNODC in 2001. The previous government had embargoed the study. The study found that licit opiate abuse accounted for 43 percent of Indian drug abuse. According to the study, drug users are largely young and predominantly male. Although drug abuse cuts across a wide spectrum of India’s society, more than a quarter of drug abusers are homeless, nearly half are unmarried, and 40 percent had less than a primary school education. Itinerant populations (e.g., truck drivers) are extremely susceptible to drug use. The number of women drug abusers is increasing rapidly. Most women IDUs exchange sex for drugs; many are commercial sex workers. Frequently, their children become drug users. A new residential treatment program for women IDUs opened in New Delhi in 2004, so that India now has two residential treatment programs for women IDUs. Widespread needle sharing has led to high rates of HIV/AIDS and overdoses.

The popularity of injecting controlled licit pharmaceuticals can be attributed to four factors. First, they are far less expensive than their illegal counterparts. Refined heroin on the illicit market can cost as much as \$2 a dose, while LOPPS usually cost fewer than 40 cents a dose. Second, they provide quick, intense “highs” that many users prefer to the slower, longer-lasting highs resulting from heroin. Third, many IDUs believe that they experience fewer and milder withdrawal symptoms with pharmaceutical drug use. Finally, licit opiate/psychotropic pharmaceuticals are widely available and easy to obtain, since virtually any drug retail outlet will sell them without a prescription.

Because LOPPS produces shorter periods of intoxication, users must inject them more often, leading to more opportunities to spread diseases associated with IDU, such as HIV/AIDS and hepatitis. It is not uncommon for IDUs to share needles and other drug paraphernalia with as many as eight to 15 people a day. Estimates of HIV/AIDS prevalence among injecting drug users by India’s National AIDS Control Organization and by NGOs range from 39 percent in the Northeast to 15 percent in

Chennai to 40 percent in New Delhi. The MSJE/UNODC study found that intravenous drug users often engaged in unprotected sexual intercourse, often with sex workers.

The GOI's Ministry of Social Justice and Empowerment (MSJE) has a three-pronged strategy for demand reduction: building awareness and educating people about drug abuse; dealing with addicts through programs of motivational counseling, treatment, follow-up, and social reintegration; and training volunteers to work in the field of demand reduction. The MSJE's goal is to promote greater community participation and reach out to high-risk population groups with an on-going community-based program for prevention, treatment and rehabilitation through some 400 NGOs throughout the country. The MSJE spent about \$5 million on NGO support last year.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. The United States has a close and cooperative relationship with the GOI on counternarcotics issues. On December 15, 2004, the long-awaited Customs Mutual Assistance Agreement was signed. In September 2003, the United States and India signed Letter of Agreement (LOA) amendments to provide State Department drug assistance funding worth \$2.184 million for counternarcotics law enforcement. In 2004, another \$40,000 was added to the LOA. A separate grant of \$50,000 directly to NGO Navjyoti of the Delhi Police Foundation funds a drug rehabilitation project to train medical personnel to treat drug abusers and to provide community-based prevention services to slum areas, which have the highest rates of drug abuse in New Delhi.

The Road Ahead. The GOI continues to tighten controls over licit opium cultivation. The NCB's move to the Ministry of Home Affairs has enhanced the U.S. relationship with the Ministry and NCB. DEA gave more courses to more law enforcement officials from a wider variety of state and central government law enforcement agencies in 2004 than ever before. The Intelligence Infrastructure Enhancement Project training on link analysis software will yield results in better targeting of drug traffickers and closer cooperation with DEA. The GOI says it is increasingly concerned over the nexus between drug trafficking and terrorism. The GOI has recognized the need for stronger drug control efforts nationally, particularly in the Northeast. The United States will continue to explore opportunities to work with the GOI in addressing drug trafficking and production and other transnational crimes of common concern.

The Maldives

Consisting of approximately 1,100 islands set in the Indian Ocean and with a population of approximately 270,000, the Republic of the Maldives has a comparatively small drug problem. Maldivian authorities believe, however, that the drug problem is at the root of most crime in the society. The Maldivian government and the U.S. maintain a good working relationship on counternarcotics issues. The Maldives is not a producer of narcotics or precursor chemicals. Officials believe all narcotics that reach the Maldives come from elsewhere and are destined for the local population and are not for transshipment.

The Maldivian government is very focused on the illicit drug issue and is taking steps to address the problem. The government conducted a Rapid Situation Assessment of drug abuse in Maldives during 2003 and published it in 2004. The study was possible due to changes to the narcotics law in 2002, which enabled officials to speak with drug abusers without being required to report them as drug abusers. In line with government officials' assumptions, the study found that the majority of drug abusers are in the 18-35 year-old category. Officials also found that five to ten percent of the population abuses drugs. The study determined that drug abuse had shifted from cannabis to "brown sugar" heroin in recent years. The late-teen onset of drug abuse coincides with completion of secondary education and the lack of sufficient employment opportunities for the growing population of young adults.

In September 2004, the Police Department split from the National Security Service and is now responsible for narcotics law enforcement. The Department has a Narcotics Control Unit staffed by approximately one dozen officers. Given the relatively small scale of the abuse problem in the Maldives, the police believe that only small quantities of narcotics are generally trafficked. Police estimate that between three to four kilograms of heroin are trafficked into Maldives annually. The task of the police is thus quite challenging, as these small quantities are much harder to detect. The police believe that the large number of foreign workers, mainly South Asians, is one possible source of drug trafficking. As the country has a large amount of commerce and traffic via the sea, officials believe that another possible source of drug smuggling is via small commercial vessels. Police plan to engage vessel operators in interdiction efforts.

In prior years, the U.S. has assisted the Maldives in counternarcotics activities, including via direct training and through the Colombo Plan—a regional development agency headquartered in Colombo, Sri Lanka. In 2004, the Colombo Plan conducted U.S.-funded regional narcotics officer training in the Maldives. Previous direct U.S. government funding through State Department narcotics/law enforcement assistance to the Maldives in 1993 created a computerized immigration record-keeping system, in part to track the movements of alleged drug traffickers. This was followed by additional U.S. funding in 1996 to enhance the system.

The Maldivian government established a Narcotics Control Board under the Executive Office of the President—now renamed the National Narcotics Control Bureau (NNCB)—to oversee rehabilitation of addicts and conduct drug abuse avoidance campaigns throughout the islands. At present, Maldives only has a 150-bed treatment center. To address the chronic shortage of space, the government is building an additional 200-bed treatment center, which will only be available to individuals convicted of a drug offense. Officials expect the center to open early in 2005. The NNCB has also begun employing expatriate healthcare professionals, such as child psychologists, to work with population in the treatment centers.

No senior officials of the Maldives is known or suspected to be involved in narcotics-related corruption. It is the policy of the Government of the Maldives to discourage drug abuse by its citizens and to pursue drug traffickers vigorously under Maldivian laws. In 1994, the Maldives cooperated

with the U.S. in rendering a Nigerian national to the United States to face narcotics trafficking charges. The Maldivian government is a party to the 1988 UN Drug Convention.

Nepal

I. Summary

Although Nepal is neither a significant producer of nor a major transit route for narcotic drugs, small amounts of cannabis, hashish, and heroin are trafficked to and through Nepal every year. An increase in the use of Nepalese couriers, apprehended by the police, suggests that the country's citizens are becoming more involved in trafficking. Moreover, Nepal's Narcotics Drug Control Law Enforcement Unit (NDCLEU) reports that more Nepalese citizens are investing in and taking a larger role in running trafficking operations. Customs and border controls remain weak, but international cooperation has resulted in increased narcotics-related indictments in Nepal and abroad. The ongoing Maoist insurgency has an impact on rule-of-law and interdiction efforts in many parts of the country. NDCLEU has enhanced both the country's enforcement capacity and its expertise. Nepal is a party to the 1988 UN Drug Convention.

II. Status of Country

Heroin from Southwest and Southeast Asia is smuggled into Nepal across the open border with India and through Kathmandu's international airport. The ongoing Maoist insurgency has an impact on rule-of-law and interdiction efforts in many parts of the country. Police have reconfirmed that production of cannabis is on the rise in the southern areas of the country, and that most is destined for the Indian market. Police have also intercepted locally produced hashish en route to India in quantities of up to 285 kilograms at a time. Media reports have speculated that Nepal's Maoist guerrillas are involved in drug smuggling to finance their insurgency. NDCLEU reports that Maoists are known to have called upon locals in the Birgunj area to increase cannabis production. The NDCLEU reports that the Maoists levy a 40 percent tax on cannabis production in certain areas. Abuse of locally grown and wild cannabis and locally produced hashish, marketed in freelance operations, remains widespread. Licit, codeine-based medicines continue to be abused. Nepal is not a producer of chemical precursors.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Nepal's basic drug law is the Narcotic Drugs (Control) Act, 2033 (1976). Under this law, the cultivation, production, preparation, manufacture, export, import, purchase, possession, sale, and consumption of most commonly abused drugs are illegal. The Narcotics Control Act, amended last in 1993, conforms in part to the 1961 UN Single Convention on Narcotic Drugs and its 1972 Protocol by addressing narcotics production, manufacture, sales, import, and export. Nepal developed, in association with the United Nations Office of Drugs and Crime (UNODC), a Master Plan for Drug Abuse Control (MPDAC), and has been implementing it actively.

Legislative action on mutual legal assistance and witness protection, developed as part of the MPDAC, remained stalled for a third year due to the lack of a parliament. The government has not submitted scheduled amendments to its Customs Act to control precursor chemicals. Legislation on asset seizures was drafted in 1997 with UNODC assistance and is under the review of the Ministry of Law and Justice. Legislation on criminal conspiracy has not yet been drafted.

Accomplishments. The Government of Nepal (GON) continues to coordinate its counternarcotics efforts regionally, and actively cooperates in international efforts to identify and arrest traffickers. Cooperation between the DEA and Nepal's NDCLEU has been excellent and has resulted in indictments both in Nepal and abroad.

Law Enforcement Efforts. The NDCLEU has developed an intelligence wing, but its effectiveness remains constrained by a lack of transport, communications, and surveillance equipment. Coordination and cooperation among NDCLEU and Nepal's customs and immigration services, while still problematic, is improving. Crop destruction efforts have been hampered by the reallocation of resources to fight the Maoist insurgency and the lack of security in the countryside. Final statistical data for 2003 and data through October 2004 indicate that destruction of cannabis plants declined slightly. During the first 10 months of 2004, the Nepal Police arrested 35 foreigners under drug trafficking charges. In February 2004, the largest single seizure (669 kilograms) of locally produced hashish was seized, and was believed to be Canada-bound. The NDCLEU seized nearly double the amount of hashish in 2004 compared with 2003. NDCLEU reported that it seized 75.2 kilograms of hashish and 1.165 kilograms of heroin at Kathmandu's Tribhuvan International Airport (TIA) in 2004. No opium was seized in 2004. Seizures of heroin decreased, and the absolute quantity (a total of approximately 7 kilograms) remained small. Most seizures of heroin and hashish in 2004 occurred within Kathmandu or at TIA as passengers departed Nepal. Seizures of illicit and licit, but illegally held, pharmaceuticals increased in 2004.

Corruption. Nepal continues to have no laws specifically targeting public narcotics-related corruption by senior government officials, although both the Narcotics (Control) Drug Act of 1976 and Nepal's anticorruption legislation could be employed in this regard. There is no government policy to encourage or facilitate illicit production or distribution of narcotics or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal drug transactions. On the contrary, Nepal does what it can to suppress trafficking. There is also no record that senior government officials have engaged in, encouraged or facilitated the production, processing, or shipment of narcotic and psychotropic drugs and other controlled substances or that they have discouraged or otherwise hampered the investigation or prosecution of such acts.

Agreements and Treaties. Nepal is party to the 1998 UN Drug Convention, the 1961 UN Single Convention on Narcotic Drugs, as amended by the 1972 Protocol, and the 1993 South Asian Association for Regional Cooperation (SAARC) Convention on Narcotics Drugs and Psychotropic Substances. Nepal has signed, but has not yet ratified, the UN Convention against Transnational Organized Crime.

Cultivation/Production. Cannabis is an indigenous plant in Nepal, and cultivation of developed varieties is rising, particularly in lowland areas. There is some small-scale cultivation of opium poppy, but detection is difficult since it is interspersed among licit crops. Nepali drug enforcement officials believe that all heroin seized in Nepal originates elsewhere. Nepal produces no precursor chemicals. Importers of dual-use precursor chemicals must obtain a license and submit bimonthly reports on usage to the Home Ministry. There have been no reports of the illicit use of licensed imported chemicals.

Drug Flow/Transit. Narcotics seizures suggest that narcotics transit Nepal from the east and west in approximately equal proportions. Media reports claim that most narcotics are bound for India, and law enforcement sources indicate that most seizures occur at the India/Nepal border. Customs and border controls are weak along Nepal's land borders with India and China. The Indian border is open. Security measures to interdict narcotics and contraband at Kathmandu's international airport and at Nepal's regional airports with direct flights to India are inadequate. The Government of Nepal (GON), along with other governments, is working to increase the level of security at the international airport, and the Royal Nepal Army is detailed to assist with airport security.

Arrests of Nepalese couriers in other countries suggest that Nepalese are becoming more involved in trafficking both as couriers and as traffickers and that Nepal may be increasingly used as a transit point for destinations in South and South East Asia as well as Europe (Spain, the Netherlands, and

Switzerland). The NDCLEU has also identified the United States as a final destination for some drugs transiting Nepal, typically routed through Bangkok

Domestic Programs (Demand Reduction). The GON continues to implement its national drug demand reduction strategy in association with the Sri Lanka-based Colombo Plan, the United States, UNODC, donor agencies, and NGOs. However, resource constraints limit significant progress.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. U.S. policy is to strengthen Nepal's law enforcement capacity to combat narcotics trafficking and related crimes, to maintain positive bilateral cooperation, and to encourage Nepal to enact and implement appropriate laws and regulations to meet all objectives of the 1988 UN Drug Convention. The United States, NDCLEU, and other donors work together through regional drug liaison offices and through the Kathmandu Mini-Dublin Group of Countries Offering Narcotics Related Assistance.

Bilateral Cooperation. The United States works with GON agencies to help implement Nepal's master plan for drug abuse control and to provide expertise and training in enforcement. Nepal exchanges drug trafficking information with regional states and occasionally with destination states in Europe in connection with international narcotics investigations and proceedings.

The Road Ahead. The United States will continue information exchanges, training, and enforcement cooperation; will work with the UNODC to strengthen the NDCLEU; will provide support to various parts of the legal establishment to combat corruption and improve rule of law; and will support improvements in the Nepali customs service. The United States will encourage the GON to enact stalled drug legislation.

Pakistan

I. Summary

There is significant opium poppy cultivation in Pakistan, and Pakistan is also an important transit country for Afghan opiates and hashish. According to DEA, Pakistani financier/traffickers may also play an important role in opium production in Afghanistan. In 2004, the USG estimated through aerial and ground surveys that Pakistan's opium poppy harvested crop remained at the 2003 level of approximately 3,100 hectares, although attempted cultivation (before crop eradication) increased slightly. Counternarcotics cooperation between the Government of Pakistan (GOP) and the United States remains excellent. GOP counternarcotics efforts are led by the Anti-Narcotics Force (ANF) under the Ministry of Narcotics Control (MNC), but also include several law enforcement agencies and the Home Departments of Northwest Frontier Province (NWFP) and Balochistan Province. DEA has not been able to confirm that some small heroin production facilities exist in Pakistan, but there is a strong suspicion that some exist.

GOP authorities continue to remain unable to complete three U.S. extradition requests pending in the High Court for nearly a decade. While the GOP extradited one individual in a non-drug-related case during 2004, in addition to the three narcotics cases, three other U.S. extradition requests remain pending, one of which since 1994. Efforts underway since 2001 to enhance border security as a measure against terrorism have improved the ability of law enforcement forces to enter into previously inaccessible tribal areas on the border where some of the drug trafficking takes place. Pakistan is a party to the 1988 UN Drug Convention. The U.S.-Pakistan Joint Working Group on Law Enforcement (JWG) has provided a useful forum for addressing narcotics and other law enforcement issues; it last met during September 1-2, 2004 in Islamabad.

II. Status of Country

After being declared "poppy free" by the United Nations in 2001, ground and aerial surveys in 2004 demonstrated that opium poppy cultivation in fact increased slightly in Pakistan. However, cultivation was almost completely contained in the "nontraditional" areas of Federally Administered Tribal Areas (FATA), in which significant cultivation occurred in 2003. Some possible factors for the increase in cultivation include continuing high prices for poppy, spillover from Afghanistan, better rains, lack of development programs, farmers' expectations of a diminished effect to contain poppy growth due to the GOP focus on counterterrorism, and inaccessibility to the areas of highest cultivation. Due in part to increased monitoring and aggressive eradication efforts, harvested opium poppy in 2004 remained about the same as in 2003 at 3,100 hectares. The Frontier Corps and tribal khassadar forces, who provide security for opium crop destruction operations, continued to be stretched thin due to counterterrorist operations, and the GOP was reluctant to pursue eradication aggressively in some parts of Khyber Agency for fear of disrupting community acquiescence to counterterrorism operations in the area. Although the crop levels are insignificant compared to neighboring Afghanistan (and to the many thousands of hectares under cultivation in Pakistan in the 1990s), the GOP aims to regain poppy-free status through enforcement of a strict "no tolerance" policy for cultivation.

Pakistan remains a substantial trafficking country for heroin, morphine, and hashish from Afghanistan, and according to DEA, Pakistani financiers/traffickers may also play an important role in financing and organizing opium production in Afghanistan. Control of narcotics trafficking along the remote 1,450-mile border has presented a major challenge for the GOP. Interdiction operations on the border occur, but drug convoys are becoming increasingly smaller, well guarded, and highly mobile, with high-tech communications capability and the ability to take advantage of difficult terrain and widely

dispersed law enforcement personnel. The GOP has expressed concern that as counternarcotics efforts ramp up in Afghanistan, the drug trade will push east into Pakistan. An ambitious, U.S.-funded Border Security Project begun in 2002, however, has significantly improved GOP capacity on the border, and continuing USG assistance should result in greater advances in 2005 and beyond.

The steady flow of drugs into Pakistan has left a social toll, fueling domestic addiction and contributing to persistent corruption. Pakistan has established a chemical controls program that monitors the importation of controlled chemicals. While some diversion of precursors probably occurs in Pakistan, it is not believed to be a major precursor source country. DEA has unconfirmed intelligence that there are small heroin labs in Pakistan, producing 2-10 kilograms on a weekly basis; the GOP does not have any information that there are heroin labs in Pakistan.

III. Country Actions Against Drugs in 2004

Policy Initiatives. After the unexpected resurgence of poppy cultivation in 2002-2003, the ANF developed an antipoppy strategy to prevent cultivation, eradicate poppy with force when necessary, and to file criminal cases against growers. In Balochistan, the ANF took a proactive approach, delivering a strong antipoppy message to growers before and during the October-November sowing season via warnings in the local media and in person by provincial and tribal authorities. The ANF also reported an aggressive eradication campaign in Balochistan, leading to the destruction of 84 percent of the poppy crop in that region—although this figure could not be confirmed by the U.S. Embassy in Pakistan. In the FATA, the traditional cultivation region, the ANF has very limited jurisdiction, but NAS and GOP officials met regularly during the pre-sowing and early growing season with local political authorities to ensure that the tribal residents understood that they must comply with the ban on cultivation or else the GOP would undertake forced eradication and, if necessary, impose fines, arrest growers, and take other measures provided for under special law applicable to the FATA.

The GOP's USG-supported Border Security Project (begun in 2002) made significant progress in 2004. The project is aimed at strengthening security along Pakistan's western border through training to professionalize border forces; provision of vehicles and surveillance and communications equipment to enhance their ability to patrol the remote border areas; and an aviation program to enable aerial surveillance and interdiction missions along the border (although the 8 Huey II helicopters were in high demand for counterterrorism operations, limiting their availability for counternarcotics). Border security will be further enhanced by construction of approximately 390 kilometers of roads in the remote FATA adjacent to NWFP.

Accomplishments. The GOP extended its 1998-2003 Drug Abuse Control Master Plan (covering both supply and demand) through 2006. The GOP has been actively engaged at the ministerial level in regional and international fora on counternarcotics, such as the Paris Pact. The special narcotics courts established in 2001 continued to produce commendable results despite limited resources. As of November 30, 2004, the ANF had registered 722 narcotics cases in the GOP's court system, 450 of which were decided with a 74 percent conviction rate. The GOP also improved its poppy monitoring, particularly in NWFP and Balochistan. This enhanced monitoring might have led to inclusion in GOP statistics of poppy cultivation overlooked in the past.

In October 2004, the Air Wing and the ANF conducted a joint air assault in Balochistan that netted 100 kilograms of heroin and 8 metric tons of poppy pods. The operation, which involved both INL-provided fixed-wing and rotary aircraft, featured noteworthy interagency cooperation in the areas of intelligence gathering, planning, logistic support, and command and control that bodes well for continued joint missions in the future. The ANF also conducted initial aerial poppy surveys with U.S.-supplied helicopters and is planning a series of such surveys during the 2004-2005 growing season. An ANF surveillance flight in May 2004 also identified large poppy fields in Balochistan. ANF and the Frontier Corps mounted an operation that successfully eradicated the poppy and made 12 arrests.

Law Enforcement Efforts. In 2004, the GOP appointed a Minister of Narcotics Control, whose leadership will be crucial for coordinating federal efforts in counternarcotics. The ANF is Pakistan's leading narcotics law enforcement agency. The ANF is operating at 83 percent of authorized strength, with 1,608 of 1,934 authorized personnel, but it expects to address staffing shortfalls with the addition of 114 army personnel by the end of 2004. The GOP is also considering restructuring plans that would almost double ANF's manpower to 3,100, including the addition of needed inspectors and constables. The U.S. has trained and equipped ANF's Special Investigative Cell (SIC), a vetted unit that was established in 2000 to target major trafficking organizations. The performance of the SIC—which now has 59 members, including 37 investigators—continued to improve. The SIC arrested 150 persons as of December 10, 2004—a 42-percent increase over 2003. The SIC also established an eight person unit in Quetta, the provincial capital of Balochistan, where they made eight seizures of morphine-base totaling over 5 metric tons (MT) in 2004. In the past four years, the SIC has conducted a number of joint operations with other national and international law enforcement agencies.

During 2004, GOP security forces reported seizing 24.7 metric tons of heroin (including morphine-based), 2.5 metric tons of opium, and 136 metric tons of hashish. Compared to 2003, overall hashish seizures increased by 55 percent. Overall 2004 heroin seizures by GOP agencies decreased by 27 percent compared to 2003 and varied in quality, although still represented a 178 percent increase over 2002. Additionally, ANF's heroin seizures increased this year by 72 percent from 4.7MT to 8.1MT. Overall GOP opium seizures decreased 53 percent compared to 2003. GOP interlocutors have attributed the decrease in opium seizures to traffickers changing routes and increased processing of opium in other countries, particularly Afghanistan. Even semi-refining of opium to morphine base decreases its weight by a factor of 10, thus facilitating profitable, detection-free trafficking.

In 2004, GOP authorities reported arresting 49,186 individuals on drug-related charges. Several long-running (some 10 years and more) cases in the Pakistani legal system proceeded against major drug traffickers in 2004. In the Sakhi Dost Jan Notezai case (in which the Balochistan High Court dismissed the convictions on two counts, reduced the sentence in a third, and reduced the fine), the Supreme Court of Pakistan admitted an appeal by ANF, issued warrants to arrest the accused, and directly instructed the Inspector General of Police in Balochistan to present them for further court hearings. In the case of Muhammad Asim Khurd, former Finance Minister of Balochistan, the ANF filed an appeal with the Appellate Shariat Court. The ANF also filed an appeal regarding the cases of Manawar Hussain Manj and expects a hearing soon. The appeal of Rahmat Shah Afridi, the editor of the Peshawar-based independent daily "The Frontier Post," is still pending. After a prolonged period of not having any available judges, the Special Narcotics Courts have resumed operations in Quetta and Karachi. Through November 30, 2004, the amount of drug traffickers' assets frozen stood at \$1.85 million and \$1.28 million in assets was forfeited.

While the narcotics courts have improved the processing of drug cases, only the major cases are tried there, and other prosecutions still languish in the system for years. Corruption in the judiciary is believed to be widespread. The ANF has made commendable efforts to address reversals of convictions by hiring its own special prosecutors, who have had admirable results despite limited resources, and by looking to add attorneys as part of its expansion.

Corruption. The United States has no evidence that the GOP or any of its senior officials encourage or facilitate the illicit production or distribution of narcotic or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal drug transactions. With government salaries low and societal and government corruption endemic, narcotics-related corruption cannot be ruled out. The government's National Accountability Bureau (NAB) has taken some important steps to address official corruption. As of November 12, 2004, the NAB had investigated 724 cases of corruption. Of the 454 decided cases, 357 were convictions and 62 acquittals. Through this process, the NAB recovered a total of over \$2.1 billion from politicians, businessmen, and civil servants found guilty in special accountability courts.

Agreements and Treaties. Pakistan is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention on Narcotic Drugs as amended by the 1972 Protocol, and the 1971 Convention on Psychotropic Substances. The United States is providing counternarcotics and law enforcement assistance to Pakistan under a Letter of Agreement (LOA) that provides for cooperation in the areas of border security, opium poppy eradication, narcotics law enforcement, and drug demand reduction. Extradition is carried out under the terms of the 1931 U.S.-UK Extradition Treaty, which continued in force for Pakistan following its independence. In September 2004, an extradition request that had been pending since 2002 finally was concluded when the fugitive waived appeal of the extradition finding and Pakistani authorities extradited an individual wanted for kidnapping, rape, and attempted murder. However, lack of action on three pending extradition requests for drug-related cases and three non-narcotics cases continues to be of concern. Problems include inexperience of GOP public prosecutors, confusing legal provisions, permitting multiple appeals, and corruption in the court system. Pakistan has signed but has not yet ratified the UN Convention on Transnational Organized Crime.

Cultivation/Production. Through ground and aerial surveys, the NAS and GOP estimated that approximately 6,600 to 7,500 hectares of opium poppy were cultivated in Pakistan in 2004 (approximately 3,600 to 4,500 hectares in the NWFP/FATA and, according to ANF, approximately 3,000 hectares in Balochistan, although NAS could not verify the numbers due to security constraints). Taking into account ANF's reportedly high levels of eradication in Balochistan, NAS estimates a total harvested crop nationwide of some 3,100 hectares, about the same level as 2003. Eradication efforts in certain areas were hindered by ongoing counterterrorist operations. The great majority of poppy in NWFP/FATA was cultivated in the traditional growing area of Khyber Agency in the FATA (approximately 2,000 hectares)—although 800 hectares of that crop were damaged by insects, disease and drought in the Bara Valley. Kohistan and Kala Dhaka Districts in NWFP saw the next largest, cultivation figures of about 1,000 hectares and 600 hectares respectively. Some argue that the increase in cultivation in Kohistan and Kala Dhaka was statistical in nature, and due more to substantially improved GOP monitoring in those areas in 2004 than to actual increases in cultivation over previous years. Cultivation was almost completely contained in 2004 in the “nontraditional” areas in which significant cultivation occurred in 2003 (Orakzai, Kurram, and North Waziristan (no estimates for South Waziristan are available due to ongoing counterterrorism operations). In Balochistan, ANF reported that the greatest amounts were grown in Qilla Abdullah, Jhal Magsi, and Khuzdar. Based on the estimate of 3,100 hectares of harvested crop in 2004 and the GOP calculation of about 25 kilograms of opium produced per hectare, potential opium production was approximately 70 metric tons.

Drug Flow/Transit. Afghan-origin hashish and opiates transit through Pakistan. Afghanistan opium poppy cultivation has skyrocketed since 2001, and due in part to the post-Taliban spike in cultivation across the border, Pakistan's importance as a transit country has increased, particularly as a conduit to Turkey, by land, and Iran, by land and sea. Afghan opiates trafficked to Europe and North America enter Pakistan's Balochistan and NWFP provinces and exit either through Iran or Pakistan's Makran coast, or through international airports located in Pakistan's major cities. The ANF reports that drugs are being smuggled in the cargo holds of dhows to Yemen, Oman, and United Arab Emirates via the Arabian Sea. Traffickers also transit land routes from Balochistan to Iran and from the tribal agencies of NWFP to Chitral, where they re-enter Afghanistan at Badakhshan province for transit through Central Asia. Convoys in Balochistan generally comprise two to three vehicles with well-armed guards, and use scouts for early warning. The ANF's SIC also observed in 2004 drugs being trafficked from Balochistan to Karachi through concealment in vehicles, rather than in convoys. According to DEA, Pakistani traffickers are also an important source of financing to the poor farmers of Afghanistan who otherwise would not be able to produce opium.

Available evidence indicates that traffickers are transporting smaller quantities of drugs in an attempt to reduce the size of seizures and protect their investment. This “shotgun” approach has increased the

number of transporters who move smaller loads; the seizures of 100-kilo shipments of several years ago have been replaced by seized shipments of 20-100 kilos, at most. The ANF also believes that traffickers are frequently changing routes and concealment methods to avoid detection.

Pakistan is a major consumer of Afghan heroin, although the majority of the heroin smuggled out of Southwest Asia through Pakistan continues to go to the European market, including Russia and Eastern Europe. The balance goes to the Western Hemisphere and to Southeast Asia where it appears to supplement shortfalls in opiates in that region. The ANF has observed that West African traffickers are using more Central Asian, European, and Pakistani nationals as carriers in addition to Africans. Couriers intercepted in Pakistan were en route to Africa, Nepal, India, Europe, Thailand, Bangladesh, Sri Lanka, and the Middle East (especially United Arab Emirates). Methods of shipment include via hard-side luggage; strapped to the body and concealed from drug sniffing dogs with special sprays; or inside legal objects (such as cell phone batteries). The ANF reports that the use of the postal service has increased for exporting small quantities of heroin abroad. In 2004, the SIC also observed the trend of heroin being heated and rolled into thin sheets and laminated between layers of corrugated cardboard to be used as packaging material for exported goods.

Domestic Programs (Demand Reduction). The GOP has expressed concern about increasing drug abuse in Pakistan, especially in the FATA, where lack of economic opportunity and physical isolation create the conditions in which addiction thrives. Reliable data are hard to obtain, but based on a 2000 National Assessment Study on Drug Abuse in Pakistan, the GOP estimates that there are some four million users, with approximately 500,000 heroin addicts. Users are increasingly injecting narcotics—which has raised the concern that HIV infection rates may rise as well. The GOP views addicts as victims, not criminals. In 2004, the ANF began a number of demand reduction programs, including a series of UNODC- and USG-funded demand reduction workshops on raising awareness of district officials in the four provinces and on the role of women in drug abuse. Other programs include financial support of NGOs involved in treatment and rehabilitation of drug addicts; establishment of two model addiction and rehabilitation centers in Islamabad and Quetta; a study on drug addiction in women; training for the staff of sixteen treatment and rehabilitation centers in Pakistan with the help of UNODC; and creation of youth groups to prevent drug abuse through organized alternative activities. Mass awareness activities continue in media and schools. While the GOP has the political will to do more, it lacks the resources.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. U.S. counternarcotics policy objectives in 2004 were: to continue to help the GOP strengthen the security of its borders against drug trafficking and terrorism; to urge the GOP to expand regional cooperation; to encourage the GOP to reduce opium poppy cultivation, eliminate remaining opium poppy cultivation, and inhibit any spread of cultivation; to increase interdiction of opiates from Afghanistan; to help dismantle major trafficking organizations; to expand demand reduction efforts; to enhance cooperation regarding the extradition of narcotics fugitives; to encourage enactment of comprehensive money laundering legislation; to press for reform of law enforcement institutions; and to encourage cooperation and coordination among GOP agencies with counternarcotics responsibilities.

Bilateral Cooperation. Through the State Department-funded Counternarcotics Program and Border Security Projects, the United States provides operational and commodity assistance to ANF, as well as funding for demand reduction activities and training. The State Department also funds alternative crop, small-scale development, and road building projects in Bajaur, Mohmand, and Khyber Agencies of the FATA. The roads, which open up inaccessible areas, allow forces to eradicate poppy crops, while facilitating farm-to-market access for legitimate crops. The U.S. also funds Narcotics Control Cells in both the Home Department NWFP and the FATA Secretariat to help coordinate

counternarcotics efforts in the province and tribal areas. In addition, the USG provided commodity assistance to Frontier Corps NWFP and Balochistan, who perform counternarcotics missions along the border. The State Department-supported MOI Air Wing program will provide significant benefits to counternarcotics efforts as well, while advancing its primary counterterrorism goal.

The DEA provides operational assistance and advice to ANF's SIC. The ANF continues to cooperate effectively with DEA to raise investigative standards. New investigative equipment, vehicles, and surveillance motorcycles were provided this year. The unit continues to perform work throughout Pakistan, and their DEA-supported expansion began, including the equipping of a new facility and ongoing training.

The Road Ahead. Even with the provision of air and ground mobility and communications capacity through the border security program, the GOP will face an immense challenge in the coming year to interdict the increasing supply of drugs from Afghanistan. The GOP will need to work with the U.S. to develop a strategy to utilize new resources wisely, increase the coordination among the agencies that have counternarcotics responsibilities, and put training to best use. In coordination with the border security program, the U.S. will work with the GOP to put greater emphasis on the development of drug intelligence as it directly relates to trans-border trafficking activity and to target kingpin smuggling operations. Continued efforts to streamline and reform law enforcement, to investigate and prosecute corruption, and to speed up the pace of the counternarcotics judicial process will also be key to greater success against the drug trade in the future. The United States will continue to work with the GOP to expedite extradition requests and to strengthen Pakistan's ability to attack money laundering, particularly by encouraging the passage of money laundering legislation that meets both UN and Financial Action Task Force standards.

Sri Lanka

I. Summary

Sri Lanka has a relatively small-scale drug problem. The Government of Sri Lanka (GSL) remains committed to targeting drug traffickers and implementing nation-wide demand reduction programs. In 2004, the U.S. government strengthened its relationship with Sri Lanka on counternarcotics issues by offering training and seminars for the Sri Lanka Police. A comparatively relaxed security environment as a result of the 2002 ceasefire agreement between the GSL and the Liberation Tigers of Tamil Eelam (LTTE) has opened a new overland drug trafficking route that officials are taking active measures to police and monitor. Although Sri Lanka has signed the 1988 UN Drug Convention, Parliament had not enacted implementing legislation for the convention as of the end of 2004.

II. Status of Country

Sri Lanka is not a significant producer of narcotics or precursor chemicals. GSL officials continue to raise internal awareness of and vigilance against efforts by drug traffickers attempting to use Sri Lanka as a transit point for illicit drug smuggling. Domestically, officials are addressing a modest drug problem, consisting of heroin, cannabis, and increasingly, Ecstasy.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In 2004, Sri Lanka made progress in further implementing its counternarcotics strategy, developed in 1994. The lead agency for counternarcotics efforts, the Police Narcotics Bureau (PNB), is headquartered in the capital city of Colombo. The new government, elected in April 2004, has not initiated, to date, any policy changes with respect to counternarcotics activities. The GSL remains committed to on-going efforts to curb illicit drug use and trafficking.

Accomplishments. The PNB and Excise Department worked closely to target cannabis producers and dealers, resulting in several successful arrests. The PNB warmly welcomed and was an active partner in taking full advantage of U.S.-sponsored training for criminal investigative techniques and management practices.

Sri Lanka continued to work with South Asian Association for Regional Cooperation (SAARC) and the United Nations Office of Drugs and Crime (UNODC) on regional narcotics issues. SAARC countries met in Maldives in early 2004 and agreed to establish an interactive website for the SAARC Drug Offense Monitoring Desk, located in Colombo, for all countries to input, share, and review regional narcotics statistics. GSL officials maintain continuous contact with counterparts in India and Pakistan, origin countries for the majority of drugs in Sri Lanka.

Law Enforcement Efforts. The PNB continued close inter-agency cooperation with the Customs Service, the Department of Excise and the Sri Lankan Police to curtail the illicit drug supply lines and local drug dealers and users. As a result of these efforts, GSL officials arrested nearly 2,674 heroin dealers and drug dealers and more than 2,135 cannabis dealers during the first six months of this year. The largest heroin haul for the year, to date, has been 17 kilograms, valued locally at around \$390,000. Law enforcement agencies throughout 2004 made a number of other small-scale seizures of heroin and other drugs. In addition, in response to the slowly increasing Ecstasy usage in upscale venues in Colombo, the PNB made the first two ever Ecstasy-related drug arrests in 2004.

Apart from its Colombo headquarters, the PNB has one sub-unit at the Bandaranaike International Airport near Colombo, complete with operational personnel and a team of narcotics-detecting dogs.

Greater vigilance by PNB officers assigned to the airport sub-station led to increased arrests and narcotics seizures from alleged drug smugglers. During the year, the PNB began the process of establishing additional sub-stations. The next two substations, at the international port in Colombo and the northwest coastal town of Mannar, will be operational shortly. Future sub-stations will also be located in cannabis-growing regions.

Corruption. A government commission, established to investigate bribery and corruption charges against public officials, temporarily resumed operations in 2004. In May 2004, the Judicial Services Commission suspended a Colombo high court judge for granting bail to alleged drug traffickers. Police arrested a leading alleged drug kingpin in connection with the November 2004 murder of a widely respected judge. At the time of this alleged dealer's arrest and questioning, subsequent information revealed that numerous police officers allegedly helped facilitate this individual's illegal activities. In response, the Inspector General of Police, the most senior ranking police official, ordered a complete investigation into any involvement by police officers. The investigation was on-going at year's end.

Agreements and Treaties. Sri Lanka is a party to the 1988 UN Drug Convention and the 1990 SAARC Convention on Narcotic Drugs and Psychotropic Substances. Implementing legislation for both conventions had not reached Parliament by year's end. The Attorney General's office has reviewed both pieces of legislation and anticipates submitting implementing legislation to Parliament in early 2005. Sri Lanka is also a party to the 1961 UN Single Convention, as amended by the 1972 Protocol, and the 1971 Convention on Psychotropic Substances. Sri Lanka has signed, but has not yet ratified, the UN Convention against Transnational Organized Crime, and is a party to the UN Convention Against Corruption. An extradition treaty is in force between the U.S. and Sri Lanka.

Cultivation/Production. Small quantities of cannabis are cultivated and used locally. There is little indication that this illicit drug is exported. The majority of the production occurs in the southeast jungles of Sri Lanka. PNB and Excise Department officials work together to locate and eradicate cannabis crops.

Drug Flow/Transit. Some of the heroin entering Sri Lanka is solely for transshipment purposes. With the opening of the northwestern coastal waters in the advent of the ceasefire between the GSL and the LTTE, narcotics traffickers have taken advantage of the short distance across the Palk Strait to transit drugs from India to Sri Lanka. According to police officials, drugs are mainly transported across the strait and then overland to the south. The PNB is attempting to control the area better with the upcoming opening of a sub-station in this region. With no coast guard, however, Sri Lanka's coast remains highly vulnerable to transshipment of heroin moving from India.

Police officials state that the international airport is the second major entry point for the transshipment of illegal narcotics through Sri Lanka. There is no evidence to date that synthetic drugs are manufactured in Sri Lanka. Police note that the Ecstasy found in Colombo social venues is likely trafficked from Thailand.

Domestic Programs (Demand Reduction). The National Dangerous Drugs Control Board (NDDCB) began establishing task forces in each regional province to focus on the issue of drug awareness and rehabilitation at the community level. Each task force works with the existing municipal structure, bringing together officials from the police, prisons, social services, health, education, and NGO sectors. For the first time in 2004, NDDCB officials visited the war-affected north and east provinces to assess the local situation and investigate the possibility of establishing treatment centers in those regions. The GSL continued its support, including financial, of local NGOs conducting demand reduction and drug awareness campaigns. The Sri Lanka Anti Narcotics Association in collaboration with PNB and the Colombo City Traffic Police organized a "Run Against Drug Abuse" in June 2004. The Colombo Plan Drug Advisory Program, a regional organization, pledged its assistance to the government and non-government agencies in their efforts to combat illicit drugs.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. The USG remained committed to helping GSL officials develop increased capacity and cooperation for counternarcotics issues. The USG also continued its support of the regional Colombo Plan Drug Advisory Program, which conducts regional and country-specific training seminars, fostering communication and cooperation throughout Asia.

Bilateral Cooperation. In 2004, the USG began implementing, primarily with the PNB, a law enforcement development program. Over 200 officers throughout the police force participated in training seminars. Pursuant to bilateral letters of agreement between the USG and the GSL, the Sri Lanka police are fulfilling their obligations. USG-trained Sri Lanka police are replicating the seminars and scheduling training for colleagues of the original police trainees at the training academies and stations throughout the island. Regional U.S. government officials, primarily DEA, conducted narcotics officer training for their local counterparts in seminar, organized by the Colombo Plan.

Road Ahead. The U.S. government intends to maintain its commitment to aiding the Sri Lanka police to transition from a paramilitary force to a community-focused one. This will be accomplished with additional assistance for training and continued dialogue between U.S. counternarcotics related agencies and their Sri Lankan counterparts. The U.S. also expects to continue its support of the Colombo Plan. The major tsunami, which hit Sri Lanka so tragically hard at the end of 2004, will command a good deal of government attention as initial relief efforts move into longer-term reconstruction.

SOUTHEAST ASIA

[*This text has been revised since its original posting to the website; see version as [released to Congress](#).]

Australia

I. Summary

Australia is a committed partner in international efforts to combat illicit drugs, according high priority to drug-related issues, both internationally and domestically. Australia manages the diverse legal, health, social and economic consequences of drug use through comprehensive and consistent policies of demand and supply reduction, and circumscribed harm reduction initiatives. Australia is party to the 1988 UN Drug Convention.

II. Status of Country

Australia is a consumer nation for illicit drugs. There is no evidence indicating that narcotics destined for the U.S. are transiting Australia. U.S. and Australian law enforcement agencies have excellent cooperation on narcotics matters. While domestically produced marijuana is the most abused drug in Australia, the use of MDMA (Ecstasy) and methamphetamine has risen drastically in the past few years. The UN 2004 World Drugs Report indicated that Australia has one of the highest rates of MDMA and methamphetamine abuse in the world. There are also indications that the use of cocaine has increased throughout Australia in recent years. Although the use of heroin has declined since 2000, law enforcement and health officials continue to aggressively target heroin trafficking and abuse.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The Federal Government continues to vigorously pursue policies that attempt to both prevent and treat illegal drug use. Launched in 1997, Prime Minister Howard's National Illicit Drug Strategy, called "Tough on Drugs," outlines a program to address drug issues. Australia has committed more than US\$750 million (AU\$1 billion) to the Strategy. (NOTE: Throughout this report, figures are in U.S. dollars, calculated at an exchange rate of A\$1 equals U.S. \$0.75) Since 2002, following the Federal Government's creation of the Australian Crime Commission, state and federal investigators have increased their cooperation, bolstered their enforcement responses to serious crimes such as drug trafficking, and improved prosecution at the appropriate state or federal level. The Federal government committed an additional \$187.4 million in 2003 to the "Tough on Drugs" program to reduce the supply of, and demand for, illicit drugs.

In 2004, the Australian government instituted a national program to educate customs officers, container examiners and other law-enforcement personnel on the precursor chemicals used in the creation of synthetic narcotics. It also increased the budget for drug research by \$3 million. This additional \$3 million is being used to research pseudoephedrine, a common ingredient in cold and cough medicine, which is also a precursor to methamphetamine. The government hopes to develop a pseudoephedrine product that cannot be used as a precursor chemical for methamphetamine. There is an ongoing campaign to prevent illegal sales of pseudoephedrine in Australia. The government also introduced technology in 2004 to help combat narcotics trafficking, most notably a neutron scanner to screen air cargo and an advanced ion scanner that enables customs officials to determine drug type quickly.

Accomplishments. The Australian government continues to implement extensive multi-faceted programs to combat drug trafficking and use in Australia. Throughout 2004, Australian law enforcement officials seized record amounts of Ecstasy and crystal methamphetamine. These seizures were consistent with the reported increased use of these drugs throughout Australia. In addition to

these seizures, Australian law enforcement officials worked closely with law enforcement agencies from Fiji, Vanuatu, the U.S., New Zealand and throughout Asia to dismantle an Asian organized crime group that was establishing large-scale crystal methamphetamine production labs in Fiji and in several Asian countries. It is believed that much of the methamphetamine produced at these labs was destined for Australia. State Police agencies continue to report increases in the number of clandestine methamphetamine labs seized throughout the country. The agencies believe that the level of sophistication in many of these labs has advanced. Australian efforts to control the availability of the precursor chemical pseudoephedrine have led to the increase in illegal bulk pseudoephedrine import attempts into Australia. In May 2004, an Australian multi-agency law enforcement effort resulted in the seizure of approximately 1.5 tons of pseudoephedrine in the Philippines destined for Australian methamphetamine production groups. The trial for defendants arrested as a result of the April/May 2003 seizure of 125 kilograms of heroin from the North Korean cargo vessel MV Pong Su is scheduled to begin in January 2005.

Law Enforcement Efforts. Australian law enforcement agencies continued their aggressive counternarcotics efforts in 2004. Responsibility for these activities is divided among the Federal government—primarily the Australian Federal Police (AFP), the Australian Customs Service (ACS), the Australian Crime Commission (ACC) and the Therapeutic Goods Administration (TGA)—and state/territorial police services throughout the country. The AFP maintains 68 officers in 32 overseas liaison posts in 26 countries to assist in narcotics investigation. Liaison Officers, particularly those in the Pacific Islands and throughout Asia, also assist local law enforcement agencies in training and institution building. The AFP and other Australian law enforcement agencies continue to have close working relationships with U.S. agencies including the DEA and FBI. In recent years, the AFP has increased its liaison network in order to focus on transnational crime, including drug trafficking, terrorist activities and people smuggling. Recently, there has been an increase in cocaine couriers using South Africa to transport cocaine into Australia.

Corruption. The Australian Government is vigilant in its efforts to prevent narcotics-related corruption. There is no indication of any senior official of the government facilitating the production or distribution of illicit drugs or aiding in the laundering of proceeds from such activities. Although some state police officers have been investigated and tried for drug-related corruption, corruption is not common or widespread.

Agreements and Treaties. The U.S. and Australia cooperate extensively in law enforcement matters, including drug prevention and prosecution, under a bilateral mutual legal assistance treaty and an extradition treaty. The USG has a Customs Mutual Assistance Agreement (CMAA) with Australia. Australia is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention as amended by its 1972 Protocol. Australia is a party to the UN Convention against Transnational Organized Crime and its protocol against migrant smuggling.

Cultivation/Production. Cannabis is the only significant illicit drug cultivated in Australia. The use of hydroponic growth sites has been increasing throughout the country in recent years. The cannabis grown in Australia is primarily destined for the domestic market and there is no evidence that Australian marijuana reaches the U.S. in any significant quantity. Australia has a well-established and controlled licit opium crop (12,000 hectares) on the island of Tasmania. Although recent significant seizures of foreign produced methamphetamine may be signaling a change in trafficking patterns, a majority of amphetamine and methamphetamine consumed in Australia is produced in small, often mobile, domestic clandestine laboratories.

Drug Flow/Transit. Historically, Australia has been the target for Asian-based criminal groups trafficking in heroin. This trend is continuing and many of these organizations are also involved in the trafficking of methamphetamines into Australia. The primary source for heroin in Australia continues

to be the Golden Triangle area of Laos, Burma and Thailand. Ecstasy consumed in Australia is primarily imported from Europe with some shipments transiting Asia prior to arrival in Australia. South American cocaine trafficking organizations are utilizing the improved transportation/commercial links between Australia and South America to facilitate the smuggling of cocaine. Couriers from South America are intercepted at international airports on a regular basis.

Domestic Programs. The Federal Government has continued to pursue an aggressive policy to prevent and treat drug use. The Prime Minister's National Illicit Drug Campaign committed the equivalent of \$4 million to drug prevention programs in schools and \$40 million for compulsory education and a treatment system for drug offenders.

Under Australian law, the Federal Government has responsibility for national health and crime issues, while the States and Territories have responsibility for the delivery of health and welfare services. The Ministerial Council on Drug Strategy brings together Federal, State and Territory Ministers responsible for health and law enforcement to determine national policies and programs to reduce the harm caused by drugs in Australia.

Although the Federal Government opposes supervised injecting rooms, the legal authority to provide injecting rooms rests with the health and law enforcement agencies in the States and Territories. In May 2001, the State of New South Wales passed legislation to permit the licensing and operation of an injecting center for a trial period of 18 months. This trial period has been since extended to October 2007. The center, which is now in operation, provides for medically supervised heroin injections. The Australian Capital Territory has passed similar legislation but has not opened an injection center.

IV. U.S. Policy Initiatives and Programs

U.S. Policy Initiatives. U.S. counternarcotics activities in Australia feature strong ongoing U.S.-Australian collaboration in investigating, disrupting, and dismantling international illicit drug trafficking organizations. In mid-2002, the U.S. and Australia signed a Memorandum of Understanding to outline these objectives.

Bilateral Cooperation. Cooperation between U.S. and Australian authorities is excellent.

The Road Ahead. Australia shows no sign of lessening its commitment to the international fight against drug trafficking. Australian counternarcotics efforts throughout Asia and the Pacific Islands continue to be extremely robust. The U.S. can expect strong bilateral relations with Australia on counternarcotics issues. The two countries will continue to work closely in support of the UN Drug and Crime Program and other multi-lateral fora.

Burma

I. Summary

Burma is the world's second largest producer of illicit opium and a primary source of amphetamine-type stimulants (ATS) produced in Asia. However, annual production of opium has declined for eight straight years and in 2003 Burma produced 292 metric tons of opium, less than five percent (4.8 percent) of the opium produced in Afghanistan. Burma's opium is grown predominantly in the border region of Shan State, in areas controlled by former insurgent groups (less than one percent of Burma's poppy crop is grown outside of Shan State).

Ethnic Wa cultivators along the Chinese border now account for 65 percent of Burma's total poppy crop, and major Wa traffickers continue to operate with impunity. The United Wa State Army (UWSA) has pledged to end opium production and trafficking at the end of the 2005 poppy harvest, but the government has been unable to curb other Wa drug activities and UWSA involvement in methamphetamine production and trafficking remains a serious concern. During the 2004 drug certification process, the USG determined that Burma was the only country in the world that had "failed demonstrably" to meet its international counternarcotics obligations.

The Burmese government has for several years extended its counternarcotics cooperation with other countries in the region, including the opening over the past three years of five border liaison offices on the Chinese and Thai borders, and annual joint operations with China that have destroyed several major drug trafficking rings. Burma is a party to the 1961 UN Single Convention, the 1971 UN Convention on Psychotropic Substances, and the 1988 UN Drug Convention.

II. Status of Country

Burma is the world's second largest producer of illicit opium, but produces only a small fraction of the opium now produced in Afghanistan. Eradication efforts and enforcement of poppy-free zones have combined to depress cultivation levels for the past four years. According to the UNODC, a persistent and strong demand in Asia for opiates and a falling supply in the Golden Triangle region have led to an 80 percent increase in Burmese village-level opium prices.

Declining poppy cultivation has also led to a sharp increase in the production and export of synthetic drugs. According to a joint U.S./Burma opium yield survey, in 2004 the total land area under poppy cultivation was 30,900 hectares, a 34 percent decrease from the previous year. Estimated opium production in Burma totaled approximately 292 metric tons in 2004, a 40 percent decrease from 2003 and an 89 percent decline over the past eight years. In 2004, the average opium yield dropped eight percent from 2003 to 9.5 kilograms/hectare, well below the peak level of 15.6 kilograms/ha recorded in 1996.

Burma plays a leading role in the regional traffic of ATS.

Drug gangs based in the Burma/China and Burma/Thailand border areas annually produce several hundred million methamphetamine tablets for markets in Thailand, China, and India using precursors imported from those countries.

According to GOB figures, during the first ten months of 2004, ATS seizures totaled over 8 million tablets, more than double 2003 seizures. Aside from these seizures, the government did not take significant steps to stop ATS production and trafficking. Authorities reported that they destroyed one ATS lab in 2004.

Opium, heroin, and ATS are produced predominantly in the border areas of Shan State, areas controlled by former insurgent groups. Starting in 1989, the Burmese government negotiated a series of individual cease-fire agreements, allowing each of several ethnically distinct tribal peoples limited autonomy and continued narcotics production and trafficking activities in return for peace.

Since the mid-1990s, however, the Burmese government has elicited “opium-free” pledges from each cease-fire group and, as these pledges have come due, has stepped up law-enforcement activities against opium/heroin in the respective cease-fire territories. The government has yet to put significant pressure on the UWSA to stop illicit drug production or trafficking and the Wa, despite a pledge to be poppy-free in 2005, remain the country’s leading poppy growers and opium producers. According to many reports, the Wa are also major manufacturers and traffickers of ATS pills.

Burma has a small, but growing drug abuse problem.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Burma’s official 15-year counternarcotics plan, launched in 1999, calls for the eradication of all narcotics production and trafficking by 2014, one year ahead of an ASEAN-wide plan of action that calls for the region to be drug-free by 2015. The plan is to proceed in stages, with eradication efforts coupled to alternative development programs in individual townships, predominantly in Shan State. The government initiated its second five-year phase in 2004. U Sai Lin’s Special Region No. 4 around Mong La has been opium-free since 1997; the Kokang Special Region No. 1 banned poppy cultivation in 2003 after missing a 2000 deadline; and the Wa Special Region No. 2, after several postponements, plans to implement a ban in June 2005.

However, according to the 2004 joint U.S./Burma opium yield survey, poppy cultivation within Wa territories now represents 65 percent of the total Burma crop.

The most significant multilateral effort in support of Burma’s counternarcotics efforts is the modest UNODC/Wa project financed by the United States, Japan, and Germany. UN Human Security Funds also contributed to UNODC-implemented activities parallel to this project. The UNODC/Wa project was initially a five-year, \$12.1 million supply-reduction program to encourage alternative development in territory controlled by the UWSA. In order to meet basic human needs and ensure the sustainability of a projected UWSA opium ban in 2005, the UNODC extended the project until 2007, increased the total budget to \$16.8 million, and broadened the scope from 16 villages to the entire Wa Special Region No. 2.

In 2003, the UNODC also established a new project in the Wa and Kokang areas (“KOWI”) aimed at supporting the humanitarian needs of farmers who have abandoned poppy cultivation. The idea is to prevent any return to poppy cultivation and thus to sustain drug control efforts in the long term. Altogether 18 partner organizations--including the WFP, the FAO, and INGOs--are coordinating activities under the KOWI umbrella. The goal of these interventions, many of which commenced in 2004 or are scheduled to start in early 2005, is to provide assistance to poppy farmers and their families facing the loss of their primary source of income.

Japan and Italy were early donors to UNODC, and KOWI partners received support from Australia, Germany, the European Commission (and ECHO), New Zealand, Sweden, Switzerland, and the United Kingdom. UNODC plans to phase out its participation by 2007.

Bilateral counternarcotics projects include a small, U.S.-financed crop substitution project in northern Shan State (Project Old Soldier) and a substantial Japanese effort to establish buckwheat as a cash crop in the Kokang and Mong Ko regions of northeastern Shan State. No U.S. counternarcotics funding directly benefits or passes through the GOB.

The Government of Burma, under a 1993 Narcotics Drugs and Psychotropic Substances Law, has in the intervening years issued notifications controlling 124 narcotic drugs, 113 psychotropic substances, and 25 precursor chemicals. Burma enacted a Mutual Assistance in Criminal Matters Law in April 2004 and, in support of a 2002 Control of Money Laundering Law, enacted in December 2003 “Rules for Control of Money Laundering Law.”

Law Enforcement Measures. The Central Committee for Drug Abuse Control (CCDAC)--which is comprised of personnel from the police, customs, military intelligence, and army--leads drug-enforcement efforts in Burma. The CCDAC now has 18 drug-enforcement task forces around the country, with most located in major cities and along key transit routes near Burma’s borders with China, India, and Thailand. As is the case with most Burmese government entities, the CCDAC suffers badly from a lack of adequate resources to support its law-enforcement mission.

Narcotics Seizures. Summary statistics provided by Burmese drug officials indicate that during the first ten months of 2004, Burmese police, army, and the Customs Service together seized approximately 579 kilograms of raw opium, 958 kilograms of heroin, 128 kilograms of marijuana, 59 kilograms of morphine, and just over 8 million methamphetamine tablets. Opium, heroin and morphine seizures represent approximately 2.3 percent of Burma’s 2003-year maximum potential opium production

Although seizures of raw opium decreased from 2003, seizures of heroin again doubled for the second year in a row, including a massive heroin bust of almost 600 kilograms in July along Burma’s southern coast, leading to an international investigation, including the Burmese Police Force and DEA that resulted in 35 arrests and the seizure of significant assets and property. Seizures of ATS in 2004 also doubled, reversing a downward trend and providing compelling evidence of growth in ATS production and trafficking. In July 2004, Burmese authorities seized 5.5 million ATS tablets in a single bust in northern Shan State.

Through October 2004, according to official statistics, Burma arrested 3,436 suspects on drug related charges. In 2004 Burmese authorities also arrested and extradited 12 Chinese and 2 Thai drug traffickers, and have handed over 32 other Chinese traffickers to China during the past three years.

The government dismantled only one heroin refinery through the first ten months of 2004, compared to 24 over the previous two years. The GOB also reported the destruction of one methamphetamine laboratory. Both facilities were located in northern Shan State. The government eradicated 3,052 hectares (7,545 acres) of opium poppy in 2004, a fraction of the crops destroyed earlier. However, given a significant decline in the land under poppy cultivation, eradicated acreage represented nearly eight percent of the total 2003-04 crop. Overall eradication accounts for almost one-third of the reduction in area under poppy cultivation since 2001.

Corruption. There is no reliable evidence that senior officials in the Burmese Government are directly involved in the drug trade. However, lower level officials, particularly army and police personnel posted in border areas, are widely believed to be involved in facilitating the drug trade; and some officials have been prosecuted for drug abuse and/or narcotics-related corruption. According to the Burmese government, over 200 police officials and 48 Burmese Army personnel were punished for narcotics-related corruption or drug abuse between 1995 and 2003. Of the 200 police officers, 130 were imprisoned, 16 were dismissed from the service, 7 were forced to retire, and 47 were demoted. In October 2004, the military junta ousted Prime Minister General Khin Nyunt, accusing him and hundreds of his military intelligence subordinates of corruption, including illegal activities conducted in northern Shan State. However, none of these officials has been charged with drug-related offenses and no Burma Army officer over the rank of full colonel has ever been prosecuted for drug offenses.

Agreements and Treaties. Burma is a party to the 1961 UN Single Convention, the 1971 UN Convention on Psychotropic Substances, and the 1988 UN Drug Convention (ratified in 1991). In

September 2003, the 1971 UN Convention on Psychotropic Substances took effect in Burma. In addition, Burma is also one of six nations (Burma, Cambodia, China, Laos, Thailand, Vietnam) that are parties to UNODC's sub-regional action plan for controlling precursor chemicals and reducing illicit narcotics production and trafficking in the highlands of Southeast Asia.

Over the past several years, the Burmese government has extended its regional counternarcotics cooperation, including the signing in 2001 of Memoranda of Understanding (MOUs) with both China and Thailand; the opening over the past three years, with UNODC support, of five border liaison offices on the Chinese and Thai borders to facilitate the sharing of intelligence; annual joint operations with China that have destroyed several major drug trafficking rings; and the establishment with Thailand of three joint "narcotics suppression coordination stations."

Cultivation and Production. According to the 2004 U.S./Burma joint opium yield survey, opium production declined in Burma for the eighth straight year. The survey also found that the maximum potential yield for opium in Burma in 2004 totaled 292 metric tons, down 40 percent from the previous year.

Over the past eight years, opium production in Burma has declined by more than 88 percent. During the same period, the total area under cultivation has also dropped by over 80 percent, from 163,100 hectares in 1996 to approximately 30,900 hectares in 2004 (a 38 percent drop for the year). Due in part to poor rainfall, yields have also declined from an estimated 16 kilograms per hectare in 1996 to about 9.5 kilograms per hectare in 2004.

Results from a UNODC-sponsored survey throughout Shan State in 2004 largely corroborated the findings of the U.S./Burma joint opium yield survey. According to UNODC, the area under poppy cultivation in 2004 declined by 29 percent from the previous year and by 73 percent since 1996. UNODC also determined that potential opium yield declined in 2004 by 54 percent.

According to the GOB, Thailand planned to contribute an additional \$700,000 to an opium crop substitution and infrastructure project in southeastern Shan State, having provided \$960,000 since launching the project in 2002. While not formally funding alternative development programs, the Chinese government has encouraged investment in many projects in the Wa area, particularly in commercial enterprises such as tea plantations and pig farms and has assisted in marketing those products in China through relaxation of duty taxes. Also in 2004, with the support of UNODC, Burma and Laos agreed to conduct joint patrols along the Mekong River.

Drug Flow/Transit. Most ATS and heroin in Burma is produced in small, mobile labs located in the Burma/China and Burma/Thailand border areas, primarily in territories controlled by active or former insurgent groups. A growing amount of methamphetamine is reportedly produced in labs co-located with heroin refineries in areas controlled by the United Wa State Army (UWSA), the ethnic Chinese Kokang, and the Shan State Army-South (SSA-S). Heroin and methamphetamine produced by these groups are trafficked overland (or via the Mekong River) primarily through China, Thailand, India, and, to a lesser extent, Laos, Bangladesh, and Burma itself. Heroin seizures in 2004, and subsequent investigations, revealed the increased use by international syndicates of the Rangoon international airport and port for trafficking of drugs to the global narcotics market.

Demand Reduction. The overall level of drug abuse is low in Burma compared with neighboring countries, in part because many Burmese are too poor to afford a drug habit. Deteriorating economic conditions will likely stifle significant growth in consumption. However, while the government maintains that there are only about 70,000 registered addicts in Burma, surveys conducted by UNODC, among others, suggest that the addict population could be as high as 300,000 (i.e., still less than one percent of the population). Most drug users, particularly among the older generation, use opium, but NGOs and community leaders report increasing use of heroin and synthetic drugs, particularly among disaffected youth in urban areas and workers in ethnic minority mining

communities. The UNODC estimated that in 2003 there were at least 15,000 regular ATS users in Burma and a joint UNODC/UNAIDS/WHO study estimated that there are between 30,000 and 130,000 injecting drug users. There is also a growing HIV/AIDS epidemic, linked in part to intravenous drug use. According to a UNODC regional center, an estimated 24 percent of all intravenous drug users in Burma have tested positive for the HIV/AIDS virus, with a range of 10 to 73 percent depending on the specific location. Infection rates are highest in Burma's ethnic regions, and specifically among mining communities in those areas, where opium, heroin, and ATS are readily available.

Burmese demand reduction programs are in part coercive and in part voluntary. Addicts are required to register with the GOB and can be prosecuted if they fail to register and accept treatment. Altogether, more than 21,000 addicts were prosecuted for failing to register between 1994 and 2002. The GOB has not provided 2003-04 data. Demand reduction programs and facilities are strictly limited, however. There are six major drug treatment centers under the Ministry of Health, 49 other smaller detox centers, and eight rehabilitation centers which, together, have reportedly provided treatment to about 55,000 addicts over the past ten years. There are also a variety of narcotics awareness programs conducted through the public school system. In addition, the government has established demand reduction programs in cooperation with NGOs. These include programs with CARE Myanmar, World Concern, and Population Services International (PSI), all of which focus on injecting drug use as a factor in the spread of HIV/AIDS.

IV. U.S. Policy Initiatives and Programs

Policy and Programs. The USG suspended direct counternarcotics assistance to Burma in 1988, when the Burmese military began its suppression of the pro-democracy movement. The USG now engages the Burmese government in regard to narcotics control only on a very limited level. DEA, through the U.S. Embassy in Rangoon, shares drug-related intelligence with the GOB and conducts joint drug-enforcement investigations with Burmese counternarcotics authorities. The U.S. also conducted opium yield surveys in the mountainous regions of Shan State in 1993 and 1995 and annually from 1997 through 2004 with assistance provided by Burmese counterparts. These surveys give both governments an accurate understanding of the scope, magnitude, and changing geographic distribution of Burma's opium crop.

The Road Ahead. The Burmese government has in recent years made significant gains in reducing opium poppy cultivation and opium production and cooperated with UNODC and major regional allies (particularly China and Thailand) in this fight. Although large-scale and long-term international aid--including development assistance and law-enforcement aid--is necessary to help curb drug production and trafficking in Burma, the military regime's ongoing political repression has limited international support of all kinds, including support for Burma's law enforcement efforts.

Furthermore, a true opium replacement strategy must undertake an extensive range of counternarcotics actions, including crop eradication, effective law enforcement, alternative development, and support for former poppy farmers to ensure sustainability. The Government of Burma must foster cooperation between itself and the ethnic groups involved in drug production and trafficking, especially the Wa, and enforce counternarcotics laws to eliminate poppy cultivation and opium production.

The USG believes that the Government of Burma must continue to reduce poppy cultivation and opium production; prosecute drug-related corruption, especially corrupt government and military officials who facilitate or condone drug trafficking and money laundering; take action against high-level drug traffickers and their organizations; enforce its money-laundering legislation; and expand demand-reduction, prevention, and drug-treatment programs to reduce drug use and control the spread of HIV/AIDS. The GOB must also address the explosion of ATS that has flooded the region by gaining support and cooperation from the ethnic groups, especially the Wa, who manufacture and

distribute ATS, as well as through closing production labs and preventing the diversion of precursor chemicals needed to produce synthetic drugs. The USG also urges the GOB to stem the growth of a domestic market for the consumption of ATS before this problem becomes more significant.

Cambodia

I. Summary

The number of drug-related investigations, arrests and seizures in Cambodia continued to increase in 2004. This reflects an alarming escalation in drug activity and perhaps some increase in law enforcement capacity. The government is concerned at the increasing use of amphetamine-type stimulants (ATS) among all socio-economic levels. The government's principal counternarcotics body, the National Authority for Combating Drugs (NACD), cooperates closely with DEA, regional counterparts, and the United Nations Office on Drugs and Crime (UNODC). Cambodia is not a party to any of the major UN drug conventions but is studying all of them and expects to become a party in 2005.

II. Status of Country

Cambodia has experienced a significant increase in recent years in the amount of amphetamine-type stimulants (ATS) transiting from the Golden Triangle. The UNODC estimates that more than 100,000 methamphetamine tablets enter Cambodia each day, some 25 percent of which are thought to be re-exported to Thailand. In addition, Cambodian authorities believe that foreign crime syndicates, working in concert with Cambodian nationals, have set up mobile laboratories within Cambodia that produce ATS for local distribution and export to Thailand. Cocaine use by wealthy Cambodians and foreigners in Cambodia is a relatively small but worrisome new phenomenon.

There is some evidence that precursor chemicals imported from Vietnam and Thailand for industrial use in Cambodia—including methanol, sulfuric acid, toluene, and ephedrine—are being diverted for illicit drug production. There is also evidence that sassafras extract, from a naturally occurring tree species in Cambodia, is being smuggled in large quantities from Cambodia to Vietnam, where it is further processed to create an MDMA (i.e., “Ecstasy”) precursor.

Cambodia is not a producer of opiates or coca-based drugs; however, it serves as a transit route for heroin from Burma and Laos to international drug markets. In-country sources estimate that 10 to 20 kilograms of heroin are trafficked through Cambodia daily in the form of small-scale shipments. In addition, apparently reliable reports indicate that more sizeable amounts, somewhere in the region of 50 to 100 kilograms per month, transit into Vietnam on a relatively frequent basis. There are indications of involvement by military personnel in these activities. The amount of heroin seized in the United States in recent years that is traceable to Cambodia is small.

There are no reliable figures available from either the Cambodian government or the UNODC on the current amount of marijuana produced in Cambodia, although some estimates place total production at more than 1,000 tons annually, most of which is cultivated for export. Much of the production occurs in Cambodia's northwest provinces and is reputed to be “contract cultivation” with Cambodians operating with the financial help, and under the control or influence of foreign criminal syndicates. Analysis of seizures in recent years indicates that Europe is the major destination for Cambodian cannabis, with other destinations including the United States, Australia and Africa. Quantities coming to the United States are not sufficient to have a significant impact on the United States.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Cambodian law enforcement agencies suffer from limited resources, lack of training, and poor coordination. The National Authority for Combating Drugs (NACD), which was reorganized in 1999, has the potential to become an effective policy and coordination unit. With the

backing of the Cambodian government, the UNODC launched in April 2001 a four-year project entitled “Strengthening the Secretariat of the National Authority for Combating Drugs (NACD) and the National Drug Control Program for Cambodia”. This project seeks, inter alia, to establish the NACD as a functional government body able to undertake drug control planning, coordination, and operations. The UNODC intends to continue the project beyond 2005 if funding continues.

During 2004, the UN and other donors provided the NACD with vehicles, office and audiovisual equipment, and local area computer network (LAN) servers and computers to support staff e-mail, the NACD website, and law enforcement computer-based training centers (CBT) in three key provinces. In addition, the UNODC supplied 12 provincial drug control committees and two new border liaison offices with motorcycles, radios, cameras, computers, scanners and office equipment to facilitate drug use and trafficking surveillance and on-line data collection efforts and to strengthen sub-regional cross-border law enforcement cooperation. The German government donated a computer to the NACD in 2004 and continued to provide a drug control expert to work within the NACD to help increase the organization’s capacity and to develop demand reduction and treatment programs. The UNODC sponsored 4 Cambodian participants in a 2-week intensive harm-reduction training course in 2004.

Accomplishments. During 2004 the NACD began to implement Cambodia’s first-ever 5-year narcotics control master plan (2004-2008) focused on demand reduction, supply reduction, drug law enforcement, and expansion of international cooperation. A draft of the master plan is awaiting review by the National Assembly. The NACD trained 36 policemen in drug identification in 2004. This training complements donor-provided training to increase local law enforcement capacity to test seized substances for use as evidence in criminal trials.

In December 2004, a National Assembly special review committee discussed the 1961, 1971 and 1988 UN Drug Conventions. It is expected that the three conventions will be ratified in the coming year.

Law Enforcement Efforts. In the first 11 months of 2004, 474 people (mostly Cambodians) were arrested for various drug-related offenses. This is an increase over arrests during this same period in 2003, which numbered 305. Police arrested 2 people in heroin-related cases in 2004, including a notorious head of an international heroin ring with Triad (Organized Chinese Criminal) connections. This was the most significant counternarcotics operation in which Cambodian authorities have ever participated. Another key case involved the arrest of 3 international MDMA (“Ecstasy”) traffickers and the seizure of 4,500 MDMA tablets in August 2004.

Total seizures of heroin in 2004 were 2.15 kilograms, a considerable decrease over 2003 seizures, which totaled more than 46 kilograms. Most of the confiscated heroin was discovered in postal shipments. Six people were arrested in ketamine-related cases in 2004 and 25,000 bottles of ketamine were seized. Police also confiscated 2,600 kilograms of sulfuric acid (used as precursor chemical) in a 2004 case. Police arrested 372 people in methamphetamine-related cases in 2004 and seized over 860,000 methamphetamine pills. This is a significant increase over 2003 seizures, which totaled 210,000 pills. Police confiscated over 600,000 methamphetamine pills trafficked from Laos during a single bust in early 2004. This cache was more than 10 times larger than any previous seizure in Cambodia.

Cambodian legal penalties for drug-related offenses are extremely weak, allowing for maximum penalties of just \$5,000 or a somewhat theoretical 10 years imprisonment. The NACD has drafted an amendment to the drug law that would stiffen punishment for drug traffickers. The draft legislation, which is expected to be promulgated in the coming year, provides for a maximum penalty of \$1 million fine and life imprisonment, and would allow proceeds from the sale of seized assets to be used towards law enforcement and drug awareness and prevention efforts.

Corruption. Corruption remains pervasive in Cambodia, making Cambodia highly vulnerable to penetration by drug traffickers and foreign crime syndicates. Senior Cambodian government officials

assert that they want to combat trafficking and production, however, corruption, abysmally low salaries for civil servants, and an acute shortage of trained personnel severely limit sustained advances in effective law enforcement. The judicial system is weak, and there have been numerous cases of defendants in important criminal cases having charges against them dropped after paying relatively small fines. In 2004 there were preliminary discussions within the Cambodian government and international community on ratifying the UN convention on corruption sometime in 2005, drafting a domestic anticorruption law, and establishing an anticorruption commission.

Agreements and Treaties. Cambodia has signed but not ratified the 1961 UN Single Convention and its Protocol. It has not signed the 1971 UN Convention on Psychotropic Substances or the 1988 UN Drug Convention. In December 2004 the National Assembly began to review all three UN Drug Conventions. It is expected that the conventions will be ratified in the coming year.

Cambodia has no extradition or mutual legal assistance treaty with the United States, but the Cambodian government has cooperated with U.S. law enforcement agencies regularly in the past by rendering or deporting persons wanted in the United States for crimes upon request and presentation of an appropriate warrant. The U.S. Embassy in Phnom Penh has been assured that such cooperation will continue.

Cultivation/Production. During 2004, over 14 hectares of cannabis plantations were destroyed. Eleven people were arrested for ATS production and drug-making equipment was seized.

Drug Flow/Transit. Cambodia shares porous borders with Thailand, Laos, and Vietnam and lies near the major trafficking routes for Southeast Asian heroin. The UNODC has reported that drugs enter Cambodia via the northern border. Some heroin and marijuana are believed to enter and exit Cambodia via locations along the gulf—including the deep water port of Sihanoukville—as well as the river port of Phnom Penh. The country's main international airport, Pochentong International Airport in Phnom Penh, and the regional airport in Siem Riep, suffer from lax customs and immigration controls. Some illegal narcotics are believed to transit these airports en route to foreign destinations.

Domestic Programs (Demand Reduction). The number of Cambodians using illicit drugs, including ATS and heroin, has increased steadily since the mid-1990's. Despite awareness-raising efforts, the Cambodian populace has an extremely limited understanding of the associated risks. A rapid assessment of illicit drug use in Cambodia conducted by the WHO, UNAIDS and CDC in 2004, indicates a high level of drug abuse, particularly in Cambodia's capital, Phnom Penh, and a growing problem in the Cambodian countryside. Researchers found that users regularly shared needles, tended to engage in unsafe sexual behavior, and sometimes sold their blood for money to purchase narcotics, thereby increasing the public health risk of HIV and other blood borne illnesses. Nearly 40 percent of the respondents were unaware of the risks of HIV transmission through illicit drug use.

With the assistance of the UNODC, UNICEF, the World Health Organization (WHO), CDC, the Japanese International Cooperation Agency (JICA) and NGOs, the NACD is attempting to boost awareness about drug abuse among Cambodians—especially Cambodian youth—through the use of pamphlets, posters, and public service announcements. The NACD and the National Aids Authority have established a working group to focus on harm reduction strategies.

The government has sought outside assistance for programs on drug treatment and rehabilitation centers for drug addicts and vocational training centers for severe addicts. Several national and international NGOs operate in Cambodia with mandates that directly or indirectly relate to drug control issues, including harm reduction and demand reduction. A Japanese-funded treatment and rehabilitation project is being developed to establish centers in Phnom Penh, Battambang and Poipet to provide services to addicts and to help develop the capacity of health and human services to deal effectively with drug treatment issues. The project will link Cambodia with international treatment groups, including the National Institute for Drug Abuse (NIDA).

IV. U.S. Policy Initiatives and Programs

Cambodia is a fragile, flawed democracy. For the first time in over three decades, there has been relative political stability since the formation of coalition governments following national elections in 1998 and 2003. However, Cambodia is plagued by many of the institutional weaknesses common to the world's most vulnerable developing countries. The challenges for Cambodia include: nurturing the growth of democratic institutions and the protection of human rights; providing humanitarian assistance and promoting sound economic growth policies to alleviate the debilitating poverty that engenders corruption; and building human and institutional capacity in law enforcement sectors to enable the government to deal more effectively with narcotics traffickers.

Bilateral Cooperation. U.S.-Cambodia bilateral counternarcotics cooperation is hampered by restrictions on official U.S. assistance to the central government of Cambodia that have remained in place since the political disturbances of 1997. Cambodia regularly hosts visits from DEA personnel based in Bangkok, and Cambodian authorities cooperate actively with DEA. U.S. officials raise narcotics-related issues regularly with Cambodian counterparts at all levels, up to and including the Prime Minister. DEA provided basic narcotics training to Cambodian counternarcotics police in December 2004. During this same month, DOD conducted the first in a series of Joint Interagency Task Force—West (JIATF—West) training missions. The three-week mission trained personnel from the Cambodian police, military, and the Immigration Department. The training was conducted in Koh Kong province and was designed to increase the capacity of Cambodian security forces that are charged with controlling the Thai-Cambodian border. In 2004, the U.S. provided support for a UNODC project to conduct a national survey to collect baseline data on illicit drug use and the associated HIV/AIDS risk. This is the first such study to be conducted in Cambodia and will provide key information needed to develop an effective counternarcotics/HIV Treatment/Prevention strategy for the country.

The Road Ahead. Cambodia is making progress toward more effective institutional law enforcement against illegal narcotics trafficking; however, its capacity to implement an effective, systematic approach to counternarcotics operations remains low. The NACD faces many challenges, including exceedingly low salaries, corruption, lack of authority to recruit its own staff, and heavy dependence on foreign agencies. Efforts to develop effective counternarcotics strategies are further limited by the lack of comprehensive data on the extent and nature of illicit drug use in Cambodia.

Instruction for mid-level Cambodia law enforcement officers at the International Law Enforcement Academy in Bangkok (ILEA) has partially addressed Cambodia's dire training needs. The ILEA training has produced a small but growing cadre of Cambodian officials who are becoming familiar with modern police techniques including drug identification, coordination of operations and intelligence gathering.

However, after training they return to an environment of scarce resources and pervasive corruption. This situation will require a long period of sustained investment to change the culture.

China

I. Summary

The People's Republic of China (PRC) is a major factor in the regional drug market, serving as a transit country and an important producer/exporter of Amphetamine Type Stimulants (ATS). The PRC continues to have a domestic heroin problem along with an upsurge in the consumption of synthetic drugs such as Ecstasy (MDMA) and crystal methamphetamine, known locally as "ice". PRC authorities view drug trafficking and abuse as a major threat to national security, the economy and national and regional stability, but corruption in far-flung drug producing and drug transit regions of the PRC limit what dedicated enforcement officials can accomplish. Authorities continue to take steps to integrate the PRC into regional and global counternarcotics efforts. The PRC is a party to the 1988 UN Drug Convention.

Cooperation with United States counternarcotics officials has steadily improved over the past year. This was highlighted by a joint operation involving the DEA and several PRC law enforcement agencies in October 2004, which led to the world's largest seizure of Mandrax, totaling 18 metric tons. In 2004, the Chinese Government also continued to provide U.S. counternarcotics officials with samples of drugs seized on a case-by-case basis.

II. Status of Country

Mainland China is situated adjacent to both the major narcotics producing areas in Asia, Southeast Asia's "Golden Triangle" and Southwest Asia's "Golden Crescent." While the "Golden Triangle" area poses a longstanding problem, PRC officials admit that the "Golden Crescent" is a source for increasing amounts of illicit drugs trafficked into western China, particularly Xinjiang Province. The PRC itself is also an important producer of ATS. Diverted Chinese precursor chemicals sustain synthetic drug production in many other countries, including ones as far away as Belgium and the Netherlands. According to the PRC Government, drug abuse in China continues to rise and there were, as of 2004, 1.6 million registered drug addicts, double the number in 1995. Youths made up 74 percent of the registered drug addicts. The majority of registered drug addicts are heroin users. Illegal drug use was recorded in 2,148 cities, counties, and districts across China. The PRC Government reports about 25,000 deaths of drug addicts from overdoses in past years (seeking data for 2004).

As the PRC's economy has grown and its society has opened up over the last decade, the country's youth have come to enjoy increasing levels of disposable income and freedom. This has been associated with a dramatic increase in drug abuse among the country's youth in large and mid-sized cities. In large cities like Beijing and Shanghai a Western style rave culture has begun to take root, accounting for the increasing popularity of recreational drugs, such as Ecstasy and ATS, particularly at local nightclubs. Despite increased awareness by police and several highly publicized campaigns, results have been limited.

With a large and developed chemical industry, China is one of the world's largest producers of precursor chemicals, including acetic anhydride (AA), potassium permanganate, piperonylmethylketone (PMK), pseudoephedrine, and ephedra. China monitors all 22 of the chemicals on the 1988 UN Drug Convention watch list. PRC authorities claim to have seized over 96 tons of precursor chemicals August through November 2004. China continues to be a strong partner of the United States and other concerned countries in implementing a system of pre-export notification of dual-use precursor chemicals.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In June 2004, the PRC published an authoritative five-year plan to tackle the drug problem, which provided the Ministry of Public Security (MPS) with a mandate to step up counternarcotics efforts. The national budget for counternarcotics efforts has seen regular increases. While the MPS's National Narcotics Control Commission (NNCC), China's counternarcotics coordinating body, received an annual budget of less than \$1 million in the mid-1990's, by 1998 this amount had increased to approximately \$4.5 million and to about \$17.5 million in 2003. Sources say funding was flat this year, but we have not received official statistics yet. The total narcotics budget, however, is significantly higher, because each province administers its own counternarcotics budget.

Accomplishments. The September 2004 seizure of 10 tons of pseudoephedine tablets in Los Angeles was the result of strengthened bilateral cooperation with U.S. law enforcement agencies (see below under law enforcement cooperation). China continued to cooperate with regional and international partners to stem drug trafficking. China has eradicated opium poppy cultivation and PRC authorities continue efforts to destroy illicit drug laboratories within China's borders.

Law Enforcement Efforts. The Chinese Government has continued its aggressive counternarcotics campaign. The coordination between China's Beijing-based counternarcotics efforts and those at the provincial level has grown substantially with increased training and exchange programs. In November 2004, the Anti-Smuggling Bureau (ASB) in Guangdong seized 469 kilograms of MDMA tablet inside shipping containers.

In order to increase its effectiveness in law enforcement, the NNCC reorganized its enforcement operations, establishing separate heroin and ATS enforcement groups at both the ministerial and provincial levels. Prior to 2003, enforcement was handled by one organization and focused primarily on heroin. With this reorganization, the NNCC can better focus on ATS enforcement.

In 2004, PRC authorities continued to strengthen cooperation with U.S. law enforcement entities. As an example, the September 2004 seizure of 10 tons of pseudoephedine tablets in Los Angeles resulted from strengthened bilateral cooperation with U.S. law enforcement agencies. The MPS continues to provide strategic and concrete information to its DEA counterparts to actively target drug rings. In addition, the MPS routinely facilitates travel of U.S. law enforcement personnel based at the U.S. Embassy in Beijing. In part due to international cooperation with its neighbors in the Golden Triangle, the MPS reports that poppy cultivation in Laos and Burma has been reduced by 44,000 hectares in recent years, which amounts to a 27 percent decrease in the total area of production since 1995.

Corruption. Official corruption in China is a serious problem. Anticorruption campaigns have led to arrests of many lower-level government personnel and some more senior-level officials. Most corruption activities in the PRC involve abuse of power, embezzlement and misappropriation of government funds, but payoffs to "look the other way" when questionable commercial activities occur are clearly another major source of official corruption in China. While narcotics-related official corruption exists in China, it is seldom reported in the press. MPS takes allegations of drug-related corruption seriously, launching investigations as appropriate. Most cases appear to have involved lower-level district and county officials. There is no specific evidence indicating senior-level corruption in drug trafficking. Nevertheless, the quantity of drugs trafficked within the PRC raise suspicions that official corruption is a factor in trafficking in certain provinces bordering drug producing regions, such as Yunnan, and in Guangdong and Fujian, where narcotics trafficking and other forms of transnational crimes are prevalent. Official corruption cannot be discounted among the factors enabling organized criminal networks to operate in certain regions of China, despite the best efforts of authorities at the central government level. As a matter of government policy or practice, China does not encourage or facilitate the laundering of proceeds from official drug transactions, nor are there any indications that senior PRC officials engage in laundering the proceeds from illegal drug

transactions. Narcotics-related corruption does not appear to have adversely impacted on-going law enforcement cases in which U.S. agencies have been involved.

Agreements and Treaties. China actively cooperates with other countries to fight against drug trafficking. The U.S. and the PRC cooperate in law enforcement efforts under a mutual legal assistance agreement signed in 2000. China is a party to the 1988 UN Drug Convention, as well as to the 1961 UN Single Convention and its 1972 Protocol and the 1971 Convention on Psychotropic Substances. In January 2003, the United States and China reached agreement on the Customs Mutual Assistance Agreement (CMAA.) The PRC continues to cooperate with DEA's chemical initiatives, "Operation Purple" and "Operation Topaz," and strictly regulates the import and export of precursor chemicals. Leakage into the illicit market nevertheless occurs despite this effort.

The PRC continued its participation in the "ASEAN and China Cooperative Operations in Response to Dangerous Drugs (ACCORD)." China, along with its ASEAN partners, held meetings in order to map out a regional counternarcotics cooperative mechanism in pursuit of making the region drug-free by 2015. In June, Burma, China, India, Laos and Thailand signed the Chiang Rai Declaration pledging to implement cooperative counternarcotics programs and exchange counternarcotics information. The PRC also continues to participate in UN Office of Drugs and Crime (UNODC) demand reduction and crop substitution efforts in areas along China's southern borders. China routinely participates in counternarcotics education programs sponsored by the International Law Enforcement Academy (ILEA), located in Bangkok, Thailand. The PRC actively participates in the annual International Drug Enforcement Conference (IDEC) and Regional Targeting Meetings, which are intended to boost regional law enforcement cooperation against drug trafficking.

The Chinese Government sometimes conducts drug operations with its neighbors. In 2004, Burma-China cooperation led to the closure of 9 heroin-processing plants in Burma. The joint operations netted 275 kilograms of semi-processed heroin, 120 kilograms of ATS, 26 tons of poppy seeds and 47 tons of precursor chemicals.

Cultivation/Production. The PRC has effectively eradicated the production of drug-related crops within China. Opium appears no longer to be cultivated in China. The PRC is a main source for natural ephedra, which is used in the production of methamphetamine. China is also one of the world's largest producers of synthetic ephedra. However, ephedra is also used for legitimate medicinal purposes. The Chinese central Government—supplemented by stricter controls in critical provinces, notably Yunnan and Zhejiang—makes laudable efforts to control exports of this key precursor. Despite these efforts, there is little question that some Chinese ephedra finds its way into the illicit market, both in China and abroad.

The PRC Government continues to make shutting down illicit drug laboratories a top priority. MPS seized 198 drug-processing laboratories between July and August 2004.

Drug Flow/Transit. China continues to be used as a transshipment route for drugs produced in the "Golden Triangle" to the international market, despite counternarcotics cooperation with neighbors such as Vietnam, Thailand and Burma. Drug transportation in Yunnan and Guangdong Provinces has been especially pervasive. While China's southern and southwestern provinces constitute the PRC's major drug flow and transit areas, Chinese authorities acknowledge that western China is experiencing significant problems as well. They claim that drugs such as opium and heroin are being smuggled into Xinjiang Province and are then distributed throughout China. The border areas with North Korea are also problematic, with amphetamine and heroin production possible on both sides of the border.

Domestic Programs (Demand Reduction). According to the MPS, China had 1.6 million illegal drug users registered by law enforcement departments. The majority of registered drug users are addicted to heroin. The Ministry of Education (MOE) has expanded drug education and prevention programs, aimed at preventing children from ages 12 to 18 from getting involved in drugs. Chinese officials

report the distribution of over 1.16 million drug education posters and 580,000 leaflets in 2002, reaching out to an estimated 300 million people. In 2004, major cities such as Shanghai and Beijing introduced drug education into the curriculum for all elementary school students. China gave higher priority to controlling the spread of HIV/AIDS in 2004. The MPS also stepped up campaigns targeting young people in its fight against banned narcotics, and created more drug-free residence communities and villages for rehabilitating addicts.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. Counternarcotics cooperation between China and the United States continues to develop in a positive way. This cooperation is yielding significant operational results. The information shared by China is leading to progress in attacking drug-smuggling rings operating between the two countries. Chinese authorities continue to share drug samples with U.S. colleagues on a case-by-case basis. In August 2004, the DEA, in conjunction with the NNCC, convened two conferences on precursor chemical control in Shanghai and Nanling, Guangxi Province to provide training to law enforcement officers from China police and customs.

Road Ahead. While China has on occasion provided the DEA with samples of drugs seized in the PRC intended for U.S. markets, the U.S. Government would welcome routinely receiving samples of all drugs seized by Chinese authorities. Despite these issues, bilateral cooperation remains on track and should steadily improve over the coming year.

Hong Kong

I: Summary

Hong Kong is not a major transit/transshipment point for illicit drugs destined for the international market because of its efficient law enforcement efforts, the availability of alternate transport routes, and the development of port facilities elsewhere in southern China. Some traffickers continue to operate out of Hong Kong to arrange shipments from nearby drug-producing countries via Hong Kong to the international market, including to the United States. The government of the Hong Kong special administrative region (HKSARG) actively combats drug trafficking and abuse through legislation and law enforcement, treatment and rehabilitation, preventative education, research work and international cooperation. The 1988 United Nations convention against illicit trafficking in narcotics drugs and psychotropic substances, to which the People's Republic of China (PRC) is a party, applies to Hong Kong. Prior to its reversion to the PRC in 1997, Hong Kong was also a party to this convention.

II: Status of Hong Kong:

Hong Kong's position as a key port city in close proximity to the golden triangle and Mainland China historically made it a natural transit/transshipment point for drugs moving from southeast Asia to the international market, including to the United States. In recent years, Hong Kong's role as a major transit/transshipment point has diminished due to law enforcement efforts and the availability of alternate routes in southern China. Despite the diminished role, some drugs continue to transit Hong Kong to the United States and the international market. Drug-traffickers continue to use Hong Kong as their base of operations, including many investors involved in international drug trafficking activity who reside in Hong Kong.

Hong Kong law enforcement officials continue to maintain cooperative liaison relationships with U.S. counterparts in the fight against drugs. Hong Kong is not a producer of illicit drugs. According to Hong Kong authorities, drugs seized in Hong Kong are smuggled in mostly for local consumption and to a lesser extent for further distribution in the international market, including the United States. Hong Kong experienced an overall decrease in drug abuse in 2004. According to the Hong Kong central registry of drug abuse (CRDA), in the first three quarters of 2004 (January-September), 12,003 drug abusers were reported, a drop of 6.5 percent from the 12,838 reported in the same period in 2003. Heroin was the most commonly abused drug, involving some 72 percent of the 12,003 persons for whom drug information was reported in the first three quarters of 2004. Of the overall total, 17 percent abused ketamine, while 11 percent took triazolam/midasolam and 7 percent used cannabis. In 2004, the total number of arrests for drug offenses in Hong Kong declined by 8.08 percent, compared to 2002.

The Hong Kong government again gave a high priority to tackling psychotropic substance abuse in 2003 and 2004. The Hong Kong government has identified the continuing prevalence of psychotropic substance abuse and the growing trend of young people to experiment with drugs as their major area of concern in the battle against drug abuse and trafficking. Although there was a 14 percent increase in the number of young people arrested for drug offenses from 2003 to 2004 (from 1213 to 1384), the total was less than the 1577 arrested in 2002.

III. Actions Against Drugs in 2004:

Policy Initiatives. In policy-making and coordination efforts, the Hong Kong government's narcotics division of the security bureau acts on the advice of the Action Committee Against Narcotics (ACAN).

ACAN is a non-statutory advisory body comprised of 17 members from the fields of social work, education, medicine and community service. The Hong Kong commissioner for narcotics and an official representing the director of health also serve on ACAN. ACAN works to ensure policy coordination among the various Hong Kong government departments in the effort to stop illegal trafficking of drugs and abuse.

The Hong Kong government issued a revised code of practice for dance party organizers in January 2003 to provide guidance to the organizers of these events on the prevention of drug abuse and other crimes. Under the amended regulations, organizers of dance parties are required to obtain a “places of public entertainment license” from the food and environmental hygiene department for holding such parties in premises that are not otherwise licensed.

Law Enforcement Efforts. Hong Kong’s law enforcement agencies, the Hong Kong police, and Hong Kong customs and excise department (HKCED) place high priority on meeting the objectives of the 1988 UN Drug Convention. Their counternarcotics efforts focus on the suppression of drug trafficking and the control of precursor chemicals. The Hong Kong police have adopted a three-level approach to combat narcotics distribution: at the headquarters level, the focus is on high-level traffickers and international trafficking; the regional police force focuses on trafficking across police district boundaries; and the district level police force has responsibility for eradicating street-level distribution.

HKCED’s chemical control group, in cooperation with the U.S. DEA office in Hong Kong, closely monitors the usage of precursor chemicals and tracks the export of suspicious precursor chemical shipments to worldwide destinations. HKCED also does mid-high level narcotics investigations in addition to export monitoring.

In 2003, due to high profit margins, Guam emerged as a new market for mainland China-produced “ice” (crystal methamphetamine). In February 2003, a joint investigation between Hong Kong customs and U.S. DEA led to the seizure of 2.8 kilograms of ice from a parcel that arrived in Guam from Hong Kong and was bound for the United States. In 2004, a similar shipment bound for the United States was seized in Hong Kong.

In 2004, several cocaine seizures in Hong Kong of approximately 60 kilograms have exceeded the combined cocaine seizures of 2002 and 2003 by a wide margin. It appears that cocaine abuse is becoming more prevalent in the East Asia region.

The narcotics bureau of the Hong Kong police cooperates with the PRC, Canada, Australia, the United States, and countries throughout Southeast Asia in combating international drug trafficking. Both the Hong Kong police and HKCED maintain excellent regional cooperation with DEA and regional law enforcement agencies to target significant drug organizations.

Corruption. There is no known narcotics-related corruption among senior government or law enforcement officials of the Hong Kong SAR. Nor are there any known senior government officials engaging in, encouraging, or facilitating the illicit production or distribution of such drugs or substances, or laundering money related to illegal drug transactions. Hong Kong has a comprehensive anticorruption ordinance that is effectively enforced by the Independent Commission Against Corruption (ICAC), which reports directly to the chief executive.

Drug Flow/Transit. Some drugs continue to flow through Hong Kong for the overseas market, including the United States. Traffickers use land routes through Mainland China to smuggle heroin into Hong Kong. The heavy volume of vehicle and passenger traffic at the land boundary between PRC and Hong Kong continues to pose difficulties in the fight against the trafficking of drugs into Hong Kong.

In an effort to eradicate Hong Kong's role as a transit/transshipment point for illicit drugs, the HKSARG maintains a database of information on all cargoes, cross-border vehicles, and shipping. The air cargo clearance system, the land border system and the customs control system are all capable of quickly processing information on all import and export cargoes, cross-border vehicles and vessels.

International Cooperation. Hong Kong maintains close links with the United Nations, the World Health Organization (WHO), Financial Action Task Force (FATF), INTERPOL and the World Customs Organization (WCO) as well as individual governments around the world in combating narcotics trafficking and abuse. Hong Kong has "mutual legal assistance in criminal matters treaties" with the United States, Australia, France, the United Kingdom, New Zealand, Italy, South Korea, Switzerland, Canada, the Philippines, Portugal, Ireland, the Netherlands, Ukraine, Singapore and Belgium. Hong Kong has also signed surrender of fugitive offenders agreements with 13 countries including the U.S., and transfer of sentenced persons agreements with seven countries, including the U.S. Hong Kong law enforcement agencies enjoy a close and cooperative working relationship with their mainland counterparts and counterparts in many countries. Through their established liaison channels they exchange operational intelligence on drug trafficking, money laundering and control of precursor chemicals.

Because of the unique "one country, two systems" environment in which Hong Kong operates, Hong Kong's law enforcement and customs operations around the time of reversion (July 1997) operated less efficiently with their mainland counterparts than they do now. In the last few years, liaison information sharing and data-networking functions, such as customs information, have been formalized and have been successful in increasing the levels of inter-system cooperation and efficiency. Because intermittent drug trafficking through Hong Kong often involves mainland China aspects, foreign law enforcement agencies in Hong Kong such as the U.S. DEA have benefited from the increased level of PRC-Hong Kong cooperation.

Domestic Programs. In 2003, the Hong Kong government's preventative education policy efforts continued to focus on youth and parents. The Hong Kong government has provided a comprehensive drug prevention program throughout Hong Kong's education system. The narcotics division worked closely with the Action Committee Against Narcotics (ACAN) to promote counternarcotics education among youth. In 2004, school drug education programs were extended to non-Chinese speaking children (including English School Foundation (ESF) and international schools and local schools serving students of South Asian origin). The Hong Kong government's narcotics bureau also partners with youth organizations and uniform groups such as Junior Police Call, the Hong Kong Red Cross and the Scout Association of Hong Kong to promote the counternarcotics message to youths through the train-the-trainer approach. Corporate volunteers also helped the Hong Kong government promote the counternarcotics message during the year. For example, one of Hong Kong's largest electric power companies distributed counternarcotics leaflets to customers as bill inserts. In June, the Hong Kong Government formally opened the Drug InfoCentre (DIC), funded by the Hong Kong Jockey Club. The DIC is the first exhibition centre in Hong Kong dedicated to counternarcotics education.

The Hong Kong government collects information on drug abuse cases through the Central Registry of Drug Abuse (CRDA) from reports sent to it by law enforcement, treatment agencies and welfare organizations. The information is used for statistical analysis and research purposes. CRDA's reports are published regularly on the trends and major characteristics of drug abusers. In November 2003, the CRDA began a computer system redevelopment project to enhance the functionality of the system, however, that project has not yet been completed.

On the research front, two studies commissioned by ACAN were completed in 2004. The first, which was a three-year longitudinal study of chronic drug abusers in Hong Kong, was disseminated to drug treatment and rehabilitation agencies. The second report was designed to obtain information on abusers who cross the border into the mainland to abuse drugs. Among the report's findings was that

one of the most popular reasons for abusing drugs in the mainland was the lower prices. The narcotics division has exchanged and discussed the findings with relevant authorities from Guangdong province, PRC and Macau.

Cultivation and Production. Hong Kong is not a producer of illicit drugs.

IV: U.S. Policy Initiatives and Programs.

The U.S. Government and the HKSARG continue to promote sharing of proceeds from joint counternarcotics investigations. In May 2003, Hong Kong began participating in the U.S. Container Security Initiative (CSI), which U.S. law enforcement believes will increase the potential for identifying shipments of narcotics. Hong Kong is also an active participant in the International Law Enforcement Academy (ILEA).

The Road Ahead. The Hong Kong government has proven to be a reliable and valuable partner in the fight against drug trafficking and abuse. Hong Kong law enforcement agencies, arguably among the most effective in the region, continue to cooperate with the U.S. counterparts. The U.S. Government will continue to encourage Hong Kong to maintain its active role in counternarcotics efforts.

Indonesia

I. Summary

Although Indonesia is not a major drug producing, consuming, or drug transit country, Indonesia continues to have a growing problem in all three areas. The Indonesian National Police (INP) have participated in several international donor-initiated training programs and continue to commit increased resources to counternarcotics efforts. The INP has received U.S. assistance, including vehicles, software, safety and tactical equipment to support its efforts against crime and drugs. INP efforts are firmly based on counternarcotics legislation and international agreements. The INP relies heavily on assistance from major international donors, including the U.S. Indonesia is a party to the 1988 UN Drug Convention.

II. Status of Country

All major groups of illegal drugs are readily available in Indonesia: methamphetamine, in its crystalline and tablet forms, Ecstasy (MDMA), heroin, cocaine, and marijuana. The INP reports that the majority of heroin seized in Indonesia originates in Afghanistan. Indonesian authorities report that much of the heroin trade in Indonesia is controlled and directed by West African and Nepalese traffickers, often utilizing Thailand and Singapore as transit points for their couriers. Methamphetamine used in Indonesia is both imported and produced by domestic clandestine laboratories. According to reports, MDMA is primarily imported from the Netherlands; however, clandestine MDMA labs have been seized in Indonesia. Marijuana is produced domestically, harvested in North Sumatra, especially in Aceh province. In the past, INP has alleged that the Free Aceh Movement (GAM), a separatist movement, is involved in marijuana production to support its operations. Recent eradication operations by the INP, which have led to major seizures, and arrests seem to confirm this. INP reported the seizure of over 40 tons of marijuana and the arrest of a number of GAM members who were guarding marijuana production fields as a result of these operations. According to the INP, GAM levies a tax on marijuana production, which is controlled primarily by trafficking organizations based in Jakarta. Although cocaine seizures continue to occur in major Indonesian airports, the market for cocaine in Indonesia is believed to be very small.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The Indonesian counternarcotics code is sufficiently inclusive to enable police, prosecutors, and the judiciary to arrest, prosecute, and adjudicate narcotics cases; however, the continued lack of modern detection, enforcement and investigative methodologies and technology, as well as the presence of pervasive corruption, are the greatest obstacles to advancing counternarcotics efforts.

Accomplishments/Law Enforcement Efforts. The National Narcotics Board (BNN) continues to strive to improve interagency cooperation in drug enforcement, interdiction, and precursor control. In 2004, BNN revised its mission statement to place more emphasis on improvement of enforcement efforts by Indonesian law enforcement agencies. Within the coordinating authority of BNN, plans have been developed for a Joint Interagency Counterdrug Operations Center and Network. The purpose of this program would be to improve coordination and information exchange between various Indonesian law enforcement agencies related to drug enforcement.

The INP Narcotics and Organized Crime Directorate continues to improve its ability to investigate and dismantle international drug trafficking syndicates. The Narcotics Directorate has become increasingly

active in regional targeting conferences designed to coordinate efforts against transnational drug and crime organizations. The maritime counternarcotics effort depends on a myriad of Indonesian law enforcement agencies. Efforts to define the roles of these agencies, including the Navy and the INP Air and Sea police continue in an effort to avoid duplication. The Indonesian courts have sentenced approximately 21 drug traffickers to death since January 2000. In 2004, the Indonesian government began to carry out these sentences, executing three individuals.

Agreements and Treaties. Indonesia is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention, as amended by the 1972 Protocol. Indonesia has signed, but has not yet ratified, the UN Convention on Transnational Organized Crime, and is a signatory to the UN Convention Against Corruption.

Cultivation/Production. Indonesia produces significant amounts of marijuana; however, most is believed to be for domestic consumption.

Corruption. As a matter of government policy and practice, the GOI does not encourage or facilitate the illicit production or distribution of drugs or the laundering of proceeds from illegal transactions. Corruption in Indonesia, however, is endemic, despite its domestic laws, and seriously limits the effectiveness of all law enforcement, including narcotics law enforcement. The recently elected administration has made anticorruption efforts a major policy initiative.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. Indonesia and the United States maintain excellent law enforcement cooperation on narcotics cases. During 2004, the United States sponsored hundreds of INP officers to attend training at the International Law Enforcement Academy (ILEA) in Bangkok, and to State department-funded training in Indonesia. In 2004, DEA provided training in the areas of drug intelligence analysis and precursor control. Indonesia continues to work closely with the DEA regional office in Singapore in narcotics investigations.

The Road Ahead. In 2005, the U.S. will assist the BNN and its member agencies in developing the Counterdrug Operations Center and Network. The goals of the project are to standardize and computerize the reporting methods related to narcotics investigations and seizures, to develop a drug intelligence database, and to build an information network designed to connect all of the provinces of Indonesia.

Japan

I. Summary

Although Japan is not a major producer of drugs, it is one of the largest methamphetamine markets in Asia, with approximately 600,000 addicts and 2.18 million casual users nationwide. These 2004 figures are the same as those of 2003. During 2004, Japanese authorities seized 387 kilos of methamphetamine and over 413,000 tablets of MDMA (Ecstasy), an increase in Ecstasy seizures of 21 percent (71,640 tablets) from 2003 figures.

II. Status of Country

Japan is not a significant producer of narcotics. Licit cultivation of opium poppies, coca plants, and cannabis for research is done on a modest scale and is strictly monitored and controlled by the Ministry of Health, Labor and Welfare. Methamphetamine is Japan's most widely abused drug. Approximately 90 percent of all drug arrests in Japan involve this substance. In spite of this significant methamphetamine abuse problem, there is no evidence of clandestine manufacturing in Japan. Ephedrine, the primary precursor for the manufacture of methamphetamine in Asia, is strictly controlled under Japanese law.

Japanese (GOJ) authorities unofficially estimate that 10-20 metric tons of methamphetamine are trafficked annually into Japan. This estimate is unchanged from 2003, which stated that the GOJ estimated that 2.18 million users consume 11 grams per person annually. Through October 2004, law enforcement officials seized 378 kilograms of methamphetamine. GOJ authorities believe the majority of the methamphetamine smuggled into Japan is refined and/or produced in the People's Republic of China (PRC), Taiwan, and the Philippines. Some illicit methamphetamine also probably comes from North Korea, but relative quantities are hard to determine.

Methamphetamine trafficking remains a significant source of income for Japanese organized crime. The illegal immigrant population in Japan also participates actively in drug trafficking. As in 2003, heroin imports from Southeast Asia into Japan significantly decreased this year, with 23 grams of heroin and 174 grams of opium seized through October 2004. Heroin, marijuana and hashish use continues to be significantly lower than that of other illegal drugs in the country.

Seizures of cocaine increased significantly in 2004, with 86 kilos seized through October, compared with 2.3 kilos seized in 2003. The large increase over the previous year is mainly due to two significant seizures of cocaine originating from Colombia, 44 kilos and 28 kilos respectively. The 44-kilo seizure was taken from a Panamanian-flagged tuna vessel, and the 28-kilo seizure from a Federal Express shipment.

III. Country Actions Against Drugs in 2004

Policy Initiatives. DEA Tokyo works closely with the GOJ to add synthetic drugs of abuse to Japan's list of prohibited drugs. During 2002-2003, the GOJ enacted legislation making possession, sale, and/or use of Benzylpiperazine (BZP), trifluoromethylphenylpiperazine (TFMPP), Psilocybin ("magic mushrooms"), Gamma Hydroxybutyrate (GHB), and 4-Methylthioamphetamine (4-MTA) illegal. Japanese officials are currently considering adding Ketamine, AMT, BZP, and 5-MeO-DIPT (Foxy Methoxy) to the list of prohibited drugs.

The DEA is renewing its agency-wide emphasis on money laundering investigations related to drug trafficking and will host a money laundering seminar in Tokyo in April 2005.

Accomplishments. DEA Tokyo promotes regional cooperation through the Asian Drug Enforcement Conference (ADEC) and the International Drug Enforcement Conference. DEA Tokyo continues to serve as an advisory, support and training resource to the Japan National Police Agency (NPA) in the planning and production of the annual ADEC conference, as well as several other regional seminars held annually in Japan. ADEC's primary objectives are to promote the exchange of strategic intelligence regarding international drug trafficking organizations and establish a regional network of law enforcement officials and agencies dedicated to drug enforcement efforts. In February 2004, 130 officials from 28 countries, and members of the UNODC and INTERPOL attended the 9th annual ADEC conference hosted by the NPA.

In July 2004, the Suspicious Transaction Reporting Office (STRO) of the Commercial Affairs Department, Singapore Police Force and the Japan Financial Intelligence Office (JAFIO) established a cooperative framework for the exchange of financial intelligence related to money laundering or terrorist financing. In December 2004, the JAFIO and the U.S. Financial Crimes Enforcement Network signed a similar agreement facilitating information exchange regarding suspicious transactions possibly linked to terrorist financing and/or money laundering/narcotics trafficking.

The U.S.-Japan Mutual Legal Assistance Treaty (MLAT) was signed in 2003 and ratified in 2004. The MLAT paves the way for Japan's Ministry of Justice and NPA to directly ask the U.S. Justice Department for cooperation and information and vice versa.

Law Enforcement Efforts. In August 2004, DEA Tokyo initiated a joint investigation with NPA's Drugs & Firearms Control Division, Kanagawa Prefecture Police and U.S. Naval Criminal Investigative Service to intercept multiple packages containing MDMA tablets mailed from Seattle to a U.S. military base in Japan. This international controlled delivery resulted in the arrests of two U.S. nationals and the seizure of 50,000 tablets of MDMA. The MDMA was sourced to violators in Vancouver, Canada.

Japanese authorities seized 378 (as stated above) kilograms of methamphetamine in 2004. Police counternarcotics efforts tend to focus on Japanese organized crime groups, the main smugglers and distributors of drugs. In addition to smuggling and distribution activities, Japanese law enforcement officials are paying increased attention to drug-related financial crimes. The Financial Services Agency received 18,768 reports of suspicious transactions in 2003.

Between 1992 (when the Asset Seizure Law took effect) and 1999, the NPA seized a total of about \$7.23 million in drug proceeds in 82 investigations. However, the NPA and Customs advise that financial seizure statistics are no longer maintained. Japanese authorities seize money primarily as trial evidence. After conviction, judges may levy fines, impose tax penalties, or order the outright confiscation of narcotics related proceeds, but statistics on these actions are not maintained.

Corruption. There were no reported cases of GOJ officials being involved in drug-related corruption in Japan in 2004.

Agreements and Treaties. Japan is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention on Narcotic Drugs, the 1972 Protocol amending the Single Convention, and the 1971 UN Convention on Psychotropic Substances. An extradition treaty and a customs mutual assistance agreement are in force between the United States and Japan. A mutual legal assistance treaty has been submitted to the Senate for advice and consent to ratification. Japan has signed but has not yet ratified the UN Convention on Transnational Organized Crime.

Cultivation/Production. Japan is a member of the Chemical Action Task Force (CATF) and controls 28 chemicals. Although Japan is not a significant cultivator or manufacturer of controlled substances, it is a major producer of 60 types of dual-use precursor chemicals. For example, Japan is one of only a handful of countries that refine ephedrine, a chemical used to treat nasal/breathing problems.

Ephedrine is also an essential ingredient in methamphetamine. The DEA Country Attaché in Japan, working closely with his Japanese counterparts, closely monitors end users of dual use precursors.

Drug Flow/Transit. With minor exceptions, all drugs illicitly trafficked into Japan are smuggled from overseas. According to the NPA, Taiwan, China, the Philippines, and North Korea are principle sources. China remains the primary source for methamphetamine seized in Japan, with major seizures of methamphetamine also coming from Taiwan and Malaysia. While not previously identified as a significant source of illicit drugs, Canada was the source country of 44.5 kilos of methamphetamine and 60 kilos of marijuana seized through October 2004. There were no confirmed drug seizures linked to North Korea in 2004, though some drugs listed as coming from China may have some connection with North Korea. While methamphetamine prices dropped significantly during the first five months of 2004, prices rose again in June and stabilized at 2003 levels.

Domestic Programs (Demand Reduction). Domestic programs focus primarily on interdiction. Drug treatment programs are small and generally run by private organizations. The Japanese Government provides narcotics-related counseling focused on drug prevention and supports the rehabilitation of addicts at prefectural centers. The Japanese Government continues to support a number of drug awareness campaigns designed to inform the public about the growing use of stimulants in Japan, especially among junior and senior high school students. The Ministry of Health and Welfare, along with prefectural governments and private organizations, continues to administer national publicity campaigns and promote drug education programs at the community level.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. U.S. goals and objectives include Strengthening enforcement cooperation, including participation in controlled deliveries and drug-related money-laundering investigations; encouraging more demand reduction programs; encouraging effective use of anticrime legislation and government agencies responsible for financial transaction oversight

The Road Ahead. DEA Tokyo will work closely with its Japanese counterparts and offer support in conducting international money laundering investigations. In addition, DEA Tokyo will continue to carry out an aggressive education program with Japanese Customs and NPA officials to foster knowledge of money laundering investigations, and their relationship to narcotics trafficking and terrorist financing.

Laos

I. Summary

The Government of Laos (GOL) continued to make some progress in its counternarcotics efforts during 2004. Most notable progress was registered in its efforts to eliminate opium poppy cultivation. Specific actions included: continued cooperation and progress with the U.S.-GOL bilateral program; pursuit of relatively low-level traffickers; improved counternarcotics cooperation with the U.S. by the GOL's Customs Department; continued counternarcotics cooperation with the United Nations Office of Drugs and Crime (UNODC) and several non-governmental organizations (NGOs); a sustained campaign to eradicate illicit opium poppy; an increased tempo of counternarcotics public awareness activities, especially concerning amphetamine-type stimulants (ATS); and cooperation on HIV/AIDS, an issue related to drug use.

The Ministry of Public Security's (MPS) cooperation with the DEA Vientiane Country Office (VCO) was minimal—there was no direct actionable or enforcement-related cooperation with DEA. Corruption remains an ongoing and severe problem; GOL law enforcement authorities failed to arrest any major drug traffickers; and provincial counternarcotics units (CNU) have shown limited results after several years of USG support. The GOL devoted few of its own modest resources to fighting drugs, relying overwhelmingly on the donor community. During 2004, Laos became a party to the 1988 UN Drug Convention. Laos is also a party to the 1961 Single Convention and the 1971 Convention but has not ratified the 1972 Protocol to the 1961 Convention. Laos is a member of INTERPOL.

II. Status of Country

Laos is landlocked and about 80 percent mountainous. The country borders Burma, Thailand, the PRC, Vietnam, and Cambodia. It is among the least developed countries in Asia, with a per capita income of only about \$320 per year. The population is approximately 5.7 million and includes 49 distinct ethno-linguistic groups. Social indicators are among the worst in the world—infant mortality is 87 per 1,000 births and life expectancy is about 55 years. Health care service coverage is very poor and children die mainly from malaria, acute respiratory infections, diarrhea, malnutrition, and various vaccine-preventable diseases. The growth and consumption of opium, concentrated among minority hill tribe peoples, is closely related to poverty. While illicit opium production is declining, Laos still ranks as the third largest grower, although cultivation lags well behind Burma and Afghanistan. Generally, opium poppy is cultivated (and consumed) in the country's northern region. UNODC estimates that about half is consumed domestically (often for traditional medicinal use) and the other half is exported, generally regionally. Cultivated area in opium poppy estimates vary widely, ranging from a recent GOL estimate of just over 3000 hectares to the USG 2004 estimate of 10,000 hectares. The GOL claims that its estimate takes into account 2004 eradication efforts. UNODC estimates about 6,600 hectares of cultivation, based on its 2004 survey.

Laos has significant structural limitations, including (1) limited capacity for sustainable opium elimination, due to insufficient alternative development; (2) limited capacity for drug demand reduction, due to a lack of data and familiarity with key approaches and concepts; (3) very limited drug law enforcement capability, both among police and administration of justice; (4) lack of data and information on drugs and crime; (5) a lack of drugs and crime legislation, as well as a near absence of implementing regulations; (6) limited human resources in the drug and crime sectors, due to the lack of training at all levels; and (7) a limited penitentiary system, which, like most of the Lao public sector, suffers from neglect and insufficient resources.

In addition to illegal opium cultivation, Laos is a significant transit country for narcotics (mostly heroin and amphetamine-type stimulants (ATS) and precursors. Narcotics transit Laos to Vietnam, Cambodia, and Thailand; some are probably destined for the international market. There are reports that, due to the severe crackdown of ATS in Thailand during the first few months of 2003, some ATS and heroin production may have moved from northern Thailand into Laos, but DEA has not yet confirmed this, at least partly due to the lack of investigative cooperation from the Lao. Other law enforcement officials have noted that, improved law enforcement efforts in Burma and the PRC are likely to expand drug production and trafficking in Laos, where there are many remote areas generally beyond the reach of law enforcement authorities. Precursor chemicals appear to be widely available in Laos and there are few regulatory controls. There are also reports of small amounts of cannabis growing in southern Laos, according to UNODC. The Thai crackdown could also result in increased cannabis production in southern Laos. The Mekong River is an important factor in the trafficking process, since it transverses the country and is minimally patrolled, although this may improve in 2005 with increased Thai-Lao cooperation.

ATS is a problem that is growing rapidly in Laos, both in the rural areas as well as the urban centers. ATS is apparently transiting Laos from the Golden Triangle region and/or may be produced in Laos. The GOL vehemently denies that there is any ATS production in the country.

While information regarding cannabis is sketchy at best, DEA believes that there is limited production in southern Laos and cannabis appears readily available in that region. There may be some contract growing for Thai traffickers. According to Lao Customs and the state-controlled media, Customs officials seized 710 kilograms of cannabis in Boulikhamsay Province (located in central Laos) on December 5 and 9.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The structure of the GOL's counternarcotics efforts is built around the Lao National Commission for Drug Control and Supervision (LCDC). LCDC is also the main counterpart for the U.S. bilateral assistance program. The Minister to the President's Office and Chairman of LCDC is currently Soubanh Srithirath. At the most senior level, the Prime Minister, Bounnhang Vorachit, is also the President of the Central Steering Committee for Drug Prevention, but responsibility for day-to-day management rests with Minister Soubanh. Other Commission members include representatives from the Ministries of Foreign Affairs, Public Security, Justice, Health, Education, and Agriculture. In addition, the Department of Customs (under the Ministry of Finance) and the Council of Ministers, are also represented on the Commission. Within the MPS, the Drug Control Department (DCD) has administrative and some operational responsibilities. The exact nature of cooperation and coordination between LCDC and DCD is not always clear, but in general, MPS is a powerful force within the GOL bureaucracy. In Laos' system of "vertical structure," individual provinces have a Provincial Committee for Drug Control (PCDC) that reports to LCDC. The USG bilateral program provides administrative support for those offices, as well as LCDC, DCD, and seven provincial counternarcotics units (CNU's). DCD and the provincial CNU's serve as the primary counternarcotics law enforcement arm in Vientiane and those provinces.

The main drug law is Article 135, adopted in 1990. This article prohibits drug trafficking, as well as the manufacture of heroin and other narcotics. In 1996, the GOL modified Article 135 and made opium production illegal. In 2001, penalties under Article 135 became more severe, including the death penalty for production, trafficking, and the distribution of heroin (more than 500 grams), amphetamines (more than three kilograms). Other penalties include up to five years imprisonment for possession of less than two grams of heroin.

The USG focuses on helping the GOL achieve three primary counternarcotics objectives: elimination of opium poppy cultivation, suppression of illicit drug and precursor chemical trafficking, and drug

education and treatment programs. The USG has addressed the first goal through bilateral integrated rural development projects. The USG works closely with the UNODC and other donors of development assistance to ensure that counternarcotics objectives are included in all rural development programs in northern Laos. Suppression of trafficking is pursued through support of the CNU and Lao Customs.

While there were no new major policy initiatives during 2004, the GOL leadership regularly emphasized the importance of fighting drugs in a variety of fora. On October 8, Minister Soubanh told the UN General Assembly's Third Committee that, "Illicit drug production, trafficking, and abuse threaten our security and stability and jeopardize development." In the same speech, Soubanh noted that the GOL is "gravely concerned" about the spread of ATS in Laos. In late April, Mr. Linthong Phetsavan, Head of LCDC's Permanent Secretariat, told a multilateral meeting in Thailand that, "eradicating Laos' culture of opium is a top national priority."

The 2001 Seventh Party Congress has had an important impact on national drug policy. During that congress, the Party decreed that Laos would be "opium free" by the end of 2005. Essentially, this resolution has been the driving force behind the GOL's aggressive opium eradication policy since 2001. The decree has pushed GOL policy implementation towards eradication and detoxification and put additional pressure on national and provincial officials to meet the 2005 goal. This has led to controversy within the donor community, some of whom believe that the GOL's goal is not obtainable without undue hardship in the northern provinces.

Accomplishments. UNODC officials said that, over the past few years, the GOL has shown a "higher level of commitment" in dealing with the drug problem, especially concerning opium eradication. However, officials said that they are "less impressed" by the GOL's commitment to fighting ATS and heroin trafficking/abuse. Minister Soubanh, summarizing this year's drug activity, said in November that, the "most important GOL accomplishment" in 2004 was the opium eradication campaign. According to Soubanh, at the beginning of 2004, there were about 7,800 hectares of poppy—as of November 2004, the number of hectares is "around 3,000," due mainly to GOL eradication efforts since the February UNODC survey, he claimed. In 2004, the GOL declared five provinces as "poppy free." There is some anecdotal evidence that the pace of eradication is also leading to a type of "professional grower," i.e., farmers contracted by traffickers to specifically grow poppy in the more remote areas. In addition, there is anecdotal evidence that, with the opium disappearing, addicts are turning to ATS or any other drugs that they can get their hands on. Some foreign officials also fear that heroin use could increase.

Law Enforcement Efforts. In late August, Thai and Lao officials met at the seventh annual Lao-Thai Meeting on Narcotics Law Enforcement Cooperation. At the meeting, the two sides agreed to improve bilateral cooperation, including an enhanced riverine program to patrol the Mekong River from the Thai-Lao border at Nong Khai (Friendship Bridge) and in Xaiaboury Province, which shares a 650 kilometer border with Thailand. The two sides also agreed to establish an online system to monitor cross border movements aimed at reducing the flow of illegal drugs and other contraband.

During 2004, Lao DCD cooperation with the DEA was virtually non-existent; there was no direct actionable or enforcement-related cooperation with DEA and efforts to establish direct links with DCD have thus far been unsuccessful. A senior MPS official appointed as DEA's "direct link" proved ineffective and has reportedly been transferred to another position. DEA has provided information to DCD, but has received almost no feedback, other than some very basic telephone subscriber information. DEA's law enforcement counterpart at LCDC has provided arrest and seizure statistics on somewhat more regular intervals compared to 2003.

Working directly with Lao Customs appears to be showing more promise, according to DEA. In November, Lao Customs detained two Taiwanese heroin traffickers transiting the Vientiane International Airport en-route to another Asian destination. They were arrested holding about 800

grams of heroin. Lao Customs officials provided quick feedback to DEA on the case. During 2004, Lao Customs also provided DEA information on several other active drug related cases in a timely manner.

According to information provided by UNODC for the first six months of 2004, there was a generally upward trend in seizures, other than opium. In all 2003, law enforcement entities seized 39 kilograms of heroin; in the first six months of 2004, 55 kilograms were seized. Despite this improvement, DEA believes that the seizures represent the “tip of the iceberg” of the amount of heroin transiting Laos. Regarding ATS, in 2003, 1.2 million tablets were seized. In the first six months of 2004, law enforcement seized 3.02 million (about one-third in one seizure). Concerning opium, seizures are apparently headed downward, not surprising, since there has been considerable eradication. The last USG opium yield survey “ground truthing” revealed that it is getting harder and harder to find less opium. In 2003, GOL law enforcement seized 241 kilograms of raw opium; during the first six months of 2004 law enforcement seized 43 kilograms. Cannabis seizures appear about the same as 2003. During the first six months of 2004, GOL law enforcement seized 1,806 kilograms; in 2003, law enforcement seized 4,578. Regarding arrests for all drugs, UNODC figures through June 2004 suggest a decline compared to 2003. In 2003, there were 226 drug cases resulting in 445 persons arrested; through June 2004, there were only 79 cases, although those cases resulted in 227 arrests.

The GOL continued a policy of strict punishment for drug offenses. During 2004, there were reports of death sentences and long jail terms for drug traffickers. We have not been able to confirm whether any death sentences related to drugs were carried out in 2004.

GOL law enforcement authorities do not believe that major trafficking syndicates are responsible for moving drugs in and out of Laos. However, DEA is concerned that, with the crackdown in Thailand, more significant traffickers have begun to view Laos as a relatively risk free transit route and storage location.

Resource constraints within the GOL continued to be a major problem in 2004. LCDC, like much of the rest of Laos’ public sector, is essentially bankrupt. In November, Minister Soubanh lamented that LCDC’s budget from the GOL “suffered a 20 percent cut—from 50 million kip (about \$6375) to 40 million kip (\$5100). Seven embassy visits to provincial narcotics enforcement units (CNU) since August have revealed that much of their equipment is outdated and/or inoperable. Most officers have received little training, although some commanders and/or deputy commanders have attended ILEA courses. Generally, office equipment, hand-held radios, and motorbikes are not working. Some buildings are in disrepair. According to LCDC officials, they are unable to finance any repairs themselves and must wait for donor assistance. Among the CNUs visited in 2004, generally, transportation and communication resources are weak and drug testing kits either missing or outdated. CNU officials consistently told NAS and DEA that, in order to operate effectively, they need additional training for the rank and file officers as well as updated equipment such as cameras and night vision goggles.

Corruption. The Lao Government takes a strong stance against official corruption, including narcotics-related corruption. But Drug Czar, Minister Soubanh, acknowledges that “corruption is a big problem.” He attributed the problem to the very low salaries paid to law enforcement officials and the “temptation” to profit from drug trafficking. Soubanh said that at Cabinet meetings the Prime Minister reiterates that corruption in the public sector, including narcotics, “will not be tolerated.” While firm evidence regarding narcotics related corruption is hard to come by, there have been reports that GOL and military officials may be facilitating drug trafficking to some extent. Recognizing the need for further assistance in anticorruption measures, the GOL is working with Sweden to develop appropriate anticorruption enforcement measures. Concerning narcotics-related corruption, the GOL did demonstrate a willingness in 2004 to take limited action, prosecuting several low and mid-level border officials for accepting bribes.

Agreements and Treaties. The USG and GOL have signed a Memorandum of Understanding (MOU) on counternarcotics cooperation in crop control every year since 1990. Bilateral law enforcement project agreements have been signed annually since 1992. An MOU for demand reduction was added to the bilateral program in 2002. Both countries have expressed their intention to continue and expand this cooperation. Although the GOL does not have a mutual legal assistance or extradition treaty with the U.S., it has in the past cooperated in deporting drug traffickers to the United States, generally via Thailand.

The 1988 UN Drug Convention entered into force in Laos on 30 December 2004. Laos is also a party to the 1971 UN Convention on Psychotropic Substances; and the 1961 UN Single Convention. Following its ratification the 1988 UN Drug Convention, GOL officials have stated that the GOL is committed to working with UNODC to pass legislation, such as chemical control and money laundering regulations, necessary to bring Lao law into compliance with the Convention.

Cultivation/Production. The USG 2004 estimate for poppy cultivation is 10,000 hectares. About 85 percent of the crop is concentrated in Phongsaly, Houaphan, Luang Prabang, and Oudomxai provinces in northern Laos. USG methodology included 280 imagery samples from USG satellites and ground visits to 12 fields in Phongsaly, Xieng Khuang and Luang Prabang provinces. With USG support, UNODC and the GOL conducted an opium yield survey in 2004. According to the survey report published in June, there were about 6,600 hectares of opium poppy cultivation. The UNODC effort included limited satellite surveys based on commercially available imagery, as well as ground surveys and interviews with village headmen and household heads in 388 villages in 11 provinces. The satellite images in the UNODC survey were used to crosscheck the results of the ground survey.

Officially, the GOL admits to only about 3,000 hectares of opium cultivation as of November 2004. The GOL bases this figure on the UNODC/GOL figure minus eradication since the survey. Senior LCDC officials maintain that the USG overestimates the size of the opium crop, in part by misjudging the degree of intercropping of opium among other licit crops.

Potential opium production dropped significantly, although the USG figure is still somewhat higher than the UNODC/GOL survey. According to USG figures, 2004 potential production is about 49 metric tons, a huge drop from the 2003 figure of 200 metric tons. The UNODC/GOL figure is 43 metric tons. According to UNODC, the drop in yield was mainly due to “unfavorable growing conditions and an ensuing drought. Regarding yield per hectare, the UNODC/GOL figure is actually somewhat higher (6.5 kilograms per hectare) than the USG figure of 4.9 kilograms per hectare.

While the USG and GOL disagree on the amount of poppy cultivation that still exists, there is no disagreement that there has been a significant decline since 1998, when there were nearly 30,000 hectares of opium poppy throughout northern Laos. Based on USG strategic goals and the Embassy’s Mission Performance Plan, opium poppy elimination in Laos represents a genuine success story.

The cornerstone of the USG-GOL bilateral counternarcotics program are the two LAPs(Lao Assistance Projects) in Luang Prabang and Phongsaly provinces. These two integrated rural development projects account for about 70 percent of the NAS bilateral program budget (not counting salaries and administrative costs). In 2004, the LAP in Luang Prabang province, begun in 2003, moved briskly into the implementation stage, which included the construction of the project offices and several roads and supplementary assistance to agriculture, education, health, and community development sectors.

Concerning the LAP/Phongsaly project, during 2004, the LAP nearly completed a new 23 kilometer road to reach new project target villages; introduced new crops, such as coffee, tea, and galanga; implemented village-based handicrafts; provided over 200 cattle to establish “cattle banks” in project villages; installed clean water systems in 15 villages; trained health volunteers and provided medicine chests in several villages; and detoxed about 200 opium addicts.

Drug Flow/Transit. While DEA, UNODC, and the GOL agree that significant amounts of drugs are transiting Laos, DEA has not yet identified a firm case of heroin entering the U.S. directly from Laos. According to DEA and U.S. Customs officials, there has been some individual smuggling of opium via the mail between Hmong in Laos and the U.S., a trend that seems to have increased in 2004, according to DEA and U.S. Customs officials. A major problem faced by the GOL is the inability to control the long borders with Thailand and the PRC, as well as shorter borders with Burma and Cambodia. The Mekong River is a major conduit for trafficking, according to DEA, and it is only patrolled in a few areas. Many key drug areas, especially in the north, are virtually inaccessible to GOL officials. There is some border control near major population areas, along principal land routes, and at established river crossings, but it is not particularly difficult for traffickers to circumnavigate. Ironically, as the country's highway system continues to improve, this is likely to facilitate illegal trafficking of drugs, people, logs, and other contraband. Various NGO and other foreign officials are especially concerned over the potential impact of the Kunming-Bangkok trans Asia highway that will pass through Luang Nam Tha province.

Domestic Programs/Demand Reduction. While opium is still generally the drug of choice in Laos, ATS use is spreading rapidly. During 2004, ATS appeared to get more attention among GOL officials. There may be more high-level attention because, unlike opium use, ATS use affects the families of the elite, either directly or indirectly. While in the recent past, most ATS use appeared confined to the larger urban centers and the more affluent, there is evidence that it is spreading into remote areas. In June, Houaphan Province's Vice Governor said that ATS "may overtake" opium, as opium cultivation declines. UNODC has also reported that, while opiates are declining, ATS use appears to be increasing.

During 2004, the GOL, with assistance from UNODC and other donors, moved ahead on its national program for demand reduction. According to Minister Soubanh, the main activity during 2004 was a campaign (funded by the U.S.) to implement ATS drug testing in various secondary schools around the country. In Khammouan Province, testing results revealed relatively high positive rates (up to 15 percent of those tested). A LCDC official characterized these results as "surprising". Other activities include construction of ATS treatment facilities in Savannakhet province and Champassak province, which should be completed by the end of 2005. The USG is fully engaged in assisting the GOL to treat drug addiction. The USG has contributed significantly to ongoing UNODC activities through a \$167,000 capacity building project. Part of this funding is helping UNODC to train Lao health professionals to form a drug-counseling network. U.S. funding is also supporting a major UNODC/GOL effort in community-based opium detoxification throughout northern Laos.

According to the GOL, the HIV infection rate in Laos is relatively low compared to its neighbors. But beyond this accurate impression, statistics are so poor that the scope of the problem is essentially unknown. The GOL reports 1,212 HIV-positive individuals and, since 1990, 486 AIDS-related deaths (26 during 2004). However, five of Laos' 18 provinces have not reported any HIV/AIDS data whatsoever. Accordingly, most foreign observers believe that the official numbers under-report the problem. Systematic and nationwide surveillance for HIV is not yet in place, so the future course of the epidemic is uncertain. Because Laos is surrounded by countries that have significant numbers of HIV infections, such as China, Thailand and Vietnam, it is "likely that the epidemic will continue to spread in Laos in the absence of appropriate interventions." UNODC officials said that the main reason that Laos has been spared the higher rates of HIV infection is because there is little intravenous drug use compared to neighbors like Thailand and Vietnam. However, UNODC is "concerned" that there could be social and behavioral changes due to other drug use, especially ATS, that could lead to higher HIV rates. The GOL is beginning to demonstrate an increasing awareness and concern over the problem and appears to have a growing awareness of the nexus between HIV/AIDS and drugs.

IV. U.S. Policy Initiatives and Programs

Since 1989, the USG has provided approximately \$38 million to support the GOL's counternarcotics control program. During 2004, the U.S.-GOL bilateral counternarcotics program continued to make progress. GOL officials continued to be enthusiastic participants in USG-sponsored training at the Bangkok International Law Enforcement Academy (ILEA). Through November, 76 GOL officials had attended various ILEA courses, ranging from basic narcotics to post blast investigations.

Multilaterally, Laos worked closely with UNODC, especially in alternative development and opium detoxification. The USG contributes to some of these activities. In the northern part of Phongsaly province, UNODC is implementing, with financial assistance from the USG and others, an alternative development project aimed at the reduction of opium poppy cultivation. The USG also contributes to UNODC's Program Facilities Unit (PFU), an administrative unit that supports various UNODC/LCDC activities aimed at alternative development, demand reduction, and law enforcement. UNODC is also implementing a village-based development project in Houaphan province, partially financed by the USG. The aim of this project is to reduce opium cultivation through micro development at the village level in one of northern Laos' poorest areas.

The Road Ahead. The GOL is acutely aware of the threat of drugs and of Laos' growing domestic drug problem, especially regarding ATS. However, there is still reluctance, especially within MPS, to cooperate on a bilateral basis with DEA. On a more positive note, we expect to see continuing and growing bilateral law enforcement cooperation with Lao Customs. During 2004, as in previous years, the GOL made progress with programs aimed at dealing with various facets of the drug problem, most notably in opium poppy eradication. However, it is clear that, in order to make significant progress in arresting major traffickers and seizing large quantities of drugs, the GOL will have to upgrade its law enforcement capacity. As with most other facets of the GOL public sector, this will not be possible without more resources. The USG-GOL bilateral program will continue and the focus is likely to remain on crop control and development assistance to northern Laos. How much progress the GOL makes in battling drugs and drug traffickers is likely to depend on how much the GOL is able to improve its public sector performance. In a country with few financial resources, this will continue to present the GOL and foreign donors a major challenge.

Malaysia

I. Summary

Malaysia has not produced a significant amount of illegal drugs in the past, but a large seizure of precursor chemicals and the destruction of a lab producing crystal methamphetamine last year suggests the past situation might be changing. Heroin and other drugs from Southeast Asian countries transit Malaysia, but there is little evidence that significant amounts of illegal drugs reach the U.S. market through Malaysia. Domestic drug abuse continues to grow, though the government has established a “drug-free by 2015” policy. Malaysia’s competent counternarcotics officials and police officers have the full support of senior government officials. Cooperation with the U.S. on combating drug trafficking is excellent, and led to high-profile arrests and seizures in 2004. The U.S. maintains active and successful programs for training Malaysian counternarcotics officials and police. Malaysia is a party to the 1988 UN Drug Convention, and has a bilateral extradition treaty in force with the U.S.

II. Status of Country

While Malaysian officials have expressed concern about rising rates of drug addiction in their country, there is little evidence that Malaysia is a source country or a transit point for U.S.-bound illegal drugs. Narcotics imported to Malaysia include heroin and opium from the nearby Golden Triangle area, and other drugs, primarily amphetamine type stimulants (ATS) including crystal methamphetamine and Ecstasy. These imports either transit Malaysia bound for other markets such as Thailand, Singapore, and Australia, or are consumed domestically. The drugs of choice for Malaysian users are heroin, morphine, marijuana, and methamphetamines, according to government statistics. The Malaysian government identified over 34,000 drug addicts during the first ten months of 2004 through reporting from police, community organizations, and treatment centers, bringing the total since 1988 to over 255,000. Malaysia itself does not produce a significant amount of illicit drugs.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Malaysia launched a long-term effort in 2003 to reduce drug use to negligible levels by 2015. Senior officials including the Prime Minister speak out strongly and frequently against drug abuse. The National Anti-Drugs Agency (NADA, formerly called the National Drugs Agency) is the policy arm of Malaysia’s counternarcotics strategy, coordinating demand reduction efforts with various cabinet ministries. The agency targets its efforts toward youth, parents, students, teachers, and workers, while trying to identify particularly vulnerable groups. The NADA’s extensive efforts engage schools, student leaders, parent-teacher associations, community leaders, religious institutions, and workplaces. In October the Prime Minister chaired the first meeting of a new Cabinet Committee on Eradication of Drugs, composed of 20 government ministers. Parliament passed a bill in 2004 to give NADA authority to make drug-related arrests, in addition to the agency’s policy responsibilities. The stated vision is eventually to put all counternarcotics efforts under one organization.

Accomplishments. The Malaysian police, in cooperation with other international agencies including DEA, in 2004 raided a crystal meth lab near the capital of Kuala Lumpur, seizing enough precursor chemicals to produce two tons of “ice,” the largest ever such seizure in Malaysia and one of the largest in Southeast Asia. Fifteen persons were arrested in the raid, which is part of a larger multi-national effort to combat Asian drug-trafficking syndicates. In another joint operation, again involving DEA and agencies from several other nations, Malaysian intelligence-sharing helped lead to a massive lab seizure in Fiji. Malaysia and seven other Southeast Asian countries signed a multilateral treaty on Mutual Legal Assistance in Criminal Matters in November 2004. It will go into effect when ratified by

the various countries' governments. The treaty is limited by clauses that make legal assistance subject to the parties' domestic laws, but signals a desire to improve regional law enforcement cooperation.

Law Enforcement Efforts. Malaysian police have continued to investigate and prosecute narcotics crimes vigorously, identifying abusers and traffickers, and limiting the distribution, sale, and financing of illicit drugs. Malaysia enforces a mandatory death penalty against major drug traffickers, though judges often seek ways to apply lesser sentences. The narcotics division of the Royal Malaysia Police (RMP) benefits from excellent and innovative leadership, and is well respected in the region for its modernization efforts. There was a 34-percent increase in drug-related arrests for the period January to September 2004, compared with the same period in 2003. Malaysian law provides for the seizure of assets from the proceeds of narcotics crimes. For the first nine months of 2004, according to the NADA, police seized U.S. \$7.7 million and confiscated \$425,000 worth of drug-related criminal assets, both substantial increases from the previous year.

Corruption. No senior officials were arrested for drug-related corruption in 2004 and there was no evidence that the government tolerates or facilitates the production, distribution, or sale of illegal drugs. Malaysia's Anti-Corruption Agency has power to investigate crimes and arrest suspects, while prosecution of corruption cases falls to the attorney general.

Agreements and Treaties. Malaysia is a party to the 1988 UN Drug Convention and, as noted, has signed the ASEAN MLAT. Malaysia is negotiating an MLAT with Australia. The U.S.-Malaysia Extradition Treaty went into effect in 1997.

Drug Flow/Transit. Malaysia's geographic proximity to the heroin production areas and methamphetamine labs of the Golden Triangle leads to smuggling across Malaysian borders, destined for Australia and other markets. Ecstasy from Amsterdam is flown in to Kuala Lumpur International Airport (KLIA) for domestic use and distribution to Thailand, Singapore, and Australia. While drugs transiting Malaysia do not appear to make a significant impact on the U.S. market, there are indications that third-country nationals are using Malaysia as a transit point for modest shipments of U.S.-bound heroin. There is also at least some production of ATS in Malaysia, in light of the take-down of a large methamphetamine lab last year, and the seizure of a substantial quantity of precursor chemicals awaiting use at that lab.

Domestic Programs (Demand Reduction). Demand reduction programs in public schools and a drug-free workplace prevention program continued in 2004. The NADA has expanded the scope of its anti-Ecstasy demand reduction drive to include all types of ATS. Government statistics indicate that 11,045 persons were undergoing treatment at Malaysia's 28 public rehabilitation facilities as of September 2004, similar to the number last year. The U.S. funded, through the Colombo Plan, two innovative faith-based training seminars on addiction therapy for Afghan religious leaders, held in Malaysia in May and December. In addition, the U.S. sponsored training in 2004 for Malaysian therapists and family members through the Daytop International organization, and other demand reduction programs.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. U.S. counternarcotics training continued in 2004 via the International Law Enforcement Academy (ILEA) in Bangkok and the "Baker-Mint" program sponsored by the U.S. Department of Defense. Baker-Mint aims to raise the operational skill level of local counternarcotics law enforcement officers. The Department of State Assistant Secretary, International Narcotics and Law Enforcement, visited Malaysia in May 2004, meeting with senior police officials and community drug treatment leaders.

Road Ahead. United States goals and objectives for the year 2005 are to: encourage the Malaysian government to use existing aiding and abetting laws more effectively against drug traffickers, and to

enact narcotics-related conspiracy laws; and to continue the excellent cooperation between Malaysian and U.S. law enforcement authorities. United States law enforcement agencies will take advantage of enhanced cooperation with Malaysian authorities to interdict drugs transiting Malaysia, and to follow regional and global leads. U.S.-funded counternarcotics training for Malaysian law enforcement officers will continue.

Mongolia

Drug trafficking and abuse are not widespread in Mongolia but continue to rise and draw the attention of the government and NGOs. Mongolia's young burgeoning urban population is especially vulnerable to the growing drug trade. The government continues to implement the National Program for fighting Narcotics and Drugs adopted in March 2000. The National Council headed by the Minister of Justice coordinates implementation of this program. The program is aimed at preventing drug addiction, drug related crimes, creating a legal basis for fighting drugs, elaborating counternarcotics policy, and raising public awareness of the drug abuse issue.

Mongolia's long unprotected borders with Russia and China are vulnerable to all types of illegal trade, including drug trafficking. Illegal migrants, mostly traveling from China through Mongolia to Russia and Europe, sometimes transport and traffic drugs. Police suspect that trafficking in persons and prostitution are also connected to the drug trade.

The government has made the protection of Mongolia's borders a priority. U.S.-sponsored projects to promote cooperation among security forces (support for conferences) and training have provided some assistance. A lack of financial and technical capacity and resources, along with corruption in police forces, and many other parts of government, hinder Mongolia's ability to patrol its borders, detect illegal smuggling, and investigate transnational criminal cases. Mongolia is a party to the 1961 UN Single Convention and its 1972 Protocol, the 1971 UN Convention on Psychotropic Substances, and the 1988 UN Drug Convention. The government of Mongolia attempts to meet the goals and objectives of international initiatives on drugs, where possible. The United States and Mongolia have in force a customs mutual legal assistance agreement.

Occasional reports indicate that the availability and use of marijuana, heroin, amphetamines, and over-the-counter drugs have increased. The Mongolian government, alert to precursor chemical production and export issues, has closed suspected facilities, but foreign interest in the production, export and transit of precursor chemicals in Mongolia continues to surface. Mongolian internal corruption and financial crimes appear unrelated to narcotics activities. The weakness of the legal system and financial structures (i.e., the absence of anti-money laundering and antiterrorist financing legislation), however, leaves Mongolia vulnerable to exploitation by drug traffickers and international criminal organizations, particularly those operating in China and Russia.

Growth in international trade and the number of visitors to Mongolia increases concern about a rise in transnational organized crime. Mongolian law enforcement agencies have proven inadequate to the task of detecting and cracking down on the activities of organized crime elements from Russia and China. The reopening of the North Korean Embassy in Ulaanbaatar in August 2004 also heightens concern that the North Korean Government, through its Embassy in Ulaanbaatar, may again seek (as it did in the late-1990s) to finance North Korean diplomatic and other activities through narcotics trafficking, counterfeiting or other illicit activity.

The Mongolian government and law-enforcement officials have increased their participation in international fora focused on crime and drug issues. Mongolia has observer status in the Asia-Pacific Group on Money Laundering and has committed to adhere to Financial Action Task Force (FATF) standards, while seeking participation and eventual membership in the FATF. Domestic, non-governmental organizations work to fight drug addiction and the spread of narcotics, as well as trafficking in women and children. International donors are working with the government to help Mongolia develop the capacity to address narcotics and related criminal activities before they become an additional burden on Mongolia's development. U.S. government assistance in these efforts includes international visitor programs on transnational crime and counternarcotics, as well as training by

regional representatives of the Drug Enforcement Agency, the U.S. Customs Service, the Internal Revenue Service and the U.S. Secret Service.

North Korea

I. Summary

For decades, North Koreans have been apprehended trafficking in narcotics and engaged in other forms of criminal behavior, including passing counterfeit U.S. currency and trade in copyright products. Numerous instances of North Korean drug trafficking and trade in copyright products, and other criminal behavior by North Korean officials, in many cases using valuable state assets, such as military-type patrol boats, has caused many observers and the Department to come to the view that it is likely, though not certain that the North Korean Government sponsors such illegal behavior as a way to earn foreign currency for the state and for its leaders. This report discusses instances of North Korean involvement in drug trafficking during 2004.

II. Status of Country

On two occasions in 2004 North Korean diplomats were arrested for involvement in narcotics smuggling. In June, Egyptian law enforcement authorities detained two North Korean diplomats working in the Commercial Office at the North Korean Embassy in Egypt for attempting to deliver 150,000 tablets of Clonazipam. Clonazipam is a Schedule IV benzodiazepine used to treat seizures and anxiety. Both North Korean diplomats were expelled from Egypt.

In December, Turkish authorities arrested two North Korean diplomats suspected of smuggling synthetic drugs destined for Arab markets. The diplomats, assigned to North Korea's Embassy in Bulgaria, were caught in a drug raid in Turkey and found to be carrying over half a million Captagon tablets. The Captagon, a synthetic drug taken as an aphrodisiac, had a "street value", i.e., illicit market value, of seven million dollars. The North Korean diplomats were returned to Bulgaria, but were expelled by the Bulgarian government.

These two incidents are the first to come to light in several years involving DPRK officials stationed abroad at embassies caught smuggling narcotics. It is impossible to say with certainty that such individuals were acting under the instructions of their government, and were thus engaged in state trading of narcotics. Neither Captagon, an amphetamine-type stimulant, nor Clonazipam, a central nervous system depressant, has been associated with instances of DPRK trafficking in the past.

DPRK officials have ascribed past instances of official misconduct to the individuals involved, and stated that these individuals would be punished in the DPRK for their crimes. There is no information available indicating if the DPRK diplomats involved in these two drug smuggling incidents were, in fact, punished upon their return to North Korea.

North Korean defectors and informants report that large-scale opium poppy cultivation and production of heroin and methamphetamine occurs in the DPRK. A defector identified as a former North Korean high-level government official wrote in a February 2004 "Jamestown Review" article that poppy cultivation and heroin and methamphetamine production were conducted in North Korea by order of the regime. The government then engaged in drug trafficking to earn large sums of foreign currency unavailable to the regime through legal transactions. This article and similar reports by defectors have not been conclusively verified by independent sources. Defector statements however, are consistent over years, and occur in the context of multiple narcotics seizures linked to North Korea.

There were also reports in 2004 of more organized smuggling of heroin along the DPRK's border with China. Traffickers living in North Korea reportedly contacted individuals in China to act as heroin couriers ("drug mules"). It is unclear whether the heroin in question was produced in the DPRK. North Korean and Chinese border guards were reportedly complicit, since they received payments from the

traffickers. The presence of North Korean residents in China might well encourage this type of trafficking. Regular refugee traffic and other border trade, often facilitated by bribes, opens the way to drug smuggling. There is also other evidence of close cooperation between Chinese criminals and North Korean criminals in heroin and methamphetamine smuggling to foreign markets.

In addition, several drug traffickers arrested for smuggling methamphetamine into South Korea over the last year have indicated to authorities that the drugs originated from North Korea and were transshipped through China. Methamphetamine is the drug of choice for South Koreans.

There were no seizures of methamphetamines in Japan during 2004 linked to North Korea. As much as 30 percent to 40 percent of methamphetamines seized in Japan in past years have been linked by Japanese enforcement officials to the DPRK. The origin of heroin and methamphetamine seized on Taiwan during 2004, where DPRK-linked drugs have been seized in the past, generally was ascribed to domestic manufacture, to South East Asia or to China, not to sources in the DPRK. The street price for drugs did not change significantly in either Japan or Taiwan, so if past shipments from the DPRK stopped, they were replaced by traffickers operating elsewhere.

The "Pong-Su" incident in Australia in 2003 drew worldwide attention to the possibility of DPRK state trading of drugs. The "Pong Su" is a sea-going cargo vessel, owned by a North Korean enterprise, which was seized in Australia in mid-April 2003 after reportedly delivering a large quantity of pure heroin to accomplices on shore. The "Pong Su" case trial began in late January in Australia and is expected to continue for at least four to five months. The North Korean Captain of the "Pong Su", and other senior officers, will face prosecution for complicity in smuggling the heroin to Australia, and a North Korean communist "Party Secretary" found aboard the "Pong Su", will also face prosecution for complicity in the smuggling, in accordance with evidence developed during an investigation by the Australian Federal Police (AFP) and the Australian Crime Commission. The disposition of the "Pong Su" itself will be determined later this year. The vessel has been in Australian custody since it was seized in the wake of the smuggling incident. During the time it was held, government investigators and prosecutors, as well as defense counsel have had access to the vessel in preparing their respective cases.

Beyond the incidents described above, no additional information about DPRK-linked drug trafficking entered the public record during 2004. As the Department of State noted in its report on North Korea in the March 2004 INCSR, the cumulative impact of drug smuggling incidents linked to North Korea over years in a context of other admitted DPRK state-directed criminal activity, such as the Japanese kidnapping incidents, support the Department's conclusion that it is likely, though not certain that the DPRK is state trading narcotics. There is also strong reason to believe that methamphetamine and heroin are manufactured in North Korea as a result of the same state-directed conspiracy behind trafficking. The United States will continue to monitor developments in North Korea to test the validity of the judgment that drugs are probably being trafficked under the guidance of the state, and to see if evidence emerges confirming manufacture of heroin and methamphetamine.

Palau

I. Summary

Palau is not a major drug trafficking or producing country or a source of precursor chemicals for production of narcotic drugs, although the possibility for drug transit exists. To curtail drug use, Palau has ongoing counternarcotics campaigns, as well as drug treatment and counseling programs.

Palau is not a party to the 1988 UN Drug Convention, but it is a party to the 1961 UN Single Convention on Narcotic Drugs, as amended by the 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances.

II. Status of Country

The Republic of Palau is an island nation with a population of approximately 20,000, and a constitutional government whose structure is comparable to that of the United States. Palau is a former UN trust territory of the United States that became independent on October 1, 1994. There is some crime in Palau, but it is not a major drug trafficking or producing country or a source of precursor chemicals for production of narcotic drugs.

Palau is an attractive tourist destination, especially for divers. The island has good air connections to many regional destinations. The possibility for drug transit exists. Authorities are aware of this danger and take steps to counter it through attentive enforcement. The USG has no evidence that any high-level official in Palau facilitates drug trafficking for personal gain. Small-scale corruption, which might facilitate trafficking, is a possibility; but Palau authorities, focused on maintaining Palau as an attractive tourist destination, are attentive to corruption and punish it when it comes to their attention.

III. Country Actions Against Drugs in 2004

There were 10 cases involving possession or trafficking in methamphetamine, and 33 cases of possession or trafficking in marijuana in 2004. Authorities also destroyed approximately 7,795 marijuana plants. The Ministry of Justice and Ministry of Health have ongoing counternarcotics campaigns, as well as drug treatment and counseling programs.

IV. U.S. Policy Initiatives and Programs

U.S. law enforcement officials have conducted training for local law enforcement officials. Cooperation in law enforcement between the United States and Palau is mutual and professional.

The Philippines

I. Summary

Philippine law enforcement agencies redirected resources in 2004 to target major traffickers and large clandestine drug labs. Although official Philippine government arrest and seizure statistics reflect an overall decline (with the exception of marijuana), the 2004 figures likely indicate a more accurate accounting by Philippine law enforcement. The dismantling of four clandestine methamphetamine laboratories in the last half of December 2004 may raise some seizure statistics to levels close to 2003's totals. The Philippine government continues to develop a dedicated counternarcotics capability in the Philippine Drug Enforcement Agency (PDEA), established by the Government of the Republic of the Philippines (GRP) in 2002. The Philippines continues to be a major producer of crystal methamphetamine. Evidence indicates some links between terrorist organizations and drug trafficking. The Philippines is a party to the 1988 UN Drug Convention.

II. Status of Country

Domestic production of crystal methamphetamine, locally known as "shabu," exceeds demand, with most of the precursor chemicals smuggled into, or illegally diverted after importation into the Philippines from the People's Republic of China (PRC), including Hong Kong (HKSAR). Dealers sell shabu in crystal form for smoking. There is no production or distribution of methamphetamine in tablet form. Producers make methamphetamine in clandestine labs through a hydrogenation process that uses palladium and hydrogen gas to refine the liquid mixture into crystal form. PRC- and Taiwan-based syndicates have established all of the Philippines' clandestine methamphetamine labs using a network of ethnic compatriots with the necessary technical skills. The Philippines also serves as a transshipment point for further export of methamphetamine of foreign manufacture to Australia, Canada, Japan, Korea, the U.S. (including Guam), and Saipan.

The Philippines also produces, consumes, and exports marijuana. Philippine authorities continue to encounter difficulties stemming production. Marijuana cultivation is generally in areas inaccessible to vehicles and/or controlled by insurgent groups. Corruption and inefficiency among government officials also complicate eradication efforts. Most of the marijuana produced in the Philippines is for local consumption, with the remainder smuggled to Australia, Japan, Malaysia, Taiwan, and Europe.

Methyl-dioxy-methamphetamine (MDMA), commonly known as Ecstasy, is a popular recreational drug in the Philippines. Philippine authorities report use among young, prosperous adults, particularly in bars and clubs. Anecdotal reports cite increased availability, but enforcement actions against MDMA did not increase in 2004.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The Arroyo Administration continues to concentrate on the full and sustained implementation of counternarcotics legislation and the institution building of PDEA as the lead counternarcotics agency. PDEA conducts investigations and continues to develop a training program. President Arroyo in 2002 created by executive order the Philippine National Police's (PNP) Anti-Illegal Drugs Special Operations Task Force (AIDSOTF). AIDSOTF's mission is to maintain law enforcement pressure on narcotics traffickers while PDEA builds its capacity.

Accomplishments. **Illicit Cultivation.** In 2004, Philippine law enforcement again joined with units from the Armed Forces of the Philippines (AFP) to launch marijuana eradication operations, some of which took place in territory controlled by armed insurgent movements. A new focus on significant

drug traffickers rather than small-scale marijuana farmers produced several large seizures, resulting in a 1400-fold increase in dried marijuana leaves (332,690 kilograms) and a 420 percent increase in marijuana sticks. Using manual techniques to eradicate marijuana, government entities successfully uprooted and destroyed 2,361,581 plants and seedlings. They also confiscated 5 kilograms of seeds. The seized and eradicated marijuana crop was valued at \$155 million, up from \$10.7 million in 2003.

Production. Philippine authorities dismantled 11 clandestine methamphetamine laboratories in 2004, the same number as in 2003. GRP law enforcement officials cite four factors behind the existence of domestic labs: 1) the simplicity of processing ephedrine into methamphetamine on a near one-to-one conversion ratio; 2) the crackdown on drug production facilities and processed methamphetamine in other methamphetamine-producing countries; 3) the lesser danger in trafficking in methamphetamine precursors (ephedrine) compared to the finished product; and 4) the lack of law enforcement expertise and statutory power to detect precursor chemicals used in clandestine labs and prosecutions that are limited to finished product rather than the potential output. GRP authorities seized a total of 756 kilograms of methamphetamine, with an estimated value of \$27,013,306, and 5,791 kilograms of ephedrine (including pseudo-ephedrine and chlorephedrine), essential precursors in the production of methamphetamine. While these numbers are down from 2003's totals, raids on four clandestine labs in the last half of December 2004 could raise total 2004 seizure statistics close to 2003's levels totals once the GRP releases these latest figures.

Distribution. According to the PDEA, the Philippines arrested 25,221 people for drug related offenses in 2004, a decrease of 7,929 individuals from 2003. The decline reflects the new strategy to concentrate on larger distributors rather than users and low-level dealers. GRP authorities filed criminal charges in 17,887 drug cases. PRC- and Taiwan-based traffickers remain the most influential foreign groups operating in the Philippines. According to PDEA, Philippine authorities arrested and/or disrupted the operations of 127 out of the 295 local drug rings and syndicates.

Sale, Transport, And Financing. The Philippines exports certain domestically produced drugs and is also used as a transshipment country. Illegal drugs enter the country through seaports, economic zones, and airports. With over 36,200 kilometers of coastline and 7,000 islands, the Philippine archipelago is a drug smuggler's paradise. Vast stretches of the Philippine coast are virtually unpatrolled and sparsely inhabited. Traffickers use shipping containers, fishing boats, and cargo ships (which off-load to smaller boats) to transport multiple hundred kilogram quantities of methamphetamine and precursor chemicals. Deficits in equipment, training, and intelligence sharing hamstring marine interdiction efforts between the AFP and law enforcement.

The DEA Manila Country Office and Joint Inter-Agency Task Force-West (JIATF-W) are developing a plan to create three maritime counternarcotics fusion centers in the Philippines. The primary center will be located in PDEA Headquarters in Metro Manila, with two satellite centers in Poro Point, La Union (Northern Luzon), and the headquarters of the Naval Forces Western Mindanao, Zamboanga Del Sur (Southern Mindanao). Officers from the Philippine Navy, Coast Guard, PNP-Maritime Group, and PDEA will staff the facilities. The purpose of the fusion centers will be to gather information about maritime drug trafficking and other forms of smuggling and provide actionable target information that the agencies at the information centers can use to investigate and prosecute drug trafficking organizations. Construction of these centers will begin in January 2005. The Philippines is also a transshipment point for further export of crystal methamphetamine to Japan, Australia, Canada, Korea, the U.S (including Guam), and Saipan. Commercial air couriers and express mail services remain the primary means of shipment to Guam and to the mainland U.S., with a typical shipment size of one to four kilograms.

Demand Reduction. The Comprehensive Dangerous Drugs Act of 2002 includes provisions mandating drug abuse education in schools, the establishment of provincial drug education centers, drug-free workplace programs, and other demand reduction clauses. Abusers who voluntarily enroll in

treatment and rehabilitation centers are exempt from prosecution for illegal drug use. While preliminary 2004 figures are not yet available, residential and outpatient rehabilitation centers reported 5,965 admission cases in 2003. Statistics from rehabilitation centers highlight the following: 1) the majority of patients are in the 20-29 age group; 2) the mean age of drug users is 28 years old; 3) methamphetamine and/or marijuana are the drugs of choice; 4) the ratio of male to female users is 11:1. Officials of the Philippine Department of Interior and Local Government, which has overall jurisdiction over both law enforcement and demand reduction efforts, have indicated a desire for a program similar to the Partnership for a Drug-Free America. The Dangerous Drugs Board (DDB) estimates that the total number of regular drug users in the Philippines is approximately 1.8 million (about 2.2 percent of the population). DDB continues to study the issue to determine the number of addicts or abusers involved in each drug category.

Law Enforcement Efforts. Throughout 2004, Philippine authorities continued to link drug trafficking activities and terrorist organizations. The Abu Sanyaf Group (ASG), a U.S. and UN-designated Foreign Terrorist Organization operating in extreme southwest Philippines, collects money from drug smugglers by acting as protectors for foreign trafficking syndicates. The ASG also controls a thriving marijuana production site in Basilan. In the Central and Western Mindanao areas controlled by the Moro Islamic Liberation Front (MILF), mounting evidence indicates the presence of several clandestine methamphetamine laboratories. The drugs produced by these labs are distributed within the Philippines and possibly exported to other countries. According to government estimates, the Communist New People's Army (NPA), another U.S.-designated Foreign Terrorist Organization, but operating countrywide, receives money for providing safe haven and security for many of the marijuana growers in the northern Philippine and collects "revolutionary taxes" on the sale of drugs.

Major evidentiary and procedural obstacles exist in the Philippines in building effective narcotics cases. Restrictions on the gathering of evidence hinder narcotics investigations and prosecution. Philippine laws regarding electronic surveillance and bank secrecy regulations also constrain the ability of prosecutors to build narcotics cases. The 1965 Anti-Wiretapping Act prohibits the use of the information gleaned as a result of wiretapping and the consensual monitoring of conversations as evidence in court. Crimes against the state such as treason and sedition are the only exceptions to the Act. There are also no provisions to seal court records to protect confidential sources and methods. Pervasive problems in the law enforcement and criminal justice systems (i.e., rampant corruption, low morale, inadequate salaries, recruitment and retention difficulties, and lack of cooperation between police and prosecutors) hamper narcotics investigations and prosecutions. Perennial backlogs in the judicial system impede further the already slow pace of proceedings in narcotics cases. Under the Comprehensive Dangerous Drugs Act of 2002, only those courts designated as "Special Drug Courts" can hear drug cases, obliging GRP prosecutors to move cases previously filed in other courts into the Special Drug Courts. The Comprehensive Dangerous Drug Act also prohibits plea-bargaining in exchange for testimony; the GRP can reward cooperation with the filing of lesser charges, but not by reduced sentences.

GRP law enforcement agencies receive and act upon drug shipment intelligence from regional partners. They are less efficient in developing and transmitting intelligence on outbound shipments. Corruption within the GRP, including law enforcement and customs agencies, diminishes the effective inspection of inbound and outbound shipments.

Corruption. Corruption among the police, judiciary, and elected officials continues to be a significant impediment to Philippine law enforcement efforts. However, GRP policy clearly prohibits senior GRP officials from engaging in, encouraging, or facilitating the illicit production or distribution of narcotic drugs or substances, or the laundering of proceeds from illegal drug actions. There have been recent cases of PDEA officers arrested for dealing drugs and selling seized chemicals. The GRP's Office of the Ombudsman in 2004 undertook vigorous prosecution of significant corruption cases, including against senior civilian and military officials.

Agreements and Treaties. The Philippines is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention on Narcotic Drugs, as amended by the 1972 Protocol. The Philippines is a party to the UN Convention Against Transnational Organized Crime and its protocols on migrant smuggling and trafficking in women and children. The Philippines also is a signatory to the UN Convention Against Corruption. The U.S. and the Philippines cooperate in law enforcement matters through an extradition treaty and a mutual legal assistance treaty, both of which entered into force in 1996.

Cultivation/Production. Authorities have identified at least 98 marijuana cultivation sites spread throughout nine different regions of the Philippines. The largest areas of marijuana cultivation are the mountainous areas of Northern Luzon, Central Visayas, and central, southern, and western Mindanao.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. The USG's main counternarcotics policy goals in the Philippines are to: 1) work with local counterparts to provide an effective response to counter the burgeoning clandestine production of methamphetamine; 2) cooperate with local authorities to prevent the Philippines from being used as a transit point by trafficking organizations affecting the U.S.; 3) promote the development of PDEA as the focus for effective counternarcotics enforcement efforts in the Philippines; and 4) develop an improved statutory framework for controls of drug and precursor chemicals.

Bilateral Cooperation. In the largest single raid of a clandestine lab in Philippine history, Philippine authorities in September, acting on intelligence developed from a joint USG-RP-Hong Kong (HKSAR) investigation, raided a methamphetamine mega-lab located in Cebu. GRP authorities arrested eleven people from the Philippines, Taiwan, and the PRC (including Hong Kong)—all of them ethnic Chinese—and seized 498 kilograms of pseudoephedrine and 80 gallons of liquid methamphetamine. The raid and arrests highlighted the Philippines' transition into a major methamphetamine producer and the role of transnational criminal group in production.

Road Ahead. The GRP is committed to sustaining PDEA's funding and staffing requirements in 2005. The USG plans to continue work with the GRP to promote law-enforcement institution building and encourage anticorruption mechanisms via our new JIATF-West presence as well as ongoing programs. Strengthening the counternarcotics bilateral relationship serves the national interests of both nations.

Singapore

I. Summary

The Government of Singapore (GOS) effectively enforces its stringent counternarcotics policies through strict laws (including the death penalty), vigorous law enforcement, and active prevention programs. Singapore is not a producer of precursor chemicals or narcotics, but as a major regional financial and transportation center it is an attractive target for money launderers and drug transshipment. Corruption cases involving Singapore's counternarcotics and law enforcement agencies are rare, and their officers regularly attend U.S.-sponsored training programs (as well as regional fora on drug control). Singapore is experiencing a slight increase in drug-related crime. Ketamine-related offenses still constitute a small portion of overall drug offenses; however, documented Ketamine abuse is on the rise. Singapore is a party to the 1988 UN Drug Convention.

II. Status of Country

In 2004, there was no known production of illicit narcotics or precursor chemicals in Singapore. The Central Narcotics Bureau (CNB) works with the DEA to closely track the import of modest amounts of precursor chemicals for legitimate processing and use in Singapore. CNB's precursor unit monitors and investigates any suspected diversion of precursors for illicit use. The CNB also monitors precursor chemicals that are transshipped through Singapore to other regional countries; however, neither Singapore Customs nor the Immigration and Checkpoints Authority (ICA) keep data on in-transit or transshipped cargo unless there is a Singapore consignee involved in the shipment. Singapore notifies the country of final destination before exporting transshipped precursor chemicals. Abuse of heroin, methamphetamine, and Ketamine is on the rise.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Singapore has continued to pursue a strategy of demand and supply reduction for drugs. This plan has meant that, in addition to arresting drug traffickers, Singapore has also focused on arresting and detaining drug abusers for treatment and rehabilitation. The Misuse of Drugs Act (MDA) gives the CNB the authority to commit all drug abusers to drug rehabilitation centers for mandatory treatment and rehabilitation.

Law Enforcement Efforts. Arrests for drug-related offenses registered a sharp decline of 47 percent from 2002 to 2003 (no 2004 information was available). The number of persons detained for trafficking offenses, and arrests for abuse and possession also declined. Arrests of first-time heroin abusers fell by 78 percent. Authorities executed 56 major operations during which they crippled 30 drug syndicates and arrested a total of 74 traffickers and 1,993 abusers. The largest marijuana seizure for CNB was 9.3 kilograms of cannabis. Seizures of MDMA declined by 38 percent between 2002 and 2003, however there was an 11 percent increase in the amount of MDMA abusers arrested. The following statistics reflect 2003 arrests related to specific drugs and the corresponding percentage increase or decrease as compared to 2002 arrests: 567 heroin arrests (-74.63 percent), 114 Ecstasy arrests (+16.32 percent), 260 cannabis arrests (+41.3 percent), 369 methamphetamine arrests (-40.48 percent), and 497 Ketamine arrests (+97.22 percent).

In 2003, authorities also seized approximately 94,200 nimetazepam or Erimin 5 tablets (a depressant), an increase of about 140 percent over 2002 seizures.

Corruption. The CNB is charged with the enforcement of Singapore's counternarcotics laws. The CNB and other elements of the government are effective and there are few cases of corruption.

Agreements and Treaties. Singapore is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention on Narcotic Drugs and its 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances. Singapore and the United States continue to cooperate in extradition matters under the 1931 U.S.-UK extradition treaty. In 2000, Singapore and the United States signed a Drug Designation Agreement (DDA), strengthening existing cooperation between the two countries on drug cases. In the past, the lack of such a bilateral agreement had been an occasional handicap. The agreement provides for cooperation in asset forfeiture and sharing of proceeds in narcotics cases; in 2002, one joint case resulted in a \$1.9 million seizure of assets in Singaporean bank accounts.

The DDA has also facilitated the exchange of banking and corporate information on drug money laundering suspects and targets. This includes access to bank records, testimony of witnesses, and service of process. The DDA is the first such agreement Singapore has undertaken with another government. Singapore has signed mutual legal assistance agreements with Hong Kong and ASEAN. Singapore has signed, but has not yet ratified, the UN Convention against Transnational Organized Crime.

Cultivation/Production. There was no known cultivation or production of narcotics in Singapore in 2003 or 2004.

Drug Flow/Transit. Singapore has the busiest (in tonnage) seaport in the world, and approximately 80-90 percent of the goods handled by its port are in transit. Due to the extraordinary volume of cargo that is shipped through the port, it is likely that some of that cargo could contain illicit materials.

Singapore does not require shipping lines to submit data on the declared contents of transshipment cargo, unless there is a Singapore consignee to the transaction. The lack of such information makes enforcement a challenge. Absent specific information about a drug shipment, GOS officials have been reluctant to impose tighter reporting or inspection requirements at the port out of concern that this would interfere with the free flow of goods and thus jeopardize Singapore's position as the region's primary transshipment port. However, scrutiny of goods at ports has increased. In January 2003, Singapore's new export control law went into effect; while the law seeks to prevent the flow of WMD-related goods, the controls introduce scrutiny of some transshipped cargo. In March, Singapore became the first Asian port to commence operations under the U.S. Container Security Initiative (CSI), under which U.S. Customs personnel prescreen U.S.-bound cargo. While this initiative is aimed at preventing weapons of mass destruction from entering the U.S., the increased information and scrutiny could also aid drug interdiction efforts.

Domestic Programs (Demand Reduction). Singapore uses a combination of punishment and rehabilitation against first-time drug offenders. Many first-time offenders are given rehabilitation instead of jail time, although the rehabilitation regime is rigorous. The government may detain addicts for rehabilitation for up to three years. In an effort to discourage drug use during travel abroad, CNB officers may now require urinalysis tests for Singapore citizens and permanent residents returning from outside the country. Those who test positive are treated as if they consumed the illegal drug in Singapore.

Adopting the theme "Prevention: The Best Remedy," Singapore authorities organize sporting events, concerts, plays, and other activities to reach out to all segments of society on drug prevention. Drug treatment centers, halfway houses, and job placement programs exist to help addicts reintegrate into society. At the same time, the GOS has toughened antirecidivist laws. Three-time offenders face long mandatory sentences and caning. Convicted drug traffickers are subject to the death penalty, regardless of nationality.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. Singapore and the United States continue to enjoy good law enforcement cooperation. In FY04, approximately 24 GOS law enforcement officials (including approximately 14 from the CNB) attended training courses at the International Law Enforcement Academy (ILEA) in Bangkok on a variety of transnational crime topics.

The GOS has cooperated extensively, with the U.S. and other countries, in drug money laundering cases, including some sharing of recovered assets.

The Road Ahead. The United States will continue to work closely with Singapore authorities on all narcotics trafficking and related matters. Increased customs cooperation under the Container Security Initiative and other initiatives will help further bolster law enforcement cooperation.

South Korea

I. Summary

Narcotics production or abuse is not a major problem in the Republic of Korea. However, continuing intelligence indicates that large quantities of drugs are smuggled through South Korea en route to the United States as well as other countries. South Korea in recent years has become a favored transshipment location for drug traffickers due to the country's reputation for not having a drug-abuse problem. This, combined with the fact that the South Korean port of Pusan is the second largest port in East Asia, makes Korea an attractive location to divert illegal shipments coming from more suspect countries. In response, the South Korean government has taken significant steps to thwart the transshipment of drugs through its borders.

Club drugs such as Ecstasy and LSD continue to grow in popularity among college students. Most of the LSD and Ecstasy used in South Korea comes from North America or Europe. However, methamphetamine continues to be the drug of choice for Koreans. The Republic of Korea (ROK) is a party to the 1988 UN Drug Convention.

II. Status of Country

Drugs encountered in South Korea continue to consist of methamphetamine, marijuana, and club drugs such as LSD, Ecstasy and ketamine. The numbers of persons arrested in South Korea for use of psychotropic substances, mostly club drugs, increased from 3,657 persons to 4,478 persons (a 23 percent increase) while persons arrested for marijuana use fell from 1,276 to 940 (a 26 percent decrease). The overall arrest rate for drug offenders increased slightly, from 6,086 arrests in 2003 to 6,529 arrests in 2004. It should be noted that these figures for both years are based on the first ten months of the year. Total figures for 2004 were not available.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In 2004, the ROK National Assembly confirmed newly amended legislation, which enhances the control of certain precursor chemicals. Previously, Korean authorities could only bring administrative charges of mislabeling against companies that transshipped precursor chemicals through Korea. The recent legislative action enhances the controls and enforcement procedures of the host government and allows for criminal sanctions. Unfortunately, the lead agency for this initiative, the Korean Food and Drug Administration (KFDA), has extremely limited resources and is only able to assign a limited number of persons to monitor the precursor chemical program. Still, this proactive legislation demonstrates South Korea's recognition of the need for an enhanced precursor chemical program.

Accomplishments. The ROK has identified the transshipment of narcotics and the export of precursor chemicals as its most serious narcotics trafficking issues, and has taken aggressive, proactive steps in response. To curb the flow of drugs through airports, South Korea law enforcement has increased its presence and implemented tighter screening processes, including enhanced procedures for examining persons, luggage, express mail and cargo. To better manage the export of precursor chemicals, the ROK created a precursor chemical program with greater power to punish offending companies.

In 2003, no cargo containers routed through Korea were identified carrying drugs or precursor chemicals, although intelligence indicated that these items had successfully transshipped through ROK ports. However, in 2004, the DEA and the Korea Customs Service tracked two large transshipments of

illicitly diverted precursor chemicals as they were transshipped through the country, with resulting seizures at the final destinations.

Law Enforcement Efforts. In the past year, the Korean National Police Agency reassigned 175 police to a newly created narcotics detail, creating dedicated narcotics enforcement teams at 14 of the major metropolitan provincial districts. This is the first time that South Korean police officers are being assigned solely to narcotics investigations. However, while the Korean National Police Agency can make arrests, they have limited investigative authority. The police are expected to immediately report the case to the Ministry of Justice Prosecutor's Office, which will usually assume jurisdiction of the investigation.

The DEA Seoul Country Office provided for a one-week training session on narcotics investigations, at the Korean Police University for members of the Korean National Police Agency's narcotics units, the Korea Customs Service, the Korean National Intelligence Service, the Korean Maritime Police and the Korean Supreme Prosecutor's Office. This training is again scheduled for 2005, with an advance course being considered for 2006.

Corruption. Although isolated reports of official corruption continue to appear in the ROK's vigorous free press, there continues to be no evidence that any official corruption adversely influenced narcotics law enforcement in Korea. It is not government policy to facilitate illicit production or distribution of narcotics.

Agreements and Treaties. The U.S. and Korea have an extradition treaty and a mutual legal assistance treaty in force. South Korea is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention, as amended by its 1972 Protocol. South Korea has signed, but has not yet ratified, the UN Convention on Transnational Organized Crime, and is a signatory to the UN Convention Against Corruption. Korean authorities are exchanging information with international counternarcotics services such as UNODC, INTERPOL and have placed National Police and/or Customs Attaches in Thailand, Japan, Hong Kong, China and the United States. South Korea has several bilateral mutual legal assistance treaties with other countries.

Illicit Cultivation and Production. Legal marijuana and hemp growth is licensed by local Health Departments. The hemp is used to produce fiber for traditional hand-made ceremonial funeral clothing. Every year, each District Prosecutor's Office, in conjunction with local governments, conducts surveillance into suspected or known illicit marijuana growing areas during planting or harvesting time periods in an attempt to match the number of seeds farmers reported planting to mature crops and limit illicit diversion. Last year, a marked decrease of 5,599 plants were seized by local authorities, however, this year, the number of plants seized is extremely high at 58,755 plants. The DEA Office in Seoul suggests that because the limited number of crops in the ROK is heavily dependent on natural phenomenon such as drought, monsoons, etc, the percentages can vacillate greatly from year to year. Opium poppies are grown in the Kyonggi Province and farmers have traditionally used the harvested plants as a folk medicine remedy to treat sick pigs and cows. Opium is not normally processed from these plants for human consumption. All poppies are grown illegally; South Korea forbids the growing of poppies for any reason. Each year, each District Prosecutor's Office, in conjunction with their respective local governments, conduct surveillance into the suspected or known poppy growing areas during planting and harvesting time periods.

Drug Flow/Transit. Few narcotics originate in South Korea for use within country, and none are known at this time to be exported out of the country. However, Korea does produce and export the precursor chemicals Acetone, Toulene and Sulfuric Acid. Most Koreans who attempt to smuggle methamphetamine into Korea are coming from China, and on a few occasions the smugglers have indicated that the methamphetamine originated from North Korea and was simply transshipped through China.

A majority of the LSD and Ecstasy used in South Korea has been identified as coming from North America or Europe. The amount of seizures of Ecstasy went up exponentially from 2,575 tablets in 2003 to 20,358 tablets in 2004. Persons living in metropolitan areas of Korea, as well as USFK (United States' Forces Korea) employees and dependants are known to use marijuana originating from South Africa and Nigeria, whereas those living in rural areas appear to obtain their marijuana from locally produced crops.

The areas of origin for the transshipped narcotics include Thailand, China, North Korea and Canada for heroin; Iran and South Africa for marijuana and hashish; United States and Spain for Ecstasy; and China, Thailand, Philippines and North Korea for methamphetamine. Chemicals used for manufacturing illicit drugs, such as potassium permanganate, ephedrine and acetic anhydride, originate mostly in China for transshipment to South America and the Middle East region. Seizures of trafficked marijuana were down by half, from about 29 kilograms in 2003 to approximately 16 kilograms in 2004. This is probably a result of stepped up customs procedures at the airports and seaports. Heroin is generally not used by Koreans; cocaine is used only sporadically with no indication of its use increasing.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives and Programs. DEA and Immigration and Customs Enforcement (ICE) work closely with Korea narcotics law enforcement authorities, and the DEA considers the working relationship excellent.

Bilateral Cooperation. The DEA in Seoul completed a survey of chemical monitoring programs operating in other Asian countries and forwarded the results to the Korean Food and Drug Administration to highlight the importance of the steps being taken by neighboring countries. DEA also works closely with the Korea Customs Service, which monitors airport and drug transshipment methods and trends, including the use of international mail by drug traffickers.

Road Ahead. While the Korean law enforcement agencies all strive to combat narcotics use and trafficking within their country, South Korea is also looking forward to a more global approach to address the forces outside of Korea. In addition, Korean authorities have expressed concern that the popularity of South Korea as a transshipment nexus may lead to a greater volume of drugs making its way onto Korean markets. Korean authorities fear increased accessibility and lower prices could stimulate increased drug usage domestically.

Taiwan

I. Summary

In 2004, the Taiwan authorities implemented counternarcotics legislation containing more severe punishments and stricter prosecutorial guidelines passed by the Legislative Yuan in 2003. Cooperation on drug trafficking issues continues to be guided by the Mutual Legal Assistance Agreement (MLAA) between the American Institute in Taiwan (AIT) and the Taipei Economic and Cultural Representative Office (TECRO) in the United States. Although there is little evidence to suggest that Taiwan is becoming a transit/trans-shipment point for drugs bound for the U.S., one disturbing trend has emerged: in 2004, several Taiwan nationals were arrested at crystal methamphetamine “mega labs” located throughout the East Asia/Pacific (EAP) region. Based on these laboratory seizures and arrests, it is apparent that Taiwan-based organizations are exporting skilled lab technicians to manufacture large quantities of methamphetamine in other countries.

Taiwan is not a member of the UN and therefore cannot be a party to the 1988 UN Drug Convention. Nevertheless, Taiwan authorities have amended and passed legislation consistent with the goals and objectives of this Convention.

II. Status of Taiwan

The People’s Republic of China (PRC), North Korea, and Thailand are the primary sources of drugs smuggled into Taiwan. In 2004, Taiwan continued to see a rapid increase in the distribution and use of crystal methamphetamine and club drugs such as MDMA and ketamine. Taiwan has also experienced an increase in the importation of marijuana from Canada. In 2004, a number of heroin seizures were made in Thailand destined for Taiwan, as well as seizures in Taiwan of drug shipments originating from Thailand. Several Taiwan based organizations continue to have a direct impact on the United States, to include the shipment of precursor chemicals and drugs to the West Coast and Canada. However, enhanced airport interdiction, coast guard and customs inspection, surveillance and other investigative methods have prevented serious flows of heroin and other drugs from Taiwan into the U.S.

III. Actions Against Drugs in 2004

Policy Initiatives. In 2004, laws passed by the Legislative Yuan (LY) with regard to narcotics enforcement were implemented. The laws allowed for the use of controlled deliveries as a tool for drug law enforcement. The LY is also currently considering legislation that will permit the use of confidential sources and undercover operations. In 2004, Taiwan also implemented statutes containing more severe punishments, stricter prosecutorial guidelines and the addition of Schedule 4 drugs to comply with the UN Drug Convention. Taiwan is also reportedly considering the establishment of a drug enforcement administration largely modeled after the U.S. DEA. Although only in the preliminary stages of discussion, this proposal would create one primary drug investigative agency by merging several drug law enforcement units currently working under the auspices of different agencies.

Accomplishments. A provision permitting samples of seized narcotics to be shared with other law enforcement authorities, including DEA’s Drug Signature Program (drug origin) is now in effect and has been implemented. In 2004, DEA received several samples of heroin from various law enforcement agencies in Taiwan. In a combined effort with local authorities, DEA also successfully performed the first controlled delivery in Taiwan in 2004. The operation resulted in the arrest of one

individual and the seizure of approximately 4.7 kilograms of cocaine, currently the largest seizure of cocaine documented by Taiwan law enforcement authorities.

Law Enforcement Efforts. The Ministry of Justice continues to lead Taiwan's drug enforcement efforts with respect to manpower, budgetary and legislative responsibilities. However, the Ministry of Justice Investigation Bureau (MJIB), the National Police Administration's Criminal Investigation Bureau (NPA/CIB), Foreign Affairs Police Bureau, Aviation Police Bureau, Military Police Command, Coast Guard and Customs all contributed to the counternarcotics effort in 2004. For instance, Taiwan authorities provided information to the DEA Hong Kong Country Office (HKCO) that led to the successful dismantling of several drug-manufacturing facilities located in the East Asia/Pacific (EAP) region. Taiwan authorities continue to share valuable intelligence and coordinate investigative activities with U.S. counterparts and are currently investigating several large United States-impact organizations involved in the trafficking of methamphetamine. Additionally, MJIB has provided valuable assistance to the DEA on several significant money laundering operations.

From January through September 2004, Taiwan authorities seized 1,360.81 kilograms of methamphetamine, 2,693.74 kilograms of semi-processed amphetamine, 470.78 kilograms of heroin, 296.96 kilograms of MDMA, 517.56 kilograms of ketamine and 35.48 kilograms of marijuana.

Corruption. There is no indication that either the Taiwan authorities, as a matter of policy, or senior officials in Taiwan encourage or facilitate illicit production or distribution of narcotics or psychotropic drugs or other controlled substances, to include the laundering of proceeds from illegal drug transactions. No cases of official involvement in narcotics trafficking were reported in 2004.

Agreements. In 1992, AIT and its counterpart, TECRO, signed a Memorandum of Understanding on Counternarcotics Cooperation in Criminal Prosecutions, and in 2001, AIT and TECRO signed a Customs Mutual Legal Assistance Agreement. In March 2002, the AIT-TECRO Mutual Legal Assistance Agreement (MLAA) entered into force and remains the primary avenue for cooperation.

Drug Flow/Transit. The PRC, North Korea and Thailand remain the principal sources for heroin, methamphetamine, and club drugs for Taiwan. Fishing boats, cargo containers and couriers are still the primary means of smuggling these types of drugs into Taiwan, but there has also been a marked increase in the number of drug seizures at Taiwan's international airports. Seizures of methamphetamine on Taiwan also increased dramatically in 2004. As of October 2004, Taiwan authorities reported the seizure of 12 methamphetamine labs of various sizes. This increase can be attributed to the crackdown on such facilities in the PRC and a relocation of manufacturers to Taiwan.

Domestic Programs. The Ministry of Education and the Taiwan National Health Administration continue to forge partnerships with various civic and religious groups to sponsor periodic campaigns to raise awareness about the dangers of drug-use and educate the public about the availability of treatment programs.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. The United States' main counternarcotics policy goal, in cooperation with Taiwan, continues to be a coordinated effort to prevent Taiwan from returning to its earlier status as major transit/transshipment point for U.S.-bound narcotics. In 2004, the DEA HKCO provided several training seminars to many of Taiwan's law enforcement agencies, focusing on undercover and controlled delivery operations, financial investigations, methamphetamine laboratory safety and airport interdiction. The DEA HKCO also coordinated the visit of four prosecutors from the Taiwan Ministry of Justice and one MJIB Senior Special Agent to the United States for training and familiarization with the investigation and prosecution of drug cases in both the U.S. federal and state legal systems.

The counternarcotics authorities on Taiwan continue to regularly share intelligence and investigative leads with the DEA, and in turn, enjoy a close working relationship with DEA's Hong Kong office and AIT's Regional Security Office. In 2004, MJIB, Coast Guard and NPA police units participated and cooperated with DEA in joint investigations. As a result of this close working relationship, several significant arrests and drug seizures were made throughout the EAP region.

Road Ahead. AIT and DEA anticipate building upon and enhancing what is already an excellent working relationship with Taiwan's counternarcotics agencies. The Taiwan Ministry of Justice, Department of Prosecutorial Affairs anticipates that the LY will pass the pending undercover legislation in 2005 and that this legislation will greatly enhance counternarcotics efforts in Taiwan. The DEA expects to conduct additional training in anticipation of the undercover legislation being implemented, as well as training for financial and money laundering investigations. DEA also intends to expand the Drug Signature Program to receive more samples of heroin and other drugs seized in Taiwan.

Thailand

I. Summary

Thailand continued to be a leading regional partner in combating drug trafficking and other transnational crimes. It did so by ratifying a number of multilateral conventions and passing legislation implementing these conventions into domestic law, diligently honoring bilateral treaties, vigorously enforcing money laundering and narcotics law, adopting new criminal laws and procedures and cooperating closely with counterparts, bilaterally, regionally and internationally. Thailand was not included in the President's 2004 annual report to Congress of major narcotics producing or trafficking countries. This was the first time that Thailand was not listed as a major producing or transit country, and it reflects the overall progress Thailand has achieved over many years in its efforts to combat narcotics production and trafficking. For the past five years, Thailand has not been a major source country for opium and heroin, and for the past three years, the U.S. Government has not included Thailand in its annual survey of opium poppy cultivation and heroin production in Southeast Asia. In 2002-2003, opium production in Thailand was estimated to be only 320 hectares, of which 90 percent was eradicated before it could be harvested. This year's goal is 100 percent eradication.

Thailand is a major victim of trafficking in amphetamine-type stimulants (ATS), which are primarily manufactured in Burma. Narcotics abuse is recognized by the Thai government and people to be a major national security problem, and an important threat to the safety and health of the Thai people. The Thai government has had successes in implementing its comprehensive national strategy to combat illicit drug abuse, trafficking and production by controlling drug demand through prevention and treatment, and reducing drug supply by drug law enforcement, interdiction and drug crop elimination. In early 2003, Thai authorities launched a far reaching "war on drugs," which resulted in a large reduction in abuse and trafficking as measured by higher prices, reduced availability and consumption, and a drastic drop in seizures, because drugs never reached Thai streets. However, it also led to charges that some authorities had been complicit in extra-judicial killings of suspected drug traffickers. Occasional reports of extra-judicial killings by police of suspected traffickers, reportedly in self-defense, continue to appear in the Thai press. On December 3, 2003, Prime Minister Thaksin declared victory in the war on drugs. Follow-on "phases" of the campaign continued throughout 2004. Efforts were focused on an "area approach" to demand reduction and community based efforts to ensure that villages and communities remained drug free.

Drugs smuggled into Thailand also transit to other countries including the U.S. No quantified information on the extent of such transit is available. The U.S., as a matter of policy, encourages Thailand to continue to implement its national drug control strategy, and to maintain and enhance its regional leadership role and growing status as a donor of drug control assistance to other countries. Thailand is a party to the 1988 UN Drug Convention.

II. Status of Country

Thailand does not produce heroin, Ecstasy, ketamine, or cocaine, although all of these drugs were trafficked into and through Thailand in 2004. There is limited cultivation of cannabis, and some methamphetamine is manufactured in Thailand, although such production is considered statistically insignificant when compared to the volumes of methamphetamine smuggled from Burma. The most commonly abused drugs in Thailand in 2003 were krathom, (a mild stimulant that grows wild throughout much of the country), ATS and cannabis. ATS is most frequently encountered in the form of pills or tablets whose purity averages about 25 percent methamphetamine (locally called "yaba"- "Mad Medicine"). Most ATS consumed in Thailand is produced and smuggled from Burma. Many

traditional heroin trafficking organizations in Burma participate in this traffic, but the United Wa State Army (UWSA) dominates ATS manufacturing and smuggling. According to private and public surveys, ATS abuse remains prevalent throughout Thailand, despite large reductions following the Royal Thai Government's (RTG) "war on drugs". One potential side effect of this 2003 campaign has been changes in use patterns of Thai abusers. Late in 2004, there were reports of an increasing popularity in the use of crystallized methamphetamine known as "Ice." Seizures in 2004 included quantities of both methamphetamine powder and "Ice."

Although still limited relative to ATS, the availability and use of Ecstasy, ketamine and cocaine is a growing concern. Ecstasy remains an expensive party drug with a largely "high society" or foreign clientele. Most Ecstasy is smuggled from Europe, often via intermediate countries, although there is evidence of some Ecstasy production in the region. Because of an increased focus on Ecstasy by Thai law enforcement, Ecstasy seizures became routine in 2004, with many resulting from undercover operations by the Thai police. Ketamine is also encountered as a limited "club drug", and its popularity rose in 2004. Thai authorities seized 135 liters of ketamine in January 2004. There were again a significant number of cocaine seizures in 2003, although the quantities involved in each individual seizure remained modest. West African trafficking organizations, dominated by Nigerians, control the bulk of the cocaine market. Much of the cocaine imported by West Africans using couriers sent to South America is re-distributed within the region. Thailand has ceased to be a source of heroin. Its harvestable opium poppy crop has been below the U.S. statutory definition of a major producer (1000 hectares) every year since 1999. The U.S. Government has not included Thailand in its annual opium poppy crop survey for Southeast Asia since 2002. No heroin production laboratories have been found in Thailand for years. Heroin seizures in 2004 began to increase in size, and the overall amount of heroin seized in 2004 increased to 685 kilograms. The UN Office on Drugs and Crime (UNODC) considers that most of the diminishing quantity of heroin produced in Burma and Laos reaches other markets through southern China, although stringent law enforcement pressure there in 2004, caused some traffickers to seek new routes through Thailand.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Following the initial phase of the war on drugs, the RTG launched phase two of the campaign from May 1-December 2003. The focus of this phase was rehabilitation, supervision and treatment of drug abusers to enhance community strength against drug use at the village level. At the end of the second phase, 83,947 villages/communities were declared drug free with 2,767,885 volunteer counternarcotics coordinators in place. These coordinators were responsible for watching to ensure that drug users or traffickers did not return to the areas under their responsibility. During 2004, the Royal Thai Government continued with various phases of its war on drugs after Prime Minister Thaksin declared "victory" in the campaign on December 3, 2003. Phase three took place from December 3, 2003-September 30, 2004 and focused on maintaining sustainable drug free communities.

In early 2003, the RTG established the National Command Center for Combating Drugs (NCCD) under Deputy Prime Minister Chavalit as the highest level planning and policy level organization on developing counternarcotics policies and programs. This body was set up to enhance coordination among government agencies and bring added high level attention and support to the war on drugs. In addition to the NCCD, the Office of the Narcotics Control Board (ONCB) underwent a reorganization and expansion during 2004. The number of regional offices of ONCB doubled from four to eight. Similar plans to decentralize the national police force are under consideration.

Internationally, Thailand continued to expand its role as a donor, as well as a recipient, of drug control assistance. Thailand continued efforts to enhance drug control cooperation with Burma, including implementing a Thai-funded alternative development project to reduce poppy cultivation at the Yaung

Kha site along the border. The RTG announced that it will fund the construction and operation of a drug abuse treatment clinic near the border in south-central Laos, at a cost of approximately \$600,000.

Accomplishments. During 2004, Thai authorities from the Royal Thai Police (RTP) and ONCB declassified wiretap evidence gathered during Thai investigations and shared with the U.S., in effect, permitting its use in U.S. investigations. Although no formal plea bargaining legislation is yet in place, Thai officials continue to permit and use reduction of sentences for convicted drug offenders that cooperate with authorities. Parliament continued to consider a more general law on plea bargaining in criminal cases, controlled deliveries, establishment of a witness protection program and other improvements in substantive and procedural criminal law.

ONCB in its role as a central authority for coordinating drug law enforcement issued instructions to coordinate complicated drug cases between various agencies such as the police and prosecutors. Legislation on conspiracy and asset forfeiture in drug cases was implemented throughout the country. ONCB organized judicial seminars in which over 350 judges from the courts of first instance located in every province of the country attended to receive training in trying complicated drug cases. In November, the Attorney General's Office announced the formation of a special prosecution task force to work alongside police in cases of special public interest.

The newly enacted Special Investigations Act (SIA) (2004) helped establish the Department of Special Investigation (DSI), a still-evolving elite law enforcement agency modeled in part on the FBI. In furtherance of that role, DSI was placed under the Ministry of Justice to give it independence from the RTP. The SIA clarified that DSI's jurisdiction includes transnational cases, investigation of influential persons, and a wide variety of financial crimes. The SIA gives DSI express authority to wiretap telephones and other electronic communications, and to offer the intercepts as courtroom evidence. The SIA concludes with unprecedented authority for investigator-prosecutor teamwork during the investigative stage of more complex cases. DSI ended the year with what was reported to be one of the largest seizures to date of counterfeit consumer goods.

The RTG is also a full partner in counternarcotics matters related to mutual legal assistance, cooperation on drug-transit and operational freedoms. The RTG responds to U.S. requests for information or evidence made pursuant to the bilateral mutual legal assistance treaty, providing items such as surveillance tapes, phone subscriber information, investigative background materials, etc. Thailand is among the most cooperative partners of the U.S. in regard to suppressing drug transits and targeting influential, transnational drug syndicates that engage in trafficking. Thailand also gives U.S. drug law enforcement entities considerable investigative leeway, permitting such agencies to use virtually any investigative tool available to them in the U.S.

Law Enforcement. According to ONCB, seizures for most types of narcotics continued to decrease in 2004 as a result of Thailand's successful war on drugs. The only categories that increased were heroin; 685 kilograms in 2004 vice 436 kilograms in 2003; raw opium 1,173 kilograms in 2004 vice 267 kilograms in 2003; ketamine 162 kilograms in 2004 vice 98 kilograms in 2003; codeine 1,026 kilograms in 2004 vice 941 kilograms in 2003; psychotropic substances 71 kilograms in 2004 compared to 36 kilograms in 2003. Methamphetamine seizures declined greatly from 6,442 kilograms to 2,082 kilos. Ecstasy seizures declined from 33 kilograms to 21 kilos, cocaine went from 11 kilograms to 7 kilograms and ice (crystal methamphetamine) declined from 48 to 34 kilograms in 2004. Dried cannabis went from 13,771 kilograms last year to 7,062 kilograms in 2004, while fresh cannabis went from 5,878 kilograms last year to 4,555 kilograms in 2004. The number of arrests also declined dramatically from 107,823 in 2003 to 37,121 in 2004. As of October, 2004, 81,184 prisoners were detained for drug offenses, 78 of them on death row.

For much of 2004, the high prices and limited availability of methamphetamine generated by the war on drugs in 2003 persisted. In the latter half of the year, however, seizure quantities of methamphetamine began to creep upward. Police effectiveness has precluded a return to pre-2002

levels of trafficking but law enforcement efforts are not likely to sustain the reduced trafficking levels indefinitely. In declaring victory in the war on drugs in December 2003, the Prime Minister's office issued the following statistics: 43,621 drug producers and dealers turned themselves in, arrests were made of 92,436 drug abusers and 753 importers, 21,855 key drug traders, 22,890 drug retailers, and 1,257 state officials, while six major drug trafficking rings led by "influential figures" were dismantled.

Over the past few years, most heroin seizures were modest, in the five to twenty kilogram range with an occasional large seizure. In 2004 there were more seizures in the twenty to seventy kilogram range. One trafficking organization under investigation by DEA and Thai police is associated with the seizure of 127.4 kilograms of heroin between January and June 2004. There was a seizure of 43.4 kilograms of heroin in Taiwan in January 2004 and another of 64.6 kilograms in June 2004. Both of these commercial maritime shipments of heroin had arrived in Taiwan from Thailand. In late 2004, Thai and Chinese authorities cooperated to seize in China 463 kilograms of Burmese heroin that had been smuggled into China for re-export to Europe. The suspected kingpin, Liu Gang-yi was arrested in Bangkok on October 29 and deported to China shortly thereafter. At least some of these shipments may have been destined for North America.

Corruption. As a matter of government policy, the Royal Thai Government does not encourage or facilitate illicit production or distribution of narcotic or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal transactions. Nevertheless, public corruption is a serious problem in Thailand, and is recognized as such. Historical and cultural attitudes of deference to individuals of wealth, high social standing or official position have contributed to public acquiescence toward corruption. Low public sector salaries create the same incentives for corruption in Thailand as they do in many other countries. Many government officials live well above their identifiable means. Efforts by transnational and organized crime to facilitate or protect illegal activities including drug trafficking, trafficking in persons, fraudulent document production, migrant smuggling, money laundering and other crime contribute to corruption in law enforcement and judicial institutions. Security of complex investigations against major drug traffickers has been maintained and no major investigations have ever been compromised by the Thai. In January 2004, a former member of NSB was given the death sentence for his complicity in trafficking one million tablets of methamphetamine. Also in the second quarter, one Border Patrol Police officer in Nong Khai Province and a former BPP officer in Chiang Rai were also arrested for trafficking in methamphetamine. Moreover, a former deputy governor of Chiang Rai and Phrae provinces was removed from his post to an inactive position, reportedly because he was involved in taking bribes from one of the largest drug traffickers in the province. Police are investigating the case, and arrests of police, prosecutors, and other local officials are anticipated.

One nondrug related case originated by the National Counter-Corruption Commission (NCCC) (an autonomous institution established by the 1997 Constitution) demonstrated that political prominence is no longer necessarily a guarantee of impunity. The Supreme Court's special political corruption chamber convicted a politically prominent man, who served at various times in five ministerial positions, of accepting bribes in connection with procurement of hospital supplies while he was Minister of Health in 1998-9. The ex-minister jumped bail but was captured in September and is now serving a 15-year prison sentence. This is the first time that a former minister has been convicted on such a corruption charge. Corruption is certainly the most difficult and durable problem faced by Thailand's entire law enforcement and criminal justice system. However, the Thai government has displayed its willingness, backed by growing popular support, to implement effective measures to prevent, or to investigate and punish, such public corruption.

In September, the Prime Minister announced a new "war against corruption." Early measures taken included: a multi-agency agreement to pool resources in corruption investigations and an agreement

between the Anti-Money Laundering Office (AMLO) and the NCCC to expedite asset seizure procedures for politicians and civil servants found guilty of corruption.

Agreements and Treaties. Thailand is a party to the 1988 UN Drug Convention, the 1961 Single Convention on Narcotic Drugs and the Convention on Psychotropic Substances. Thailand has signed but has not yet ratified the UN Convention against Transnational Organized Crime and the UN Convention Against Corruption.

On September 20, 2004, the United States Ambassador and the Ministry of Foreign Affairs' Director General for Technical and Economic Cooperation signed a bilateral agreement on narcotics control and law enforcement assistance, with initial funding for U.S. Fiscal Year 2004. Thailand has bilateral treaties with the United States on extradition, mutual legal assistance, and the execution of penal sentences. Thailand routinely responds to requests from the United States for assistance under the mutual legal assistance treaty, and repatriates qualified American prisoners under the execution of penal sentences treaty. During 2004, Thailand concluded bilateral agreements with a number of other countries for cooperation in drug law enforcement and related matters.

Cultivation/Production. Through one of the most successful drug crop control programs in the world, Thailand has ceased to be a source of heroin or of significant quantities of opium. In June 2004, Thai officials from ONCB and the Royal Thai Army's Third Army released their estimate of the opium poppy cultivation for the 2003-2004 growing season. According to this estimate, opium poppy cultivation in Thailand reached a record low of 128 hectares compared to 842 hectares for the 2002-03 season, 1,257 hectares in 2001-2002 and 1,103 hectares in 2000-2001 growing season. Much of the cultivation occurred in extremely difficult terrain in Tak, Chiang Rai and southern Chiang Mai provinces. Thai officials estimated they eradicated up to 90 percent of production. Although overall cultivation continues to decline, the opium cultivation survey and eradication campaign remain a necessary deterrent against technological innovations and other strategies used by farmers to avoid eradication. Farmers replanted poppy in areas once harvested or eradicated by government officials while attempting to grow two or three crops in a single season. Opium was interspersed with legitimate crops to avoid detection by aerial survey.

Some cultivation of cannabis occurs on both sides of the Mekong River in Thailand and Laos. ONCB believes most cannabis consumed in Thailand is smuggled over the borders from Laos and Cambodia—as is the case for most of the marijuana that transits on its way to international markets.

Production in Thailand of refined opiates ceased with elimination of large-scale poppy cultivation. Years ago, several heroin processing laboratories were found and destroyed annually. None have been found in Thailand for several years. There have been some small-scale “kitchen” methamphetamine laboratories, but ONCB considers that the vast bulk of ATS drugs sold in Thailand are produced in Burma. However, in November 2004, the first full circle methamphetamine lab since 1997 was discovered in Pathum Thani, a suburb of Bangkok. There is no known production of other illicit drugs or controlled substances in Thailand.

Drug Flow/Transit. The U.S. Government annual survey of opium poppy cultivation in Southeast Asia for 2003 indicates that potential opium production in the region was about one-quarter the production estimated in 1993. Ten years ago, Thailand was the primary transit route for Burmese-origin heroin. UNODC now estimates that most of the steadily diminishing amount of heroin produced in Burma and Laos reaches world markets through China. Neither Thai nor other law enforcement authorities possess quantifiable information on the volume or destination of heroin, cannabis or other drugs that may transit Thailand destined for markets in other countries. Methamphetamine, cannabis, opiates and other illegal drugs smuggled into Thailand are largely destined for sale and consumption among Thailand's large and well-documented population of illegal drug users. There is also transit of illegal drugs through Thailand to other countries, although its exact extent cannot be quantified. Methamphetamine produced in Burma enters Thailand largely across its northern land borders.

Methamphetamine is also smuggled through Laos and Cambodia to destinations in Thailand. Drugs are generally carried across uncontrolled parts of the borders—or carried across the Mekong border by small boat—by individuals or groups of couriers often associated with organizations such as the UWSA. Armed clashes between drug couriers and the Border Patrol Police or RTA are not unusual. A number of police and RTA personnel, and substantially more couriers, have been killed or wounded. Once within Thailand, drugs are consolidated and smuggled, generally by road, to Bangkok or other metropolitan markets. Several cases are discovered each year of smuggling of Burmese-origin ATS pills to destinations in the U.S. or other countries, generally by international mail or parcel service. However, ATS used in Thailand is mostly in pill form, while the most common form for abuse of this drug in the U.S. and most other countries is the crystalline form known as “ice”. Heroin that is sold to Thailand’s domestic population of addicts (estimated variously between 30,000 to 50,000) is generally smuggled by the same routes, and same groups, as methamphetamine.

In early July 2004, two traffickers were arrested and authorities seized 140,000 methamphetamine tablets when a joint task force of the Mekong River Operations Unit stopped a speedboat on the Thai side of the river in Chiang Rai Province. Burmese-based trawlers are frequently used to move heroin and methamphetamine into provinces in the isthmus of Thailand, especially Ranong and Phang Nga provinces. Drug loads are often concealed in cover loads of seafood that are offloaded at shore facilities. Sometimes, the drugs are offloaded in boat-to-boat transfers at sea. One commercial maritime shipping venture involving drugs being shipped to Taiwan was uncovered in the second quarter. A shipment with a total of 100 blocks of heroin (totaling 43 kilograms) was uncovered from 40 of the 500 cartons of squid in the shipment. Another Taiwan connection was made in February when three Taiwanese were arrested in Bangkok and charged with attempting to ship twenty slabs of heroin from Bangkok to a buyer in Malaysia.

As always, couriers remain a popular method of smuggling for organizations attempting to get illegal drugs into, out of, or through Thailand. Five West African couriers were arrested in December 2003 and January 2004 as they attempted to smuggle heroin from Pakistan through Thailand to Indonesia. The male couriers were normally ingesting anywhere from 1,000 to 1,500 grams while the female couriers were generally carrying about 1,000 grams of heroin on their bodies or concealed in luggage. The West Africans also continue to use a plethora of routes and methods to get cocaine into Thailand from South America. Often Thai females are used between South America and Bangkok, often passing through South Africa, Indonesia or Malaysia en route. Express mail services also sustain their role as popular means for international smuggling. Numerous examples of drugs being mailed from Thailand to the United States and around the world can be found each month. For example, in 2004 heroin, opium, and methamphetamine have been mailed to locations in the U.S. as diverse as North Carolina, California and Alaska. However, other countries around the world also seize drugs or controlled substances that were mailed from Bangkok. For example, early in 2004, two separate seizures of steroids were made in Costa Rica from packages originating in Thailand. Further, the mail services continue to also be used to import controlled substances and drugs into Thailand. A typical example was the seizure at the Miami International Airport of 5.5 pounds of cocaine secreted in a Sky Net parcel. The parcel was mailed in Peru and was sent to an address in Bangkok.

UWSA methamphetamine production laboratories were increasingly being moved away from the Burmese-Thai border to more remote, less visible locations deeper in the jungles. The methamphetamine is often consolidated for shipment in Tachilek and other border areas in Burma. Thai officials speculate that Tachilek will become even more important as a transit location. Besides Tachilek, the smuggling routes between Burma/Laos and northeastern Thailand as well as the routes involving Burma-Laos-Cambodia-Vietnam, are increasingly important. Multiple organizations transport the drugs (primarily heroin and methamphetamine) down the Mekong River and into Nong Khai Province. From there, the drugs are shipped southward to Songkhla for eventual delivery into Malaysia. Other organizations favor the Laos to Cambodia or Vietnam route. Heroin moving from

Laos into Vietnam is often shipped out to the international markets by organizations of ethnic Vietnamese. Heroin and methamphetamine that is smuggled from Laos into Cambodia is either exported to international market through Cambodian ports or makes it way back into Thailand across jungle borders.

Domestic Programs/Demand Reduction. The RTG has undertaken a massive narcotics demand reduction program in the past few years as part of its war on drugs. The government realizes that demand reduction is a central and vital part of a successful, long term narcotics control program. Over 320,000 drug users turned themselves into authorities in 2003. However, in 2004 that number dropped to only around 30,000. According to surveys by university networks and government agencies, the number of persons who used illegal drugs dropped precipitously in 2004. The RTG intensified efforts to disseminate public awareness and prevention measures and to expand substance abuse treatment available to users. ONCB and the Ministry of Public Health are responsible for coordinating prevention and treatment programs, with participation by other agencies, and by NGO's through a national Anti-Narcotics Coordinating Committee. The Ministry of Education has incorporated drug awareness and prevention messages in school curricula at all levels. The RTG attempted to identify and target potential drug users and institute preventive campaigns involving a wide variety of activities designed to keep this group away from drugs. A permanent epidemiological network involving Chulalongkorn and other universities in each of the four major regions of Thailand supports design of prevention strategies with timely information about use patterns and motivations among affected groups. Thailand is active in the international network of public/private sector drug prevention organizations. This network mobilizes public opinion against narcotics abuse. King Bhumipol's eldest daughter, Princess Ubolratana, leads a nationwide campaign called, "To Be Number One" designed to keep youth from drug abuse through a variety of activities designed to develop self-confidence, and to encourage users to attend treatment and rehabilitation programs. The organization had over five million members as of 2004.

To encourage users and addicts to identify themselves for treatment, campaigns have been launched to educate addicts/users, their families, and the general public that addiction should be seen as a disease and users as "patients." There is an on-going campaign to modify the attitude of the public to forgive addicts and users and rehabilitate them within their communities, while maintaining a zero tolerance policy on drug use. Depending on the addict/users circumstances there are a variety of treatment options available—voluntary, compulsory and within the correctional system. In 2004, the Ministry of Public Health further expanded ATS treatment programs, particularly those based on the Matrix model developed at UCLA. Community-based behavioral modification outpatient treatment centers for ATS abuse now exist in locations around the country and are being further expanded as health care workers are trained and capacity increased. The RTG has expanded drug abuse treatment in the correctional system, in collaboration with Daytop International. The Department of Corrections has implemented therapeutic community programs in juvenile corrections and intake centers. The RTG also continued camps operated by the armed forces, which provide three to nine months of rehabilitation for drug-dependent prisoners nearing the end of their terms. Thailand also continued sentencing drug-dependent first offenders charged with possession of small quantities of drugs to mandatory substance abuse treatment as an alternative to incarceration, in accordance with the Narcotics Rehabilitation Act of 2002.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. U.S. drug control policy goals consistent with past years' are to encourage the RTG to:

- Maintain all elements of its successful opium poppy crop reduction program, and extend that expertise also to other countries such as Burma, Laos and Afghanistan; b)

Develop and implement more effective criminal investigation and prosecutorial laws, procedures and methods; c) Strengthen enforcement against money laundering; d) Continue as a leader in regional activities under the “ACCORD” Plan of Action, continue and expand Thailand’s leadership in regional and international drug and crime control; e) Enhance measures against corruption and promote integrity in public institutions.

- The U.S. International Narcotics Control and Law Enforcement (INCLE) assistance program in Thailand is one of the oldest in the world, and has provided over \$85-million since its inception in the 1970’s. Beginning with FY 2001, this program has included increasing assistance to improve the institutional capabilities of the criminal justice system in general, including but not specifically limited to drug crime, and to improve capabilities against non-drug crimes that are also international policy concerns of the U.S. Longstanding INCLE projects for support of drug law enforcement and opium poppy crop control will continue to be substantially reduced in FY 2004. The United States will therefore encourage the RTG to employ its own resources, as it has increasingly done in recent years, to support interdiction and drug law enforcement, opium poppy crop control, and other aspects of its national strategy against the abuse, trafficking and production of illicit drugs.
- The United States Mission in Thailand includes offices of the Drug Enforcement Administration, the Federal Bureau of Investigation, the U.S. Secret Service, the Department of Homeland Security (Immigration and Customs Enforcement), and the Diplomatic Security Service. Agents of these agencies cooperate closely with Thai authorities in investigations of drug trafficking organizations and related offenses, as well as non-drug crimes. U.S. and other foreign immigration officials assigned to embassies in Bangkok operate a full-time Immigration Control Experts office at the Bangkok International Airport to assist Thai authorities to identify malafide international travelers, including drug couriers. Among the law enforcement agencies resident in Thailand, the Drug Enforcement Administration (DEA) has the lead role for counternarcotics investigations and operations. Under the guidance of the Ambassador, the DEA conducts joint investigations with its Thai counterparts in an aggressive effort to combat common drug trafficking threats. During 2004, the DEA in Thailand expanded its investigative initiatives to greater reflect and contribute to the execution of the United States’ national drug strategy. In two areas, in particular, the DEA in Thailand attempted to advance counternarcotics capabilities of Thai law enforcement entities while significantly contributing to reduced drug flow into the U.S. and more effective prosecutions of transnational drug traffickers operating out of the Kingdom of Thailand.

Bilateral Cooperation. The first policy and enforcement initiative of note was a vastly increased emphasis in 2004 on Thailand-based drug traffickers distributing pharmaceuticals and other controlled substances directly to consumers in the United States. Beginning in November 2003 and continuing throughout most of 2004, the DEA worked with Royal Thai Customs (RTC) to identify, target and dismantle a Bangkok based organization that was mailing pharmaceutical drugs such as Xanax, Valium, and diazepam to U. S. consumers. Recognizing that abuse of pharmaceuticals is one of the fastest growing and most persistent abuse problems in the U.S., the DEA dedicated considerable resources to properly implement this new initiative and set up a task force composed of the DEA, the RTC, the Thai Transnational Crime Division (CSD), the Royal Thai Postal Authority, and members from two the DEA’s Sensitive Investigative Units began a concentrated effort to identify and investigate the Thailand-based individuals that were involved in illegally supplying U.S. consumers.

The second initiative of note undertaken by the DEA in Thailand during 2004 was the close coordination with Thai authorities with regard to information received during court-authorized wiretaps in Thailand. Previously, information gathered on such legal wiretaps was passed to the United States as an integral part of joint investigations. However, that information could only be used for intelligence and lead purposes, and not in court cases in the United States. During 2004, the DEA in Thailand began investigating a transnational drug trafficking syndicate based in Bangkok. This organization traffics in cocaine and heroin in a number of countries throughout the world, including Thailand, the United States, and numerous other countries. Recognizing the scope and significance of this organization, Thai authorities revised their policies and agreed to permit the information intercepted inside Thailand to be used in courts in the United States. This opened the door to greatly enhanced investigations because it permitted, for the first time, drug law enforcement agencies in other jurisdictions in the U.S. and other countries to use leads obtained in Thailand to initiate court-authorized wiretaps in their own jurisdictions.

The Road Ahead. Despite reduction of U.S. financial assistance, RTG agencies concerned with drug law enforcement, opium poppy crop control, and drug abuse prevention and treatment, will continue with their own resources to effectively and successfully implement all aspects of Thailand's comprehensive national strategy against abuse, trafficking and production of illicit drugs. Thailand will further expand its role as a regional leader in drug control and efforts against related forms of transnational crime, will continue to cooperate closely with the international community on these issues, and will continue to increase its participation as a provider of expertise and donor of assistance in these areas. Further legislation to employ advanced techniques for investigation and prosecution of drug and other serious criminal offenses will be approved over the next few years. This can be expected to address, among other issues, more extensive types of plea bargaining, co-conspirator and cooperating defendant testimony, witness protection, and controlled deliveries. Concerned Thai criminal justice institutions, with U.S. assistance, will become proficient in use of such laws, procedures and practices for prosecution of transnational and organized crime. Close cooperation between Thailand and the U.S. will continue on drug and other crime control issues. Extradition and mutual legal assistance relationships, and investigative cooperation between law enforcement authorities, will remain strong. Regional cooperation against transnational crime will be further promoted through continued effective operation of ILEA/Bangkok.

Action to prevent, control, disclose and punish public corruption will remain the most difficult long-term challenge to the RTG. Over the next several years, the RTG should begin to develop improved public ethics regimes, internal oversight mechanisms, and mechanisms to more effectively enlist public participation and support in measures against official corruption. Thailand should move as promptly as possible to complete necessary domestic legislative procedures to enable it to ratify the UN Convention Against Transnational Organized Crime and the UN Convention Against Corruption and should give special attention to designing and implementing specific measures to promote public integrity and prevent official corruption, such as those identified in the UN Corruption Convention.

Vietnam

I. Summary

The Government of Vietnam (GVN) continued to make progress in its counternarcotics efforts during 2004. Specific actions included: sustained efforts of counternarcotics law enforcement authorities to pursue drug traffickers; increased attention to interagency coordination; continued cooperation with the United Nations Office on Drugs and Crime (UNODC); increased attention to both drug treatment and harm reduction; an increased tempo of public awareness activities; and additional bilateral cooperation on HIV/AIDS. Additionally, in March, the U.S.-Vietnam counternarcotics Letter of Agreement (LOA), which was negotiated to permit the United States to provide counternarcotics assistance to Vietnam, entered into force, and the two sides completed the first of the LOA projects. However, real operational cooperation between Vietnamese law enforcement and DEA's Hanoi Country Office (HCO) was minimal. Vietnam is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention as amended by the 1972 Protocol and the 1971 UN Convention on Psychotropic Substances.

II. Status of Country

GVN, UNODC and law enforcement officials no longer consider cultivation a major problem, despite the fact that Vietnam meets the U.S. legislative definition of a "major drug-producing" country based on a 2000 USG imagery-based survey showing 2,300 hectares of poppy cultivated in the northern and western provinces of Lai Chau, Son La and Nghe An. The GVN claims a much lower figure (32.5 hectares) and official UNODC statistical tables no longer list Vietnam separately in drug production analyses. Cultivation in Vietnam probably accounts for about one percent of cultivation in Southeast Asia, according to a law enforcement estimate; DEA has no evidence of any Vietnamese-produced narcotics reaching the United States. There appear to be small amounts of cannabis grown in remote regions of southern Vietnam. Vietnam has not been considered a source or transit country for precursors. Heroin from the Golden Triangle and China transits Vietnam en route to Taiwan, Hong Kong and, increasingly, Australia, and during 2004, large amounts of cannabis, heroin and synthetic drugs entered Vietnam from Cambodia. GVN authorities are particularly concerned about rising amphetamine-type stimulant (ATS) use among urban youth and, during 2004, increased the tempo of enforcement and awareness programs that they hope will avoid a youth epidemic.

Despite some high-profile cases in 2004, lack of training, resources and experience both among law enforcement and judicial officials continues to plague Vietnamese counternarcotics efforts. In addition, resource constraints in drug law enforcement and treatment are pervasive. Drug laws remain very tough in Vietnam. Possession of 100 grams of heroin or five kilograms of opium gum or cannabis resin or 75 kilograms of cannabis or opium plants may result in the death penalty. For possession or trafficking of 600 grams or more of heroin, the death penalty is mandatory.

Foreign law enforcement sources do not believe that major trafficking groups have moved into Vietnam. Relatively small groups—perhaps five to 15 individuals, who are often related to each other—do most narcotics trafficking. DEA believes that as Vietnam becomes a more "attractive" transit country, larger trafficking groups could become more prominent.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The structure of the GVN's counternarcotics efforts is built around the National Committee on AIDS, Drugs and Prostitution Control (NCADP), which includes a broad spectrum of

GVN ministries and mass organizations. In addition, MPS has a specialized unit to combat and suppress drug crimes. According to UNODC, during 2004 the GVN continued to focus on the drug issue, which included an increase in attention from the state-controlled media and GVN-funded training courses, conferences, and international delegations. Many provinces and cities implemented their own drug awareness and prevention programs, as well as demand reduction and drug treatment. The GVN views drug awareness and prevention as a significant objective in its fight against drugs as well as an integral part of its effort to comply fully with the 1988 UN Drug Convention. The GVN has continued to rely heavily on counternarcotics information campaigns, culminating in the annual drug awareness week in June. Officially sponsored activities cover every aspect of society, from schools to unions to civic organizations and government offices. This year, the GVN also made a particular effort to de-stigmatize drug addicts in order to increase their odds of successful treatment. Enforcement played a significant role in the GVN's 2004 counternarcotics activities as well. In 2004, May, June and July saw significant drug seizures in Ho Chi Minh City and Hanoi as well as provinces throughout the country.

At a March NCADP-organized conference, participants at the conference stated that drug crimes are on the rise, and drug seizure data shows a large increase in both the number of drug cases and the per-case quantity of drugs seized. The drug addiction relapse rate is still high, at about 70 percent. According to official numbers released at the conference, there are 160,670 drug users nationwide with 80 treatment centers providing treatment to over 40,000 drug addicts. One of the main outcomes of a high-priority USG-funded UNODC project was the establishment of six interagency counternarcotics enforcement task force units in six border "hotspot" areas. The establishment of these task forces represented a high mark in the normally weak interagency cooperation process among Vietnamese security forces.

Accomplishments. In 2004 the GVN established a narcotics branch in the Department of Crime Statistics in the Supreme People's Procuracy. The new office improved the GVN's collection and sharing of crime statistics. In March the GVN made some final changes that allowed the entry into force of the letter of agreement on counternarcotics activities between the United States and Vietnam. The first project under the LOA, a training course for counternarcotics police and customs officers from all over Vietnam, occurred in Hanoi in August. U.S. Customs and Border Protection agents who taught the course reported that it had an effect immediately: using the new search techniques he had learned in the training the week earlier, one of the inspectors discovered an Australia-bound heroin courier.

Law Enforcement Efforts. The GVN continued a policy of strict punishment for drug offenses. Seizures of opium, heroin, and amphetamine-type stimulants (ATS) increased during the year. According to GVN statistics, during the first six months of calendar year 2004, there were 5,376 drug cases involving 8,484 traffickers with larger amounts of heroin and synthetic drugs seized. Total seizures include 100.3 kilograms of heroin, 53.3 kilograms of opium, 622.7 kilograms of cannabis, 23,902 methamphetamine tablets and 4,128 ampoules of addictive pharmaceuticals and other substances.

All international law enforcement representatives in Vietnam acknowledged that real operational cooperation on counternarcotics cases is minimal or nonexistent due to legal prohibitions against foreign security personnel operating on Vietnamese soil. Without changes in Vietnamese law to permit foreign law enforcement officers to work on drug cases in Vietnam, "cooperation" will remain a function of information exchange and Vietnamese police carrying out law enforcement activities on behalf of foreign agencies on a case-by-case basis. During 2004, GVN law enforcement authorities did not provide meaningful cooperation to DEA's Hanoi country office. DEA agents have not been permitted to work with GVN counternarcotics investigators officially. Cooperation was limited to receiving information from DEA and holding occasional meetings. Thus far, the counternarcotics police have declined to share information with DEA or cooperate operationally. GVN officials explain

that drug information is subject to national security regulations and not releasable to foreigners. To date, there has been nothing concrete to indicate that the GVN has any intention of taking the necessary administrative or legislative steps to permit DEA to expand beyond its current liaison role.

Corruption. In 2004 the GVN made anticorruption policy statements at all levels of government and conducted some high-profile corruption cases involving politically connected government officials, but did not single out narcotics-related corruption for specific attention. The USG has no information linking any senior official of the GVN with engaging in, encouraging or facilitating the illicit production or distribution of such drugs or substances, or the laundering of proceeds from illegal drug transactions. Concerning narcotics-related corruption, the GVN did demonstrate willingness in 2004 to prosecute officials, though the targets were relatively low-level. The UN, law enforcement agencies, and the GVN continue to view corruption in Vietnam as an endemic problem that exists at all levels and in all sectors. Vietnam ranks 97 out of 104 countries in the World Economic Forum's corruption index. The GVN's own estimates state that as much as 19 percent of the investment in major infrastructure projects is lost to poor management and corruption. Vietnam has signed the UN Convention against Corruption, and endorsed a regional anticorruption action plan at an ADB (Asia Development Bank) meeting in Manila. Recognizing the need for more anticorruption assistance, the GVN signed an agreement with Sweden in September 2002 for research on socio-economic policy and anticorruption measures. Under the \$2.7 million project, scheduled to run from the end of 2002 through 2005, Sweden will provide resources to assist Vietnam in developing appropriate anticorruption policies.

Agreements and Treaties. Vietnam is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention as amended by the 1972 Protocol and the 1971 UN Convention on Psychotropic Substances. Vietnam is currently precluded by statute from extraditing Vietnamese nationals, but the GVN is contemplating legislative changes. However, at the request of the USG (and in accordance with the 1988 UN Drug Convention), Vietnam has in the past agreed to rendition requests and has returned two non-Vietnamese nationals to the U.S. Vietnam has signed but has not yet ratified the UN Convention on Transnational Organized Crime.

Cultivation/Production. Small amounts of opium are grown in hard-to-reach upland and mountainous regions of some northwestern provinces, especially Son La, Lai Chau and Nghe An Provinces. According to USG sources, the total number of hectares under opium poppy cultivation has been reduced sharply from an estimated 12,900 hectares in 1993, when the GVN began opium poppy eradication, to 2,300 hectares in 2000. There have been reports in past years concerning probable indications of ATS production, as well as some seizures of equipment (i.e., pill presses). DEA also turned up information pointing to an extremely large methamphetamine lab in Ho Chi Minh City in 2004. As part of its efforts to comply fully with the 1988 UN Drug Convention, the GVN continued in 2004 to eradicate poppy when found, and to implement crop substitution. The GVN appears sincere in its poppy eradication efforts. However, GVN officials have admitted that complete eradication is probably unrealistic, given the remoteness of mountainous areas in the northwest and extreme poverty among ethnic minority populations who sometimes still use opium for medicinal purposes. The GVN's Ministry of Agriculture and Rural Development (MARD) continues to support crop substitution projects in various provinces, including a large (partially USG financed) project in Nghe An. The GVN has tasked MARD with developing a national crop substitution proposal to include in the GVN's 2006-2010 Master Plan.

Drug Flow/Transit. While law enforcement sources and UNODC believe that significant amounts of drugs are transiting Vietnam, DEA has not yet identified a case of heroin entering the United States directly from Vietnam. More commonly, drugs, especially heroin and opium, enter Vietnam from Laos and Cambodia, making their way to Hanoi or especially to Ho Chi Minh City, where they are transshipped by air or sea to other countries. The Australia-Vietnam heroin smuggling channel is significant. The ATS flow into the country during 2004 continued to be serious and not limited to

border areas. According to Vice Minister of Public Security Le The Tiem, in addition to opium or heroin, ATS can now be found throughout the country. According to “Phap Luat” (Law) newspaper, ketamine has emerged this year in Hanoi and other major cities. Law enforcement agencies gave warnings of the spreading use of ketamine in nightclubs and discos and called for stricter control of diversion from legal sources.

Domestic Programs/Demand Reduction. Within the GVN, the Ministry of Culture and Information (MCI) is responsible for public drug control information and education among the general population. The Ministry of Education and Training (MOET) carries out awareness activities in schools. Counternarcotics material is available in all schools and MOET sponsors various workshops and campaigns at all school levels. MOET reported that drug abuse remains a problem among the students in 51 universities, colleges and vocational schools in 50 provinces and cities. In its 2004 drug activity report, SODC reported that the border forces continued to play an “active role” in disseminating counternarcotics information to border villages and communes.

According to UNAIDS and the GVN, nearly 70 percent of cumulative HIV/AIDS cases in Vietnam are related to injection drug use. Furthermore, HIV surveillance indicates that nationwide, more than 30 percent of IDUs are HIV-infected; this percentage is much higher (60-80 percent) in Ho Chi Minh City, (65-85 percent) in Quang Ninh Province and other northeastern provinces. Vietnam has a network of drug treatment centers. According to MOLISA, with three new facilities in Binh Phuoc (2) and Hanoi (1), there are now 74 centers at the provincial level and 7,100 treatment facilities at lower levels. The provincial centers have a capacity of between 100 to 3,000 addicts each. According to Vice Minister of Public Security Le The Tiem, the addiction growth rate has been reduced, but the absolute number of addicts keeps increasing. As resources permit, localities have tried to increase the percentage of drug users in treatment centers (as opposed to permitting “community treatment,” a kind of outpatient drug treatment program). Hanoi, for example is attempting to put all known drug addicts in treatment centers and to launch a pilot compulsory treatment program in Gia Lam and Dong Anh Districts. This effort has been slowed by overcrowding and under capacity. Vietnam has also strived to integrate addiction treatment and vocational training to facilitate the rehabilitation of drug addicts. These efforts include tax and other economic incentives for businesses, which hire recovered addicts. Despite these efforts, at most 18 percent of recovered addicts find regular employment, and there has been some domestic criticism that keeping recovering addicts in supervised “employment parks” is a way of applying administrative punishment through “detention” in a way that fails to ensure the detainees’ civil rights. HIV/AIDS is a serious and growing problem in Vietnam and one that is closely related to intravenous drug use. In July 2004 Vietnam was designated the 15th focus country of PEPFAR (President Emergency Plan for AIDS Relief) and USG’s funding for FY05 is expected to be \$32 million. The Emergency Plan will support existing agencies working in HIV/AIDS in Vietnam, including USAID, U.S. CDC, DOL and DOD. The USAID budget for FY 2004 was \$4.5 million for HIV/AIDS, administered through several non-governmental organizations. USAID’s funding level will rise to \$9.2 million in 2004.

IV. U.S. Policy Initiatives and Programs

In 2003, Vietnam and the United States completed and signed a bilateral counternarcotics agreement, which came into force in 2004. The agreement included counternarcotics and law enforcement projects totaling \$333,390. It represents the first direct bilateral counternarcotics program assistance to Vietnam. The USG currently funds training annually for some GVN law enforcement officers and other officials involved in the legal arena for courses at the International Law Enforcement Academy (ILEA) in Bangkok. During calendar year 2004, U.S. Embassy Hanoi sent 65 Vietnamese law enforcement officers for training at the Academy. The USG also contributes to counternarcotics efforts through the UNODC. During 2004, the USG made contributions to two projects: “Measures to Prevent and Combat Trafficking in Persons in Vietnam,” and “Interdiction and Seizure Capacity Building with

Special Emphasis on ATS and Precursors.” The ATS project achieved its main goals in 2004 with the signing of an interagency MOU and the establishment of six interagency task forces at key border “hotspots” around the country.

The Road Ahead. The GVN is acutely aware of the threat of drugs and Vietnam’s increasing domestic drug problem. However, there is continued suspicion of foreign law enforcement assistance and/or intervention in the counternarcotics arena, especially from the United States. During 2004, as in previous years, the GVN made progress with ongoing and new initiatives aimed at the law enforcement and social problems that stem from the illegal drug trade. Notwithstanding a lack of meaningful operational cooperation with DEA, the GVN continued to show a willingness to take unilateral action against drugs and drug trafficking. Vietnam still faces many internal problems that make fighting drugs a challenge. With the entry into force of the counternarcotics LOA, the USG can look forward to enhanced counternarcotics cooperation in the area of assistance to Vietnamese law enforcement agencies. Operational cooperation, however, remains on hold pending the development of a legal framework in Vietnam to allow foreign law enforcement officers to carry out operations on Vietnamese soil, or the signing of a bilateral agreement between the United States and Vietnam that would create a mechanism for joint investigation and development of drug cases. Neither the legal overhaul nor the bilateral agreement seems likely to occur in the short term.

EUROPE AND CENTRAL ASIA

Albania

I. Summary

Drug trafficking is a significant problem in Albania, which is a major transit country for heroin from Afghanistan and Turkey destined for markets throughout Europe. Organized crime groups use Albania as a transit point for drug and other types of smuggling due to the country's strategic location, weak police and judicial systems, and porous borders. The most common illegal drugs are heroin, marijuana, and to a lesser extent, cocaine. Heroin is typically transported through the "Balkans Route" of Turkey-Bulgaria-Macedonia-Albania, and on to Italy, Greece and the Netherlands. Cocaine is smuggled from South America, via the United States, Italy, Spain, Greece or the Netherlands, and then passes through Albania for distribution throughout Western Europe. There was some domestic opium poppy cultivation in 2004. Marijuana is produced domestically for markets in Europe. There is evidence that high-quality Albanian hashish is exchanged in Turkey for heroin. Synthetic drugs, particularly Ecstasy, are a growing concern. Drug abuse is a growing problem in Albania itself, but remains on a smaller scale than in Western Europe. Statistics continue to be unreliable on drug trafficking or use, and the public is generally unaware of the problems associated with drugs.

The Government of Albania (GOA), largely in response to international pressure and with international assistance, is confronting criminal elements more aggressively, but is hampered by a lack of resources and endemic corruption. In 2001, Albania became a party to the 1988 UN Drug Convention and the 1961 UN Single Convention on Narcotic Drugs, In 2003 it became a party to the 1971 UN Convention on Psychotropic Substances.

II. Status of Country

The government is continuing its efforts to build security and stability throughout Albania. Police professionalism has increased in recent years, especially among units that defend public order. However, recent restructuring and large-scale firings at the Ministry of Public Order have reduced the ranks of internationally trained police officers, particularly in the counternarcotics sectors. The judiciary is still weak and subject to corruption. However, a judicial code of conduct and a code of disciplinary procedures against judges have been implemented, leading to the dismissal of several judges on corruption charges. The GOA has undertaken a number of measures to combat trafficking. Working with Italian law enforcement, the Albanian police and military brought a near halt to clandestine trafficking via speedboat across the Adriatic for a time during August 2002; however, there is evidence of renewed narcotics trafficking via this route, particularly from the ports of Shengjin and Durres. The Albanian Parliament recently passed an asset forfeiture law that allows the GOA to confiscate illegally obtained property of persons identified as members or connected to members of organized crime groups, including drug traffickers. In 2004, 312 cases of police corruption were reported by the Office of Internal Control to the Prosecutors' Office, with 251 police officers fired, demoted, fined, transferred and/or suspended. Only four of these cases involved narcotics trafficking and low-ranking officers were involved in all four cases.

Plagued by high unemployment, crime, and lack of infrastructure, the Albanian public focuses little attention or debate on the problem of drug abuse. There are no independent organizations that compile data on drug use in Albania. According to the government, there are an estimated 30,000 drug users. No significant government assets are dedicated to tracking the problem and NGOs have neither the capability nor the finances to thoroughly assess the extent of drug use in Albania. It is clear that the country is experiencing an upsurge in drug abuse among younger Albanians, though illicit drugs were only introduced to the country within the last decade. Heroin and marijuana abuse is growing; cocaine

and crack (crystal methamphetamine) are also available, but expensive, keeping use of these drugs at a low level. Heroin is imported from Macedonia, but is refined in Turkey or Afghanistan.

Marijuana is produced domestically and smuggled abroad. Cocaine is smuggled from South America to Albania, though the routes used to get it into Albania are in dispute. Albanian authorities have uncovered cases in which the cocaine was routed through the United States via airplane, while international law enforcement agencies cite Italy, Spain, Greece, and the Netherlands as the main trafficking routes. In 2004, the Toxicology Clinic at Tirana's Military Hospital—the only facility in the country to deal with overdoses—has treated 1,740 cases, an increase of nearly 50 percent over last year. Of these cases, 92 percent involved heroin use and the drugs were injected in 66 percent of the cases. The only special treatment center for drug addicts is a center operated by the Emmanuel Community, an Italian NGO under the auspices of the Catholic Church. The Community operates a group home for young recovering addicts. There are 12 young men housed at the center at this time.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The GOA has adopted a National Strategy Against Drugs for 2004-2010, which was developed with the input of central and local government institutions, international organizations and NGOs. In September, the Albanian Parliament passed an antiMafia asset forfeiture law that allows the GOA to confiscate illegally obtained property of persons identified as members or connected to members of organized crime groups, including drug traffickers. The GOA has taken steps to increase the level of accountability to which its law enforcement officials are held. For example, the Director of the Port of Vlore was suspended when seven kilograms of heroin were seized in Italy that had passed undetected through the Port.

Law Enforcement Efforts. Albanian police continued to increase their counternarcotics operations, including large drug seizures in Fier and at the ports of Vlore and Durres, and made successful raids in cooperation with Italian authorities. Authorities report that through November 2004, police arrested 285 persons for drug trafficking, seven of them foreign citizens. An additional 59 persons are being sought for arrest on narcotics offenses and another 39 are under investigation. The police seized 138.9 kilograms of heroin, 4,152.8 kilograms of marijuana, 1.2 kilograms of cannabis seeds, and 2.3 kilograms of cocaine, and destroyed 695 opium poppy plants under cultivation near Fier. They conducted massive helicopter and door-to-door searches throughout the region to search for more. Police also destroyed 73,757 cannabis plants and confiscated 10 tablets of Ecstasy.

Although the quantities of narcotics seized have increased compared to previous years, they still represent a fraction of the drugs transiting Albania. According to the Italian Authorities, in the first three quarters of 2004, they seized 875 kilograms of heroin, 796 kilograms of marijuana, and one kilogram of cocaine that had transited or originated from Albania. Drug trafficking by Albanian citizens in Italy is an extensive problem, with 766 Albanians arrested for drug offences in Italy and 47 deported to Albania in the first three quarters of 2004 alone. The most common drugs involved in these cases were heroin, marijuana, cocaine, hashish, and Ecstasy. Greek authorities reported that in the first three quarters of 2004, they confiscated 96 kilograms of heroin, 754 kilograms of cannabis pressed in bars, 2069 kilograms of dried cannabis, 1.5 kilograms of hashish oil, approximately three kilograms of cocaine and 68 Ecstasy tablets that had originated in or transited through Albania at Albania's border crossings with Greece. 278 Albanian nationals were arrested and tried in Greece in the first three quarters of 2004 on drug-related charges, including cocaine, heroin and cannabis trafficking, as well as possession and/or trafficking of Ecstasy, amphetamines, methadone in tablets and liquid form, and tranquilizers.

Organized crime plays a significant role in drug trafficking, including the facilitation of sales, financial arrangements, and smuggling. The government, with significant help from the Italian authorities, brought clandestine speedboat traffic across the Adriatic Sea to a near halt in August 2002; however,

there is evidence that renewed narcotics trafficking is taking place via this route, particularly from the ports of Shengjin and Durres. Tirana and the central Albanian city of Fier are also known as hubs for drug traffickers.

Due to a recent round of firings at the Ministry of Public Order, the Albanian State Police have decreased the number of police officers assigned to the Anti-Narcotics Unit. The director of the Anti-Narcotics Unit was unable to provide the number of officers and agents assigned to the Unit at this time, but the number is believed to be approximately 100, significantly reduced from the 2003 figure of 146 police officers and agents.

Corruption. Corruption remains a deeply entrenched problem. Low salaries and social acceptance of graft make it difficult to combat corruption among police, magistrates, and customs and border officials. Police and Customs officials signed a Memorandum of Understanding (MOU) in December 2002 to foster greater cooperation to help reduce the influence of corruption at Albania's borders. The UNODC reports that this MOU has been effective and led to more effective cooperation between police and customs officials. In addition, the Office of Internal Control, which was created with the assistance of U.S. Department of Justice police trainers (ICITAP) and tasked with investigating police corruption, has been instrumental in bringing about the arrests of several corrupt officers. For the period January through November 2004, some 288 officers have been fired, 72 suspended until the end of their criminal case, and 42 have been demoted. As a matter of policy, the GOA does not encourage or facilitate the illicit production or distribution of drugs or substances, or the laundering of proceeds from illegal drug transactions; however, there are allegations that some senior government officials are engaged in such activities.

Agreements and Treaties. An extradition treaty is in force between Albania and the U.S. Albania is a party to the UN Convention Against Transnational Organized Crime and its protocols on migrant smuggling and trafficking in women and children. Albania is also a party to the 1988 UN Drug Convention the 1961 UN Single Convention as amended by the 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances.

Cultivation and Production. With the exception of cannabis, Albania is not known as a major producer of illicit drugs. According to authorities of the Ministry of Public Order's Anti-Narcotics Unit, cannabis is currently the only drug grown and produced in Albania, and is typically sold in Greece, Italy, Turkey, Bulgaria, Montenegro, Kosovo, Slovenia, the United Kingdom, and Germany. Metric ton quantities of Albanian marijuana have been seized in Greece and Italy. In August 2004, alleged drug traffickers opened fire against an Italian Interforza helicopter, which was carrying Albanian and Italian police forces on a narcotics detection flight. The helicopter was flying over a large cannabis field adjacent to the southern Albanian village of Lazarat, near Gjirokaster. .

Drug Flow and Transit. Heroin is the main drug transiting Albania. Authorities report that heroin typically flows through the "Balkan Route." According to some reports, high quality Albanian hashish is shipped to Turkey in exchange for heroin. Ecstasy also finds its way to and through Albania, but in small quantities.

Domestic Programs/Demand Reduction. Drug abuse is a comparatively new problem in Albania. The GOA estimated that there were as many as 30,000 drug users in Albania in 2000 (the most recent year for which it has an estimate), six times the amount estimated in 1995; but NGOs believe the figure is closer to 10,000. According to the Tirana Military Hospital, 66 percent of the 1,740 overdose cases treated so far this year resulted from injected drug and heroin was the drug used in 92 percent of those cases.

The GOA's National Strategy for the Fight Against Drugs for 2001-2010 recognizes the limited resources of the GOA, but acknowledges the need to develop and implement treatment programs for

addicts. It also envisions treatment service models to be developed in Tirana and other cities in “high-risk” regions, including Shkoder, Vlore, and Berat.

IV. U.S. Policy Initiatives and Programs

Bilateral and Multilateral Cooperation. ICITAP and Prosecutor Advisors work closely with the Ministry of Public Order, the Ministry of Justice, and the Prosecutor General to combat organized crime and trafficking and to improve border control. In November 2002, the USG launched the Three Port Strategy, placing U.S. advisors to work with police, customs, and security officials at each of Albania’s three major ports of entry—Mother Teresa Airport and the Adriatic ports of Durres and Vlora—to bring interdiction operations up to international standards and disrupt trafficking through Albania. The GOA has welcomed this initiative, adding it to the National Strategy to Combat Trafficking in Human Beings.

In February 2004, the U.S. also assisted the GOA in the creation of the Organized Crime Task Force (OCTF). Under the OCTF, police and prosecutors work together to handle high profile and sensitive organized crime and trafficking cases. In addition, ICITAP has provided equipment and training to Albania’s drug-detection police dogs and their handlers, including constructing kennels for the dogs. Other U.S., EU, and international programs include support for Albanian customs reform and enhanced border controls, continued judicial training, efforts to improve cooperation between police and prosecutors, boarding officer training for the navy, and anticorruption programs. Albanian law enforcement has a good bilateral relationship with Italian Interforza and has cooperated with Italian law enforcement to carry out narcotics raids in Albania and conduct narcotics detection helicopter flights, among other activities.

The Road Ahead. U.S. and EU programs will continue to assist the GOA’s overall counternarcotics effort (narcotics, weapons, and humans) by providing integrated and coordinated border management and border control assistance. The U.S. will continue to encourage the GOA to make progress on illegal drug trafficking, to use law enforcement assistance efficiently, and to support legal reform.

Armenia

I. Summary

Armenia is not a major drug-producing country and its domestic abuse of drugs is relatively small. The Government of Armenia (GOAM), recognizing its potential as a transit route for international drug trafficking, is attempting to improve its interdiction ability. The Parliament passed a bill aimed at strengthening the police mandate to combat drug sales and trafficking in 2002. Together with Georgia and Azerbaijan, Armenia is engaged in an ongoing UN-sponsored Southern Caucasus Anti-Drug Program (SCAD), which was launched in 2001. Armenia is a party to the 1988 UN Drug Convention.

II. Country Status

As a Caucasian crossroads between Europe and Asia, Armenia has the potential to become a transit point for international drug trafficking. At present, limited transport traffic between the country and its neighboring states makes Armenia a secondary traffic route for drugs. Armenia Police Service's Department to Combat Illegal Drug Trafficking has accumulated a significant database on drug trafficking sources, routes and the people engaged in trafficking; scarce financial and human resources, however, limit the Police Service's ability to combat drug trafficking. Drug abuse does not constitute a serious problem in Armenia, and the local market for narcotics, according to the police, is not large. The principal drugs of abuse are opium, cannabis and ephedrine. Heroin and cocaine first appeared in the Armenian drug market in 1996 and, since then, there has been a small upward trend in heroin sales, while cocaine abuse has remained flat. The Interdepartmental Committee on Combating Drug Addiction and Drug Trafficking created in 1993 became an official Government of Armenia body in the past year. The Commission is headed by the Chief of Police.

III. Country Actions Against Drugs in 2004

Policy Initiatives. There were no new policy initiatives since the enactment on May 10, 2003 of the Law on Narcotics and Psychotropic Substances of the Republic of Armenia.

Accomplishments. Preventive measures to identify and eradicate both wild and illicitly cultivated cannabis and poppy continued in 2004. The draft law on Money Laundering, which has passed the first reading, should be enacted in the near future.

Law Enforcement Efforts. In the first 9 months of 2004, the Armenian Police uncovered 340 criminal drug trafficking cases and 156 cases of criminal drug abuse. In this period more than 12 kilograms of drugs were seized, more than twice as much as during the first 9 months of 2003.

Corruption. Corruption remains a problem in Armenia. Although the GOAM has taken some steps to develop an anticorruption program, political will and concrete steps toward implementation have not been adequate. The government does not encourage or facilitate illicit production or distribution of narcotic or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal drug transactions and no government officials have been found to engage in these activities.

Agreements and Treaties. In 1992 in Kiev, the Ministries of Internal Affairs of CIS (Soviet successor states) member-countries entered into an "Agreement against Illicit Traffic in Narcotic Drugs, Psychotropic Substances and Substances Frequently Used in Illicit Manufacturing of Drugs." On June 6, 1999 in Tbilisi, a "Memorandum of Understanding on Cooperation in the Area of Narcotics Control and Money Laundering" was signed between Armenia, Georgia, Iran and UNDCP. Armenia also has a number of bilateral agreements with CIS countries on law enforcement cooperation that include the

area of illicit traffic of narcotic drugs. Armenia is party to the 1988 UN Drug Convention, the 1961 UN Single Convention as amended by the 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances. Lastly, Armenia is a party to the UN Convention Against Transnational Organized Crime and its protocols on migrant smuggling and trafficking in women and children.

Cultivation and Production. Hemp and opium poppy grow wild in the northern part of Armenia, particularly in the Lake Sevan basin and some mountainous areas. From September 10 to October 10, 2004, Armenian Police carried out “Hemp and Poppy 2004” an annual measure to find and eradicate cultivated and wild growing hemp and poppy.

Drug Flow/Transit. The principal transit countries through which drugs pass before they arrive in Armenia include Iran (opiates, heroin), Georgia (opiates, cannabis, hashish), and the Russian Federation (opiates, heroin). Armenia’s borders with Turkey and Azerbaijan remain closed due to the Nagorno-Karabakh conflict; however, according to the police, opiates and heroin are smuggled to Armenia from Turkey via Georgia. When all Armenia’s borders reopen, the police believe that drug transit could increase significantly.

Demand Reduction. The majority of Armenian addicts are believed to be using hashish, followed by heroin and then by ephedrine. Armenia has adopted a policy of focusing on prevention of drug abuse through awareness campaigns and treatment of drug abusers. These awareness campaigns are being implemented and manuals are being published under the framework of the South Caucasus Anti-Drug (SCAD) Program, funded by the UNDCP.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. The USG continues to work with the Government of Armenia to increase the capacity of Armenian law enforcement. Joint activities include development of an independent forensic laboratory, improvement of the law enforcement training infrastructure and establishment of a computer network that will link law enforcement offices within Armenia and between Armenia and the rest of the world.

The Road Ahead. The USG will continue aiding Armenia in its counternarcotics efforts through capacity building of Armenian law enforcement and will continue to engage the government on operational trafficking issues.

Austria

I. Summary

Austria is primarily a transit country for drug trafficking along major trans-European routes. Foreign criminal groups from former East Bloc countries, Turkey, West Africa, and Central and South America dominate the organized drug trafficking scene. Austrian authorities do not consider consumption of illegal drugs to be a severe problem. The total number of drug addicts is estimated at around 20,000, or 0.25 percent of total population. Production, cultivation and trafficking by Austrian nationals remain insignificant.

Cooperation with U.S. authorities was outstanding during 2004 and led to significant seizures, frequently involving multiple countries. The visit to Vienna of U.S. Attorney General Ashcroft in January 2004, Austrian Interior Minister Strasser's September 2004 visit to Washington, and a January 2004 visit to the ONDCP by Austria's National Drug Coordinator Pietsch and national legislators underscored the close bilateral cooperation between the countries. In 2004, Austria continued its efforts to intensify regional police cooperation within the Salzburg Forum, a meeting of regional interior ministers, as well as with Balkan countries. Furthermore, Austria maintained a leading role within the central Asian border security initiative. Austria has been a party to the 1971 and 1988 UN drug conventions since 1997.

II. Status of Country

Production of illicit drugs in Austria continues to be marginal. However, Austria remains a transit country for drugs which organized crime syndicates transport along the major European drug routes to Western Europe. There were 163 drug-related deaths in 2003, compared to such deaths in 2002. Preliminary figures for 2004 indicate little change compared to 2003. Experts point out that the percentage of drug deaths from mixed intoxication has been rising steadily in recent years. The 21,780 drug-related offenses in 2003 represent a 0.33 percent decrease over 2002. Of these offenses, 470 involved psychotropic substances, and 93 of them precursor materials. Experts estimate the number of conventional, illicit drug abusers at around 20,000-25,000 (0.25-0.30 percent of total population). The number of users of MDMA ("Ecstasy") decreased slightly in 2004, while usage of amphetamines was on the rise during the same period, as these substances became increasingly available in non-urban areas. Studies show that about one third of young adults (ages 19-29) had "some experience" with cannabis, and 2-4 percent of this age group had already used cocaine, amphetamines and Ecstasy. Studies also found that about 25 percent of teenagers (ages 13-18) had already had "some experience" with illegal substances. In 2004 one gram of cannabis sold for Euros 7 (\$9.30) and one Ecstasy tablet cost Euros 3.00 (\$4). Street heroin sold for Euros 70.00 (\$93) per gram, cocaine for Euros 100.00 (\$133) per gram, and amphetamines at an average of Euros 60.00 (\$80) per gram.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Overall, the government continued its no tolerance policy regarding drug traffickers, while continuing a policy of "therapy before punishment" for non-dealing drug offenders. A new law passed in 2004 allows police to mount surveillance cameras in high-crime public spaces. Additionally, the law provides for the establishment of "protection zones" around schools, pre-schools and old-age homes. According to the law, police may ban any person suspected of drug dealing within a protection zone from that area for up to 30 days. In reaction to intense public discomfort over an increase in the number of asylum seekers engaged in criminal activity, including drug dealing, the government submitted a legislative proposal for more restrictive asylum policies which will take effect

in 2005. Throughout 2004, there was an ongoing debate about lowering the existing threshold for the allowable amount of cannabis a person can carry without being prosecuted, as well as about whether to expand police powers to allow police to test drivers suspected to be under the influence of drugs, and about the introduction of mandatory drug tests at schools.

Throughout 2004, Austria maintained its lead role within the Central Asian Border Security Initiative (CABSI) and the VICA (Vienna Initiative on Central Asia) project. At the same time, Austria intensified efforts to cooperate with countries in the Balkans, dispatching law enforcement representatives to Austrian embassies in the region, most recently to the Austrian embassy in Belgrade. Furthermore, Austria continued to address drug trafficking and related security issues through the Salzburg Forum—a recurring ministerial-level security policy meeting which includes representatives from Austria, the Czech Republic, Slovakia, Poland, Hungary, and Italy. Also in 2004, Austria, together with Italy, started a project within the United Nations Office on Drugs And Crime (UNODC) for reform of the justice system in Afghanistan. Additionally, Austria works together with the UNODC, the EU and Iran to establish more effective border control along the Afghanistan-Iranian border.

Law Enforcement Efforts and Accomplishments. No comprehensive seizure statistics are available for 2004. The total street value of illicit drugs (cannabis products, heroin, cocaine, LSD doses, and Ecstasy pills) seized in 2003 amounted to 8.2 million Euros (\$10.9 million). Quantities of cannabis herb and cannabis resin rose by 23 and 80 percent respectively over 2003, cocaine seizures rose by 58 percent, and Ecstasy seizures rose by 10 percent over the same period. Seizures of heroin and LSD dropped by 28 and 65 percent, respectively. Regarding psychotropic substances, authorities booked a total of 461 individuals for related criminal offenses, a slight decrease over 2002. Overall, authorities made 15,600 drug seizures of psychotropic substances, 22 percent less than in 2002. The number of criminal cases involving precursor materials rose by 30 percent, from 60 in 2002 to 93 in 2003. For 2004, officials expect higher seizure figures for heroin and cocaine, and a significant reduction of seizures of Ecstasy.

Corruption. The GOA's public-corruption laws recognize and punish the abuse of power by a public official. Austria has been a party to the OECD Anti-Bribery Convention since 1999. Recent legislation has eliminated tax deductibility of bribes and any gray market payments. No records exist yet to assess the degree of its enforcement. There are no cases pending at the moment, which involve any bribery of foreign public officials. The U.S. Government is not aware of the involvement of any high-level Austrian government officials in drug-related corruption.

Agreements and Treaties. An extradition treaty and mutual legal assistance treaty are in force between Austria and the U.S. In 2004, Austria enacted legislation to implement the EU council framework decision on the European arrest warrant and the surrender procedure between member states. Austria is a party to the 1988 UN Drug Convention, the 1961 Single Convention On Narcotic Drugs and its 1972 Protocol, and the 1971 UN Convention On Psychotropic Substances. Vienna is the seat of the United Nations Office for Drugs and Crime (UNODC). Austria has been a "major donor" to the UNODC with an annual pledge of approximately \$440,000. Austria ratified the UN Convention Against Transnational Organized Crime in 2004.

Cultivation. The U.S. Government is not aware of any significant cultivation or production of illicit drugs in Austria.

Drug Flow/Transit. Austria is not a source country for illicit drugs. Illicit drug trade by Austrian nationals is negligible. Organized drug trafficking is carried out by foreign criminal groups (Kurdish clans from Turkey, Albanians, and nationals of the countries of the former Yugoslavia, West African gangs, and Central and South American gangs), which are well established on major European drug routes, particularly along the Balkan drug route. The illicit drug trade increasingly relies on airports in central and east-Europe, including Austria. Due to increased surveillance as a result of terrorist threats,

the number of cocaine body packers and smuggling in luggage decreased significantly at Vienna Airport in 2004. Heroin smuggling by air from Turkey via Vienna to the Netherlands increased. Trafficking of Ecstasy products (originating in the Netherlands) was slightly down in 2004 from the record in 2003. Illicit trade in amphetamines, carried out by criminal groups from Poland and Hungary, and trade in cocaine, increased.

Domestic Programs (Demand Reduction). Austrian authorities and the public generally view drug addiction as a disease rather than a crime. This is reflected in rather liberal drug legislation and in related court decisions. The center-right government has made the fight against drug trafficking a major policy goal. At the same time, it remains committed to measures designed to prevent social marginalization of drug addicts. Federal guidelines ensure minimum quality standards for drug treatment facilities. The use of heroin for maintenance during drug treatment is generally not allowed. Demand reduction policies emphasize primary prevention, drug treatment and counseling, as well as “harm reduction.” Ongoing challenges in demand reduction are the need for psychological care for drug abusers, and greater attention to older drug abusers and to immigrant drug abusers.

Primary intervention starts at the pre-school level and continues through secondary school, extending also to apprenticeship institutions and out-of-school youth programs. The government and local authorities routinely sponsor educational campaigns inside and outside schools. Overall, youths in danger of addiction have become prime targets of new treatment and care policies.

Austria has syringe exchange programs in place for HIV prevention. HIV prevalence rate among drug-related deaths slightly increased (to 8 percent) in 2004, while hepatitis prevalence rates declined (hepatitis C: from 71 percent to 51 percent; hepatitis B: from 47 percent to 34 percent). Policies toward greater diversification in substitution treatment (methadone, prolonged-action morphine and buprenorphine) continued. Throughout the year experts also discussed introduction of consumption rooms and heroin maintenance programs.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. Austrian cooperation on U.S.-interest drug cases is excellent. In the past, Austrian interior ministry officials have exchanged lessons-learned with the FBI, DEA and Department of Homeland Security to improve enforcement techniques. Austria and the U.S. operate a joint “contact office” in Vienna that serves as a key facilitator for flexible and speedy anticrime cooperation. The U.S. Embassy regularly sponsors speaking tours of U.S. narcotics experts in Austria.

The Road Ahead. The U.S. will continue to support Austrian efforts to create more effective tools for law enforcement, and work with Austria within the context of U.S.-EU initiatives, the UN and the OSCE. U.S. priority will remain promoting a better understanding of U.S. Drug policy among Austrian officials.

Azerbaijan

I. Summary

Azerbaijan is located along a drug transit route running from Afghanistan and Central Asia west into Western Europe, and from Iran north into Russia and west into Western Europe. Consumption and cultivation of narcotics are low, but levels of use are increasing. During 2004, the main drugs seized were hashish and opium. Since 2002, the United States has funded counternarcotics assistance to Azerbaijan through the Freedom Support Act. Azerbaijan is a party to the 1988 UN Drug Convention.

II. Status of Country

Azerbaijan's main narcotics problem is the transit of drugs through its territory. Azerbaijan emerged as a narcotics transit route several years ago because of the disruption of the "Balkan Route" due to regional conflicts in several countries of the former Yugoslavia. Narcotics from Afghanistan enter by land from Iran or via the Caspian Sea from Central Asia, and continue on to markets in Russia and Europe. Azerbaijan shares a 611-km frontier with Iran, and its border control forces are insufficiently trained and equipped to patrol it effectively. Iranian and other traffickers are exploiting this situation. Approximately 14 percent of territory claimed by Azerbaijan is occupied by Armenia; reports that narcotics transit through this area are impossible to verify from Azerbaijan and denied vigorously by Armenia. Domestic consumption continues with approximately 16,800 persons registered in hospitals for drug abuse or treatment in Azerbaijan. The actual level of drug abuse is estimated to be many times higher.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In 2004, the Virtual Law Enforcement Center completed the training of law enforcement personnel from Moldova, Ukraine, Azerbaijan and Georgia. Computer equipment was donated to the government of Azerbaijan (GOAJ) in order to initiate the cooperative effort of information exchanges among the participating countries. In early 2005, training will begin in the other participating countries to integrate them into the system. The center will be organized around an encrypted system of information exchange among the law-enforcement agencies in member countries, with the goal of coordinating efforts against terrorism, narcotics trafficking, small arms, and trafficking in persons. During the first ten months of 2004, the U.S. provided \$715,000 to continue the implementation of the State Commission together with the UN's South Caucasus Anti-Drug Program (SCAD), a five-year regional initiative. The SCAD Program has established a resource center and information network that provides access to a central database of information pertaining to narcotics control.

Accomplishments. According to the Ministry of National Security, during the first ten months of 2004, GOAJ seized 6.2 kilograms of heroin, 28.6 kilograms of hashish, 13.7 kilograms of opium, and 12.5 kilograms of marijuana. From 2001-2004, 10,157 drug crimes were recorded and authorities detained 638 kilograms of drugs including 367 kilograms of marijuana, 134 kilograms of opium, 20 kilograms of heroin and 25.8 kilograms of hashish. More than 1.5 tons of narcotics were destroyed in that period.

Law Enforcement Efforts. The Ministry of National Security reported that during the first ten months of 2004, 222 people were prosecuted for trafficking drugs. The Police lack basic equipment and have little experience in modern counternarcotics methods. Border control capabilities on the

border with Iran and Azerbaijan's maritime border units are inadequate to prevent narcotics smuggling.

Corruption. Corruption remains a significant problem, but the GOAJ has taken steps to address it with new anticorruption legislation enacted in 2004, which will go into effect in January 2005. However, the GOAJ has done little to implement anticorruption legislation, vet specialized units, or adopt a charter for the anticorruption commission.

Agreements and Treaties. Azerbaijan is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 Single Convention as amended by the 1972 Protocol. Azerbaijan also is a party to the UN Convention against Transnational Organized Crime and its protocols against migrant smuggling and trafficking in women and children.

Cultivation and Production. Cannabis and poppy are cultivated illegally, mostly in southern Azerbaijan.

Drug Flow/Transit. Narcotics traffickers rely on familiar transit routes. However, drug enforcement officials suspect that traffickers may attempt to use new direct flights between Kabul and Baku as an alternate route, but there is no evidence so far to support this theory. Opium and poppy straw originating in Afghanistan transit through Azerbaijan from Iran, or from Central Asia across the Caspian Sea. Drugs are also smuggled through Azerbaijan to Russia, then on to Central and Western Europe. Azerbaijan cooperates with Black Sea and Caspian Sea littoral states in tracking and interdicting narcotics shipments, especially morphine base and heroin. Caspian Sea cooperation includes efforts to interdict narcotics transported across the Caspian Sea by ferry. Law enforcement officials report that they have received good cooperation from Russia.

Demand Reduction. Opium and cannabis are the most commonly used drugs. The GOAJ has begun education initiatives directed at curbing domestic drug consumption, particularly among students.

IV. U.S. Policy Initiatives and Programs.

Bilateral Cooperation. In 2004 the Export Control and Related Border Security (EXBS) program continued to provide assistance to the Azerbaijan State Border Guards and Customs services. EXBS training and assistance efforts, while aimed at nonproliferation of weapons of mass destruction, directly enhance Azerbaijan's ability to interdict all contraband, including narcotics. During 2004, EXBS sponsored numerous courses for the Border Guard Maritime Brigade. These courses included "Advanced International Border Interdiction Training" which introduced the participants to real-time, hands-on inspections and Border Patrol tactics in the field. EXBS also hosted the "US-Azerbaijan Legal Technical Forum III" which provided assistance to the GOAJ in strengthening its legal framework for an export control system in Azerbaijan that is consistent with international standards. In addition, in 2004, EXBS Conducted a Counter-Narcotics Instructor Course and reorganized the Border Guards conscript and officer training programs.

U.S. and European experts participated in a three-day workshop on "Implementing the norms of international law on extradition and mutual legal assistance related to drug offences into national law and practice." During this workshop, U.S. and European legal experts provided training to and shared advice and practical experience with relevant Azeri legal professionals (police, prosecutors, judges and parliament) on the implementation of Azerbaijan's international legal obligations related to drug offences.

Key Azerbaijani law enforcement officials participated in a U.S.-based study tour which provided them with a first hand look at how the U.S. criminal justice system operates in practice, with a particular focus on issues related to reforms currently underway in Azerbaijan. The participants were

introduced to various investigative and forensic techniques and the concept of vetted units of police and prosecutors working as a team.

The Road Ahead. The U.S. and Azerbaijan will continue to expand their efforts to conduct law enforcement assistance programs in Azerbaijan. Such programs would include helping the Government of Azerbaijan modernize its criminal records system, training and exchanges for Azerbaijan's law-enforcement officials and police officers, and forensic lab development, in addition to counternarcotics/drug enforcement programs. Cooperation between DEA and the GOAJ continues, and the DEA plans to help Azerbaijan increase its counternarcotics capabilities.

Belarus

I. Summary

Belarus continues to grow in importance as a transit country for drugs. Local drug use, drug-related crime, and HIV/AIDS infection rates continue to increase. Belarus does not produce drugs for export, though it may be a source of precursor chemicals. With the help of other nations and organizations, Belarus is improving its efforts to combat drug abuse and trafficking, but corruption, and lack of organization, funding and equipment continue to hinder progress. Belarus is a recipient of the EU/UNDP program BUMAD (Belarus, Moldova, Ukraine Anti-Drug Programme), which seeks to reduce trafficking of drugs into the European Union. The program seeks to develop systems of prevention and monitoring, improve the legal framework, and provide training and equipment. It is the most significant counternarcotics program in Belarus at this time.

II. Status of Country

Drugs increasingly transit Belarus on their way to points east, west and north due to Belarus' porous borders and good railway and road system. Most heavy drugs, especially heroin, enter Belarus from Russia. This trade is facilitated by Belarus' customs union with Russia, and the resultant lack of border controls between Belarus and Russia. Before the customs union with Russia, more than 30 percent of all seizures occurred on that eastern border. Police claim Roma groups control much of the drug trade into Belarus, particularly heroin. The formation of the Eurasian Economic Community (Belarus, Russia, Kazakhstan, Kyrgyz Republic, and Tajikistan) has the potential to create a broader border-free area, which would facilitate all types of trafficking. Narcotics enter Belarus from all neighboring countries, except Latvia. Belarusian border guards lack the training, and in many cases the equipment, to conduct effective searches.

In the first nine months of 2004 authorities seized 1,750 kilograms of narcotics, slightly more than in all 2003 (1,688 kilograms). Official seizure figures do not reflect the reality of the problem, as it is assumed most drugs transit Belarus undetected. Neighboring countries reported an increase in drugs that came from or passed through Belarus.

Drugs enter Belarus from Russia, Ukraine (Semi-refined Opium); Baltic states, the Netherlands, Poland (Amphetamines); Afghanistan, Caucasian republics, Pakistan, Russia, Tajikistan, Turkmenistan, Ukraine (Heroin); Caucasian republics, Ukraine (Marijuana); Russia (Methadone); Ukraine (Poppy Straw).

Drugs transit Belarus to Poland, Russia (Amphetamines); Russia, Western Europe (Heroin); Lithuania, Russia (Marijuana, Poppy Straw); Poland, Russia (Precursors); Baltic states, Russia (Rohypnol).

Police report Nigerian drug rings frequently hire Belarusian citizens to smuggle drugs from Russia, South America, Africa, and the countries of the Golden Crescent/Golden Triangle into Western Europe.

There is no evidence of large-scale drug production in Belarus. However, Belarus has all the resources necessary for the production of synthetic narcotics and lack of controls, which lead to such production elsewhere. The chemical industry, completely government owned, is allowed to police itself. According to law enforcement officials in neighboring countries, Belarus is a source of precursor chemicals, but officials in Belarus deny this.

According to official data, there are approximately 10,500 registered drug addicts in Belarus, double the number since 2002. Belarusian experts estimate the real number at 100,000. The estimated number

of addicts is growing by 20-25 percent annually. The percentage of youth, women, and student addicts is growing. The level of addiction is worst in Gomel Oblast, where in some towns the level of addiction per population is four times the national average.

The many unregistered addicts fear consequences at work, school, and in society if their addiction becomes known. Drug use is heavily criminalized and highly stigmatized by government and in society. The exception is among youth. A recent study found youth have ready access to narcotics at dance clubs, university dormitories and educational facilities. A strong link between HIV/AIDS and drug use exists. In the worst hit city, Svetlogorsk, 74 percent of registered drug users are HIV/AIDS positive. The number of HIV/AIDS positive registered addicts is increasing by 40 percent annually. Sharing of syringes by intravenous drug users is the primary cause of transmission of HIV/AIDS in Belarus.

Belarus' narcotics problems have increased many-fold since the Soviet era, and continue to worsen. Since 1987, the number of drug-related crimes has increased by 17.3 percent; the number of people charged with narcotics-related offences grew by 18.3 percent; the number of people charged with the sale of illegal narcotics increased by 41 percent; charges against drug users increased to 102.5 percent; and the total weight of drugs seized increased roughly 100 percent.

Synthetic drugs are growing in popularity. In the last two years heroin use has dropped sharply, replaced by the slightly more expensive but much longer lasting methadone. In the first half of the year, authorities seized 464 grams of methadone, a 470 percent increase over the same period in 2003. Amphetamine use is growing rapidly, particularly among youth; police seized 20.5 kilograms of amphetamines in the first five months of the year, compared to less than one kilogram in all of 2000.

The average age of drug users is 25. Seventy-nine point one percent of drug users are men; 8.3 percent are under 18 years old and 22.5 percent are ages 18-24. Thirty-seven point eight percent of drug addicts first used drugs in prison, 50.9 percent in their local neighborhoods, and the rest at work, in the military, or at school.

Belarus continues to have problems with abuse of, the extract from poppy straw, which is very popular in Ukraine, Russia, and Belarus. Poppy straw was the drug seized in greatest quantity in 2004 (1,150 kilograms). There is, however, no evidence of large-scale production of poppies for export.

III. Country Actions Against Drugs in 2004

Law Enforcement Efforts. From January to October, 2,825 people were charged with drug crimes. Authorities seized 1,749 kilograms of drugs from January to November 2004, but experts, including government officials, agree that this quantity fails to reflect the real quantity of drugs transiting or used in Belarus.

Enforcement efforts suffer from lack of communication and coordination among agencies, as well as from lack of training and resources. For example, less than 50 percent of border checkpoints have adequate equipment. Even when the equipment is present, border guards often do not know how to use it. Main shortages involve x-ray devices, air detectors, mobile labs, computers and networks, and drug-detection dogs. Police officers have no training in undercover operations or controlled delivery stings. Despite these resource problems, the majority of government officials take seriously their efforts to combat drug smuggling. By all accounts officials involved in combating drug trafficking cooperate well with their colleagues in neighboring countries.

Drugs seized January-November 2004 (in kilograms): Poppy Straw (1150); Marijuana (260); Extraction Opium (210); Benzodiazepine (57.9); Amphetamine/Methamphetamine (27.6); Hashish (22.6); Acetylated Opium (liquid heroin) (14.5); Hallucinogens (2.7); Heroin (2.5); All Other Drugs (under one kilogram).

Corruption. Corruption is a problem among border and customs officials. Some reports implicate high-level members of the regime in narcotics trafficking. These factors make interdiction of narcotics difficult. In 2004 there was a crack down on corruption amongst border guards, though thus far the prosecuted cases have not included narcotics-related offences or any senior officials.

Agreements and Treaties. Belarus is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention on Narcotic Drugs, as amended by the 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances. Belarus is a party to the UN Convention against Transnational Organized Crime and its three protocols.

The international donor community has had repeated difficulties in getting assistance programs registered by the government. There have also been attempts by the Belarusian government to tax foreign aid, despite international agreements. These problems have slowed the implementation of international assistance programs.

Cultivation/Production. There is no confirmed drug cultivation or production in Belarus. Belarus law enforcement officials are not trained in tracking precursor chemicals or the detection of synthetic drug manufacturing facilities. There is no legislation in Belarus dealing with precursor chemicals. Control of precursors is not on the agenda of policy makers.

Drug Flow/Transit. The Government of Belarus is not operating any significant programs particularly aimed at combating trafficking. The BUMAD program is attempting to improve Belarus' border checkpoints and the training of law enforcement personnel. Resource shortages plague the government's efforts in this area.

President Lukashenko in 2003 threatened to open Belarus' western border to all forms of trafficking, narcotics, migrants and trafficked women, in retaliation against EU efforts to encourage democratization. However, he did not act on this threat. This year Lukashenko on several occasions decried the "great costs" Belarus incurs preventing smuggling into Europe, and ordered his government to seek reimbursement from the European Union.

Domestic Programs (Demand Reduction). A national drug abuse prevention strategy exists, called The State Program of Complex Measures Against Drug and Psychotropic Substances Abuse and Their Illicit Trafficking for 2001-2005. Government officials confess, however, that the program lacks details of implementation, timeframes, as well as sufficient financial support. The Ministry of Interior has primary responsibility for its implementation. Other institutions involved in reducing drug demand include the Ministry of Health, Ministry of Foreign Affairs, Ministry of Education, Committee on State Security (BKGB), and the State Customs Committee.

Belarus still lacks an effective system of counternarcotics education, though such programs occur at the local level with varying degrees of success. Police officers who work with juvenile crime run drug prevention programs in schools, but lack sufficient training, resources, and nation-wide coordination of curriculum. The BUMAD program aims to formulate a national curriculum and provide training.

Treatment of drug addicts is generally done in psychiatric hospitals, either as a result of court remand or self-enrollment, or in prisons. The emphasis of all programs is only detoxification and stabilization. NGOs run six rehabilitation centers, which attempt to provide long-term care, including psychological assistance and job training. Financial limitations constrain the breadth of these programs.

IV. U.S. Policy Initiatives and Programs

The USG has not provided narcotics/justice sector assistance to the GOB since a U.S. policy of selective engagement became effective in February 1997.

The Road Ahead. The USG will continue to encourage Belarus authorities to enforce their counternarcotics laws.

Belgium

I. Summary

Belgium remains an important transit point for a variety of illegal drugs, most significantly Ecstasy, cocaine, and heroin. It is the second-largest supplier of Ecstasy to the U.S., and plays a significant role in the shipment of cocaine from South America to Europe. Usage and trafficking of heroin in Belgium appear to be on the rise. Belgium is also a transit point for a variety of chemical precursors used to make illegal drugs. Traffickers use Belgium's busy seaports and two international airports to move drugs to their primary markets in the United Kingdom, the Netherlands, and elsewhere in Western Europe—as well as to the United States to a much lesser extent. Belgium takes a proactive approach to interdicting drug shipments and cooperates with the U.S. and other foreign countries to help uncover distribution rings abroad. Belgian authorities also continued to fight the production of illicit drugs within their borders, shutting down eight synthetic drug labs in 2004. Belgium is party to the 1988 UN Drug Convention, contributes to the UNODC's budget, and is part of the Dublin Group of countries concerned with combating narcotics trafficking.

II. Status of Country

Belgium produces synthetic drugs and cannabis and remains a key transit point for illicit drugs bound for the UK, the Netherlands, and elsewhere in Western Europe, as well as the United States. Airline passenger couriers remained the principal means of transporting Ecstasy to the United States, while the mailing of pills via both express and regular mail continued to decline. Belgian officials believe that sea freight is likely used for shipping larger amounts of Ecstasy from Belgium to the United States, but no such shipments have yet been discovered. Belgian authorities continue to make a concerted effort to stem the tide of Ecstasy headed for the United States. Turkish groups continue to control most of the heroin trafficked in Belgium. This heroin is principally shipped through Belgium to the UK, but there appears to be growing demand in Belgium as heroin becomes cheaper, purer, and more readily available. Heroin usage in Belgium is spreading to “casual” club users who sniff small, relatively inexpensive doses.

Hashish and cannabis remain the most widely distributed and used illicit drugs in Belgium. Although the bulk of the cannabis consumed in Belgium is produced in Morocco, cultivation in Belgium continues to increase. In October 2004, the Belgian Supreme Court revoked the article of the 2003 Drugs Act that had instructed authorities not to prosecute minor possession of cannabis for personal consumption. This revocation, however, is believed to be temporary and knowledgeable observers of the drug scene in Belgium predict that it will have no major bearing on either domestic demand or police seizures. Cannabis seizures have remained stable and even lower than usual in 2004, a trend that may be explained by the rise of indoor cultivation.

Although Belgium is not a major producer of precursor essential chemicals used in the illicit manufacture of drugs, it is an important transshipment point for these chemicals. Precursor chemicals that transit Belgium include: acetic anhydride (AA) used in the production of heroin; PMK and BMK chemical precursors used in the production of Ecstasy; and potassium permanganate used in cocaine production.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Belgium's National Security Plan for 2004-2007 cites synthetic drugs and heroin as the top large-scale drug trafficking problems. Of particular concern to Belgium in the next three years

will be the importation of cocaine and the exportation of synthetic drugs. The National Security Plan calls for attention to be concentrated on shutting down clandestine laboratories for synthetic drugs, on breaking up criminal organizations active in the distribution of synthetic drugs and heroin, and on halting the rise of drug tourism in Belgium. The Federal Prosecutor's Office, established in 2002, works to centralize and facilitate mutual legal assistance requests on drug trafficking investigations and prosecutions. At the request of the Belgian government, U.S. DEA and DoJ officials conducted a five-day training seminar in March for the Belgian Federal Prosecutor's Office, local prosecutors, investigating judges, and the Federal Police. The seminar addressed asset seizure and money laundering.

Accomplishments. Belgian authorities seized eight laboratories in 2004: three producing Ecstasy, three producing amphetamines, and two producing GBL. As in past years, all production sites were located along the northern border with the Netherlands. These seizures bring the number of laboratories seized in the past six years to 41. By comparison, only ten laboratories were seized in the six-year period from 1992 to 1998. During 2004, two high-capacity amphetamine labs were seized. One of these super laboratories, reported to be the largest ever seized in Europe, had produced 2.5 tons of amphetamine over the course of four months. Belgian authorities discovered over 12,000 liters of toxic chemical by-products of refining at this lab, which had been operational for two years. An investigation conducted jointly among the U.S., Belgium, and the Netherlands resulted in the arrest of several Israeli traffickers. The investigation is believed to have largely dismantled an important Israeli trafficking group, which had once dominated the export of Ecstasy from Belgium and the Netherlands. The DEA Brussels Office documented the seizure of more than 1,500 kilograms (7.5 million tablets) of Ecstasy in 2004. Major seizures included in this sum were 120 kilograms located inside a safe in Antwerp and 354 kilograms sent to Italy in a pizza oven. This figure does not take into account an 835 kilogram controlled delivery to Australia in November 2004.

Law Enforcement Efforts. Belgian Law Enforcement authorities actively investigate individuals and organizations involved with illegal narcotics-trafficking. In keeping with Belgium's drug control strategy, they focus their efforts on combating synthetic drugs, heroin and cocaine. Belgian authorities continued to cooperate closely with DEA officials stationed in Brussels.

At Brussels' Zaventem airport in the Brussels region, non-uniform personnel trained by the Federal Police to help detect drug couriers became increasingly proficient during 2004. Over 114 kilograms of illicit drugs were seized at Zaventem in 2004; the majority of these seizures involved one to five kilogram amounts of cocaine. Belgian authorities continued a proactive approach to searches and inspections of U.S.-bound flights at the airport. The resources Belgium devotes to the inspection of sea freight, however, appears almost certainly to be inadequate. Although Belgium's busy seaports appear to be used to ship Ecstasy (as demonstrated by a major seizure in Australia that had been shipped from the port of Zeebrugge in 2003), Belgian inspectors have uncovered no such shipments at any Belgian port in 2003 or 2004. Port inspectors did, however, seize significant amounts (575 kilograms) of cocaine at the port of Antwerp in 2004.

Corruption. The Belgian government does not encourage or facilitate illicit production or distribution of narcotic or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal drug transactions. No senior official of the Dutch government engages in, encourages or facilitates the illicit production or distribution of such drugs or substances, or the laundering of proceeds from illegal drug transactions. Corruption is not judged a problem within the narcotics units of the law enforcement agencies. Legal measures exist to combat and punish corruption.

Agreements and Treaties. Belgium is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention and its 1972 Protocol, as well as the 1971 UN Convention on Psychotropic Substances. In August 2004, Belgium ratified the UN Convention against Transnational Organized Crime, the trafficking in persons protocol and migrant smuggling protocol, and ratified the firearms protocol in

September 2004. The United States and Belgium have an extradition treaty, as well as a Mutual Legal Assistance Treaty (MLAT) that entered into force in January 2000. As part of a joint U.S.-EU venture, in 2003 the U.S. and Belgium signed bilateral instruments implementing the 2003 U.S.-EU Extradition Agreement.

Under a bilateral agreement with the United States as part of the U.S. Container Security Initiative, U.S. Customs officials in 2004 were stationed at the Port of Antwerp to serve as observers and advisors to Belgian Customs inspectors on U.S.-bound sea-freight shipments.

The Belgian Navy and the U.S. Coast Guard signed a Memorandum of Understanding in March 2001 formalizing Belgian Navy participation in the Caribbean Maritime Counter Drug Initiative. The MOU provides the terms and conditions for U.S. Coast Guard law enforcement detachments to embark in Belgian navy ships deployed to the Caribbean to participate in multinational efforts (led by the United States) to detect, monitor and interdict drug smuggling by sea and air in the Caribbean.

During FY-2004, eight MLAT requests for narcotics case information sharing were submitted between Belgium and the United States.

Cultivation/Production. Belgium's role as a transit point for major drug shipments, particularly Ecstasy, is more significant than its own production of illegal drugs. Nevertheless, Belgian authorities believe Ecstasy and cannabis production is on the rise. Only the Netherlands exports more Ecstasy to the United States than does Belgium.

Cultivation of marijuana is increasingly done at elaborate, large-scale operations in Belgium. A 2003 investigation in Liege revealed 3,500 plants being cultivated and a capacity for an additional 3,500. The operation was found in a bunker built underneath a tennis court. The grower had been selling the marijuana in the Netherlands and was linked to an additional five cultivation rings.

The production of amphetamines does not appear to have abated, as evidenced by the seizure of yet another three labs in 2004. Dutch traffickers are also linked to Belgium's production of Amphetamine-Type Stimulants (ATS). As Dutch law enforcement pressure mounts on producers of Ecstasy and other ATS in the Netherlands, some Dutch producers either look to Belgian producers to meet their supply needs or to establish their own facilities in Belgium. Authorities report that when Belgian amphetamine production facilities are uncovered, there is often a connection to Dutch traffickers.

Drug Flow/Transit. Belgium remains an important transit point for drug traffickers because of its port facilities (Antwerp is Europe's second-busiest port), its two international airports, highway links to cities throughout Europe, and proximity to the Netherlands. Illicit drugs from Belgium flow to the United Kingdom, the Netherlands and elsewhere in Western Europe, as well as to the United States.

Israeli drug traffickers no longer figure so prominently in the export of Ecstasy from Belgium and the Netherlands (see above), but a new trend involves Chinese traffickers shipping precursor chemicals from China to Belgium and the Netherlands. Ultimately, the Ecstasy is sent in bulk from Belgium to Chinese or Vietnamese gangs in Canada. These Chinese groups are believed to have largely displaced traditional Ecstasy sources. Ecstasy production continues to be controlled by Dutch chemists on either side of the border between Belgium and the Netherlands.

The port of Antwerp continues to be the preferred destination for cocaine imported to Europe, with an estimated 20 tons entering the port each year. The flow of cocaine to Belgium is controlled by Colombian organizations with representatives residing in the region. Antwerp port employees are also documented as being involved in the receipt and off-load facilitation of cocaine upon arrival at the port. In January 2004 Belgian authorities seized 400 kilograms of cocaine. Subsequent investigation demonstrated that the same organization had managed the shipment of about six tons of cocaine during the prior twelve-month period. The predominant cocaine trafficking groups in Belgium are

Colombian, Dutch, Surinamese, Chilean, and Israeli. Though not as significant, Albanian and Moroccan traffickers have also been identified.

Belgium remains a transit country for heroin destined for the British market. Seizures of the past three years and intelligence indicate that Belgium has also become a secondary distribution and packing center for heroin coming along the Balkan Route. Turkish groups continue to dominate the trafficking of heroin in Belgium and are also known to have become increasingly involved in the distribution of Ecstasy and cocaine. The Belgian Federal Police have identified trucks from Turkey as the single largest transportation mechanism for westbound heroin entering Belgium. Moroccan and Algerian groups control most of the cannabis importation overland from France. Indoor growth activity of marijuana is controlled by Belgian and Dutch groups.

Domestic Programs. Belgium has an active counternarcotics educational program that targets the country's youth. The regional governments (Flanders, Wallonia, and Brussels) now administer such programs. The programs include education campaigns, drug hotlines, HIV and hepatitis prevention programs, detoxification programs, and a pilot program for "drug-free" prison sections. The Belgian system contrasts with the U.S. approach in that Belgium directs its programs at individuals who influence young people versus young people themselves. Teachers, coaches, clergy, and the like are thought to be better suited to deliver the counternarcotics message to the target audience because they already are known and respected by young people.

The annual spending on heroin consumption in Belgium is about \$225-\$300 million. The number of intravenous heroin addicts in Belgium remains stable, but the sniffing of heroin is becoming more fashionable in clubs. The growing acceptance of heroin as a club drug is a matter of concern for Belgian authorities, especially given that one dose costs as little as 10 Euros (\$12.50). This worrying trend, together with the crime and social costs associated with heroin addiction, make thwarting the proliferation of this drug a top priority for Belgian public health and law enforcement officials alike.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. The United States and Belgium frequently share counternarcotics information. Officials in the Federal Police, Federal Prosecutor's Office, and Ministry of Justice who work on counternarcotics in the GOB are fully engaged with their U.S. counterparts.

The Road Ahead. The U.S. looks forward to continued close cooperation with Belgium in combating illicit drug trafficking and drug-related crime, with a growing emphasis on systematic consultation and collaboration on operational efforts. The U.S. also welcomes Belgium's active participation in multilateral counternarcotics fora such as the Dublin Group of countries concerned with narcotics-trafficking.

Bosnia and Herzegovina

I. Summary

Bosnia and Herzegovina (BiH) remains a small but growing market for drugs, and has emerged as a regional hub for narcotics trans-shipment. Despite increasing law enforcement cooperation, gradual improvements in the oversight of the financial sector, increased seizure of drugs, and substantial legal reform, local authorities are politically divided and enforcement efforts are poorly coordinated. Narcotics trade remains an integral part of the influence wielded by foreign and domestic organized crime figures and ethnic extremists who operate with the tacit acceptance (and sometimes active collusion) of some corrupt public officials. Border controls have improved, but flaws in the regulatory structure and justice system, coupled with a lack of attention by Bosnia's political leadership, mean that few effective measures against narcotics trafficking and related crimes exist. BiH is in the process of developing a national counternarcotics strategy and is creating a state-level body to coordinate the fight against drugs. In 2004, police powers were given to the State Investigative and Protection Agency (SIPA) to conduct search and seizure counternarcotics operations. In 2005, the BiH government will launch a public information campaign to raise awareness about the dangers and effects of drugs. BiH is party to the 1988 UN Convention on Drugs and is attempting to forge ties with regional and international law enforcement agencies.

II. Status of Country

BiH occupies a strategic position along the historic Balkan smuggling routes between drug production and processing centers in South Asia and markets in Western Europe. Narcotics trafficking emerged as a serious problem during the 1991-95 war, both as a reflection of the general breakdown of law and order and as a means for warring parties to generate revenue. Bosnian authorities at the state, entity, cantonal and municipal levels have been unable to stem the continued transit of illegal aliens, black market commodities (especially cigarettes), and narcotics since the conclusion of the Dayton Peace Accords. Traffickers have capitalized in particular on an ineffective justice system, public sector corruption, the lack of specialized equipment and training in combating criminal networks that support illicit drug trade, and poor coordination between law enforcement authorities. Bosnia and Herzegovina is increasingly becoming a warehouse for drugs en route to Western Europe.

Information on domestic consumption is not systematically gathered, but anecdotal evidence and law enforcement information indicate that demand is steadily increasing. No national drug information system focal point exists, and the collection, processing, and dissemination of drug-related data is neither regulated nor vetted by a state-level regulatory body. Moreover, Bosnia and Herzegovina lacks a comprehensive state-level strategy to stem narcotics trafficking and use, and an inter-entity coordination body does not exist. There is no state-level control over confiscated drugs.

BiH is also considered a storage country, since quantities, mainly of marijuana and heroin, coming into BiH from Montenegro, are stored in Bosnia for customers Central European customers. One of the main routes for drug trafficking starts in Albania, continues into Montenegro, and enters BiH through a border point close to Trebinje. From BiH, drugs pass to Croatia and Slovenia and then on to Central Europe. Cocaine arrives mainly from the Netherlands through the postal system.

In 2003, the Federation Ministry of Interior (FMUP) established a narcotics statistics department to track information on illegal drug laboratories. There have been several cases of suspicious imports and exports of precursors by fictitious BiH companies. In 2003, 20,000-30,000 Ecstasy pills of BiH origin were found in Austria.

In BiH there are only two methadone therapy centers, one in Sarajevo and one in Sanski Most, with approximately 150 patients and five to ten patients, respectively.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The BiH Government implemented a new Criminal (CC) and Criminal Procedure (CPC) Codes in 2003. The implementation of these codes enhanced the legal system's abilities to protect the rights of victims and criminal defendants. Although previous reports noted routine interference by organized crime and political leaders with the judiciary, judicial reform efforts have reduced this undue influence. Law enforcement and judicial officials have better tools, in the new CPC, to investigate and prosecute serious crime or corruption cases. In particular, the criminal procedure code permits communications surveillance, use of informants, and undercover police work. Department of Justice ICITAP and Overseas Prosecutorial Development Assistance Training (OPDAT) training organized for law enforcement agencies are teaching police and prosecutors how to use these tools. Improved relations between BiH and Serbia and Montenegro, working-level cooperation with Slovenian and Croatian law enforcement authorities, and an upgraded information exchange system in Sarajevo's Interpol office may also presage progress in the fight against narcotics-related crimes.

Accomplishments. Under close observation by the international community, Bosnian law enforcement agencies have taken steps toward increased cooperation on the counternarcotics front, most notably with the formation of an inter-entity (i.e., Federation and RS-Republica Serbska) joint task force. The Government of BiH has established the State Court and State Prosecutors Office, that has jurisdiction over serious criminal offenses such as terrorism and trafficking and has created new state-level Ministries of Security and Justice as well as strengthened border and financial controls.

As of 2004, the SBS covers one hundred percent of Bosnia's borders. Forty-seven international border crossings are manned by SBS personnel and all four international airports are under SBS control. However, there are still a large number of illegal crossing points, chosen at locations where SBS does not exercise effective control. Five SBS Mobile Support Units are responsible for policing roughly four hundred unofficial entry points, such as dirt paths and river fords, over Bosnia's more than 1600-km border. Moreover, most official checkpoints are minimally staffed and many crossings are severely understaffed, bordering on unsafe manning levels. Though the task of building a border control that meets European standards remains far from complete, the less porous borders, which have been achieved, should help stem the flow of illicit goods through Bosnia. With significant USG and international community financial assistance and technical support, computerized tracking information systems have been installed at the Sarajevo, Banja Luka, and Mostar international airports. However, the SBS lacks adequate command, control, and communication expertise, technology and equipment, as well as professional training.

The U.S. donated and installed a secure radio communications network for the SBS that will greatly enhance the ability of headquarters and regional offices to direct, control, and coordinate operations with mobile and fixed border crossing units. The communications equipment and repeater network are intended for primary use by the SBS, but are available to other law enforcement institutions, particularly SIPA, for joint law enforcement operations. Cooperation between law enforcement cooperation agencies and prosecutors is primarily informal and ad hoc. Mutual legal assistance is severely limited by judicial bureaucracy, and serious legal and bureaucratic obstacles to the effective prosecution of criminals remain in place. Neither the RS nor the Federation has made significant progress in addressing the legal environment that allows criminals to act with virtual impunity. Neither entity has pursued new legislation to adequately enforce or reinforce existing asset seizure/forfeiture or money-laundering statutes. However, in 2004 the international community completed the vetting and appointment of all judges and prosecutors in the country.

Law Enforcement Efforts. Counternarcotics efforts have improved but remain inadequate given suspected trafficking levels. In the Federation, drug-related criminal reports to the prosecutor have increased by thirty percent, while the number of minor offense reports has decreased by fifty percent.

Based on data through December 2004 the number of drug-arrests in the RS has increased by 34 percent compared to 2003 levels. RS police operations have seized a total of approximately 166,182 kilograms of marijuana (a decrease of 20 percent over 2003 levels, 1692 grams of heroin a 10 percent increase over 2003 levels), and 1978 Ecstasy pills (a 20 percent increase over 2003 levels).

Through December 2004, fifteen arrests in the Brcko District were reported. Meanwhile, preliminary figures indicate that the SBS has filed 31 criminal reports and 33 minor offense charges, and seized approximately 176 kilograms of marijuana, 11 grams of heroin, and 8 Ecstasy pills through December 19, 2004.

Through December 2004 in the Federation, 280 criminal reports were filed for the unauthorized production, processing and trade of drugs (a 13 percent decrease in comparison with 2003), 980 criminal reports for possession of drugs (a 215 percent increase in comparison with 2003). The enormous increase of criminal reports for drug possession is linked to implementation of the Federation Criminal Code, which criminalized drug possession. Federation counternarcotics operations have resulted in the seizure of 34 kilograms of marijuana, 3.323 kilograms of heroin (a 50 percent increase over 2003 levels), and 1214 Ecstasy pills (a 50 percent increase over 2003 levels).

Corruption. Bosnia and Herzegovina does not have laws that specifically target narcotics-related public sector corruption and has not pursued charges against public officials on narcotics-related offenses. A long-standing parliamentary inquiry into the disappearance of over 20 kilograms of heroin from the safe of the war-time Federation Interior Minister has made no progress to date. Organized crime, corrupt officials, and ethnic hard-liners, all use the narcotics trade to generate revenue. As a matter of government policy and practice, BiH does not encourage or facilitate the illicit production or distribution of drugs or the laundering of proceeds from illegal drug transactions.

Agreements and Treaties. Bosnia and Herzegovina is a party to the 1988 UN Drug Convention and is developing bilateral law enforcement ties with neighboring states to combat narcotics trafficking. An extradition treaty between the U.S. and the Kingdom of Serbia applies to the BiH as a successor state. BiH has ratified the UN Convention against Transnational Crime and its two protocols.

Drug Flow and Transit. Major heroin and marijuana shipments are believed to travel through Bosnia and Herzegovina by several well-established overland routes. Local officials believe that Western Europe—not the U.S.—is the destination for this traffic. Judging by reported seizures, cocaine use and trafficking are minimal, while the market for designer drugs, especially Ecstasy, in urban areas is rising rapidly. Law enforcement authorities posit that elements from each ethnic group and all major crime “families” are involved in the narcotics trade, often collaborating across ethnic lines. There is mounting evidence of links between, and conflict among, Bosnian criminal elements and organized crime operations in Russia, Albania, the FRY, Croatia, Austria, Germany, and Italy.

Cultivation and Production. Officials believe that domestic cultivation is limited to small-scale marijuana crops grown in southern and western Bosnia. However, cannabis production is reportedly declining, largely as a result of the ready import of cheaper and better quality cannabis from Albania through Montenegro. There are also indications that there is increasing production of synthetic drugs, like Ecstasy, on a small but rapidly increasing scale. Though Bosnia and Herzegovina does not have the industrial infrastructure that could support large-scale illicit manufacturing, a modest level of synthetic drugs produced in clandestine labs cannot be ruled out, given that the production and possession of chemical precursors to synthetic narcotics are currently legal under current Bosnian law. This legislative loophole will have to be closed with amendments to the new criminal codes.

Domestic Programs. USG-sponsored community-oriented policing programs, which contain a strong counternarcotics component, have reached over 40,000 Bosnian children. Although individual cantons have sponsored pilot community outreach programs and sought international assistance to introduce more proactive initiatives, there is no national drug awareness program. Meanwhile, the Sarajevo Canton Health Ministry has established a government-operated therapeutic center for recovering drug addicts.

An NGO, UG-PROI—the Citizen’s Association for Treatment, Support, and Re-Socialization of Drug Addicts—provides advice and support to drug addicts and their families, and assists in the re-socialization of recovering addicts. The organization is now in the process of establishing a therapeutic community for the rehabilitation of addicts near Sarajevo on a property donated by a local family. UG-PROI cooperates with the Drug Addiction Department of Kosevsko Hospital in Sarajevo and with the Canton Sarajevo Family Counseling Branch of the Center for Social Work. UG-PROI also cooperates on a regional level with the NGO “Help” from Split and with “The Association for Helping Drug Addicts Family” from Zagreb, Croatia. Daytop, Inc., from the USA provided a four-month orientation program and specialized training to two members of UG-PROI. Daytop Inc. will also provide experts who will support the work of the therapeutic community now being established by UG-PROI. During 2004, a total of thirty patients were successfully rehabilitated through UG-PROI programs. Currently, UG-PROI is focusing on development of a nation-wide database of drug abusers, as well as on the development of a study to standardize treatment.

IV. U.S. Policy Initiatives and Programs

U.S. Policy Initiatives. USG policy objectives in BiH include reforming the criminal justice system, improving the rule of law, de-politicizing the police, improving local governance, strengthening bank regulatory authorities, and introducing free-market economic initiatives. The USG will continue to work closely with Bosnian authorities and the international community to combat narcotics-trafficking and money-laundering.

Bilateral Cooperation. The USG remains committed to providing the counternarcotics training and support needed to foster independent law enforcement operations by Bosnian authorities.

The Road Ahead. Since the European Union Police Mission (EUPM) took over from the International Police Task Force (IPTF) in 2004, building local capacity in counternarcotics has become even more important as the EUPM has far fewer officers (approximately one-third the IPTF’s size). The EUPM is concentrating its efforts on monitoring and advising mid-to upper-levels of law enforcement management, placing special emphasis on advanced specialized policing skills in areas such as counternarcotics, organized crime and counterterrorism. However, coordination among the international community is complicated by a lack of continuity and frequent turnover of international personnel. As international experts depart, knowledge leaves with them. Strengthening the rule of law and reforming the judiciary remain top USG priorities. The USG will continue to focus its bilateral programs on related subjects such as organized crime, public sector corruption, and border controls. The adoption and full implementation (as well as provision of appropriate training and technical assistance) of the new criminal and criminal procedure codes are pivotal U.S. and international community goals for this year and next. The international community is also working to increase local capacity and to encourage interagency cooperation by mentoring and advising the local law enforcement community.

Bulgaria

I. Summary

Bulgaria is a major transit country, as well as a producer of illicit narcotics. Strategically situated on Balkan transit routes, Bulgaria is vulnerable to illegal flows of drugs, people, contraband, and money. Heroin moves through Bulgaria from Southwest Asia, while chemicals used for making heroin move from the former Yugoslavia to Turkey and beyond. It is estimated that 80 percent of the heroin distributed in Europe was first transported through Bulgaria. Marijuana and cocaine also continue to be transported through Bulgaria.

The Government of Bulgaria has continued to make progress in improving its law enforcement capabilities and customs services, although major structural changes remain to be implemented. The Bulgarian government has proven cooperative, working with many U.S. agencies, and has reached out to neighboring states to cooperate in interdicting illegal flow of drugs and persons. Nevertheless, Bulgarian law enforcement agencies, investigators, prosecutors and judges require further assistance to develop the capacity to investigate, prosecute and adjudicate illicit narcotics trafficking and other serious crimes effectively. Bulgaria is a party to the 1988 UN Drugs Convention.

II. Status of Country

In the past year, Bulgaria has continued to move from primarily being a drug transit country to an important producer of narcotics. Bulgaria is beginning to replace Turkey as a center of synthetic drug production and laboratories are increasingly being moved to Bulgaria. Most importantly, the use of synthetic drugs has overtaken the use of heroin, formerly the most widely used drug in Bulgaria. The spillover effect of drugs as payment for transportation services is resulting in an increase in local user populations. Transporters, reimbursed in product instead of money, typically break down the purer drugs for street level consumption.

The Government of Bulgaria has emphasized its commitment to combat serious crime including drug trafficking. Despite some progress towards this goal, there were no major convictions for drug trafficking, or other serious related crimes, including organized criminal activity, corruption or money laundering during 2004. Among the problems hampering counternarcotics efforts are poor interagency cooperation, inadequate equipment to facilitate narcotics searches, widespread corruption, and an overall weak judicial system.

III. Country Actions Against Drugs in 2004

The Bulgarian government has issued an annual national drug prevention strategy every year since 2002, and in 2004 it continued its efforts to interdict the flow of narcotics through Bulgaria. Additional measures—started in 2002—continued through 2004, including the creation of a counternarcotics coalition involving some 60 NGOs, and work on establishing “prevention information centers” in various municipalities. Unfortunately, the new national program for prevention, treatment and rehabilitation, scheduled to run to 2005, received only BGN 200,000 (apx. \$134,000) out of an estimated BGN 10 million (apx. \$6.7 million) needed.

Accomplishments. The Bulgarian law-enforcement services have opened a new crime intelligence center with multi-agency input and access. This intelligence center will be pivotal in the collection, analysis, and dissemination of investigative information in a time sensitive and usable form.

Law Enforcement Efforts. From January to September 2004, Bulgarian Customs seized 1430.64 kilograms (kg) of drugs, including 784 kilograms of heroin, 113 kilograms of marijuana and 410 kilograms of amphetamines. This compares to roughly 1074 kilograms of drugs seized in 2003 and 462 kilograms in 2002. The rise in seizures suggests that Bulgarian interdiction efforts have improved and that more traffickers are being apprehended. Additionally, the seizure of precursor chemicals, including ephedrine and acetic anhydride, are priorities of Bulgarian Customs and law enforcement officials.

Corruption. In 2002, the Bulgarian government unveiled an “action plan” to implement its 2001 anticorruption strategy. Despite some progress, corruption in various forms remains a serious problem. The Customs Service is widely considered the most corrupt government agency. However, there was no evidence that senior government officials engaged in, encouraged or facilitated the production, processing, shipment or distribution of illegal narcotics, or laundered the proceeds of illegal drug transactions. Bulgaria has signed but has not yet ratified the UN Corruption Convention.

Agreements and Treaties. Bulgaria is a party to the 1988 UN Drug Convention, the 1961 Single Convention and its 1972 Protocol, the 1971 Convention on Psychotropic Substances and the 1990 Convention on Laundering, Search, Seizure and confiscation of Proceeds from Crime. Bulgaria is a party to the UN Convention Against Transnational Organized Crime and its three protocols. The 1924 U.S.-Bulgarian Extradition Treaty and a 1934 supplementary treaty are in force and in use, although there have been difficulties in implementation in narcotics cases.

Cultivation and Production. The only illicit drug crop known to be cultivated in Bulgaria is cannabis, but the extent of illicit cultivation is not known. It is certainly not very extensive, and is not a significant factor in abuse beyond Bulgaria’s own borders. There has been a steady increase in the indigenous manufacture and distribution of amphetamine products (captagon), followed by ecstasy, cocaine, and opiates such as hydrocodone, triazolam, and morphine.

Drug Flow/Transit. Synthetic drugs have become the main drug transported through Bulgaria. However, heroin from the Golden Crescent and Southwest Asia (e.g., Afghanistan) and some marijuana and cocaine also transit through Bulgaria. The Northern Balkan route from Turkey through Bulgaria to Romania is the most frequently used overland route. Other routes go through Serbia and Montenegro and the Republic of Macedonia. Precursor chemicals for the production of heroin pass from the Western Balkans through Bulgaria to Turkey. Methods of transport and conveyances are automobiles, trucks, buses/coaches, and mini-buses/vans, followed by postal proceeds, air cargo consignments, airplanes, territorial checkpoints, and pedestrians.

Domestic Programs (Demand Reduction). Demand reduction has received government attention for several years. The Ministry of Education requires that schools nationwide teach health promotion modules on substance abuse. There is also a World Health Organization program for health promotion in 30 target schools. The Bulgarian National Center for Addictions (NCA) provides training seminars on drug abuse for schoolteachers nationwide. There are also municipal demand reduction programs co-sponsored by the NCA and the Institute of Public Health in six major cities and a number of smaller communities. Three universities provide professional training in drug prevention. For drug treatment, there are 35 outpatient units and approximately 12 inpatient facilities nationwide. The NCA has psychiatric units in 20 regional centers. Specialized professional training in drug treatment and demand reduction has been provided through programs sponsored by UNODC and the EU and the Council of Europe’s Pompidou Group.

IV. U.S. Policy Initiatives and Strategies

Bilateral Cooperation. DEA operations are managed from Embassy Athens. The USG also supports various programs through the State Department, USAID, Department of Justice (DOJ) and the

Treasury Department to address problems in the Bulgarian legal system. These initiatives address a lack of adequate equipment (e.g., in the Customs Service), the need for improved administration of justice at all levels and inadequate cooperation among Bulgarian agencies. A DOJ resident legal advisor works with the Bulgarian government on law enforcement issues, including trafficking in drugs and persons. An American Bar Association/Central and East European Law Initiative criminal law liaison advises Bulgarian prosecutors and investigators on cyber-crime and other issues. A Treasury Department representative enhances the capacity of the Bulgarian justice sector to investigate and prosecute financial crimes, including money laundering. USAID provides assistance to strengthen Bulgaria's constitutional legal framework, enhance the capacity of magistrates and promote anticorruption efforts, and an FBI Legal Attache will soon arrive in Sofia.

The Road Ahead. The U.S. will continue to assist Bulgaria's counternarcotics and legal sector reform efforts.

Croatia

I. Summary

Croatia is not a producer of narcotics. However, narcotics smuggling—particularly heroin—through the “Balkans route” to Western Europe remains a serious concern. Croatian law enforcement bodies cooperate actively with their U.S. and regional counterparts to combat narcotics smuggling. Croatia is a party to the 1988 UN Drug Convention.

II. Status of Country

Croatia shares borders with Slovenia, Serbia, Hungary, and Bosnia and Herzegovina, and has a 1,000 km long coastline (4,000 km adding in its 1,001 islands), which presents an attractive target to contraband smugglers seeking to move narcotics into the vast European market. Croatian police have noted a steady increase in smuggling from the east, estimating that 70 to 80 percent of heroin destined for European markets is smuggled through the notorious “Balkans Route.”

III. Country Actions Against Drugs in 2004

Policy Initiatives. Croatia adopted a National Program for Narcotics Abuse Control in January 2003. The Program identifies drug trafficking and abuse as priorities for the Croatian government and apportions specific tasks to various ministries and other governmental bodies. The Interior Ministry, Justice Ministry and Customs Directorate have primary responsibility for law enforcement issues, while the Ministry Of Health has primary responsibility for the strategy to reduce and treat drug abuse. The Interior Ministry’s Anti-Narcotics Division is responsible for coordinating the work of counternarcotics units in police departments throughout the country. The Interior Ministry maintains cooperative relationships with Interpol and an expanding number of neighboring states.

In the fall of 2004, the government formed a working group to review and draft changes to the criminal code, including revising some drug-related provisions. Parliamentary discussion of these changes is expected by summer 2005.

Accomplishments. In October 2004, the parliament revised the law governing the work of the special Office for Combating Organized Crime and Corruption (USKOK). In addition to strengthening the tools USKOK can use to combat organized crime, the new law gives USKOK jurisdiction to investigate narcotics-linked organized crime cases.

Croatia continues to cooperate well with neighboring and Western European states to improve the control and management of its porous borders. Cooperation on narcotics enforcement issues with neighboring states is generally described as excellent. In January 2004, working with Austrian, Slovenian, and Serbian police, Croatian police joined an operation targeting narcotics smuggling through Kosovo, resulting in the seizure of 7 kilograms of heroin from an Albanian national. However, officials complain that overlapping jurisdictions and significant legal loopholes in Bosnia and Herzegovina limit the utility of cooperation.

Law Enforcement Efforts. Croatian police improved and focused their counternarcotics efforts on targeted border-crossing points, leading to the largest total amount of heroin seized in Croatia to date. Police note, however, that the purity of heroin seized this year is significantly lower than in previous years. As a result of a new law passed in July to reduce drug and alcohol-related traffic incidents, 50 traffic police were trained in narcotics detection techniques and equipment use.

Corruption. Narcotics-linked corruption does not appear to be a major problem in Croatia. As a matter of government policy, Croatia does not encourage or facilitate illicit production or distribution of narcotic or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal drug transactions. Similarly, no senior government official is alleged to have participated in such activities. Investigations by the State Prosecutor's Office continue into allegations of corruption, smuggling and financial crimes of a number of businessmen and politicians linked to members of HDZ party when it was previously in power in the 1990s. Some of the smuggling offenses reportedly involved narcotics, according to local press reports.

Agreements and Treaties. Croatia signed the UN Convention Against Corruption in December 2003. Croatia is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention and its 1972 Protocol and the 1971 UN Convention On Psychotropic Substances. Croatia is also a party to the UN Convention Against Transnational Organized Crime and its protocols on migrant smuggling and trafficking in women and children.

In the fall of 2004, the Chief State Prosecutor initiated discussions with his counterparts in neighboring countries toward signing bilateral agreements to facilitate cross-border criminal prosecutions. In December 2004, the Croatian State Prosecutor's Office joined 11 other regional Prosecutors in signing a memorandum of understanding on joint work to fight organized crime. Over the past several years, Croatia has entered into a number of bilateral agreements with neighboring states on law enforcement cooperation, including Slovenia, Bosnia and Herzegovina, Serbia and Montenegro and Hungary. It also intensified its cooperation with Austria, Germany, Italy and Slovenia on border control. In 2000 Croatia entered the Southeast Europe Cooperative Initiative (SECI) agreement to prevent and combat trans-border crime. Croatia has a representative at the SECI crime center in Bucharest.

Extradition between Croatia and the United States is governed by the 1902 extradition treaty between the U.S. and the Kingdom of Serbia, which applies to Croatia as a successor state. The Croatian constitution prohibits the extradition of Croatian citizens; however, the Government of Croatia permits its citizens to be extradited to The Hague War Crimes Tribunal For The Former Yugoslavia (ICTY).

Cultivation/Production. Small-scale cannabis production for domestic use is the only narcotics production within Croatia. Opium poppies are cultivated on a very small scale for culinary use of the seeds. Because of Croatia's small market and its relatively porous border, Croatian police report that nearly all illegal drugs are imported into Croatia. However, authorities believe that given the existence of ecstasy labs in Bosnia and Herzegovina, it is inevitable that small-scale labs will be discovered in Croatia.

Drug flow/Transit. Croatia lies along part of the "Balkans Route." authorities believe that up to 80 percent of the heroin from Asian sources travels across this route on its way to the European market. Although not considered a primary gateway, police seizure data indicate smugglers continue to attempt to use Croatia as a transit point for other drugs, including cocaine and cannabis-based drugs. Ecstasy and other pill-form narcotics are smuggled into Croatia from Western Europe in small quantities for domestic use. Police believe that illicit labs in The Netherlands and Belgium are the primary sources.

Demand Reduction. The Office for Combating Drug Abuse is the focal point for coordination of various agencies activities to reduce demand for narcotics. This Office develops the national counternarcotics strategy and coordinates implementation of the annual National Action Plan, which was approved in February 2004. The Office also serves as Croatia's focal point for international coordination and is working to harmonize counternarcotics policies with European Union norms. In July 2004, the parliament approved some changes to the criminal code allowing courts to mandate therapeutic treatment in some drug addition cases.

According to the Office, drug abuse rates were highest in Istria County (major city Pula) in 2003 (latest data available), followed by the capital of Zagreb and urban areas of Sibenik, Zadar and Rijeka. In 2003, 5,678 persons underwent drug addiction treatment, which is 2.3 percent less than in the previous year. The number of new opiate addicts has varied in the past several years ranging between 820 and 1,048 annually. The number of first time seekers of addiction treatment has been sliding since 2001; in 2003 it dropped to 1,840, an 11 percent drop from the previous year. Seventy percent of the overall number of addicts are addicted to heroin. Over 72 percent were infected with hepatitis C, and 0.7 percent were HIV positive. There were 71 drug-related deaths in 2003, which represents a 26 percent increase from the year before.

Demand reduction programs are coordinated by national Office for Combating Drug Abuse. The Ministry Of Education requires drug education in primary and secondary schools. Additional major drug abuse prevention and public awareness programs are run by the Ministry of Defense, the Ministry of Public Health, the Ministry of Justice, and the Ministry of Interior. Other ministries and government organizations also run outreach programs to reach specific constituencies such as pregnant women. The state-run medical system offers treatment for addicts, but slots are insufficient to accommodate all those needing treatment. The Ministry of Health operates in-patient detoxification programs as well as 14 regional outpatient methadone clinics. The government of Croatia budgeted nearly 85 million Kuna (approx \$13,500,000) for demand reduction related activities in 2003, a significant rise over 2002, but 22 million Kuna short of what the Office for Combating Drug Abuse recommended. The Office projected 91.3 million Kuna (approx. \$16,000,000 at current exchange rates) will be spent in 2004 in aggregate for demand reduction efforts, although actual figures will not be available until mid-2005. The Government of Croatia also will sponsor the creation of expert advisory groups that will work with local governments to counter drug abuse.

IV. U.S. Policy Initiatives and Programs

Goals. The primary objectives of U.S. initiatives in Croatia are to offer assistance with the development of skills and tools among Croatian law enforcement agencies to improve their ability to combat organized crime and narcotics trafficking and to improve Croatian law enforcement agencies' abilities to work bilaterally and regionally to combat trafficking.

Accomplishments. Police reform efforts begun in 2001 to provide technical assistance to the Interior Ministry have begun to show fruit. The first class of police recruits graduated from a completely revamped basic police school in July 2004. This class will be the first to proceed from graduation to probationary assignments with specially trained, senior police officers as coaches and mentors. A new police policies and procedures field manual was issued to all police officers in fall 2004. In addition, Croatian police have been regular participants in training programs at the U.S.-funded International Law Enforcement Academy in Budapest as well as follow-on training in Roswell, New Mexico. Under the Export Control and Border Security (EXBS) program, police and customs officers have been trained on risk analysis methodologies and new equipment has been donated to help improve at-the-border detection of smuggled contraband.

Road Ahead. In fall 2004, an experienced U.S. organized crime and narcotics criminal investigator was placed in the Criminal Police Directorate to work with police and prosecutors in developing crime task-force investigative skills. For 2005, U.S. expert training teams will join in-country U.S. trainers to help Croatian police develop witness protection and confidential source management skills, as well as provide follow-on assistance to improve police and prosecutor cooperation in complex narcotics and organized crime cases. Additional training and detection equipment donations planned for 2005 under the EXBS program will have ancillary benefits for Croatia's fight against narcotics trafficking, particularly in the areas of interagency cooperation and border management capabilities.

Cyprus

I. Summary

Although Cypriots do not produce or consume significant amounts of narcotics, increase in local drug use continues to be a concern. The Government of Cyprus traditionally has had a low tolerance toward any use of narcotics by Cypriots and continues to employ a public affairs campaign to remind Cypriots that narcotics use carries heavy costs, and users risk stiff criminal penalties. Cyprus' geographic location and its decision to opt for free ports at its two main seaports continue to make it an ideal transit country for legitimate trade in most goods, including chemicals, between the Middle East and Europe. To a limited extent, drug traffickers use Cyprus as a trans-shipment point due to its strategic location and its relatively sophisticated business and communications infrastructure. Cyprus monitors the import and export of dual-use precursor chemicals for local markets.

Cyprus customs authorities have implemented changes to their inspection procedures, including computerized profiling and expanded use of technical screening devices, such as portal monitors to deter those who would attempt to use Cyprus free ports for narcotics smuggling. A party to the 1988 UN Drug Convention, Cyprus strictly enforces tough counternarcotics laws, and its police and customs authorities maintain excellent relations with their counterparts in the U.S. and other governments.

II. Status of Country

Cyprus' small population of soft-core drug users continues to grow. Cannabis is the most commonly used drug, followed by heroin, cocaine, and MDMA (Ecstasy), which are available in major towns. Reports of heroin overdoses have increased in 2004: there have been ten confirmed overdose deaths this year. The use of cannabis and Ecstasy by young Cypriots and tourists continues to grow. The Government of Cyprus has traditionally adopted a low tolerance toward any use of narcotics by Cypriots and uses a pro-active public relations strategy to remind Cypriots that narcotics use carries heavy penalties. The media reports extensively whenever narcotics arrests are made. Cypriots themselves do not produce or consume significant quantities of drugs. The island's strategic location in the eastern Mediterranean creates an unavoidable liability for Cyprus, as Cyprus is a convenient stopover for narcotics traffickers moving from Southwest Asia to Europe. Precursor chemicals are believed to transit Cyprus in limited quantities, although there is no hard evidence that they are diverted for illegal use. Cyprus offers relatively highly developed business and tourism facilities, a modern telecommunications system, and the seventh-largest merchant shipping fleet in the world. Drug-related crime, still low by international standards, has been steadily rising since the 1980's. Cypriot law carries a maximum prison term of two years for drug users less than 25 years of age with no prior police record. Sentences for drug traffickers range from four years to life, depending on the substances involved and the offender's criminal record. Cypriot law allows for the confiscation of drug-related assets as well as the freezing of profits, and a special investigation of a suspect's financial records.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In May 2004, Cyprus became a member of the European Union (EU). Prior to its accession into the EU, Cyprus implemented all the necessary requirements to comply with EU regulations. To meet EU regulations, Cyprus established the Anti-Drug Council, which is responsible for national drug strategies and programs. The council is chaired by the Health Minister and is composed of heads of key agencies with an active role in the fight against drugs. They are appointed

by the Council of Ministers for a period of three years. As the national coordinating mechanism on drug issues in the country, the Council's mandate includes the planning, coordination and evaluation of all actions and programs and interventions aimed at the primary, secondary and tertiary levels of drug prevention. The Council acts as a liaison between the Republic of Cyprus and other foreign organizations concerning drug related issues, as well as having the responsibility for promoting legislative or any other measures in an attempt to effectively counter the use and dissemination of drugs. Moreover, the Cyprus Anti-Drug Council is the responsible body for the strategic development and implementation of the National Drugs Strategy and the National Action Plan on Drugs aligned with the EU Drugs Strategy.

In connection with EU entry this year, Cypriot Authorities also established the Cyprus Police European Union and International Police Co-operation Directorate, which replaces a similar operational unit established in 2002. The Division is responsible for cooperating with foreign liaison officers appointed to Cyprus, including the U.S. Drug Enforcement Administration (DEA), Nicosia Country Office (NCO), as well as Cypriot liaison officers appointed abroad. The Cyprus Police European Union and International Police Co-operation Directorate assisted in the extradition of two individuals to the United States arrested on narcotics charges. In 2004, the Cyprus Police, Drug Law Enforcement Unit, (DLEU) appointed a new commander, with twenty years of service in the DLEU. The commander rose through the ranks of the DLEU and his experience will greatly assist the unit. The DLEU has increased its budget in 2004 for the training of DLEU members in Cyprus and abroad to combat drug trafficking. In 2004, Cyprus established two new centers for the detoxification and rehabilitation of drug addicts. A new law enacted in Cyprus provides judges with the discretion to send convicted drug addicts to jail or to one of these centers under certain conditions.

Cultivation/Production. Cannabis is the only illicit substance cultivated in Cyprus, and it is grown only in small quantities for local consumption. While cannabis is the most widely used drug, there has been a reported decrease in the cultivation of cannabis plants over the past year. The Cypriot authorities vigorously pursue illegal cultivation.

Drug Flow/Transit. Although no longer considered a significant transit point for drugs, there were several cases of narcotics smuggling in the past year. Cypriot law enforcement authorities continued to cooperate with the DEA office in Nicosia on several international investigations initiated during 2004. Tourism to Cyprus is sometimes accompanied by the import of narcotics, principally Ecstasy and cannabis. Cyprus police believe that to a large extent their efforts in combating drug trafficking have converted Cyprus from a drug transit point to a "broker point," in which dealers meet potential buyers and negotiate the purchase and transport of future shipments. This change is a result of improved conditions in Lebanon: Lebanese containerized freight now moves directly to third countries without transiting Cyprus. In the past, Cypriot authorities believed that there was no significant retail sale of narcotics occurring in Cyprus; however, with new statistics on arrests and seizures of narcotics, this theory has changed. Last year, arrests of Cypriots for possession of narcotics with intent to distribute were significantly higher than the number of arrests of non-Cypriots on similar charges. During the past year there has been an increase in the number of Turkish Cypriots arrested for the distribution of narcotics in Cyprus. There is no production of precursor chemicals in Cyprus, nor is there any indication of illicit diversion. Dual-use precursor chemicals manufactured in Europe do transit Cyprus to third countries. The Cyprus Customs Service no longer has the responsibility of receiving manifests of transit goods through Cyprus. This responsibility now rests with the Cyprus Ports Authority. Goods entering the Cypriot free ports of Limassol and Larnaca can be legally re-exported using different transit documents, as long as there is no change in the description of the goods transported.

Law Enforcement Efforts. Cyprus aggressively pursues drug seizures, arrests, and prosecutions for drug violations. Cyprus focuses on major traffickers when cases subject to their jurisdiction permit them to, and readily supports the international community in efforts against the narcotics trade. Cypriot police are generally effective in their law enforcement efforts; their techniques and capacity

remain restricted by a shortage of financial resources. The Republic of Cyprus authorities have no working relations with enforcement authorities in the Turkish-controlled northern sector of the island. The self-proclaimed “Turkish Republic of Northern Cyprus” (“TRNC”) is not recognized by the United States nor by any other country except Turkey. The U.S. Embassy in Nicosia, particularly the DEA, within the Embassy, nevertheless works with Turkish Cypriot authorities on international narcotics-related issues. Turkish Cypriots have their own law enforcement organization, responsible for the investigation of all narcotics-related matters. They have shown a willingness to pursue narcotics traffickers and to provide assistance when asked by foreign law enforcement authorities.

Corruption. There is no evidence that senior or other officials facilitate the production, processing, or shipment of drugs, or the laundering of the proceeds of illegal drug transactions.

Agreements and Treaties. Cyprus is a party to the 1988 UN Drug Convention, the 1961 Single Convention on Narcotic Drugs, the 1972 Protocol amending the Single Convention on Narcotic Drugs, and the 1971 Convention on Psychotropic Substances. Cyprus is a party to the UN Convention against Transnational Organized Crime and its three protocols, and is a signatory to the UN Convention Against Corruption. An extradition treaty between the United States and Cyprus entered into force in September 1999. A mutual legal assistance treaty (MLAT) between the United States and Cyprus entered into force on September 18, 2002. Cyprus also became a member of the EU in May 2004.

Domestic Programs (Demand Reduction). Cyprus actively promotes demand reduction programs through the school system and through social organizations. Drug abuse remains relatively rare in Cyprus. Marijuana is the most commonly encountered drug, followed by heroin, cocaine, and Ecstasy, all of which are available in most major towns. Users consist primarily of young people and tourists. Recent increases in drug use have prompted the Government to promote demand reduction programs actively through the school system and social organizations, with occasional participation from the DEA office in Nicosia. Drug treatment is available.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. The U.S. Embassy in Cyprus, through the regional DEA office, works closely with Cypriot police to coordinate international narcotics investigations and evaluate local narcotics trends. Utilizing its own regional presence, DEA assists the new coordination unit in establishing strong working relationships with its counterparts in the region. DEA also works directly with Cypriot customs, in particular, on development and implementation of programs to ensure closer inspection and interdiction of transit containers.

The Road Ahead. The USG receives close cooperation from the Cypriot Office of the Attorney General, the Central Bank, the Cyprus Police, and the Customs Authority in drug enforcement and anti-money laundering efforts. In 2005, the USG will continue to work with the Government of Cyprus to strengthen enforcement of existing counternarcotics laws and enhance Cypriot participation in regional counternarcotics efforts. DEA regularly provides information and insight to the GOC on ways to strengthen counternarcotics efforts. New laws to empower members of the Drug Law Enforcement Unit in their fight against drug traffickers are currently before Parliament.

Czech Republic

I. Summary

Illegal narcotics are imported to, manufactured in, and consumed in the Czech Republic. Marijuana, both imported and, to a much lesser extent, grown locally is used more than any other drug. Consumption of marijuana continues to grow, particularly among the young. The popularity of Ecstasy (MDMA) is also growing, especially among the young and “rave dance scene” participants, who consider it a “recreational” drug. According to an EU report for 2003, more than twice as many Czech students (44 percent) used marijuana or hashish than the European average (21 percent). Similarly, twice as many Czech students (12 percent) used some other illicit drug than the ESPAD average (6 percent). The government has taken note of these trends and has altered its drug strategy for the next 5 years to include more counternarcotics education for the young. On the positive side, the use of what the Czechs call problem drugs, such as heroin or the amphetamine Pervetine, decreased slightly. The level of cocaine use remains very low. Tobacco and alcohol consumption is very high. The Czech Republic is a producer of ephedrine, a precursor for Amphetamine-Type Stimulants (ATS) and a producer of lysergic acid, ergometrine and ergotamine, used for production of LSD.

II. Status of Country

Several factors make the Czech Republic an attractive country for groups in the drug trade. These factors include its central location, the closure of most of the traditional customs posts along the nation’s borders as part of EU accession in 2004, low detection rates for laundered drug money, low risk of asset confiscation, and relatively short sentences for drug-related crimes. The maximum sentence for any drug-related crime is 15 years.

The Czech National Focal Point for Drugs and Drug Addiction, which became fully operational in January 2003, is the main body responsible for collecting, analyzing and interpreting data on drug use. It issues an annual report on the drug situation in the Czech Republic and cooperates closely with the European Center for Monitoring Drugs and Drug Addiction (EMCDDA).

The Focal Point report for 2003 indicates that the number of problem drug users is approximately 30,000 (19,000 Pervetine and 11,000 heroin users). This represents a 15 percent drop from the estimate of 35,000 problem users for the previous year. Between 80 percent and 90 percent of this group are intravenous drug users. Focal point estimates that 60 percent of problem drug users are in regular contact with treatment centers, and drop-in centers. Health officials say there were only 4 new cases of HIV among problem drug users in 2003. They attribute the relatively low numbers of HIV and hepatitis infections to the fact that the majority of IV drug users are in contact with treatment centers and drop-in centers which offer needle exchange.

Authorities offer differing explanations for the decrease in heroin use. Some attribute it to effective substitution treatment with buprenorphin or methadone. Others, particularly among police officials, say the heroin market was unstable and lower amounts of heroin were available.

While the use of heroin declined significantly, consumption of softer drugs such as marijuana and Ecstasy increased in 2003. The annual report by the European School Survey Project on Alcohol and other Drugs (ESPAD) showed an increase in marijuana use from 34.8 percent in 1999 to 43.6 percent in 2003. Similarly, Ecstasy use grew from 3.4 percent in 1999 to 8.3 percent in 2003. The ESPAD report also highlighted increased trend in cigarette smoking and alcohol consumption among 16 years olds. The report also confirms the decrease in experimental use of heroin and Pervetine.

One third of children have their first experience with legal drugs (tobacco and alcohol) by the age of 11. Children try illegal drugs, primarily marijuana, at the age of 14-16. While the average age of heroin users went up in 2003, suggesting fewer new young addicts, the average age of those using drugs with lower health risks went down.

III. Country Actions Against Drugs in 2004

Policy Initiatives. There is an ongoing debate in the Czech government and society over whether there should be a more liberal line taken in regard to soft drugs, in order to focus on hard drugs. In March, 2004, the Christian Democrats announced their war on drugs, which, with its stricter policy on marijuana ran counter to the then prevailing liberal line of the government's drug policy. Due to the important position of the Christian Democrats in the governing coalition, the preparation of the government's drug policies for 2005-2009, as well as preparation for the recodification of the nation's penal code, were interrupted. The proposed changes to the Penal Code would have divided drugs into soft and hard classes. That division and consequent lower penalties for soft drugs were behind the debate that led to the dismissal of Josef Radimecky, the man who until early December, 2004 was the head of the body responsible for government drug policy. But on one of the last business days of 2004 the government approved the next five-year plan on drug strategy, to a large extent along the lines suggested earlier by Radimecky. The plan focuses on the fight against organized gangs that provide drugs, and taking steps to further lower the number of addicts.

Based on the results of an internal audit, the National Drug Headquarters—the main institution responsible for major drug cases—changed its organizational structure in June 2004. They now have only two departments: one focused on natural drugs, and one on synthetic drugs and precursors. This structure allows much better coordination of existing cases and enables them to establish task forces. In the past there were six departments focusing on particular drugs (heroin, Ecstasy, marijuana) or particular organized groups (Asians, ethnic Albanians, Africans, Russian speaking groups etc). The original structure showed problems in cases when a certain criminal group was involved in more than one activity and dealt with more than one kind of drug. The National Drug Headquarters also strengthened cooperation with The Financial Police Unit, which was established in July 2004 under the Ministry of the Interior.

The General Directorate of Customs underwent major changes in 2004 as part of the Czech Republic's entry into the EU. All of the traditional customs posts along the nation's borders with Poland, Germany, Austria, and Slovakia, other EU states, were closed. The only remaining international customs post is at Prague's International Airport. Eight mobile customs teams have also been set up and these teams now conduct random checks along highways, in warehouses, and at marketplaces.

The drug unit of the Czech Customs Service gained new responsibilities such as monitoring transport, and imports and exports of precursors from and to third countries. Beginning in January 2005, they will also be responsible for monitoring the growth of poppies and technical cannabis (containing less than 2 percent THC). This monitoring used to be done by the Czech Ministry of Agriculture.

Accomplishments. In the first half of 2004, the National Drug Headquarters, together with the Custom Service, seized 5.66 kilograms of heroin; 35,691 ecstasy pills; 1.5 kilograms of methamphetamine, 26 kilograms of marihuana, 729 cannabis plants, 5.17 kilograms of hashish, 0.5 kilograms of ephedrine and 3 kilograms of cocaine. They also found 105 laboratories for methamphetamine production.

There were several prominent arrests in the second half of the year. In November 2004, the National Drug Headquarters, in cooperation with the Customs Service, arrested a five-member gang, two Czechs and three foreigners, suspected of organizing the export of heroin from the Czech Republic.

The police seized 27 kilograms of heroin but suspect them of having smuggled roughly 220 kilograms of heroin to other European countries.

In cooperation with specialists from the U.S., Holland, Israel and Belgium, in September 2004, the Czech National Drug Headquarters arrested the head of a Czech-Israeli gang that organized the export of Ecstasy from Europe to Los Angeles. 300,000 tablets were seized in the U.S. Two Czechs were arrested in Austria while receiving payment for the sale.

According to the police statistics for the first half of 2004, 2149 people were investigated for drug related crimes. 2085 suspects were investigated for unauthorized production and possession of narcotics and psychotropic substances. 173 others were investigated for drug possession for personal use, and 67 were investigated for spreading addiction. According to statistics provided by the Ministry of Justice for 2004, the state prosecuted 2945 suspects and indicted 2589 others for drug related crimes. 363 were accused of drug possession for personal use and 299 were accused of spreading addiction. Courts have convicted 1376 people; among those there were 64 convictions for drug possession for personal use and 45 for spreading addiction.

Statistics for year 2004 showed that most of the convicted criminals (52 percent) received conditional sentences for drug related crimes and only one fourth of convicted criminals were sentenced to serve time. Only 12 percent of this latter group received sentences higher than 5 years. The majority (77 percent) of those given prison sentences received from 1 to 5 years.

Corruption. Possession of a small amount of drugs is considered an administrative offence and possession of more than a small amount a criminal offence. The vague definition of what is a “small amount” opened up the possibility for police corruption, allowing some venal officers to construe any amount as “small”, and treat the offense as an administrative one. To avoid any possible confusion and to eliminate possibilities for corruption, the Police President and Supreme Public Prosecutor issued internal regulations designed to clarify elements of the drug law that some feared allowed policemen too much discretion on whether to pursue drug cases.

In 2003 10 police officers committed drug related crimes. There were 9 cases of production and distribution of drugs, and 1 case of spreading addiction. Four of the 10 police officials received sentences from four to nine years for trying to sell five kilograms of heroin, part of a larger amount confiscated in an earlier case. A prosecutor and his superior arranged for part of a drug seizure to escape destruction and then arranged with two policemen to sell the heroin. In 2002 only 4 police officers committed drug related crimes (3 cases of production and distribution and 1 case of spreading addiction. All those cases were conditionally suspended.

Agreements and Treaties. The Czech Republic is a party to the 1988 UN Drug Convention and the World Customs Organization’s Convention on Mutual Administrative Assistance for the Prevention Investigation and Repression of Customs Offenses. An extradition treaty and an MLAT are in force between the U.S. and the Czech Republic, though the extradition treaty is 80 years old, based on outdated mutual lists, and does not allow the extradition of Czech nationals to the U.S. The Czech Republic has taken the necessary legislative measures to join the European Arrest Warrant system. However, the EAW has not been used and there is sharp debate about whether the Czech constitution even allows the extradition of nationals to other EU Member States. A test case before the Constitutional Court may resolve the issue in 2005. The Czech Republic has signed, but not yet ratified, the UN Convention against Transnational Organized Crime.

Drug Flow/Transit. Marijuana cultivation used to be primarily for personal use only. However the police recently found many laboratories where the drug was cultivated hydroponically, which appears to be an indication that the marijuana is produced for local distribution. Police discovered three big laboratories in the first half of the year. The marijuana growers stated that they were encouraged to start these large marijuana operations by the signals of the government’s more liberal drug policy

against soft drugs. Marijuana is also imported from Holland and more recently from Morocco via Spain.

Czech police focused their activities on ethnic Albanian drug gangs that import heroin mainly from Afghanistan via Iran and Turkey. There were no reports of imports of white heroin from Thailand or Burma. Heroin sometimes transits the Czech Republic via the Balkan Route to Northern and Western Europe. But police believe shipments are now smaller and more frequent, unlike the big heroin cases of the past. Cocaine is mainly exported to the Czech Republic through Holland. It usually then transits through to Northern and Western Europe. It is delivered most often to the Czech Republic by individual travelers returning from visits abroad or by mail. Czech drug couriers mainly use the airport in Amsterdam where the cooperation with the local police is very complicated in terms of arrest. The local police more often than not confiscate the drug, but do not start prosecution. Due to the price of cocaine, to the degree it is used in the Czech Republic, it is mainly consumed by the middle and upper classes.

Pervitine, a synthetic amphetamine, is produced mainly by Czechs, primarily for local consumption. It is often produced in home laboratories where ephedrine, the main ingredient in Pervitine, is extracted from pills that are readily available. One Czech company, INC Roztoky u Prahy, had been producing tons of ephedrine annually. INC announced a production pause in May 2004, in connection with plans to sell the factory or the production technology. Neither of those two options have taken place, but all ephedrine stocks have been sold, mainly to the USA (Novus; cca 30 tons), South Africa (cca 3 tons), Argentina and Brazil or to local companies. It looks as though INC plans to restart its production in 2005. Pervitine is exported mainly to Germany and to a lesser extent to Austria. Czech technology for the production of Pervitine has also been sold to neighboring Slovakia.

Ecstasy, still the favorite drug of the dance scene, is imported mainly from Holland and Belgium. The import is organized among smaller, closed groups or individuals; however, the amounts of drug shipments are growing. Most Ecstasy in the Czech Republic is in pill form. There are no indications that Ecstasy is produced in the Czech Republic.

The Ministry of Agriculture monitors the growth and sale of poppies that are cultivated for poppy seeds sold to EU markets or used in traditional Czech cooking. Total production in 2003/2004 (July 2003-June 2004) was 19,544 tons (16,918 tons in 2002/2003). 80 percent-90 percent of production is exported. The Czech Customs Service will be responsible for monitoring growth as well as exports beginning January 2005.

Domestic Programs (Demand Reduction). School prevention programs continue to be the most common prevention programs. After-school activities are organized by NGOs. The number of contact centers that provide needle exchange is growing. In 2003 1.7 million needles were distributed.

In 2003, the state budget provided 317 million Czech Crowns, or \$13.7 million to national drug programs and an additional 48 million Crowns, or \$2.1 million directly to the regions. The Government Commission for Coordination of Drug Policy received \$4.45 million for projects at the local level, up from the 2002 amount of US\$3.75 million.

The Commission needs to coordinate with other institutions to make sure that the resources for prevention and treatment programs will be spent wisely. It has been criticized for supporting programs to test the purity of Ecstasy at dance-parties in the past. Since there are many preventive as well as treatment programs (and a lot of them are not very effective), the Committee came up with a proposal to evaluate programs.

The U.S. Department of State supports the prevention efforts of Lions' Club, Lions' Quest Program. Children are taught at elementary schools how to live a healthy life without drugs. This program, supported by the Ministry of Health and Ministry of Education, is now being implemented at several schools.

Bilateral Cooperation. Czech police consider cooperation with the U.S., German, Austria, Israel, Switzerland and the UK as very good. Czech and German police continue to cooperate in Operation Crystal to combat Pervitine trafficking.

IV. U.S. Policy Initiatives and Programs

The U.S. covers Czech Republic drug issues through the DEA office in Berlin. DEA maintains an extremely active and cooperative relationship with Czech counterparts, particularly with the National Drug Headquarters. DEA cooperates with NDH on investigations. DEA also assists with organizational changes at NDH and has provided training. The State Department has given grants for counternarcotics education and has provided equipment and training for customs officers.

The Road Ahead. In the first half of the year the Government Commission for Coordination of Drug Policy did an analysis of Czech drug policy. Based on the results of their analysis, they proposed a new drug policy strategy for 2005-2009. They proposed a general document to which they would add two action plans for 2005-2006 and 2007-2008. The priority will be given to public health concerns, including a balance between drug supply, demand reduction and risk minimization, and standardization and quality assurance of services such as primary prevention, treatment and rehabilitation. The government now runs nine drug treatment/ substitution centers and wants to increase the number of these centers. The government also wants to implement a certification scheme for NGOs providing these services. Legal drugs, tobacco and alcohol, became another priority of the government. They want to focus more on misuse of these drugs by children, based on the latest research results. This strategy hasn't been approved yet due to political differences over drug policy. The Interior Minister intends to seek legislation approving undercover "buy-bust" type operations and use of criminal informants, which he feels would help catch criminals and corrupt officials involved in the drug trade. The bill is prepared but hasn't begun the legislative approval process.

Denmark

I. Summary

Denmark's strategic geographic location and status as one of Northern Europe's primary transportation points make it an attractive drug transit country. The Danes cooperate closely with their Scandinavian neighbors, the European Union (EU), and the U.S. government (USG) against the transit of illicit drugs, and Denmark plays an increasingly important role in helping the Baltic States combat narcotics trafficking. Danish authorities assume that their open border agreements and high volume of international trade allow some drug shipments to transit Denmark undetected. Nonetheless, regional cooperation has contributed to substantial heroin and increased cocaine seizures throughout the Scandinavian/Northern Baltic region. Denmark is a party to the 1988 UN Drug Convention.

II. Status of Country

Drug traffickers utilize Denmark's excellent transportation network to bring illicit drugs to Denmark for domestic use and for transshipment to other Nordic countries. Evidence suggests that drugs from the Balkans, Russia, the Baltic countries and central Europe pass through Denmark en route to other EU states and the U.S., although the amount flowing to the U.S. is relatively small. Police authorities do not believe that entities based or operating in Denmark play a significant role in the production of drugs or in the trading and transit of precursor chemicals.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Legislation creating stiffer penalties for narcotics-related crime was enacted in March 2004 and raised the maximum jail sentence for serious drug-related crimes from ten to sixteen years. In 2003, legislation allowing the use of undercover operations and informants was approved. Danish police view this legislation as an important tool in combating and infiltrating organized crime groups operating in Denmark, particularly in dealing with the criminality of the biker gangs Hells Angels and Banditos—both involved in illegal drugs. Undercover operations and informants may now be used when investigating crimes punishable by terms of over six years in prison.

Previous Danish legislation passed in late 2002 requires the reporting of money exceeding 15,000 Euros (approximately \$17,850) to customs upon entry to or exit from Denmark. This law has led to a proactive response by Danish customs in intercepting illegal money.

Denmark continues to provide counternarcotics training, financing and coordination assistance to the three Baltic countries. Denmark, Sweden and Norway have each stationed a Nordic liaison officer in one of the Baltic countries through their Nordic Police Customs Council Agreement (PTN Agreement). Denmark's officer is stationed in Lithuania.

Accomplishments. In early 2004, three people were arrested following the seizure of 325 kilograms of hashish that had been smuggled into Denmark in a refrigerated truck. One of the persons arrested was a member of the Hell's Angels biker gang. In 2004, the Danish Police also demolished the hashish booths in a previously loosely regulated area of Copenhagen known for illicit drug trade and arrested 70 people in the process. Authorities succeeded in closing down the area in response to complaints from residents about the open sale of illegal substances.

Law Enforcement Efforts. During 2004, there was a large increase in cocaine seizures. Cocaine investigations are the current top priority of counternarcotics police efforts in Denmark. The Danish National Police Commissioner issued a statement that the increase in cocaine seizures can be

attributed to “police efforts to fight organized crime and with the systematic police investigations aimed at criminal groups and networks which are involved in drug crime.” The Police Commissioner vowed to continue “goal oriented and systematic efforts to fight organized crime in close cooperation with the European police unit at Europol and foreign police authorities.” Police also targeted members of the Hell’s Angels and Banditos biker gangs active in narcotics smuggling and distribution by increased enforcement of tax laws. Authorities brought 31 cases of tax evasion against members of the biker gangs resulting in fines up to a top fine of DKK 4,000,000 (\$727,272).

Heroin availability in Denmark has fluctuated based on the heroin production levels in Afghanistan. Heroin trafficking continues to be largely controlled by Serbian nationals. By November 1, 2004, the Danish authorities had seized 22.15 kilograms of amphetamine, 15.3 kilograms of methamphetamine, 16.8 kilograms of heroin, 84.2 kilograms of marijuana and 325 kilograms of hashish, 24.4 kilograms of cocaine, and 31,581 tablets of MDMA (Ecstasy)

Corruption. The USG has no knowledge of any involvement by Danish government officials in drug production or sale, or in the laundering of their proceeds. Danish laws regarding public corruption are very stringent.

Agreements and Treaties. Denmark complies with the requirements of all major international conventions and agreements regarding narcotics to which it is party. Denmark is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention as amended by its 1972 Protocol. Denmark also is a party to the UN Convention against Transnational Organized Crime and its protocol against trafficking in women and children, and is a signatory to the UN Convention Against Corruption. The USG has a Customs mutual assistance agreement, and an extradition treaty with Denmark.

Cultivation/Production. There is no substantial narcotics cultivation or production in Denmark. Only small MDMA (Ecstasy) production labs exist in the country and these are vigorously pursued, shut down, and their operators prosecuted.

Drug Flow/Transit. Denmark is a transit country for drugs on their way to neighboring European nations and, in small quantities, to the U.S. The ability of the Danish authorities to interdict this flow is slightly constrained by EU open border policies. The Danish Police report that the continuous smuggling of cannabis to Denmark is typically carried out by car or truck from the Netherlands and Spain. Amphetamines are typically smuggled from the Netherlands via Germany to Denmark and there distributed by members of the Hell’s Angels and Banditos biker gangs. Continued international cooperation, including information sharing among EU members’ national police forces, has helped stem drug flow across the Danish-German border by allowing better detection (at origin) and tracking (to destination) of attempted narcotics smuggling efforts.

Domestic Programs. Denmark’s Ministry of Health estimates that in 2003 (Most recent data available) there were approximately 25,500 drug addicts in the country, including 900 to 1,200 seriously addicted individuals. Seventy-five percent of heroin addicts at that time were receiving methadone treatment. The 2003 governmental action plan against drug abuse was built upon existing programs and offers a multi-faceted approach to combating drug addiction. Its components consist of prevention, medical treatment, social assistance, police and judicial actions (particularly against organized crime), efforts to combat drug abuse in the prison system, and international counternarcotics cooperation.

IV. U.S. Policy Initiatives and Programs

U.S. Goals. U.S. goals in Denmark are to serve as a liaison with the Danish authorities on drug-related issues, to assist with joint investigations, and to coordinate USG counternarcotics activities with the eight countries of the Nordic-Baltic region.

Bilateral Cooperation. The USG enjoys excellent cooperation with its Danish counterparts on drug-related issues. In September 2004, the Department of Homeland Security (DHS) and the U.S. Coast Guard (USCG) conducted a joint training seminar for 34 EU law enforcement officials, including 10 from Denmark. The training contained segments on interdiction of vessels that might contain contraband, hidden compartments, smuggling trends, and narcotics identification. DHS and USCG conducted similar training in 2003, which included presentations from the Drug Enforcement Administration (DEA). In 2003, DEA sponsored the Second International Drug Profiling Conference in Sweden, which was attended by twenty forensic chemists from the U.S., Europe, including Denmark, Asia and Australia.

The Road Ahead. Danish enforcement efforts will be strengthened by new legislation that authorizes police to utilize informants and conduct undercover operations. The 2004 accession of the Baltic States to the EU signals the impending weakening of international barriers to travel and commerce of all sorts. When visa-free travel is fully implemented, there will unavoidably be an increased opportunity for smuggling. The Danes will seek to expand their cooperative efforts to successfully meet the new smuggling threat. At the same time, the USG will continue its cooperation with Danish authorities and work to deepen joint efforts against drug trafficking.

Estonia

I. Summary

Despite continued, concentrated police effort, the abuse of, and trafficking in, illegal drugs continue to rise in Estonia. Frequent arrests of drug traffickers at Estonia's borders indicate not only the extent of drug transit through Estonia, but also the increasing efficiency of counternarcotics efforts of Estonian law enforcement agencies. A 2004 pan-European survey showed that teenagers in Estonia are more eager to use legal and illicit drugs than their European peers, which, in combination with the increasing number of Estonians dying of drug overdose, suggests an increase in domestic drug consumption.

II. Status of Country

The October 2004 closure of a drug lab in Parnu County and seizure of a record amount of Ecstasy pills and Ecstasy precursors at the site prove that Estonia is involved in the production of synthetic illicit drugs. According to the Head of the Central Criminal Police, more than 330,000 pills of Ecstasy and over ten kilos of MDMA were seized, making it the biggest amount of Ecstasy found in the Nordic and Baltic countries to date. In December 2004, officials of the drug squad of the Estonian Tax and Customs Board seized seven kilos of hashish at the Virtsu Port on Estonia's west coast. The drugs were seized as they were being loaded onto a small Finnish vessel.

Estonia has one of the highest HIV infection growth rates in Europe. As of December 2004, 4,408 cases of HIV have been registered, 709 in 2004. Although the virus has started to spread to the general population, intravenous drug-users still form the biggest share of the newly registered HIV cases. Therefore, state policies on HIV/AIDS and other drug-related infectious diseases are a key part of the national drug strategy.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In 2004 a number of changes were introduced to the state legal framework regulating drug-related issues. The Amendments to the Penal Code providing for more strict penalties with respect to crimes associated with narcotics and psychotropic substances entered into force on January 1, 2004, expanding considerably the category of drug related offenses.

In 2004 the GOE approved the Draft Narcotic Drugs and Psychotropic Substances Act (NDPSA), and in September 2004 it passed its first reading in Parliament. The NDPSA will empower the Estonian Drug Monitoring Center to collect data on drugs and drug addiction and set up a drug treatment registry.

In April 2004, the GOE Parliament unanimously approved the National Strategy on the Prevention of Drug Dependency 2004-2012. The strategy includes six fields: prevention, treatment-rehabilitation, harm reduction, supply reduction, drugs in prison, and monitoring of the drug situation. The Government Coalition Agreement for the period of 2003-2007 provides for several activities related to the fight against illicit and licit drugs to be carried out by the parties in the ruling political coalition.

To improve procedures for the prescription of medical products containing buprenorphine, and to avoid illegal use of this same product, additional restrictive measures against the drug were adopted in 2004.

Law Enforcement Efforts. Combating the drug trade and reining in domestic consumption is a top priority not only for Estonian law enforcement agencies but also for several government ministries. In

2004 the Ministry of Justice announced the start of a three-year fight against the organized trade in narcotics. In addition, in 2004 twenty officials from the Estonian prison system were trained as counternarcotics instructors. The Prosecutor General and Director General of the Police Board have both stated that the fight against drugs will be among Estonia's top two law enforcement priorities in 2005. Local governments have also taken steps to combat the increasing domestic drug consumption. In 2003 the Tallinn City Government adopted its own Action Plan for the Prevention of Drugs and HIV-AIDS in Tallinn for the years 2003-2007. In December 2003 the City Government of Narva adopted a similar action plan to combat drug trade and fight HIV/AIDS.

Corruption. Narcotic-related corruption in Estonia occurs at lower levels of the enforcement system, and is prosecuted when discovered. There is no indication of higher level narcotics-related corruption.

Agreements and Treaties. Estonia is a party to the 1961 UN Single Convention as amended by its 1972 Protocol, the 1971 UN Convention on Psychotropic Substances, and the 1988 UN Drug Convention, and the 1990 Council of Europe Convention on Laundering, Search, Seizure and Confiscation of the Proceeds from Crime. The domestic drug legislation of Estonia implements international agreements on illicit drugs. A 1924 extradition treaty, supplemented in 1934, remains in force between the U.S. and Estonia, and a mutual legal assistance treaty entered into force in 1998. Estonia is a party to the UN Convention Against Transnational Organized Crime and its three protocols.

Cultivation and Production. There are increasing indications that at least some synthetic drugs are produced in Estonia, especially Ecstasy.

Drug Flow/Transit. The Estonian Border Guard and Police have noted that most Estonian-Finnish drug trafficking is done via small ports. Of the total narcotics trade in Estonia, transit accounts for approximately 70 percent and domestic use 30 percent.

Domestic Programs. Drug treatment is available. Authorities give particular attention to health counseling and HIV/AIDS prevention/detection.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. In 2004, the Department of State approved funding for a workshop for the Baltic States on clandestine drug laboratories, to be held in Lithuania in 2005. Also, in 2004, Embassy Tallinn's Legal Attache Office funded the participation of two members of the Estonian Security Police and one representative of the Estonian Criminal Police in the FBI national re-training course in Norway. In 2004 the USG funded a series of counternarcotics children's books. The U.S. Embassy in Tallinn also co-sponsored a production of the American musical "Rent" to raise awareness of drug and HIV/AIDS issues in Estonia.

The Road Ahead. The United States anticipates continued close cooperation with Estonian authorities in the international battle against drugs.

Finland

I. Summary

Finland is not a significant narcotics producing or trafficking country. However, drug use and drug-related crime have increased steadily over the past decade. Law enforcement authorities must act in accordance with Finland's constitution, which strongly emphasizes civil liberties and constrains the state from using electronic surveillance techniques such as wiretapping, etc., in all but the most serious investigations; Finland's political culture tends to favor demand reduction and rehabilitation efforts over strategies aimed at reducing supply. The police believe increased drug use in Finland is attributable to the wider availability of narcotics in post-cold war Europe, greater experimentation by Finnish youth, a cultural de-stigmatization of narcotics use, and a gap between law enforcement resources and the growing incidence of drug use. While there is some overland narcotics trafficking across the Russian border, particularly in heroin, police believe existing border controls are mostly effective in preventing this route from becoming a major trafficking conduit into Finland and Western Europe. Police remain concerned about shipments of Ecstasy and other Amphetamine-type Stimulants (ATS) designer drugs arriving from the Baltic countries, chiefly Estonia. Police fear that Estonia's accession to the EU and Schengen arrangements could lead to increased trafficking of Ecstasy from Tallinn into Finland. Finland is a major donor to the UNDCP and is active in counternarcotics efforts within the EU. Finland is a party to the 1988 UN Drug Convention.

II. Status of Country

Narcotics production, cultivation, and the production/diversion of precursor chemicals in Finland is relatively modest in scope. Most drugs that are consumed in Finland are produced elsewhere, and Finland is not a source country for export of narcotics abroad. Estonia, Russia, Spain, and the Netherlands are Finland's principal sources of illicit drugs. Finnish law makes the distribution, sale, and transport of narcotic substances illegal, and provides for extradition, transit and other law enforcement cooperation relating to narcotics offenses, and precursor chemical control. Domestic drug abuse rehabilitation and education programs are excellent. Legislation passed in 2001 allows the police to fine violators for possession of small amounts of narcotics. Statistics are not yet available for how many fines were levied in 2004. The overall incidence of drug use in Finland remains low but is increasing. Cocaine use is rare, and Finland has one of Europe's lowest cannabis-use rates, but amphetamines, methamphetamine, other synthetic drugs, and heroin use are increasingly popular. The use of Ecstasy and other MDMA-type designer drugs has grown significantly in recent years, and police are also concerned about the arrival of gamma-hydroxybutyrate (GHB) in Finland. As in many other western countries, Ecstasy and GHB use in Finland tends to be concentrated among young people and associated with the "club-culture" in Helsinki and other cities. Social service authorities believe the introduction of GHB and other "date rape" drugs into Finland has led to an increase in the number of sexual assaults reported by young women. Finnish law enforcement authorities admit that their lack of resources, together with legal restrictions on electronic surveillance and undercover police work, make penetrating the Ecstasy trade difficult. Increasingly permissive social and cultural attitudes toward drug use and experimentation also contribute this phenomenon.

Heroin use is on the rise in Finland. Police reported a significant drop in the purity of heroin imported to Finland subsequent to the conflict in Afghanistan in 2001. A number of seizures made prior to late 2001 had a purity as high as 75 percent. More recent seizures have had a purity as low as 5 percent. Despite increased use, overdose-related deaths have declined for several years because the heroin content of drugs available in Finland is low.

Because of the difficulty of obtaining high-grade heroin, some users are turning to Subutex (buprenorphine), which they obtain primarily from France. Subutex is used in the treatment of heroin addiction in France; doctors there can prescribe up to a three week supply. Finnish couriers frequently travel to France to obtain Subutex, which they then resell in Finland at a high mark-up. Possession of Subutex is legal in Finland with a doctor's prescription, but there is also a vigorous black market fed by these illegal imports.

The incidence of new HIV cases related to IV drug use in Finland held steady in 2004. According to Finnish police, there are approximately two dozen organized crime groups operating in Finland, many of which have connections with organized crime syndicates in the Baltics and Russia. Some of these groups are facilitators and distributors of narcotics to the Finnish market. Crime syndicates are already using Finland as a transit country into the Schengen region for trafficking-in-persons, and police are concerned that narcotics trafficking in both directions might be next. Police report that Estonians run most of the illicit drug smuggling trade for Finland, although the domestic street-level dealers are chiefly Finns. In the past, the Estonian rings primarily smuggled Dutch or Belgian made Ecstasy. Beginning in 2003, the syndicates also began smuggling greater quantities of Estonian-produced Ecstasy, although the quality and market value is lower. Most Ecstasy in Finland today is now believed to originate in Estonia. Estonian crime syndicates also organize the shipment of Moroccan cannabis from Spain to Finland. Russian syndicates in St. Petersburg have been the primary suppliers of heroin for the Finnish market, but Estonian traffickers are now active in this area as well.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In 1998 the Finnish government released a comprehensive policy statement on illegal drugs, which clearly articulated a zero-tolerance policy for illicit narcotics. The statement warned citizens that all narcotics infractions, from casual use to manufacturing and trafficking, are crimes punishable under Finnish law. However, a new law took effect in 2001 implementing a system of fines for possession of small amounts of drugs, rather than jail time. This law enjoys widespread popular support, and is chiefly used to punish young offenders found in possession of small quantities of marijuana, hashish, or Ecstasy. Finnish law enforcement authorities have expressed concern over the mixed message the 2001 legislation sends and would prefer to send a stronger deterrent message on the demand side. There does not appear to be sufficient political support at this time for a policy aimed at curbing demand through stronger punitive measures, however. A member of parliament in 2004 was involved in a tabloid scandal when she admitted having smoked hashish at a party as a sitting MP; there were no charges filed in the case.

Accomplishments. In late 2000, parliament passed legislation that would increase the law enforcement's community's ability to pursue criminals with investigative tools, such as undercover investigations and wiretaps. Although the legislation went into effect in 2001, a number of restrictions on using such techniques remain and the practical result is that they are not regularly employed. The Finnish government's strategy during 2004 focused on regional and multilateral cooperation aimed at stemming the flow of drugs before they reach Finland's borders and on beefed-up border control measures designed to discourage traffickers. In 2004 Finland played a major role in developing OSCE's drug control strategy.

Law Enforcement Efforts. Although final figures are not yet available, the police believe that arrests and seizures remained relatively stable in 2004. Beginning in the mid-1980s, law enforcement authorities focused police resources on major narcotics cases and significant traffickers, which, due to resource limitations, was somewhat to the detriment of street-level patrols, investigations, and prosecution. Police suggest the result of this focus was to reduce drug users' fear of arrest and to make recreational drug use more widespread. According to police, the rise in drug use during the 90's led to a situation in which the number of drug offenders exceeds the resources deployed to combat illegal

drugs. Following the release of the 1998 government policy statement on drugs, greater resources have been devoted to investigations at the street level by uniformed patrols as well as plainclothes police officers.

Corruption. As a matter of government policy, the Finnish government does not encourage or facilitate illicit production or distribution of narcotic or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal transactions. There have been no arrests or prosecutions of public officials charged with corruption or related offenses linked to narcotics trafficking in Finnish history.

Agreements and Treaties. Finland is a party to the 1988 UN Drug Convention, and it has implemented the Convention through domestic legislation. Finnish judicial authorities are empowered to seize the assets, real and financial, of criminals. Finland is also a party to the 1961 UN Single Convention, amended by its 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances. Finland is a party to the UN Convention Against Transnational Organized Crime. A 1976 bilateral extradition treaty is in force between the United States and Finland. Finland in 2004 signed the bilateral instrument of the EU-U.S. Extradition Treaty. The United States has also concluded a customs mutual assistance agreement with Finland. Finland is a signatory to the UN Convention Against Corruption.

Cultivation/Production. There were no seizure of indigenously cultivated opiates, no recorded diversion of precursor chemicals, and no detection of illicit methamphetamine, cocaine, or LSD laboratories in Finland in 2004. Finland's climate makes natural cultivation of cannabis and opiates almost impossible. Local cannabis cultivation is limited to small numbers of plants in individual homes using artificial lighting. Production is chiefly for personal use. The distribution of the 22 key precursor chemicals used for cocaine, amphetamine, and heroin production is tightly controlled.

Domestic Programs (Demand Reduction). The Finnish government takes the approach that demand reduction is best achieved by implementing an effective Nordic welfare policy which calls for early and effective intervention before drug use becomes a problem. Though the Nordic welfare model tends toward centralization, the Finnish government gives substantial autonomy to local governments to address demand reduction using federal money. Finnish schools are required to educate children about the dangers of drugs. Public health services offer rehabilitation services to users and addicts. Such programs typically use a holistic approach that emphasizes social and economic reintegration into society and is not solely focused on eliminating the subject's use and abuse of drugs. Replacement and maintenance therapy for using buprenorphine is a relatively new treatment for heroin addicts in Finland and not yet widespread.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. The United States has pursued cooperation with Finland in a regional context, coordinating assistance between Finland and the other Nordic States with assistance to the Baltic States. Cooperation between Finnish law enforcement agencies and their U.S. counterparts on narcotics objectives is excellent.

The Road Ahead. The United States anticipates continued excellent cooperation with the government of Finland in all areas of countering narcotics trafficking. The principal limitation to such cooperation will likely be limitations created by the small resource base that Finnish law enforcement authorities have at their disposal.

France

I. Summary

France is a transshipment point for drugs moving into, from and within Europe. Given France's shared borders with trafficking conduits such as Spain, Italy, and Belgium, France is a natural distribution point for drugs moving toward North America from Europe and the Middle East. France's own maritime presence in the Caribbean its proximity to North Africa and its participation in the virtually Europe-wide Schengen open border system, contribute to its liability as a transit point for drugs, including drugs originating in South America. France's own large domestic market of predominantly cannabis users is, of course, attractive to traffickers as well. Specifically, in descending order, cannabis originating in Morocco, cocaine originating in South America, heroin originating in southwest Asia, and Ecstasy (MDMA) originating in the Netherlands and Belgium all find their way to France. Increasingly, traffickers are also using the Channel tunnel linking France to Great Britain as a conduit for drugs from mainland Europe to the UK and Ireland. With numbers of drug arrests and seizures increasing again in 2003 (latest figures), new Government of France (GOF) counternarcotics initiatives in 2004 included increasing cooperation with neighboring countries and Morocco and facilitating confiscation of traffickers' assets. France is a party to the 1988 UN Drug Convention.

II. Status of Country

In 2003, the number of drug offenses, seizures, and arrests increased over 2002 levels, according to official French figures, as did the volume of seizures of cannabis, heroin, cocaine, crack, and amphetamines. Seizures of Ecstasy remained almost equal with 2002 levels. Seizures of methamphetamines and LSD declined, as did fatal drug overdoses, continuing a trend that began in 1995 (with the exception of a small up-tick in 2000). The number of deaths due to drug overdose has decreased by more than 25 percent between 2000 and 2003, with an eight percent decrease from 2002 to 2003 alone.

Cannabis users account for more than 90 percent of all drug users in France, according to official French statistics. By contrast, users of the next most popular drugs, heroin and cocaine, account for only four percent and two percent of users respectively, and Ecstasy users total fewer than two percent of all users. In 2003, authorities seized more than 80 tons of cannabis products (mostly resin), more than 4 tons of cocaine, 545 kilograms of heroin, and more than 2 million Ecstasy pills. Police, customs officials, and the gendarmerie arrested more than 90,000 users and more than 17,000 persons for trafficking. Males far exceeded females as users: males made up 93 percent of those interrogated by the police for using cannabis, and more than eight out of 10 users of cocaine, heroin, and Ecstasy. French nationals accounted for 93 percent of those arrested for cannabis usage, and the average age of all users was just over 22 years; among traffickers, French nationals represented 86 percent of those arrested. Of cocaine traffickers arrested, only 56 percent were French, while 72 percent of heroin traffickers were French. Almost two-thirds of drug users, according to French figures, are between 18 and 25 years old.

III. Country Actions Against Drugs in 2004

France continued to work hard to meet its obligations under the 1988 UN Drug Convention:

Policy Initiatives. France's drug control agency, the Mission Interministerielle de la Lutte Contre la Drogue et la Toxicomanie (MILDT, or the Interministerial Mission for the Fight Against Drugs and Drug Addiction), is the focal point for French national drug control policy. Created in 1982, MILDT

coordinates the 19 ministerial departments that have a role in establishing, implementing, and enforcing France's domestic drug control strategy. The French also participate in regional cooperation programs initiated and sponsored by the European Union. In June, Interior Minister Dominique de Villepin announced plans to have police conduct searches more often in planes and trains originating from particular destinations, especially the Netherlands, Spain and Belgium. Villepin noted that he hoped to sign agreements with those countries to allow French investigators to work at their airports. He also sought to establish mixed patrols at the borders, intensify controls on roadways, and create a new Interministerial Antidrug Committee (CILAD), which will draw up a map of the main illegal drug centers in France.

Given the primary role that cannabis resin from Morocco plays in the French market (80 percent of the hashish seized in France each year comes from Morocco) in mid-September Villepin went to Rabat to meet with his counterpart to discuss ways to reinforce cooperation. The director general of the national police, the director of Public Liberties and Judicial Affairs, and the director of the Directorate of Territorial Security (DST, France's FBI equivalent) accompanied Villepin and met with their counterparts as well. The two countries agreed to exchange liaison officers specializing in counternarcotics. According to the agreement, France's Office Central pour la Repression du Traffic Illicit des Stupfians (OCTRIS, the Central Office for the Repression of Illicit Trafficking in Narcotics) will set up an operation in Tangiers, and, in an attempt to uncover supply networks, French police will question 167 French or Franco-Moroccans being held in Morocco for drug offenses. They hope ultimately to establish a Mediterranean counternarcotics group, also involving Spain.

In October, National Assembly member Jean-Luc Warsmann of the ruling Union for a Popular Majority proposed 44 measures to fight drug-trafficking networks. U.S. Drug Enforcement Agency (DEA) officials had briefed Warsmann on drug trafficking in the region in preparation for his proposal. In response to Warsmann's proposals, Villepin announced the creation of a "unit for the identification of property" which will allow justice and finance officials to pinpoint-even prior to arresting traffickers-all of the traffickers' property, both in France and abroad, thus facilitating seizures. Authorities will confiscate all assets that the owner cannot prove were acquired with 'valid money.' In late October, the directors-general of the French and Spanish national police met to follow up on a meeting earlier that month between their respective interior ministers. They signed agreements calling for Spain to send one Central Drugs Unit inspector to Martinique as a liaison officer for investigation of cocaine trafficking, and another to OCTRIS headquarters in Paris to enhance cooperation generally in drug-trafficking investigations.

Law Enforcement Efforts. French counternarcotics authorities are efficient and effective. In 2004, French authorities made several important seizures of narcotics. In addition, they dismantled several drug rings across France.

In March authorities confiscated several large hauls of cannabis resin. On March 12, customs authorities in Perpignan seized two tons; on March 19, police in southeastern France seized another ton; on March 27, customs authorities seized another ton in a minibus at a toll plaza near Arles; and at the end of the month, customs authorities in Perthus, in the eastern Pyrenees, seized 3.1 tons of the drug hidden in a truck in potato sacks. In late March, police in northern France arrested 24 people trafficking cannabis resin.

In June, police seized 5.6 million Euros' worth of cannabis resin (2.8 metric tons) on the A10 national motorway near Orleans, south of Paris, from a truck headed for the Netherlands. Later that month, French customs authorities seized 10 tons of cannabis resin off the French coast from a British-registered boat returning from Morocco. In mid-July, customs officials at Orly made the year's biggest airport seizure, confiscating 27 kilos of cocaine with a value of 1.2 million dollars from a passenger arriving from Suriname.

In late August, customs officials in Perthuis seized nine tons of cannabis resin on a truck from Spain destined for Germany. Valued at 17.5 million Euros, the haul was one of the most important seizures in France in recent years.

In September, the narcotics brigade seized 4.5 tons of Moroccan cannabis worth 25 million Euros in a warehouse in the Paris suburbs—a record for the Paris region in recent years, according to the police. In conjunction with the raid, authorities dismantled an international network they had been investigating since May and arrested eight people who were working in a structured international network shipping Moroccan drugs via Spain to France. In late September, French authorities worked with Dutch, Belgian and Luxembourg officers to conduct a major drugs sweep. Authorities confiscated more than 10 kilos of cocaine worth more than 400,000 Euros and arrested the three major figures in the network.

In October, customs officers in Perpignan (near the Spanish border) confiscated 2.1 metric tons of cannabis resin in a truck that came from Barcelona destined for the Netherlands, bringing to 25 tons the amount of cannabis resin that authorities there had seized in 2004. Later in the month, police in Lille (close to the Belgian border) carried out a major operation resulting in the arrest of 41 people. The ring purchased drugs in Morocco, stashed them in Belgium and the Netherlands, and sold them in northern France, according to French authorities.

By the end of October, French and Spanish authorities had seized 1.5 tons of cocaine that had washed up on beaches over the course of the year. The cocaine probably came from a traffickers' ship—thought to have originated in Colombia—that lost its cargo in a storm.

Corruption. Narcotics-related corruption among French public officials is not a problem. The USG is not aware of any involvement by senior officials in the production or distribution of drugs or in the laundering of drugs proceeds.

Agreements and Treaties. France is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention as amended by its 1972 Protocol. The USG and the French government have bilateral narcotics-related agreements in place, including a 1971 agreement on coordinating action against illegal trafficking. A new extradition treaty between France and the U.S. entered into force in February 2002. A new mutual legal assistance treaty (MLAT) entered into force in 2001. The U.S. also has a Customs Mutual Assistance Agreement (CMAA) with France. France is a party to the UN Convention on Transnational Organized Crime and its protocols against migrant smuggling and trafficking in women and children.

Cultivation/Production. French authorities believe the cultivation and production of illicit drugs is not a problem in France. France cultivates opium poppies under strict legal controls for medical use, and produces amphetamines as pharmaceuticals. It reports its production of both products to the International Narcotics Control Board (INCB) and cooperates with the DEA to monitor and control those products. According to authorities, there are no significant Ecstasy laboratories in France, although there may be some small kitchen labs.

Drug Flow/Transit. France is a transshipment point for illicit drugs to other European countries. France is a transit point for Moroccan cannabis (hashish) and South American cocaine destined for European markets. Most of the heroin consumed in, or transiting, France originates in southwest Asia (Afghanistan) and enters France via the Balkans after passing through Iran and Turkey. New routes for transporting heroin from southwest Asia to Europe are developing through Central Asia and Russia and through Belgium and the Netherlands. West African drug traffickers (mostly Nigerian) are also using France as a transshipment point for heroin and cocaine. These traffickers move heroin from both southwest Asia and southeast Asia (primarily Burma) to the United States through West Africa and France, with a back-haul of cocaine from South America to France through the United States and West Africa. Law enforcement officials believe these West African traffickers are stockpiling heroin and

cocaine in Africa before shipping it to final destinations. There is no evidence that significant amounts of heroin or cocaine enter the United States from France. Most of the South American cocaine entering France comes through Spain and Portugal. However, officials are seeing an increase in cocaine coming directly to France from the French Caribbean, giving impetus to the creation of the Martinique Task Force—a joint effort with Spain, Colombia, and the UK. Most of the Ecstasy in or transiting France is produced in the Netherlands or Belgium.

Domestic Programs. MILDT is responsible for coordinating France's demand reduction programs. Drug education efforts target government officials, counselors, teachers, and medical personnel, with the objective of giving these opinion leaders the information they need to assist those endangered by drug abuse in the community. The government is continuing its experimental methadone treatment program. Although the public debate concerning decriminalizing cannabis use continues, the French government is opposed to any change in the 1970 drug law, which criminalizes usage of a defined list of illicit substances, including cannabis.

Substitution treatments for addicts have saved 3,500 lives in less than ten years, according to French authorities; there are currently 85,000 persons taking Subutex in France now, and 25,000 on methadone. However, a health-insurance reform law adopted in July could have dramatic consequences for clinics, according to French press. Under the law, someone seeking medication treatment to combat drug addiction would have to sign a treatment contract with both a physician and his health insurance to have the state cover the drugs to treat their addiction (previously, one needed only to consult a doctor to receive a prescription). Some advocates warn that this requirement could discourage addicts in need of help, noting that adding more administrative measures to the process of getting help could increase the risk of the most susceptible turning to the streets to acquire the drugs. It is possible that these dire predictions are part of an effort to discourage any changes at all in France's generous social welfare arrangements, including national health care.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. U.S. and GOF counternarcotics law enforcement cooperation remains excellent, with an established practice of information sharing. Since October 2001, the DEA's Paris Country Office (CO) and OCRTIS have been working together on an operation that has resulted in the seizure and/or dismantling of 17 operational, or soon-to-be-operational clandestine MDMA (Ecstasy) laboratories, and the arrests of more than 30 individuals worldwide. International Controlled Deliveries have resulted in nine lab seizures in the United States, two each in France, Germany, and Australia, and one each in New Zealand and Spain.

Road Ahead. The United States will continue its cooperation with France on all counternarcotics fronts, including through multilateral efforts such as the Dublin Group of Countries Coordinating Narcotics Assistance and UNODC.

Georgia

I. Summary

Georgia has the potential to be a transit country for narcotics flowing from Afghanistan. The “Silk Road” or “Caucases Route” winds through Azerbaijan, Armenia and Georgia, presenting a stable drug trafficking route from Asia to Europe. This situation has been further compounded by the existence of uncontrolled territories, vestiges of long standing ethno-political conflicts that created transit routes for black market and illicit goods. Following the “Rose Revolution” in Georgia, the new Georgian administration has begun to take steps to make Georgia’s borders less permeable. There have been notable improvements along the Turkish border, the Black Sea coast, and the Russian border that have resulted in major increases in customs revenues. The Ministry of Internal Affairs, which has since merged with the Ministry of State Security to become the Ministry of Police and Public Safety (MPPS), has initiated a vigorous counternarcotics campaign. Unfortunately, statistics for law enforcement activities that resulted in seizures, arrests, and prosecutions for narcotics related crime in the country are scarce and much remains to be done to reduce the trafficking of all illicit goods into and through Georgia. Georgia is a party to the 1988 UN Drug Convention and receives assistance from the UN Office on Drugs and Crime (UNODC).

II. Status of Country

Given Georgia’s geographic location and its ambition to be a key link in overland trade between Europe and Asia, the potential for it to emerge as a major drug trafficking route is always present. The logical narcotics trafficking routes through Georgia are principally east/west routes. Asian cultivated narcotics destined for Europe enter Georgia from Azerbaijan via the Caspian and exit through the northern Abkhaz or southern Ajaran land and water borders. Similarly, west/east routes traffic illicit synthetic drugs from Europe destined for Georgia and other countries in the region. Thinly staffed ports of entry and confusing and restrictive search regulations make TIR (Transport Internationale Routierre—a system of customs-sealed trucks to facilitate trade across borders) trucks the main vehicles for narcotics trafficking in the region. TIR trucks move westward from Azerbaijan crossing into Georgia at the Gardabani regional border points (Red Bridge). Once in Georgia, the drugs move west to the Black Sea ports of Poti, Batumi (Ajara) and Sukhumi (Abkhazia). From there the shipments are mainly bound for Turkey (Istanbul), Romania (Constantia) and Ukraine (Odessa). Conversely, synthetic drugs are trafficked from Europe in small quantities, undetected via used-car trade routes where vehicles acquired in Western Europe are driven through Greece and Turkey destined for Georgia. In November of 2004 at the Turkish-Georgian border point of Sarpi, \$70,000 of Subutex and Tramal trafficked via this route and bound for Georgia was confiscated. Subutex is a pharmaceutical used in France, and other European countries to wean heroin addicts from their addictions, while Tramal is used to treat pain. Both are subject to abuse by individuals not under medical supervision—their effects are analogous to heroin. The function of detecting illegal smuggling at the Georgian borders was transferred a year ago from Customs to the newly established Operational Investigative Unit under the Ministry of Tax and Revenues. Narcotics seizure statistics are not adequate; they hint at, but do not prove, that borders are more secure. A sharp increase in revenues from better customs duty enforcement at borders suggests more clearly that improvements have also been registered on the narcotics interdiction front.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The Government of Georgia (GOG) is investing a great deal of time and resources into an on-going reorganization of the law enforcement sector, building capacity and addressing immediate needs of its people. Reorganizations are aimed at excising layers of bureaucracy that fostered nepotism and corruption. The Criminal Procedure Code that will move the country towards an Anglo-American Common Law system is presently being rewritten. The formerly independent Narcotics Bureau was folded into MPPS and since then efforts have been made to appoint corruption-free and competent leadership. Controlling illicit substances is on the GOG's radar screen, but just now the focus is more sharply on rule of law.

Law Enforcement Efforts. Registered drug seizures and arrests decreased from 2003 to 2004. According to the MPPS, its counternarcotics unit uncovered 1,763 drug-related cases, compared to 4,183 in the previous year. Of this year's cases 1,698 or 96.3 percent resulted in criminal proceedings. A noticeable decrease in the registered drug seizures could be caused by lack of coordination among agencies involved in the counternarcotics fight. A number of counternarcotics officials and policemen suspected of involvement in illicit trade activities were recently arrested in Georgia. This suggests that large volumes of contraband drugs are being unofficially seized and resold on the fast-expanding local black market. According to GOG statistics:

Corruption. Corruption has long been the most significant problem within Georgia's law enforcement agencies. The result has been a huge number of uninvestigated cases, criminals who remain at large, an increase in crime throughout the country and loss of trust among the society towards law enforcement employees. Since the Rose Revolution, the law enforcement community, under government prodding, has taken noteworthy positive steps to launch a fierce war against corruption. A considerable number of corrupt former government and law enforcement officials have been detained, their property confiscated and large fines levied. The GOG is working on civil service, tax and enforcement reforms aimed at deterring and prosecuting corruption in the future. Complex structural reforms have been implemented within the law enforcement sector to root out corruption, streamline bureaucratic processes and build a professional police force. But there is still a long way to go to truly create governmental and societal systems that effectively deter corruption.

Agreements and Treaties. Georgia is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substance, and the 1961 UN Single Convention as amended by its 1972 Protocol. Georgia has signed, but has not yet ratified the UN Convention Against Transnational Organized Crime.

Cultivation and Production. Estimates by the GOG on the extent of narcotics cultivation within the country are unreliable and do not include those areas of the country outside the central government's control (South Ossetia and Abkhazia). Apart from a small amount of low-grade cannabis grown mainly in the foothills of the Caucasus mountains, largely for domestic use, Georgia is not a significant producer of narcotics.

Drug Flow/Transit. The GOG has no reliable statistics on the volume of drugs transiting through Georgia. The MPPS has previously reported that 95 percent of illegal drugs entering Georgia are destined for onward shipment, but the basis for this estimate is unclear. Prices for drugs in Georgia are currently estimated at the wholesale level at \$150-\$200 for one gram of heroin. The current street price of opium is estimated at \$15 per gram, and the price for one pill of "Subutex" is \$100-\$120. The price for heroin over the past two years has remained relatively stable. The price for raw opium has steadily decreased.

Demand Reduction. Independent and official sources indicate that there were at least 275,000 drug users in Georgia during 2004. The increase in the number of drug addicts and drug consumption in comparison with last year's figure of 150,000 is mainly caused by the import and illegal sale of

Subutex. This drug is not registered in the Georgian health care system and is imported illegally mainly from Europe. The price for one tablet of Subutex is approximately \$100. The tablet is dissolved into an injectable solution for three or four people at \$25-\$30 cost per user. Since 2001, the Southern Caucasus Anti-Drug Program has been implementing projects that address three main areas: to strengthen interdiction capacities at sea ports; to strengthen interdiction capacities at land borders; and to develop compatible systems of intelligence gathering and analyses.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. In 2004, the USG continued timely and direct assistance on criminal justice issues to the GOG as well as to the legal and law enforcement community in the areas of procuracy reform, corruption, money laundering, criminal procedure, forensics, police academy, human trafficking and creation of the patrol police.

The Road Ahead. The best way to assist Georgia's law enforcement reform efforts is to provide focused training and technical assistance from the U.S. and the international community on a few high-priority, achievable objectives. Any assistance to Georgian law enforcement, including counternarcotics, must include a provision for anticorruption reform, and must be closely monitored for progress.

Germany

I. Summary

Although not a major drug producing country, Germany continues to be a consumer and transit country for narcotics. The government actively combats drug-related crimes and focuses on prevention programs and assistance to drug addicts. In 2004, the German government established the National Inter-agency Drug and Addiction Council to coordinate implementation of its June 2003 “Action Plan on Drugs and Addiction.”

Cannabis is the most commonly consumed illicit drug in Germany. In 2003, consumption of amphetamine, crack, and cannabis increased, while the use of cocaine remained static and the use of heroin and Ecstasy decreased. Drug-related deaths decreased in 2003, as well as during the first half of 2004, and the number of first time users of illicit hard drugs decreased in 2003. Narcotics trafficking, and increasingly “multi-drug trafficking,” continued to be the main criminal activities of organized crime groups in Germany. The number of drug-related crimes has increased continuously in the last ten years, with a moderate rise of 2 percent in 2003. Germany is a party to the 1988 UN Drug Convention. The Federal Criminal Police (BKA) publishes an annual narcotics report on illicit drug related crimes in Germany, including data on seizures, drug flows, and consumption.

II. Status of Country

Germany is not a significant drug cultivation or production country. However, Germany’s location at the center of Europe and its well-developed infrastructure make it a major transit hub. Cocaine and Ecstasy transit through Germany from the Netherlands to Scandinavia, Eastern and Southern Europe. Ecstasy also transits from the Netherlands through Germany to the United States. Cocaine is transported from Southern Europe. Ecstasy also transits from the Netherlands through Germany to the United States. Cocaine is transported from South America directly to Germany. Heroin transits Germany from Eastern Europe via the Balkan route to Western Europe, especially the Netherlands. Organized crime continues to be heavily engaged in narcotics trafficking. Germany remains a leading manufacturer of pharmaceuticals, making it a potential source for precursor chemicals used in the production of illicit narcotics.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In June 2003, the cabinet adopted the Health Ministry’s new “Action Plan on Drugs and Addiction,” superceding the 1990 “National Plan to Combat Narcotics.” The action plan establishes a comprehensive strategy to combat narcotics for the next five to ten years in harmony with EU and UN drug policy.

The Drug Commissioner at the Federal Health Ministry continues to coordinate national drug policy. The national plan focuses on specific prevention strategies for new risk groups, enhancing international cooperation, and addressing trends in the states of the former East Germany. Key pillars of the government’s drug policy remain (1) prevention, (2) therapy and counseling, (3) survival assistance, and (4) interdiction and supply reduction. The following developments in 2004 are in line with Germany’s four key policy initiatives:

Survival Aid. In 2004, there were 25 “drug consumption rooms” in Germany. The 2003 International Narcotics Control Board (INCB) Annual report (published in March 2004) noted that “drug consumption rooms” are not in compliance with international drug control treaties “insofar as they serve as forums in which drugs acquired on the illicit market can be abused.” The Federal law requires

personnel at these sites to provide medical counseling and other professional help. Room managers are required to take measures to prevent the rooms from becoming a venue for criminal activity.

Interagency Council. In October 2004, the German government established the National Inter-agency Drug and Addiction Council to coordinate and to review the implementation of the government's 2003 "Action Plan on Drugs and Addiction." The council is comprised of the Drug Commissioner, high-level federal and state level officials, as well as scientists, NGOs, and representatives from counseling centers. The Council will establish a working group on prevention.

Focus On Cannabis. In June 2004, the Federal Health Ministry published a study on cannabis consumption, therapies, and assistance programs in Germany. In November 2004, the Drug Commissioner hosted a two-day conference on cannabis consumption, prevention, and therapy strategies.

Telephone Hotline. In 2004, the Health Ministry conducted a public relations campaign to increase awareness of the new telephone hotline. Established in 2003, this hotline offers professional counseling, aid, and information on drugs and drug problems. The hotline merges previous hotlines of several local drug-counseling institutions.

Law Enforcement Efforts. Counternarcotics law enforcement continues to be a high priority for the Federal Criminal Police (BKA) and the Federal Customs Police (ZKA). German law enforcement agencies scored numerous successes in seizing illicit narcotics and arresting suspected drug dealers. In Germany, in the first half of 2004, the seizures of heroin, opium, cocaine, and amphetamines increased compared to the first half of 2003, while the seizures of LSD and hashish dropped. In the first half of 2004, the Customs Office at Frankfurt Airport alone made seizures totaling 432 kilograms of illicit narcotics, with hard drugs seizures (cocaine, heroin, and opium) increasing by almost 40 percent compared to the first half of 2003.

In one of the biggest narcotics-trafficking investigation successes over the last several years in Germany, police in Munich in July 2004 arrested the head of a major ring for smuggling 600 kilograms of heroin from Turkey to Western Europe. The arrest was the result of international cooperation of law enforcement officials from Germany, the Netherlands, and Turkey.

Corruption. Neither the government nor senior officials encourage or facilitate the production or distribution of illicit drugs. No cases of official corruption in this regard have come to the USG's attention.

Agreements and Treaties. A 1978 extradition treaty and a 1986 supplement treaty is in force between the U.S. and Germany. The U.S. and Germany signed a Mutual Legal Assistance Treaty in Criminal Matters (MLAT) on October 14, 2003, which the German Bundestag is expected to ratify in 2005. The MLAT has also been sent to the U.S. Senate for its advice and consent. In addition, the U.S.-EU Agreements on Mutual Legal Assistance and Extradition will further improve U.S.-German legal assistance and cooperation. The U.S.-Germany implementing instrument is currently under negotiation. That instrument, along with the implementing instruments of other EU member states, must be signed before the agreement can be ratified. There is a Customs Mutual Legal Assistance Agreement (CMAA) between the U.S. and Germany. In addition, Germany is party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention as amended by the 1972 Protocol. Germany has signed, but has not yet ratified, the UN Convention against Transnational Organized Crime and the UN Convention against Corruption.

Cultivation and Production. Germany is not a significant producer of hashish or marijuana. The Federal Criminal Police reported that all fourteen synthetic drug labs seized in Germany in 2003 were small and were not equipped for large-scale production.

Drug Flow/Transit. Germany's central location in Europe and its well-developed infrastructure make it a major transit hub. Traffickers smuggle cocaine from South America, especially from Colombia, to and through Germany from the Netherlands to other European countries. Heroin from Afghanistan transits from Eastern Europe to Western Europe, especially to the Netherlands. Cannabis is trafficked to Germany mainly from the Netherlands. Frankfurt Airport is still a major transshipment point for Ecstasy and other drugs destined for the U.S. from Europe.

Domestic Programs/Demand Reduction. The Federal Ministry of Health continues to be the lead agency in developing, coordinating, and implementing Germany's drug policies and programs. Drug consumption is treated as a health and social issue. Policies stress prevention through education. The ministry is expanding Internet-based information and their prevention programs. Addiction therapy programs focus on drug-free treatment, psychological counseling, and substitution therapy. The Ministry of Health launched a heroin-based treatment pilot project to treat seriously ill, long-term opiate addicts in March 2002, which is still ongoing.

IV. U.S. Policy Initiatives and Programs

Initiatives and Bilateral Cooperation. German law enforcement agencies work closely and effectively with their U.S. counterparts in narcotics-related cases. Close cooperation to curb money laundering continues between DEA, the Federal Bureau of Investigation (FBI), the Internal Revenue Service (IRS), the U.S. Customs Service, and their German counterparts, including the BKA, the AKA, and the state criminal police (LKAs). German agencies routinely work very closely with their U.S. counterparts in joint investigations using the full range of investigative techniques, such as undercover operations. German-U.S. cooperation to stop diversion of chemical precursors for cocaine and heroin production also continues to be close (e.g., Operations "Purple" and "Topaz"). A DEA liaison officer is assigned to the BKA headquarters in Wiesbaden to facilitate cooperation and joint investigations. Two DEA offices, the Berlin Country Office and the Frankfurt Resident Office, facilitate information exchanges and operational support between German and U.S. drug enforcement agencies. BKA and DEA also participate in a tablet exchange program to compare samples of Ecstasy pills.

Road Ahead. The U.S. will continue its cooperation with Germany on all bilateral and international counternarcotics fronts, including the Dublin Group of Countries Coordinating Narcotics Assistance and the UNODC. The U.S.-German MLAT and the U.S.-EU Agreements on Mutual Legal Assistance and Extradition, once implemented, will simplify and expedite law enforcement cooperation.

Greece

I. Summary

Greece is a “gateway” country in the transit of illicit drugs. Although Greece is not a major transit country for drugs headed for the United States, it does serve as a major transit point for drugs flowing into Western Europe. Greek authorities report that drug abuse and addiction continue to climb in Greece as the age for first-time drug use drops. Drug trafficking remains a significant issue for Greece in its battle against organized crime. Investigations initiated by the DEA and its Hellenic counterparts suggest that a dramatic rise has occurred in the number and size of drug trafficking organizations operating in Greece. Greece is a party to the 1988 UN Drug Convention.

II. Status of Country

With its extensive coastline border, numerous islands, and land borders with other countries through which drugs are transported, Greece’s geography plays an important role in establishing Greece as a favored drug transshipment route to Western Europe. Greece is also home to the world’s largest merchant marine fleet.

Greece is not a significant source country for illicit drug production, though shipment of anabolic steroids to the United States does occur on a small scale. (Use of anabolic steroids is legal in Greece. However, it is illegal to ship them to countries where they are categorized as a controlled substance.)

III. Country Actions Against Drugs in 2004

Policy Initiatives. Greece participates in the Southeast European Cooperative Initiative’s (SECI) anticrime initiative, in the work of the regional Anti-Crime Center in Bucharest and in its specialized task force on counternarcotics. Enhanced cooperation among SECI member states has the potential to disrupt and eliminate the ability of drug trafficking organizations to operate in the region. Greece’s inter-party committee for handling the drug problem is composed of representatives of various political parties and is responsible for reviewing drug related statistics and issues, including proposed narcotics-related legislation and demand reduction programs.

Law Enforcement Efforts. The Central Narcotics Council, composed of representatives from the Ministries of Public Order, Finance, and Merchant Marine, coordinates Greece’s drug enforcement activities. Cooperation between U.S. and Greek law enforcement officials is exceptionally close and professional; the Government of Greece (“GOG”) is very responsive in its aggressive pursuit in the processing of U.S. requests for legal assistance.

Several notable joint U.S./Hellenic Counter Narcotics investigations occurred in 2004 with significant arrests and seizures. In July 2004 after a three-year investigation, the DEA, in cooperation with Hellenic, British, Spanish, Belgian and French authorities, dismantled a major maritime smuggling organization. The effort culminated in the seizure of 5,400 kilograms of cocaine, the seizure of the M/V AFRICA I, the seizure of 4,000,000 Euros, and the arrest of 9 individuals. Additionally, the Hellenic Financial Crimes Unit is conducting an intense financial investigation into the related drug trafficking organization, which may lead to additional financial seizures and arrests.

In June 2004, DEA and the Hellenic Counter Narcotics Units targeted a group utilizing pleasure craft to transport multi-ton quantities of cocaine from the Caribbean to Western Europe. In August 2004, this joint investigation culminated with the seizure of 1.2 tons of cocaine, the seizure of a sailing yacht, and the arrest of seven individuals. Information that was developed post-arrest revealed that

approximately 500 kilograms of cocaine was to be exchanged for Ecstasy pills that would be transported back to the Caribbean.

Corruption. Officers and representatives of Greece's law enforcement agencies are generally under-trained, underpaid, under-appreciated, and overworked. Although this atmosphere has the potential to breed corruption, the level of corruption in the law enforcement agencies is relatively low with regard to narcotics and narcotics-related money laundering. Regarding the judiciary, at least a dozen judges are currently being investigated for allegedly taking bribes in exchange for favorable judgments for a variety of defendants, including accused drug traffickers. The Justice Ministry has ordered the investigation be accelerated so that indictments may be handed down by mid-2005. As a matter of government policy, Greece does not encourage or facilitate illicit production or distribution of narcotics, psychotropic drugs, or other controlled substances. Greece also does not encourage or facilitate the laundering of proceeds from illegal drug transactions. No known senior official of the GOG engages in, encourages, or facilitates the illicit production or distribution of such drugs or substances, or the laundering of proceeds from illegal drug transactions.

Agreements and Treaties. Greece is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, the 1961 UN Single Convention on Narcotic Drugs as amended by its 1972 Protocol. An agreement between Greece and the United States to exchange information on narcotics trafficking has been in force since 1928, and an extradition treaty has been in force since 1932. A mutual legal assistance treaty between the U.S. and Greece entered into force in November 2001. A Police Cooperation Memorandum, signed in September 2000, enhances operational police cooperation between the United States and Greece. The United States and Greece also have concluded a customs mutual assistance agreement (CMAA). The CMAA allows for the exchange of information, intelligence, and documents to assist in the prevention and investigation of customs offenses, including the identification and screening of containers that pose a terrorism risk. Greece has signed, but has not yet ratified, the UN Convention against Transnational Organized Crime and is a signatory to the UN Convention Against Corruption.

Cultivation/Production. Cannabis, cultivated in small amounts for local consumption, is the only illicit drug produced in Greece.

Drug Flow/Transit. Greece is a major transshipment route to Western Europe for heroin refined in Turkey, hashish from the Middle East, and heroin and marijuana from Southwest Asia. Metric ton quantities of marijuana and smaller quantities of other drugs are smuggled across the borders from Albania, Bulgaria, and the Republic of Macedonia. Marijuana has been smuggled into Greece on pack mules across the mountainous border with Albania. Hashish is off-loaded in remote areas of the country and transported to Western Europe by boat or overland. Larger shipments are smuggled into Greece in shipping containers, on bonded "TIR" trucks, in automobiles, on trains, and in buses. Police and customs authorities report a decline in drug trafficking on the Greece-Turkey border, attributed to more stringent enforcement, including vehicle X-rays on the Turkish side of the border. Heroin from Afghanistan is trafficked using other routes through the Balkans into Western Europe. Such trucks typically enter Greece via Turkish border crossings, then cross the Adriatic by ferry to Italy. A small portion of these drugs is smuggled into the United States, including Turkish-refined heroin that is traded for Latin American cocaine, but there is no evidence that narcotics entering the United States from Greece are in an amount sufficient to have a significant effect on the United States. Nigerian drug organizations smuggle heroin and cocaine through the Athens airport, and increasingly through the Aegean islands from Turkey. A small portion of these drugs is smuggled into the United States.

Domestic Programs (Demand Reduction). Drug addiction continues to climb in Greece. The most commonly used substances are chemical solvents, and marijuana and heroin. There is a surge in the illegal use of tranquilizers and, to a lesser extent, Ecstasy pills, that reflects developments in the

growing European synthetic drug market. The GOG estimates that there are between 20,000 and 30,000 addicts in Greece, with the addict population growing.

OKANA, the state agency that coordinates all national treatment policy in Greece, is currently treating 2,900 addicts (up from 1,640 in 2003) in six methadone treatment centers. OKANA runs a buprenorphine substitution program with 15 centers, of which seven are operated in or with public hospitals. OKANA has plans to extend the program to other regions and to open it to more addicts, but its plans are threatened by strong local reactions against the establishment of such treatment centers. OKANA treated 1,967 addicts in “cold-turkey” therapeutic programs in 2004, up from 1,469 in 2003. (NB. Some figures used above have been updated from those used in last year’s report.)

IV. U.S. Policy Initiatives and Programs

The Road Ahead. The United States will encourage the GOG to continue to participate actively in international organizations such as the Dublin Group-focused on narcotics assistance coordination efforts. The DEA will also continue to organize additional conferences, seminars, and workshops with the goal of building regional cooperation and coordination in the effort against narcotics.

Hungary

I. Summary

The geographical location of Hungary, its modern transportation system, and the war in the former Yugoslavia has contributed to making Hungary a primary transit country for heroin from Southwest Asia to Western Europe. Over the past fourteen years, however, Hungary has expanded into a consumption country as well. Drug abuse shot up in the nineties, and is still increasing. The illicit drugs of choice in Hungary are heroin, marijuana, amphetamines, and Ecstasy (MDMA), as well as the abuse of opium-poppy straw, barbiturates and prescription drugs containing benzodiazepine. In the last 2-3 years a significant development took place in the field of drug related legislation for harmonization with relevant EU legislation.

In 2004, the Ministry of Children, Youth, and Sports Affairs, which oversaw matters involving illegal narcotics, was dissolved and the newly created Ministry of Youth, Family, Social Affairs and Equal Opportunity was given primacy over drug issues. Fewer funds were allocated to drugs and less support was given to drug demand reduction, than in previous years. A data collection center was established in February 2004 to report valid, comparable and reliable data on drug abuse trends to the European Monitoring Center for Drugs and Drug Addiction. Hungary is a party to the 1988 UN Drug Convention.

II. Status of Country

Hungary continued to be a major transit country for illegal narcotics smuggled from Southwest Asia and the Balkans to Western Europe. Traditional routes in the Balkans that had been disrupted due to instability in the FRY were once again being used to smuggle narcotics. Hungarian authorities report that narcotics smuggling is especially active across the Romanian and Serbian borders. Foreign organized crime, particularly those from Albania, Turkey, and Nigeria, control transit and sale of narcotics in Hungary. Hungarian drug-pushers, networks are getting stronger, too, and involve an increasing number of immigrants and ethnic minorities. Officials report the increasing seriousness of Hungary's domestic drug problem, particularly among teens and those in their twenties, who have benefited from the country's strong, if unequal, economic performance.

III. Country Actions Against Drugs in 2004

Policy Initiatives. A National Drug Data Collection Center was established in February 2004 in the National Epidemiological Center of the National Public Health Network. This center is required to compile an annual report of valid, comparable and reliable data for the European Monitoring Center for Drugs and Drug Addiction. The National Drug Prevention Institute (NDPI) was set up in 2000 to provide technical and financial support for drug action teams in cities with populations over 20,000. The NDPI encourages the creation of local fora composed of officials of local government institutions, law enforcement agencies, schools and non-governmental organizations. These fora create local drug strategies, customized for local needs. Out of 64 cities 56 have thus far established counternarcotics fora.

The GOH has had programs for combating drug use at schools since 1992, however, given the shortage of police trainers and funding, there has been an increase in drug dealing at schools. Research findings indicate that the rate of those experimenting and using drugs is on a steady increase. One in five youth have tried marijuana, one third of these are under the age of fourteen. The drugs of choice are marijuana, Ecstasy, and to a lesser extent LSD.

Accomplishments. Preliminary data show that the seizures of Ecstasy and cocaine increased dramatically from 2003 to 2004. Modern electronic detection equipment provided by the European Union for certain high threat border posts installed in 2003 has improved border interdiction of all types of contraband.

Law Enforcement Efforts. In order to provide for an effective stance against drug-related crimes in 2004, close cooperation was introduced between the Hungarian Border Guards and the organs of the National Police Headquarters, as well as with the Ministry of Finance and the National Headquarters of the Customs and Finance Guard. Jointly planned and staged actions related to crime and border traffic were implemented with a view to preventing drug trafficking and other kinds of illegal trade. By the end of 2004, the Ministry of Interior had begun preparing a unified police drug strategy in harmony with the requirements of the EU drug strategy for the period between 2005 and 2012. The stated goals of this strategy are to guarantee the security of the society, combat the illegal production and smuggling of drugs and precursors, facilitate joint actions with the EU member countries, as well as combat production, trading and consumption of synthetic drugs.

According to year-end statistics, the number of criminal drug cases increased by more than 25 percent from 2003 to 2004, with more cases opened on almost every major drug. Seizure statistics were dramatically up in 2003 almost all across the board.

The cooperation between the Hungarian National Police (HNP) and DEA offices in Vienna slowed in 2004. There are currently no cooperative cases between the two groups and the exchange of information has become burdensome.

Corruption. The USG is not aware of systematic corruption in Hungary that facilitates narcotics trafficking. The Hungarian Government enforces its laws against corruption aggressively, and takes administrative steps (e.g., re-posting of border guards) to reduce the temptation for corruption whenever it can.

Agreements and Treaties. Hungary is party to the 1961 UN Single Convention, as amended by the 1972 Protocol, the 1971 UN Convention on Psychotropic Substances, and the 1988 UN Drug Convention. A treaty on mutual legal assistance and an extradition treaty between the U.S. and Hungary entered into force in 1997. A bilateral data-sharing memorandum of understanding was signed in January 2000. This agreement paved the way for even closer cooperation between U.S. and Hungarian law enforcement agencies. The Hungarian National Assembly is expected to ratify the UN Convention against Transnational Organized Crime in Spring 2005.

Cultivation/Production. GOH authorities report that marijuana (mostly cultivated in Western Hungary) is locally produced; Ecstasy (MDMA), and LSD may also be manufactured locally, however, no production laboratories have been discovered. All other illegal narcotics are imported into Hungary.

Drug Flow/Transit. Authorities believe that foreign groups control transit and sale of narcotics in Hungary, particularly nationals of Albania, Turkey and Nigeria. Many of these traffickers have been resident in Hungary for many years. Budapest's Ferihegy International Airport is an increasingly important stop for the transit of cocaine from South America to Europe. Synthetic drugs are transported into Hungary, usually by car, from the Netherlands and other Western European Countries.

Domestic Programs. Hungarian officials continue to report the seriousness of their domestic drug problem, particularly among youth. Drug prevention programs are taught to teachers as part of the normal training in prevention programs. Several drug prevention and health promotion programs are running in schools and many teachers have graduated from drug prevention projects. The largest one, the Life Skills program was developed in the early nineties with USIA assistance, trained somewhat more than 10,000 teachers by 2004. Community based prevention focuses on the teen/twenties age group and delivers more complete information about the dangers of substance abuse while

emphasizing productive lifestyles as a way of limiting exposure to drugs. There are about 230 healthcare institutions that care for drug patients. At the end of 2004 circa \$200,000 was granted by the Ministry of Health to establish 4 drug outpatient clinics in regions where such institutes were not yet available. By the end of 2003 about \$600,000 was transferred to the National Institute of Addictive Diseases for distribution to those institutions in 2004, which participate in the alternative treatment type of care.

An amendment to Hungarian counternarcotics legislation, which went into effect in March 2003, was designed to shift the focus of criminal investigations from consumers to dealers. Before this amendment was enacted, Hungarian civil rights leaders claimed that the Hungarian narcotics law, among the toughest on users in Europe, subjected even casual users to stiff criminal penalties, while addicts were often exempted from prosecution. The amendment allows police, prosecutors, and judges to place drug users in government-funded treatment or counseling programs instead of prison. Drug addicts are encouraged to attend treatment centers while casual users are directed towards prevention and education programs. The amendment also provides judges with more alternatives and flexibility when sentencing drug users. There has been a push by the Constitutional Court in beginning in December 2004 to scale back the treatment programs and focus again on prison sentences, however, the State Secretary for Drug Affairs has reconfirmed her commitment to alternative treatment programs. In 2004, the GOH continued to run several needle exchange dispensers in Budapest to guarantee inexpensive, sterile needles for drug users.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. The USG focuses its support for GOH counternarcotics efforts on training and cooperation through the ILEA and a small bilateral program developed especially for Hungary by the U.S. Embassy in Budapest. DEA maintains a regional office in Vienna that is accredited to Hungary and works with local and national authorities. The UCSD (University of California, San Diego, US, performed training for 200 drug treatment professionals in Budapest at the end of 2003 in the Ministry of Health, in order to acquainted them with the American experiences in the field of diagnosis and treatment of drug addict offenders in the criminal justice system.

The Road Ahead. The USG supports Hungarian legislative efforts to stiffen criminal penalties for drug offenses, and will continue to support the GOH through training at ILEA and in-country programs. The DEA office in Vienna continues to work with the HNP in an effort to streamline the flow of actionable investigative information.

Iceland

I. Summary

Iceland is not a significant drug-producing or drug-transit country. Icelandic authorities focus mainly on stopping the importation of narcotics for domestic use and punishing distribution and sale, with a lesser emphasis on prosecuting for possession and use. Along with the government, secular and faith-based charities organize abuse prevention projects and run respected detoxification and treatment centers. Iceland is a party to the 1988 UN Drug Convention.

II. Status of Country

Illegal drugs and precursor chemicals are not produced in significant quantities in Iceland. The harsh climate and lack of arable land make the outdoor cultivation of drug crops almost impossible. Icelandic authorities believe that the production of drugs is limited to marijuana plants and perhaps a small number of small-time amphetamine laboratories. Domestically cultivated marijuana has become increasingly competitive with imported marijuana, and current estimates indicate it makes up anywhere from 10 to 50 percent of the total cannabis market. The most recent National Commissioner of Police figures shows that there were 45 seizures of domestically cultivated cannabis in 2004. Most illegal drugs in Iceland are smuggled in through the mail, inside commercial containers, or by airline passengers. The chief illicit drugs entering Iceland, mainly from Denmark, are cannabis and amphetamines, with the latter becoming increasingly common during the year as part of a trend of increased stimulant drug use that also involved heightened levels of cocaine in circulation. The recent National Commissioner of Police figures also show that 74 persons were arrested in 2004 for importing drugs and precursors. Preliminary results of the third European School Survey Project on Alcohol and Other Drugs, conducted in 2004, showed that controlled substance use among Icelandic adolescents has decreased significantly in recent years, and that students currently completing secondary school have used drugs less throughout their school careers than did earlier cohorts. Typically stimulants and cocaine are used by young people, so data from the European School Survey suggesting reduced drug use by Icelandic young people conflicts with sharply higher seizures of “recreational” Club Drugs like cocaine and stimulants.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The Public Health Institute, established in 2003, is responsible for alcohol and drug abuse prevention programs on behalf of the government. Programs are funded through an alcohol tax, with allocations overseen by the independent national Alcohol and Drug Abuse Prevention Council (ADAPC). The institute’s mission policy remains to be fully developed, but its primary activities are data collection on use of intoxicants and funding and advising local governments and non-governmental organizations working primarily in prevention. During the year it made grants worth \$680,000 to a total of 59 groups across the country. The institute is reviewing demand reduction programs in other countries in order to develop best practices for Iceland, and intends to employ focus groups to analyze the effectiveness of its future programs. The major emphasis in future will be on teaching teens and parents interactively about drugs instead of relying on fear as a deterrent against drug experimentation/use. The institute’s “Together” project continues to urge parents (through posters, print advertisements, and television spots) to develop better relationships with children, using the slogan: “The togetherness of the whole family is the best prevention.” The institute is part of the Nordic Council for Alcohol and Drug Research, which promotes and encourages a joint Nordic research effort on drug and alcohol abuse.

Reykjavik Customs continued with its national drug education program, developed in 2002 and formalized in an agreement with the state (Lutheran) church in 2003, in which an officer accompanied by a narcotics sniffing dog informs students participating in confirmation classes about the harmful effects of drugs and Iceland's fight against drug smuggling. Parents are invited to the meetings in order to encourage a joint parent-child effort against drug abuse. Since 2003 customs officials have also used the meetings to distribute an educational multimedia CD dealing with drug awareness. While there is not a fully-developed master plan for Icelandic counternarcotics efforts, since 1997, Icelandic authorities have given particular attention to bolstering law enforcement resources relating to drug crime: the government has allocated additional budget resources for the project annually, Reykjavik (by far the country's largest city) has bolstered numbers of narcotics police officers, and the National Commissioner of Police has deployed specially trained narcotics officers to all major police districts. The National Commissioner has also given priority to new equipment purchases for narcotics policing and formalized the operational parameters of the police canine units. Since 2001, the Government has had a special fund for the investigation of major drug cases, and the Police College has added narcotics instruction to basic cadet training. The National Commissioner of Police supported this initiative with his own effort, launched in 2003, encouraging Icelandic police commissioners to step up their counternarcotics efforts. Authorities state that this push has contributed to an increase in seizures over the past two years (from 1170 in 2002 to 1640 in 2003 and 1887 in 2004, as of December 2, 2004).

Accomplishments. At seaports, authorities conducting package post and container searches confiscated 15 kilograms of cannabis arriving from Denmark in February, leading to four persons being charged; 1,000 Ecstasy tablets and 131 grams of cocaine were discovered hidden in candles in a shipment from the Netherlands in the same month, leading to charges against seven persons; and, in the largest case of the year, customs agents cooperated with the captain of an Icelandic shipping liner to confiscate 10.4 kilograms of amphetamines, 600 grams of cocaine, and 2,000 doses of LSD in a series of package mail shipments throughout the year. The case remains under investigation with nine persons already under arrest. Through November 2004, Keflavik International Airport (KEF) authorities made about 60 seizures compared to 45 for the same period in 2003. In the year's largest seizures, customs at KEF in May discovered one kilogram of cocaine and one kilogram of amphetamines hidden on a passenger's person. In February, KEF customs found 10 kilograms of cannabis expertly hidden inside Nepalese wooden artifacts shipped through DHL. In June, a woman traveling from Paris was discovered to be carrying 5,000 Ecstasy tablets hidden in a backpack. The following month she was convicted and sentenced to a five-year prison term. In February, a recreational diver discovered the corpse of a Lithuanian citizen in Neskaupstadur harbor (East Iceland). Apparently a drug "mule," concealed in his body were 223 grams of amphetamines packaged in condoms. In November, Reykjavik District Court sentenced three men to two and a half years in prison for contributing to the death of the man by withholding medical care and then disposing of the body. Authorities suspect that the case may be connected to the arrest, by KEF police in August, of another Lithuanian man carrying 70 packets of cocaine totaling 300 grams in his intestinal tract. No U.S.-bound passengers were discovered smuggling illegal drugs, but authorities note that transit flights to the U.S. are not searched for drugs during the required screening for explosives and weapons. Airport officials say that the biggest trend in drug smuggling during the year has been the increased incidence of drugs smuggled in bodily orifices or through orally ingested packets. While there has been an increase in foreign drug mules in recent years, Icelandic drug mules still account for about 80 percent of seizures. In the year to date as of December 2, 2004, local police forces had shut down 27 cannabis producers. During the year, police confiscated at least 7,500 Ecstasy pills, almost double the number seized in 2003, and seized over 15,600 amphetamine tablets, compared to fewer than 3,000 in 2003. Police attribute the increases to improved enforcement rather than increased usage.

Law Enforcement Efforts. In the sixth and seventh such incidents in recent years, Icelandic authorities expelled a total of 17 members of Scandinavian biker gangs arriving at KEF. Nordic and

local officials believe biker groups engaged in organized crime are attempting to import their criminal operations to Iceland, and the authorities have taken a pro-active, cooperative approach to stopping the spread. To stem the flow of drugs smuggled into Iceland's prisons, the Ministry of Justice purchased a narcotics-detecting "Ion Trap" mobility spectrometer in 2003. Installed at Iceland's main prison, Litla Hraun, the machine was also periodically moved to various other locations to be used in unannounced chemical searches. Authorities at Litla Hraun have initiated a series of searches, using drug-sniffing dogs, designed to stop visitors from smuggling drugs into the prison and to discover hidden drugs in cells and other areas.

Customs and police have increased their efforts to monitor Iceland's only overseas passenger ferry service, which travels from Seydisfjordur (East Iceland) to Denmark via the Faroe Islands, following major seizures in 2003 and suspicion that the route might be a particular target for drug smuggling. Customs and police have cooperated in setting up snap inspections involving drug-sniffing dogs and X-ray equipment at ferry landings. But with only 23 minor seizures, for a combined total of 116 grams of assorted narcotics captured during the year, the impression is that the port has not in fact been a major transit point for illegal narcotics.

KEF Police acquired a new drug-sniffing dog in 2004, bringing their total number of canines to three. Customs and police deployed drug-sniffing dogs to popular outdoor festivals on a holiday weekend in early August to deal with drug distribution among attending youths. They made over one hundred seizures of small amounts of narcotics.

In September, a three-member training team from the U.S. Customs Office of International Affairs provided a week of instruction for 39 Icelandic officials. Participants represented all customs offices around Iceland as well as the Icelandic Coast Guard and civil aviation authorities. The course highlighted latest practices and technology for intercepting smuggled cargo and possible terrorist contraband as well as means to combat internal corruption.

Corruption. There was one incident of narcotics related corruption during 2004 in Iceland. The incident involved the deputy of the Reykjavik Narcotics Division channeling seized drug money into his personal bank account. The Chief Detective Inspector was convicted and received a nine-month jail sentence. The country does not, as a matter of government policy, encourage or facilitate the illicit production or distribution of narcotic or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal drug transactions. No senior official of the government is known to engage in, encourage, or facilitate the illicit production or distribution of such drugs or substances, or to be involved in the laundering of proceeds from illegal drug transactions.

Agreements and Treaties. Iceland is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention on Narcotic Drugs and its 1972 Protocol. Iceland has signed, but has not yet ratified, the UN Convention on Transnational Organized Crime. The U.S.-Denmark extradition conventions are applicable to Iceland.

Drug Flow/Transit. Authorities consider Iceland a destination country for narcotics smuggling rather than a transit point. There have been no major seizures of transit shipments during the year and only rare seizures of such shipments in previous years.

Domestic Programs (Demand Reduction). Heroin abuse is virtually unknown in Iceland. Cannabis is the prevalent drug among persons under 20, while older addicts are partial to injecting morphine. Ecstasy, cocaine (but not crack), and particularly amphetamines are popular on the capital region's weekend club scene. Between them, Icelandic governmental, non-governmental, and faith-based organizations provide about one alcohol- and drug-rehabilitation bed for every 800 citizens. Three detoxification facilities (of which two have doctors on call around the clock) are supplemented by a number of dedicated treatment and rehabilitation facilities as well as halfway houses with beds for about one in every 1400 citizens.

Most alcohol and drug abuse treatment is taken on by SAA, the National Center of Addiction Medicine. Founded in 1977 by a group of recovered addicts who wished to replicate the rehabilitation services they had received at the Freeport Hospital in New York, SAA now receives roughly two thirds of its annual budget from the government. It makes detoxification and inpatient treatments available free to Icelandic citizens. While there can be waiting lists for long-term adult male addicts, there are none for women and teens. SAA's main treatment center admits around 2,400 patients a year, while another 300 or so (often those with complicating psychiatric illnesses) go to the National-University Hospital. Individuals with less acute problems may turn to Samhjalp or Byrgid, two Christian charities that use faith-based approaches to treating addiction.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. DEA will continue to support Icelandic requests for U.S.-sponsored training.

The Road Ahead. The DEA office in Copenhagen and the Regional Security Office in Reykjavik have developed good contacts in Icelandic law enforcement circles for the purpose of cooperating on narcotics investigations and interdiction of shipments. The USG's goal is to maintain the good bilateral law enforcement relationship that up until now has facilitated the exchange of intelligence and cooperation on controlled deliveries. The USG will continue efforts to strengthen exchange and training programs in the context of mission effort to strengthen law enforcement, homeland security, and counterterrorism ties with Iceland.

Ireland

I. Summary

The Republic of Ireland is not a transshipment point for narcotics to the United States, nor is it a hub for international drug trafficking. According to Government of Ireland (GOI) officials, overall drug use in Ireland continues to remain steady, with the exception of cocaine use, which doubled over the last two years. Seizures have also increased as traffickers attempt to import drugs in larger quantities. The GOI's National Drug Strategy is to significantly reduce drug consumption through a concerted focus on supply reduction, prevention, treatment, and research. In 2004, the GOI signed the European Arrests Warrant Act 2003, allowing Irish police to have suspects detained by foreign police and extradited to Ireland for trial, and the Criminal Justice Act, enabling Irish authorities to investigate international criminality in close cooperation with EU member states. Ireland is a party to the 1988 UN Drug Convention.

II. Status of Country

Ireland is not a transit point for drugs to the United States; it is occasionally used as a transit point for narcotics trafficking to other parts of Europe, including across its land border to Northern Ireland. Ireland is not a significant source of illicit narcotics, though in a single raid in May, officials found a quantity of precursors intended to manufacture around Euro 500 million worth of Ecstasy and amphetamines.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The GOI continued with drug abuse strategies it established in its National Drug Strategy for 2001-2008. Its goal is to “to significantly reduce the harm caused to individuals and society by the misuse of drugs through a concerted focus on supply reduction, prevention, treatment and research.” By 2003, substance abuse programs were a part of every school curriculum in the country and the GOI launched the National Awareness Campaign on Drugs. The campaign featured television and radio advertising, and lectures by police, supported by an information brochure and website, all designed to promote greater awareness and communication about the drug issue in Ireland. Regional Drug Task Forces (RDTF), set up to examine drug issues in local areas, were fully operational throughout the country. The GOI established a review procedure to measure how effectively each department in the government is internally implementing the National Drug Strategy. The GOI will release the results and recommendations of this review in April 2005.

Accomplishments. Seizures in 2003 totaled Euro 121 million, three times the goal set in the National Drug Strategy, 2001-2008. The Justice Minister attributed this both to the increase in usage and improvements in law enforcement. The Irish Police continued to cooperate closely with other national police forces. On December 12, after eight months of coordination among forces from the United Kingdom, Spain, the Netherlands, and Ireland, authorities cracked down on a major drug smuggling gang. This gang is suspected of supplying cocaine to most of the drug users in Dublin and Limerick. This investigation is still in progress.

Law Enforcement Efforts. Official statistics are not yet available for 2004 but the Irish Police confirmed that drug-related arrests remained constant over the previous three years. There are normally 7,000-8,000 arrests annually, including the approximately 450 arrests made by the National Drug Unit each year. The NDU's arrests tend to include most of the large seizures, but local police also have had success. In December 2004, for example, the local police in Cork seized Euro one

million of narcotics in a series of arrests the weekend before Christmas. Each year, 60-65 percent of arrests for drug-related offenses nationwide tend to be for simple possession; 20-25 percent possession with the intention to sell; and the remainder related to obstructing drug arrests or forging prescriptions. In 2003, there were in total 7,150 arrests, of which 25 percent were possession with the intent to sell and 67 percent simple possession. Cannabis was the drug most often seized, followed by heroin, Ecstasy and then cocaine. The value of seized drugs for 2003 was Euro 121 million.

Official statistics for 2004 are not yet available, but highlights of key raids, arrests and prosecutions include the January seizure of 500,000 Ecstasy tablets worth a street value of Euro 5 million. Also, in January, police seized 80 kilograms of Khat, worth Euro 200,000. In February, local police, supported by the National Drugs Unit, seized eight kilograms of cocaine estimated at Euro 800,000. In March, Irish police raided a cocaine-processing plant, recovering Euro 50,000 worth of contraband, and in another raid, police seized Euro 400,000 worth of cocaine. The same month, the Dublin Circuit Criminal Court jailed a South African resident for three years for smuggling Euro 30,000 worth of cannabis and an Irish citizen was sentenced for seven years for possession of Euro 150,000 worth of cocaine and ecstasy. An April seizure netted 88 kilograms of cannabis, estimated at a value of Euro 1.14 million. In May, officials found a quantity of precursors intended to manufacture around Euro 500 million worth of Ecstasy and amphetamines. Officials tracked chemicals shipments from southern China, to Rotterdam and then on to Ireland. In June, police seized over Euro 1 million in cocaine from drug gangs. On November 4, an American citizen was arrested at Dublin airport for smuggling 4 kilograms of cocaine from Lagos via Paris. Her case is pending criminal proceedings. On December 16, in three operations, Irish police seized up to Euro 16 million in cocaine. An arrest was made of a Nigerian national attempting to smuggle 14.5 kilograms into Dublin airport. Another unrelated arrest during a raid resulted in the seizure of up to 60 kilos. Under the Drugs Trafficking Act, the suspect can be held without charge for a maximum of seven days.

Corruption. Ireland does not encourage or facilitate illicit production or distribution of narcotic or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal drug transactions. Senior officials of the government do not engage in, encourage, or facilitate the illicit production or distribution of such drugs or substances, or the laundering of proceeds from illegal drug transactions.

Agreements and Treaties. The United States and Ireland signed a mutual legal assistance treaty (MLAT) in January 2001, which was ratified by the U.S. in 2003 and is awaiting ratification by the GOI. An extradition treaty between Ireland and the United States is currently in force.

Ireland is a party to the 1998 UN Drug Convention, the 1961 UN Single Convention on Narcotic Drugs, as amended by the 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances. Ireland has signed, but not yet ratified, the UN Convention against Transnational Organized Crime. Ireland is a signatory to the UN Convention Against Corruption. In June, the Irish government signed the Criminal Justice Act of 2004 into law, enabling authorities across EU states to investigate international crimes. In January, the European Arrests Warrant Act of 2003 became law, allowing for foreign arrests and extradition.

Cultivation/Production. Only small amounts of cannabis are cultivated in Ireland. With the exception of the precursor chemicals seized in May, there is no evidence that synthetic drugs are being produced domestically.

Drug Flow/Transit. Among drug abusers in Ireland, cocaine, cannabis, amphetamines, Ecstasy (MDMA), and heroin are the drugs of choice. Cocaine comes primarily from Colombia and other countries in Latin America and the Caribbean. Heroin, cocaine, Ecstasy, and cannabis are often packed into cars in either Spain or the Netherlands and then brought into Ireland for distribution around the country. This distribution network is controlled by 6 to 12 Irish criminal gangs based in Spain and the Netherlands. Herbal cannabis is primarily imported from South Africa.

Domestic Programs (Demand Reduction). There are 7,100 treatment sites for opiate addiction, exceeding the GOI's National Drug Strategy target of 6,500 treatment places. The Strategy also mandates that each area Health Board have in place a number of treatment and rehabilitation options. For heroin addicts, there are 65 methadone treatment locations. Most clients of treatment centers are Ireland's approximately 14,500 heroin addicts, 12,400 of which live in Dublin. In 2004, the GOI undertook an evaluation of drug treatment centers' ability to cope with the leveling off of heroin use and the increase of other drugs. The review's results are due in early 2005.

IV. U.S. Policy Initiatives and Programs

U.S. Policy Initiatives. In 2004, the United States continued legal and policy cooperation with the GOI, and benefited from Irish cooperation with U.S. law enforcement agencies such as the DEA. Information sharing, and joint operations and investigations between U.S. and Irish officials continued to strengthen ties between the countries.

The Road Ahead. U.S. support for Ireland's counternarcotics program, along with U.S. and Irish cooperative efforts, continue to work to prevent Ireland from becoming a transit point for narcotics trafficking to the United States.

Italy

I. Summary

The Government of Italy (GOI) is firmly committed to the fight against drug trafficking in-country and internationally. Italian law enforcement agencies are capable and effective. The Berlusconi government is continuing its strong counternarcotics stand. Italy is a consumer country and a major transit point for heroin coming from the Near East and southwest Asia through the Balkans en route to western/central Europe, as well as for cocaine originating from South America. Domestic and Italy-based foreign organized crime groups are heavily involved in international drug trafficking. GOI cooperation with U.S. law enforcement agencies continues to be exemplary. Italy is a party to the 1988 UN Drug Convention.

II. Status of Country

Italy is mainly a narcotics transit and consumption country. Law enforcement officials focus their efforts on heroin and cocaine. Possession of small amounts of illegal drugs is an administrative, not a criminal, offense, but drug traffickers are subject to stringent penalties. Law enforcement agencies with a counternarcotics mandate are highly professional. Although Italy produces some precursor chemicals, they are well controlled in accordance with international norms and not known to have been diverted to any significant extent.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Italy continues to combat narcotics aggressively and effectively. The Berlusconi government has made combating drug abuse a high priority, although its focus is more on prevention, improved treatment, and rehabilitation than criminalization. A draft law submitted to Parliament in late 2003 would eliminate the legal distinction between hard and soft drug use as well as decrease tolerance for possession of a “moderate quantity” of drugs, making possession and personal use of drugs illegal. At minimum, drug users would be compelled to enter treatment or face administrative penalties such as suspension of driving licenses or passports. Above certain prescribed levels, violators would face criminal charges. The Senate Justice Committee began to discuss this legislation in mid November 2004.

At the multilateral level, Italy is the second largest contributor to the UN Office of Drug Control and Crime Prevention (UNODC), funding almost 20 percent of UNODC’s counternarcotics work. It supported U.S. key objectives at the UN commission on narcotic drugs. The Italian EU presidency in 2003 championed the need to get tougher on synthetic drugs, enhance counternarcotics assistance in the Balkans, and strengthen the role of the family in drug abuse prevention.

Accomplishments. Comparing January to September data for 2003 and 2004, seizures have decreased in each drug category with the exception of MDMA (Ecstasy). Arrest and death by overdose statistics also decreased. There are a number of factors, from inclement weather in source countries to successful international counternarcotics operations to explain these decreases. In January 2004, the Italians and several other European and South American countries, along with U.S. authorities, delivered a devastating and disrupting blow to a joint Italian (Calabrian) organized crime and Colombian cocaine distribution organization following a 4-year investigation. Throughout the duration of the investigation there were in excess of 3 tons of cocaine seized and the arrests of over 100 individuals. This successful operation tremendously disrupted the criminal organization and its ability to continue its illicit activities.

The fight against drugs is a major priority of the national police, carabinieri, and financial police—which are the three services coordinated by the Central Directorate for Drug Control Prevention (DCSA). Working with the liaison offices of the U.S. and western European countries, DCSA has 18 drug liaison officers in 17 countries that focus on major traffickers and their organizations. Two additional drug liaison positions have been approved for Tehran, Iran and Tashkent, Uzbekistan. Investigations of international narcotics organizations often overlap with the investigations of Italy's traditional organized crime groups (e.g. the Sicilian Mafia, the Calabrian N'drangheta, the Naples-based Camorra and the Puglia-based Sacra Corona Unita). Additional priority trafficking groups are Albanian, Nigerian and other Balkan organized crime groups responsible for smuggling heroin into Italy, while Colombian, Dominican and other South American trafficking groups are involved in the importation of cocaine. Italian law enforcement officials employ the same narcotics investigation techniques used by other western countries: informants, extensive court-ordered wire-tapping of phones and email accounts, undercover operations and controlled deliveries under certain circumstances. Adequate financial resources, money laundering laws, and asset seizure/forfeiture laws help insure the effectiveness of these efforts.

Corruption. Italian officials do not encourage or facilitate the illicit distribution of narcotics or the laundering of proceeds from illegal drug transactions. No senior official of the government of Italy engages in, encourages, or facilitates the illicit production or distribution of such drugs or substances, or the laundering of proceeds from illegal drug transactions. Corruption exists only among bit players and has not compromised investigations. When a corrupt law enforcement officer has been discovered, authorities have taken appropriate action. Laws against corruption come under the Criminal Code, apply to all public officials, and pertain to the receipt of money or other advantages in exchange for an official act or for delaying or not performing an official act. Penalties range from 6 months to 5 years, depending on the charge.

Agreements and Treaties. Italy is a party to the 1961 UN Single Convention and its 1972 Protocol, as well as the 1971 UN Convention on Psychotropic Substances, and the 1988 UN Drug Convention. Italy has signed, but has not yet ratified, the UN Convention Against Transnational Organized Crime, which is still being examined by the Justice Ministry. Italy is a signatory to the UN Convention Against Corruption. Italy has bilateral extradition and mutual legal assistance treaties with the U.S., which will be affected by the new U.S.-EU mutual legal assistance and extradition treaties agreed to in 2003; Italy is currently concluding negotiations with the U.S. on bilateral instruments to implement the U.S.-EU treaties.

Cultivation/Production. There is no known cultivation of narcotics plants in Italy. No heroin laboratories or processing sites have been discovered in Italy since 1985. However, opium poppy grows naturally in the southern part of Italy, including Sicily. It is not commercially viable due to the low alkaloid content. No MDMA-Ecstasy laboratories have been found in Italy.

Drug Flow/Transit. Italy is a consumer country and a major transit point for heroin coming from southwest Asia through the Balkans en route to western and central Europe. Albanian heroin traffickers work with Italian criminal organizations as transporters and suppliers of drugs. Heroin is smuggled into Italy via automobiles, ferryboats and commercial cargo.

Cocaine destined for Italy originates with Colombian and other South American criminal groups. Cocaine shipments consisting of multi-hundred kilograms enter Italy via several seaports concealed among commercial cargo. Large cocaine shipments are also off-loaded in Spain where they are eventually transported to Italy and other European countries by means of vehicles. Smaller amounts of cocaine consisting of grams to multi-kilograms enter Italy via express parcels or airline couriers traveling from South America. They are usually concealed in luggage. The couriers are primarily of Nigerian, Colombian and Dominican as well as other South American descent.

Ecstasy found in Italy primarily originates from the Netherlands and is usually smuggled into the country by means of couriers utilizing commercial airlines, trains or vehicles. Italy has been utilized as a transit point for couriers smuggling Ecstasy destined for the United States. A method used by trafficking groups in the past has been to provide thousands of Ecstasy tablets concealed in luggage to couriers in Amsterdam. The couriers then travel by train or airline to Italy. Once in Italy, the couriers are provided an originating airline ticket from Italy to the U.S. disguising the fact that the couriers recently traveled from a source country before entering the U.S. thereby minimizing scrutiny by law enforcement authorities.

Hashish is smuggled regularly into Italy on fishing and pleasure boats in multi-hundred kilogram quantities from Morocco and Lebanon. As with cocaine, larger hashish shipments are smuggled into Spain and eventually transported to Italy by vehicle.

Domestic Programs/Demand Reduction. The Italian Ministry of Health funds 557 public health offices operated at the regional level while private non-profit NGOs operate another 1,430 social communities for drug rehabilitation. Of the 500,000 estimated drug addicts in Italy, 159,000 receive services at public agencies and approximately 15,000 are served by smaller private centers. Others either are not receiving treatment or arrange for treatment privately. The Berlusconi government continues to promote more responsible use of methadone at the public treatment facilities. For 2005, the Italian Government has budgeted 120 million Euro for counternarcotics programs run by the health, education, and labor ministries. Seventy-five percent (75 percent) of this amount is dedicated to the different regions and the remaining twenty-five percent (25 percent) is for national programs.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. The U.S. and Italy continue to enjoy exemplary counternarcotics cooperation. The DEA Administrator visited Italy in April 2004 to discuss counternarcotics issues with both Italian law enforcement and ministry level officials. During 2003, the DEA re-initiated the Drug Sample Program with the GOI, which consists of the analysis of seized narcotics to determine purity, cutting agents and source countries. In 2004, the DEA received approximately 114 samples of heroin, cocaine and Ecstasy. DEA recently expanded this program to the countries of Slovenia, Croatia and Albania. The sample collection from these countries and others in the Balkan region is essential in determining production methods and trafficking trends that ultimately impact Italy. The DEA independently conducted drug awareness programs at international schools in Rome and Milan.

The Road Ahead. The USG will continue to work closely with Italian officials to break up trafficking networks into and through Italy as well as enhance both countries' abilities to apply effective demand dampening policies. Italian authorities plan to assign two drug liaison officers in Tehran, Iran and Tashkent, Uzbekistan to address the heroin problem along the Balkan route that directly impacts Italy. The Italian authorities are considering an invitation by the Afghanistan Drug Czar to assign a drug liaison officer in Kabul, Afghanistan.

Kazakhstan

I. Summary

Kazakhstan continues to be a major route for Afghan heroin and opium in transit to Russia and Europe. An Associate Professor of the Academy of National Security estimates that approximately 100-150 tons of Afghanistan's narcotics will move through Kazakhstan this year. Approximately 30 percent of these drugs will be sold in Kazakhstan. More than 19 tons of narcotics were seized since the beginning of 2004, which is 14 percent more than the previous year. Local drug use and its health consequences continue to increase, but local crime connected to drug use seems to have dropped. Kazakhstan continues to take steps to control drug-related crimes within its own borders, but official corruption complicates efforts to improve controls over drug trafficking. Kazakhstan is a party to the 1998 UN Drug Convention.

II. Status of Country

Although vast fields of wild marijuana and ephedra, along with some small-scale opium growing, demonstrate that Kazakhstan could become a major producer of narcotics, evidence continues to suggest that local production is mostly limited to in-country use and small-scale smuggling into Russia. Drugs transiting Kazakhstan impact Russia and Europe, not the U.S., but proceeds from drug smuggling potentially could serve as revenue for terrorist groups. There were no discoveries of laboratories for the production of narcotics announced this year.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Kazakhstan is in the fourth year of its five-year plan in the fight against drug trafficking, but President Nazarbayev announced this year that it will take twenty years before Kazakhstan can fully control its narcotics problem. On March 3, 2004, the President signed a decree that established the Committee on Combating and Controlling Narcotics (the Committee) within the Ministry of the Interior (MIA), a DEA-like office whose sole responsibility is fighting narcotics. The Committee coordinates efforts among law enforcement entities, analyzes developing trends in the trafficking and consumption of narcotics, initiates legal reform and drafts statutes pertaining to the narcotics problem in Kazakhstan, interacts with the mass media and the press to inform the public on counternarcotics efforts taken by the Committee and other governmental agencies, and engages with international counterparts through the national branch of Interpol. The Committee's staff is comprised of 630 officers. In cooperation with the Statistics Division of the Prosecutor's Office, the Committee has changed the format of the GOK's intelligence collection on statistics related to narcotics trafficking, cultivation, seizures, and demand reduction. The Committee's current database includes detailed information on major narcotics dealers, underage narcotics users, and the socio-economic background of addicts and those who are involved in criminal activities related to drugs. The GOK also announced that more than \$5 million was allocated this year from national and local budgets within the framework of the National Program for Combating Narcotics.

On June 28, 2004, the GOK signed "The Additional Protocol to the Memorandum of Understanding on Narcotics Control and Law Enforcement between the Government of the United States of America and the Government of the Republic of Kazakhstan." This agreement established a framework to support projects designated to improve the capacity of Kazakhstani law enforcement agencies to combat narcotics trafficking and organized crime. The agreement includes a provision for technical assistance aimed at improving the ability of the Ministry of the Interior's counternarcotics forces to interdict narcotics and other contraband transiting through Kazakhstan. It also calls for improving the

collection and reporting of crime statistics with an emphasis on those statistics and regions germane to the evaluation of GOK progress in the fight against narcotics trafficking.

Accomplishments. Kazakhstan continues to work toward the UN Convention's goals on combating illicit narcotics cultivation and production within its borders. The annual "Operation Poppy" campaign eradicated more than 977 square meters of illicit poppy and marijuana cultivation this year.

The Presidential decree of March 3, 2004 that established the Committee headed by Colonel Anatoliy Vyborov was a significant move forward this year in Kazakhstan's fight against narcotics trafficking. In his April interview with a local newspaper, Colonel Vyborov called for urgent legal reform to assist the Committee in its work. According to Vyborov, the country needs to toughen punishments for those involved in drug trafficking and the sale of narcotics to the underage population. The MIA is soliciting public opinion regarding an increased sentence for drug-related crimes through its website. While this legal reform is in its early stages, if done transparently and correctly, it could greatly assist the Committee in its work by serving as a deterrent to potential criminals. The Committee is also currently working on statutes to amend the Law of the Republic of Kazakhstan on "Narcotics, psychotropic substances, precursors, and countermeasures to illegal consumption."

In an effort to combat production and trafficking in narcotics, the Ministry of the Interior has also initiated "Operation Dope." This project has led to several raids resulting in the confiscation of narcotics, the most effective of which were conducted by the division of the Ministry of the Interior in Astana, Almaty, and Karaganda. The Karaganda division of the MIA seized 25 tons of narcotics.

Law Enforcement Efforts. The GOK continues to actively fight drug smuggling, but the results of these efforts only demonstrate a slight improvement over last year. The Committee's statistics for the first nine months of 2004 show only a moderate increase in seizures of opium and a slight increase in seizures of heroin and cannabis. The Committee supervised forces, which made the majority of narcotics seizures and has actively employed undercover tactics to eliminate major narcotics traffickers.

More than 19 tons of various narcotics, including 92 kilograms of heroin, were seized in the first nine months of 2004, which is approximately four tons more than the previous year (15 tons and 70 kilograms of heroin in 2003.)

Since the beginning of this year, more than 22 undercover operations were led by the Committee. Two major organized criminal groups and eight smuggling rings with criminal ties to other organized crime groups in the country were apprehended and charged with illicit narcotics activities. More than 21 kilograms of heroin was seized from one of these groups. In May 2004, more than 2.5 kilograms of heroin and 26.5 kilograms of opiates were seized in the northern region of Kazakhstan from a drug dealer who was trafficking narcotics from the Kyrgyz Republic to Kazakhstan. Another notable seizure took place in Almaty where a Kyrgyz citizen was apprehended while trying to sell 1.5 kilograms of heroin to an undercover Committee agent.

The annual project "Operation Poppy," which combines intelligence collection, interdiction of smugglers, eradication of cultivation, and demand reduction was conducted from June 7 until October 15, 2004. More than 1,700 officers from the Ministry of the Interior, 145 officers from Customs, and 55 officers from the Committee on National Security combined their efforts in this project. As a result, more than 103 individuals were arrested for the cultivation of opiates and 236 were arrested for marijuana cultivation. In addition to these arrests, authorities seized more than 12 tons of marijuana.

Another large-scale operation, entitled "Dope," is aimed at the control and seizure of psychotropic substances and precursors. A total of more than 15 tons of drugs were seized during the first stages of the operation this year. The Committee raided 703 drug stores, 111 storage facilities, 387 medical facilities and 120 industrial facilities that were discovered to be in possession of illicit/diverted narcotics. As a result, 243 people, including 11 medical workers, were convicted of violations related

to the illicit diversion of narcotics substances. In October 2004, the National Security Committee (NSC) also arrested a German citizen in Almaty who was in possession of over 30,000 psychotropic pills. According to the detainee, he acquired the pills in the German town of Aalen in May 2004 and brought them to Kazakhstan in the secret compartment of a vehicle that he shipped overland. According to the NSC, this particular seizure was one of the biggest in all of the CIS countries during 2004.

Overall, however, there has been a decrease in narcotics-related convictions in Kazakhstan. From January 2004 until September 2004, there were 7,897 criminal cases related to narcotics, which is 18.6 percent lower than the previous year (9,705) and comprises only 8 percent of the overall reported national crime apprehensions.

More than 94 percent (4,910 out of 5,185 registered cases) were related to the production, processing, and trafficking of narcotics, psychotropic drugs, and other controlled substances. 44.5 percent (2,123) of these criminal cases were related to the sale of or an attempt to sell narcotics.

In comparison to the previous year, the Committee has reported a drop (25.3 percent) in criminal cases related to illegal narcotics transiting the country, a 15.9 percent decrease in the underage population known to be involved in the narcotics business, and a 13.5 percent drop in cases involving non-Kazakhstani citizens from elsewhere in the former USSR. Overall, there were 63 criminal cases related to the abuse of psychotropic and controlled substances, which is 18.2 percent lower than in 2003 (77 cases). It is difficult to determine whether these statistics are suggestive of an overall decrease in the actual use and trafficking of narcotics in the country or a decrease in the effectiveness of Kazakhstan's law enforcement agencies in apprehending those involved in narcotics. Since this decline in convictions is coupled with at least a slight increase in narcotics seizures, however, it does appear that Kazakh law enforcement agencies are having more success in apprehending larger drug trafficking rings than was the case last year.

Corruption. While it is difficult to determine the extent to which corruption negatively affects the country's efforts to combat narcotics trafficking, widespread corruption in Kazakhstan indicates that it is almost certainly a critical factor in hampering the country's war on drugs. Nonetheless, there appears to be an increasing effort to apprehend at least lower-level officials involved in corruption. The Department on Combating Economic Crimes and Corruption of Almaty City investigated 68 criminal cases this year.

The number of corruption cases increased 4.5 times over 2003.

According to the Constitutional Council of Kazakhstan, in 2004 there were 356 criminal cases involving corruption, 222 officials were reprimanded for abusing their authority, and 210 officials were accused of taking bribes. According to the Head of the Committee on Combating Narcotics of the MIA, Anatoly Vyborov, these corruption charges included 26 criminal cases against individuals from the Ministry of the Interior for illegal actions involving their operations with narcotics. In all cases, the perpetrators were sentenced to jail terms and were immediately fired from their positions in the MIA. While these efforts demonstrate that the GOK is beginning to address corruption among law enforcement officials combating narcotics, given the money involved in drug trafficking, it is likely that corruption will continue to be an issue of grave concern.

Agreements and Treaties. The U.S. and Kazakhstan signed a Memorandum of Understanding on narcotics control and law enforcement in December 2002. Kazakhstan is party to the 1998 UN Drug Convention and has signed the Central Asian Counter-Narcotics Memorandum of Understanding with the UNODC. The Kazakhstan national counternarcotics law, passed in 1998, specifically gives the provisions of international counternarcotics agreements precedent over national law (Article 3.2). Kazakhstan, Kyrgyz Republic, Tajikistan, and Uzbekistan signed an agreement in September 1999 on cooperation in combating transnational crime, including narcotics trafficking. The five Central Asian

countries, Azerbaijan, Georgia, Iran, Pakistan, and Turkey are members of the Economic Coordination Mechanism supported by the UNODC. Kazakhstan has signed but has not yet ratified the UN Convention Against Transnational Organized Crime.

Cultivation and Production. Marijuana and ephedra grow wild on about 1.2 million hectares of southern Kazakhstan, with the largest single location being the 130,000 hectares of marijuana in the Chu Valley. It is estimated that approximately 97 percent of the marijuana sold in Central Asia originates in Kazakhstan. The production of opium and heroin remains minimal. In the first nine months of 2004, the Statistics Division of the Prosecutor General's Office identified 195 cases of the illicit cultivation of opium poppies, marijuana and ephedra and 31 cases of the cultivation of wild marijuana (916 square meters and 61 square meters of eradicated fields). According to Anatoly Vyborov, the situation in the Chu Valley is growing worse as there is increasing evidence that organized crime rings are involved in the region's marijuana cultivation and production. Evidence of the sophistication of marijuana cultivation includes the discovery of land mines near the entrances to green houses where marijuana is being cultivated. Believing that this problem has not been adequately addressed, the MIA this year fired for incompetence the head of its counternarcotics division in Zhambyl oblast, which includes the Chu Valley.

Drug Flow/Transit. Despite the efforts of law enforcement agencies, Kazakhstan continues to be an important transit country, especially for drugs coming out of Afghanistan. According to UNODC 30 percent of Afghanistan's opium crop will pass through Central Asia, and 70 percent of that (about 800-1000 metric tons) passing through Kazakhstan. The GOK's estimate of the opium transiting Kazakhstan is considerably lower. The main routes for the transit of Afghani narcotics through Kazakhstan continue to run through Tajikistan and the Kyrgyz Republic, or Turkmenistan and Uzbekistan.

Domestic Demand. Kazakhstan's increasing prosperity has also created a new market for Ecstasy and amphetamines shipped in from Russia. A much larger problem, however, is the growing use of heroin in Kazakhstan. Likely due to the large amount of heroin and opium transiting Kazakhstan, drug addiction is a quickly growing problem in the country. Since 1991, the number of drug addicts in Kazakhstan is estimated to have grown 22-fold. During the first nine months of 2004, it was estimated that there were approximately 47,000 drug addicts in Kazakhstan. Almost two thirds of these addicts are people younger than 30 years of age. The Procuracy's statistics show a slight drop in the number of registered addicts, almost a 2 percent decrease in comparison to previous year. Experts estimate that the true number of addicts is about five times the number of those registered.

State financing for drug rehabilitation centers has grown substantially over the last several years. This year the GOK allocated 68 million Tenge (130 Tenge equals \$1) to finance drug rehabilitation centers, and more than 86 million Tenge has already been allocated for next year. In addition, the GOK has sponsored several drug awareness programs since the beginning of this year. These included 37 counternarcotics programs initiated throughout schools as part of a pilot project on combating narcotics among the underage and teenage population as well as 812 publications in the press, 1010 films, and 163 radio talk shows devoted to combating narcotics abuse.

IV. U.S. Policy Initiatives and Programs

In March 2003, President Nazarbayev approved the State Department Narcotics Assistance Letter of Agreement, signed in December 2002, allowing the commencement of assistance to Kazakhstan. Despite its continued problems of drug trafficking and abuse, Kazakhstan has made considerable progress since that time, especially compared to the rest of the region. Given Kazakhstan's great potential as a partner in the fight against narcotics, terrorism and money laundering, our overall goal is to develop a long-term cooperative relationship between the police and investigative services of the United States and those of Kazakhstan.

Bilateral Cooperation. In 2004 the U.S. Government assisted Kazakhstan's counternarcotics effort in several ways:

In August 2004, the State Department sponsored two UK Customs agents who provided training on drug profiling as well as pedestrian, rail and vehicular searches to selected MIA and Border Guard units as well as to the academies of both the Ministry and the Border Guards.

State continued to assist the National Forensics Laboratory in Almaty. One gas chromatograph as well as numerous drug test kits and "Drug ID Bibles" were delivered to the Laboratory in March 2004.

State also continued to sponsor the Committee on Combating Drugs. As part of a larger project aimed at combating narcotics trafficking in Kazakhstan Approximately one-third of the funds provided by the U.S. were used to acquire equipment needed to search vehicles for contraband, especially illegal narcotics. The remainder of the money is being used to provide specialized training to the unit in a variety of areas including drug identification, the search of vehicles using the equipment provided under the project, and Kazakh legal statutes pertaining to illegal narcotics and the arrest and detention of criminal suspects. The legal training also includes the principles of asset forfeiture (principles of legal seizure, custody, cooperation with prosecutors and judges, and transfer to GOK authorities responsible for the sale of forfeited assets.)

Training and equipment was provided to the Statistics Committee of the Prosecutor's Office, which targets drug trafficking organizations operating in Kazakhstan. The project also covered the costs of modernizing the Statistics Division of the Prosecutor's Office. The first field offices to be modernized under the project were those contiguous to the Kazakh-Kyrgyz border between Kordai and Taraz, the field office in the town of Sarishagan near Lake Balkash, and the field offices contiguous to the Kazakh-Russian border in the towns of Aul and Zheshkent. In total, \$117,000 worth of technical equipment was given to the Prosecutor's Office of the GOK under this project, including computers, printers, monitors, and copy machines. In November 2004, computer equipment was distributed throughout Kazakhstan to 17 different branches within the Criminal Statistics Unit; and the State Department sponsored 25 training courses in 2004, during which a total of 687 GOK officials were trained.

The Road Ahead. Kazakhstan is making serious efforts to end its status as a narcotics transit country. The GOK is working to refine its laws related to narcotics, to develop its police services and to cooperate with the international community. Corruption, failure to devote sufficient resources to training and equipment, and a weak infrastructure remain serious problems, but trends are encouraging.

Kyrgyz Republic

I. Summary

The Kyrgyz Republic is a transit route for heroin and other opiates from Afghanistan destined for Russian, Western European and American markets. Several of the main drug trafficking routes out of Afghanistan run directly through the Kyrgyz Republic. There is minimal internal production of illicit narcotics or precursor chemicals. During the calendar year 2004, the Government of the Kyrgyz Republic (GOKG) attempted, with limited resources, to combat drug trafficking and locate and prosecute offenders. The GOKG has been supportive of international and regional efforts to limit drug trafficking and has begun major initiatives to address its own domestic drug abuse problems. The GOKG recognizes that the drug trade is a serious threat to its own stability and is continuing efforts to focus on secondary and tertiary drug-related issues such as money laundering, drug-related street crime, and corruption within its own government ranks. Drug abuse is a continuing and escalating problem that has placed a burden on law enforcement and the health care system. The Ministry of Health reports that ninety percent of known HIV and AIDS cases are related to intravenous drug use.

Public confidence is continuing to be eroded as it relates to the GOKG's ability to address important concerns of its citizens such as unemployment, unpaid salaries, inadequate health care, and rising crime. The result has been public apathy towards government initiatives such as counternarcotics programs, toleration of government corruption, and a growing dependency on a shadow economy that includes drug trafficking, street sales, and usage. While the GOKG has been a supporter of counternarcotics programs, it is still struggling to deliver a clear and consistent counternarcotics strategy to either the Kyrgyz people or the international community. The former State Commission for Drug Control and the newly established Kyrgyz Drug Control Agency (DCA) (a counternarcotics agency sponsored by the USG and managed by UNODC) have been fighting a losing battle against drug trafficking. Particularly in the city of Osh and its surrounding regions, the drug trafficking has become an ever-increasing source of income and employment. There is hope the establishment of the DCA will mark a new beginning in the Kyrgyz Republic's efforts to minimize drug trafficking and reestablish the public's confidence.

II. Status of Country

The Kyrgyz Republic shares a common border with China, Kazakhstan, Uzbekistan, and Tajikistan. Mountainous terrain, poor road conditions, and an inhospitable climate for much of the year make detection and apprehension of drug traffickers difficult. Border stations located on mountain passes on the Chinese and Tajik borders are snow covered and uninhabited for up to four months of the year. These isolated passes are some of the most heavily used routes for drug traffickers. Government outposts and interdiction forces rarely have electricity, running water or modern amenities to support their counternarcotics efforts.

The Kyrgyz Republic is one of the poorest successor states of the former Soviet Union, relying on a crumbling infrastructure and suffering from a lack of natural resources or significant industry. Unlike some of its Central Asian neighbors, the Kyrgyz Republic does not have a productive oil industry or significant energy reserves. The south and southwest regions--the Osh and Batken districts are primary trafficking routes used for drug shipments from Afghanistan. The city of Osh, in particular, is the main crossroads for road and air traffic and a primary transfer point for narcotics into Uzbekistan and Kazakhstan and on to markets in Russia, Western Europe and the United States. The Kyrgyz Republic is not a major producer of narcotics, however, cannabis, ephedra and poppy do grow wild in many areas.

Agreements and Treaties. The Kyrgyz Republic is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention on Narcotic Drugs, as amended by the 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances. The Kyrgyz Republic has signed bilateral and multilateral agreements concerning narcotics control with all CIS countries as well as Pakistan, Germany, Austria, China, Iran, Bulgaria, and the Czech Republic. The Kyrgyz Republic is a party to the UN Convention against Transnational Organized Crime.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The GOKG has instituted various national programs and legislation to combat drug trafficking and drug abuse. Projects currently underway include Regional Precursor Control in Central Asia; Strengthening Drug Capacities in Data and Information Collection Project; Diversification of HIV Prevention and Drug Treatment Services for Intravenous Drug Users.

Drug Flow/Transit. The GOKG and the State Commission for Drug Control (SCDC) had previously identified four separate routes for drug trafficking: the Kyzyl-Art route across the southernmost part of the Kyrgyz Republic and onward to Osh and the Ferghana Valley and Uzbekistan; the Batken Route stretching to the far western and most remote areas bordering Tajikistan and Uzbekistan; the Altyn-Mazar route that follows a similar path into the Ferghana Valley; and a fourth route overlapping some of these routes and beginning in the city of Khojand on the Tajik border. All of these routes originate somewhere on the 1000-kilometer Tajik border and consist of footpaths, minor roads, and only a few major thoroughfares. The GOKG estimates that there may be over 100 different paths smugglers use to move narcotics and contraband across Kyrgyz borders.

Domestic street values of heroin have shown a steady increase over the past four years, returning to 1997 levels. In 2001 the price for a kilogram of heroin in the northern region was approximately \$6,000. In the southern regions it was closer to \$3,000. In August 2003, a kilogram of heroin could be purchased in Bishkek for approximately \$8,000, depending on purity of drugs. One year later, a kilogram of heroin with the same purity level is now selling for up to \$10,000. In Kyrgyz Republic's southern regions it has increased from a high-end of \$4,500 to nearly \$5,000 per kilogram over this same one-year period. However, the price of a street-dose (0.1 gm.) of heroin has remained fairly stable in the northern regions of the country and risen proportionately in the southern regions. By contrast, raw opium has shown a dramatic increase in cost over the last four years in both regions of the Kyrgyz Republic. In 2001 a kilogram of opium was selling in the range of \$400-\$500 in the northern region and \$300-\$400 in the southern. In 2004 that cost has risen to nearly \$1,500-\$1,900 in the northern region and \$1,000-\$1,500 in the southern. This might be caused by a shortage of opium, as more Afghan opium is being refined in Afghanistan and shipped as a refined opiate (heroin and morphine base), since this product is much less bulky than opium. The upward trend in heroin prices could reflect competition for available heroin with richer "customers" in Russia and Western Europe

While the street-price of marijuana has followed the same trend as opium, hashish has shown a slight reduction in price over this four-year period.

Law Enforcement Efforts. The GOKG's State Commission for Drug Control, which has existed since 1993 with only 16 staff members, was replaced in 2004 by the creation of the Kyrgyz Drug Control Agency (DCA) with a staff of 240. The DCA became operational in March 2004. The DCA estimates that, based on its own internal reporting and that of the other law enforcement agencies, there were 3,760 kilograms of illicit narcotics seized, compared to 3,355 kilograms during the same reporting period in 2003. Additionally, in 2004 the DCA was successful in initiating a controlled delivery of one kilo of heroin that originated in Tajikistan and traversed the Kyrgyz Republic, Russia, and Latvia and terminated in Germany with the identification and arrest of several drug traffickers. This was the first transnational operation for the DCA, which culminated in Western Europe. The

GOKG and the DCA have had difficulty gathering information and controlling resources in some of the remote regions, particularly in the Osh and southern districts.

Corruption. The DCA openly admits that some Kyrgyz officials are involved in the drug trade, including members of the MVD, and SNB (National Security Service—successor to the Soviet-era KGB). The Osh region remains an unwieldy and volatile drug trafficking region that the DCA has declared a high priority target for its counternarcotics efforts and has identified as the location for the DCA southern-branch headquarters.

Domestic Demand. As of January 2004, the Kyrgyz Republic's National Narcology Center reported 6,350 registered drug addicts, which is an increase of 739 from its July 2003 figures. While there was still an increase in the number of registered addicts, the percent of increase declined in 2004. Best estimates are the actual number of drug abusers is likely to be 10-15 times this amount. The DCA has reported that the number of drug related crimes reported in 2004 is 2,764 versus 2,771 in 2003, a decrease of 0.2 percent. The number of investigated drug related crimes was 2761 versus 2722 in 2003 and increase of 1.4 percent.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. In December 2001, the GOKG and the U.S. Embassy in Bishkek, on behalf of the State Department's Bureau for International Narcotics and Law Enforcement Affairs (INL), signed a Letter of Agreement (LOA) to construct a Model Customs Post in the village of Kyzyl-Art on the Tajik border. This \$250,000 project will seek to serve as a model, which can be replicated for efforts to counter the narcotics traffic on what has been identified as one of the Kyrgyz Republic busiest drug-trafficking routes. This post will be equipped with modern detection equipment and manned on a 24-hour basis. The U.S. also provided other GOKG law enforcement bodies with counternarcotics equipment—including vehicles, office, laboratory and communications equipment.

In June 2003, the GOKG and the United Nations Office on Drugs and Crime (UNODC) signed a Project Document on the establishment of the DCA. The only donor to this \$6.3 million project is the U.S. Government. The USG works together with GOKG and UNODC to reduce corruption and foster transparency in the GOKG's struggle against narcotics trafficking and its effects. During a lengthy hiring process for the DCA, the UNODC and USG have insisted in a strict vetting process to reduce the likelihood of criminals or corrupt officials being included in the organization. One hundred and seventy (170) positions have been filled and although only partially staffed and equipped, the DCA has conducted several successful counternarcotics operations resulting in drug seizures and arrests. Construction and renovation of the DCA's government donated headquarters building in Bishkek has been completed and is operational. The OSH headquarters building has been identified and renovation has begun with a completion date of mid-year 2005. Additional operational equipment has been procured and will be distributed early in 2005.

In November 2003, the GOKG and the International Organization for Migration (IOM) Bishkek Office signed a Memorandum of Understanding (MOU) to establish a new International Passport system in the Kyrgyz Republic. This project is of great importance for the Kyrgyz because their current passport fails to meet international security standards. The Passport Project was scheduled to be completed by June 2004. However, governmental bureaucracy has delayed the issuance of the passports to ordinary citizens. That event is now scheduled for early in 2005. The USG is the sole donor of this \$1.6 million project.

The Road Ahead. The USG will continue to assist the GOKG in its counternarcotics efforts through prosecutorial, customs and law enforcement training and logistical support. The USG will continue working with the GOKG to provide direct support and training to its law enforcement and customs canine services.

Latvia

I. Summary

Amphetamines, cannabis, and heroin are the drugs of choice in Latvia. Shifting patterns of recreational drug use, due in part to information campaigns about the dangers of intravenous drug use, have accelerated a shift away from heroin towards increased abuse of amphetamines, cocaine, and cannabis. Concentration levels of locally sold heroin, which dropped dramatically during the war in Afghanistan, have returned to pre-war levels. Latvia is a party to the 1988 UN Drug Convention.

II. Status of Country

Drug production is not a significant problem in Latvia, though potential does exist for manufacture or cultivation of certain drugs. Narcotic substances are frequently smuggled into Latvia from Lithuania, principally by train, bus, truck, and car. Secret compartments inside gas tanks or built-in compartments underneath car floors, car trunks, doors, and inside engines are common concealment methods. Individual couriers traveling by land frequently conceal drugs in baggage or within their bodies. Amphetamines are trafficked from Lithuania, the Netherlands, and Poland, often through the mail. Heroin is primarily trafficked via Russia from Central Asia. Drugs tend to be transshipped through Latvian seaports; drugs destined for Latvia itself rarely arrive at seaports.

Latvia is not a significant producer of precursor chemicals. It has, however, served as a destination and transit point for precursor chemicals. Customs officials believe that there is a significant presence of “pre-precursors” that originate in Belarus. International customs officials for Nordic countries have traced a significant amount of the precursor trade back to Lithuania, where it then goes through Latvia to Estonia before taking advantage of the frequent ferry service from Tallinn to Helsinki. The amount of confiscated precursors rose from 500 ml of liquid chemicals in the first half of 2002 to 7.54 kilograms of solid chemicals and 1,560 ml of liquid chemicals in the first half of 2003. In 2004 the Latvian police seized 109.2 kilograms of safrole, an extract from sassafras plants used to produce Ecstasy tablets, as it was being smuggled by car across the border from Lithuania into Latvia.

Heroin is sold at “retail” in public places such as parks, at the city center, or more discreetly in private apartments; selling tactics and methods constantly change. Larger dealers use intermediaries to limit their clients’ contact with them. Amphetamines are mainly distributed at gambling centers and other areas that attract youth, such as nightclubs, discotheques and raves. According to police and NGO sources, much of the cannabis trade is carried out by persons of Roma (Gypsy) origin. Distribution is often a family business and an essential source of income. Other members or close relatives of the family continue the business if one family member is detained or prosecuted. Stable, organized crime groups also engage in both wholesale and retail trade.

Heroin demand, supply, and usage decreased following hostilities in Afghanistan, and police officials report that this was due to a disruption in the supply of heroin flowing from Central Asia through Russia to Latvia and points further west. This disruption caused the quantity and quality of heroin available in Latvia to deteriorate, with concentration levels in seized heroin dropping from 80 percent in 2001 to an average of 6 percent to 30 percent in 2002 through 2003. Seizures in 2004 showed that concentration levels had climbed back to 70 percent. Through the first nine months of 2004, Latvian police seized 494.38 grams of heroin, compared to 503.34 grams in the previous year. Latvia’s growing affluence, coupled with the diminished supply of heroin in 2002 and 2003, led to increased usage of cocaine. The Organized Crime Bureau reported that the standard purity of seized cocaine averages 50-60 percent.

Recreational drug use has increased, with both amphetamines and cannabis usage showing an increasing trend. Nonetheless, among officially registered drug addicts at Latvia's Narcology Center, heroin and opiates account for the largest single category. As of September 2004, there were 2690 registered opiate users. Retail prices for heroin have continued to rise. In 2001, 0.1 gram of heroin retailed for 5 LVL (approx. \$9). The most current retail price is 15 LVL for 0.1 gram (approx. \$29).

III. Country Actions Against Drugs in 2004

Policy Initiatives. The Latvian State Police and the Ministry of Interior have drafted a master plan that addresses national drug control and drug abuse, which was submitted to the Prime Minister's Cabinet for official government approval in 2004. Under this plan, the Prime Minister presides over a Narcotics Coordination Bureau that supervises Latvian law enforcement action against narcotics trafficking and use. The plan has six goals: reduce the prevalence of drug use; reduce the negative health consequences of drug use; increase treatment of addicts; reduce the supply of drugs; reduce the number of drug related crimes; reduce ancillary drug crimes, including money laundering; and reduce the illegal trafficking of drug precursors.

The State Police reorganized their efforts to combat drug distribution in May 2003, placing their domestic drug control unit under the supervision of the Organized Crime Bureau.

Law Enforcement Efforts. The total number of drug-related crimes increased from 727 in the first nine months of 2003 to 814 in the same period of 2004. The 2004 drug-related crime statistics include 796 crimes related to sales, purchasing, possession, and repeated illegal use of narcotics; ten crimes related to large-scale drug contraband. In the first nine months of 2004, police filed drug-related criminal charges against 575 individuals. In the first nine months of 2004, the amount of seized poppy straw, LSD, and Ecstasy increased compared to 2003 figures. Cocaine and hashish seizures dropped.

In 2003 police made two large seizures of hashish and one large seizure of cocaine that were far greater than normal. Thus, hashish seizures in 2004 dropped from 30144.3 grams to 139.62 grams through the first nine months of the year. Cocaine seizures fell from 1776.34 grams to 628.41 grams over the same time period. Seizures of poppy straw grew from 37.05 kilogram in 2003 to 103.13 kilogram in 2004. Police also seized 4385 Ecstasy tablets, a significant increase over the previous year's 1119.

Corruption. Corruption remained a problem in Latvia, but the government established a new Anti Corruption Bureau in February 2003. An investigation in March 2003 focused on allegations of police involvement in retail drug dealing and led to the arrest of two former criminal police officers. In 2004, the Anti-Corruption Bureau doubled its criminal caseload and continued its campaign to improve professional responsibility across all levels of Latvian law enforcement. Although there are allegations that Customs Officers and Border Guards sometimes conspire with smuggling rings, the USG has no evidence of drug-related corruption at senior levels of the Latvian government.

Agreements and Treaties. Latvia is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention as amended by its 1972 Protocol. A 1923 extradition treaty, supplemented in 1934, remains in effect between Latvia and the United States. A bilateral mutual legal assistance treaty between the United States and Latvia entered into force in 1999. Latvia is a party to the UN Convention against Transnational Organized Crime.

IV. U.S. Policy Initiatives and Programs

U.S. Policy and Bilateral Cooperation. The United States maintains programs in Latvia that focuses on investigating and prosecuting drug offenses, corruption, and organized crime. Several Latvian enforcement personnel have attended U.S. training courses in Latvia and elsewhere in the region. The

director of Latvia's Narcotics Bureau credited a U.S. Embassy-funded HIV/AIDS program with helping to stem the number of IV drug users in Latvia.

The Road Ahead. The United States will continue to pursue and deepen cooperation with Latvia. The United States will expand efforts to coordinate with the EU and other donors to ensure complementary and cooperative assistance and policies with the GOL.

Lithuania

I. Summary

In 2004, Lithuania strengthened its counternarcotics efforts, rolling out a National Drug Addiction Prevention and Drug Control Strategy for 2004-2008. The use and sale of narcotics, however, continues to increase in Lithuania. Lithuania remains a transit route for heroin from Asia to Western Europe and produces synthetic narcotics for both domestic use and export. Law enforcement authorities estimate that the domestic drug trade is 500 million Litas (\$200 million) per annum and growing. The most popular drugs include synthetic narcotics, poppy straw extract, heroin, and cannabis. Industrially produced psychotropic drugs are also popular. Though public awareness campaigns have grown, the number of registered drug addicts and drug-related crimes increased in 2004. USG and GOL law enforcement cooperation is very good. Lithuania is a party to the 1988 UN Drug Convention.

II. Status of Country

Synthetic narcotics, poppy straw extract, heroin, and cannabis are the most popular drugs in Lithuania. Poppy straw and cannabis are popular because they are inexpensive, while synthetic narcotics are most popular on the black market. The price of a dose of heroin, 20 Litas (\$5.70), remained unchanged from 2003. Heroin is smuggled into Lithuania from Central Asia and the Balkans. Cocaine imports from South America travel through Western Europe into Lithuania. Poppy straw is especially popular in the countryside, and is smuggled to the Kaliningrad district of Russia. Industrially produced psychotropic drugs (e.g., GHB), artificial heroin, and new psychotropic substances are increasingly popular. Hashish is not popular. Law enforcement authorities estimate that the domestic drug trade is 500 million Litas (\$200 million) per annum and growing. Lithuanian organized crime groups have begun to penetrate the German narcotics market.

There were 4,689 registered drug addicts in January 2004, an increase of 284 individuals from 2002. In 2003, 356 persons approached health care institutions for the first time (653 in 2001). Nearly 75 percent of all drug addicts are younger than 35 years old, while more than 90 percent live in cities, and one-fifth are women. Over 90 percent of drug dependency cases are intravenous drug users. Lithuania had 943 registered cases of HIV in October 2004, an increase from 735 cases at the beginning of 2002. Eighty percent of those registered with HIV contracted the disease through intravenous drug use. In 2003, rates of Hepatitis B and C infection among intravenous drug users decreased by 26 percent and 35 percent, respectively. The number of 15-16 year-old students who have tried drugs at least once remained stable at approximately 15 percent (15.6 percent in 2003, 15 percent in 2002). Health education programs have been integrated into school curricula, resulting in an increased awareness about the dangers of drug use. Lithuania is a member of the international European School Survey Project on Alcohol and Other Drugs (ESPAD 95, ESPAD 99, ESPAD 03) and monitors the fluctuations of data on substance abuse among children aged 15-16. A 2003 survey showed that the consumption of cannabis, hashish, amphetamines, alcohol and tobacco is increasing, while the consumption of heroin and Ecstasy is decreasing among Lithuania's student population. According to an international survey published in 2004, 81 percent of children in foster care abuse alcohol, drugs, or glue.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In order to improve preventive measures, combat addiction, and bring Lithuanian law in line with the European Union's 1999 counternarcotics strategy, the Government of Lithuania

(GOL) enacted the National Drug Addiction Prevention and Drug Control Strategy for 2004-2008 (“Strategy”). The Strategy, initiated in April 2004, increases cooperation between national authorities and drug control organizations, promotes local government initiatives to prevent and control drug use, and increases the role of society in dealing with drug problems. In 2004, the GOL provided 10.2 million Litas (\$4.08 million) to the Strategy. In 2004, more resources were allocated for initiatives that focused on prevention and rehabilitation than were allocated for fighting the trafficking and sale of narcotics. EU structural funds, however, augmented GOL expenditures in support of strengthened national borders. The GOL’s Narcotics Control Department, which implements the Strategy and coordinates the efforts of the national and local governments, began operation in January 2004. In December 2004, parliament created a Drug Addiction Prevention Commission. The GOL continued to implement its National HIV/AIDS Prevention and Control Program for 2003-2008. The program seeks to prevent the transmission of HIV/AIDS within high-risk groups (intravenous users, prostitutes, sailors, long-distance drivers, and prisoners). In the summer of 2004, the Parliament annulled a provision in the Criminal Code that established alternative punishments (15 to 90 days of incarceration) for those convicted of drug distribution. Those convicted now face prison terms of between five to eight years.

Accomplishments. Experts note that public awareness concerning the hazards of drug use is rapidly increasing. In 2004, the GOL allocated approximately 4 million Litas (\$1.6 millions) for public awareness programs, primarily conducted by the Ministry of Education and Science and NGOs. Police conducted separate awareness programs.

Law Enforcement Efforts. The number of drug-related crimes increased in 2004. By December 2004, Lithuanian law enforcement authorities registered 1,121 crimes (up from 886 in 2003). In 2004, the police shut down a laboratory producing high-quality amphetamines. The Customs Criminal Service initiated six narcotics related criminal cases in 2004 (13 in 2003, 14 in 2002, 8 in 2001, 0 in 2000). In December 2004, a Kaunas court sentenced three Lithuanian citizens to 10.5 years, 8 years, and 2 years of imprisonment, respectively, for producing amphetamines. In the largest seizure of 2004, police seized 18,000 doses of LSD, 71,000 Ecstasy tablets, 3 kilograms of marijuana, and 2 liters of precursors in November from a 19-year-old student who police believed to be a member of an organized trafficking group. On December 31, 2003, in the largest seizure of the year, Customs officials confiscated 300,000 Rohypnol pills (26 kilograms) at a Latvian border checkpoint.

Corruption. Corruption is a problem in Lithuania; however, the government enforces its laws against corruption, and as a result, narcotics-related corruption is not believed to be a major factor in trafficking. In December 2004, a parliamentary ombudsman, Kestutis Virbickas, resigned following findings that he had illegally intervened on behalf of a Lithuanian national standing trial for drug trafficking in Norway.

Cultivation/Production. An intravenous opium extract produced from locally grown poppies and the drug “Ephedrone,” made from medications containing ephedrine, remain popular in Lithuania. Police, in cooperation with Customs agents, destroyed 52,141 square meters of poppy plots (up from 31,426 in 2003 and 22,676 in 2002) and 196 square meters of cannabis plots between June and September 2004 (down from 687 in 2003 and 1,884 in 2002). Illicit laboratories produce amphetamines for local use and export.

Drug Flow/Transit. Poppy straw is transported through Lithuania to Kaliningrad and Latvia. Marijuana and hashish arrive in Lithuania from the east and the west, by land and sea (e.g. from Morocco). Heroin comes to Lithuania by the Silk Road (Afghanistan, Pakistan, Tajikistan, Uzbekistan, Kazakhstan, Russia, Belarus, Lithuania) or the Balkan road (via the Balkans and Central or Western Europe). From Lithuania, heroin leaves by ferry or car to Scandinavian countries, Poland, and Kaliningrad. Cocaine arrives in Lithuania from Central and South America via Germany, the Netherlands, and Belgium. Amphetamines arrive from Poland and the Netherlands.

Domestic Programs (Demand Reduction). Lithuania operates five national drug dependence centers. Ten regional Public Health Centers with local outlets work to prevent the use of drugs, especially in schools. In 2004, 20 rehabilitation centers (which together can service around 200 people annually) and 17 addict rehabilitation communities operated in Lithuania. Methadone treatment programs have operated in major cities since 1995, with 315 people receiving treatment in 2003 (133 in 2002). According to the Ministry of Justice's Prisons Department, in January 2004, 1,148 persons, or 14.4 percent of all prisoners, are registered drug users. In September 2004, 219 inmates were infected with HIV. After the HIV outbreak in the Alytus prison in 2002, the GOL allocated 2 million Litas (\$800,000) for equipment and activities designed to prevent the trafficking of drugs, train officials, and educate inmates at the Alytus facility. In May 2003, a reconstructed building capable of housing 300 HIV-infected prisoners opened in Alytus. In November 2003, a prevention and rehabilitation center for drug addicts and HIV-infected prisoners opened at the Pravieniskes correctional center.

Treaties and Agreements. Lithuania is a party to the 1988 UN Drug Convention, the 1971 UN Convention against Psychotropic Substances, and the 1961 UN Single Convention as amended by the 1972 Protocol. Lithuania also is a party to the UN Convention against Transnational Organized Crime and its protocols against migrant smuggling and trafficking in Women and Children. An extradition treaty and mutual legal assistance treaty are in force between the U.S. and Lithuania.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. USG and GOL law enforcement cooperation is very good. In 2004, the U.S. continued to support GOL efforts to strengthen its law enforcement bodies and improve border security. To strengthen regional cooperation in the fight against HIV/AIDS in the Baltic States and Russia, the U.S. funded "The Network of Excellence" project. In June 2004, a U.S. court in Florida acquitted 11 Lithuanian sailors apprehended in June 2003 of drug trafficking charges following the seizure of 3.5 tons of cocaine aboard the merchant vessel Yalta. In December 2003, Lithuania extradited an American citizen wanted for narcotics trafficking. In 2003, the Lithuanian State Security Department discovered a package suspected of containing counterfeit U.S. currency that was being sent to Minneapolis, Minnesota. The package also contained 100 tablets of Ecstasy. A joint investigation by the State Security Department and U.S. Secret Service resulted in arrests in both countries, including that of a major organized crime figure in the city of Kaunas. His trial is ongoing.

The Road Ahead. The USG looks forward to continuing its close cooperative relationship with Lithuania's law enforcement agencies. Although Lithuania has made some progress in improving regulations and procedures and developing an export control infrastructure, it still lacks the professional skills to detect narcotics and clandestine labs. In 2005, the USG will continue to promote increased GOL attention to the drug problem, and support activities aimed at preventing the production and trafficking of illicit narcotics. In 2005, the DEA will provide training to Lithuanian law enforcement agencies on the investigation and seizure of drug laboratories.

Macedonia

I. Summary

Macedonia, a country with a population of just over two million, is neither a major producer nor a major transit point for illicit drugs. However, the country lies along the so-called “Balkan route,” which is used frequently by traffickers to ship heroin from Afghanistan, and marijuana and hashish from Albania, to the Western European consumer market. Some progress was made in combating drug trafficking in Macedonia during 2004. Drug seizures, measured by quantity, increased by approximately 50 percent over the previous year, with a notable increase in seizures in the last half of the year. The increase is credited to more effective enforcement procedures, made possible in some instances by new legislation that gives the police and Customs officers greater latitude in employing investigative and prosecution techniques and methods.

Although the government demonstrated some increased political will to combat narcotics trafficking, counternarcotics operations often were hindered by ineffective inter-agency coordination and lack of central strategic planning. Macedonian local police, particularly ethnically mixed police teams, the border police, and mobile customs teams benefited from international assistance. They also demonstrated increased focus on counternarcotics operations, despite security and equipment challenges. Over the year, the Ministry of Interior (MOI) reported a 12 percent increase in drug-related criminal offenses. In 2004, the government adopted several key pieces of legislation to strengthen counternarcotics efforts. Macedonia is a party to the 1988 UN Drug Convention.

II. Status of Country

Macedonia lies along one of several overland routes used to deliver Southwest Asian heroin (through Turkey) to Western Europe. This route also is used to deliver high-grade hashish and marijuana produced in Albania to Turkey, where it is exchanged for heroin that subsequently is transported to Western European markets. Small amounts of marijuana are grown in Macedonia, but the narcotics is produced mainly for personal use since the market for it is small and it cannot compete with higher quality, cheaper Albanian marijuana. Wild marijuana is a problem in eastern Macedonia, where it is easy to cultivate due to favorable climate conditions. Macedonia is not known to produce precursor chemicals. Police and Customs officials strictly control the entry of possible precursors at the borders. A Law on Control of Precursors went into effect in June 2004. Cocaine is not transported to or through Macedonia in significant quantities. Trafficking in synthetic drugs, in particular Ecstasy, increased in 2004.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Macedonia undertook, in 2004, comprehensive legislative reforms of its criminal codes, following the prior adoption of an amendment to the Constitution to allow police to use specialized investigative methods, including wire tapping in drug cases. Changes to the Criminal Code increased penalties for drug trafficking, introduced the possibility of immunity from punishment for cooperating defendants/witnesses, and imposed criminal liability on legal entities involved in drug trafficking. New legislation also introduced better witness protection rules and more detailed provisions for confiscation/asset forfeiture in trafficking cases. A special draft Law on Electronic Surveillance, which will provide for detailed rules for wiretapping operations, is pending adoption by the Parliament. A special Law on Witness Protection had been drafted but not yet approved, and parallel activities were underway by year’s end to create within the MOI a Special Witness Protection Unit for cooperating witnesses/defendants. A new Law on the Public Prosecutor’s Office was adopted

in 2004, enhancing the role of prosecutors in criminal investigations while creating a Special Anti-Organized Crime Prosecutors Unit.

The Law on Money Laundering Prevention was amended in 2004 to strengthen the authority of the Money Laundering Prevention Directorate and to bring it into compliance with European Union guidelines. The new Financial Police Unit, which is part of the Ministry of Finance and has the authority to investigate serious financial crimes, including money laundering, was only partially operational in 2004 due to organizational and funding restrictions. The Parliament ratified the Second Protocol to the European Convention on Mutual Legal Assistance in Criminal Matters. The Second Protocol allows for cross-border monitoring of drug traffickers and joint investigative teams to pursue cases against them. The National Anti-Corruption Commission actively reviewed cases of corruption alleged against public officials. The Commission has brought such cases to the attention of law enforcement officials and prosecutors, but there have been few successful prosecutions to date.

The Law on Control of Precursors, which brought Macedonian law into compliance with UN Office on Drugs and Crime (UNODC) and European Union standards, was passed in mid-2004. An inter-ministerial working group, including medical and pharmaceutical experts as well as professionals from the Agriculture Ministry, MOI, and other agencies, is completing the draft text for a special Law on Narcotics that should further enhance counternarcotics efforts.

The Customs Administration continued to strengthen its intelligence units and mobile teams. As a result, the Administration was able to report a significant increase in the number of drug seizures by customs officers in 2004. The Ministry of Interior and the Customs Administration strengthened their cooperation and coordination in 2004.

Accomplishments. Macedonian police worked on an inter-agency basis with colleagues from neighboring countries on a number of drug cases in 2004. Through increased interagency cooperation and intelligence sharing with the Ministry of Interior, the Customs Administration in 2004 was able to seize the largest quantity of drugs in the history of its existence. In December, Macedonian authorities reported three major drug seizures: on the Macedonian-Serbian border, the Macedonian-Albanian border, and in Skopje. The seizures amounted to 142.5 kilograms of high-quality heroin (origin unknown) destined for Serbia; 500 kilograms of hashish from Albania; and 102 kilograms of paracetamol and codeine, also from Albania.

Law Enforcement Efforts. Counternarcotics police benefited from U.S., EU and UNODC training and support. In 2004, 2,860 uniformed police officers participated in specialized OSCE-sponsored training, included a counternarcotics component. The UNODC is supporting a project to promote regional criminal intelligence gathering and sharing. The high turnover rate in political-appointee leadership positions in the MOI deprived the counternarcotics effort of consistent leadership focus.

Drug seizures in 2004 increased by more than 50 percent over the previous year's total. During the year, MOI and Customs Administration agents seized over 550 kilograms of marijuana; 417 cannabis sativa plants; 242 kilograms of heroin; 530 kilograms of hashish; 839 milliliters of hashish essence; 131 grams of cocaine; 6 kilograms of opium; 1,216 methadone pills, 128 Ecstasy pills; 39 LSD doses; and 14 tons of different precursors.

During the same time period, the MOI participated in several coordinated regional activities. As a result of these efforts, eight international narcotics trafficking routes were uncovered, four of which were used for heroin trafficking, two for hashish, one for hashish oil, and one for marijuana trafficking. Nine drug traffickers (nationals of the Republic of Albania, and of Serbia and Montenegro) were extradited to Macedonia for trafficking-related prosecutions in 2004. Five drug traffickers were extradited from Macedonia to Italy, Switzerland, Norway, and Serbia and Montenegro for prosecution on drug charges. The MOI worked with Interpol to identify and forward data on 20 Macedonian nationals arrested abroad for narcotics trafficking.

Counternarcotics police continued to find it difficult to penetrate predominantly ethnic-Albanian drug trafficking organizations. Despite the increased number of ethnic-Albanian police officers in high-ranking MOI positions, few potential ethnic-Albanian informants were willing to work with counternarcotics police. Law enforcement officials expect to obtain a higher level of cooperation from informants in 2005, provided new criminal legislation is passed and implemented that would provide protection for cooperating witnesses.

Due to the introduction of the use of special investigative methods and rules on the admissibility of evidence at trials, police and Customs officials are able to arrest traffickers while they are preparing to commit a crime, which was not permitted by law before the amendments were passed. Law enforcement officials may seize vehicles involved in trafficking, but have been reluctant to force forfeiture of vehicles or other assets. With the adoption of improved asset forfeiture legislation in 2004, Macedonian authorities expect an increase in court decisions ordering asset forfeiture in narcotics cases in 2005.

Corruption. As a matter of government policy and practice, the government of the Republic of Macedonia does not encourage or facilitate the illicit production or distribution of drugs or the laundering of proceeds from illegal drug transactions.

However, corruption is prevalent in Macedonia and is widely seen as a necessary part of doing business in the country. Low salaries and high unemployment help to foster graft among law enforcement officials. However, corruption among police and Customs officials appeared to decline in 2004, compared to previous years. The judiciary remains weak and frequently is accused of corruption. The Parliament approved the dismissal—recommended by the Republic Judicial Council—of eight judges on corruption/unethical conduct allegations in 2004. However, only one judge was convicted on corruption charges during the year, although criminal proceedings had begun in another case. Anticorruption legislation in effect since 2003 was amended this year, but it was too early to determine whether it contributed to any decrease in official corruption. A special Law on Prevention of Conflict of Interest is in the drafting stage.

Agreements and Treaties. Macedonia is a party to the 1988 UN Drug Convention, the 1961 Single Convention on Narcotic Drugs as amended by the 1972 Protocol, and the 1971 Convention on Psychotropic Substances. A 1902 Extradition Treaty between the United States and Serbia, which applies to Macedonia as a successor state, governs extradition between Macedonia and the United States. Difficulties arise from the fact that the Macedonian Constitution does not allow for the extradition of its own nationals. Macedonia has signed the UN Convention against Transnational Organized Crime and its protocols against migrant smuggling and trafficking in women and children.

Illicit Cultivation/Production. Macedonia is not a major cultivator or producer of illicit narcotics. There are no reports of local illicit production or refining of heroin or illegal synthetic drugs. The small amount of legal opium poppy cultivation that exists is strictly controlled and decreasing. The only authorized pharmaceutical company for production and processing of legally cultivated poppy plants cultivated poppy on 380 hectares, producing approximately 22 kilograms of poppy straw per hectare in 2004. The overall 2003-2004 poppy crop yield was approximately the same as the previous year. Authorized poppy production is reported to the Ministry of Health, which shares that information regularly with the Vienna-based International Narcotics Control Board. Limited quantities of marijuana are cultivated illegally for personal use in southeastern Macedonia, and wild poppy plants were located and destroyed in eastern Macedonia.

Drug Flow/Transit. Macedonia lies along the southern variant of the Balkan Route used to ship Southwest Asian heroin to the Western European consumer market. Police report that approximately 90 percent of large-scale traffickers arrested in Macedonia are ethnic Albanians; however, the number of arrested Serbian nationals also increased in 2004. Drug gangs used heavy trucks, vans, buses and cars to transport the bulk of the drug shipments. Local officials reported a notable trend in the

smuggling to Turkey of high-quality hashish and marijuana produced in Albania, where it is exchanged for heroin refined in Turkey. Occasionally, hashish and marijuana produced in Albania was trafficked to Greece via Macedonia. Police reported that the quality of heroin produced in Turkey and transiting Macedonia improved, while the price had dropped. Macedonian officials reported that drug smugglers generally appeared to prefer trading Albanian marijuana for Turkish heroin via northern Greece or by sea, rather than using Macedonia as a transfer point. The most recent heroin seizure, of 122 kilograms, was the largest such seizure ever by Macedonian authorities. In December 2004, police in Germany reported the arrest of four Macedonian citizens suspected of having smuggled 450 kilograms of heroin from Macedonia to Germany.

Police officials also reported that narcotics traffickers appeared to be using the northern Balkan route—from Turkey to Bulgaria, Serbia or Romania, and then on to Western Europe—more often than they did the southern route through Macedonia. The small quantity of cocaine that entered Macedonia from Bulgaria and Greece generally arrived in packages of one to six kilograms. It usually was transported via airmail or courier through one of Macedonia's two airports. The average price of a kilo of cocaine in Macedonia was approximately \$40,000.

The quantity of synthetic narcotics trafficked in Macedonia in 2004 remained limited, although police reported a slight increase in the overall quantity sold here. Officials are aware of Macedonia's increasing vulnerability to synthetic drugs trafficking, since the cost of such drugs is low. Most synthetic drugs aimed at the Macedonian market originated in Bulgaria or Serbia and arrived in small amounts by vehicle. They were sold to Macedonian users for approximately \$10 per pill.

Domestic Programs (Demand Reduction). Official Macedonian statistics regarding drug abuse and addiction generally are unreliable. Observers believe the number of drug abusers in Macedonia to be relatively high; of particular concern is the fact that many new drug addicts are below the age of 15. According to police and health care officials, most registered drug abusers use marijuana (53 percent), and there is a growing level of heroin abuse (41 percent). Six percent of addicts abuse other drugs. Authorities also reported an increase in the abuse of Ecstasy and medical drugs by both long-term drug users and newcomers. Cocaine abuse remained modest, due to its high cost and relative unavailability on the domestic market. Police data available for the first nine months of 2004 showed 6,216 registered drug addicts, indicating an additional 182 addicts compared to 2003. Unofficial statistics from NGOs and the health sector suggest that the actual number of drug addicts in the country could be as high as 30,000.

Macedonia's health care and social welfare systems are still woefully unprepared to deal efficiently with the effects of drug abuse and dependence. The situation worsened in 2004 when the Center for Social Welfare removed a number of drug addicts from the welfare rolls in 2004 due to budget shortfalls. The GOM admitted that its social welfare agents, due to a lack of expertise, training, and technical equipment, were unable to adequately assist with the social reintegration of recovering drug addicts following completion of their medical treatment.

Periodic public awareness campaigns in 2004 were similar in theme to those in 2003. Educators and NGOs continued their programs to increase public awareness of the harmful consequences of drug abuse. The Ministry of Science and Education launched an illegal drug use information campaign at the primary and secondary school level. The campaign used existing academic curricula, textbooks, handbooks, and specially organized events to highlight the counternarcotics theme. The Ministry's Agency of Youth and Sport provided financing to 40 NGOs for public awareness-raising activities concerning drug abuse. Educators continued to play an important role in the work of the National Commission on Prevention of Drug Abuse in implementing its Action Plan for Combating Drug Abuse. In 2005, the GOM expects its National Youth Strategy to involve 80 NGOs in counternarcotics campaigns.

Societal attitudes in 2004 remained firm in advocating complete abstinence as the most effective way to avoid drug dependency. The Office for Social Inclusion Activities for Drug Addicts and Their Families, which was opened in 2003 by the Ministry of Labor and Social Policy, showed some results. The Ministry of Labor and Social Policy is in the process of opening Out-Patient Care and Rehabilitation Centers for Drug Addicts in five Macedonian towns whose populations are facing severe drug addiction problems. These Centers will provide comprehensive services and counseling for drug addicts and their families. A few local NGOs have made limited efforts to establish prevention programs, such as the SOS telephone line financed by the EU, for which information is available to the public through the printed and electronic media.

Macedonia has one state-run outpatient medical clinic for drug addicts, founded in 1985, which dispenses methadone to approximately 500 registered heroin addicts daily. The clinic has a pressing need to expand its capacity, technical equipment and personnel. The illegal diversion of methadone from treatment centers to the streets dramatically increased in 2004. The media reported numerous cases in which patients receiving methadone from a the clinic sold the medication to non-patients in front of that facility. According to available information, the government took no action to eliminate or ameliorate the problem.

Evidence indicates that official statistics did not accurately capture all drug overdose cases. Some health care officials estimated that there were as many as 200 non-lethal overdoses in 2004. There were two registered fatal overdoses among drug addicts in 2004. According to unofficial sources, however, as many as 20 deaths resulted from fatal overdoses in 2004. Drug treatment programs did receive increased attention from the GOM in 2004 with the opening of the five Out-Patient Day Care and Rehabilitation Centers mentioned above. However, given budgetary constraints, difficulties can be expected regarding the normal maintenance and operations of those Centers.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. DEA officers work closely with the Macedonian police, support coordination of regional counternarcotics efforts, and organize specialized training for Macedonian police officers in the United State. Macedonian police and customs officers benefited in 2004 from a two-month specialized law enforcement course—which also covered counternarcotics issues—at the U.S.-funded ILEA regional training facility in Budapest. MOI police, financial police, customs officers, prosecutors, and judges received State Department-financed training in specialized anti-organized crime operations and techniques. U.S. Customs officials continued to provide technical advice and assistance to Macedonian Customs and the MOI's Border Police.

The Road Ahead. Because of Macedonia's porous borders and the growing influence of regional, mostly ethnic Albanian narcotics trafficking groups, Macedonia is likely to face increased transit rates of illegal drugs, especially synthetic drugs. The United States government, through its law enforcement and rule of law training programs, will continue to encourage police to monitor and arrest well-known narcotics traffickers, and to enhance the ability of prosecutors and judges to effectively prosecute and punish them. The United States will continue to push for criminal justice sector reform and the adoption of specialized counternarcotics and witness protection legislation that is indispensable for effective investigation, prosecution and conviction of drug traffickers.

Malta

I. Summary

The Republic of Malta does not play a significant role in the shipment, processing or production of narcotics and psychotropic drugs and other controlled substances. Surveys indicate that illicit drug use is confined to a small segment of the population. The Maltese Government dedicated much time and effort over the past several years updating Malta's laws and criminal codes in preparation for accession to the European Union that occurred on May 1, 2004. As a result, Malta's criminal code stands in harmony with the goals and objectives of the 1988 United Nations Drug Convention, which Malta ratified in 1999. The Malta Police Drug Unit and the National Drug Intelligence Unit (NDIU) continue to improve their capabilities. Success is perhaps best illustrated by the upward trend in seizures of Heroin and Cocaine over the last several years. This trend is the result of improved coordination and communications among all agencies involved in controlling drugs.

II. Status of Country

Malta, an island nation of 400,000 between Sicily and North Africa, is a minor player in global production, processing, and transshipment of narcotics and other controlled substances. There is no evidence to indicate that Malta's role in the worldwide drug trade will change significantly in the near future. Because Malta's population is small and Malta is an island, unwanted trends are easy to detect and deter. The drug problem is generally limited to the sale and use of consumer quantities of illegal drugs. There has been a recent increase in the proliferation of recreational drugs such as Ecstasy and also an increased use and trafficking of illicit drugs by persons under eighteen. Cultivation activity is limited to the growing of less than a few hundred cannabis plants per year. Malta is not a precursor or essential chemical source country. Malta does not produce or possess significant amounts of precursor or essential chemicals nor does it have chemical manufacturing or trading industries that conduct considerable trade with drug producing regions.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Maltese Police and Customs personnel have had significant success through the profiling and targeting of suspected drug couriers transiting the airport. The Police and the Armed Forces work together to monitor, intercept and interrupt sea borne smuggling of illegal drugs. Maltese Customs officials have worked to become more adept at detecting and preventing the movement of drugs through the Malta Freeport, a daunting task, given the volume of containers moving through the Freeport. Port authorities have shown the ability to respond quickly when notified by foreign law enforcement of intelligence related to transshipment attempts.

Accomplishments. In June of 2004, the Government of Malta and the United States signed a Letter of Agreement concerning 'Cooperation to Suppress Illicit Traffic in Narcotic Drugs and Psychotropic Substances by Sea'. This Maritime Counter-Narcotics Cooperation Agreement should assist the interdiction of the flow of drugs through Mediterranean shipping lanes. Currently, there is no extradition treaty between the United States and Malta. However negotiations on both a Mutual Legal Assistance Treaty (MLAT) and a bilateral extradition treaty are ongoing, with a target for completion in the first half of 2005. The USG has successfully used an extradition agreement between the United Kingdom (Malta's former colonial power) and the United States, applicable to Malta, to effect extraditions to the U.S. The most recent example involved the October 2004 extradition of a U.S. national charged with cocaine distribution in the Northern District of Iowa. There was no significant

seizure of property related to drug crimes in 2004. However, current Maltese law provides the necessary provisions for asset forfeiture of those accused of drug related crimes.

Law Enforcement Efforts. Maltese law enforcement seized modest amounts of heroin, cannabis, Ecstasy and cocaine during 2004, amounting cumulatively to under 5 kilogram of dangerous drugs.

Corruption. The USG is not aware of any wide spread corruption of public officials associated with illegal drug activities and does not have evidence that a serious corruption problem exists within the ranks of enforcement agencies. Maltese law contains the necessary provisions to deal effectively with official corruption. In 2002 the country's Chief Justice and two fellow judges were arraigned on corruption charges for taking bribes from inmates convicted on drug charges. Investigative agencies used newly-granted wiretapping authority to identify the judges involved and gather evidence that they were planning to accept bribes in exchange for reducing the sentences of several individuals appealing the terms of their drug convictions. This case is an important example both of the Government's willingness to properly apply anticorruption laws and as a signal to the Maltese people that the social elite are not 'untouchable' as had been believed widely for many years. The final outcome in this case is pending appeals filed on behalf of the defendants right to a fair trial.

Treaties and Agreements. Malta is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention on Narcotic Drugs, as amended by the 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances.

Drug Flow Transit. Currently, there is no data that indicates that Malta is a major trafficking location. The Malta Freeport is a continuing source of concern due to the volume of containers that passes through its vast container terminal. The USG has provided equipment and training as part of non-proliferation and border security initiatives that also have enhanced Malta's ability to monitor illicit trafficking through the Freeport. This should improve detection and act as a deterrent to narcotics traffickers seeking to use container shipping activity at the Freeport as a platform for drug movements through the country. Malta serves as a transfer point for travelers between North Africa and Europe. Heroin smuggled into Malta is primarily carried in by visitors from North African countries (Libya, in particular). Malta's most typical drug problems involve the importation and distribution of small quantities of illegal drugs for individual use. Malta has the world's fifth largest ship registry, which makes it a likely player in future ship interdiction scenarios.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. U.S. law enforcement and security agencies and their Maltese counterparts continue to cooperate closely on drug-related crime. Maltese officials remain interested in securing USG sponsored training for personnel involved in narcotics control. U.S. Customs provided several training courses in Malta during 2004. The U.S. Customs Export Control Advisor based at Embassy Valletta continues to work closely with port officials in an effort to improve their ability to monitor and detect illegal shipments. The Defense Attache's Office routinely provides training through the U.S. Coast Guard to personnel assigned to the Maltese Maritime Enforcement Squadron. Training focuses on maritime search and seizure techniques as well as on the proper utilization and operation of the recently donated state-of-the-art patrol boat. The Regional Security Officer (RSO) works closely with the DEA Country Attach and the FBI Legal Attach based in Rome to foster cooperative efforts to strengthen law enforcement. The joint effort to provide training, support and assistance to GOM law enforcement agencies has clearly improved the Maltese enforcement agencies' ability to profile individuals possibly involved with trafficking and/or in possession of dangerous drugs. The number of arrests and seizures for drug related offenses has steadily increased, indicating that Maltese authorities want to battle the drug problem within their own country and benefit from close USG cooperation. .

Road Ahead. Maltese authorities work harmoniously with USG efforts to stem the proliferation of narcotics and dangerous drugs. We fully expect that such cooperation will continue.

Moldova

I. Summary

The Moldovan Ministry of Interior (MOI) remains responsible for counternarcotics law enforcement activity. The number of law enforcement personnel within the Drug Enforcement Unit decreased from 115 to 103 officers nationwide, with 15 officers at headquarters in Chisinau supporting 88 officers in the regions. Statistics in 2004 regarding the quantity of illicit opium and poppy straw seized show a noticeable decrease compared with 2003, while marijuana seizures show a significant increase. The number of criminal proceedings this year also indicates a noticeable increase in cases referred to the Prosecutor General (PG). Drug usage within Moldova remains a concern, with the number of officially registered addicts increasing by over 20 percent, despite the fact that consistently poor economic conditions make Moldova a relatively unattractive market for narcotics sales. The MOI continues to claim that domestic usage increases by approximately 35 percent each year. Moldova is not a significant producer of narcotics or precursor chemicals. During 2004, the United States provided no training specifically related to narcotics investigations, but supported travel abroad by Moldovan prosecutors, judges and legislators, and more general administration of justice training with unquestionable “spin-offs” for better narcotics enforcement. The training focused on enhanced prosecutorial, judicial and legislative techniques directed at combating corruption, money laundering and organized crime. Moldova is a party to the 1988 UN Drug Convention.

II. Status of Country

Moldova is an agriculturally rich nation with a climate conducive to the cultivation of marijuana and opium poppy. Annual domestic production of marijuana is estimated at several thousand kilograms. By November of 2004, authorities had seized and destroyed 8,588 kilograms of hemp plants and 8,950 kilograms of poppy plants during 2004. The market for domestically produced narcotics remains small, largely confined to local production areas or neighboring countries. The importation of synthetic drugs continues, although authorities seized only small quantities of Ecstasy, codeine, ephedrine and other psychotropic substances this year. Domestic drug traffickers remain closely connected to organized crime in neighboring countries. These groups are not only involved in narcotics, but also in trafficking in persons.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The introduction of a new criminal code in 2003 reduced the maximum penalty for narcotics trafficking to 12 years in prison. Related legislation permits Moldovan authorities to charge those who, while not directly involved, aid and/or abet narcotics traffickers. The Drug Enforcement Unit is comprised of 103 officers nationwide, all of whom are dedicated exclusively to counternarcotics efforts. Moldova also continues to pursue, with U.S. support, anticorruption, antitrafficking and border control initiatives that supplement counternarcotics efforts.

Accomplishments. Despite the lack of rudimentary equipment such as vehicles, Moldovan authorities do their best to fight against narcotics traffickers at all levels. Seizures and lab destructions remain high priorities for the counternarcotics units. During the first 11 months of 2004, 1,947 cases (98 percent of those reported) were sent to the PG, with 1,554 (70 percent) going to trial.

Law Enforcement Efforts. Moldovan authorities initiated over 1,947 drug related cases in the first 11 months of 2004, compared to 2,142 cases for the entire year of 2003. This year, 460 kilograms of poppy straw and 13.5 liters of opium were seized, down from 547 kilograms of poppy straw and 4.324

kilograms and 15.7 liters of opium in 2003. Historically, many transit countries have become user countries over time, which is a concern for Moldova. Moldova will need to invest significant resources in education, border enhancement, and further law enforcement initiatives if it hopes to stem the growth in its user population.

Corruption. Corruption remains a major factor in Moldova. Corruption in the Customs Department and in the police creates opportunities for drug trafficking, while the Center for Combating Economic Crime and Corruption is at best ineffective, and at worst is used to harass political opponents of the administration. For example, recently, the Mayor of Chisinau was detained and many of his city council members arrested. Passage on December 16, 2004 of the new National Anti-Corruption Strategy and Plan may signal a new will on the part of the government to deal with corruption.

Agreements and Treaties. Moldova is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention as amended by its 1972 Protocol. Moldova is also a party to the Strasbourg Convention of 1990 and the UN Convention for the Suppression of the Financing of Terrorism, and cooperates in accordance with these agreements where resources and abilities permit. Moldova has signed but has not yet ratified the UN Convention on Transnational Organized Crime.

Drug Flow/Transit. Seizures this year continue to indicate that Moldova remains primarily a transshipment country for narcotics. Information provided by the MOI indicates that two of the predominant heroin routes are from Ukraine through Moldova to Western Europe, and from Turkey through Romania and Moldova into the CIS.

Domestic Programs. As of November 2004, the number of officially registered addicts was 8,260, a slight decrease from 2003 (8,527) for the same reporting period. Treatment remains an option for only the wealthiest of offenders. Financial hardships and dilapidated facilities restrict rehabilitation and treatment efforts by the Moldovan government. In past year, NGO's provided needed but minimal counternarcotics information and education campaigns.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. On-going USG training and equipment initiatives are designed to improve the abilities of police to investigate and infiltrate organized crime and narcotics syndicates. Other training programs related to counternarcotics include customs and border improvement programs, aimed at strengthening Moldovan border controls and reducing the flow of illegal goods through Moldova.

The Road Ahead. The U.S. and Moldova will continue to work together to discourage narcotics trafficking through Moldova, and improve the administration of justice generally.

Netherlands

I. Summary

The Netherlands continues to be a significant transit point for drugs entering Europe (especially cocaine), an important producer and exporter of synthetic drugs (particularly Ecstasy (MDMA)), and a substantial consumer of most illicit drugs. U.S. law enforcement information indicates the Netherlands is still the largest source-country for Ecstasy in the U.S., although some U.S. analysts are watching the increasing trafficking from Canada with concern. The current Dutch center-right coalition has made measurable progress in implementing a five-year strategy (2002-2006) against production, trade and consumption of synthetic drugs. According to the public prosecutor's office, the number of Ecstasy tablets seized in the U.S., which could be linked to the Netherlands dropped to one million in 2003 from 2.5 million in 2002 (most recent year for statistics). The National Criminal Investigation Department ("Nationale Recherche"-NR), which was set up to enhance the efficiency and effectiveness of criminal investigations and international joint efforts against narcotics trafficking, officially began operations in January 2004. Operational cooperation between U.S. and Dutch law enforcement agencies is excellent, despite some difference in approach and tactics. This was reflected by the several trips to the Netherlands by the DEA Administrator in 2004. Furthermore, in October 2004, the Netherlands became the first European country to sign an MOU with DEA's El Paso Intelligence Center (EPIC) to participate in law enforcement information sharing. Dutch popular attitudes toward soft drugs remain tolerant to the point of indifference. The Government of the Netherlands (GONL) and the public view domestic drug use as a public health issue first and a law enforcement issue second.

II. Status of Country

The central geographical position of the Netherlands, with its modern transportation and communications infrastructure, one of the world's busiest container ports in Rotterdam and one of Europe's busiest airports, makes the country an attractive operational area for international drug traffickers and money launderers. Production of Ecstasy and marijuana is significant; there is also production of amphetamines and other synthetic drugs. The Netherlands also has a large (legal) chemical sector, making it an opportune location for criminals to obtain or produce precursor chemicals used to manufacture illicit drugs.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In January 2004, the National Crime Squad officially started functioning. The new department combines the current five core police teams, the national criminal investigation team, the Unit Synthetic Drugs (USD), the Trafficking in People Unit, and the five Ecstasy teams. The NR, which is part of the National Police Services (KLPD) and which comes under the authority of the National Public Prosecutors' Office, gives top priority to international cooperation in the fight against organized crime, in particular the production of and trafficking in synthetic drugs.

Cannabis. On July 1, the Dutch Parliament approved the April 2004 "Cannabis Letter" from the Ministers of Health, Justice and Interior, which included an "Action Plan to Discourage Cannabis Use." According to the letter, Dutch coffee-shop policy has not led to a significantly higher cannabis use since Dutch use is "average" compared to that of other EU countries. The Ministers argued that the distinction between hard and soft drugs had worked: hard drugs were seldom found in coffee shops. Still, they were concerned about the health risks of cannabis use and the sharp rise in the THC content. The Action Plan included the following initiatives:

- An experiment with the introduction of special coffee-shop passes for Dutch residents in order to ban foreigner “drug tourists”. Justice Minister Donner said the ban was in line with the stricter EU drug regulations. Donner wants to start a trial project with the special passes in Maastricht (close to the German and Belgian borders). If successful, the experiment, which will limit the purchase of soft drugs in Dutch coffee shops to Dutch nationals, will be expanded;
- An investigation into possible risks of cannabis with a high THC content. (In 2003, the THC content of Dutch-grown cannabis (“Nederwiet”) was 18 percent and Dutch hashish 35.8 percent.) If research should prove use of high-level THC cannabis involved serious health risks, cannabis with high THC levels could be placed on List 1 of the Opium Act, making it an illegal hard drug;
- Stricter licensing criteria with respect to the distance between coffee shops and schools; and
- Intensified controls on cannabis cultivation.

The 2003 National Drug Monitor, published in March 2004, showed the number of recent (last-month) cannabis users in the Dutch population over the period 1997-2001 rose from some 326,000 to 408,000, or 3 percent of the Dutch population of 12 years and older (of a total population of 16 million). Life-time prevalence (ever-use) of cannabis among the population of 12 years and older rose from 15.6 percent in 1997 to 17 percent in 2001. The average age of recent cannabis users is 28 years. According to the Trimbos Addiction Institute, cannabis use among young people ages 12-18 dropped in 2003: recent (last-month) use for boys dropped to 10 percent, which was almost one-third less than in 1966. Last-month cannabis use by girls stabilized at 7 percent.

According to a December 10, 2004 letter by Health Minister Hoogervorst to the Second Chamber, legal sales of medicinal cannabis by pharmacies have largely failed. Only some 1,000 to 1,500 patients are buying the government-controlled cannabis, which is one-tenth of the number of expected customers. The disappointing sales, which will cost the Ministry almost 400,000 Euros in 2004, are attributed to reluctance among doctors to prescribe and the higher prices of the “state wiet.” Since March 2003, doctors are allowed to prescribe medicinal cannabis for their patients.

Cocaine Couriers. Justice Minister Donner touted the Schiphol airport 100 percent control measure, initiated in December 2003 to stop drug trafficking into the Netherlands from the Netherlands Antilles, Aruba, Suriname, and later Venezuela, as a success, citing declining cocaine seizures at Schiphol as an indicator. According to the program’s sixth progress report published December 16, 2004, 3,313 cocaine couriers (an average of about 100 couriers per day) were arrested in the first eleven months of 2004, all of whom had been blacklisted. Seven-hundred and thirty-nine kilos of cocaine were seized from the bodies of the couriers, in addition to 3,451 kilos hidden in other materials. An additional 1,675 kilos of cocaine were seized at Schiphol and 565 couriers arrested during regular controls (coming from countries other than those targeted in the 100 percent control program). Over the 11-month period, a total of 1,545 kilos of cocaine were found at Schiphol in freight, of which 713 kilos were discovered through the 100 percent control program. On average, two couriers are found per flight now (initially, there were an estimated 80-100 couriers per flight). Donner noted the primary goals of his policy, seizing drugs and blacklisting couriers, have proved much more effective than simply arresting large numbers of “small” couriers. He planned to continue the policy for the time being, including the “temporary” measure of turning back “bolita swallowers” carrying less than three kilos (“catch and release”). Although cocaine seizures in Rotterdam port have been rising this year, the report stated it was too early to draw a link with the 100 percent Schiphol control program, noting seizures at the port fluctuate from year to year, just as in other European ports.

In December 2004, the KLPD began sharing the names of “blacklisted” Schiphol couriers with U.S. DEA’s El Paso Intelligence Center (EPIC).

Heroin Experiment. In June 2004, the Cabinet approved expansion of the experiment under which heroin is medically prescribed to a group of seriously ill and chronic addicts for whom all other forms of treatment have failed. The number of persons receiving such “medical treatment” will be increased from 300 currently to 1,000 in 15 major cities (up from six currently). For each participant a treatment contract is drawn up stating improvements required within a year. Government funding to the project of 5 million Euros per year will be raised by one million in 2005.

Ecstasy. In June 2004, Justice Minister Donner officially launched an information campaign to keep potential Ecstasy traffickers from smuggling to other countries. The Justice Ministry has opened a website with information about foreign prison sentences and prison conditions.

Accomplishments. A major accomplishment was the drafting of the EU 2005-2008 Drugs Strategy during the Dutch EU presidency in the second half of 2004. In October 2004, the Dutch Government signed a joint cooperative agreement with the Government of China concerning precursor chemical investigations. The agreement pledges both countries to cooperate on precursor chemical investigations. The GONL also approved the stationing of a police drug liaison officer in China to facilitate law enforcement cooperation. In addition to working directly with the Chinese, the Netherlands is an active participant in the International Narcotics Control Board’s (INCB) PRISM project’s taskforce. Minister Donner said on March 31, 2004 the first assessment report of the five-year (2002-2006) Ecstasy action plan proved very successful.

Law Enforcement Efforts. Overall the Health Ministry coordinates drug policy, while the Ministry of Justice is responsible for law enforcement. Matters relating to local government and the police are the responsibility of the Ministry of Interior. At the municipal level, policy is coordinated in tripartite consultations among the mayor, the chief public prosecutor and the police.

The Dutch Opium Act punishes possession, commercial distribution, production, import, and export of all illicit drugs. Drug use, however, is not an offense. The act distinguishes between “hard” drugs that have “unacceptable” risks (e.g., heroin, cocaine, Ecstasy), and “soft” drugs (cannabis products). Trafficking in “hard drugs” is prosecuted vigorously and dealers are subject to a prison sentence of 12 years. When this takes place on an organized scale, another one-third of the sentence may be added (up to 16 years). However, actual sentences are considerably lower. Sales of small amounts of cannabis products (under five grams) are “tolerated” (i.e., not prosecuted, even though technically illegal) in “coffee shops” operating under regulated conditions (no minors on premises, no hard drug sales, no advertising, and not creating a “public nuisance”).

Dutch police teams and National Prosecutors give high priority to combating drug trafficking. DEA agents stationed with Embassy The Hague have close contacts with their counterparts in the Netherlands. Beginning in FY 2002, the Dutch assigned Dutch liaison agents to Miami, Florida and Washington, D.C. to improve coordination with U.S. law enforcement agencies.

In September 2004, the Dutch joined the Joint Intelligence Working Group (JWIG) in Washington D.C. This group, representing six countries, meets to share drug intelligence and assist in coordinating international drug trafficking investigations. In October 2004, the KLPD signed a Memorandum of Understanding (MOU) with the DEA and EPIC in order to enhance police-to-police intelligence sharing on narcotics-related investigations.

All active narcotics case-related requests for assistance from foreign jurisdictions are sent to the DIN (International Network Service). The DIN has assigned two liaison officers to assist only DEA. Since the new reorganization, the DIN has allowed DEA and other liaison officers to contact one of the five regional offices directly with requests. This policy has allowed for better coordination during ongoing enforcement actions, such as controlled deliveries. Due to Dutch law enforcement policy, prosecutors

still control all aspects of an investigation. Dutch police officers need prosecutor concurrence to share police-to-police information. This policy often hampers quick sharing of information, which can be used proactively in an ongoing investigation. Many controlled delivery requests sent to the DIN by DEA are turned down due to lack of manpower. In November and December 2004, however, the Dutch approved four controlled delivery requests (including one involving 70 kilos of cocaine which resulted in the arrest of six suspects). The vast majority of these controlled deliveries are small amounts of cocaine (less than five kilograms) contained in parcels being sent from South America or the Caribbean. Since the initiation of the 100 percent controls on inbound flights from the Caribbean, there has been a serious reduction in the amount of outbound couriers arrested at Schiphol. This reduction is due in part to the amount of law enforcement capacity required to conduct the 100 percent inbound checks. The amount of flights targeted for outbound checks has decreased.

Corruption. The Dutch government is committed to fighting national and international corruption. It does not encourage or facilitate illicit production or distribution of narcotic or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal drug transactions. No senior official of the Dutch government engages in, encourages or facilitates the illicit production or distribution of such drugs or substances, or the laundering of proceeds from illegal drug transactions. Press reports of low-level law enforcement corruption appear from time to time but the problem is not believed to be widespread or systemic. An investigation in 2004 by the special Schiphol CargoHarc drug team, comprised of military police, fiscal investigation/control service (FIOD-ECD) and Customs, led to the arrest of fourteen baggage handlers and four shop assistants accused of smuggling drugs through uncontrolled airport channels. To address concerns about the influence of drug trafficking on police, Customs and other officials, the Justice Ministry is funding a study on the extent of corruption in the Netherlands that will be completed by mid-2005.

The national prosecutor's office confirmed in November 2004 that a criminal organization involved in large-scale cocaine smuggling and money laundering had invested part of its drug profits in Air Holland, a Dutch charter airline flying mostly to the Netherlands Antilles. In the interim, this airline has gone bankrupt (in April 2004).

Agreements and Treaties. The Netherlands is party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, the 1961 Single Convention on Narcotic Drugs, and the 1972 Protocol amending the Single Convention. The Netherlands is a member of the UN Commission on Narcotics Drugs and the major donors group of the UNODC. The Netherlands is a leading member of the Dublin Group of countries coordinating drug-related assistance. The Netherlands ratified the UN Convention on Transnational Organized Crime on May 26, 2004, and has signed but not ratified the protocols on trafficking in persons and migrant smuggling as well.

Cultivation and Production. About 75 percent of the Dutch cannabis market is Dutch-grown marijuana ("Nederwiet"), although indoor cultivation of hemp is banned, even for agricultural purposes. A November 2003 national police report of the Dutch drug market estimated the Netherlands has between 17,000-22,000 cannabis plantations producing about 68,000-99,000 kilos of "Nederwiet." Although the Dutch government has given top priority to the investigation and prosecution of large-scale commercial cultivation of Nederwiet, legally tolerated coffee shops appear to create the demand for such cultivation. According to the Government's "Cannabis Letter," about half of the anonymous crime reports received annually relate to drug trafficking, particularly cannabis cultivation, indicating serious public concern.

The Netherlands remains one of the largest producers of synthetic drugs, although the INCB has noted a shift to Eastern Europe. According to a report by the South Netherlands Core Team/Unit Synthetic Drugs (KTZ/USD) and the five Dutch Ecstasy teams (all of them now part of the National Crime Squad), some 214 suspects were arrested in 2003. Together the teams seized 11,453 liters of chemical precursors. They also completed 33 investigations. The number of Ecstasy tablets with an alleged

Dutch connection confiscated by U.S. authorities decreased significantly to approximately one million tablets in 2003. The seizures of drugs around the world that could be related to the Netherlands involved almost 13 million MDMA tablets and more than 871 kilos of MDMA powder and paste. MDMA (powder and paste) seizures in the Netherlands in 2003 dropped to 435 kilos, and the number of Ecstasy tablets seized dropped 20 percent to more than 5.4 million. The number of dismantled production sites for synthetic drugs dropped to 37 from 43 in 2002. Of the 37, some 11 were found in residential areas. The KTZ/USD reported increased amphetamine seizures in 2003 from 2002.

Drug Flow/Transit. The Netherlands remains an important point of entry for drugs to Europe, especially cocaine. According to the National Crime Squad, an estimated 40,000-50,000 kilos of cocaine are smuggled annually into the Netherlands, about 20,000 kilos via Schiphol and the remainder via seaports and overland by road from Spain (Dutch cocaine use is estimated at 4,000-8,000 kilos annually). The Dutch government has stepped up border controls to combat the flow of drugs, including the Schiphol Action Plan. The government has also expanded the number of container scanners in the port of Rotterdam and at Schiphol airport. Controls of highways and international trains connecting the Netherlands to neighboring countries have also been intensified.

Demand Reduction. The Netherlands has a wide variety of demand and harm-reduction programs, reaching about 80 percent of the country's 26,000-30,000 opiate addicts. The number of opiate addicts is low compared to other EU countries (2.6 per 1,000 inhabitants, less than one-quarter of one percent of the population); the number has stabilized over the past few years; the average age has risen to 40; and the number of overdose deaths related to opiates has stabilized at between 30 and 50 per year.

According to the 2003 National Drug Monitor, the out-patient treatment centers registered some 26,605 drug users seeking treatment for their addiction in 2000, compared to 26,333. The number of cannabis and opiate addicts seeking treatment has stabilized at 3,443 and 15,544, respectively. Statistics from drug treatment services show a sharp increase in the number of people seeking help for cocaine problems (representing an increase of 49 percent between 1994 and 2000). Two out of three people seeking help for cocaine problems are crack cocaine users. The average age of drug "clients" was 39 years. Total costs of drug treatment programs are put at \$100 million. Although the most recent data about drug use are unavailable to confirm the impression, drug experts have noted a significant drop in Ecstasy use, while cocaine use appears to be going up.

Demand Reduction/Prevention. Drug prevention programs are organized through a network of local, regional and national institutions. Schools are targeted for special demand reduction attention in an effort to discourage drug use, while national campaigns are conducted in the mass media to reach the broader public. The Netherlands requires school instruction on the dangers of alcohol and drugs as part of the health education curriculum. The Netherlands Institute of Mental Health and Addiction (the Trimbos Institute) has developed a project in the field of alcohol and drugs in the context of teaching "healthy living" in classrooms. About 75 percent of Dutch secondary schools participate in the project. In March 2004, the Health Ministry and the Trimbos Institute launched a major cannabis information campaign warning young people in the 12-18 age group about the health risks. The 24-hour national Drug Info Line of the Trimbos Institute has become very popular.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. U.S. and Dutch law enforcement maintained excellent operational cooperation, with principal attention given to countering the Netherlands' role as a key source country for MDMA/Ecstasy entering the U.S. The U.S. Embassy in The Hague has made the fight against the Ecstasy threat one of its highest priorities. Although the Dutch and U.S. agree on the goal, we differ over which law enforcement methodology is most effective in achieving it. The Dutch continue to resist criminal undercover "sting"-type operations in their investigations of drug traffickers. Manpower constraints also prevent them from pursuing international and organized crime aspects of

each Ecstasy investigation. The third bilateral law enforcement talks, which were held in The Hague in March 2004, resulted in additional points included in the “Agreed Steps” list of actions to enhance law enforcement cooperation in fighting drug trafficking. Since 1999, the Dutch Organization for Health Research and Development (ZonMw) has been working with the U.S. National Institute on Drug Abuse (NIDA) on joint addiction research projects.

The Road Ahead. U.S.-Dutch bilateral law enforcement cooperation will intensify, building on the successful visits of the DEA Administrator to the Netherlands in 2004. The Dutch government’s Ecstasy Action Plan should continue to produce results against Ecstasy trafficking. The Dutch synthetic drug unit, which now is part of the National Crime Squad, will continue to make concrete progress. The bilateral “Agreed Steps” agreement will certainly boost cooperation on international investigations, including Ecstasy and money laundering cases. The recent decision by the Dutch Government to begin sharing information with U.S. law enforcement on drug couriers detected at Schiphol Airport is a positive development that should promote enhanced bilateral cooperation in preventing drug transshipment through the Caribbean. The U.S. anticipates increased cooperation with the Netherlands and China on precursor chemicals, especially now that a Dutch drug liaison officer is stationed in China (early 2005).

Norway

I. Summary

As in previous years, illicit drug production in Norway remained insignificant. Norway continued to tightly control domestic sales, exports and imports of precursor chemicals. The number of drug seizures declined, but seizure volumes rose as the police maintained a recent shift of attention from individual abusers to traffickers. Police also increased efforts to track and intercept drugs in transit. Cannabis accounted for the bulk of 2004 seizures (41 percent), followed by amphetamines (19 percent) and benzodiazepines (18 percent); other drugs were 22 percent. Norway is a party to the 1988 UN Drug Convention.

II. Status of Country

Illicit drug production remains insignificant in Norway, primarily as a result of Norway's stringent regulations governing sale, export, and import of precursor chemicals and because of its harsh climate conditions. Given its strong legal framework and active law enforcement efforts, Norway is unlikely to become a significant producer of precursor chemicals. It remains, however, a popular market and transit point for drugs produced in Central/Eastern Europe and elsewhere.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The Norwegian Police Directorate (POD) continued to implement its 2003-2008 Counter-Narcotics Action Plan, a common framework for all Norwegian police districts. The Action Plan focuses on reducing domestic drug abuse and identifying and curbing illicit drug distribution. The ultimate aim, according to the police, is to ensure that Norway does not become an attractive country for production, import, and sale of narcotics. The Customs and Excise Directorate (CED) also continued its counternarcotics efforts aimed at curbing drug imports and seizing illicit drug money and chemicals used in narcotics production. The CED has now been equipped with mobile X-ray scanners that can detect drugs, illegal arms and alcohol in vehicles passing major border crossings. Norway contributed NOK 15.5 million (\$2.5 million) to the United Nations Office on Drugs and Crime (UNODC). Norway is a member of Interpol, the Dublin Group, and the Pompidou Group.

Accomplishments. According to the Ministry of Health and Social Affairs, Norway remains in full compliance with the 1988 UN Drug Convention. Norway's counternarcotics plans/initiatives are progressing as scheduled, law enforcement efforts remain steady, and cooperation with the UN's Drug Control Program continues. In 2004, Norway also cooperated with the EU's European Monitoring Center for Drugs and Drug Addiction (EMCDDA) on issues relating to narcotics problems and counternarcotics measures and policies.

Law Enforcement Efforts. According to statistics compiled by the Norwegian police crime unit (KRIPOS), the number of drug seizures in 2004 declined to an estimated 23,500 cases from 25,210 in 2003. Volumes of seized drugs, however, again rose as the police continued to shift their focus from individual abusers to traffickers. The volume of heroin seized rose significantly in 2004, from 51 kilograms in 2003 to an estimated 215 kilograms in 2004. The number of persons charged with narcotics offenses also dropped, from 37,204 in 2003 to an estimated 35,000 in 2004, as a result of the heightened focus on bulk suppliers. In November, the Oslo police seized a record 860 kilograms of hashish and arrested 18 in two raids. The raids, part of a coordinated effort against one of Norway's biggest smuggling rings, resulted from cooperation between the Oslo police, regional authorities, the Customs and Excise Directorate, and Interpol. One of the seizures occurred at a border crossing with

Sweden, where the police stopped a long-distance truck from the Netherlands and used their new mobile screening unit to discover the drugs, which were hidden in cartons of soap. Responding in part to police calls for additional resources, Parliament budgeted an additional NOK 500 million (\$80 million) for police activities in 2005.

Corruption. Norway does not encourage or facilitate illicit production or distribution of narcotic or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal drug transactions. Senior officials of the government do not engage in, encourage, or facilitate the illicit production or distribution of such drugs or substances, or the laundering of proceeds from illegal drug transactions.

Agreements and Treaties. Norway is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention as amended by the 1972 Protocol. Norway also is a party to the UN Convention Against Transnational Organized Crime and its three protocols, and is a signatory to the UN Convention Against Corruption. Norway has an extradition treaty and customs agreement with the U.S.

Drug Flow/Transit. The inflow of illicit drugs—particularly cannabis, heroin, benzodiazepines, Ecstasy, and amphetamines—remains significant. Norway expects the flow of heroin into the country will increase, particularly with the increase of opium cultivation in Afghanistan. In one 2004 raid, Oslo police confiscated 150 pounds of heroin, double the previous largest seizure. Most illicit drugs are brought into Norway by vehicle from other European countries. For example, in August the police seized a record 22 kilograms of amphetamines from three Chinese nationals crossing the Swedish border. As in the past, some drugs have been seized in commercial vessels arriving from the European continent and Central/South America. According to police authorities, gangs from the Balkans, particularly Albania, and Lithuania are among the most active narcotics-traffickers in Norway. The police expect that in the coming years more narcotics will also enter the country from Russia. While there is concern that narcotics dealers may establish mobile laboratories to convert chemicals into drugs, the police did not uncover significant drug production in 2004.

Domestic Programs. The Ministry of Health and Social Affairs implemented its joint Narcotics and Alcohol Abuse Treatment and Prevention Reform. Effective January 1, 2004, the State, represented by regional health enterprises, has assumed responsibility for treatment and prevention programs from local county councils. The principal aim of the centralization is to provide better and more uniform health and counseling services for drug and alcohol abusers nationwide. The Narcotics Action Committee, established by the Ministries of Health and Social Affairs in 2003, continued to advise the government on narcotics policy for the 2003-2005 period. The committee is empowered to evaluate preventive strategies and to propose drug rehabilitation and treatment measures. The government estimates that Norway has approximately 14,000 heroin addicts. The number of overdose deaths peaked at 338, before dropping to 210 in 2002 and 172 in 2003. Initial estimates for 2004 indicate that the number will again rise, partly as a result of lower drug prices and the return of purer Afghan drugs to the market. Oslo authorities attributed 11 deaths during an 18-day period in May to a potent batch of heroin.

IV. U.S. Policy Initiatives and Programs

U.S. Drug Enforcement Administration officials consult with Norwegian counterparts when required.

The Road Ahead. The U.S. and Norway will continue to cooperate on narcotics control issues.

Poland

I. Summary

Poland has traditionally been a transit country for drug trafficking. However, improving economic conditions and increased ease of travel to Western Europe have increased its significance as a consumer market and a producer of amphetamines. Illicit drug production and trafficking are closely tied to organized crime, and, while Polish law enforcement agencies have been successful in breaking up organized crime syndicates involved in drug trafficking, criminal activities continue to become more sophisticated and global in nature. Poland finalized a National Program for Counteracting Drug Addiction in July 2002, and this year allocated a budget for its implementation. Cooperation between USG officials and Polish law enforcement has been consistent and outstanding, and Poland's EU accession has accelerated the process of GOP diligence on narcotics policy. Poland is a party to the 1988 UN Drug Convention.

II. Status of Country

Poland has traditionally been a transit country for drug trafficking. However, improving economic conditions and increased ease of travel to Western Europe have increased its significance as a consumer market and a producer of amphetamines. Illicit drug production and trafficking are closely tied to organized crime, and, while Polish law enforcement agencies have been successful in breaking up organized crime syndicates involved in drug trafficking, criminal activities continue to become more sophisticated and global in nature. Poland finalized a National Program for Counteracting Drug Addiction in July 2002, and this year allocated a budget for its implementation. Cooperation between USG officials and Polish law enforcement has been consistent and outstanding, and Poland's EU accession has accelerated the process of GOP diligence on narcotics policy. Poland is a party to the 1988 UN Drug Convention.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The National Program for Counteracting Drug Addiction, which covers the period 2002-2005, brought Poland into compliance with the 2000-2004 EU Drugs Strategy. The National Program is a comprehensive and realistic plan focusing on prevention, supply reduction, treatment, and monitoring. MONAR, a non-governmental organization, is the main actor in the implementation of the National Program. In 2004, the National Program budget was increased to \$3.6 million. In addition, individual ministries and local governments continue to finance Program activities out of existing counternarcotics budgets.

Accomplishments. During 2004, Polish police shut down 17 major amphetamine-producing laboratories. Most of these were in the Warsaw region, with two in Lodz and one in the Mazury Lake District. To fight international crime, the use of informants, telephone taps, and controlled purchases are now all permitted by Polish law, and a witness protection program is in place. In December 2004, witness protection and courtroom security training were conducted for Polish judges, prosecutors, investigators and senior police officials by the U.S. Marshals Service, with the aim of improving understanding of the most effective use of such programs, and cooperation among the various agencies. This training was part of a series of highly successful courses presented at the National Police Training Center under a Law Enforcement Assistance Letter of Agreement (LOA) signed in November 2002.

Law Enforcement Efforts. DEA agents visit Poland nearly every month and have enjoyed close collaboration with Polish officials on drug-related investigations. The National Bureau for Drug Addiction is well-known for its openness and cooperation in discussing drug-related issues.

Corruption. A comprehensive inter-ministerial anticorruption plan is in existence that contains strict timelines for legislative action and for the implementation of strict and transparent anticorruption procedures within each individual ministry. While instances of small-scale corruption bribery, smuggling, etc., are prevalent at all levels within the customs service and among police, there is no evidence of large-scale corruption that facilitates the production, processing or shipment of narcotic and psychotropic drugs and other controlled substances. Polish National Police and the CBS continue their joint efforts to investigate small-scale corruption, which impedes or discourages police investigations or prosecution. The number of cases investigated and successfully prosecuted relative to the number of reported incidents, however, remains low. The U.S. Government has worked closely with the Polish National Police to improve police training on ethics and corruption, and has presented several training courses on the subject under the Law Enforcement LOA mentioned above.

Agreements and Treaties. Through the National Program, Poland has fulfilled requirements to harmonize its laws with the European Union's Drug Policy. Poland is a party to the UN Convention on Organized Crime and its protocols against migrant smuggling and trafficking in persons, and is a signatory to the UN Convention Against Corruption. Poland is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention, as amended by the 1972 Protocol. An extradition treaty and MLAT are in force between the U.S. and Poland.

In May 2004, Poland became a full member of the Dublin Group, a consortium of 20 industrialized countries endeavoring to coordinate bilateral drug-related assistance policies. Poland, together with the European Commission, the Baltic States, Russia, Germany, and the Nordic states, comprise the Task Force on Organized Crime in the Baltic Sea Region.

Drug Flow/Transit. While end-product synthetic drugs are manufactured in Poland (the precursors are usually imported from other countries), heroin, hashish, and cocaine frequently transit Poland en route to Western Europe. There are also North-South routes transiting or leading to Poland. Polish police believe that most of the drugs transiting Poland are headed to Germany and the United Kingdom. Sea-based shipping routes are also utilized; some of the largest seizures in Poland have taken place at the Baltic port of Gdansk. Police, however, report that they lack a basis to estimate with any precision the amount of illegal drugs transiting through Poland.

Domestic Programs (Demand Reduction). Demand reduction objectives of the National Program include reducing the spread of drug use, limiting the spread of HIV infections connected with drug use, and improving the quality and effectiveness of treatment. On the supply side, the Program seeks to improve training and coordination between various Polish law enforcement authorities including the CBS and the border guards. Because of the high level of market activity in cheap precursors, the CBS has made the controlling and monitoring of precursors the Bureau's top priority.

In addition to the programs mentioned above, the Law on Counteracting Drug Addiction requires the Ministry of Education to provide a drug prevention curriculum for schools and to provide support for demand reduction projects based on a community approach. In response to this requirement, the government has implemented a drug prevention curriculum for schools, which consists of 23 separate programs for different age groups. This curriculum comprises part of the Program of Prevention of Problems in Children and Young People, which educates students on a range of social ills including drugs.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. The USG believes that targeting training to assist the Polish law enforcement community with more effective investigation and detection techniques continues to be the best way to serve U.S. interests. DEA-conducted seminars and train-the-trainer programs will continue and will be part of the 2005 bilateral activities. Enhancing operational cooperation through joint investigations and travel assistance to Polish law enforcement officers will also continue.

Bilateral Cooperation. The DEA maintains close contact and holds numerous operational liaison meetings with Polish law enforcement officials, and cooperates with two full-time agents from the Federal Bureau of Investigation posted in Warsaw.

The Road Ahead. Poland's accession to EU membership on May 1, 2004 played a key role in sharpening the Government of Poland's (GOP) attention to narcotics policy. The EU is by far the largest donor to Poland's counternarcotics activities, which serves as a motivating force for even closer collaboration between Poland and its neighbors to the East and the West. GOP priorities for 2005 include better educational campaigns addressed to specific target groups (including media campaigns, and a 'peer campaign' for children and students) and a new pilot program for the assessment of the quality of medical, rehabilitation, and health damage reduction treatments provided by various institutions. Authorities will also focus on the creation of strategy for counteracting drug addiction at the local (township) level. The U.S. fully supports these targets.

Portugal

I. Summary

Portugal is a significant gateway into Europe for drug shipments from South America and North Africa. Hashish remains the most prevalent drug used in Portugal, with Ecstasy (MDMA) and heroin also taking a heavy human and economic toll. Overall drug seizures in Portugal for the period 2000-2004 were up over 500 percent when compared to the period 1995-1999, although apprehensions were down by approximately 27 percent when compared to the same period.

Portugal actively participates in international counternarcotics programs. U.S./Portugal cooperation on narcotics control has included visits by U.S. officials and experts, training of law enforcement personnel, and assistance in establishing rehabilitation programs. Portugal is party to the 1988 UN Drug Convention.

II. Status of Country

Drug smugglers use Portugal as a gateway to Europe, their task made somewhat easier by open borders between the Schengen Agreement countries and Portugal's extensive coastline. South America was the primary source of cocaine in 2004. Some shipments transit Brazil and Venezuela, which have large resident Portuguese populations. Other primary source countries in 2004 were Morocco (hashish) and Afghanistan and Pakistan (heroin). Cocaine and heroin enter Portugal by car, commercial aircraft, truck containers, and maritime vessels. Heroin transits through the Netherlands and Spain en-route to Portugal. The Netherlands and Spain are the primary source of Ecstasy in Portugal. Drug abuse within the Portuguese prison system continues to be a major concern for authorities.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Portugal decriminalized drug use for casual consumers and addicts in July 2001. The law makes the "consumption, acquisition, and possession of drugs for personal use" a simple administrative offense. In March 2002, Portugal created the Maritime Authority System and the National Maritime Authority. This authority, in coordination with other law enforcement agencies, combats drug trafficking in coastal waters and within Portugal's Exclusive Economic Zone. Portugal is seeking maritime security cooperation agreements with other countries, particularly Morocco, and was selected to host the headquarters of the European Maritime Security Agency (EMSA) in December 2003. Public debate surrounding the national action plan for 2000-2004 revealed some success stories, particularly regarding increased drug seizures, but press coverage focused on the fact that other key targets in the plan were not met, such as reducing the number of users.

Accomplishments. The Institute of Judicial Police and Criminal Science reported that between 2000-2004, more than EURO 30 million in drug-related assets were seized. This figure includes vehicles, property, and currency. From 2000-2004, Portuguese authorities seized 500 percent more drugs than in the previous five years. Hashish accounted for the majority of seizures, followed by cocaine and heroin. Just over 600,000 Ecstasy pills were seized over the same period. Apprehensions for hash and Ecstasy increased in the last five years, although total apprehensions declined by almost 27 percent when compared to 1995-1999.

Law Enforcement Efforts. Portugal has seven separate law enforcement agencies that deal with narcotics: the Judicial Police (PJ), the Public Security Police (PSP), the Republican National Guard (GNR), Customs (DGAIEC), the Immigration Service (SEF), the Directorate General of Prison

Services (DGSP), and the Maritime Police (PM). The PJ is a unit of the Ministry of Justice with overall responsibility for coordination and criminal investigations. Authorities apprehended more than 4,500 individuals for drug related offenses in 2003 and seized more than 63 thousand grams of heroin, 3 million grams of cocaine, and 31 million grams of hash.

In November 2004 the PJ seized more than 3,200 kilograms of hash on a boat originating from North Africa that was planning to land in Portugal. Other drug arrests were made at the Lisbon airport when police seized 63 kilograms of hash and over 4 thousand kilograms of cocaine. Authorities seized more than 66 thousand Ecstasy pills in the first semester of 2004 alone.

Corruption. No cases of systematic or large-scale corruption were reported in 2004. Government policy actively discourages the illicit production or distribution of narcotic or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal transactions. No senior officials are known to be involved in, or encourage, such activities.

Agreements and Treaties. Portugal is a party to the 1961 UN Single Convention as amended by the 1972 Protocol, the 1971 UN Convention on Psychotropic Substances, and the 1988 UN Drug Convention. Portugal also is a party to the 1971 UN Convention on Psychotropic Substances and the 1961 UN Single Convention as amended by the 1972 Protocol. A Customs Mutual Assistance Agreement (CMAA) has been in force between Portugal and the U.S. since 1996. Portugal and the U.S. are parties to a 1908 extradition treaty. This treaty does not cover financial crimes, drug trafficking, or organized crime. Certain drug trafficking offenses, however, are extraditable in accordance with the terms of the 1988 UN Drug Convention. Portugal also is a party to the UN Convention against Transnational Crime and its protocols against migrant smuggling and trafficking in persons, and is a signatory to the UN Convention Against Corruption.

Drug Flow/Transit. Portugal's long, rugged coastline and proximity to North Africa offer an advantage to traffickers who smuggle illicit drugs into Portugal. In some cases, traffickers are reported to use high-speed boats in their attempts to smuggle drugs into the country. In October 2004, Venezuelan and Portuguese authorities detained several Portuguese citizens in Caracas and Lisbon in a highly publicized arrest of drug traffickers that netted 386 kilograms of cocaine. The U.S. has not been identified as a significant destination for drugs transiting Portugal.

Domestic Programs. Responsibility for coordinating Portugal's drug programs was moved to the Ministry of Health in 2002. The Government also established the Institute for Drugs and Drug Addiction (IDT) by merging the Portuguese Institute for Drugs and Drug Addiction (IPDT) with the Portuguese Service for the Treatment of Drug Addiction (SPTT). IDT is charged with gathering statistics, disseminating information on narcotics issues, and managing government treatment programs for narcotics addiction. IDT sponsors several programs aimed at drug prevention and treatment. The most important is the Municipal Plan for Primary Prevention. Its objective is to create, with community input, locality-specific prevention programs in thirty-six municipal districts. IDT runs a hotline and manages several public awareness campaigns. Regional commissions are charged with reducing demand for drugs, collecting fines, and arranging for the treatment of drug abusers. A national needle exchange program was credited with significantly reducing the spread of HIV/AIDS and hepatitis, although HIV infections resulting from injections are still a major concern in the Portuguese prison system.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. DEA-Madrid cooperates with the Portuguese Judicial Police on drug cases involving the U.S. and Portugal. The Portuguese Customs Bureau cooperates with the U.S. under the terms of the 1996 CMAA. In March 2004, Embassy Lisbon's Office of Defense Cooperation (ODC)

arranged for a U.S. Coast Guard mobile training team to conduct advanced boarding-officer training with the Portuguese Customs Bureau as well as a counternarcotics instructor course in April.

The Road Ahead. Continuing cooperation between the U.S. and Portugal on narcotics law enforcement will aid in attacking drug trafficking networks. Portugal's eventual ratification of the bilateral implementation protocol to the U.S.-EU MLAT and Extradition Treaty will enable better cooperation and information sharing. Additionally, Portugal's plan to join the Container Security Initiative should provide a fringe benefit in improved seizures of narcotics in maritime cargo containers.

Romania

I. Summary

Romania is not a major source of production or cultivation of narcotics. However, Romania serves as a transit country for narcotics and lies along the well-established Northern Balkan route used to move heroin and opium from Southwest Asia to Central and Western Europe. It is a developing route for the transit of synthetic drugs from Western and Northern Europe to the East. Romania recently has begun to serve as a source of amphetamines and is used as a transit point for South American cocaine destined for Western Europe. In 2004, Romania made several major drug seizures. Romania worked to implement its 2003-2004 National Anti-Drug Strategy and developed a National Anti-Drug Strategy for 2004-2007. Allegations of corruption continued to damage the image of the primary drug fighting law enforcement body. Romania is a party to the 1988 UN Drug Convention.

II. Status of Country

Romania lies along what is commonly referred to as the Northern Balkan Route, and thus it is a transit country for narcotics, mainly heroin and opium, moving from Southwest Asia, through Turkey and Bulgaria and onward toward Central and Western Europe. Romania also lies along a developing route for the transit of synthetic drugs from Western and Northern Europe to the East. A large amount of precursor chemicals transits Romania from West European countries toward Turkey. Romania increasingly is becoming a storage location for illicit drugs prior to shipment to other European countries. In 2004, law enforcement officials made several important drug seizures and arrests and dismantled an international drug trafficking network. Heroin and marijuana are the primary drugs consumed in Romania; however, the use of synthetic drugs such as MDMA (Ecstasy) increased among segments of the country's youth. Officials also predict an increase in domestic heroin consumption.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Romania continues to build an integrated system of prevention and treatment services at the national and local level, with 47 Anti-Drug Prevention and Counseling Centers throughout the country. The General Directorate for Countering Organized Crime and Anti-Drug (DGCCOA) operates at both the central and territorial level, with 15 local centers and 42 county offices for combating narcotics and organized crime. Joint teams of police and social workers carry out educational and preventative programs against drug consumption. Romania plays an active role in the Bucharest-based Southeast European Cooperative Initiative (SECI) Center's Anti-Drug Task Force.

Accomplishments. Romania worked to implement its 2003-2004 National Anti-Drug Strategy and developed a National Anti-Drug Strategy for 2004-2007. Romanian courts have sentenced several drug traffickers to long sentences under the narcotics law enacted in 2000. The Romanian Parliament modified the narcotics law in November 2004, reducing the penalties for cultivation, production, manufacturing, buying, or possessing narcotics for personal consumption from up to five years in custody to either six months to two years in prison, or a fine. Tougher sentencing provisions were retained for cases involving high-risk narcotics. Under the modified law, a person arrested for personal consumption of narcotics may be released without sanction if they enter a treatment program. The modified narcotics law coincides with recent narcotics cases involving family members of several prominent individuals, raising some concern that the new law could provide a loophole for politically connected offenders. The Romanian police have established an undercover drug investigation unit to

take full advantage of the authority for undercover operations that the drug law provides. Legislation enacted in 2004 strengthened legal provisions against the use of precursor chemicals for illicit drug production.

Law Enforcement Efforts. In the first eleven months of 2004, Romanian authorities seized 426 kilograms of illegal drugs, including 64.9 kilograms of heroin, 7,734 amphetamine pills and 12,503 LSD doses. Over 15,000 kilograms and 2,000 liters of precursor chemicals also were seized. Police investigated 2,189 individuals for drug-related crimes and 524 individuals were convicted. Also in 2004, 213 drug trafficking rings were dismantled, including a Turkish-Romanian heroin trafficking network and a Bucharest-based heroin trafficking network. An international drug precursor chemical trafficking ring and a Spanish-Romanian cocaine and Ecstasy trafficking network also were dismantled.

Romania continues to modernize and reorganize the DGCCOA, Romania's primary drug fighting service. In 2003, the DGCCOA was reorganized into two divisions—an organized crime division and a counternarcotics division. The DGCCOA now has 165 officers, with 26 specializing in counternarcotics; it also has internal squads working undercover operations. In 2004, Romania nearly doubled the number of counternarcotics officers at both the county and regional levels, operating with 419 officers throughout the country. Intelligence analysis and physical-chemical analysis capabilities also were expanded at the regional level.

Corruption. Corruption remains a serious problem within the Romanian government, including within the judiciary and law enforcement branches. The reorganization of the DGCCOA was triggered by a scandal in which the head of one of its drug squads was accused of using an informant to divert confiscated drugs. The National Anti-Corruption Prosecutor's Office (PNA) began operation September 1, 2002 and has made some progress on investigating low and mid-level corruption cases. In April of 2004, Romania enacted a code of ethics for police officers, providing strict rules for the professional conduct of law enforcement. It specifically addresses corruption, use of force, torture, and illegal behavior. Unlawful or abusive acts may trigger criminal or disciplinary sanctions. In conjunction with the code of ethics, the government created a permanent commission within the Ministry of the Administration and Interior to monitor compliance with the code.

Agreements and Treaties. Romania is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention on Narcotic Drugs, as amended by the 1972 Protocol. An extradition treaty is in force between Romania and the United States. A mutual legal assistance treaty came into force in October 2001. Romania is party to the UN Convention Against Transnational Organized crime and its three protocols, as well as to the UN Convention Against Corruption.

Cultivation/Production. Not applicable. This section is not applicable to Romania, because illicit drugs are neither grown nor manufactured in Romania, as far as the Department is aware

Drug Flow/Transit. Illicit narcotics from Afghanistan and Central Asia enter Romania both from the north and east, and through its southern border with Bulgaria. Land transportation methods include both cargo and passenger vehicles. However, drugs, primarily heroin, are also brought into the country via the Black Sea port of Constanta on commercial maritime ships and across the border with Moldova, as well as via the country's international airports. Once in Romania, the drugs move either northwest through Hungary, or west through Serbia. Police estimate that 80 percent of the drugs entering Romania continue on to Western Europe. Romania also is becoming an increasingly important route for the transit of synthetic drugs from Western and Northern Europe to the East.

Domestic Programs. While consumption of narcotics in Romania has historically been low, this appears to be slowly changing; the Romanian government has become increasingly concerned about domestic drug consumption. Detoxification programs are offered through some hospitals, but

treatment is very limited. These programs are hampered by a lack of resources and adequately trained staff. In the first eleven months of 2004, approximately 2,000 individuals were registered for treatment.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. In 2004, the United States provided \$950,000 in assistance to further develop Romania's cybercrime and counternarcotics capabilities, to reform the criminal justice system, and to combat emerging crimes and counter official corruption. In addition, Romanian Police officers participated in U.S. Secret Service cybercrime training and received specialized software and computers. They have also participated in DEA and Customs Enforcement undercover operations training, focusing on drug related investigations. Romanian police officers participated in the U.S. Bureau of Customs and Border Security Canine Enforcement Officer training, as well. Romania also benefited in 2004 from approximately \$1.2 million in U.S. assistance to the Bucharest-based Southeast European Cooperative Initiative (SECI) Center for Combating Trans-border Crime, which more broadly supports the twelve participating states in the Balkan region and focuses on trans-border crime, including the narcotics trade. The U.S. is a permanent observer country at the SECI Center and maintains a DEA Liaison Officer who assists in coordinating narcotics information sharing, maintains liaison with participating law enforcement agencies, and coordinates with the DGCCOA on case-related issues. A Resident Legal Advisor from the U.S. Department of Justice also is assigned to the SECI Center, providing guidance on drug trafficking investigations.

Road Ahead. Romania has put a serious emphasis on its counternarcotics efforts and cooperation with the USG. The USG believes that cooperation will continue, as the Romanian government has become increasingly concerned with domestic drug consumption. The United States will continue supporting Romania's efforts to strengthen its judicial and law enforcement institutions.

Russia

I. Summary

In 2004, the Government of Russia (GOR) intensified its counternarcotics efforts. President Vladimir Putin and other leaders frequently highlight the drug trade as a threat to Russia's national security in their public remarks. The State Committee for the Control of Narcotic and Psychotropic Substances (GKPN), which had been created in 2003, was reorganized and renamed the Federal Drug Control Service (FSKN). On multiple occasions, FSKN Director General Viktor Cherkesov has emphasized the need for international cooperation in order to confront drug traffickers, who operate without regard for borders. The FSKN has recently announced plans to station liaison officers in other countries. In 2004, Russia signed bi-lateral agreements on counternarcotics cooperation with China, Kyrgyz Republic, and Nicaragua. Heroin trafficking and abuse continue to be major problems facing Russian law enforcement and public health agencies. Opium cultivation and heroin production in Afghanistan have risen dramatically. With Russia's large and porous borders with Central Asia, Afghan opium/heroin transiting Russia to Europe has become a major problem for the GOR. This rise in heroin trafficking is reflected in the increase of drug-related crime and the number of HIV/AIDS and Hepatitis C cases, both related to increased intravenous drug use.

Russian forces have been guarding the border between Tajikistan and Afghanistan since 1992. Initially placed there to prevent incursions by Islamic extremists, narcotics interdiction has become one of their primary functions. In October, however, President Putin and Tajik President Emomali Rahmonov signed an agreement that provides for a phased withdrawal of Russian forces by 2006. Licit pharmaceuticals and precursor chemicals are frequently diverted to the illicit market in Russia. Perhaps the greatest concern in this area has been the diversion of Acetic Anhydride (AA), a precursor chemical essential for the production of heroin. AA produced in Russia is used in the manufacture of heroin in Turkey and Afghanistan. The GOR has recognized the extent of the drug trafficking and health problems within the country and is taking steps to address both the law enforcement and public health issues. Health education programs in schools are beginning to incorporate messages about the harmful effects of drug use and the links between injecting drugs and the transmission of HIV/AIDS. Russia is party to the 1988 UN Drug Convention, the 1961 Single Convention of Psychotropic Substances and its 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances.

II. Status of Country

Russia is both a transshipment point and a market for heroin and opium. Opiates transiting Russia originate almost exclusively in Afghanistan and are typically destined for Europe. The Russian border with Kazakhstan is roughly twice the length of the U.S.-Mexican border and is poorly monitored. Considering the resource constraints facing local law enforcement agencies, Russian authorities are unlikely to prevent a significant portion of the heroin entering their country.

The average price for a gram of heroin in 2004 remained steady in the thirty-dollar range. Per gram prices as low as ten dollars and as high as fifty dollars have been reported.

Synthetic drugs produced in Russia typically take the form of amphetamine-type stimulants (ATS) and heroin analogues like methadone. Ecstasy labs have also begun to appear in Russia, which are typically located in the Northwest of the country close to St. Petersburg and the Baltic States. In the early summer of 2004 a group of chemistry students at Moscow State University was arrested for selling MDMA they had produced in one of the school's labs.

Although the MDMA tablets produced in Russia are of poor quality, the low prices (as little as \$5) are attractive to Russian youth, compared to the \$20 typically charged per pill for MDMA tablets manufactured in the Netherlands.

In addition to AA, used in refining heroin, other precursors such as ergotamine (LSD), red phosphorous (methamphetamine), and acetone (several substances) are also produced in Russia. As of yet, there have been no reports of large-scale diversion of these other chemicals for illicit uses.

Cocaine trafficking is not widespread in Russia. Cocaine prices in Russia remain very high, though the drug is easily obtained by those who can afford it. Cocaine is frequently brought into Russia through the port of St. Petersburg. Sailors aboard fruit carriers and other vessels operating between Russian and Latin America provide a convenient pool of potential couriers. Cocaine also enters Russia smuggled in containerized cargo. Couriers traveling on commercial flights also smuggle cocaine into Russia, often operating through third countries, including the United States. The third largest cocaine seizure in Russian history is reported to have taken place in May 2004 in St. Petersburg when members of the Federal Customs Service and the FSKN seized a total of 29 kilograms. The cocaine had been brought to St. Petersburg by sailors aboard two freighters operating between Ecuador and Russia. Part of this cocaine was intended for distribution in Russia; the rest was destined for Germany where authorities recently made several arrests in a related case.

At a press conference in June 2004, FSKN Director Viktor Cherkesov cited Ministry of Health figures that placed the number of officially registered addicts in Russia at 390,000—up 14.7 percent from 340,000 as reported in 2003. Director Cherkesov further stated that FSKN estimates that four to five million Russians use illegal drugs on a regular basis.

According to the Ministry of Health, as of November 2004, there were 300,000 officially registered HIV/AIDS cases in Russia. This is a 10 percent increase from last year. The United Nations AIDS program and the GOR's Federal AIDS Surveillance Unit estimate the number of actual cases was at roughly one million at the end of 2003. Intravenous drug users made up about seventy percent of new HIV cases registered in 2001-2002. Eighty percent of those intravenous drug users who tested positive for HIV/AIDS also tested positive for Hepatitis C.

At the wholesale level, the heroin trade in Russia is dominated by Central Asians. Tajiks, Uzbeks, and others with ethnic and family ties to Central Asia transport Afghan heroin across the southern border with Kazakhstan and into European Russia and western Siberia. Retail distribution of heroin and other drugs is carried out by a variety of criminal groups. Again, these organizations are typically organized along ethnic lines with Central Asian, Caucasian, Russian/Slavic, and Roma groups all active in drug trafficking.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The FSKN was originally established in 2003 as the State Committee for the Control of Traffic in Narcotic and Psychotropic Substances (GKPN). Russian President Vladimir Putin issued an edict in July 2004 calling for the restructuring of the agency, which is now known as the Federal Drug Control Service (FSKN). Since FSKN's creation, Director Cherkesov has stressed the importance of attacking money laundering and other financial aspects of the drug trade. The FSKN has also continued its efforts to implement effective monitoring of the chemical industry. Prior to the creation of FSKN, precursor chemicals and pharmaceuticals were governed by a patchwork of regulations enforced by different agencies. For example, the Ministry of Health was responsible for pharmaceuticals, while the Ministry of Economic Development regulated import and export of chemicals. Pending legislation will make FSKN the sole regulator for controlled substances. Production, transportation, distribution, and import/export of controlled substances will all require

licensing from FSKN. The GOR has signed bilateral agreements on counternarcotics cooperation with the governments of China, Kyrgyz Republic, and Nicaragua.

Accomplishments. Russia now has a legislative and financial monitoring scheme that facilitates the tracking, seizure, and forfeiture of all criminal proceeds. Russian legislation provides for a variety of investigative techniques, such as search, seizure and the compulsion of document production. On February 1, 2002, Russia's financial intelligence unit, the Financial Monitoring Committee (FMC), became operational. (The FMC has since been renamed the Federal Service for Financial Monitoring or FSFM.) The FSFM has responsibility for coordinating all of Russia's anti-money laundering and counterterrorist financing efforts. Legislation passed in 2001 requires that financial institutions report suspicious transactions to the FSFM. According to sources in the FSKN, approximately 120 drug money-laundering cases had been initiated as of November 2004.

In 2004, Russia also passed new witness protection legislation. Russian law previously provided some protection for testifying witnesses, but the provisions were weak and ineffective. Police statistics indicate that six witnesses in criminal cases were murdered in Russia in 2003 and each year approximately one fifth of all witnesses are pressured to change their testimony. The new legislation, entitled "On Protection of Victims, Witnesses and Other Participants in Criminal Proceedings" expands protection to all parties involved in a criminal trial. Prosecutors or investigators may recommend that a judge implement witness protection measures if they learn of a threat to the life or property of a participant in a trial. Steps taken to protect a program participant could include personal and property protection, change of appearance, change of identity, relocation, and transfer to a new job.

Law Enforcement Efforts. Despite some initial growing pains, FSKN's investigative efforts are gaining momentum. For the first nine months of 2004, FSKN reports having seized more than 107 tons of controlled substances, including over a ton of heroin, and 162 tons of chemical precursors.

Corruption. Since its inception, controlling corruption has been a stated priority for the Putin administration. Implementing this policy, however, has been a constant challenge. Inadequate budgets, low salaries, and lack of technical resources hamper performance, sap morale, and encourage corruption throughout the ranks of law enforcement. This has led some observers to question the commitment and vigor of the Putin administration in fighting corruption within its government.

In 2004, there were several reports of corruption among low to mid-level law enforcement officers. Speaking in November, FSKN Director Cherkesov stated that roughly 100 law enforcement officers had come under suspicion of having ties to drug trafficking. In November, a joint FSKN/MVD investigation resulted in the arrest of an MVD Lieutenant Colonel, who stands accused of leading a gang of seven former police officers caught dealing heroin in Naro-Fomisk and Odintsovo (Moscow Region). There were no reported cases of high-level narcotics-related corruption.

Agreements and Treaties. Russia is party to the 1988 UN Drug Convention, the 1961 Single Convention on Psychotropic Substances and its 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances. Russia also is a party to the UN Convention Against Transnational Organized Crime and its protocols against migrant smuggling and trafficking in women and children. Russia is also a signatory to the UN Convention Against Corruption.

Under the U.S.-Russia Mutual Legal Assistance Treaty (MLAT), which entered into force on January 31, 2002, the requested country is obligated to provide assistance if there is dual criminality and the other pertinent requirements of the treaty are met. If there is no dual criminality, assistance is discretionary. As a result of the treaty's requirement for designating a central authority and point of contact, a separate office responsible for implementing international assistance requests has been formed within the Russian General Procuracy. Under the MLAT, Russia has provided assistance to the U.S. in two narcotics related cases.

Cultivation / Production. There are no official statistics on the extent of opium cultivation in Russia, and the USG has no evidence to suggest that more than 1,000 hectares of opium are cultivated. In Russia, there are small, illicit opium poppy fields of about one to two hectares. Typically the opium fields are small, backyard plots or are located in the countryside concealed by other crops. In Siberia, in the Central Asian border region, and in the Omsk-Novosibirsk-Tomsk region along the border with Kazakhstan, opium poppies are widely cultivated.

Cannabis grows wild throughout Russia and is also cultivated in quantities ranging from a few plants to plots of several hectares. As part of the annual “Operation Poppy” eradication effort, Russian authorities identified and eradicated a total of 1,066 individual incidents of illicit cannabis and poppy cultivation.

Drug Flow/Transit. Opiates (and hashish to a lesser degree) from Afghanistan are trafficked across the Central Asian borders into Russia. Contraband is typically carried in vehicles along the region’s highway system. The Russian cities of Yekaterinburg, Samara, Omsk, and Novorossisk have emerged as hubs of trafficking activity. Passenger trains are also frequently utilized by couriers. Air couriers on flights from Central Asia are widely known to carry drugs internally on what are known by Russian police as “drug flights.”

Cocaine destined both for Russia and redirection to Europe enters the country through the port of St. Petersburg. Synthetic drugs manufactured in Russia and Europe flow in both directions across Russia’s western borders. Again, much of this smuggling activity appears to be concentrated in the Northwest region around St. Petersburg. In 2004, there were multiple seizures of large quantities of ephedrine tablets that had originated in Turkey. These seizures were not associated with any evidence of large-scale methamphetamine production. Ephedrine tablets are often sold in Russia in their original form as a low-cost stimulant.

Russian forces have been stationed in Tajikistan since the dissolution of the Soviet Union and took responsibility for sealing the border with Afghanistan when civil war broke out in 1992. At that time, Russia’s stated goal was to prevent incursions by Islamic extremists. The stationing of Russian Border Guards in Tajikistan was formalized in a 10-year agreement signed in 1993. Since that time, narcotics interdiction has become one of Russian Border Guards’ primary functions. In 2003, Russian forces on the Tajik-Afghan border seized 4,501 kilogram of heroin and opium. This is more than half the total seized in all of Tajikistan in 2003 (7,924 kilogram). In the first nine months of 2004, the total quantity of heroin and opium seized by Russian Border Guards operating in Tajikistan stood at approximately 3,100 kilogram.

In May 2003, an agreement governing the presence of Russian forces on the Tajik-Afghan border was set to expire, and rumors of their imminent withdrawal began to circulate. After a summer of mixed signals from both sides President Putin and Tajik president Emomali Rahmonov signed a final accord in October 2004. The accord provides for a phased withdrawal of Russian forces to be completed by 2005. The Russians will leave behind facilities and equipment that will be taken over by the Tajik border guard service.

Demand Reduction. Russian authorities are attempting to implement a comprehensive counternarcotics strategy that would combine education, health and law enforcement. FSKN is tasked with demand reduction among its other responsibilities and has recently begun a large-scale public awareness campaign. Russian law enforcement authorities also believe that demand reduction should complement law enforcement efforts to reduce supply. With support from USAID’s “Healthy Russia 2020” project, demand reduction messages are being incorporated into a Ministry of Education sanctioned health education curriculum for high school students.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. The principal U.S. goals in Russia are to help strengthen Russia's counternarcotics law enforcement capacity to meet the challenges of international drug trafficking into and across Russia and to strengthen and develop Russian law enforcement personnel, making them effective partners with U.S. law enforcement.

Bilateral Cooperation. In 2002, the U.S. Department of State, Bureau of International Narcotics and Law Enforcement Affairs (INL), negotiated a Letter of Agreement (LOA) with the GOR allowing direct assistance to the GOR in the area of counternarcotics and law enforcement. In 2004, DEA's International Training teams provided State Department-funded instruction to its Russian counterparts in basic drug enforcement, airport interdiction, and vehicle interdiction. Progress continued on the Southern Border Project, a joint INL/DEA effort that will lead to the establishment of three mobile drug interdiction task forces based in Orenburg, Chelyabinsk, and Omsk along the Russian-Kazakh border. Also, the U.S. and Russia worked together to provide canine training to counternarcotics law enforcement officials from four Central Asian countries. The U.S. also provided technical assistance in support of institutional change in the areas of criminal justice reform, mutual legal assistance, anticorruption and money laundering.

The Road Ahead. The GOR places high priority on counternarcotics efforts and has indicated a desire to deepen and strengthen its cooperation with the United States and other countries. The USG will continue to encourage and assist Russia to implement its comprehensive, long-term national strategy against drugs with multidisciplinary sustainable law enforcement assistance projects that combine equipment, technical assistance and expert advisors. In 2005, DEA is scheduled to provide State Department-funded counternarcotics training to over 100 trainees, drawn from the FSKN, the MVD, and the Federal Customs Service.

Slovakia

I. Summary

Slovakia lies at the crossroads of two major drug transit routes, the traditional east-west routes from Ukraine and the Russian Federation, and the historic “Balkan Route,” which runs from southwest Asia to Turkey and on to Germany, France, and other western European countries. Slovakia is a party to the 1988 UN Drug Convention.

II. Status of Country

Levels of both consumption and production of narcotics in Slovakia remain relatively low; however, the domestic market for narcotics is growing and becoming more fully-developed. Demand for stimulants, mainly Pervitin and Ecstasy, is rapidly growing, and their use, along with that of marijuana, is quickly spreading into smaller Slovak towns.

The Government of Slovakia (GOS) remains concerned that Slovakia is a transshipment point for smuggled drugs and concentrates its interdiction efforts on east-west smuggling from Ukraine and Russia. Russian organized crime groups traffic Afghan heroin and cooperate with the established Albanian criminal groups using the Balkan route. The Albanian community is at the forefront of the heroin trade in the region, and they mainly use the southern Balkan route through Bulgaria and Croatia. EU accession and more open borders have created conditions for drug-related organized crime groups to take root in Slovakia, and most of them are based on ethnic principles. Street sales have not taken root in Slovakia, and the Roma (Gypsy) community dominates domestic drug distribution by selling drugs from their homes. Albanian groups supply the Roma sellers.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The national plan for the fight against drugs was revised for 2004-2008 and its revised version represents a comprehensive strategy to reduce drug use. The GOS also established a ministerial council for drug dependencies and drug control, which is mainly focused on education and prevention. Law enforcement ministries participate and implement their parts of the plan independently.

Law Enforcement Efforts. In the first half of 2004, there were 597 drug-related criminal cases in Slovakia. The number of cases involving synthetic narcotics increased 42.67 percent compared with the first half of 2003, and the share of synthetic drugs in overall drug-related crimes was 28.6 percent, up from 19.2 percent in 2003. Methamphetamines (precursor to Pervitin) accounted for much of the increase. The National Anti-Drug Unit (NADU) investigated 18 cases in Bratislava and 23 cases in other regions, representing a 29 percent decrease from 2003.

Accomplishments. The Ministry of Interior (MOI) underwent comprehensive organizational restructuring in 2004. The criminal and financial police, in which the NADU is located, merged with the MOI's security police. Slovak authorities hope the restructuring will facilitate better communication and shorten investigations. A specialized police agency targeting organized crime is also part of the reorganization. In this re-organization, the NADU lost some of its authority and is responsible only for the Bratislava region as a part of the Office for Fighting Organized Crime (OFOC). Other regional counternarcotics units have been incorporated into the OFOC, but they do not communicate with the NADU. Contrary to the 2000 GOS' resolution that called for an increase in the NADU's staff from 150 to 250 personnel, the MOI downsized the unit to 35 people when the MOI made it responsible only for the Bratislava region.

Corruption. Slovakia has made major legislative strides in the fight against corruption. Officials serious about creating transparent rules and prosecuting abuses have been put in key positions, a new conflict of interest law passed in 2004, and a special prosecutor and court to fight corruption were set up. The head of the GOS' anticorruption office is a noted human rights lawyer who encourages the use of "sting" operations and introduced a "whistle blower" statute to protect government employees who talk to investigators about corruption in their offices. Successful execution of the newly-implemented measures remains a challenge.

Agreements or Treaties. Slovakia is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention on Narcotic Drugs, as amended by the 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances. The extradition treaty between Czechoslovakia and the United States continues in force between the United States and Slovakia as a successor state. Slovakia is a party to the UN Convention against Transnational Organized Crime and its three protocols, and is a signatory to the UN Convention Against Corruption.

Cultivation/Production. The NADU reports that marijuana cultivation has increased in all regions of the country, and several groups are growing high-quality marijuana in laboratory conditions. However, the majority of marijuana used in Slovakia is still imported from Morocco, Lebanon, India, Pakistan and Afghanistan. It does not appear that heroin is being produced in Slovakia. Use of Ecstasy in Slovakia has increased, although there have been few reports of its production within the country. On the other hand, Pervitin is produced for mainly domestic consumption, and Czech "experts" are hired and consulted on production methods. In recent years police have discovered between 20-30 synthetic drug laboratories primarily dedicated to the production of Pervitin annually.

Drug Flow/Transit. The shared border with Hungary and Ukraine was the site of the greatest number of attempts to enter Slovakia with illegal narcotics. The greatest number of attempts to smuggle drugs out of Slovakia happened at the Czech and Austrian borders.

Domestic Programs. According to the 2003 Mini-Dublin group report, the GOS is among the highest spenders on preventative activities in relation to per capita GNP. Centers for education and psychological prevention focus on community outreach concerning drug use and function in half of the municipal districts of Slovakia. The Slovak healthcare service has a comprehensive network across the country and offers short-term and long-term treatment.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. As in prior years, Slovak law enforcement officials participated in several U.S. DOJ courses, funded by the Department of State. The classes were designed to promote the resistance to corruptive influences at the working level and to improve counternarcotics and organized crime detection/investigative skills. The USG's export control and border security program provided numerous training opportunities and equipment for Slovak customs officers. The two most effective training programs were the four weeks of joint training with Czech officers on the Czech-Slovak border and a similar program on the Slovak-Ukrainian border.

The Road Ahead. The USG will continue to encourage the GOS to adequately budget for narcotics enforcement and to maintain its tough stance on drug interdiction.

Slovenia

I. Summary

Slovenia is neither a major drug producer nor a major transit country for illicit narcotics. The Government of Slovenia (GOS) is aware that Slovenia's geographic position makes it an attractive potential transit country for drug smugglers, and it continues to pursue active counternarcotics policies. Slovenia's EU membership in May 2004, and its goal of attaining full Schengen membership as soon as possible resulted in a continued intensive focus on border controls in 2003 and 2004. Slovenia is a party to the 1988 UN Drug Convention.

II. Status of Country

Heroin from Afghanistan, which transits Turkey, continues to be smuggled via the "Balkan Route" through Slovenia to Western Europe. Heroin traffickers in 2004 tended to be mostly Albanian nationals, although recent trends show Serbian nationals becoming more involved. Slovenia's main cargo port, Koper, located on the North Adriatic, is a potential transit point for South American cocaine and North African cannabis destined for Western Europe. Drug abuse is not yet a major problem in Slovenia, although authorities keep a wary eye on heroin abuse, due to the availability of the drug.

III. Country Actions Against Drugs in 2004

Policy Initiatives/Accomplishments. In June 2004, a two-year regional project sponsored by the European Union concluded. It was aimed at strengthening cooperation of law enforcement structures and other agencies such as Customs of EU candidate countries the areas of tracking, risk assessment and shipment controls among others. The project was extensive and extremely welcomed and highly valued by Slovene Police and Customs officials.

Law Enforcement Efforts. Law enforcement agencies seized 198 MDMA tablets in the first 11 months of 2004 compared with 2,536 MDMA-Ecstasy tablets in the first 9 months of 2003, 7,051 tablets in 2002, and 1,773 Ecstasy tablets in 2001. In 2004, 148.6 kilograms of heroin were seized compared with 77.24 kilograms in 2003, 65.6 kilograms of heroin in 2002, and 88.9 kilograms of heroin in 2001. In addition 16.6 kilograms of marijuana and 4893 cannabis plants were seized in 2004 compared with, 144.37 kilograms of marijuana seized in 2003, 1,083.8 kilograms of marijuana in 2002, and 170.56 kilograms of marijuana in 2001. In the first 11 months of 2004, 104.8 kilograms of cocaine were seized by Slovene authorities.

Corruption. Neither the government nor senior officials encourage or facilitate the production or distribution of illicit drugs. Police and border control officials are adequately paid, and corruption among them is uncommon.

Agreements and Treaties. Slovenia is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention on Narcotic Drugs, as amended by the 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances. The 1902 extradition treaty between the United States and the Kingdom of Serbia remains in force between the United States and Slovenia as a successor state. Slovenia is a party to the UN Convention against Transnational Organized Crime and its three protocols.

Drug Flow/Transit. According to the Slovene Criminal Code, in the first 11 months of 2004, the Slovene authorities registered 1,183 criminal acts involving the production of and trade in narcotic drugs and psychotropic substances and the facilitation of illegal drug use. There were several

substantial seizures of drugs in the first 11 months of 2004. The majority occurred at the Obrezje border crossing with Croatia. This is the primary border crossing international traffic coming from the southern Balkans to and through Slovenia. Those seizures were primarily of cocaine, heroin and cannabis. A total of 20 kilograms of heroin were seized in Ljubljana in late 2004.

Domestic Programs. Slovenians enjoy national health care provided by the government. These programs include drug treatment.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. Slovenian law enforcement authorities have been willing and capable partners in several ongoing U.S. investigations.

The Road Ahead. Based on the high quality of past cooperation, the USG expects to continue joint U.S.-Slovenian law enforcement investigation cooperation into 2005.

Spain

I. Summary

In 2004, Spain continued its efforts to enforce the 1988 UN Drug Convention as well as EU conventions on counternarcotics trafficking. Spanish National Police, the Guardia Civil and Customs Services interdicted record amounts of cocaine, hashish, and heroin and performed numerous enforcement operations throughout Spain to arrest distributors of synthetic drugs, such as LSD and Ecstasy. However, officials have acknowledged that Spain continued to be a significant transit point and top consumer of cocaine and hashish in Europe. This issue prompted the newly elected Socialist government to restructure its drug policy coordination body, the National Drug Plan (PND), by assigning responsibility of its harm reduction unit to the Ministry of Health and its supply reduction unit to two new offices that are under the administrative control of the Secretary of State for Security within the Ministry of Interior. The GOS ranks drug trafficking as one of its most important law enforcement concerns, and has continued to maintain excellent relations with U.S. law enforcement. Cooperation between GOS and USG officials on Spain's domestic narcotics efforts and joint enforcement efforts in Latin America is a top policy objective of the new Spanish government.

II. Status of Country

Spain remains a principal gateway for shipments of cocaine transported from Latin American countries, such as Columbia and Venezuela, or transshipped from West Africa through Morocco. Spanish police continue to seize large amounts of Moroccan hashish along Spain's southern coast, some of which is trafficked by illegal immigrants. The majority of heroin that arrives in Spain is transported via the Balkan route from Turkey. No coca is grown in Spain, and production of cannabis and opium is minimal. Illicit refining and manufacturing of drugs in Spain is also minimal. This year, Spanish drug enforcement did not uncover any laboratories used to produce synthetic drugs. Spain has a pharmaceutical industry that produces precursor chemicals. There is effective control of precursor shipments within Spain from the point of origin to destination, administered by the Secretary of State for Security and the Spanish Customs Service since July 2004. Spain is a transit point to the U.S. for Ecstasy and other synthetic drugs produced mainly in the Netherlands.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Spanish strategy on drugs is directed by the PND, which covers the years 2000 to 2008. The strategy, approved in 1999, expanded the scope of law enforcement activities, such as permitting sale of seized assets in advance of a conviction and allowing law enforcement to use informers. The strategy also outlined a system to reintegrate individuals who have overcome drug addictions into Spanish society. The strategy also targets money laundering and illicit commerce in chemical precursors, and calls for closer counternarcotics cooperation with other European and Latin American countries. Following a review of the demand side of the PND in July 2004, the Government agreed to restructure the PND by placing its harm reduction unit under the authority of the Ministry of Health. The Ministry of Health was particularly concerned about drug use among school children following a nationwide survey it conducted on drug use among 25,500 Spanish children aged 14 to 18. In September 2004, officials revealed that the survey showed that within the last year, 36.1 percent of Spanish school children said they had used cannabis (double the percentage reported in 1995); 6.8 percent had taken cocaine; and less than one percent had tried heroin. In November, a European Union annual report on narcotics revealed that Spain was the top consumer of cocaine and cannabis in Europe. On drug supply, the Government placed its policymaking unit in the PSD under the

competency of a two new offices under the Secretary of State for Security: the Cabinet for Analysis and Prospective and the Cabinet for Concerted Action on Drug Trafficking, Money Laundering, and Related Crimes in Department of Security of the Ministry of Interior to coordinate its policy agenda with counternarcotics enforcement agencies. Officials have stated that it would consider additional revisions to the PND before it is comprehensively reviewed in 2008.

The Secretary of State for Security coordinates counternarcotics operations among various government agencies, including the Spanish National Guard, the Spanish National Police, and the Customs Service. Their cooperation appears to function well. There is no evidence of corruption of senior officials or their involvement in the drug trade.

In 2003, Spain and Portugal signed a Treaty of Cooperation to prevent drug consumption and to control the illegal trafficking of controlled substances. The Treaty establishes a joint “Hispano-Portuguese Commission” to exchange information, to coordinate intelligence gathering and professional training efforts.

Law Enforcement Efforts. Spanish officials at the Ministry of Interior reported that drug enforcement agencies seized 23,000 kilogram of cocaine, 223 kilogram of heroin, 531,000 kilogram of hashish, and 622,000 units of MDMA between January and August 2004. Exact interdiction statistics based on comprehensive data collected by the Civil Guard and Spanish Customs Agency will not be available, however, until March 2005.

The following are some notable cocaine seizures in 2004. On February 12, 2004, the Guardia Civil and the Spanish Customs Service discovered 5,735 kilogram of cocaine aboard the fishing vessel “Lugo” in Galicia. Seven Colombian nationals were arrested in this incident. On April 24, Spanish authorities interdicted a British-flagged sailing ship, the “Diaosa Maat” that contained 2,700 kilogram of cocaine. On March 27, the Spanish National Police interdicted a ship in the Port of Valencia carrying 3,280 kilogram of cocaine. On December 1, police officials discovered 3,100 kilogram aboard the “White Sands” shipping vessels in Galicia. They arrested 24 individuals including 11 Colombian nationals.

Although Spanish drug policy officials reported a decline in the number of interdictions of synthetic drugs generally, Spanish authorities seized large supplies of Ecstasy. On July 22, Spanish national police seized nine kilograms of MDMA powder (approximately 180,000 pills) in the luggage of a Spanish passenger at Madrid’s international airport. On September 1, the police arrested a Spanish passenger en route to the United States who was carrying 39,100 MDMA tablets at the Barcelona international airport. On August 18, police interdicted 41,000 MDMA pills carried by a Spanish passenger traveling to Puerto Rico. On December 1, Spanish police arrested a major international Ecstasy dealer, Hank Romi, in Malaga by using information provided by the Madrid DEA Country Office.

On July 7, the Guardia Civil discovered laboratories in three apartments in Madrid containing chemical materials used to produce cocaine. Eleven Colombian nationals were arrested in connection with the incident. Authorities also arrested a Romanian passenger in possession of 6.3 kilogram of heroin. The Spanish National Police interdicted 70 kilogram of heroin in Toledo on July 21.

Hashish trafficking appears to be particularly acute in the region of Catalonia and in the Costa del Sol (Sun Coast) in the province of Malaga. Drug enforcement officials have estimated that they captured 40,000 kilogram of hashish in drug raids in Barcelona, Tarragon, and Levante in 2004. Authorities in Malaga reported that they captured 21,813 kilograms and arrested 490 persons for drug-related crimes in 2004. Officials have acknowledged that hashish traffickers, primarily from North Africa, now use the coast of Catalonia more frequently than Spain’s southern coast as an entry point for their trade because there are fewer counternarcotics patrols along Catalonia’s coast and along its border with France, where drugs can be more efficiently transported to other parts of Europe by road.

Some notable hashish interdictions include the capture of 3,030 kilogram of hashish in the Deletebre in Catalonia on March 21. Police arrested seven individuals in this incident. On September 7, Spanish counternarcotics agents captured 1,100 kilogram of hashish in Guadalquivir in Sevilla. Police arrested eight Spanish citizens in the incident. On December 3, counternarcotics agents captured 4,100 kilogram of hashish and arrested 27 nationals of France, Romania, Albania, Morocco, and Algeria in a nationwide drug investigation. Officials determined that those arrested were members of a narcotics Mafia based in Marseilles.

Agreements and Treaties. Spain is a party to the 1988 UN Drug Convention, and all of the convention's articles are applied in Spain. Spain is also a party to the 1990 Strasbourg Convention. Spain signed the UN Convention against International Organized Crime and its protocols in 2000. A 1970 extradition treaty and its three supplements govern extradition between the U.S. and Spain. The U.S.-Spain Mutual Legal Assistance Treaty has been in force since 1993. The U.S. and Spain have also signed a Customs Mutual Assistance Agreement. On December 17, Spain and the United States signed an additional MLAT on judicial assistance that will facilitate further mutual cooperation on drug trafficking cases.

Spain is a party to European Conventions on Mutual Assistance in Criminal Matters, Extradition, the Transfer of Proceedings in Criminal Matters and the International Validity of Criminal Judgments. Spain has mutual legal assistance treaties or bilateral counternarcotics agreements with most countries in Latin America, as well as with Morocco, Israel and Turkey. Spain approved March 14, 2003, the European Union-wide common arrest and detention order, which facilitates the transfer of prisoners and suspects among EU states. This law took effect on January 1, 2004.

Spain is a member of the UNDCP major donors group and the Dublin group of countries coordinating narcotics assistance efforts. Spain also chairs the regional Dublin group for South America and North Africa. Spain also funds programs through the Organization of American States' Inter-American Drug Abuse Control Commission. Spain pledged USD 100 million to support Plan Colombia in 2003 and has pledged to continue to support the program in the coming years. Spanish aid is targeted towards institutional strengthening of police and judicial forces, alternative development, and demand reduction. Spain sponsors numerous training courses for police and judicial authorities in Latin America and Morocco to exchange information and best practices in the area of law enforcement on drug trafficking, money laundering and related crimes.

Cultivation/Production. Coca leaf is not cultivated in Spain, and cannabis is grown in insignificant quantities. For example, on August 27, police officials arrested the owner of a farm in Oviedo where they located 28 mature marijuana plants, 250 grams of dried marijuana plants, and a small amount of hashish. Opium poppy is cultivated under strictly regulated conditions for research. Refining and manufacturing of cocaine and synthetic drugs is minimal, with some small-scale laboratories converting cocaine base to cocaine hydrochloride.

Drug Flow/Transit. According to Spanish drug enforcement officials, most of the cocaine trafficked to Spain originates in Colombia, Peru, and Ecuador. Traffickers exploit Spain's close historic and linguistic ties with Latin America and its long southern coastline to transport drugs for consumption in Spain or distribution in other parts of Europe. Maritime vessel and containerized cargo shipments account for the bulk of the cocaine shipped to Spain. Spain remains a major transit point to Europe for hashish from Morocco; Spain's North African enclaves of Ceuta and Mellila are principle points of departure. Police officials acknowledge that traffickers are beginning to abandon traditional drug trade routes between the Strait of Gibraltar and the coasts of Huelva, Cadiz, Malaga, and Almeria, and are delivering hashish and other narcotics, to points along the coasts of Alicante, Valencia, Castellon de la Plana and Barcelona, regions not covered by Spain's electronic patrol system currently used along the Gibraltar Strait, the Integrated System for the Surveillance of the Strait of Gibraltar (SIVE). Spain's international airports in Madrid and Barcelona are transit points for passengers who intend to traffic

Ecstasy and other synthetic drugs, mainly produced in the Netherlands, to the United States. These couriers, however, are frequently captured before they leave Spain or when they arrive in the U.S.

Domestic Programs. The national drug strategy identifies prevention as its principal priority. In that regard, PND continued its publicity efforts targeting Spanish youth. Spain's autonomous communities provide treatment programs for drug addicts, including methadone programs and needle exchanges. Prison rehabilitation programs also distribute methadone. The Government has also provided approximately USD 5.4 million (4.1 million Euros) to assist private, non-governmental organizations that carry out drug prevention and rehabilitation programs.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. U.S. goals and objectives for Spain are focused on maintaining and increasing the current excellent bilateral and multilateral cooperation in law enforcement and demand reduction. We seek to promote intensified contacts between officials of both countries involved in counternarcotics and related fields. Latin America remains an important area for counternarcotics cooperation. Spanish officials are working closely with the U.S. Narcotics Affairs Section at the American Embassies in Bogotá, Colombia.

The Road Ahead. The U.S. will continue to coordinate closely with Spanish counternarcotics officials through the Madrid Country Office. Spain will continue to be a key player in the international fight against drug trafficking.

Sweden

I. Summary

Sweden is not a significant illicit drugs producing, trafficking or transit country. The fight against illegal drugs figures among the government's top priorities and enjoys strong public support. In 2004 the number of seizures of illegal drugs decreased by 15 percent, while overall quantities seized increased by 6 percent. Amphetamine and cannabis remain the most popular illegal drugs. The government completed year three of its National Action Plan on Narcotic Drugs. Sweden actively participates in numerous international counternarcotics fora. Sweden is a party to the 1988 UN Drug Convention.

II. Status of Country

Swedish government and society are highly intolerant of illegal drugs. Sweden has approximately 27,000 seriously addicted drug addicts (i.e., regular intravenous use and/or daily need for narcotics). There are approximately 350 narcotics-related deaths each year. Government reports issued in June indicate that the overall numbers of young people who use drugs and of heavy drug users are declining. The December 2004 publication of results from the European Schools Project on Alcohol and Other Drugs (ESPAD) showed that 7 percent of Swedish sixteen-year-olds have tried cannabis and 3 percent have tried any other form of narcotic drug, as compared with European Union averages of 21 percent and 6 percent respectively. Sweden places strong focus on drug prevention and education.

Prime Minister Gran Persson has declared the fight against narcotics as one of his government's top priorities. To this end, Sweden has allotted approximately \$42 million to a National Action Plan on Narcotic Drugs, which began in January 2002 and runs through the end of 2005. Restriction of supply for youth figures prominently in the plan. Continued cooperation with countries in the Baltic region—where significant trafficking routes exist—constitutes an ongoing and important element in Sweden's counternarcotics efforts.

In 2004 Swedish Customs reported its first seizures of liquid steroids originating from China. In an attempt to reduce black market trade of the medicine methadone and of the related drug "Subutex," authorities limited the circumstances under which physicians may prescribe them.

Trends observed in 2004 include increased cocaine use among young drug users, and an increase in seizures of drugs within prisons. The National Prison and Probation Administration increased efforts to combat drugs in prisons. The use of Rohypnol (a powerful central nervous system depressant) dropped significantly during the year. Swedish Customs attributed the decline to a reduction in smuggling via Lithuania, the primary conduit for Rohypnol's entry into Sweden. Problems that arose in 2003 with the synthetic drug Fentanyl did not reoccur.

III. Country Actions Against Drugs in 2004

Accomplishments. The government's "Mobilization Against Drugs" taskforce continued to implement the National Action Plan on Narcotic Drugs established in January 2002. Its work during 2004 involved information campaigns and seminars throughout the country designed to raise awareness, in addition to the establishment and/or maintenance of networks with national and international NGOs.

The government initiated a two-year, \$100 million project to strengthen rehabilitation of drug addicts. It earmarked an additional \$30 million for preventive actions (chiefly information campaigns) for youth. The NGO CAN (Association for Information on Alcohol and Narcotics) launched an information website in a cooperative effort with other NGO's and government authorities.

Sweden continued to participate in several international fora including: the UN Commission on Narcotic Drugs (CND); the UN Drug Control Program (UNDCP); the Dublin Group; the Pompidou Group of the Council of Europe; the Comprehensive Action against Synthetic Drugs in Europe (CASE) project; the Nordic Police and Customs Initiative (PTN); and the European PHARE project on synthetic drugs and their precursors. Sweden is one of the major contributors to the UNDCP. Its 2004 contribution totaled approximately \$7.3 million.

In 2004 the government spent an extra \$1 million at the municipal level on drug preventive programs for young people, treatment for drug addicts, and special assistance for children of addicts.

Fighting drugs remains a high priority area for Sweden's official development assistance. The Swedish International Development Authority (SIDA) allocated about \$8 million in 2004 for multilateral and bilateral UN normative instrument projects against drugs and tobacco. SIDA also developed and secured government adoption of a new strategy aimed at deepening Swedish engagement within the UNDCP.

Law Enforcement Efforts. No major drug processing labs were detected during the year. Police reported 32,900 narcotics-related crimes for the January-September 2004 period. This represents a seven percent increase over the corresponding period of 2003. Approximately 30 percent of these arrests led to convictions under the Narcotics Act. The majority of the crimes involved consumption.

Corruption. There were no known cases of public corruption in connection with narcotics in Sweden during the year. Swedish law covers all forms of public corruption and stipulates maximum penalties of six years imprisonment for gross misconduct or taking bribes. The Narcotics Act contains severe penalties for the use and/or production of illegal narcotic substances.

Agreements and Treaties. Sweden has bilateral customs agreements with the United States, the United Kingdom, Germany, Spain, Norway, Hungary, Latvia, Slovakia, the Czech Republic, Iceland, Russia, Lithuania, France, Finland, Estonia, Poland, Denmark and the Netherlands. Through the EU, Sweden also has agreements with other nations concerning mutual assistance in customs issues and counternarcotics efforts. An extradition treaty and protocol are in force between the U.S. and Sweden.

Sweden is a party to the 1988 UN Drug Convention and is meeting the Convention's goals and objectives. Sweden is a party to the 1961 Single Convention, as amended by the 1972 Protocol, and to the 1971 Convention on Psychotropic Substances. Sweden is a party to the UN Convention against Transnational Organized Crime and its protocol against trafficking in persons, and is a signatory to the UN Convention Against Corruption.

In 2004 Sweden joined the Container Security Initiative (CSI), a U.S. Government-sponsored program designed to safeguard global maritime trade. Through identification and examination of high-risk and/or suspect containers, CSI enhances security for the global trading system, deterring terrorism and hindering illicit traffic of all kinds. Two U.S. Customs Officials are currently based in Gothenburg in support of this program.

Cultivation/Production. Government reports noted that small cultivations of cannabis were detected and seized in Gotland, Halland, Lulea and Pitea. The seeds reportedly came from Copenhagen and/or were purchased via the Internet from other places. Some legal cultivation of hemp/cannabis for use in fibers occurs in Sweden, as allowed for under EU regulations on the cultivation of flax and hemp for fiber.

Drug Flow/Transit. Drugs mainly enter the country concealed in commercial goods, by air, by ferry, and by truck over the Oresund Bridge linking Sweden to Denmark. Statistics show that 70 percent of all seizures are made in the southern region. Despite increased smuggling through the Baltic countries and Poland, 75 percent of illicit drugs are smuggled through other EU countries. Most of the seized amphetamine originates from Poland, the Netherlands, and Baltic countries. Seized Ecstasy comes mainly from the Netherlands; cannabis from Morocco and southern Europe; and khat from Eastern Africa via Amsterdam and London. Cocaine often comes through Spain and the Baltic region. The route for heroin is more difficult to establish.

In 2004 law enforcement officials did not encounter any drugs intended for the U.S. market.

Domestic Programs and Demand Reduction. The National Institute of Public Health, and municipal governments, are responsible for providing compulsory drug education in schools. Several NGO's are devoted to drug abuse prevention and public information programs.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. Swedish cooperation with United States Government law enforcement authorities continues to be excellent.

The Road Ahead. The U.S. will pursue enhanced cooperation with Sweden and through the EU.

Switzerland

I. Summary

Switzerland plays a role as both a consumer market and transit route for illicit narcotics, but it is not a significant producer of most illicit drugs, with the exception of hemp/marijuana. Based on revised data, total drug-related arrests were down during 2003 by 4.7 percent. Across Switzerland five to ten per cent of police time is spent fighting drugs.

The Swiss public continues its strong support for the government's four-pillar counternarcotics policy of preventive education, treatment, harm reduction, and law enforcement. The politics of drug liberalization at the federal level has changed recently, putting the brakes on the cannabis legalization movement. A new drug bill aimed at decriminalizing cannabis use for Swiss adults, concentrating enforcement efforts against other drugs, and making permanent a pilot heroin maintenance program for drug addicts was rejected by parliament in June 2004.

One month later, a Swiss NGO known as "For the Protection of Youth Against Drug Criminality" initiated a new ballot initiative demanding the decriminalization of cannabis including the possession, consumption, and purchase for personal use. Supporters include well-known legislators from a wide political spectrum, physicians, scientists, prevention professionals, business leaders, as well as law enforcement and hemp industry representatives. The group collected 70,000 signatures over four months and is expected to collect the required total of 100,000 to bring the matter before the voters before the end of 2005.

In parallel, a zero tolerance federal ordinance against driving while on drugs (cannabis, heroin, cocaine, ecstasy) went into effect on January 1, 2005.

II. Status of Country

In a country of approximately seven million people, about half a million are thought to use cannabis at least occasionally. Roughly 30,000 people are addicted to heroin and/or cocaine, and more than 7.2 percent of the population uses a narcotic substance regularly in Switzerland. While the use of heroin has stabilized and even shown a slight decrease in recent years, the use of cannabis and synthetic drugs, especially MDMA (Ecstasy), continues to increase. Police are also concerned about the continuing trend by casual users to mix cannabis and other drugs. An international survey recently revealed that Swiss teenagers smoke more cannabis than their peers in more than 30 other European countries, with one in three Swiss 15-year-olds smoking pot at least once within the past year. There are an estimated total of 250,000 people who regularly smoke cannabis—nearly twice as many as a decade ago. Drug consumer arrests nevertheless dropped by 5.4 percent in 2003 and most concerned cannabis smokers.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Jurisdiction for all cases involving organized crime, money laundering, and international drug trafficking is with the federal prosecutor's office in Bern. Beginning January 1, 2002, it became illegal to advertise products that contain narcotics or other psychotropic substances without government certification. Violators who put human lives at risk face fines up to \$161,000(SFr 200,000) or imprisonment.

Accomplishments. Swiss drug control authorities say that therapy and treatment programs have improved the physical and mental health of many drug addicts and reduced incidents of drug-related

crime. Swiss officials credit needle exchange programs with reducing drug-related AIDS and hepatitis. Statistics show that 20 per cent of the patients on Switzerland's heroin prescription program are infected with HIV, and federal public health figures show that the number of new HIV cases among intravenous drug users steadily declined from over 400 in 1991 to around 100 in 1997. Drug-related mortality increased dramatically by 16 percent from 167 in 2002 to 194 in 2003 (in contrast to a 6 percent rise the year before).

There are about 30,000 consumers of hard drugs in Switzerland; 2,500 addicts have been treated in medically supervised heroin programs, and 18,000 addicts are being treated using methadone as a substitute therapy.

Law Enforcement Efforts. The most current seizure and arrest statistics available cover the 2003 period. Cannabis seizures decreased from 23,210 kilogram in 2002 to 13,032 kilogram in 2003, and the number of narcotics apprehensions during 2003 decreased from 49,201 to 46,886 (-4.7 percent) percent, with wide disparities among cantons. Drug trafficking also increased by 5.9 percent during 2003 (down from +15.4 percent a year before), mostly involving cocaine, marijuana and heroin. The sharpest rise in drug trafficking arrests involved abuse of amphetamines, hashish and marijuana. Drug smuggling also increased by 4.4 percent, with dramatic redistribution among the cantons. The top cantons with historically significant drug smuggling activity are: Zurich (103, down from 991 arrests a year ago), Valais (44), St. Gallen (35), Basel City (26) Geneva (zero, down from 806), Bern (9, down from 434) and Vaud (9, down from 286).

During 2003, Swiss police seized just 13,032 kilogram of cannabis, in sharp contrast with the 23,210 kilogram seized in 2002 (-43 percent), 188 kilogram of cocaine (+1 percent), 300 kilogram of heroin (+44 percent), 20,599 doses of synthetic drugs (down from 88,342 doses the year before). Zurich police expressed concerns that the city had become the "hemp Mecca" of Switzerland, with an average of 30 shops selling hemp in several different districts of the city. Most of these shops sell hemp as a sideline to other ordinary goods. Zurich police believe that a single person has been behind this activity for the last 15 years. Swiss hemp is produced in the Zurich area, Aargau, Thurgau and St-Gallen, and large quantities are exported to neighboring countries.

Foreigners and asylum seekers play a significant role in the Swiss drug scene, especially in distribution. During 2003, 71.4 percent of the 3,649 drug traffickers, 78 percent of the 259 drug smugglers and 35 percent of the 37,464 drug consumers were foreigners. One fifth of those arrested originated from the Balkans (Albania, Former Yugoslavia, Bosnia) Africa (Sierra Leone, Guinea), Europe (France, Germany, Italy and Portugal). According to the Swiss Federal Police, there are three types of criminal organizations in the country: the West African networks involved in the cocaine traffic; Albanian gangs dealing in heroin and prostitution; and the money laundering networks consisting of persons from the former Soviet republics. Noticing that many resident aliens suspected (but not convicted) of drug dealing travel from canton to canton, several cantonal authorities increasingly ban drug dealers resident in another canton, or from certain areas such as the railway stations and schools. If picked up by police, these dealers (mainly refugees from Eastern Europe and sub-Saharan Africa) are fined and "deported" to their canton of residency. If picked up again, they are jailed. Deportation of foreign drug dealers to their home country is difficult because they often hide their true identity from the police.

Drug Policy. Heroin prescription programs were only permitted for a limited period of five years, ending in December 2004. But on June 15, the Parliament extended the period until 2009. The Swiss Federal Office for Public Health believes that its heroin prescription program has a direct impact on drug-related crime: around 70 per-cent of addicts earned money from illegal activities at the time they entered the program, compared with 10 percent after 18 months in the program. The heroin prescription program has many detractors, mostly conservative and religious groups, who argue that the overall goal of getting addicts off drugs has been forgotten and that the Swiss government should

instead favor abstinence programs. The Secretary of the UN International Narcotics Control Board (INCB), Herbert Schaepe, recently questioned the cost-effectiveness of the heroin treatment program and said that his agency does not encourage other countries to follow the Swiss example: "It is an approach that is feasible only in a very limited number of countries which can afford it. This program is extremely expensive and, in times of limited resources, it has to be decided whether these resources can be spent elsewhere in a better and more productive way." Supporters like ARUD, a Swiss umbrella organization committed to harm reduction policies, point out instead that the program only costs \$38 per day (SFr 47) to treat one patient, compared to a cost of SFr90 (\$72) per person in terms of health care and criminal damage. Following the release of the "Zurich Drugs and Addiction Policy Report" made public in August 2004, Zurich authorities admitted that they had been so busy tackling the heroin addiction problem that other areas of addiction had been missed. After concentrating on the heroin problem for the past ten years, the city said it wanted to be more active in other areas such as encouraging the reintegration of all drug addicts. While heroin consumption is on the decline, the use of cocaine and Ecstasy is on the increase. A pilot project for the distribution of cocaine under prescription is underway but it is not being supported for the time being by the Federal Health Office in Bern.

Several drug arrests made especially noteworthy headlines: In late December 2003, Lausanne police arrested a German woman accompanied by her 2-year old child after they discovered 500 grams of Dutch heroin hidden in her shoes. Five other persons, including the smuggling ring leader, were later arrested. In a year, Lausanne police dismantled no less than 11 cocaine networks operating in the city. On February 28, 2004, Swiss customs arrested a Swiss-Guinean drug trafficker at the Geneva airport while he was about to depart to his home country. The police found 250,000 Swiss francs in cash and came to the conclusion that it was drug money. The suspect later acknowledged he was being used as a "mule" to repatriate other traffickers' funds. Another 430,000 francs had already been repatriated between August 2003 and January 2004. The police later arrested a drug trafficker from Sierra Leone with 13,000 Francs in his possession, and 400 grams of cocaine. According to the police, most drug smugglers are well integrated in the society and benefit from possession of a legal Swiss residency permit, which enables them to travel freely in Switzerland. Most of the proceeds of the sale of drugs are being laundered through the purchase of real estate in Africa, or second-hand cars for export to Africa. In March 2004, Lausanne police arrested 13 drug traffickers, all asylum seekers of Kurdish-Iraqi origin. Police originally found out about the heroin and cocaine network when citizens discovered drug doses hidden in Lausanne public parks. Investigators later found out that the traffickers were commuting by train between Lausanne and Geneva to sell the drugs. Police seized a total of 1.3 kilos of heroin and 500 grams of drug chemicals.

On March 9, 2004, a Tessin court sentenced Scott Blakey, a 40-year old Australian drug trafficker known as the "Hemp Guru," to 4 years in prison and a 10-year ban on entering Switzerland. The convict is believed to have played a significant role in a hemp shop in Tessin, selling no less than 5 tons of hemp in the Swiss and international market.

In May 2004, the Geneva investigative judge Paul Perraudin issued a legal assistance request to Saudi Arabia in connection with the alleged smuggling of cocaine by the Saudi Prince Naef al-Chalaan, founder of the now defunct Kanz Bank in Geneva. Naef al-Chalaan, now hiding in Saudi Arabia, is accused by French and U.S. authorities of smuggling several tons of cocaine from Columbia to Europe. In spring 2004, Neuchatel police dismantled 11 indoor hemp plantations (equivalent to 30,000 plants) located in the northern Val-de-Travers region close to the French border. Six people have so far been arrested. The media expressed concerns that the local police did nothing to prevent these activities, despite persistent rumors among the local population.

July 2004 was a busy month for narcotics arrests in Switzerland. Swiss customs in Tessin arrested a Dutchman at the Chiasso railway station after finding 8.6 kilos of cocaine hidden in a suitcase. The suspect was planning to cross the border to Italy. In the same month, an international network bringing

cocaine from South America to Switzerland was broken up in a joint operation by Swiss and German police agents. The investigation that lasted about six months showed that at the head of the network were a German national and his wife from Cameroon, a Nigerian residing in Switzerland, and another German national—a businessman in Ludwisburg (Germany). A total of 12 individuals were arrested and 7 kilogram of cocaine were confiscated worth \$600,245.00.

Also in July 2004, Tessin police arrested a 34-year-old Yugoslav near the Italian border after finding 10.5 kilos of heroin hidden in his car. Two other Yugoslav men and a Czech woman were arrested soon after. Police found in their apartments 40 grams of cocaine, several weapons including a Kalashnikov, a bulletproof jacket, and several cell phones. The arrests were the result of a joint investigation with the Bern counternarcotics police unit.

In July, Zurich police arrested several suspects including an 11-year old child and seized 5 kilos of heroin. Among those involved were three Turks, two Slovaks and one Iraqi. In a parallel police operation, Zurich police arrested five Dominicans and two Swiss and seized 650 grams of cocaine, Euro 9000.00, and Sfr 3,200.

Again in July, Swiss police reported several operations during which a total of twelve people were arrested and 45 kilogram of heroin seized. The arrests took place in the context of a long investigative procedure by the Federal Attorney General against a group from the Balkan Peninsula.

Still in July, Swiss customs arrested several drug smugglers from Nigeria after they found out that they had swallowed up to 1.2 kilo of cocaine using condoms.

Between July and September 2004, Zurich airport police and customs authorities seized over 68 kilos of narcotics (36 kilos of cocaine and 32 kilos of the narcotic plant “qat”). The narcotics were smuggled into the country in small quantities, carried in the traffickers’ stomachs or luggage, or hidden in their shoe soles, and in shampoo bottles. Those arrested included 20 men and 7 women from 12 different nations, ranging from between 18 and 57 years old.

In summer 2004, the Neuchatel Cantonal police managed to break an important cocaine ring in La Chaux-de-Fonds. The operation, planned for September, was carried out earlier due to the numerous complaints from parents and school officials concerned about the presence of drug dealers and drug abusers in the school areas. Thirty-four individuals from Western Africa were arrested. Sixteen of them did not have identity documents. Several others were identified as refused asylum seekers.

In August 2004, Norway deported a 44-year old drug trafficker to Switzerland following a Swiss international warrant. The man was the head of a drug smuggling network including 19 people in the Bern area. Swiss police believe that the group smuggled in several kilos of cocaine and heroin during the first half of 2002.

On August 5, 2004, the Lausanne police arrested a 32-year old drug trafficker from Guinea. The man is accused of smuggling and selling 5 kilos of cocaine over the last 4 years in the Lausanne area. Part of the money was used to purchase and export various vehicles and goods to Africa. The man was using two apartments rented by African students to store the drugs. In addition, 56 customers “well integrated in the Swiss society” were also arrested.

Following a six-month investigation, ending in October 2004, the Geneva police successfully broke an international cocaine trafficking ring. Fifteen nationals from Guinea are under arrest. About 25 kilogram of cocaine were confiscated during the investigation. The individuals arrested played a major role in supplying street dealers in Geneva. The drugs were produced in Latin America, shipped through Africa and delivered to European capitals, including Paris, Brussels, and Madrid.

On November 23, 2004, a criminal court in Fribourg sentenced a drug smuggler from Bern to a six-year prison sentence for smuggling 20 kilos of heroin from Kosovo to Switzerland. The man, born in Kosovo in 1969, was arrested in June 2002 at the southern Chiasso border post with Italy. Swiss

customs also found in his car \$19,348 in cash. This arrest was part of a wider counternarcotics operation named “Albatros 2” which succeeded in seizing 9 kilos of drug chemicals and arrested a total of 40 people.

During 2003, Swiss border guards reported that the amount of drugs seized at the border was “significant,” with cocaine seizures increasing from 118 to 138 kilogram, and heroin seizures decreasing from 135 to 96 kilogram. Swiss customs also reported that the number of illegal immigrants increased compared to the previous year, and that violence against border police was still a problem. The number of persons handed over to cantonal police also increased from 32,290 in 2002 to 34,063 in 2003.

Corruption. The USG is not aware of any court decision concerning narcotics-related corruption among Swiss judicial, administrative, or law enforcement officials.

Agreements and Treaties. Switzerland and the United States cooperate in law enforcement matters through bilateral extradition and mutual legal assistance treaties. Switzerland is a party to the 1961 UN Single Convention as amended by the 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances. Although a signatory to the 1988 UN Drug Convention, Switzerland has not yet ratified the Convention. Ratification has been delayed until recently because of the provisions of the failed government bill aimed at decriminalizing marijuana use; because of the failure of this bill the Convention is expected to be ratified in the near future. The EU Schengen agreement being debated in Parliament explicitly requires members to comply with the 1988 UN Drug Convention requirements. Switzerland has signed, but has not yet ratified, the UN Convention Against Transnational Organized Crime, and is a signatory to the UN Convention Against Corruption.

Cultivation and Production. Switzerland is not a significant producer of illicit drugs, with the exception of illicit production of high THC-content cannabis/hemp. Police estimate the 2003 area planted with illicit hemp at 350 hectares, with a value of approximately \$674 million. Approximately 200 hemp shops operate throughout Switzerland, selling a variety of cannabis products, including tea, oil, foods, and beverages, cosmetics, textiles and so-called sachets. Ostensibly sold to freshen-up closets and drawers, the sachets contain a quality of marijuana suitable for smoking. Following a series of police raids on hemp shops, a federal court ruled in March 2000 that selling hemp products with a THC level above 0.3 percent was a violation of the narcotics law regardless of how the shop had labeled the hemp. Government subsidies are available to farmers growing industrial hemp. Police have also expressed concern over the increase in domestic production of Ecstasy and other synthetic drugs.

Drug Flow/Transit. Switzerland is both a transit country for drugs destined for other European countries and a destination for narcotics deliveries.

Domestic Programs. Switzerland focuses heavily on prevention and early intervention to prevent casual users from developing a drug addiction. Youth programs to discourage drug use cost \$6 million annually according to the Swiss Federal Office of Public Health.

Swiss authorities dispensed 230 kilogram of heroin to severe drug addicts for maintenance programs in 2003, compared to 201 kilogram in 2002. Three-fourths was in ampoules for injection, while the rest was distributed in tablet form. During 2003, 1,262 addicts were enrolled in the heroin prescription program, a slight increase from 1,230 in 2002. Three-quarters of those enrolled were male. The number of slots available in heroin treatment centers also increased by eight to a total of 1364 units. The average level of usage for these centers is now 92 percent (2002: 90 percent). Medical treatment costs approximately \$19,323 per year per person, or \$53 per day. Twenty-five percent of the costs were paid for by the cantons, while 75 percent was paid by the individual’s health insurance. Average time in heroin treatment is 2.86 years. Of the 175 persons who terminated the heroin prescription program, 37.2 percent opted for the methadone-assisted programs, or an abstinence therapy.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. On March 15, 2004 Switzerland and the U.S. joined forces to curb the rise in illegal sales of prescription drugs over the Internet. The two countries called for international action in a resolution presented at the annual session of the UN Commission on Narcotic Drugs in Vienna. The joint resolution states that every country should introduce and enforce laws against the sale of narcotics and psychotropic drugs over the Internet. Swiss Medic, the Swiss Agency for Therapeutic Products, estimates that 4,000 to 8,000 packages containing medicines with narcotic drugs or psychotropic substances come across the border into Switzerland. The latest annual report by the UN's International Narcotics Control Board (INCB) highlighted that Switzerland had seen a large increase in seizures of narcotic drugs bought over the Internet, many of these originating from Pakistan. Pakistani authorities are said to be working with their Swiss counterparts to resolve the problem.

The Road Ahead. The United States and Switzerland will continue to build on their strong bilateral cooperation in the fight against narcotics trafficking and money laundering. In particular, the United States will urge Switzerland to use experiences gained in fighting terrorist money laundering to become more proactive in seizing and forfeiting funds from narcotics money laundering. The United States also will monitor Switzerland's proposed revisions of its narcotics law and continue to urge Swiss authorities to ratify the 1988 UN Drug Convention without reservations.

Tajikistan

I. Summary

Tajikistan produces few narcotics, but it is a major transit country for heroin and opium from Afghanistan. The opium/heroin moves through Tajikistan, onward through Central Asia, and then to Russian and other European markets. Illicit narcotics transiting Tajikistan rarely enter the United States. The volume of drugs following the Afghanistan-Central Asia-Russia-Europe route via multiple methods of transportation—primarily land-based—is significant and growing.

Abuse of heroin, opium, and cannabis in Tajikistan is a relatively small but growing problem. Tajikistan's medical infrastructure is inadequate to address the population's growing need for addiction treatment and rehabilitation. The Tajik Government remained committed to fighting narcotics but is less equipped to handle the myriad social problems that stem from narcotics abuse. However, Tajikistan continued to implement a counternarcotics strategy and coordinated with the UN Office on Drugs and Crime (UNODC), as well as a growing number of bilateral donors. It has also participated in the UN Six Plus Two counternarcotics initiative, which targets against drugs leaving Afghanistan. Tajikistan is a party to the 1988 UN Drug Convention.

II. Status of Country

Geography and economics continue to make Tajikistan an attractive transit route for illegal narcotics. The Nizhniy Pyandzh River crossing, which forms part of Tajikistan's border with opium-producing Afghanistan, is thinly guarded, and difficult to patrol. It is easily crossed without inspection at a number of points. Tajikistan's economic opportunities are limited by a lack of domestic infrastructure and the fact that its major export routes transit neighboring Uzbekistan. Uzbekistan has often closed its borders to combat a perceived instability from Tajikistan, adversely affecting Tajikistan's economic prospects further. Additionally, the Tajik Government's efforts to strengthen rule of law and combat illegal narcotics flows are hindered by criminal networks that came to prominence during the 1992-97 civil war, and the Government's own lack of revenue to adequately support law enforcement efforts. With the average monthly income in the country around \$10, poor job prospects, and economic migration resulting in many single heads of households, the temptation to become involved in narcotics-related transactions remains high for many segments of society. In-country cultivation of narcotics crops is minimal, and neither the Tajik Government nor the USG is aware of any processing or precursor chemical production facilities. The small amount of precursor chemical imports is closely monitored by the Tajik Government and is essentially limited to five in-country industrial sites that use such chemicals.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The Presidential Office's Drug Control Agency (DCA), created in 1999 with UNODC support, continued to implement a number of programs with the UNODC that are designed to strengthen Tajikistan's drug control capacity. The DCA aims to centralize the Tajik Government's counternarcotics efforts and support drug treatment and rehabilitation efforts. During 2004, it conducted a number of operations, including several major seizures within Dushanbe itself. The Tajik Government continued to emphasize the importance of counternarcotics law enforcement in its public declarations, regularly declaring the drug trade to be a threat equal to that of international terrorism. The Tajik Government's resources for counternarcotics efforts remain limited, however, and the Government itself is vulnerable to pressure from prominent traffickers, many of whom are in a position to threaten domestic stability if seriously challenged. Although the 350 DCA officers are paid

ten times, on average, a Tajik salary, their specialized training makes them attractive to other organizations, which are in a better financial position than the government and can pay a higher salary. The head of the DCA has repeatedly noted the difficulty in retaining trained personnel.

One encouraging development is the Tajik Government's emphasis on interagency cooperation. Through a two-pronged multi-year UNODC project sponsored by the United States, the State Border Guards, the Russian Border Forces, Customs, and the DCA are all working together to improve security on the Tajik-Afghan border. The equipment and training provided through the program are designed to foster better communication and cooperation among the elements of the Government and better utilizing the indigent country's limited resources.

Accomplishments. The DCA became fully operational in April 2000 and has largely overcome many of its initial difficulties stemming from intra-governmental rivalries. It has recruited and trained a capable, well-regarded staff, and has worked to raise its profile in the country through public outreach efforts. The DCA also has extended its links with international organizations and foreign states while expanding its cooperation with other Tajik security agencies. In this vein, the DCA opened its offices in Moscow, St. Petersburg, Yekaterinburg, and Almaty and plans to open an office in Afghan Badakhshan by the end of 2005. The DCA Office in Kabul has been operating effectively since December 2003. On May 28, an international conference, "Strategy of Coordination of Control Over Drugs and Crime-Prevention in Central Asia," was held in Dushanbe under the aegis of the DCA. In September and November, a two-stage drug-prevention operation, "Channel-2004," was carried out by special services of member nations of the Collective Security Treaty Organization and resulted in detaining 30 drug traffickers and seizing more than 620 kilograms in the territory of the Republic.

Law Enforcement Efforts. During the first ten months of 2004, Tajikistan officials reported seizing 6,776 kilograms of illegal narcotics, including 4,459 kilograms of heroin, 1,706 kilograms of opium, and 567 kilograms of the cannabis group of drugs, and 44 kilograms of synthetic drugs. Heroin seizures decreased slightly when compared with the same time period from the previous year (5.1 metric tons). Tajikistan currently ranks third in the world for heroin seizures. Opium seizures also showed a slight decrease compared to 2003's ten-month total of 1,966 kilograms. This continues the trend of previous years, which demonstrated a shift from trafficking in opium to trafficking in processed heroin. Despite the fact that Tajikistan's drug enforcement structures have gained significant experience in countering drug trafficking, Tajikistan does not possess adequate police powers and resources to fight the problem. The Russian Border Forces (RBF), which have personnel stationed along the Tajik-Afghan border, continued to be responsible for almost two-thirds of the total seizures in country. Both the RBF and Tajik border forces continue to operate as Tajikistan's first and main line of defense against illegal narcotics trafficking. The withdrawal of Russian border troops by the end of 2005 may cause certain difficulties and might negatively impact Tajik drug interdiction efforts. Given low pay and high incentives for corruption, Tajik forces are at times unequal to the task.

Corruption. There is a good deal of public speculation regarding trafficking involvement by government officials. Speculation is targeted equally at prominent figures from both sides of Tajikistan's 1992-97 civil war. While it is impossible to determine how pervasive drug and other forms of corruption are within government circles, there appears to be a disparity when comparing the low salaries paid to government officials against the extravagant lifestyles many top officials appear to maintain. Even when arrests are made, the resulting cases are not always brought to a satisfactory conclusion. As a matter of policy, however, Tajikistan does not encourage or facilitate illicit production or distribution of narcotic or psychotropic drugs or other controlled substances and has continued to seek international support in augmenting its efforts to combat narcotics trafficking. There is no direct, verifiable evidence of senior Tajik officials engaging in illicit production or distribution of such drugs or substances. Nevertheless, the lavish lifestyles of some officials do give credence to corruption allegations.

Agreements and Treaties. Tajikistan is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention on Narcotic Drugs, as amended by the 1972 Protocol, and the 1972 UN Convention on Psychotropic Substances. Tajikistan has signed the Central Asian Counter-Narcotics Protocol with the UNODC and neighboring Central Asian countries. Tajikistan is a party to the UN Convention against Transnational Organized Crime and its protocols against migrant smuggling and trafficking in persons.

Cultivation/Production. Opium poppies and, to a much lesser extent, cannabis, are cultivated in very limited amounts, most in the northern Aini and Panjakent districts. Law enforcement efforts limited opium cultivation, but cultivation has also been limited because it has been far cheaper and safer to cultivate opium poppies in neighboring Afghanistan. In 2004, there were 228 registered cases of cultivation of plants containing narcotics substances, including 38 cases of opium poppy cultivation. In the course of continuous “Poppy Operation”, more than 4.9 hectares or about 291,137 plants have been eradicated, including 825 poppy plants.

Drug Flow/Transit. The Tajik government estimates that 85 percent of the narcotics produced in Afghanistan is smuggled across the border into Tajikistan’s Shurobod, Moskovskiy, and Pyanzh districts, according to Tajikistan’s statistics. While the Government may be seriously overestimating the percentage of Afghanistan’s drug production that transits Tajikistan (most observers believe the largest single share of Afghan drugs passes through Iran—especially in view of the sharp increase in use of the western/Turkmenistan route—the total volume of drugs transiting Tajikistan is certainly high and growing. One UN estimate put the amount of heroin from Afghanistan going through the country at roughly 80 to 96 tons a year. Hashish from Afghanistan also transits Tajikistan en route to Russian and European markets.

Domestic Programs (Demand Reduction). The DCA continued to expand and develop its initiatives aimed at increasing drug awareness, primarily among school children. The Tajik Government also publicly acknowledged and encouraged the involvement of domestic and international non-governmental organizations (NGOs) in this effort. This year, a youth center in Khorog was added to the Tajik Government’s programs to fight drug use among the youth and other at-risk groups. The Tajiks spent \$11,000 through the “Decrease of Demand For Drugs in Tajikistan And Uzbekistan” Program for the creation of a Rehabilitation Center for drug users in Badakhshan, and another \$5,000 for the construction of sport complex in Khorog; however, the number of young addicts continues to grow. Over 60 percent of Tajikistan’s drug addicts are in the 18-30 age group. The DCA also significantly expanded its public advocacy efforts in mass media outlets.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. Improved security in the region allowed U.S. officials to significantly increase their presence in Tajikistan, thereby creating an opportunity for expansion of bilateral counternarcotics efforts. The USG provided training for a number of Tajik law enforcement officials through the International Law Enforcement Academy in Budapest and Roswell. Eleven officers of the Tajik drug enforcement units participated in the Counternarcotics Training for Central Asian Law Enforcement Officers at Rostov Service Dog Training School in Russia. In addition to these efforts, officials from the U.S. Embassy in Dushanbe and the DEA Tashkent Office regularly met with Tajik counterparts to discuss narcotics control efforts.

The Road Ahead. The UNODC is likely to remain the principal agency supporting counternarcotics efforts in Tajikistan for at least the next few years. The USG will continue to provide law enforcement training and equipment for protecting the state border and countering drug trafficking. In light of the pullout of Russian border guards from the Tajik-Afghan frontier during 2005, assistance to Tajik interdiction efforts will be particularly important. The USG remains committed to working with the Tajik Government to increase its law enforcement and counternarcotics capabilities. The USG plans to

coordinate closely with European countries, including Russia, to maximize available resources for similar projects.

Turkey

I. Summary

Turkey is a major transit route for Southwest Asian opiates to Europe, and serves as a base for major narcotics traffickers and brokers. Turkish law enforcement organizations focus their efforts on stemming the traffic of drugs and intercepting precursor chemicals. Turkish law enforcement forces cooperate closely with European and U.S. agencies. While most of the heroin trafficked via Turkey is marketed in Western Europe, an increasing amount of heroin and opium also is smuggled from Turkey to the U.S. There is no appreciable cultivation of illicit narcotics in Turkey other than marijuana grown primarily for domestic consumption. There is no diversion from Turkey's licit opium poppy cultivation and pharmaceutical morphine production program. Turkey is a party to the 1988 UN Drug Convention.

II. Status of Country

Turkey is a major transshipment and heroin refining center. Turkey is also a base of operations for international narcotics traffickers and associates trafficking in opium, morphine base, heroin, precursor chemicals and other drugs. The majority of these opiates originate in Afghanistan, and are ultimately trafficked to Western Europe. A smaller but still not insignificant amount of heroin is trafficked to the U.S. via Turkey. Turkish law enforcement forces are strongly committed to disrupting narcotics trafficking. The Turkish National Police (TNP) remains Turkey's most sophisticated counternarcotics force, while the Jandarma and Customs continue to increase their efficacy. Turkish authorities continue to seize large amounts of heroin and precursor chemicals, such as acetic anhydride. It is estimated that multi-ton amounts of heroin are processed in or smuggled through Turkey each month.

Turkey is one of the two traditional licit opium-growing countries recognized by the USG and the International Narcotics Control Board. Opium for pharmaceutical is cultivated and refined in Turkey under strict domestic controls, and in accordance with all international treaty obligations. There is no appreciable illicit drug cultivation in Turkey other than marijuana grown primarily for domestic consumption.

Turkish law enforcement authorities continue to seize large quantities of synthetic drugs that have been manufactured in Northern and Eastern European countries. The majority of the synthetic drug seizures have occurred as the drugs were being shipped through Turkey to other countries in the Middle East.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The GOT devotes significant financial and human resources to counternarcotics activities. Turkey continues to play a key role in Operation Containment (a regional program to reduce the flow of Afghan heroin to Western Europe) as well as in other regional efforts.

The Turkish International Academy against Drugs and Organized Crime (TADOC), established under the Turkish National Police (TP), continues to be the key agency leading the fight against drug abuse in Turkey. In 2004, TNP increased the number of drug training and prevention units it previously established in various provinces, to cover most parts of Turkey. These units conducted intensive training programs for parents, teachers and students in these provinces, making a major contribution to the GOT's drug prevention efforts.

Accomplishments. TADOC organized 79 training programs for local and regional law enforcement officers in 2004, mostly on narcotics smuggling and money laundering. The USG provided three of these training programs. A total of 257 foreign officers were trained at TADOC this year, including officers from the Balkans, Central Asia and Afghanistan. Syrian officials received counternarcotics training for the first time at TADOC this year. The UN conducted a drug abuse survey in 6 major cities in Turkey in 2004, which showed that there was no major increase in drug abuse in Turkey in the last couple of years. TADOC's academy director attributed this to the TNP's intensive training and prevention efforts throughout Turkey.

Law Enforcement Efforts. Through 22 December 2004, Turkish law enforcement agencies seized 8.9 tons of heroin, 4.7 tons of morphine base, 10.8 million dosage units of synthetic drugs, 8.9 tons of hashish and 206 kilograms of cocaine. In addition, the GOT law enforcement authorities have made more than 15,187 drug-related arrests.

Corruption. In June 2003 a Parliamentary Commission on Corruption issued a report examining the reasons for and possible solutions to the problem of government corruption. It recommended increased transparency in public administration, strengthened audits, hiring of more qualified personnel, adoption of international judicial standards, and increased public and business education. The Parliamentary Commission on Corruption conducted detailed investigations into one former prime minister and five former ministers. Results of these investigations were sent to the Supreme Court. The court cases for these officials have not yet been finalized. Another important step the GOT took against corruption in 2004 was preparing the Draft Law on Combating Corruption, which is currently on the General Assembly's agenda. The law defines the crimes that fall under corruption, as well as the prosecution procedures for these crimes. The law also calls for periodic training of public sector personnel on work ethics and corruption. Another law the GOT submitted to the Parliament this year, which is still awaiting the Commission's approval, is the law making December 9 Anti-Corruption Day in Turkey.

Agreements and Treaties. Turkey is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention, as amended by the 1972 Protocol. Turkey also is a party to the UN Convention Against Transnational Organized Crime and its three protocols. The U.S. and Turkey cooperate in law enforcement matters under a 1981 treaty on extradition and mutual assistance in legal matters.

Cultivation/Production. Illicit drug cultivation, primarily marijuana, is minor and has no impact on the United States. The Turkish Grain Board strictly controls licit opium poppy cultivation quite successfully, with no apparent diversion into the illicit market.

Drug Flow/Transit. Turkey remains a major route, and storage, production and staging area, for the flow of heroin to Europe. Turkish-based traffickers and brokers operate in conjunction with narcotics smugglers, laboratory operators, and money launderers in and outside Turkey. They finance and control the smuggling of opiates to and from Turkey. Afghanistan is the source of most of the opiates reaching Turkey. Morphine and heroin base are smuggled overland from Pakistan via Iran. Multi-ton quantities of opiates and hashish have been smuggled by sea from Pakistan to points along the Mediterranean, Aegean, and/or Marmara seas. Opiates and hashish also are smuggled to Turkey overland from Afghanistan via Turkmenistan, Azerbaijan, and Georgia. Traffickers in Turkey illegally acquire the heroin precursor chemical, acetic anhydride, from sources in Western Europe, the Balkans and Russia. For fiscal year 2004, 1.5 metric tons of acetic anhydride was seized in, or destined for, Turkey. Turkish-based traffickers control and operate heroin laboratories at various locations. Some of them reportedly have interests in heroin laboratories operating near the Iranian-Turkish border in Iran. Turkish-based traffickers control much of the heroin marketed to Western Europe.

In 2004, Turkish authorities reported an increase in synthetic drug seizures throughout Turkey. Although Turkish law enforcement has not seen a large increase in synthetic drug manufacturing in

Turkey, Turkish National Police did report one synthetic drug laboratory seizure in Usak, Turkey in December 2004. For fiscal year 2004, a total of 7.7 million dosage units of synthetic drugs, predominantly amphetamine and Ecstasy, were seized in Turkey.

Demand Reduction. While drug abuse remains low in Turkey compared to other countries, the number of addicts reportedly is increasing. Although the Turkish Government is increasingly aware of the need to combat drug abuse, the agencies responsible for drug awareness and treatment remain under-funded. As of 2004, six Alcohol and Substance Abuse Treatment and Education Clinics (AMATEM) have been established, which serve as regional drug treatment centers. Due to lack of funds, only one of the centers focuses on drug prevention as well as treatment. The most recent clinic was opened in Ankara in 2004 and will serve as the countrywide coordinating center for drug and alcohol treatment and education. The Health Ministry has not conducted a drug abuse survey since 1995 due to lack of resources. In 2004, the United Nations coordinated a survey in 6 major cities on drug abuse in Turkey. The survey did not demonstrate any major increase in the number of drug users compared to previous data provided by local NGOs.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives and Programs. Through fiscal year 1999, the U.S. Government extended \$500,000 annually in assistance. While that program has now terminated, during 2004-05 the U.S. Government anticipates spending approximately \$100,000 in previously-obligated funds on counternarcotics programs.

Bilateral Cooperation. U.S. counternarcotics agencies report excellent cooperation with Turkish officials. Turkish counternarcotics forces have developed technically, becoming increasingly professional, in part based on the training and equipment they received from the U.S. and other international law enforcement agencies.

Road Ahead. U.S. policy remains to strengthen Turkey's ability to combat narcotics trafficking, money laundering and financial crimes.

Turkmenistan

I. Summary

Turkmenistan remains a major transshipment route and passage for traffickers seeking to smuggle contraband to Turkish, Russian and European markets from neighboring drug-producing countries. Turkmenistan is not a major producer or source country for illegal drugs or precursor chemicals. Turkmenistan shares a rugged and remote 744-kilometer border with Afghanistan, as well as a 992-kilometer boundary with Iran. Counternarcotics efforts are carried out by the Ministry of National Security (MNB), Ministry of Internal Affairs (MVD), State Customs Service (SC), Border Guards Service (SBS), and Prosecutor General's Office. The State Counter Narcotics Coordination Commission is an inter-departmental body responsible for coordination of the activities of concerned government departments. According to government of Turkmenistan (GOTX) statistics, law enforcement officers seized a total of about 563 kilograms of illegal narcotics in the first six months of 2004. The GOTX continues to publicly commit itself to counternarcotics efforts; however, its law enforcement agencies are hampered by a widespread lack of resources, training and equipment. Turkmen officials have acknowledged publicly that smuggling organizations are increasing their efforts to transit narcotics across Turkmenistan and large-scale seizures are increasingly common. Mounting evidence, together with increased contacts with government officials and non-governmental organizations, strongly suggests that domestic drug abuse is steadily increasing, although concrete statistics are difficult to obtain. Turkmenistan remains vulnerable to financial fraud and money laundering schemes due to its dual exchange rate and the presence of foreign-operated hotels and casinos, although no cases have been officially reported. Turkmenistan is a party to the 1988 UN Drug Convention.

II. Status of Country

Turkmenistan remains a key transit country for the smuggling of narcotics and precursor chemicals. The flow of Afghan opiates, destined for markets in Turkey, Russia and Europe, enter Turkmenistan from Afghanistan, Iran, Pakistan, Tajikistan and Uzbekistan. The bulk of Turkmen law enforcement resources and manpower are directed toward stopping the flow of drugs from Afghanistan. Turkmen law enforcement efforts at the Turkmen-Uzbek border are primarily focused on interdiction of smuggled commercial goods, thus opening up the possibility of increased drug smuggling by this route. U.S. Embassy officers, visiting Iranian crossing points in 2004, confirm that commercial truck traffic to and from Iran continues to be heavy. Caspian Sea ferryboat traffic from Turkmenistan to Azerbaijan and Russia continues to be an attractive smuggling route. Turkmenistan Airlines operates international flights connecting Ashgabat with Abu Dhabi, Bangkok, Beijing, Birmingham, Dubai, Frankfurt, Istanbul, London, Moscow, New Delhi, Almaty, Kiev, Tashkent and Tehran.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Turkmenistan has a multi-year national plan for counternarcotics activities. The plan began in 2001, and is in effect through 2005. It includes measures to address trafficking, legal reform of counternarcotics laws, treatment and rehabilitation of addicts and expanding international cooperation. During the past year, the president of Turkmenistan acknowledged that drug use and smuggling were a problem in Turkmenistan, and increased pressure on sometimes less-than-efficient law enforcement officials to improve counternarcotics efforts. The president also signed a new law on narcotic drugs, psychotropic substances, precursors and measures to fight their trafficking which made it easier to prosecute drug users and smugglers. The GOTX incorporated recommendations from the

UNODC and created rules to curtail usage and trafficking. The new law includes provisions for prevention and treatment programs.

Law Enforcement Efforts. The GOTX continues to give priority to counternarcotics law enforcement and in 2004 Customs and the Border Guards received equipment from the USG and international organizations. The EXBS program (to improve the capacity to detect smuggled WMD) installed an x-ray machine at the Serhetabad (formerly Gushka) border crossing and delivered spare parts and maintenance to the Point Jackson cutter based at the Turkmenbashi port. Night vision goggles, water trucks and binoculars were also provided to the SBS by EXBS—a U.S. program to improve border surveillance capacity for WMD. State department narcotics assistance supplied the newly created State Forensic Service (SFS), with drug and precursor identification kits and laboratory equipment to support drug interdiction efforts. The SC also purchased eight x-ray machines and installed them at border crossings. Turkmen border forces are moderately effective in detecting and interdicting narcotics and reported a total of 563 kilograms of illegal narcotics seized in the first six months of 2004. According to GOTX officials, there are now female border guards along the Turkmen border checkpoints to search suspected female traffickers; nearly half of all traffickers being arrested at border crossings are female.

Corruption. Low salaries of Turkmen law enforcement officials, combined with their broad general powers, foster an environment in which corruption occurs. A palpable general distrust of the police by the Turkmen public, fueled by anecdotal evidence of police officers soliciting bribes under the guise of routine traffic stops, suggests a problematic level of corruption in Turkmen law enforcement. Reports linger that senior officials of the GOTX are directly linked to the drug trade, though these reports have not been confirmed. Payments to lower-level officials at border crossing points to facilitate passage of smuggled goods frequently occur. Such arrangements easily could facilitate drug trafficking.

Agreements and Treaties. Turkmenistan is a party to the 1998 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention as amended by the 1972 Protocol.

Cultivation and Production. Turkmenistan is not a significant producer of illegal drugs, although small-scale opium cultivation is thought to occur in remote mountain and desert areas. Each spring the GOTX conducts limited aerial inspections of outlying areas in search of illegal poppy cultivation. Upon discovery opium crops are eradicated by Turkmen law enforcement. Some sources within GOTX law enforcement agencies also report that the cannabis plants are being cultivated for domestic consumption in the country's remote areas.

Drug Flow/Transit. Turkmenistan remains a primary transit corridor for smuggling organizations seeking to transport opium and heroin to markets in Turkey, Russia and Europe, as well as for the shipment of precursor chemicals to Afghanistan. According to GOTX officials, the quantity of drugs intercepted this year along the Afghan border has increased due in part to their efforts, as well as the significant increase in poppy production in Afghanistan. Officially released 2004 data shows some impressive seizures but lack of prior comparable data makes it impossible to determine if these statistics represent a true improvement. GOTX authorities report that a number of Iranian armed smugglers who attempted to cross the border were shot by Turkmenistan law enforcement. They laud this as a success in counternarcotics trafficking. Officials have also pointed to problems with narcotics identification and have gratefully accepted technical training and equipment to allow them to improve their efforts.

Turkmenistan's nearly 1800-kilometer Uzbek frontier presents a formidable challenge to border security forces. In 2004 officials moved to upgrade many ill-equipped border crossing points. GOTX officials have expressed concern to U.S. embassy officers that the Uzbek frontier has increasingly become an attractive alternative for smugglers seeking to circumvent more stringent controls on Turkmenistan's southern borders.

Turkmenistan's two major border control agencies, the SC and the SBS, are significantly handicapped by a systematic lack of adequate resources, facilities and equipment in carrying out their drug enforcement duties. Most Turkmen border crossing points have rudimentary inspection facilities for screening vehicle traffic and lack reliable communications systems. The GOTX has supplied some computers, x-ray equipment, and dogs trained in narcotics detection; however, these efforts were initiated only in 2004 and significant investment in infrastructure, equipment and training is still required by the GOTX. Until meaningful legal and political reforms are initiated in Turkmenistan, it is likely to continue to serve as a major transit route for illegal drugs and precursors.

Domestic Programs/Demand Reduction. Currently, the Ministry of Health operates six drug treatment clinics. Narcotics users receive treatment at these clinics without having to reveal their identity. Regional media outlets have increasingly covered drug-related stories, U.S. and international narcotics treatment? Programs, have highlighted the dangers of drug addiction, and have informing the public about the availability of the state's treatment facilities.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. The USG seeks to assist Turkmenistan in updating its law enforcement institutions and body of law to counter more effectively the illegal drug trade. In 2004 the GOTX made significant progress in cooperating with the USG. The GOTX facilitated training of customs, border, scientific and legal personnel throughout 2004. The GOTX's decision to cooperate in regional training and permit border visits to inspect crossing points has opened new opportunities to expand bilateral cooperation.

The Road Ahead. In the coming year, the USG will continue to cooperate with Turkmenistan in its fight against the illegal drug trade. The USG also will encourage the GOTX to institute long-term demand reduction efforts and will foster supply reduction through interdiction training, law enforcement institution building, the promotion of regional cooperation, and an exchange of drug-related intelligence.

Ukraine

I. Summary

Trafficking and use of narcotics continued to increase in Ukraine in 2004. Ukraine has adequate counternarcotics legislation. The Government of Ukraine (GOU) continued to take steps to limit illegal cultivation of poppy and hemp. The transit of narcotics through Ukraine is a serious and growing problem. Combating narcotics trafficking and use, and its effects, continues to be a national priority, though a lack of financial resources seriously hinders Ukrainian efforts. Coordination between law enforcement agencies responsible for counternarcotics work has improved but still remains a problem due to regulatory and jurisdictional constraints. Ukraine is a party to the 1988 UN Drug Convention, and it follows the provisions of the Convention in its counternarcotics legislation.

II. Status of Country

Although Ukraine is not a major drug producing country, it is located astride several important drug trafficking routes into Europe, and thus is an important transit country. Ukraine is a significant transit corridor for narcotics originating in East, Central and Southwest Asia (Afghanistan) and transiting through Russia, the Caucasus and Turkey further into the Western Europe. Some drug traffic routes through Ukraine originate in Latin America and Africa. Ukraine's domestic market is increasingly influenced by drugs trafficked from both Asia and Central and Eastern Europe (Poland, Romania, Baltic Republics). Numerous available ports on the Black and Azov seas, river transportation routes, porous borders, and inadequately financed and under-equipped border and customs control forces make Ukraine susceptible to drug trafficking, especially on the north-east border with other former Soviet republics. Domestic use of narcotics continues to rise, and the number of drug addicts is increasing. Domestic drug abuse is marked by a growing trend of use of amphetamine-type stimulants (ATS).

III. Country Actions Against Drugs in 2004

Policy Initiatives. While Ukraine has domestic counternarcotics legislation sufficiently flexible to permit adequate counternarcotics enforcement, as part of its long-term counternarcotics strategy (See below) improvements in drug legislation are under consideration. In 2004 the Government of Ukraine continued to implement a comprehensive policy paper entitled "The Program of the State Policy in Combating Illegal Circulation of Narcotics, Psychotropic Substances and Precursors for 2003-2010." The Program acknowledged the growing scale of drug abuse, the lack of adequate education and public awareness efforts, community prevention efforts, treatment and rehabilitation. The Program is to be implemented in two stages: stage one to be implemented between 2003-2005, and stage two to be implemented between 2006-2010. Stage one objectives include: improvement of legislation; improved monitoring of drug abuse and drug trafficking; improving interagency cooperation; creating a modern interagency data bank; improving the prevention of drug abuse; increasing law enforcement capacity; scientific research; and setting up an interagency lab to research new drugs and discover new trends in drug trafficking. Stage two will include integration into the European information space and exchange of information on drug trafficking; strengthening drug abuse prevention centers; introducing new treatment practices; increasing public awareness and education, especially in schools; further strengthening law enforcement capacity and fully achieving international standards. These priorities are further split into 63 specific tasks, and responsible agencies were named. The Program also provides estimates of future funding to support its implementation. The total estimate is over 300

million Ukrainian hryvnias (\$55 million), including about UAH 50 million (\$9 million) in 2003, and nearly UAH 59 million (\$10.5 million) in 2004.

In Ukraine, counternarcotics enforcement responsibility is shared between the Ministry of Internal Affairs (MIA) with its domestic law enforcement function and the Security Service of Ukraine (SSU), which deals with trans-border aspects of drug traffic. The State Border Guard Service (SBGS) and State Customs Service (SCS) carry out certain drug enforcement functions in their respective field of operation, mainly drug interdiction customs borders.

In 2004 the Government of Ukraine proposed amending the existing counternarcotics legislation to further improve the regulation of licensed licit production and sale of narcotics, psychotropic substances and dual use precursors. The new legislation is currently pending in the Ukrainian Parliament.

Accomplishments. In 2004 Ukraine took initial steps to implement a wide-scale BUMAD (Belarus, Ukraine, Moldova Anti-Drug) Program sponsored by the European Union and designed to decrease drug traffic in these three bordering countries. As part of the BUMAD Program, Ukraine is strengthening its potential to collect, process and disseminate information on drug trafficking on both national and regional levels.

Law Enforcement Efforts. According to official statistics for 2004 (January through November), Ukraine authorities investigated approximately 62,886 narcotics cases, including: 17,119 instances of the sale of narcotics; 178 cases of money laundering; 2,610 drug dealer rings; 224 illegal drug labs. In addition, Ukraine law enforcement seized 24.06 tons of illegal drugs, and 2,884,500 square meters of illegal cannabis and poppy planting were destroyed.

In 2004, the MIA improved the institutional structure of its specialized Drug Enforcement Department (DED). It now consists of two large divisions and a number of operational bureaus. The total number of DED officers has increased by 7 percent over the past year for a total figure of 2,684 persons. In June 2004 the Ministry approved its agency program, which envisages enhancing the professional skills and equipment of its counternarcotics units. The MIA conducted four major nation-wide counternarcotics operations in 2004. In January 2004, the SSU seized approximately 1.7 tons of poppy straw, one of the largest seizures in the past decade. The seized poppy straw could have been used to prepare more than 140,000 doses of concentrated opium, which would have had a "black market" value of approximately \$380,000. In the first half of 2004, 24,481 drug cases were referred to Ukrainian courts or were pending from previous years, of which 16,913 cases were tried resulting in 13,897 convictions.

Corruption. Ukrainian politicians and private citizens, as well as international experts, point out that corruption remains a major problem. Corruption in Ukraine is rarely linked directly with narcotics, although it decreases the overall effectiveness of law enforcement efforts to combat organized crime, a major factor in the narcotics business. In 2004, there were no charges of corruption of public officials relating to drugs. To combat corruption, the Ukrainian government has adopted an extensive set of laws and decrees. At the beginning of 2001, the government approved a national plan of action to combat corruption, but progress in implementation has been extremely slow.

Agreements and Treaties. Ukraine is a party to the 1988 UN Drug Convention and has also signed specific counternarcotics project agreements with the UN Office on Drugs and Crime (UNODC). Ukraine also is a party to the 1961 UN Single Convention on Narcotic Drugs, as amended by the 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances. The U.S.-Ukraine Mutual Legal Assistance Treaty came into force in February 2001. Ukraine also is a party to the UN Convention against Transnational Organized Crime and its protocols against migrant smuggling and trafficking in women and children, and is a signatory to the UN Convention Against Corruption. The U.S. and Ukraine signed a Memorandum of Understanding on Law Enforcement Assistance in December 2002.

Cultivation/Production. Opium poppy is grown in western, southwestern, and northern Ukraine, while hemp cultivation is concentrated in the eastern and southern parts of the country. Small quantities of poppy and hemp are grown legally by licensed farms, which are closely controlled and guarded. The Cabinet of Ministers approved such cultivation in late 1997. Despite the prohibition on the cultivation of drug plants (poppy straw and hemp), many cases of illegal cultivation by private households were discovered.

Drug Flow/Transit. Ukraine continues to experience an increase in drug trafficking from Afghanistan. Drugs pass through several countries before transiting Ukraine and come into Ukraine mostly from Russia, the Caucasus and Turkey. Shipments are usually destined for Western Europe and arrive by road, rail, or sea, posing a lower risk than shipment by air or mail. Lately, experts noted an increase in heroin traffic from Turkey into Ukraine by sea and further by land across Ukraine's western border into Western Europe. Experts believe that enforcement along traditional Balkan drug traffic routes has improved, and that criminals are looking for additional trafficking channels. The low street price of heroin in countries such as Bulgaria, Macedonia and Serbia apparently supports this assumption. Drug traffic from Asia is increasingly controlled by well-organized international Afghan, Pakistani, and Tajikistani criminal groups, which use citizens of the former Soviet republics as drug couriers. At the same time, the high street price of heroin (\$70 per one gram) in Ukraine in 2004 testified to comparatively effective heroin interdiction efforts of Ukrainian law enforcement agencies. The largest segment of drug flow involves poppy straw and hemp/marijuana, which are the most popular types of drugs in Ukraine. They are usually produced and consumed locally and partially trafficked to Russia. The same types of drugs are also trafficked from Russia into Ukraine. These drugs are cheap and therefore are easily accessible.

The traffic of synthetic drugs and psychotropic substances from Poland and hard medical drugs from Romania and Moldova is growing. Criminal groups of mixed origin (Ukrainians, Polish, Belarusians and Russians), which formed in the 1990s and traditionally stayed away from drug traffic business, are now increasingly taking up this lucrative niche. The price of these drugs is lower than that of heroin and cocaine and therefore is attractive to young drug addicts. Other smuggling routes involve cocaine from Latin America and hashish from Northern and Western Africa. These routes transit Ukraine into Europe. However, the quantity of these drugs is comparatively small.

Another notable aspect of Ukrainian involvement in international drug trafficking is the number of Ukrainian nationals involved in the movement of cocaine from Latin America. While this expensive cocaine does not reach Ukraine, international law enforcement has been wary of Ukrainian sailors and ship captains who recruit themselves to Colombian drug trafficking organizations to transport bulk amounts of cocaine by ship. Some of the largest cocaine seizures off the coast of the United States were from ships manned by Ukrainian sailors.

Domestic Programs (Demand Reduction). Estimates of the number of drug abusers vary widely, up to one million reported by local NGOs in press reports. Drug addicts commit approximately 15,000 criminal offenses annually. Drug addiction is a cause of more than 1,000 deaths every year, according to Ukrainian health authorities. Marijuana and hashish are growing in popularity with young people; but opium straw extract remains the main drug of choice for Ukraine addicts. Young people are using synthetic drugs more frequently, such as ephedrine, Ecstasy (MDMA), LSD, amphetamines and Czech-produced methamphetamines. Hard drugs such as cocaine and heroin are still too expensive for most Ukrainian drug users.

Despite major efforts to combat drug trafficking, the narcotics flow intercepted on Ukraine's borders is estimated at not more than 30 percent of the total traffic. Ukrainian efforts to combat narcotics continue to be hampered by a lack of resources (e.g., financing, personnel and equipment). Ukrainian officials are working to reduce drug demand through preventive actions at schools, as most Ukrainian drug abusers are under the age of 30. Drug information centers have been opened in the cities and

regions with the highest levels of drug abuse. NGOs operating with assistance from international institutions are conducting a number of rehabilitation programs throughout the country.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. U.S. objectives are to assist Ukrainian authorities in developing effective counternarcotics programs in interdiction (particularly of drugs transiting the country), investigation, and demand reduction, as well as to assist Ukraine in countering money laundering. Officers from the Drug Enforcement Administration, the Department of Treasury, and the Department of Justice have conducted a number of training courses and conferences funded by the Department of State in the areas of drug interdiction, forensic science, money laundering and management training.

The Road Ahead. Trafficking of narcotics from Asia and cocaine from Latin America to European destinations through Ukraine is on the upswing as drug traffickers look for new ways to circumvent West European customs and border controls. Demand reduction and treatment of drug abusers remain challenges requiring close attention. Law enforcement agencies need continued assistance in adopting modern techniques to fight drug trafficking, as well as to enhance interagency and international cooperation.

United Kingdom

I. Summary

The United Kingdom (UK) is a consumer country of illicit drugs. Like other developed nations, the UK faces a serious domestic drug problem. The UK is in the seventh year of a ten-year drug strategy launched in 1998 to address both the supply and demand aspects of illegal drug use. The UK strictly enforces national precursor chemical legislation in compliance with EU regulations. Crime syndicates from around the world tap into the underground narcotics market and use the UK as a major shipping route. Legislation introduced in October 2001 to improve the UK's asset forfeiture capabilities took effect in January 2003 and is being effectively implemented. The UK is party to the 1988 UN Drug Convention.

II. Status of Country

Cannabis remains the most-used illicit drug in the UK; according to Home Office figures for 2002/03 (most recent available), around three million 16-59 year-olds reported using cannabis at least once in the past year. However, heroin and other major drugs remain a serious concern and govern the British government's active domestic and international drug policies.

Overall, the latest official surveys on drug use showed that in 2002/03 about 12 percent of those age 16-59 reported having used an illicit drug in the past year. Class A (i.e. hard) drug use among young people has been broadly stable since 1996 with recent drops in the incidence of use of some individual drugs, such as Ecstasy. In 2002/03 around 5.4 percent of young people had used Ecstasy in the past 12 months—a reduction of 21 percent from the previous year. Cocaine use seemed to have leveled off in the latest figures, and was the only drug for which use increased among 16-24 year-olds. However, official estimates of cocaine and crack users are well over 700,000 and, with as many as 116,000 opiate users in the UK, heroin and powder and crack cocaine remain major concerns. Furthermore, drug use among the very young continues to be a problem. An independent study of drug use in 2003 among 11-15 year olds showed that use of any illicit drug was significantly higher in this age group than in the overall average, 21 percent. The study, published in 2004 by the National Centre for Social Research and the National Foundation for Education Research, indicated that, as with other age groups, cannabis was the most frequently used drug. It also reported an increase in the incidence of use of 'magic mushrooms' from 1 to 2 percent between 2002 and 2003, and an increase from 6 to 8 percent in the group reporting use of gas, glue, aerosols, or solvents.

Unofficial figures released in January 2005 from a survey of drug use in Britain by the Independent Drug Monitoring Unit (IDMU), a local NGO, indicate a sharp decline in prices for most major illegal drugs on the UK street market. Over the past ten years, prices of cocaine, heroin, cannabis, and ecstasy have all fallen between 32-70 percent; crack is the only exception, with prices fluctuating around an average of \$47.50 (£25).

Virtually all parts of the UK, including many rural areas, confront the problem of drug addiction to at least some degree. The National Criminal Intelligence Service (NCIS) reports that Britain faces a significant threat from national and international organized crime. Drugs are linked to about 80 percent of all organized crime in London, and about 60 percent of crime overall.

III. Country Actions Against Drugs in 2004

Policy Initiatives/Accomplishments. UK counternarcotics policies have a strong social component, reflecting the view that drug problems do not occur in isolation, but are often linked to other social

problems. In 2004, the British government continued its ten-year strategy program, first launched in 1998, that emphasizes that all sectors of society should work together to combat drugs. Trends in responding to drug abuse with government programs reflect wider UK government reforms in the welfare state, education, employment, health, immigration, criminal justice, and economic sectors.

UK counternarcotics strategy focuses on Class A drugs and has four emphases: to help young drug abusers resist drug misuse; to protect communities from drug-related, antisocial and criminal behavior; to enable people with drug problems to recover and live healthy, crime-free lives; and to limit access to narcotics on the streets. Key performance targets were set in each of these four areas and updated in the November 2002 drug strategy. The most controversial aspect of the updated strategy was the proposal to downgrade cannabis to a Class C drug. The final legislation implementing this downgrade was enacted in July 2003, taking effect on January 29, 2004. Class C categorization reduced the maximum sentence for possession of cannabis from five to two years in prison. There is now a presumption against arrest for adults for possession, though not for young people. Maximum penalties for supplying and dealing remain at 14 years. Notwithstanding this amendment, the UK government has emphasized that it continues to regard cannabis as a harmful substance and has no intention of either decriminalizing or legalizing its production, supply or possession. There are currently no plans to change the penalties for Class C offenses.

Arrests for possession of cannabis have fallen 30 percent in 2004, as police are encouraged to focus resources on Class A enforcement. Despite an aggressive government education campaign aimed at cannabis users, some police authorities report a lack of understanding on the part of offenders that the drug remains illegal and that they can be detained or prosecuted for possession or dealing.

Expenditures under the updated overall drug strategy are increasing 21 percent between 2002 and 2005, from \$1.95 billion (£1.026 billion) in 2002 to \$2.47 billion (£1.3 billion) in 2004, and up to \$2.85 billion (£1.5 billion) in 2005. Drug treatment expenditures are targeted to increase 31 percent over the same period, and expenditures on programs for young people will rise 59 percent. The largest increase will come in spending on community programs (234 percent).

Although fewer in number than other cocaine seizures, the number of crack seizures has increased steadily over the last ten years. Figures for crack offenders have also risen steadily. This trend prompted the UK government in 2002 to introduce a new strategy to target the crack problem, both by attacking suppliers and through developing treatment programs tailored for crack users. Under the National Crack Action Plan, existing crack treatment facilities have been evaluated for effectiveness and new sites have been opened. The government reports it has successfully used the “Antisocial Behavior Act of 2003” to close 150 crack houses in the first nine months of 2004.

Based on statistics showing an increase in drug-related deaths, the government launched a specific action plan to tackle this problem in November 2001. The plan calls for a three-to-five-year program of campaigns, surveillance, and research to reduce drug-related deaths by 20 percent by 2004. Latest statistics indicate that drug-related deaths between 2001 and 2002 dropped 4 percent, to the lowest levels since 1998.

In May 2003, the government launched a \$5.7 million (£3 million) multimedia campaign called “FRANK”, which offers help and advice to anyone who may be affected by drugs. The latest information cites over 650,000 calls to the FRANK help line. The UK now has drug education programs in all schools, supported by a certificate program for teachers, and is reviewing the education packages for effectiveness. The education programs are linked to the FRANK help line services. “Positive Futures,” a sports-based program started in 2000 to specifically target socially vulnerable young people, has served 50,000 young people since its inception with 104 projects established in regions throughout the country. A program to develop new drug-prevention services for young people at risk of drug misuse is an integral component of the 26 Health Action Zones (a broader health-policy initiative.) The UK is rapidly expanding treatment services and believes it is on track to meet the target

of doubling the number of people in treatment by 2008; current figures show a 54 percent increase of people in drug treatment programs since 1998. An additional \$407 million (£214 million) has been allocated over three years (2002-05) for both community and prison treatment programs. National Health Service statistics show a 50 percent increase in trained drug treatment professionals and a drop in waiting times for treatment from 6-12 weeks to 2-4 weeks since 2002.

Legislation was passed in 2000 under the Criminal Justice and Court Services Act giving police the power to test criminal suspects for Class A drug use when an offense may be linked to hard-drug misuse. Courts are required to weigh a positive test result when deciding bail, and bail may be denied or restricted if an offender refuses a test or refuses treatment after a positive test. Testing also is extended to offenders serving community sentences and those on parole. Under the Criminal Justice Interventions Program created in January 2003, now called the Drug Interventions Program, the UK government targeted this testing regime to the 30 areas most affected by drug-related crime; 36 additional areas were added in April 2004, with a 2004/05 budget of \$287.3 million (£151.2 million). In 2004, an average of 5,000 offenders per month were tested for Class A drugs under the program, and 1,500 people per month were sent to treatment. An additional 30 areas will be targeted from April 2005. The overall total budget for three years will reach \$849.3 million (£447 million). The goal for 2008 is to have 1,000 people per week entering treatment.

The Drug Interventions Program is designed to mesh with the existing program of Drug Treatment and Testing Orders (DTTO). DTTO is a community-based sentencing program that authorizes local courts to require offenders to undergo treatment and submit to mandatory and random drug testing. The Order began as a pilot program in September 1998 in three areas of England. In October 2000, after the pilot program demonstrated that the combination of treatment and random testing significantly reduced illegal drug use and criminal activity of offenders subject to the Order, it was rolled out nationally in England and Wales. All police forces in England and Wales now have arrest referral schemes aimed at identifying drug abusers at the point of arrest and referring them into treatment or other programs. Between January 2003 and September 2004 15,090 DTTOs were issued in England and Wales.

In January 1999, the Home Secretary announced an initiative to reduce smuggling of drugs into prisons, and the government launched a prison service drug rehabilitation program. Counseling, assessment, referral, advice, and treatment (CARAT) services are now available in every prison in England and Wales. The program is linked to another initiative called "Prospects," which was launched in February 2003 to offer support to those leaving prison by providing stable living situations and assistance with life skills. The UK government runs 77 different types of drug rehabilitation program in prisons, including a high-intensity short duration program and plans to expand the number of programs available to 117 by March 2006.

Under the UK's devolved government system, Scotland and Northern Ireland have separately articulated policies and independent judicial systems. However, they have published and implemented similar counternarcotics strategies linked to the goals and policies outlined by the central UK government.

The UK attended the International Conference on Reconstruction for Afghanistan in January of 2002 and pledged to give \$330 million (£200 million) to Afghanistan over four years. Through the Department for International Development (DFID), \$107 million (£65 million) has been given to Afghanistan for humanitarian and reconstruction purposes. (To be updated.)

The UK has taken lead responsibility for coordinating international assistance to Afghanistan to help the Transitional Afghan Government's counternarcotics efforts. Starting with the 2003 crop, the aim is to reduce opium production by 70 percent by 2008 and completely eliminate it by 2013. A combination of measures will be employed, including eradication, improving security and law enforcement capacity, and implementing reconstruction programs to encourage farmers to move away

from poppy cultivation. The UK government announced in December 2004 that it would increase its spending on this initiative from \$133 million to \$190 million (£70 million to £100 million) over the next three years. The UK cooperates very closely with the U.S. and other international donors on these efforts.

In Iran, the UK helps fund a UN counternarcotics program, as well as offering bilateral assistance for drug interdiction efforts. The UN project covers training and equipment primarily to strengthen counternarcotics work on Iran's borders with Afghanistan and Pakistan. British assistance includes direct training and equipment to enhance Iran's exit border with Turkey, filling gaps in the UNODC's Iran project.

Law Enforcement Efforts. The UK gives a high priority to counternarcotics enforcement and the United States enjoys good law enforcement cooperation from the UK. The UK honors U.S. asset seizure requests and was one of the first countries to enforce U.S. civil forfeiture judgments. The "Proceeds of Crime Act," which took effect in January 2003, has significantly improved the government's ability to track down and recover criminal assets. Official figures indicate that \$159.6 million (£84 million) has been seized under the act to date.

The number of drug seizures rose in 2001 and 2002 by 5 percent in both years (most recent detailed statistics)—131,190 in 2001 and 137,340 in 2002. Cannabis seizures represented 75 percent of all seizures. The number of seizures involving amphetamines, cannabis, and crack rose in 2002 by 2 percent, 9 percent, and 15 percent respectively. Seizures of cocaine, ecstasy, heroin, and LSD fell by 5 percent, 21 percent, 16 percent, and 65 percent respectively. Preliminary figures state that between April 2002 and December 2003, HM Customs seized 26,079 kilograms of cocaine and 11,044 kilograms of heroin and "disrupted" 330 organized crime groups. In the first nine months of 2004, they reported seizing 18,456 kilograms of the two drugs combined "targeted at the United Kingdom" and disrupting 121 organized crime groups.

The number of known drug offenders fell to 102,600 in 2001, before rising to 113,050 in 2002. The majority of these were cannabis offenses. Heroin offenders were the largest group of known Class A drug offenders, accounting for 12 percent of all known offenders in 2001 and 10 percent in 2002. About 90 percent of all persons dealt with in the courts for drug offenses were male. From 1998 to 2002, offenders under the age of 21 have consistently represented about 40 percent of all offenders.

A progress report issued jointly in December 2004 by the Prime Minister's office and the Home Office noted that the UK government plans to launch a special three-month enforcement campaign in January 2005 to focus on crack houses and drug-related gun crime. In the report the UK government pledged to seek new legislation in 2005 to give police and the courts tougher powers to tackle drug dealers and drug-related crime. It also plans to bring together elements of the National Crime Squad, the National Criminal Intelligence Service, and the drug enforcement arm of HM Customs to form the Serious Organized Crime Agency with the goal of further improving enforcement efforts.

Corruption. Narcotics-related corruption of public officials at all levels is not considered a problem in the UK. When identified, corrupt officials are vigorously prosecuted.

Agreements and Treaties. The U.S. and UK have a long-standing extradition treaty, a Mutual Legal Assistance Treaty (MLAT), and a narcotics agreement, which the UK has extended to some of its dependencies. A new bilateral extradition treaty has been negotiated and signed by both countries and awaits final ratification. A new UK extradition statute, which entered into force in January 2004, facilitates U.S. requests for extradition even prior to U.S. ratification of the new treaty, although this status is conditional and subject to revocation by Parliament.

The United States and United Kingdom also have a judicial narcotics agreement and an MLAT relating to the Cayman Islands, which extends to Anguilla, the British Virgin Islands, Montserrat, and the Turks and Caicos Islands. The UK is a party to the 1988 UN Drug Convention, the 1961 UN

Single Convention on Narcotic Drugs as amended by the 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances. The U.S.-UK Customs Mutual Assistance Agreement (CMAA) dates from 1989. In December 2000, the UK signed, but has not yet ratified, the UN Convention against Transnational Organized Crime, the Protocol to Prevent, Suppress and Punish Trafficking in Persons, and the Protocol against the Smuggling of Migrants.

Cultivation/Production. Cannabis is cultivated in limited quantities for personal use, and occasionally sold commercially. Most illicit amphetamines and MDMA (Ecstasy) are imported from continental Europe, but some are manufactured in the UK in limited amounts. Authorities destroy crops and clandestine facilities as detected. U.S. authorities have been concerned about a growing incidence of production of a “date rape” precursor drug, GBL. While the UK government made GHB, the “date rape” drug, illegal in July 2003, GBL remains uncontrolled and there were some instances of trafficking of GBL to the United States in 2003. DEA has had two very significant investigations in which UK nationals were operating websites offering GBL for sale to the U.S. via post. In early 2004, the UK police executed a search warrant on one of these targets, but had to leave a large drum of GBL behind at the suspect’s house, as GBL is not a controlled substance in the UK. Police did seize some individual parcels that were ready to be shipped to the U.S., as they were mislabeled. DEA has asked that urged the UK to control GBL and the UK is active in EU-wide discussions on control of this substance.

Drug Flow/Transit. Steady supplies of heroin and cocaine enter the UK. Some 90 percent of heroin in the UK (amounting to around 30 tons a year) normally comes from Southwest Asia, chiefly Afghanistan. UK-based Turkish criminal groups handle a significant amount of the heroin eventually imported into the UK, although Turkish criminals in the Netherlands and Belgium also channel heroin to the UK. Pakistani traffickers also play a significant part; most of the heroin they import, normally in small amounts by air couriers traveling direct from Pakistan, is destined for British cities where there are large South Asian populations. Caribbean criminals (primarily West Indians or British nationals of West Indian descent) are involved in the supply and distribution of heroin as well as cocaine. Most heroin probably enters the UK through ports in the southeast, although some enters through major UK airports with links to Turkey, Northern Cyprus, and Pakistan.

Hashish comes to the UK primarily from Morocco. Cocaine imports are estimated at 25-40 tons a year and emanate chiefly from Colombia. Supplies of both cocaine and crack cocaine reach the UK market in a variety of ways. Around 75 percent of cocaine is thought to be carried across the Channel from consignments shipped from Colombia to mainland Europe and then brought to the UK concealed in trucks or private cars, or by human couriers or “mules.” Traffickers based in the UK are the organizers of this smuggling.

The Caribbean, chiefly Jamaica, is a major transshipment point to the UK from Colombia. Cocaine comes in both by airfreight and by couriers, normally women, who attempt to conceal internally (i.e., through swallowing in protective bags) up to 0.5 kilogram at a time. A synthetic drug supply originates out of Western and Central Europe: amphetamines, ecstasy, and LSD have been traced to sources in the Netherlands and Poland; some originates in the UK.

Domestic Programs (Demand Reduction). The UK government’s demand reduction efforts focus on school and other community-based programs to educate young people and to prevent them from ever starting on drugs. Guidelines were enacted in November 1998 to help teachers and youth-workers warn young people about the dangers of drugs. The Drug Prevention Advisory Service (DPAS) was established in 1999 to provide school and community teams to give specialist prevention advice to all locally based drug action teams.

IV. U.S. Policy Initiatives and Programs

The Road Ahead. The United States looks forward to continued close cooperation with the UK on all counternarcotics fronts.

Uzbekistan

I. Summary

Uzbekistan is primarily a transit country for opiates originating in Afghanistan. Well-established trade routes facilitate the transit of these narcotics to Russia and Europe. There is a growing market for a variety of narcotics and consequently a growing problem with drug addiction and the spread of HIV/AIDS. The Government of Uzbekistan remains committed to eliminating the narcotics trade but still relies heavily on multilateral and bilateral financial and technical resources. Law enforcement officers seized a total of about 1,200 kilograms of illegal narcotics in the first nine months of 2004. Uzbekistan is a party to the 1988 UN Drug Convention, and the government considers the fight against drugs to be a high priority.

II. Status of Country

While there is no significant drug production in Uzbekistan, several transshipment routes for opium, heroin, and hashish originate in Afghanistan and cross Uzbekistan for destinations in Russia and Europe. Drug seizures in 2004 were up 50 percent from 2003. Precursor chemicals have in the past traveled the same routes in reverse on their way to laboratories in Afghanistan and Pakistan. Effective government eradication programs have eliminated nearly all the illicit production of opium poppies in Uzbekistan.

III. Country Actions Against Drugs in 2004

Policy Initiatives. A decree signed in 2002 to implement a multi-year comprehensive plan to address all aspects of the narcotics problem in Uzbekistan remains in effect through 2005. The plan includes measures to address trafficking, demand reduction, coordination of efforts among law enforcement entities, legal reform of the criminal code, treatment and rehabilitation of addicts, and deepening international cooperation for counternarcotics efforts. The plan also lists specific goals to be accomplished, gives timelines for actions, assigns responsibility to agencies, indicates funding sources, and requires detailed documentation to show progress or completion. The plan assigns tasks to all relevant ministries, the National Security Service, Border Guards, State Customs Committee, National Drug Control Center, Prosecutor's office, oblast and city mayors' offices, mahallas (neighborhoods), Uzbekistan Airways, and others.

For several years, many of these organizations have successfully worked together on the annual project "Operation Black Poppy," which combines intelligence collection, interdiction of smugglers, eradication of cultivation, and demand reduction. The demand reduction efforts have focused on a coordinated community policing effort, in which police officers work with local government and education officials to visit schools and other large institutions to discourage illicit drug use. Uzbekistan has also launched a comprehensive media campaign to combat drug usage and the spread of HIV/AIDS.

In June 2004, the GOU signed a U.S.-proposed amendment to the August 14, 2001 "Agreement on Narcotics Control and Law Enforcement Assistance Between the Government of the United States of America and the Government of the Republic of Uzbekistan." These agreements provide for U.S. assistance to Uzbekistan, and are amended in the years following their first negotiation to increase assistance levels to on going programs or to agree to begin new assistance programs. This agreement established the framework to support projects designated to enhance the capability of Uzbek law enforcement agencies in efforts against narcotics trafficking and organized crime. The amendment

includes provision of technical assistance in investigating and prosecuting narcotics trafficking cases. Implementation of various counternarcotics programs, including a DEA-sponsored investigative unit, judicial and legal reform, and enhancement of border security, continues under two other amendments signed in 2003.

The GOU is interested in the establishment of a Regional Law Enforcement and Counter-Narcotics Center in Tashkent, modeled on the Southeast European Cooperative Initiative located in Bucharest. This proposal has been discussed and approved at the highest levels of the Uzbek government. Uzbekistan also supports the establishment of a regional intelligence body that would promote information exchange among the Central Asian states, Russia and other countries regarding narcotics trafficking and interdiction.

The Uzbek criminal justice system suffers from a lack of modernization/reform, mainly judicial and procedural reform, and standards remain below international norms. The Uzbek criminal justice system is largely inherited from the Soviet Union—the executive branch and Prosecutor General’s Office are powerful entities and the judiciary is not independent. Corruption is rampant, and it is not unusual for law enforcement officers to plant narcotics on suspects.

Accomplishments. Uzbekistan continues to work toward the goals of the 1988 UN Drug Convention on combating illicit cultivation and production within its borders. The annual “Black Poppy” eradication campaign has virtually eliminated illicit poppy cultivation. In the first nine months of 2004 the operation eradicated 1.7 hectares of illicit drugs.

Efforts to achieve other convention goals are hampered by the lack of effective laws, programs, money, appropriate international agreement, and coordination among law enforcement agencies. The UN Office on Drugs and Crime (UNODC) is continuing its efforts to implement important projects, focusing on improvements in law enforcement, precursor chemical control, and border security.

Law Enforcement Efforts. Preliminary statistics from the National Center for Drug Control show that in the first nine months of 2004, Uzbek law enforcement seized a total of 1,200 kilograms of illicit drugs. Confiscated heroin accounts for approximately 42 percent of that total; opium was 33 percent of the total.

Three agencies with separate jurisdictions have counternarcotics responsibilities: the Ministry of Internal Affairs (MVD), the National Security Service (NSS), and the State Customs Committee. The MVD concentrates on domestic crime, the NSS (which now includes the Border Guards) handles international organized crime (in addition to its intelligence role), and Customs works at the border (interdiction/seizures at the border are also carried out by the Border Guards during their normal course of duties). Despite this apparently clear delineation of responsibilities, a lack of operational coordination diminishes the effectiveness of counternarcotics efforts. The National Center for Drug Control was designed to minimize mistrust, rivalry and duplication of effort among the agencies. The Center continues to have difficulty accomplishing this goal.

None of the law enforcement agencies concentrates exclusively on counternarcotics crimes, but there are about 1,500 law enforcement officials in the various agencies charged with counternarcotics activities. The MVD, although it has 800 officers dedicated to counternarcotics, is also the national police force with a full range of law enforcement responsibilities. In addition, the SIU, which became operational in 2003, continues to operate with success. The NSS is the successor to the KGB and includes intelligence and counterespionage in its portfolio and has about 200 officers (including Border Guards) dedicated to counternarcotics efforts. The Customs Committee has about 80 officers working on counternarcotics matters. In 2004, training and equipment were provided to Customs, MVD, NSS, and the Prosecutor’s Office under the bilateral agreements (Letters of Agreement) between the United States and Uzbekistan to provide narcotics-related assistance.

According to National Center reports, most smuggling incidents involve one to two individuals, likely backed by a larger, organized group. Resource constraints, however, have limited the GOU's ability to investigate these cases. In general, information that has been gathered suggests smuggling rings are relatively small, family-run operations, with no single group controlling any region or the whole country. Smuggling rings tend to be located on the border between Uzbekistan and Tajikistan, where family members can cross the border relatively freely. There is also reporting which indicates smuggling activities continue to grow along the Turkmen-Uzbek border.

Lack of money for equipment and training remains the greatest difficulty faced by all Uzbek agencies. Therefore, they rely heavily on international assistance from the UNODC, the U.S., the UK, and other countries to supplement their own thinly funded programs. The European Community and OSCE are beginning to focus more heavily on Uzbekistan and Central Asia. Basic necessities, such as uniforms, footwear, and reliable all-terrain vehicles to replace aging Soviet-era equipment, remain in short supply.

Corruption. The GOU does not encourage or facilitate illicit production or distribution of narcotic or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal drug transactions. In 2004 corruption charges were brought against several individuals from the Ministry of Internal Affairs and the Prosecutor's Office. Criminal cases resulted in prison sentences for those convicted. In other cases, those involved were fired from their jobs. The Prosecutor's Office continues to be the lead investigative agency for all criminal matters, including corruption.

Agreements and Treaties. Uzbekistan is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention as amended by its 1972 Protocol. Uzbekistan is also a party to the UN Convention Against Transnational Organized Crime. Uzbekistan signed the Central Asian Counter-Narcotics Memorandum of Understanding with the UNODC. Kazakhstan, Kyrgyz Republic, Tajikistan, and Uzbekistan signed an agreement in September 1999 on cooperation in combating transnational crime, including narcotics trafficking. The five Central Asian countries, as well as Azerbaijan, Georgia, Iran, Pakistan, and Turkey, are members of the Economic Coordination Mechanism supported by the UNODC.

Cultivation/Production. "Operation Black Poppy" has all but eliminated illicit opium poppy cultivation in Uzbekistan. National Center estimates indicate only a miniscule 1.7 hectares of land was used for illegal narcotics cultivation in 2003.

Drug Flow/Transit. Several major transnational trade routes facilitate the transportation of opiates and cannabis from Afghanistan through Uzbekistan to Russia and Europe. The border crossing point at Termez is increasingly a point for trafficking. Narcotics are being discovered in trucks returning to Uzbekistan from delivering humanitarian aid into Afghanistan as well as on trains coming from Tajikistan.

The National Center and UNODC report that trafficking also continues along traditional smuggling routes and by conventional methods, mainly from Afghanistan into Surkhandarya oblast and from Afghanistan via Tajikistan and Kyrgyz Republic into Uzbekistan. The primary regions in Uzbekistan for the transit of drugs are Tashkent, Termez, Fergana Valley, Samarkand and Syrdarya.

Domestic Programs. According to the National Drug Control Center, there are approximately 19,440 drug addicts in Uzbekistan; however that number is likely closer to between 25,000 and 30,000, according to NGOs working on drug treatment in Uzbekistan.

According to the National Center, 1,932 new addicts were registered in the first half of the year. There are no official estimates for unregistered addicts. However, the number of registered addicts is believed to reflect only 10-15 percent of the actual drug addicts in Uzbekistan. During the last few years, there was an alarming growth in the number of persons who are HIV positive, 3,867 people tested positive in the first 6 months of this year, a 52 percent increase over 2003. This number only

includes people who are brave enough to come forward for testing. Fifty-nine percent of persons infected with HIV/AIDS are drug addicts. Hospitals with drug dependency recovery programs are inadequate to meet the increasing need. The Ministry of Health and National Drug Control Center recognize the need to focus increased attention on the problem but the ministry does not have sufficient funds to move forward. Drug awareness programs are administered through NGOs, schools and the mahalla (neighborhood) support system.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. The goals of the 1998 and 2001 counternarcotics Letters of Agreement between the United States and the Republic of Uzbekistan focus on the prevention of illicit drug activities in and through the territory of Uzbekistan and the need to increase the effectiveness of the fight against the trade in illicit narcotic substances. The Drug Enforcement Administration (DEA) and the Bureau of International Narcotics and Law Enforcement Affairs at the Department of State continued to sponsor a Sensitive Investigation Unit (SIU) in the Ministry of Internal Affairs. The SIU became operational in May 2003 and has been working successfully ever since. It has conducted several undercover and international operations and dramatic increases in seizures during the first 9 months of 2004 are in part due to the work of the unit. The SIU, fully funded by the USG, continues to receive training and equipment from DEA and will be expanded with additional officers in 2005. DEA has also worked with Uzbekistan to establish a regional drug information sharing pilot project, which began with USG funding in October 2004. A U.S.-funded Resident Legal Advisor also works in Uzbekistan to address legal and judicial reform. The Ministry of Foreign Affairs signed an amendment to the 2001 agreement to implement further counternarcotics projects in Uzbekistan in 2004. In 2004, the U.S. Department of Defense appropriated funds for Uzbekistan toward counternarcotics efforts. Under this funding, training and equipment, including two patrol boats delivered to the Border Guard Maritime unit on the Afghan border. Further DOD counternarcotics training is planned for 2005.

Bilateral Cooperation. In addition to the various training and equipment program described above, in 2004 the U.S. Government sponsored U.S. Customs training for Uzbek Border Guard and Customs officials in November 2004. Border Guards units in the Fergana Valley and Uzbek Customs officials received training in narcotics detection methods, and on how to use drug test kits. The U.S. also donated equipment during this training.

The Road Ahead. U.S. in-country advisors will continue to work with all appropriate Uzbek agencies to improve narcotics detection and drug interdiction.

AFRICA AND THE MIDDLE EAST

Angola

I. Summary

Angola is not a country that suffers from significant drug production or drug abuse; however, some cannabis is cultivated and consumed locally. Previously significant transit drug traffic—particularly, cocaine from Brazil to South Africa—is believed to have been largely halted in 2004 because of effective cooperation between Angolan and South African authorities. Angola is party to the 1988 UN Drug Convention. It signed and ratified the Southern African Development Community (SADC) counternarcotics protocol in 2003.

II. Status of Country

Angola is not a major center of drug production, money laundering, or production of precursor chemicals, and is not likely to become one. Police continued to seize cocaine and cannabis in 2004, although the volume of seizures diminished as transit traffic was more effectively interdicted, and traffickers apparently altered their routes.

III. Country Actions Against Drugs in 2004

Although cases of public corruption connected to narcotics trafficking are rare, one of three counternarcotics officials suspected in the disappearance of cocaine seized in an earlier operation and under arrest in 2003 was convicted in 2004; two other officials arrested in the same case were acquitted.

In 2004, Angola enacted legislation mandating treatment for those convicted of narcotics abuse. Drug rehabilitation centers have been established in Luanda, Lubango, and Benguela. Angola cooperates with South Africa in fighting the flow of cocaine from Angola to South Africa, and South Africa has provided training and equipment to the Angolan police. Angola also cooperates on a regional basis via the South African Development Community (SADC).

Agreement and Treaties. Angola is not a party to any of the UN Drug Conventions. It has signed but has not yet ratified the UN Convention on Transnational Organized Crime and the UN Convention Against Corruption.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. In 2004, 17 Angolan police officers participated in State Department-sponsored regional training course, which included segments on counternarcotics.

The Road Ahead. The U.S. will assist Angola through training of law enforcement at ILEA Gaborone to the degree Angola wishes.

Benin

I. Summary

Though the Government of Benin (GOB) continues to take steps to implement and improve a national drug strategy, it has made only limited progress against illegal drug trafficking. Benin remains a low volume narcotics-producing country. Essentially, only marijuana sold for local consumption is produced in Benin. Nevertheless, Benin remains a transit point for illegal narcotics. Illegal drug trafficking and GOB drug seizures increased only slightly throughout the year. The GOB has developed a national counternarcotics policy and is implementing its national action plan. All narcotics trafficking interdiction efforts are handled through the Police Narcotics Branch, central office, which is relatively well organized, but severely under staffed. Real progress is further hindered by inadequate resources, corruption, lack of training and poor equipment. Benin is a party to the 1988 UN Drug Convention.

II. Status of Country

Benin produces no significant amounts of drugs, but plays a significant role as a transit point for regional traffickers. Small amounts of cannabis are grown for local consumption, but notable increases in production or consumption have not been reported. Benin's porous borders and poorly monitored ports provide African drug traffickers, particularly Nigerians, easy access and transit.

III. Country Actions Against Drugs in 2004

Policy Initiatives. No significant new policies were introduced in 2004, however, the GOB continues to work to address lack of equipment, training and staffing needs. Instead of introducing new policies, the GOB appears to be focusing on refining existing ones. The GOB also appears to be fully supportive of the investigative efforts made by the Police Narcotics Branch, Central Office during 2004.

Accomplishments. The GOB continues to address the ten counternarcotics strategies they identified in their Six Year Plan in 2001. The GOB remains focused on implementing and achieving the goals of the strategies.

Law Enforcement Efforts. The Central Office against Illegal Drug Trafficking (Police Narcotics Branch, Central Office) remains the lead law enforcement agency responsible for the fight against drugs. The Police Narcotics Branch, Central Office is subordinate to the Director General of the National Police, and works directly with Customs, Gendarmes and National Police drug units. Inadequate training, equipment, and human resources continue to hinder Police Narcotics Branch, Central Office's progress in 2004. However, working from information provided by DEA Lagos, Police Narcotics Branch, Central Office Agents made two notable seizures of cocaine in early 2004.

Agreements and Treaties. Benin is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention as amended by the 1972 Protocol. Benin also is a party to the UN Convention against Transnational Organized Crime and its three protocols.

Corruption. Rumors of corruption, bribery, tampering with evidence and poorly conducted criminal investigations continued to plague law enforcement agencies in 2004. This remains a difficult area to assess, however, due in part to the GOB's resistance to oversight reform.

Cultivation and Production. Cannabis is the only narcotics cultivated or produced in any significant quantity in Benin. No figures for the exact extent of production are available. Cannabis grown in Benin is used for local consumption.

IV. U.S. Policy Initiatives and Programs

The Road Ahead. Benin continues to address the drug transit problem in the region by implementing coordinated counternarcotics measures. Though this remains a very long and difficult process, the USG should continue to engage Benin on complex issues of counternarcotics enforcement, asset forfeiture, and money laundering. Inadequate border and port control measures, and staffing, equipment, and training needs of the Police Narcotics Branch remain the GOB's most obvious impediment to progress in this area. Better training and increased law enforcement resources offer the best prospects for resolution of these problems.

Egypt

I. Summary

The Arab Republic of Egypt is not a major producer, supplier, or consumer of narcotics or precursor chemicals. Heroin and cannabis are transported through Egypt, but presumed levels have not risen in four years. The Anti-Narcotics General Administration (ANGA) is the main counternarcotics organization in Egypt. It is competent and progressive, and cooperates fully with the Drug Enforcement Administration (DEA) office in Cairo. In 2004, a joint DEA-ANGA investigation uncovered a significant MDMA (Ecstasy) laboratory in Alexandria, Egypt, resulting in the arrest of four individuals, and possible indictment of two U.S. citizens. This was the first known occurrence of an MDMA laboratory in the Middle East. Egypt is party to the 1988 UN Drug Convention.

II. Status of Country

Egypt is not a significant producer or consumer of narcotics or precursor chemicals, despite the fact that opium and cannabis plants are grown here. The substances that are most commonly abused are cannabis, which is known here as “bango,” and legitimate pharmaceuticals. Narcotics do pass through Egypt. Egypt’s long and mostly uninhabited borders, combined with the high level of shipping passing through the Suez Canal, have made Egypt prone to the transshipment of Asian heroin. Other types of narcotics periodically pass through Cairo International Airport. The narcotics are primarily destined for Western Europe, with only small amounts headed to the United States. Transshipment has diminished considerably in recent years due to the elevation of security in Egypt and the region as a whole.

The ANGA is the oldest counternarcotics unit in the Arab world. It has jurisdiction over all criminal matters pertaining to narcotics and maintains offices in all major Egyptian cities and ports of entry. The U.S. DEA office in Egypt has a superb relationship with ANGA, which is open, cooperative, and receptive to ideas and training. DEA assists ANGA in interdiction operations in the Suez Canal Zone and at Cairo International Airport, and crop eradication operations in the Sinai Peninsula and Upper Egypt. It also has funded and conducted training for ANGA officers at regional counternarcotics courses in Nairobi, Kenya and provided in-country training on airport interdiction and chemical controls. Despite limited resources, ANGA has demonstrated continual improvements in its capabilities.

III. Country Actions Against Drugs in 2004

The Government of Egypt (GOE) continues to aggressively pursue a comprehensive drug control strategy that was developed in 1998. ANGA, the Egyptian Ministry of Interior, the Coast Guard, the Customs Service, and select military units all cooperate in task forces designed to interdict narcotics shipments. Government and private sector demand reduction efforts exist but are hampered by financial constraints and logistical challenges.

Accomplishments. Late in 2004, a joint DEA-ANGA investigation uncovered an MDMA laboratory located in a small apartment building in Alexandria, Egypt. ANGA raided the laboratory, arresting four individuals and seizing chemicals, paste, and equipment. Additionally, Egypt may indict two U.S. citizens for connections to this operation. The MDMA produced from this laboratory would likely have been exported to the European and U.S. market. This was the first known discovery of an MDMA laboratory in Egypt, and according to DEA, the first in the Middle East, and may represent a new trend toward shifting artificial drug labs to the region due to the region’s relatively lax regulation

of commercial chemical products. With the passage of the first anti-money laundering law in 2002, which criminalized the laundering of proceeds derived from trafficking in narcotics and numerous other crimes, seizures of currency in drug related cases has amounted to over 3,000,000 Egyptian Pounds (\$485,000). In 2004, ANGA opened a new office dedicated to financial investigations and combating money laundering.

Law Enforcement Efforts. Internal security and combating terrorism are the major foci of Egyptian law enforcement efforts. Despite these priorities, ANGA is able to operate an effective program against narcotics trafficking. It investigates and targets significant drug traffickers, intercepts narcotics shipments, and detects and eradicates illegal crops. Large-scale seizures and arrests are rare, primarily because Egypt does not have a significant narcotics market or narcotics abuse culture. ANGA does operate its own drug awareness campaign in addition to other government and private sector demand reduction programs. ANGA's Eradication Unit conducts monthly operations against cannabis and opium crops in the Sinai. Continuing a trend over the past several years, the amount of narcotics seized during 2004 was again higher than that of the previous year. Drug seizures in 2004 included cannabis (80,249 kilograms), hashish (1,868 kilograms), and smaller amounts of heroin, opium, psychotropic drugs, and cocaine. Significant amounts of prescription and "designer" drugs such as Ecstasy (6,194 tablets), amphetamines, and codeine were also seized. During the course of 2004, Egyptian law enforcement officials eradicated 171 hectares of cannabis and 65 hectares opium poppy plants.

Corruption. As a matter of government policy, the Government of Egypt does not encourage or facilitate illicit production or distribution of narcotic or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal transactions. The GOE has strict laws and harsh penalties for government officials convicted of involvement in narcotics trafficking or related activities. However, low-level local police officials involved in narcotics-related activity or corruption have been identified and arrested.

Agreements and Treaties. Egypt and the United States have had an extradition treaty in place since the 1860's. Egypt has been a party to the 1988 UN Drug Convention since 1991. Egypt also is a party to the 1971 UN Convention on Psychotropic Substances, the 1961 UN Single Convention on Narcotic Drugs, and the 1972 protocol amending the Single Convention. The U.S.-Egypt Mutual Legal Assistance Treaty entered into force on November 29, 2001. Egypt is a party to the UN Convention against Transnational Organized Crime and its protocol on trafficking in women and children.

Cultivation and Production. Cannabis is grown year round in the northern and southern Sinai and in Upper Egypt, while opium poppy is grown in the southern Sinai only from November through March. Rugged terrain means that plots of illegal crops are small and irregularly shaped. ANGA combats this production by using aerial observation and confidential informants to identify illegal plots. Once the crops are located, ANGA conducts daylight eradication operations that consist of cutting and burning the plants. ANGA has yet to implement a planned herbicide eradication program. No heroin processing laboratories have been discovered in Egypt in the last 14 years and no evidence is available indicating that opiates or cannabis grown in Egypt reach the United States in sufficient quantities to have a significant impact. In 2004, a joint DEA-ANGA operation uncovered the first ever MDMA laboratory in Egypt and eliminated it before it reached significant production.

Domestic Programs (Demand Reduction). In 2004, the National Council for Combating and Treating Addiction continued to be the GOE's focal point for domestic demand reduction programs. The Council is an inter-ministerial group chaired by the Prime Minister and has the participation of ten ministries. The group espouses a three-pronged strategy to counter the demand for narcotics: awareness, treatment (including detoxification and social/psychological treatment), and rehabilitation. The group's efforts over the past year included a range of activities, for example, a media advertising campaign with participation from First Lady Suzanne Mubarak, seminars at Al-Azhar University on

“Islam and Narcotics,” and the establishment of a drug treatment hotline and website. Additionally, the Council sponsors four rehabilitation centers, mostly located in the Cairo metropolitan area. These centers annually receive thousands of requests from addicts for help.

IV. U.S. Policy Initiatives and Programs

The U.S. counternarcotics policy in Egypt is to engage the GOE in a bilateral program to reduce narcotics transshipments and decrease opium poppy and cannabis cultivation. The policy includes the following specific objectives: increase training to ANGA and other government offices responsible for narcotics enforcement; assist with the identification of illegal crop eradication targets; improve narcotics interdiction methodology; improve intelligence collection and analysis.

The Road Ahead. In fiscal year 2005, the U.S. Government plans to increase its joint operations with ANGA, moving beyond a previously predominant focus on monitoring the problem. This will involve the DEA country office continuing to work closely with ANGA on joint investigations, as well as improving interdiction and eradication techniques and developing additional sources of information on trafficking and production. The U.S. Government also plans to provide additional training in financial investigations, drug interdiction, anticorruption measures, border control operations, and chemical identification and control.

Ghana

I. Summary

Ghana has taken steps to combat illicit trafficking of narcotic drugs and psychotropic substances and has mounted major efforts against drug abuse. It has active enforcement, treatment, and rehabilitation programs; however, lack of resources remains a problem. Ghana-U.S. law enforcement coordination continued in 2004, and Ghana's law enforcement agencies took steps to deepen interagency coordination. Ghana is a party to the 1988 UN Drug Convention.

II. Status of Country

Ghana is increasingly a transit point for illegal drugs, particularly cocaine from South America and heroin from Southeast and Southwest Asia. Europe remains the major destination, but drugs also flow to South Africa and to North America. Accra's Kotoka International Airport is increasingly a focus for traffickers. Ports at Tema and Sekondi are also used, and border posts at Aflao (Togo) and Elubo and Sampa (Cote d'Ivoire) see significant drug trafficking activity. Nigerian traffickers continue to strengthen their presence in Ghana, as Ghana becomes a major transportation hub for them. Trafficking has also fueled increasing domestic drug consumption. Cannabis use is increasing in Ghana, as is local cultivation. The government has mounted significant public education programs, as well as cannabis crop substitution programs. Production of precursor chemicals is not a major problem.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The Narcotics Control Board (NCB) coordinates government efforts involving counternarcotics activities. These activities include enforcement and control, education, prevention, treatment, rehabilitation, and social reintegration. The NCB's counternarcotics national strategy, the "National Plan of Action 1999/2008", was never implemented due to lack of funding. However, in 2004, the UN Office of Drugs and Crime (UNODC) financed three demand reduction projects selected from the National Plan of Action: 1) training 110 Ghana Education Service counselors (one per district in the country) on drug abuse prevention; 2) working with the Department of Social Welfare to provide vocational training to those completing drug treatment programs; and 3) producing a drug education guide for teachers throughout the country. Each year since 1999, the NCB has proposed to amend the 1990 narcotics law to allow stricter application of bail bond system (i.e., no general granting of bail when flight is a real possibility; higher sureties to assure that defendants appear for trial) and to fund NCB operations using a portion of seized proceeds; however, the Attorney General's office has not acted on these proposals.

Accomplishments. Figures from January-September 2004 reveal that quantities of cocaine, heroin and cannabis seized in Ghana increased in 2004. The number of persons arrested for possession of heroin and cocaine also increased in this period, while the number of people arrested with cannabis decreased. Overall, 2004 saw the highest number of drug trafficking arrests on record. The NCB and other law enforcement agencies continued their successful cooperation with U.S. law enforcement agencies in 2004, sharing information, as well as preparing to extradite an American citizen and a Ghanaian citizen to be tried in the United States for narcotics offenses. In January, the Narcotics Control Board and the Ghana Police Service Drug Enforcement Unit, aided by British intelligence, intercepted 588.33 kilograms of cocaine in Tema, Ghana's major port city about 20k from the capital city. The bust was West Africa's largest ever drug bust. All six suspects, five of whom were foreign nationals, were convicted in October and sentenced to significant jail time at hard labor.

The NCB's national drug education efforts continued in schools and churches, heightening citizens' awareness of the fight against narcotics and traffickers. On June 27, the NCB organized an event in Kumasi to highlight drug abuse in Ghana in conjunction with the UN's International Day Against Drug Abuse and Trafficking. At this launch, the UNODC announced that it would assist Ghana in establishing rehabilitation centers for drug addicts, and a pilot project in Accra has since been launched.

In October and November 2004, using Department of State funding, U.S. Department of Justice trainers (ICITAP) conducted a four-week counternarcotics training course in Ghana for thirty officers from the Ghana Narcotics Control Board, Ghana Police Service, Ghana Immigration Service, the Customs and Excise Protective Service, and the Ghana Civil Aviation Authority. The train-the-trainer program, conducted in two 2-week sessions, focused mainly on drug interdiction at air and seaports and was declared highly successful, receiving widespread press coverage.

Law Enforcement Efforts. In 2004, Ghanaian law enforcement agencies continued to conduct joint police/NCB operations against narcotics cultivators, traffickers, and abusers. NCB agents, who are not armed, rely upon the police's Criminal Investigative Division's (CID) narcotics unit in situations requiring armed force. The successful drug operation in January (see above) was an example of such a joint cooperative effort. The NCB continued to work with DHL, UPS, and Federal Express to intercept packages containing narcotics.

The NCB reported a drop in the prices of heroin and cannabis from 2003, while the price of cocaine rose. In 2004, a gram of cocaine sold for cedis 168,350 (\$18.50 at the current exchange rate) compared to cedis 133,350 (\$15.30) in 2003. A cocaine booster sold for cedis 12,000 (\$1.32), while crack cocaine sold for cedis 5,000 (\$.55). A gram of heroin sold for cedis 145,600 (\$16) compared to cedis 173,550 (\$20) in 2003. A heroin booster sold for cedis 10,000 (\$1.10). The price of a small parcel of cannabis in 2004 was approximately cedis 5,000 (\$.55), while a wrapper or joint sold for cedis 1,000 (\$.11). There was a sudden increase in the prices of all narcotics after the January operation (see above), but the prices dropped again soon afterward.

Corruption. Despite the regular arrests of suspected narcotics traffickers, Ghana has an extremely low rate of conviction, which law enforcement officials indicate is likely due to corruption within the judicial system. For example, in one region of the country, Ashanti, between 2001 and June 2004 only 244 persons were convicted and sentenced of the 667 cases of drug dealers and traffickers reported. The backlog of cases pending trial and the limited resources facing the judiciary remain a problem in controlling drug trafficking in Ghana. The total number of arrests made countrywide between January and September 2004 was 705. The NCB estimates that the Ashanti Region prosecution statistics are better than the national average.

NCB officials complain that courts often release suspected smugglers, including foreign nationals, on bail that is often set at only a tiny fraction of the value of the drugs found in a suspect's possession. The court requirement of a surety in addition to bail is often either dropped, or court registrars will fraudulently use the identical property as surety for multiple cases. In September, the NCB was held in contempt of court for withholding the passports of suspects charged with drug trafficking who had been released on bail. The NCB retained the passports while they waited for the Attorney General to file a request not to permit bail, which was ultimately never filed. The NCB eventually had to turn over the passports on a court order. At least one of the suspects in this case, a Dutch national, has since traveled in and out of Ghana while on bail. In contrast to 2003, in 2004 there were no cases of possible evidence tampering. In August 2004, four police officers were arraigned and charged with taking bribes from drug traffickers in October 2001. No further action was taken on these cases in 2004.

Agreements and Treaties. Ghana is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention on Narcotic Drugs, as amended by the 1972 Protocol. U.S.-Ghana extradition relations are governed by the 1931 U.S.-UK

Extradition Treaty. Additionally, Ghana is a member of the Economic Community of West African States (ECOWAS) Protocol Agreement, which includes an extradition provision among member states. In 2003, Ghana signed a bilateral Customs Mutual Assistance Agreement with the United States.

Cultivation and Production. Cannabis (also known as Indian hemp) is widely cultivated in rural farmlands. The Volta, Brong/Ahafo, Western, and Ashanti regions are principal growing areas. Most is consumed locally; some is trafficked to neighboring and European countries. Cannabis is usually harvested in September and October, and law enforcement teams increase their surveillance and investigation efforts at these times. In 2004, combined NCB and police teams continued to investigate cannabis production and distribution, and to destroy cultivated cannabis farms and plants.

In February 2003, the NCB implemented a pilot program designed to reduce the area under cultivation, under which 140 marijuana cultivators volunteered to give up marijuana in exchange for government assistance with planting and processing new food crops and immunity from prosecution. The NCB plans to expand the program to an additional 120 farmers that have registered for assistance, although the resources were not available to do so in 2004.

Drug Flow/Transit. Cocaine and heroin are the main drugs that transit Ghana. Cocaine is sourced mainly from South America and destined for Europe, while heroin comes mainly from Southeast and Southwest Asia on its way to Europe and North America. Cannabis is shipped primarily to Europe, specifically to the United Kingdom. Narcotics are sometimes repackaged in Ghana for reshipment, and the most recent trend in concealment method is in carry-on, wheeled luggage.

Although there is no hard evidence that drugs transiting Ghana contribute significantly to the supply of drugs to the U.S. market, there are indications that direct shipments to the United States are on the rise. Accra is an increasingly important transshipment point from Africa. In November, two alleged leaders of a drug smuggling ring from Ghana were indicted in Columbus, Ohio for shipping heroin for distribution across central Ohio, indicating a direct flow of illicit narcotics from Ghana into the U.S. Midwest. Direct flights from Accra play an important role in the transshipment of heroin to the U.S. by West African trafficking organizations. Because of safety problems, the U.S. FAA imposed a ban in July 2004 on flights into the U.S. by Ghana's flag carrier, the only provider of direct flights from Ghana to the United States. However, according to the NCB, this did not reduce the drug trafficking from Ghana to the U.S., but rerouted the flow through Europe. The NCB reports that narcotics air transit through Ghana has reduced somewhat in favor of land routes to Abidjan, largely due to the instability in Cote d'Ivoire, which creates more favorable conditions there for narcotics traffickers. The biggest challenge in Ghana, however, are the seaports, as most of the coastal border is unmonitored and entry points are more porous. According to the NCB, the seaports allow greater quantities of narcotics to come through at places where there are weak patrol systems in place.

Domestic Programs. The NCB works with schools, professional training institutions, churches, local governments, and the general public to reduce local drug consumption. The Ministries of Health and Education further coordinate their efforts through their representatives on the Board. Board Members and staff frequently host public lectures, participate in radio discussion programs, and encourage newspaper articles on the dangers of drug abuse and trafficking. Ghana's National Day Against Drug Abuse and Illicit Trafficking was celebrated on June 27, in Kumasi, Ashanti Region. Although treatment programs have lagged behind preventative education and enforcement due to lack of funding, there are three government psychiatric hospitals receiving drug patients, and three private facilities in Accra, run by local NGOs, also assisting drug abusers.

IV. U.S. Policy Initiatives and Programs

U.S. Goals and Objectives. The USG's counternarcotics and anticrime goals in Ghana are to strengthen Ghanaian law enforcement capacity generally, to improve interdiction capacities, to enhance the NCB's office and field operation functions, and to reduce Ghana's role as a transit point for narcotics.

Bilateral Cooperation. In 2002, the United States provided the Government of Ghana counternarcotics assistance in the form of surveillance and detection equipment, worth \$64,000, including two narcotics detection devices ("Itemizers") installed at Kotoka International Airport in December 2003. Similar equipment funded in FY 2000 and FY 2001 is effectively maintained and has facilitated a number of drug arrests and seizures. Funding provided in FY 2002 for training for the Police and CEPS to create Internal Affairs Units will continue to assist in suppressing corruption and strengthening the capacity of the police to interdict illegal drugs. A four-week, interagency counternarcotics training course, funded by the U.S. in FY 2002 and focused on drug interdiction at Ghana's air and seaports, took place in November 2004.

The Road Ahead. Improved narcotics interdiction, investigative capabilities, and prosecutorial successes sum up the USG's major policy goals. A focus on improved oversight of financial transactions is a particular concern, given the potential for any narcotics financial networks to be used by terrorist organizations.

Jordan

I. Summary

Jordan is primarily a transit country for illicit drugs, due to its geographical location between drug producing countries to the north and drug consuming countries to the south and west. Historically, Jordanians themselves have neither consumed nor produced significant quantities of illicit drugs. There have been signs that this trend may be changing. The most notable narcotics-related statistic for 2004 is a nearly 400 percent increase in Captagon (fenethylamine) tablet seizures, the bulk of which Jordanian authorities say were bound for the Gulf States. The drugs of choice among users arrested for drug possession in Jordan have been hashish (80 percent) and heroin (20 percent); The main target group is high school through college-aged students. Cooperation among neighboring countries is ongoing and growing. Jordan is a party to the 1998 UN Drug Convention.

II. Status of Country

Jordan's vast desert borders make it vulnerable to illicit drug smuggling operations. From the perspective of drug use, Jordanian authorities believe that drug consumption among Jordan's youth is not likely to increase sharply.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Due to the threat from continuing usage of hashish and heroin among high school and university-aged individuals, Jordan continues its drug awareness campaign focused at educating young people of the dangers of drug use. In June 2004, a national conference on drugs took place in Amman, in cooperation with the United Nations Office on Drugs and Crime (UNODC), during which issues such as combating drugs, prevention of drug abuse among students, and law enforcement were discussed.

Law Enforcement. Jordan's Police (PSD) maintains an active counternarcotics bureau, which has excellent relations with the U.S. Drug Enforcement Administration through the Nicosia Country Office based in Cyprus. In 2004 the PSD began utilizing x-ray equipment on larger vehicles at two of its border crossings, which has led to some drug seizures. The PSD stated that since 1997, it has worked cooperatively with the military on the Syrian and Iraqi borders to intercept traffickers entering through those areas. Jordan continues to be concerned about heroin use in the more affluent areas of country, as statistics reflect yet another annual increase in heroin seizures. Although seizures of the synthetic amphetamine-type stimulant Captagon are up by nearly 400 percent, the PSD has not noted a significant abuse problem in Jordan. Drugs of this nature are predominantly bound for the Gulf Region. According to the PSD, 85 percent of all illicit drugs entering Jordan are destined for other countries in the region. The majority of Jordan's drug seizures take place at the Jabber-a border crossing point between Jordan and Syria.

Corruption. Jordanian Officials report no narcotics-related corruption or investigations into corruption for the reporting period. There is currently no evidence to suggest that senior level officials are involved in narcotics trafficking.

Agreements and Treaties. Jordan is party to the 1988 UN Drug Convention. Jordan continues to remain committed to existing bilateral agreements providing for counternarcotics cooperation between Syria, Lebanon, Iraq, Saudi Arabia, Turkey, Egypt, Pakistan, Israel, Iran, and Hungary. Jordan has signed but has not yet ratified the UN Convention Against Transnational Organized Crime.

Cultivation and Production. Existing laws prohibit the cultivation and production of narcotics in Jordan. These laws have been effectively enforced.

Drug Flow and Transit. Jordan remains primarily a narcotics transit country. Jordan's primary challenge in stemming the flow of illicit drugs through the country remains its vast and open desert borders. While law enforcement efforts confirm cooperation with its neighbors, the desolate border regions and the various tribes, with a centuries old tradition of smuggling as a principle source of income, make interdiction difficult. None of the narcotics transiting Jordan is believed to be destined for the United States. Jordan has seen only four drug-related cases involving its border with Iraq in 2004.

Domestic Programs. Jordan maintains a robust program of awareness and education, interdiction, and rehabilitation. Education programs predominantly target high school and college-aged kids. Authorities continue to provide educational presentations in schools and universities throughout the country. Jordan also publishes a number of brochures and other materials aimed at educating Jordan's youth. Cartoons aimed at younger children designed to dissuade youngsters from trying drugs are also in the developmental stages, with an expected release timeframe of 2005. Jordan has also improved its rehabilitation programs. With United Nations' assistance, Jordan is modernizing its drug treatment centers and private hospitals. Cultural and religious norms help to control drug use. The PSD works in conjunction with the Ministry of Islamic Affairs, which directs sermons, lessons, and lectures on drug awareness and their effects.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. In March 2004, DEA Nicosia and DEA's International Training Section sponsored a regional International Drug Enforcement Seminar in Amman. The DEA also plans to sponsor a one-week Asset Forfeiture and Financial Investigations Seminar in Amman during the month of July 2005.

Bilateral Cooperation. DEA Country Attache in Cyprus and Embassy Amman officials maintain a close working relationship with Jordanian authorities on narcotics related matters.

The Road Ahead. U.S. Officials expect continued cooperation with Jordanian officials in counternarcotics related issues.

Iran

I. Summary

The Islamic Republic of Iran is a major transit route for opiates smuggled from Afghanistan and through Pakistan to the Persian Gulf, Turkey, Russia, and Europe. There is no evidence that narcotics transiting Iran reach the United States in an amount sufficient to have a significant effect. Iran is no longer a major drug producing country. Trafficking routes for opiates from Afghanistan to Russia and beyond, by way of Central Asia, have grown in importance, but the largest single share of opiates leaving Afghanistan still passes through Iran to consumers in Russia and Europe. There are also an estimated 2 million opiate abusers in Iran, with 60 percent reported as addicted to various opiates and 40 percent reported as casual users.

There is overwhelming evidence of Iran's strong commitment to keep drugs leaving Afghanistan from reaching its citizens. As Iran strives to achieve this goal, it also prevents drugs from reaching markets in the West. Three thousand two hundred Iranian law enforcement personnel have died in clashes with heavily armed drug traffickers over the last two decades, and Iran reports that another 25 died in the first half of 2004. Iran spends a significant amount on drug-related expenses, including interdiction efforts and treatment/prevention education. Estimates range from \$250-\$300 million to as much as \$800 million each year, depending on whether treatment and other social costs are included. Traffickers from Afghanistan continue to cause major disruption along Iran's eastern border, but Iranian security forces seem to be having increased success by concentrating their interdiction efforts in the eastern provinces.

Iran has ratified the 1988 UN Drug Convention, but its laws do not bring it completely into compliance with the Convention. The United Nations Office of Drug Control (UNODC) is working with Iran to modify its laws, train the judiciary, and improve the court system.

II. Status of Country

Iran is a transit country and a major consumer country of opiates and hashish. Entering from Afghanistan and Pakistan into eastern Iran, heroin, opium, and morphine are smuggled overland, usually to Turkey. Another route to Europe and Turkey passes by way of Turkmenistan, Armenia, and Azerbaijan. Drugs are also smuggled by sea across the Persian Gulf. Iran is also a major opiate consuming country, with the highest share of population abusing opiates in the world. The UNODC estimates that 2.8 percent of the Iranian population over age 15 used opiates in 2001 (latest data available).

III. Country Actions Against Drugs in 2004

Policy Initiatives. Iran is spending at least 50 percent of its budgeted counter drug expenditures on demand reduction activities, a significant shift from recent expenditure patterns where most funds went for enforcement-related supply reduction. The shift seems to be a clear response to the growing social and health impact of more dangerous drug abuse (e.g., heroin vice opium) and the trend towards more intravenous heroin abuse, with certain addict populations sharing needles. Police forces engaged in narcotics suppression activities have begun to complain publicly that their budgets are inadequate for their interdiction responsibilities.

Law Enforcement Efforts. The Drug Control Headquarters coordinates the drug-related activities of the police, the Islamic Revolutionary Guard Corps, and the Ministries of Intelligence and Security, Health, and Islamic Guidance and Education.

Iran pursues an aggressive border interdiction effort. A senior Iranian official told the UNODC that Iran had invested as much as \$800 million in a system of mud walls, moats, concrete dams, sentry points, and observation towers, as well as a road along its entire eastern border with Pakistan and Afghanistan. According to an official GOI Internet site, Iran has installed 212 border posts, 205 observation posts, 22 concrete barriers, 290 km of canals (depth-4m, width-5m), 659 km of soil embankments, a 78 km barbed wire fence, and 2645 km of asphalt and gravel roads. It also has relocated numerous border villages to newly constructed sites, so that their inhabitants are less subject to harassment by narcotics traffickers.

Thirty thousand law enforcement personnel are regularly deployed along Iran's border with Afghanistan and Pakistan. Interdiction efforts by the police and the Revolutionary Guards have resulted in numerous drug seizures. Iranian officials seized 181 metric tons (MT) of opiates (opium equivalent) just during the first six months of 2004. Opiate seizures in 2004 (projected) were on track to exceed those in 2003 by 48 percent. These increases are likely to continue as Afghanistan's largest opium harvest ever moves towards markets in Iran itself, and in the West. Iran is likely to remain the country with the highest volume of opiate seizures in the world.

Iranian opiate seizures in the first six months of 2004 display some interesting trends:

- Unrefined (raw) opium seizures increased sharply;
- Heroin was only 14 percent of all opiates seized, a surprisingly small share of the total;
- The morphine base share of seized drugs was also down from recent years to 39 percent of the total.

One possible explanation for these seizure trends is a return of Iranian addicts to traditional raw opium abuse, after a period when disruptions in supply from Afghanistan forced a switch to heroin. A large share of heroin and almost all of the morphine base transiting Iran is headed for markets in Europe (heroin) or for further refining in Turkey (morphine base).

Hashish seizures in Iran in the first six months of 2004 were on track to exceed seizures registered last year by a wide margin. At slightly more than 49.5 metric tons, only raw, unrefined opium seizures at 85 metric tons exceed hashish seizures in volume.

Drug offenses are under the jurisdiction of the Revolutionary Courts. Punishment for narcotics offenses is severe, with death sentences possible for possession of more than 30 grams of heroin or five kilograms (kg) of opium. Those convicted of lesser offenses may be punished with imprisonment, fines, or lashings, although it is believed that lashings have been used less frequently in recent years. Offenders between the ages of 16 and 18 are afforded some leniency. More than 60 percent of the inmates in Iranian prisons are incarcerated for drug offenses, ranging from use to trafficking. Narcotics-related arrests in Iran during the first six months of 2004 continued a sharp upward trend, mounting to 196,555. Almost three times more drug abusers were detained than drug traffickers. Iran has executed more than 10,000 narcotics traffickers in the last decade.

Corruption. Although there is no indication that senior government officials aid or abet narcotics traffickers, there are reports of corruption among lower/mid-level law enforcement, which is consistent with the transit of multiple-ton drug shipments across Iran. Punishment of corruption is harsh, and the evidence of Iran's commitment to keep drugs from its people is compelling. Iran points to its drug interdiction efforts as benefiting countries in Western Europe and beyond.

Agreements and Treaties. Iran is a party to the 1988 UN Drug Convention; however, its legislation does not bring it completely into compliance with the Convention, particularly in the areas of money laundering and controlled deliveries. The UNODC is working with Iran through the NOROUZ Program to modify its laws, train the judiciary, and improve the court system. Iran is also a party to the

1971 UN Convention on Psychotropic Substance, the 1961 UN Single Convention and the 1972 Protocol. Iran has signed, but has not yet ratified, the UN Convention on Transnational Organized Crime, and is a signatory to the UN Convention Against Corruption. Iran has shown an increasing desire to cooperate with the international community on counternarcotics matters. Iran is an active participant in the Paris Pact, a group of countries that actively seeks to coordinate efforts to counter opiate smuggling in Southwest Asia, and Iran is scheduled to host an expert round table of this group in 2005.

Cultivation/Production. A 1998 U.S. survey of opium poppy cultivation in Iran and a detailed U.S. multi-agency assessment concluded that the amount of poppy being grown in Iran was negligible. The survey studied more than 1.25 million acres in Iran's traditional poppy-growing areas, and found no poppy crops growing there, although the survey could not rule out the possibility of some cultivation in remote areas. A follow-up survey in 1999 reached the same conclusion. Iran is now generally viewed as a transit country for drugs produced elsewhere, but there are some reports of opium refining near the Turkish/Iranian border. Most refining of the opiates moving through Iran is done elsewhere, either in Afghanistan or in Turkey.

Drug Flow/Transit. Shipments of opiates enter Iran overland from Pakistan and Afghanistan by camel, donkey, or truck caravans, often organized and protected by heavily armed ethnic Baloch tribesmen from either side of the frontier. Once inside Iran, large shipments are either concealed within ordinary commercial truck cargoes or broken down into smaller sub-shipments. The Iranian town of Zahedan is reportedly a center for the opiate trade as it first enters Iran, and then moves westward. Foreign embassy observers report that Iranian interdiction efforts have disrupted smuggling convoys sufficiently to force smugglers to change tactics and emphasize concealment more than they have in the past. The use of human "mules" is on the rise. Individuals and small groups also attempt to cross the border with two to ten kilograms of drugs, in many cases ingested for concealment. Trafficking through Iran's airports also appears to be on the rise. Still, many traffickers move drugs in large armed convoys, and are ready for a fight if challenged.

Most of the opiates smuggled into Iran from Afghanistan are smuggled to neighboring countries for further processing and transportation to Europe. Turkey is the main processing destination for these opiates, most of which are bound for consumption in Russia and Europe. Essentially all of the morphine base, which represents almost 40 percent of all opiates seized in the first six months of 2004, in Iran, is likely moving towards Turkey, as is some share of the much diminished 14 percent, or so, of opiates moving as heroin. Significant quantities of raw opium are consumed in Iran itself, but some share also moves on to the west to be refined and consumed as heroin in Europe and elsewhere. There is a northern smuggling route through Iran's Khorasan Province, to Turkmenistan, to Tehran, and then on to Turkey. The mountains, desert, sparse population along this route make it hard to police. Traffickers are frequently well armed and dangerous.

The southern route also passes through sparsely settled desert terrain on its way to Tehran en route to Turkey; some opiates moving along the southern route detour to Bandar Abbas and move by sea to the Persian Gulf states. Bandar Abbas also appears to be an entry point for precursor chemicals moving to refineries in Afghanistan. Iran does not specifically control precursor chemicals used for producing illicit drugs, but has made a number of important seizures, mostly at Bandar, of acetic anhydride, used in the refining of heroin. All precursor chemicals seized were consigned to Afghanistan. Trafficking through Iran is facilitated by wide spread smuggling to provide necessities, and to escape high taxation. There are reports that enforcement authorities accept bribes to pass shipments, and fail to enforce laws against street sales inside of Iran.

Azerbaijan and Armenia provide alternative routes to Russia and Europe that bypass Turkish interdiction efforts. Additionally, despite the risk of severe punishment, marine transport is used through the Persian Gulf to the nations of the Arabian Peninsula, taking advantage of modern

transportation and communication facilities and a laissez-faire commercial attitude in that area. Hashish moves extensively along this route, as well. Oman and Dubai appear to be important destinations, but some Iranian hashish even finds its way to Iraq. Iranian enforcement officials have estimated that as much as 50 percent of the opium produced in Afghanistan in past years entered Iran, with as much as 700-800 metric tons of opium consumed in Iran itself by its ca. 2 million users.

Domestic Programs (Demand Reduction). Smoked opium is the traditional drug of abuse in Iran, but opium is also drunk, dissolved in tea. Opium and its residue are also injected, dissolved in water, by a small number of addicts. Iranians have clearly been using more heroin during the past several years. Heroin has not replaced opium, the traditional drug of choice in Iran, but lower street prices for heroin, and temporary shortages of opium, after the Taliban successfully prohibited opium production in Afghanistan for one year (2000/01), plus higher prices for opium, have encouraged some addicts to switch from opium to heroin. Some heroin is smoked or sniffed, but a growing share is injected.

Ninety-three percent of opiate addicts are male, with a mean age of 33.6 years (plus or minus 10.5 years), and 1.4 percent (about 21,000) are HIV positive. In the past, the Islamic Republic attacked illegal alcohol use with more fervor than drug abuse, and was reluctant to discuss drug problems openly. Since 1995, public awareness campaigns and attention by two successive Iranian presidents as well as cabinet ministers and the Parliament have given demand reduction a significant boost. Under the UNODC's NOROUZ narcotics assistance project, the GOI spent more than \$68 million dollars in the first year for demand reduction and community awareness. The Prevention Department of Iran's Social Welfare Association runs 12 treatment and rehabilitation centers, as well as 39 out-patient treatment programs in all major cities. Eighty-eight out-patient treatment centers are now operational. Some 30,000 people are treated per year, and some programs have three-month waiting lists. Narcotics Anonymous and other self-help programs can be found in almost all districts, as well, and several NGOs focus on drug demand reduction. There are no methadone treatment or HIV prevention programs, although HIV infection in the prison population is a serious concern.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. In the absence of direct diplomatic relations with Iran, the United States has no narcotics initiatives in Iran. The U.S. government continues to encourage regional cooperation against narcotics trafficking. Iran and the United States have expressed similar viewpoints on illicit drugs and the regional impact of the Afghan drug trade. In the context of multilateral settings such as the UN's Paris Pact group, the United States and Iran have worked together productively. Iran nominated the United States to be coordinator of an earlier UN-sponsored coordination effort on narcotics called the "Six Plus Two" counternarcotics initiative.

The Road Ahead. The GOI has demonstrated sustained national political will and taken strong measures against illicit narcotics, including cooperation with the international community. Iran's actions support the global effort against international drug trafficking. Iran stands to be one of the major benefactors of any long-term reduction in drug production/trafficking from Afghanistan, as it is one of the biggest victims of the short term increase in opium/heroin production there now. The United States anticipates that Iran will continue to pursue policies and actions in support of efforts to combat drug production and trafficking.

Israel

I. Summary

Israel is not a significant producer or trafficking point for drugs. The Israeli National Police (INP), however, reports that during the year 2004, the Israeli drug market continued to be characterized by high demand in nearly all sectors of society and a high availability of drugs including cannabis, Ecstasy, cocaine, heroin and LSD. The INP also reports a continuing high demand for Ecstasy in 2004, and a high level of seizure, especially compared with 2003. There was a comparable amount of marijuana seized, and a slight decrease in the amount of hashish seized. The INP reports that the amount of heroin seized remained relatively low as in previous years, although the level of demand is unchanged. The quantity of LSD seized in 2004 far exceeds past years, with the seizure of 55,438 blotters compared to 28,331 blotters in 2003. Widespread use of Ecstasy by Israeli youths is a continuing source of concern to authorities. There was a slight decrease from last year in the number of cases for drug use, trafficking, and possession not for personal use. The number of drug arrests for 2004 is not available. (Note: All data is for the period January through October.) In June 2002, Israel became a party to the 1988 UN Drug Convention. Israel's domestic law is consistent with this convention.

II. Status of Country

Israel is not a major producer of narcotics or precursor chemicals. Israeli narcotics traffickers operating outside of Israel continue to be deeply involved in the international Ecstasy trade. The Israeli National Police (INP) reports that during the year 2004, the Israeli drug market was characterized by a high demand in nearly all sectors of society and a high availability of drugs including cannabis, Ecstasy, cocaine, heroin and LSD. The INP estimates the annual scope of the Israeli market to be 100 tons of marijuana, 20 tons of hashish, 20 million tablets of Ecstasy, 4 tons of heroin, 3 tons of cocaine, and hundreds of thousands of LSD blotters. Officials are also concerned with the widespread use of Ecstasy and cannabis among Israeli youth, and say that drug use among youth mirrors trends in the West.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In 2004, the INP continued its general policy of interdiction at Israel's borders and points of entry because the biggest quantities of drugs cross into Israel from Jordan, Egypt, and Lebanon. Together with the Israeli Anti-Drug Authority (IADA), the INP concentrated specifically on the Jordanian and Egyptian borders, where the majority of heroin, cocaine, and cannabis enter Israel. The INP and the IADA have jointly developed programs to help Israeli youth, and have identified and begun investigating six or seven major families involved in drug trade in Israel.

Law Enforcement Efforts. Israel is not a significant seller, transporter or financier of the drug trade but Israeli citizens abroad in locations such as Denmark, Holland, and Belgium serve as brokers and transporters of Ecstasy to the U.S. and elsewhere. INP reports a high demand for cocaine in Israel and a total of 28.5 kilograms seized in 2004, a figure less than half of that in 2003, and showing a decline for the last two years in a row. In 2004, 14,167 kilograms of marijuana was seized, about the same as in 2003. In 2004, 773 kilograms of hashish were seized, a quantity down slightly from last year, and a decline for two years in a row. The number of Ecstasy tablets seized in 2004 was 214,076, up almost three times the amount seized in 2003. The level of heroin seized in 2004 was 50 kilograms, comparable to 2003, with one seizure of 21 kilograms in December 2004. In 2004, 55,438 LSD blotters were seized in total, almost double the amount of blotters seized in 2003. There was a slight

change from last year in the number of cases reported by the INP. In 2004, the INP reported 12,335 open cases for drug use, 2,561 for drug trafficking, and 6,007 for drug possession not for personal use. Israel destroyed 528 illicit labs in 2004, compared with none in 2003. The figures for drug arrests in 2004 are not available. In 2004, authorities seized \$6.6 million in illegal drug related assets and cash.

Corruption. In April 2004, Israel arrested and indicted Golan Segev, a former Energy Minister under Yitzhak Rabin, when he left a bag with 25,000 Ecstasy pills in a locker at the Amsterdam airport on his way back to Israel. As a matter of government policy, the Government of Israel does not encourage or facilitate illicit production or distribution of narcotic or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal transactions. Israel does not have specific legislation for public corruption related to narcotics.

Agreements and Treaties. Israel is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, the 1961 UN Single Convention on Narcotic Drugs, and its 1972 Protocol. A customs mutual assistance agreement and a mutual legal assistance treaty are also in force between Israel and the U.S. In December 2000, Israel signed the UN Convention against Transnational Organized Crime and is in the process of passing the necessary changes to Israeli law. Israel is a party to the European Convention on Mutual Legal Assistance in Criminal Matters. Israel is one of 36 parties to the COE European Treaty on Extradition and has separate extradition treaties with several other countries, including the U.S. Under the Israeli extradition law, nationality is no longer a basis for denying extradition. However, if the requested person was both a citizen and resident of Israel at the time the offense was committed, he may be extradited to stand trial abroad only if the state seeking extradition promises in advance to allow the person to return to Israel to serve any sentence imposed. Four individuals were extradited from Israel to the U.S. on drug-related charges in 2004. Israel also arrested Zeev Rosenstein, an Israeli underworld figure accused of smuggling large quantities of MDMA from Europe to the U.S., on November 8, 2004, and extradition proceedings are ongoing.

Cultivation/Production. There is negligible cultivation and production of illicit drugs in Israel.

Drug Flow/Transit. Israel is not a significant transit country, although Israeli citizens have been part of international drug trafficking networks in source, transit, and distribution countries. Israel also works with Germany and Holland to interdict the flow of Ecstasy, and with Turkey to interdict the flow of heroin, and with South American countries to interdict the flow of cocaine.

Demand Reduction. A number of both public and private entities are working to reduce the demand for drugs through awareness and prevention. The Israeli Anti-Drug Authority (IADA) is one of the main governmental actors in this effort. Its mission, among other things, is to spearhead prevention efforts, initiate and develop educational services and public awareness, and treat and rehabilitate drug users. It coordinates with and directs the activities of a number of government ministries with a role in reducing demand. The IADA also seeks to change the public atmosphere to counter increasing social acceptance of recreational drug use. Prevention programs target high-risk segments of the population like the Arab sector, as well as youths, students, backpackers, new immigrants, and others. The IADA offers workshops and lectures for immigrants from Russia and Ethiopia in their respective languages and tailored to their particular cultural needs. The IADA is working to reduce demand for narcotics among soldiers by providing officers with the skills to combat effectively the use of drugs within their units. There is an ongoing public awareness campaign aimed at parents and designed to focus their attention on knowing their children's whereabouts and activities. The IADA also concentrates on human resources development, including the development of a professional infrastructure, and is establishing a unified standard for training purposes, including development of a curriculum for nurses, police, prison employees, physicians, and counselors, as well as other drug prevention, treatment, and enforcement professionals. The IADA also performs basic, epidemiological, and evaluative research in the narcotic drug field. The INP participates in demand reduction initiatives by

lecturing at schools at all levels above 10 years of age and in the army about the impact of drugs on the body and mind.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. DEA officials characterize cooperation between the DEA and the INP as outstanding. All DEA investigations related to Israel are coordinated through the DEA Nicosia Country Office.

Road Ahead. The DEA regional office in Nicosia, Cyprus, looks forward to continued cooperation and coordination with its counterparts in the Israeli law enforcement community. The GOI is seeking to widen and build on relations with other countries and has created an office of International Relations within the IADA to pursue this objective. Israel began its four-year-term as a member of the Commission on Narcotic Drugs (CND) in January 2004.

Kenya

I. Summary

Kenya is a transit country for heroin and hashish, mostly bound from Southwest Asia for Europe and North America. Heroin transiting Kenya has markedly increased in quality in recent years and is destined increasingly for North America, even as the overall transit volume continued to decline. Although the exact impact of this heroin on the U.S. market is unclear, it is not believed to be significant. Cannabis/marijuana is grown domestically and imported from neighboring countries for the illegal domestic market. There is a small, and believed to be growing, domestic heroin market. Air passenger profiling, airport controls, and other techniques have helped reduce airborne heroin shipments. Interdiction of narcotics shipments by sea has been unsuccessful as Kenyan police lack the necessary infrastructure, funding, or staffing for such an endeavor. A program for profiling shipping containers is in effect, but has had little success due to rampant corruption among customs officials, police, and members of the judiciary. The three-year-old “National Drug Control Master Plan” has not moved forward since the cabinet turned the project over to an inter-agency committee led by the Solicitor-General. The Anti-Narcotics Unit (ANU) of the Kenyan police continues to cooperate well with international and regional counternarcotics officials. In November, Kenya hosted the 16th Operational Meeting of Regional Anti-Narcotics Units and Directors of the Criminal Investigations Division. This working group—composed of ANU and CID representatives from Tanzania, Rwanda, Ethiopia, Uganda, and Kenya as well as observers from Interpol, DEA, the UK’s Drug Liaison Office—shares narcotics-related intelligence, arrest data, and information on emerging trends in order to enhance cross-border counternarcotics efforts. Although government officials profess strong support for counternarcotics efforts, the overall program suffers from a lack of resources, which also hinder its intelligence collection capabilities. Kenya is a party to the 1988 UN Drug Convention and has enacted full implementing legislation.

II. Status of Country

Kenya is a significant transit country and a minor producer of narcotics. Heroin and hashish transiting Kenya, believed to have a relatively small impact on the United States, continued to register a decline from their 2001 peak. Cannabis or marijuana is produced in commercial quantities for the domestic market. There is no evidence of any significant impact on the United States. Kenya remains a transit country for small quantities of cocaine and other drugs destined for Southern African and Western European consumers. In general, these drugs originate from outside of Africa. Kenya’s sea and air transportation infrastructure, and a network of commercial and family ties among long-term ethnic South Asian merchants living in Kenya, help explain why Kenya is a significant transit country for Southwest Asian heroin. In 2000, officials noted a dramatic shift from low-purity brown heroin to higher-purity white heroin, and believe that the higher-purity product is destined principally for the United States. This trend continued in 2004. Although it is impossible to quantify exactly, officials now believe that the United States is at least as significant as Europe as a destination for heroin transiting Kenya. In recent years, Kenya has been an important transit point for Southwest Asian cannabis resin (hashish), and police made several multi-ton hashish seizures. Cocaine seizures are down sharply in the past three years. Kenya does not produce significant quantities of precursor chemicals.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The 2001 National Drug Control Master Plan continues to languish within an inter-agency committee chaired by the nation's solicitor-general.

Counternarcotics agencies, notably the Anti-Narcotics Unit (ANU) within the Kenyan Police Service, continue to depend on the 1994 Narcotics Act for enforcement measures and interdiction guidelines. Most believe that the ten year-old Act is sufficient to sustain current interdiction efforts, but note the Act's major area of weakness remains its capacity to combat money laundering. The "National Drug Control Master Plan" should it be implemented, would provide for a senior civil servant donor liaison who would coordinate a broad counternarcotics effort, to include a much-expanded public campaign aimed at preventing drug use. Additionally, the plan summarizes policies, defines priorities and apportions responsibilities for drug control to various agencies.

The National Campaign Against Drug Abuse (NACADA), a quasi-governmental organization, was given parliamentary recognition and saw its mandates renewed, although its budget remains negligible. Kenyan authorities improved internal information sharing and operational coordination between various government agencies, airlines and other entities over the course of 2004 to complement regional cooperation efforts bolstered by the 2001 East African Community protocol on combating drug trafficking. ANU continued to publicize its counternarcotics message effectively through local media and increased public awareness through lectures aimed at a range of students from primary grade schools through universities and members of local civic groups.

Kenya has no crop substitution or alternative development initiatives for progressive elimination of the cultivation of narcotics crops. The ANU remains the focus of Kenyan counternarcotics efforts.

Accomplishments. The ANU has sustained a successful track record in securing convictions since beginning its program of judicial outreach in 2002. Many ANU officers have undergone training, much of it through the UNODC and bilateral programs sponsored by the U.S., German, British, Japanese and other governments. The ANU and the Kenyan Customs Service now have a cadre of officers proficient in profiling and searching suspected drug couriers and containers at airports and seaports. Profiling has yielded good results, albeit generally for couriers and not major traffickers, and the success rate over the past two years has forced traffickers to seek viable land routes through Kenya. Seaport profiling has proven difficult. Despite the official estimate that eighty percent of the narcotics trafficking through Kenya originates on international sea vessels, personnel turnover at the ports is high and corruption rampant. Resource and staffing inadequacies undercut the sustainability of most training programs, undermining their effectiveness and impact. A high degree of corruption continues to thwart the success of long-term port security training. The ANU has trained two officers in maritime narcotics interdiction; however, the ANU is unlikely to possess boats with which to conduct such operations until 2005. The ANU has built its surveillance capabilities and has capitalized on the information yielded from increasingly sophisticated operations. Inadequate resources, a problem throughout the Kenyan police force, significantly reduce the ANU's operational effectiveness.

The ANU cooperates fully with the United States and other nations on counternarcotics investigations and other operations. The ANU continues to pass information to Interpol and the DEA on a regular basis. Following a 2002 joint investigation, 2003 saw the first-ever extradition to the United States from Kenya of accused members of a major U.S.-bound drug smuggling ring. The ANU and Attorney General's Office assisted the U.S. government in this case.

Law Enforcement Efforts. Kenya seized 11.6 kilograms of heroin in 2004—nearly a two percent decrease from the quantities seized in 2003 (all statistics on drug seizures in this section reflect the period from January to November 2004) and arrested 72 people on heroin-related charges. Officials report a sharp shift to higher-quality white heroin from lower-quality brown heroin, and report that

traffickers have re-oriented much of the white heroin transiting Kenya for the United States in hopes of a larger profit yield. Most couriers arrested in Kenya conceal heroin by swallowing, though some also hide it in their shoes, false-bottom briefcases, and car engine parts. The ANU concentrates its antiheroin operations at Kenya's two main international airports. Kenyan authorities seized 188,988 kilograms of cannabis in 2004 and arrested 3,292 suspects. Officials believe Kenyan coastal waters and ports are major transit points for the shipment of hashish from Pakistan to Europe and North America.

The number of individuals arrested and seizures for cocaine trafficking continued to be low in 2004. However, ANU intercepted the largest cocaine shipment ever seized in Kenya on December 14. Police seized two cocaine shipments totaling 954 kilograms. A joint investigation involving the Criminal Investigations Division, Anti-Narcotics Unit, Special Crime Prevention Unit and the General Service Unit of the police raided a warehouse in Nairobi, seizing 253 kilograms of cocaine sealed in a refrigerated container. Another team off the coast of Malindi intercepted an outbound cargo vessel, in which 701 kilograms of cocaine were concealed in two 40-foot shipping containers carrying bananas purportedly from Colombia and Venezuela. ANU speculates the drugs were destined for the Netherlands, shipped under the guise of industrial roofing tiles.

Historically, cocaine seized in Kenya is believed to originate from Brazil and Colombia; its abuse and local availability is not widespread. ANU officials involved in the most recent investigation believe it highlights an emerging trend of traffickers using Kenya as a "re-packing point" for drugs destined to Europe and elsewhere. In this case, the drugs, upon arrival in Nairobi through smaller courier deliveries, were opened, re-packaged and wrapped in plastic wrapping papers before being shipped by road to the Port of Mombasa. Once the shipment arrived in Mombasa, the drugs were initially shipped out to sea in small boats and then transferred to larger cargo vessels.

Despite two successful, highly-publicized targeted raids of 14 farms along Mt. Kenya in 2001 and 2002 that collectively destroyed 460,991.179 kilograms of cannabis, ANU saw an increase in this crop during targeted raids (successful and unsuccessful) in 2004.

The ANU continued to operate roadblocks for domestic drug trafficking interdiction and is pursuing a variety of policy initiatives for more effective coordination with other government agencies. The ANU has launched an outreach effort to persuade judges and magistrates of the seriousness of counternarcotics offenses and identify ways cases can be handled more effectively. The ANU also disseminates its messages through local media.

Corruption. Corruption remains a significant barrier to effective narcotics enforcement at both the prosecutorial and law enforcement level. The British High Commission has been so frustrated by information leaks related to key narcotics seizures that it has ceased training Kenyan customs officials. In 2003, the ANU estimated that a majority of the 200 officers lost to attrition over the previous five years were dismissed as a result of being compromised. Police frequently complain that the courts are ineffective in handling counternarcotics cases, which is likely a combination of corruption, misunderstanding of the law, and simple judicial backlog. In the past, payments ranging from \$255 to \$6,360 were offered as bribes to judges presiding over narcotics cases. In 2003, 10 judges were dismissed on corruption-related charges, and a parliamentary committee focused on the judiciary found there to be substantial and credible evidence linking 152 of Kenya's 300 judges and magistrates to corruption and unethical conduct. The Kenyan High Court had previously reassigned all narcotics cases destined for the docket of one of these judges after repeated official protests by ANU officials alleging bribery and flagrant disregard for penal procedures laid out under the 1994 Narcotics Act. Despite Kenya's strict narcotics laws that encompass most forms of narcotics-related corruption, unconfirmed reports continue linking public officials with narcotics trafficking in the East African region. Employees working at the airport continue to be involved with narcotics traffickers. In April,

two Kenya Airways pursers were arrested coming off planes carrying 2.29 kilograms and 3.6 kilograms of heroin in cosmetics cases believed to have originated in Lahore, Pakistan.

Agreements and Treaties. Kenya is a party to the 1988 UN Drug Convention, which it implemented in 1994 with the enactment of the Narcotic Drugs and Psychotropic Substances Control Act. Kenya is also a party to the 1961 UN Single Convention and its 1972 Protocol and the 1971 UN Convention on Psychotropic Substances. Kenya also is a party to the UN Convention Against Transnational Organized Crime and the UN Convention Against Corruption. The 1931 U.S.-UK Extradition Treaty remains in force between the United States and Kenya through a 1965 exchange of notes.

Cultivation and Production. A significant number of Kenyan farmers illegally grow cannabis on a commercial basis for the domestic market. Fairly large-scale cannabis cultivation occurs in the Lake Victoria basin, in the central highlands around Mt. Kenya and along the coast. Foreign tourists export small amounts of Kenyan marijuana. Officials continue to conduct aerial surveys to identify significant cannabis-producing areas in cooperation with the Kenya Wildlife Service. Aerial surveys this year found large cannabis crops in an area of Mount Kenya where crops were previously destroyed by the ANU in 2002. Dangerous weather conditions and poorly maintained helicopters prevented ANU from successfully seizing crops from this location. No aerial eradication efforts were undertaken during the year.

Drug Flow/Transit. Kenya is strategically located along a major transit route between Southwest Asian producers of heroin and markets in Europe and North America. Heroin normally transits Kenya by air, carried by individual couriers. As a result of profiling measures and enhanced counternarcotics efforts, ANU officials believe traffickers are finding Jomo Kenyatta International Airport (JKIA) an increasingly difficult exit point for East African drugs. ANU officials continued to interrupt couriers transiting a newly-created route through the Kenyan-Ugandan border at Malaba. This first-ever use of this land route in November demonstrates, in the minds of ANU officials, that traffickers have noted the increase in security and narcotics checks at JKIA. South Asians and East Africans remain active couriers, the majority of whom are women. ANU continues to track an emerging trend of Western and Eastern European heroin couriers transiting Kenya to Europe and North America. Once in Kenya, heroin is typically delivered to agents of West African crime syndicates.

There is evidence that poor policing along the East African coast makes this region attractive to maritime smugglers. (Kenya's neighbor, Somalia, has a long coastline and no functioning government.) Despite the fact local, regional, and international counternarcotics officials have increased attention paid to the maritime transport of narcotics, ANU interdiction capabilities remain nonexistent. Kenya has no functioning maritime interdiction resource. Six officers are assigned to the southern port of Mombasa for profiling purposes only, and the two officers who have been trained in maritime interdiction have no boats from which to operate. There was one maritime heroin seizure in 2004.

Postal and commercial courier services are also used for narcotics shipments through Kenya. In the past, Kenya has been a transit country for methaqualone (Mandrax) en route from India to South Africa. From 1997-2001, there were no methaqualone (Mandrax) seizures in Kenya. However, this changed in 2001 when 52,103 Mandrax tablets were intercepted and seven suspects arrested. In 2003, one person was arrested transporting 10,000 Mandrax tablets. ANU remains concerned that a new, clandestine Mandrax factory may have resumed operations in Kenya. In 2004 ANU arrested an individual in Nairobi carrying 5,000 tablets of the drug.

Officials have never identified any clandestine airstrips in Kenya used for drug deliveries and believe that no such airstrips exist.

Domestic Programs. Kenya has made some progress in efforts to institute programs for demand reduction. In addition to alcohol, illegal cannabis and legal khat are the domestic drugs of choice.

Heroin abuse is limited generally to members of the economic elite and a slightly broader range of users on the coast. Academics and rehabilitation clinic staff argue that heroin use in Nairobi and along the coast has grown exponentially since 2003. UNODC is exploring funding for a baseline study of the current heroin use trend level. Solvent abuse is widespread (and highly visible) among street children in Nairobi and other urban centers. There are no reliable statistics on domestic consumption of illicit narcotics.

Demand reduction efforts have largely been limited to publicity campaigns sponsored by private donors and a UNODC project to bring counternarcotics education into the schools. In 2001, however, the Government of Kenya appointed a National Coordinator for its Campaign Against Drug Abuse to initiate national public education programs on drugs. There are no special government rehabilitation or drug abuse treatment facilities, but some churches and non-governmental organizations provide limited rehabilitation and treatment programs for solvent-addicted street children.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. The principal U.S. counternarcotics objective in Kenya is to interdict the flow of narcotics to the United States. The U.S. seeks to accomplish this objective through law enforcement cooperation, the encouragement of a strong Kenyan government commitment to narcotics interdiction and strengthening Kenyan counternarcotics and overall judicial capabilities.

Bilateral Cooperation. There was a modest expansion of USG bilateral cooperation with Kenya and surrounding countries on counternarcotics matters in 2004. The USG provided funding to facilitate the 16th Operational Regional Counter-Narcotics Conference and has pledged funding to support the Spring 2005 conference as well. Counternarcotics training opportunities, sniffer dogs, cars, and equipment offers have also been given to the counternarcotics unit in the 2003-2004 period. The U.S. also provided the ANU with computers and related equipment and has financed several DEA courses. The United States remains active in the Mini-Dublin Group, which has responsibility for coordinating counternarcotics assistance from several Western donors.

Road Ahead. The USG will continue to take advantage of its good relations with Kenyan law enforcement to build professionalism, operational capacity and information sharing. As a regional hub, Nairobi remains a key location for conducting regional training and other regional initiatives and the USG will actively seek ways to maximize counternarcotics efforts both in Kenya and throughout East Africa. Perhaps most significantly, the U.S. will work with local, regional and international partners to better understand and combat the flow of international narcotics, particularly heroin, through Kenya to the United States.

Lebanon

I. Summary

Lebanon is not a major illicit drug producing or drug-transit country. The Lebanese government reported success against illicit poppy and cannabis crops for 2004. While the government claimed extensive crop destruction, other observers said that the threat of destruction made crop destruction unnecessary, since farmers sharply curtailed plantings. In any case, no significant illicit drug production took place during 2004 in Lebanon. Nevertheless, illicit crop cultivation is likely to continue to remain an option to local farmers due to an increasingly difficult economic climate and a lack of investment in alternative crops.

If government crop destruction claims are to be believed, cultivation of illicit crops increased slightly from 2003 to 2004. There is practically no illicit drug refining in Lebanon, and no production, trading or transit of precursor chemicals. Drug trafficking across the Lebanese-Syrian border has diminished substantially as a result of Lebanese and Syrian efforts to deter smuggling activity. The government continued its ongoing drug reduction efforts through public service messages and awareness campaigns. Lebanon is a party to the 1988 UN Drug Convention.

II. Status of Country

The deteriorating economic situation in Lebanon and the lack of investment in alternative crops continues to make illicit crop cultivation appealing to local farmers in the Bekka' Valley in eastern Lebanon. Government crop eradication operations have put some pressure on the amount of land farmers dedicated to illicit crops, based on the fear that investment in cultivation and labor would all be for naught if the crop is destroyed before harvest. The government tried to capitalize on this fear by continuing a counternarcotics campaign to discourage new planting.

According to the Internal Security Forces (ISF), approximately 68,000 square meters of poppy and 13,089,000 square meters of cannabis were eradicated in 2004. The Judiciary Police—the law enforcement agency tasked with counternarcotics responsibilities—claimed to have accomplished complete eradication in 2004.

At least five types of drugs are available in Lebanon: hashish, heroin, cocaine, methamphetamine, and other synthetics, such as MDMA (Ecstasy). Hashish and heroin are reported to be rare, due to the destruction of local crops; small quantities of cocaine arrive in Lebanon to meet very modest local demand; and the government reported increased interest in synthetic drugs.

Lebanon is not a major transit country for illicit drugs, and most trafficking is done by “amateurs,” rather than major drug networks. Marijuana and opium derivatives are trafficked to a modest extent in the region, but there is no evidence that the illicit narcotics that transit Lebanon reach the U.S. in significant amounts. South American cocaine is smuggled into Lebanon primarily via air and sea routes either directly or from Europe, Jordan, and Syria. Lebanese nationals living in South America in concert with resident Lebanese traffickers often finance these operations. According to a report issued by the Judiciary Police in 2003, very small quantities of cocaine were smuggled into Lebanon in 2003, as compared to an average of approximately 500 kilograms in previous years. Synthetics are smuggled into Lebanon primarily for sale to high-income recreational users.

There is no significant illicit drug refining in Lebanon. Such activity has practically disappeared due to the vigilance of the Syrian and Lebanese governments. Small amounts of precursor chemicals, however, shipped from Lebanon to Turkey via Syria, were previously diverted for illicit use.

Legislation passed in 1998 authorized seizure of assets if a drug trafficking nexus is established in court proceedings.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The Ministry of Interior again made counternarcotics a top priority. Notably, the Judicial Police made arrests in 2004 for narcotics-related offenses for the first time in over 35 years. The government also continued its public awareness advertising campaigns to discourage drug use, and this year took their message to university campuses. The Ministry of Interior sent counternarcotics messages on mobile phones. Counternarcotics posters and slogans were displayed throughout the country. Counternarcotics ads and video clips were broadcast on television stations, and tee-shirts reading “Together Against Drugs” were distributed to NGOs participating in the drug awareness and drug abuse reduction campaigns.

Accomplishments. In 2004, the Government of Lebanon continued cannabis and poppy eradication. A reliable local expert and director of an agricultural research center reported that the government’s zero-tolerance policy has been a great success. Demand reduction campaigns were also on going and pervasive. The Government of Lebanon received from the UN Office on Drugs and Crime (UNODC) and the United Nations Development Program (UNDP) a \$362,000 grant for “the development and implementation of a national action plan on drug demand reduction in Lebanon” from 2004-2006.

Law Enforcement Efforts. The ISF reported seizures of 900 kilograms of hashish, and significantly lesser quantities of other illicit drugs. In 2004, Police arrested 960 persons for drug abuse, 847 for dealing in narcotics, and 142 for distribution of narcotics. Smaller numbers of arrests were registered for planting, smuggling, and transporting illegal narcotics. The total number of persons arrested in 2004 for drug related crimes was 1,949, including the arrest in June of one of the major drug dealers in Lebanon. Abou Ali Sadek el-Masri was apprehended in his home in the Bekka’ Valley in a joint operation carried out by the ISF and the army.

Corruption. Corruption remains endemic in Lebanon up to the senior levels of government, but none of the corruption is reported to be connected with drug production or trafficking or the protection of persons who deal in illicit drugs. While low-level corruption in the counternarcotics forces is possible, there is no evidence of wide-scale corruption within the Judiciary Police or the ISF. ISF members appear to be genuinely dedicated to combating drugs.

Agreements and Treaties. Lebanon is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention, as amended by the 1972 Protocol. Lebanon has signed, but has not yet ratified the UN Convention Against Transnational Organized Crime.

Cultivation and Production. There are conflicting reports on cultivation of illicit crops. Statistics from the Judicial Police this year show that 68,000 square meters of poppy and 13,089,000 square meters of cannabis were eradicated during 2004. However, a respected agricultural research center reported that, in fact, there were no eradications of illicit crops because farmers did not plant illicit crops. According to the director of the center, farmers have been thoroughly intimidated by police efforts to eradicate illicit crops. Knowing that the crops will be destroyed, and given the poor economic climate, farmers are loath to invest in that which they believe will be destroyed.

Drug Flow/Transit. Illicit drug trafficking via traditional smuggling routes has been somewhat curtailed by joint Syrian-Lebanese operations, but nonetheless continues. Drug trafficking along the Israel-Lebanon border has been negligible since the Israeli withdrawal from Lebanon in May 2000 and the subsequent virtual sealing of the border. The primary route for smuggling hashish from Lebanon during 2004 was overland to Arab countries such as Saudi Arabia, Egypt, Kuwait, the United Arab Emirates, and via sea routes to Europe. According to the ISF, large exports of hashish from Lebanon

to Europe are more and more difficult for smugglers due to increased seashore patrols and airport control. The ISF asserts that no hashish has been smuggled into the United States.

Domestic Programs (Demand Reduction). Lebanese leaders recognize the need to address the problem of illicit drug use. In 2002, the government launched a widespread public awareness campaign to discourage drug use, which remains on going. Textbooks approved for use in all public schools contain a chapter on narcotics to increase public awareness. The current law on drugs dictates that a National Council on Drugs (NCD) be established, whose services and activities will include substance abuse treatment, prevention, awareness, assistance to substance users and their families, in addition to setting up a national action plan. The government has been engaged in the establishment of this council since 2001; however, the NCD has not yet been formed.

There are several detoxification programs, but the only entity in Lebanon that offers a comprehensive drug rehabilitation program is Oum al-Nour (ON), a Beirut-based NGO. The Government of Lebanon, through the Ministry of Social Affairs and the Ministry of Public Health, provided 36 percent of ON's \$1,000,000 budget in 2004 budget. ON estimates that the age of the average drug addict in Lebanon has been decreasing since the end of the country's civil war in 1990, with pre-college and college-age youth now being the most vulnerable. In 2004, 60 percent of ON's clients were under 24, compared to 5 percent for the same age group in 1990. ON statistics, based on their patient base, indicate that the most commonly abused illicit substance is heroin, but use of "designer" drugs such as methamphetamine and ecstasy is increasing.

ON operates three drug treatment centers in Lebanon, two for men and one for women. The centers, which have a maximum capacity of 70 patients, offer a yearlong residential program for hard-core addicts, and sometimes operate above nominal capacity. The centers provide detoxification, psychiatric, spiritual, and social programs without the use of substitution products. A new section, funded by USAID, was built in one of the men's centers and became operational in September. The new section, which can accommodate 12 to 15 patients, has taken in 21 patients since September. ON does not offer outpatient care for individuals whose addictions do not warrant hospitalization.

ON also engages in drug prevention activities such as distributing educational materials on college campuses and promoting drug awareness among the population through advertisements and education programs. The organization also has a research office and a center for statistical studies.

Another drug rehabilitation center for men opened in Zahleh in the Bekka' Valley in coordination with the Saint Charles Hospital and the Ministry of Health. The center can accommodate up to 16 patients. The center's team of psychiatrists, clinical psychologists and social workers also does clinical training for hospital staff.

A new walk-in outpatient therapeutic facility for addiction that offers prevention, awareness, and psychological treatment to drug users and their families called Skoun (which means "internal tranquility" or "silence" in Arabic) opened last year in downtown Beirut. The center is currently treating some 20 outpatients.

Other associations that fight drugs are: Jeunesse Anti-Drogue (JAD), which is primarily committed to drug awareness but also provides medical treatment and psychological rehabilitation on an outpatient basis; Jeunesse Contre la Drogue (JCD), which raises awareness of substance abuse and AIDS, and helps users get proper treatment and rehabilitation; and Association Justice et Misericorde (AJEM), which was established to assist prisoners. One recurrent problem is the lack of coordination between concerned ministries and sometimes between the various NGOs that work on substance abuse.

According to the report "Substance Use and Misuse in Lebanon", released by the UNODC in May 2003, ISF participants in the study reported that individuals arrested for substance-related offenses most commonly use heroin, hashish, marijuana, and cocaine. Furthermore, the participants noted that inappropriate use of licit medications is on the rise in prisons, and that the use of Ecstasy is

uncommon. Data from treatment/rehabilitation centers, however, showed that Ecstasy and abuse of licit opiates are on the rise. Data gathered from street substance users showed that abuse of codeine and other licit medications is on the rise, and additionally, the young population is increasingly inhaling thinner.

IV. U.S. Policy Initiatives and Programs

U.S. Policy Initiatives. In meetings with Lebanese officials, U.S. officials continued to stress the need for diligence in preventing the production and transportation of narcotics, and the need for a comprehensive development program for the Bekka' Valley that would provide the impoverished residents with alternate sources of income. The USG also stressed the importance of anticorruption efforts.

Bilateral Cooperation. USAID, in close cooperation with the Embassy, continued its four-component program to aid and empower key Lebanese stakeholders—local government, media, and civil society—in their efforts to fight corruption. On the supply side, USAID assisted U.S. and local NGOs working with villages to promote the substitution of illicit crops with legitimate, economically viable ones. USAID also helped increase the receiving capacity of one of Oum el Nour's rehabilitation centers (see paragraph above on Domestic Programs). In 2003, State Department counternarcotics assistance funded a narcotics demand reduction program administered by a Beirut-based NGO, the Justice and Mercy Association (AJEM). The project was designed to create a drug treatment facility in Roumieh prison to provide treatment and social rehabilitation for drug addicted prisoners incarcerated there. The State Department also funded a second project aimed at expanding receiving and treatment capacity at Oum el Nour centers.

The Road Ahead. Given the close involvement of Lebanese and Syrian officials in the battle against illicit narcotics, success in combating narcotics cultivation and trafficking depends on the will of both the Syrian and Lebanese governments. The GOL, in cooperation with the Syrian government, appears to have either eradicated or prevented, through threat of eradication, all illicit cultivation during 2004. However, it has not successfully developed a socio-economic strategy to tackle the problem of crop substitution. The USG will continue to press the GOL to maintain its commitment to combating drug production and transit and implementing anticorruption policies.

Morocco

I. Summary

Morocco continues to be a major producer and exporter of cannabis. It produced an estimated 47,400 metric tons of cannabis in 2003, providing for potential cannabis resin (hashish) production of 3,080 metric tons, according to a joint study released in late 2003 by the United Nations Office on Drugs and Crime (UNODC) and Morocco's Agency for the Promotion and the Economic and Social Development of the Northern Prefectures and Provinces of the Kingdom (APDN). A Moroccan government (GOM) study examining production levels for 2004 is still underway. Evidence continues to indicate the United States is not a major recipient of drugs from Morocco. According to the UNODC report, an estimated 134,000 hectares of land were used to cultivate cannabis in 2003, greatly surpassing the GOM's earlier estimates of a growing area covering a total of 15,000-20,000 hectares. The UNODC study also states that approximately 800,000 Moroccans (2.7 percent of the country's 2002 population) were involved in cannabis cultivation. Morocco's efforts to combat cannabis cultivation are made more difficult by limited short-term economic alternatives for those involved in its production. Morocco is a party to the 1988 UN Drug Convention.

II. Status of Country

Morocco consistently ranks among the world's largest producers and exporters of cannabis, and its cultivation and sale provide the economic base for much of northern Morocco. Only very small amounts of narcotics produced in or transiting through Morocco reach the United States. According to the UNODC report, the illicit trade in Moroccan cannabis resin generates approximately \$12 billion a year. Independent estimates indicate that the returns from cannabis cultivation range from \$16,400-\$29,800 per hectare (little of which goes to the grower himself), compared with an average of \$1,000 per hectare for one possible alternative, corn.

According to EU law enforcement officials, Moroccan cannabis is typically processed into cannabis resin or oil and exported to Europe, Algeria, and Tunisia. To date, Morocco has no enterprises that use dual-use precursor chemicals, and is thus neither a source nor transit point for them. While there has been a small but growing domestic market for harder drugs like heroin and cocaine, cannabis remains the most widely used illicit drug in Morocco. Although there is no substantial evidence of widespread trafficking in heroin or cocaine, press reports suggest Latin American cocaine traffickers may have started using well-established cannabis smuggling routes to move cocaine into Europe.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In May, the Interior Ministry announced the government was drafting a "new integrated plan" to fight drug trafficking and was considering revitalizing the National Commission of the Struggle Against Drugs. The new plan will gradually reduce the areas in which cannabis is grown, intensify border controls, expand regional and international cooperation in training, and include an aggressive public awareness campaign. The GOM's partnership with the UNODC in conducting the 2003 cannabis survey reflects the GOM's most significant effort to compile accurate and comprehensive data about narcotics production.

Throughout the 1980's, the GOM worked in conjunction with the UN to devise a response to the unique geographic, cultural and economic circumstances that confront the many people involved in the cultivation of cannabis in northern Morocco. Joint projects to encourage cultivation of alternative agricultural products included providing goats for dairy farming, apple trees, and small bee-keeping

initiatives. This effort also included paved roads, modern irrigation networks, and health and veterinary clinics. In the 1990's, the GOM has continued its focus on development alternatives in Morocco's northern provinces through the work of APDN and the Tangier Mediterranean Special Agency (TMSA). In June 2003, TMSA oversaw the groundbreaking of the centerpiece of its northern development program, the Tanger-MED port, which is set to become Morocco's primary maritime gateway to the world.

Accomplishments. In September, Morocco and France agreed to reinforce bilateral counternarcotics cooperation by deploying liaison officers to Tangiers and France. Morocco has legislation providing the maximum allowable prison sentence for drug offenses to 30 years, as well as fines for narcotics violations ranging from \$20,000-\$80,000. Ten years imprisonment remains the typical sentence for major drug traffickers arrested in Morocco. The Ministry of Justice has drawn up a draft law to further strengthen drug trafficking sentences.

Law Enforcement Efforts. In May, the Criminal Court of Tetouan sentenced convicted drug trafficker Mounir Erramach to 20 years in prison for drug trafficking and related charges and fined him \$375 million for customs and criminal violations. The court also handed down sentences ranging from one month in jail to life imprisonment to 26 other defendants in the case, including a rival drug kingpin who is still at large. The Court of Appeals of Tetouan upheld in December the majority of these sentences, including those of the two lead defendants, but reduced the sentences of four defendants and acquitted three others. In February, the GOM dismantled a small-scale crack cocaine smuggling network in Marrakech, leading to the seizure of 70 grams of the drug and the sentencing of 22 individuals to prison terms varying from one month to six years.

As part of a 1992 counternarcotics initiative, an estimated 10,000 police were detailed to drug interdiction efforts in the North and Rif mountains in 1995. Since then, approximately every six months, the GOM has rotated personnel into this region and continued to maintain narcotics checkpoints. Moroccan forces also staff observation posts along the Mediterranean coast, and the Moroccan Navy carries out routine sea patrols and responds to information developed by the observation posts. None of these efforts, however, has changed the underlying reality of extensive cannabis cultivation and trafficking in northern Morocco.

Corruption. Investigations into charges of alleged "abuse of power, corruption, embezzlement of public funds, drug trafficking," and violations of professional confidentiality by senior police officers and customs officials, as well as magistrates, court clerks, and other local government officials linked to the Erramach case, were still underway in December. Despite enforcement efforts in this case, corruption, at some level, is likely to play a role in Morocco's continuing trafficking of cannabis products.

Agreements and Treaties. The U.S. and Morocco cooperate in judicial matters through a convention on mutual legal assistance. Morocco is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances and the 1961 UN Single Convention on Narcotic Drugs, as amended by the 1972 Protocol amending the Single Convention. Morocco is a party to the UN Convention against Transnational Organized Crime.

Cultivation/Production. The center of cannabis production continues to be the province of Chefchaouen, although production has expanded in the last 20 years north to the outskirts of Tangiers, west to the coastal city of Larache, and east toward Al Hoceima. According to the UNODC report, small farmers in the northern Rif region grow most cannabis, where an estimated 27 percent of arable land is dedicated to its cultivation. Production also occurs on a smaller scale in the Souss valley of the South. The UNODC survey found that 75 percent of villages and 96,600 farms in the Rif region cultivate cannabis, representing 6.5 percent of all farms in Morocco.

The GOM has stated its commitment to the total eradication of cannabis production, but given the economic and historical dependence on cannabis in the northern region, eradication is only feasible if accompanied by a well-designed development strategy involving reform of local government and a highly subsidized crop substitution program. Moroccan officials have indicated that crop substitution programs thus far appear to have made little headway in providing economic alternatives to cannabis production. The amount of cannabis production measured in 2003 suggests that the crop's cultivation has seen a steady increase over the past few years, to the detriment of other agricultural activities. The UNODC report warned that this agricultural monoculture represents an extreme danger to the ecosystem, as the extensive use of fertilizers and forest removal continue to be the methods of choice to make room for cannabis cultivation.

Drug Flow/Transit. The primary ports of export for Moroccan cannabis are Oued Lalou, Martil and Bou Ahmed on the Mediterranean coast. Most large shipments bound for Spain travel via fishing vessels and private yachts. Shipments of up to two tons increasingly are being confiscated on smaller "zodiac" speedboats that reportedly are capable of making roundtrips to Spain in one hour. Smugglers also continue to ship cannabis via truck and car through the Spanish enclaves of Ceuta and Melilla, and the Moroccan port of Tangiers, crossing the Straits of Gibraltar by ferry. According to the UNODC, Spain still accounts for the world's largest portion of cannabis resin seizures (57 percent of global seizures and 75 percent of European seizures in 2001). The Moroccan press reported that some 800 tons of Moroccan cannabis resin were seized in Spain in 2004. Given its proximity to Morocco, Spain is a key transfer point for Europe-bound Moroccan cannabis resin.

Domestic Programs. The GOM is concerned about signs of an increase in domestic heroin and cocaine use, but does not aggressively promote reduction in domestic demand for these drugs or for cannabis. It has established a program to train the staffs of psychiatric hospitals in the treatment of drug addiction. In partnership with UNODC, the Ministry of Health is exploring the relationship between drug use and HIV/AIDS infection in Morocco. Moroccan civil society and some schools are active in promoting counternarcotics use campaigns.

IV. U.S. Policy Initiatives and Programs

U.S. Policy Initiatives. U.S. policy goals in Morocco are designed to provide training in law enforcement techniques and to promote the GOM's adherence to its obligations under relevant bilateral and international agreements. U.S.-supported efforts to strengthen money laundering laws and efforts against terrorist financing may also contribute to the GOM's ability to monitor the flow of money from the cannabis trade.

Bilateral Cooperation. According to customs officials in northern Morocco, USG-funded border security training and equipment contributed directly to the dismantling of 37 smuggling and trafficking operations in the Nador region in 2003.

Road Ahead. The United States will continue to monitor the narcotics situation in Morocco, cooperate with the GOM in its counternarcotics efforts, and, together with the EU, provide law enforcement training, intelligence, and other support where possible.

Mozambique

I. Summary

Mozambique is a transit country for illegal drugs such as hashish, herbal cannabis, cocaine, mandrax (methaqualone), and heroin consumed in Europe and South Africa. Some hashish shipments passing through Mozambique may also find their way to the United States and Canada. The country's porous borders, poorly policed seacoast, and inadequately trained and equipped law enforcement agencies facilitate transshipment of narcotics. Drug production is limited to herbal cannabis cultivation and a few mandrax laboratories. Available evidence suggests significant use of herbal cannabis and limited consumption of "club drugs" (Ecstasy/MDMA), prescription medicines, and heroin among the urban elite. The Mozambican government recognizes drug use and drug trafficking as serious problems, but has limited resources to address these issues. The U.S., the UN Office on Drugs and Crime (UNODC), and other donors have established cooperation programs to improve training of drug control officials and provide better interdiction and laboratory equipment. Despite these efforts, drug trafficking interdiction performance has not improved in the past year. Corruption in the police and judiciary continues to hamper counternarcotics efforts, but Mozambican public prosecutors did level formal charges against high-ranking police officers involved in drug trafficking in 2004. Mozambique is a party to the 1998 UN Drug Convention.

II. Status of Country

Mozambique is not a significant producer of illegal drugs. Herbal cannabis for local consumption is produced throughout the country, particularly in Tete, Nampula, and Cabo Delgado provinces. Limited amounts are exported to neighboring countries, particularly South Africa. Some factories producing mandrax for the South African market were raided and closed down in 1995, 2000, and 2002. Mozambique's role as a drug-transit country has grown rapidly. Southwest Asian producers ship cannabis resin (hashish) and synthetic drugs through Mozambique to Europe and South Africa. Limited quantities of these shipments may also reach the United States and Canada. Reports from the Mozambican Office for the Prevention and Fight Against Drugs (GCPCD) indicate that heroin and other opiate derivatives shipped through Mozambique originate in Southeast Asia. Drugs cultivated in Southeast Asia then typically transit India/Pakistan and later Tanzania, before arriving by small ship or, occasionally, overland to Mozambique. Traffickers are most commonly of Tanzanian or Pakistani origin. Increasing amounts of cocaine from the Andean region are sent with couriers on international flights from Brazil to Mozambique, sometimes via Lisbon, before being transported overland to South Africa. Mozambique has become a favored point of disembarkation because of its lax airport security control. Drug traffickers have recruited many young women in Maputo to work as couriers to and from Brazil. Mozambique is not a producer of precursor chemicals.

III. Country Actions Against Drugs in 2004

Accomplishments. Mozambique's accomplishments in meeting its goals under the 1988 UN Drug Convention remain limited. Government resources devoted to the counternarcotics effort are meager, and only limited donor funds are available. Police and border officials did make some drug seizures in the latter part of the year, particularly cocaine from Brazil and hashish from Southwest Asia. The Mozambican government carries out drug education programs in local schools in cooperation with bilateral and multilateral donors as part of its demand reduction efforts.

Law Enforcement Efforts. Mozambique's drug unit operates in Maputo and reports to the Chief of the Criminal Investigation Police. With assistance from the UNODC, drug detection equipment was

installed at border posts, ports, and airports in 2002 and 2003. In the past year, customs officers at Maputo airport and seaport have received drug interdiction training under a UNODC program. The UNODC is working with customs agents at land borders as part of a program with Mozambique, South Africa, and Swaziland. Publicized seizures in 2004 include:

- Two separate maritime seizures of hashish by Inhambane police, one weighing 40 tons and the other 12 tons. In each case, the traffickers were Pakistani citizens transporting hashish in relatively small boats. In one case, the boat had shipwrecked.
- The October seizure at Maputo airport of over two kilograms of cocaine, carried by a young Mozambican woman arriving directly from Brazil.
- The December arrest at Beira airport of a young Mozambican woman arriving from Brazil with 38 capsules containing cocaine.
- The January arrest at Maputo airport of three women, Mozambican and South African, who were carrying 90 capsules of cocaine from Brazil to Maputo via Lisbon.
- The December seizure of over five tons of hashish, reportedly from the Philippines, in Beira. One Mozambican man was arrested, and the case has been referred to the anticorruption unit of the attorney general's office for further investigation.

With the exception of the two suspects recently apprehended in separate cases in Beira, it is not clear whether any of the suspects mentioned are incarcerated at this time. Local newspapers have printed articles about Mozambican women who were detained at Maputo airport for carrying drugs from Brazil in 2003 or 2004, but subsequently released without facing formal charges.

Corruption. Corruption is pervasive in Mozambique. Mozambique is, however, for the first time in many years prosecuting high-ranking police officials charged with drug trafficking offenses. In December 2004, the Inhambane provincial prosecutor filed formal charges against four officers, including the director of the provincial criminal investigative police and the director of the provincial riot police. These officers are charged with selling the proceeds of a large Pakistani shipment of hashish that had shipwrecked in 2000, and had been held in storage by provincial police since then. The officers had been incarcerated in 2003, but formal charges were made one year later. Media sources reported in early 2004 that two Beira police officers were fired for alleged involvement in drug trafficking, but were not charged. As official policy, Mozambique seeks to enforce its laws against narcotics trafficking, but as noted above, confronts difficulties in doing so regularly.

Agreements and Treaties. Mozambique is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention, as amended by the 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances. Mozambique has signed, but has not yet ratified, the UN Convention against Transnational Organized Crime and the UN Convention Against Corruption.

Cultivation/Production. Cannabis is cultivated in Nampula, Zambezia, Niassa, Cabo Delgado, Tete, Manica, and Sofala provinces. The Mozambican government has no estimates on crop size. Intercropping is the most common method of production.

Drug Flow/Transit. Assessments of drugs transiting Mozambique are based upon limited seizure data and observations of local and UNODC officials. Mozambique increasingly serves as a transit country for hashish, cannabis resin, heroin, and mandrax originating in Southwest Asia, owing to its long, unpatrolled coastline, lack of resources for interdiction and sea, air, and land borders, and growing transportation links with neighboring countries. Drugs destined for the South African and European markets arrive in Mozambique by small ship, mostly in the coastal areas in northern Cabo Delgado province, but also in Nampula, Sofala, and Inhambane provinces.

The Maputo corridor border crossing at Ressano Garcia/Lebombo is an important transit point. Hashish and heroin are also shipped on to Europe, and some hashish may reach Canada and the United States, but not in significant quantities. Arrests in Brazil, Mozambique and South Africa indicate cocaine is being trafficked by drug couriers from Colombia and Brazil to Mozambique, sometimes through Lisbon, for onward shipment to South Africa. In addition, Nigerian and Tanzanian cocaine traffickers have targeted Mozambique as a gateway to the South African and European markets.

Domestic Programs (Demand Reduction). The primary substances of abuse are alcohol and herbal cannabis. Heroin, cocaine, and “club drug” usage and prescription drug abuse are also reported among Mozambique’s urban elite. The GCPCD has developed a drug education program for use in schools; the program includes plays and lectures in schools, churches, and other places where youths gather. It has provided the material to a number of local NGOs for use in their drug education programs. The Sofala provincial GCPCD office has created a community volunteer educational program. Due to limited funding, program initiatives were limited to Maputo and Beira. The Mozambican Office for the Prevention and Fight Against Drugs (GCPCD) has received some support for community policing and demand reduction from bilateral donors, including the German government. Drug abuse and treatment options are scarce. The GCPCD is seeking donor assistance in creating three regional treatment centers in Maputo, Beira, and Nampula.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. The USG sponsors Mozambican law enforcement officials and prosecutors to attend regional training programs through the International Law Enforcement Academy (ILEA) for Africa in Botswana. Law enforcement officials have also received training at ILEA New Mexico. The State Department’s Bureau for International Narcotics and Law Enforcement Affairs (INL) provides support to the attorney general’s anticorruption unit and the police sciences academy (ACIPOL) near Maputo. The funds have provided for training, specialized course instruction, instructor development, and curriculum development for ACIPOL. The anticorruption unit, which began operations in November 2002, has received specialized training and advisor visits through the Department of Justice OPDAT (Overseas Prosecutorial Development Assistance and Training) program. With USAID assistance, the anticorruption unit was able to open fully equipped offices in Beira and Nampula in 2004, expanding operations that were formerly based only out of Maputo.

The Road Ahead. The U.S. will continue working to upgrade facilities at ACIPOL, using INL funds in 2005 to develop a training laboratory that will include drug, fingerprint, document, and photo facilities. The criminal investigative police will also use the facility for its own drug investigation activities. U.S. assistance fund support of the anticorruption unit will continue in 2005. The U.S. is also devising a strategy with the GRM to develop a stronger border control program.

Namibia

I. Summary.

While occasionally used as a drug transit point, Namibia is not a major drug producer or exporter. The year 2004 saw an increase in drug seizures in Namibia, including record single seizures of marijuana (301 kilograms) and cocaine (21 kilograms). Drug abuse remains an issue of concern, especially among economically disadvantaged groups. Narcotics enforcement is the responsibility of the Namibian Police's Drug Law Enforcement Unit (DLEU), which lacks the manpower, resources and equipment required to fully address the domestic drug trade and transshipment issues. Namibia is not a party to the 1988 UN Drug Convention.

II. Status of Country.

Namibia is not a significant producer of drugs or precursor chemicals. No drug production facilities were discovered in Namibia in 2004. Namibia's excellent port facilities and road network combine with weak border enforcement to make it an ideal transshipment point for drugs en route to the larger and more lucrative South African market. DLEU personnel believe much of the transshipment takes place via shipping containers either offloaded at the port of Walvis Bay or entering overland from Angola and transported via truck to Botswana, Zambia and South Africa. Personnel constraints, inadequate screening equipment, a lack of training and varying levels of motivation among working-level customs and immigration officers at Namibia's land border posts all prevent adequate container inspection and interception of contraband. Inconsistently applied immigration controls also make Namibia an attractive transit point for Africans en route to Latin America for illicit purposes, as evidenced by the September 2004 discovery of a smuggling ring that specialized in the movement of Tanzanians to Brazil via Namibia.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Namibia has requested United Nations (UNDOC) assistance in completing a National Drug Master Plan, which is still being formulated. While Namibia has not announced plans to become a party to the 1988 UN Drug Convention, many Convention requirements are already reflected in Namibian law, which states that illicit cultivation, production, distribution, sale, transport and financing of narcotics are all criminal offenses.

Namibia's Parliament passed two bills designed to combat organized crime, trafficking, and terrorism in 2004, but the required implementing regulations for this legislation have yet to be drafted. Three additional initiatives are still pending parliamentary action. Once fully implemented, the new legislation will allow for asset forfeiture and other narcotics-related prosecution tools.

Law Enforcement Efforts. Namibia fully participates in regional law enforcement cooperation efforts against narcotics trafficking, especially through the Southern African Development Community (SADC) and the Southern African Regional Police Chiefs' Cooperative Organization (SARPPCO). The Minister of Home Affairs meets regularly with counterparts from neighboring countries, during which efforts to combat cross-border contraband shipment (including narcotics trafficking) are discussed.

Corruption. No incidents of narcotics-related public corruption were reported in 2004. To our knowledge, neither the Office of the Ombudsman nor any other anticorruption entity in Namibia is currently investigating narcotics-related public corruption.

Agreements and Treaties. Namibia is not a party to the 1988 UN Drug Convention. However, Namibia is a party to the 1961 UN Single Convention as amended by the 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances. While there is no U.S.-Namibia bilateral extradition treaty, narcotics offenses are extraditable under Namibian law. Namibian law also allows for the provision of mutual legal assistance as described in the 1988 UN Drug Convention. Namibia also is a party to the UN Convention Against Transnational Organized Crime and its protocols on migrant smuggling and trafficking in women and children, and to the UN Convention Against Corruption.

Domestic Programs (Demand Reduction). Drug treatment programs are available from private clinics, and to a lesser extent from public facilities. The vast majority of treatment cases in Namibia are for alcohol abuse, with the remainder divided evenly between cannabis and Mandrax (methaqualone).

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. The USG continues to offer Namibia opportunities for fully funded law enforcement training programs at the International Law Enforcement Academy (ILEA) in Gaborone, Botswana. Most of these training programs contain counternarcotics elements, and some narcotics-specific training is also offered. While representatives of several law enforcement agencies (Customs, Immigration, Prison Service) and prosecutors have participated in ILEA training, the Namibian Police have declined to do so. The Namibian Police have repeatedly stated their willingness to cooperate with the USG on any future narcotics-related investigations, and both the DLEU and the Namibian Police Special Branch were extremely cooperative in the September 2004 alien smuggling investigation (see part II above).

The Road Ahead. The USG will continue to encourage the Namibian Police to take advantage of training opportunities at ILEA Botswana, and will assist the Government of Namibia in any narcotics investigation with a U.S. nexus.

Nigeria

I. Summary

Nigeria remains a major transit route for illicit trafficking of narcotic drugs. There is evidence that narcotics transiting Nigerian ports and borders reaches the United States, but the quantities are modest in comparison to the impact of narcotics trafficked by ethnic Nigerian criminals operating trafficking rings based outside of Nigeria, and thereby beyond much of the enforcement reach of the Nigerian government. However, Nigeria does not produce any of the narcotic drugs its nationals traffic, except marijuana. Cannabis/marijuana is grown domestically in Nigeria and is trafficked to the neighboring West African countries from where it is further trafficked to Europe. There is a small, but increasing local narcotics market. Nigeria's National Drug Law Enforcement Agency (NDLEA) is strongly committed to interdicting the movement of through Nigeria of illegal narcotics and reducing abuse by Nigerians. NDLEA has grown in experience and professional competence and their counternarcotics efforts have prevented a growing share of Nigerian-trafficked drugs from reaching markets in other countries. Nigeria is a party to the 1988 UN Drug Convention.

II. Status of Country

Nigeria is not a major producer of narcotic drugs, but it is a major drug-transit hub. Heroin and cocaine transit Nigeria on their way to neighboring countries, Southern Africa, Europe and increasingly to the United States. In addition, Nigerian organized criminals are a major factor in the worldwide drug trade, especially in the trafficking of cocaine. Most drugs trafficked to and through Nigeria originate outside Africa. Drug interdiction is the sole responsibility of the NDLEA. Heroin and cocaine seizures have dominated the NDLEA activities at the Murtala Mohamed International Airport in Lagos. There was a major seizure of 30 kilograms of cocaine at the Benin-Nigerian border in December. The quantities of marijuana seized and number of arrests relating to marijuana indicate that trade in, and local consumption of, marijuana has been on the increase in 2004. On the whole there has been an increase in narcotic drugs business despite government efforts to combat illegal trafficking.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The assistance relationship between USG and Nigerian agencies is generally good. Training programs, technical assistance and equipment donations have continued, especially to the NDLEA Academy in Jos, Plateau State. Other counterpart agencies include the Economic and Financial Crime Commission (EFCC) and the National Police Force (NPF), though in the case of the NPF, there have been some difficulties coordinating efforts to improve training at the Police Academy.

Accomplishments. In 2004, NDLEA commenced a systematic implementation of all anti-money laundering legislation. Five commercial banks have been investigated and prosecuted for aiding and abetting money laundering. NDLEA also intensified its bank inspection operations at other Nigerian financial institutions.

Law Enforcement Efforts. In 2004, by the end of October, NDLEA seized 51,022 kilograms of cannabis, 92.2 kilograms of cocaine, 53.3 kilograms of heroin and 198.1 kilograms of psychotropic substances. In the same period, the agency arrested 3,067 drug traffickers and over 98 percent of them were successfully prosecuted. The seizures were concentrated at airports, seaports and border posts. NDLEA continued to develop its capacity to conduct complex investigations and get arrests and convictions of narcotics kingpins.

Corruption. Corruption is fully entrenched in Nigerian society and still remains a significant barrier to effective narcotics enforcement. It is systemic and society tends to condone it. The socio-economic conditions in Nigeria seem to be the root cause. There is widespread unemployment and the salaries of civil servants are low. In addition, the government often fails to pay salaries on time. Law enforcement officers are most affected by this failure. The Independent Corrupt Practices and Other Related Offences Commission (ICPC) is empowered to receive and investigate reports of corruption and where justifiable, prosecute the offenders. It is also empowered to educate the public against bribery, corruption and other related offences. In 2004, the commission endeavored to execute its duties despite the problems it faced. ICPC has investigated and is in the process of prosecuting high profile Nigerian government officials. These include judges, commissioners, permanent secretaries and ministers. A proposed constitutional amendment would remove the immunity of state governors from prosecution for corruption and other crimes. ICPC now has 12 qualified and motivated prosecutors and is recruiting more private-sector prosecutors to replace its current police prosecutors. The Commission is scheduled to receive assistance from a Resident U.S. Legal Advisor (RLA). This project is scheduled to commence in March 2005 for an initial six months.

Agreements and Treaties. Nigeria is party to the 1988 UN Drug Convention, the 1961 UN Single Convention on Narcotic Drugs, as amended by the 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances. Nigeria is a party to the UN Convention against Transnational Organized Crime and its protocols on migrant smuggling and trafficking in women and children. Nigeria is a signatory to the UN Convention Against Corruption. The U.S. and Nigeria cooperate in matters of extradition and judicial assistance through the 1931 U.S.-UK Extradition Treaty, which applies to Nigeria, and the U.S.-Nigeria MLAT, which entered into force in 2003.

Cultivation/Production. Marijuana/Cannabis is grown all over Nigeria, but cultivation is heaviest in the central and northern states of the country. It is also grown in large quantities in Ondo and Delta states. Its market is concentrated in West Africa and Europe. None is known to have found its way to the United States. NDLEA destroyed more than 200,000 hectares of marijuana in 2004.

Drug Flow/Transit. Nigeria remains a conduit for heroin and cocaine from Asia and South America destined for South Africa, Europe, and to a lesser degree, North America, including the U.S. Interdiction is mainly at the Murtala Mohamed International Airport in Lagos where NDLEA conducts 100 percent searches on both passengers and luggage. This has led to a change of routes by traffickers. Port Harcourt Airport, currently being used by British Airways, has been identified as a new narcotics smuggling route in Nigeria. Many observers suspect that seaports are important entry points because of the laxity of security at Nigeria's ports.

Domestic Programs (Demand Reduction). Drug abuse is on the rise in Nigeria. This is a result of the availability of imported drugs on the local market in Nigeria's large cities. Domestic cultivation and abuse of marijuana is also still a big problem. Treatment is not generally available.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. NDLEA is making continued strides, improving its interdiction efforts at Nigerian ports of entry, and working on its capacity to conduct sophisticated investigations successfully. The U.S., through State-Department narcotics assistance, is a significant factor in helping NDLEA to improve its interdiction performance.

The Road Ahead. The future of U.S. assistance to the Nigerian Police Force (NPF) is under review. The NPF has not been very cooperative in its dealings with the U.S. Government. This has been manifested in its failure to follow a new recruit curriculum and a mid-level in-service training program that were designed by Department of Justice advisors to the Nigerian Police Force. The remaining agencies receiving U.S. assistance (NDLEA, ICPC, and EFCC) have shown that they are committed to

their work and there are indicators that they are now more effective on the ground. Continuing assistance to these agencies is planned and under discussion.

Saudi Arabia

I. Summary

Saudi Arabia has no appreciable drug production and is not a significant transit country. Saudi Arabia's conservative cultural and religious norms discourage drug abuse. The Saudi Government places a high priority on combating narcotics abuse and trafficking. Since 1988, the Government has imposed the death penalty for drug smuggling. Due to these factors, drug abuse and trafficking do not pose major social or law enforcement problems. However, Saudi officials acknowledge that illegal drug consumption and trafficking are on the rise. Saudi and U.S. counternarcotics officials maintain excellent relations. Saudi Arabia is a party to the 1988 UN Drug Convention.

II. Status of Country

Saudi Arabia has no significant drug production and, in keeping with its conservative Islamic values and 1988 UN Drug Convention obligations, places a high priority on fighting narcotics abuse and trafficking. Narcotics-related crimes are punished harshly, and narcotics trafficking is a capital offense enforced against Saudis and foreigners alike. During 2004, the Saudi Government executed a number of people for narcotics-related offenses. Saudi Arabia maintains a network of overseas drug enforcement liaison offices and state-of-the-art detection and training programs to combat trafficking. While Saudi officials are determined in their counternarcotics efforts, drug trafficking and abuse is a growing problem. Since the Saudi government provides no statistics on drug consumption, interdiction, and trafficking, it is difficult to substantiate this assessment with hard data. However, anecdotal evidence suggests that Saudi Arabia's relatively affluent population, large numbers of idle youth, and high profit margins on smuggled narcotics make the country an attractive target for drug traffickers and dealers.

The Saudi Government undertakes widespread counternarcotics educational campaigns in the media, health institutes, and schools. The Narcotics Police are currently collaborating with the Presidency of Youth Welfare to produce a film for schoolchildren to educate them about the dangers of illegal drugs. Government efforts to treat drug abuse are aimed solely at Saudi nationals, who are remanded to one of the nation's four drug treatment centers in Riyadh, Jeddah, Dammam and Qassim. There are no separate facilities for Saudi women, and expatriate substance abusers are jailed and summarily deported. Health officials confirm anecdotal reports of an increase in drug abuse, but note that most addictions are not severe due to the scarcity of available narcotics and their diluted form. Heroin and hashish are the most heavily-consumed substances, but Saudi officials report that cocaine and amphetamines are also in demand. Paint/glue inhalation and abuse of prescription drugs is also reported.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The lead agency in Saudi Arabia's drug interdiction efforts is the Ministry of Interior, which has over 40 overseas offices in countries representing a trafficking threat. In addition, the Saudi Government continues to play a leading role in efforts to enhance intelligence sharing among the six nations of the Gulf Cooperation Council.

Accomplishments/Law Enforcement Efforts. Saudi and U.S. drug enforcement officials regularly exchange information on narcotics cases. Drug seizures, arrests, prosecutions and consumption trends are not matters of public record, although reports of drug seizures by Saudi officials appear

occasionally in local newspapers. Saudi interdiction efforts tend to focus more on individual carriers than on follow-on operations designed to identify drug distributors and regional networks.

Corruption. There is no evidence of involvement by Saudi Government officials in the production, processing or shipment of narcotic and psychotropic drugs and other controlled substances.

Agreements and Treaties. Saudi Arabia is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention as amended by its 1972 Protocol. Saudi Arabia has signed, but has not yet ratified, the UN Convention on Transnational Organized Crime.

Cultivation/Production. Cultivation and production of narcotics in Saudi Arabia is negligible.

Drug Flow/Transit. Saudi Arabia is not a major transshipment point. Due in part to new detection techniques employed at major points of entry, seizures of narcotics (coming primarily from Pakistan, Nigeria and Turkey) have increased. Anecdotal evidence suggests that narcotics trafficking is a growing problem via the country's land borders.

Domestic Programs (Demand Reduction). In addition to widespread media campaigns against substance abuse, the Saudi Government sponsors drug eradication programs directed at school-age children, health care providers and mothers. Executions of convicted traffickers (public beheadings which are widely publicized) are believed by Saudi officials to serve as a deterrent to narcotics trafficking and abuse. The country's influential religious establishment actively preaches against narcotics use and Government treatment facilities provide free counseling to male Saudi addicts.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. Saudi officials actively seek and participate in U.S.-Sponsored training programs and are receptive to enhanced official contacts with DEA.

Road Ahead. The U.S. will continue to explore opportunities for additional bilateral training and cooperation.

Senegal

I. Summary

Counternarcotics elements of the Senegalese Government remain concerned about the production and trafficking of cannabis, and to a lesser degree, hashish. Small quantities of cocaine and heroin are seized on an infrequent basis. Senegal's attempts to implement a national plan of action against drug abuse and trafficking have yet to get off the ground due to lack of funding. Senegalese authorities have been active in pursuing bilateral cooperation against international traffickers, including signing mutual assistance agreements with France and the UK. Education and strict enforcement of drug laws remain cornerstones of Senegal's counternarcotics goals, but are sometimes not achieved because of resource constraints, and other strident priorities, for example poverty alleviation. Senegal is a party to the 1988 UN Drug Convention.

II. Status of Country

While trafficking of all types of drugs, including heroin, cocaine, and psychotropic depressants, exists in Senegal, it is cannabis production and trafficking that has continued to stymie most enforcement efforts. Southern Senegal's Casamance region is at the center of the cannabis trade. In 2004, the peace process in the Casamance continued between the Government and the leaders of the failed independence movement, with more rebels deciding to lay down their arms to pursue legitimate economic activity. However, it is generally acknowledged that some of the rebels have turned to the cannabis trade as a source of income. Police are reluctant to undertake greater enforcement efforts against cannabis cultivation in the Casamance for fear of hampering further peace negotiations. Government troops have temporarily driven some traffickers out of the Casamance but have not followed through with eradication of cannabis crops because they claim there is inadequate manpower to do so. Drug enforcement efforts have been under-funded and undermanned, allowing the illegal cannabis trade to continue unabated. Cannabis produced in the Casamance finds its way to Dakar, the capital city, and has a regional market in Africa, but it is not exported significantly outside of Africa.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Senegal developed a national plan of action against drug abuse and the trafficking of drugs in 1997. Multidisciplinary in its approach, Senegal's national plan includes programs to control the cultivation, production and traffic of drugs; inform the population of the dangers of drug use; and reintroduce former drug addicts into society. Full implementation of this plan remains stalled due to funding constraints. Periodic efforts to improve coordination have been hampered because of insufficient funding.

Accomplishments. The amount of hard drugs seized by police in Senegal is small by international standards. Due to weak enforcement efforts and inadequate record keeping, it is impossible to assess accurately the country's real drug problem. Police lack the training and equipment to detect drug smuggling, as evidenced by a nationwide absence of drug-sniffing canines. Senegal has in the past undertaken few cannabis eradication efforts. Meetings have been organized, though, with island populations—the Casamance region is swampy and low-lying and there are many islands—in the south in accordance with the UN Program for International Control of Drugs to promote substitution of cannabis cultivation with that of other crops.

Law Enforcement Efforts. During 2004, no significant changes were made on the law enforcement front. Traffickers and their organizations are subject to asset seizures, imprisonment, and permanent

exclusion from Senegal if convicted. However, the relatively low priority the GOS places on counternarcotics enforcement is underscored by the Minister of the Interior's statement that "the fight against drugs should be understood as a problem of development," while stressing the urgency of attacking the underlying cause: poverty.

Dakar's position on the west coast of Africa and the presence of an international airport and seaport make it an enticing transit point for drug dealers. The seaport of Dakar and its international airport are the two principal points of entry/exit of drugs in Senegal. Senegalese authorities state that, because there is not a direct flight from South America, Cape Verde serves as a way station for cocaine bound for Senegal.

Given limitations on funding, training, and policy, there is only limited ability to guard Senegal's points of entry from the transiting of drugs through Dakar. The international airport has drug enforcement agents present, but they lack the training and equipment to systematically detect illegal drugs. The airport authority's efforts to attain FAA Category One certification have resulted in the tightening of security procedures and more thorough passenger luggage screening. Presumably, this has had the positive outcome of discouraging drug trafficking through the International Airport. Conversely, there is no consistent monitoring of containers at the port of Dakar.

Corruption. Corruption is a problem for narcotics law enforcement all over Africa, but the USG is unaware of any narcotics-related corruption at senior levels of the Senegalese government. In 2004, the National Commission against Non-Transparency, Corruption, and Misappropriation of Funds, an autonomous investigative panel, was created. The efficacy of the commission's efforts remains to be seen. The GOS does not, as a matter of government policy, encourage or facilitate illicit production or distribution of narcotic or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal drug transactions. No senior GOS officials engage in, encourage, or facilitate the illicit production or distribution of such drugs or substances, or the laundering of proceeds from illegal drug transactions.

Agreements and Treaties. Senegal has several bilateral agreements with neighboring countries to combat narcotics trafficking, and has signed mutual legal assistance agreements with the United Kingdom and France in efforts to combat narcotics trafficking. Senegal is also a party to the Economic Community of West African States (ECOWAS) protocol agreement, which includes an extradition provision. Senegal is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention on Narcotic Drugs, as amended by the 1972 Protocol. Senegal also is a party to the UN Convention Against Transnational Organized Crime and its protocols against migrant smuggling and trafficking in women and children, and is a signatory to the UN Convention Against Corruption.

Cultivation/Production. Although cannabis cultivation in Senegal is not a large problem in relation to the global cultivation of the drug, it could become a serious internal drug problem for Senegal. Efforts to eradicate cannabis cultivation are hampered by the civil conflict in the Casamance region.

Drug Flow/Transit. According to the Chief of the Narcotics Police, the trend in the amount of illicit drugs transited through Senegal is increasing. The Narcotics Police are monitoring the transshipment of hashish and cocaine through Senegal. The U.S. is not a destination point for these drugs.

Domestic Programs. There is no comprehensive GOS policy for systematic destruction of domestic cannabis or prevention of transshipment of harder drugs. Enforcement efforts are sporadic and uncoordinated.

NGOs, such as the Observatoire Geostrategique des Drogues et de la Deviance (OGDD), have taken the lead in public education efforts. OGDD continued a program that began in 2001. The first phase involved a campaign of information targeted at cannabis cultivators, arguing that the land had greater potential if it were used for other purposes than drugs, that drugs were bad for the environment and

health, and that drugs were degrading the economy. Village committees have been established to convey the above information to sensitize people to the problems associated with drug use. The focus of the second phase of the program is to encourage farmers to substitute alternative crops for drugs on their land. Funding constraints, however, have impeded implementation of this part of the program. Other associations for the prevention of drug abuse are in the process of elaborating a program of drug prevention under the auspices of the International Committee for the Fight Against Drugs, which is managed by the Ministry of the Interior.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. USG goals and objectives in Senegal are to strengthen law enforcement capabilities in counternarcotics efforts. In 2002, the USG started a program to train counternarcotics agents in drug investigation and interdiction methods under the International Narcotics and Law Enforcement Bureau of the State Department (INL). The program provided \$220,000 for several law enforcement programs that will aid the police in all aspects of narcotics investigations and prosecutions. Additionally, the USG is in the fourth year of continued training to the technicians at the National Drug Laboratory that was founded with basic drug analysis equipment and training provided by INL.

The Road Ahead. The USG will continue to work closely with the Senegalese government to improve the capacity of its narcotics law enforcement officers to investigate and prosecute narcotics crimes.

South Africa

I. Summary

South Africa is committed to fighting domestic and international drug trafficking, production, and abuse. The country is an important transit area for cocaine (from South America) and heroin (from the Far East) primarily destined for Southern African and European markets. South Africa is a large producer of cannabis—the world’s fourth largest, according to Peter Gastrow of the South African Institute for Strategic Studies—most of which is consumed in the Southern African region. It also may be the world’s largest consumer of mandrax, a variant of methaqualone, an amphetamine-type stimulant. Mandrax is the preferred drug of abuse in South Africa; it is smuggled, primarily from India, but also from China and other sources. Mandrax is the single most important money-earner for indigenous South African organized crime. A study conducted by the South African Police Service (SAPS) found that in 2003/04 there were 341 organized criminal syndicates (gangs) active in all of South Africa. At least 98 are known to be involved in drug trafficking (and the police claim to have infiltrated most of them). Most of those syndicates are foreign: primarily Nigerian, followed by the Pakistani and Indian syndicates. Chinese Triads are also present. The Prevention of Organized Crime Act (POCA, 1988), particularly its asset forfeiture section, has become a useful tool for law enforcement. South Africa is a party to the 1988 UN Drug Convention.

II. Status of Country

South Africa’s transition to democracy and its integration into the world economy were accompanied by the increased use of its territory for the transshipment of contraband of all kinds, including narcotics. An overloaded criminal justice system, straining hard just to deal with “street crime,” makes South Africa a tempting target for international organized crime groups of all types. South Africa has the most developed transportation, communications and banking systems in Sub-Saharan Africa. The country’s modern telecommunications systems—particularly cell telephones—and its direct air links with South America, Asia, and Europe and its permeable land borders provide opportunities for regional and international trafficking in all forms. The sanctions busting practices so prevalent in the apartheid era have continued under a different guise: instead of the embargoed items, drugs and other illicit items are now smuggled into and out of South Africa. Narcotics trade has become very profitable for organized crime syndicates and they have become heavily involved in stealing vehicles and trading them across South Africa’s land borders for narcotics. South Africa is both an importer and an exporter of drugs (produced on its own territory). The South African Government is making steady progress dealing with this situation.

Despite the progress made, South Africa has become the origin, the transit point or the terminus of many major drug smuggling routes. Cannabis, for instance, is cultivated in South Africa, imported from neighboring countries (Swaziland, Lesotho, Mozambique, Zimbabwe), exported to some of the neighboring countries (e.g. Namibia) and Europe (mainly Holland, UK) and, of course, consumed in South Africa. LSD is imported from Holland. Methamphetamine is manufactured in South Africa for local consumption. Both heroin and cocaine are imported into South Africa (from Asia and Latin America respectively), and also exported to Europe, Australia and even the U.S. and Canada. Cocaine from Bolivia and Peru goes through Colombia to Brazil and Argentina, then to South Africa via Portugal or Angola or directly to Johannesburg. To stop some of this trafficking, South Africa needs, in addition to its own efforts, increased international cooperation and assistance.

Although South Africa continues to rank among the world’s largest producers of cannabis, this production does not have a significant effect on the U.S. In terms of use of narcotics, heroin is a

particularly dangerous new trend among South Africans (who traditionally used “dagga”, the local name for marijuana only). The “club drugs” remain a problem among some of the more well-to-do youth, but alcohol remained the dominant substance of abuse (according to SA Community Epidemiology/SACENDU reports).

South Africa is becoming a larger producer of synthetic drugs, mainly mandrax, with precursor chemicals smuggled in and labs established domestically. As in 2003, a number of large labs were dismantled in 2004, including in the Pretoria area. Police reported that because of this crackdown, labs were increasingly established on farms, making it more difficult for the police to find and destroy them.

III. Country Actions Against Drugs in 2004

Policy Initiatives. Combating the use of, the production of, and the trafficking in illicit narcotics is an important component of the anticrime agenda of the South African Government (SAG). As a practical matter, however, the SAG tends to target its limited anticrime resources on serious, violent and domestic crime. South Africa has one of the world’s highest rates of murder and rape. The porous borders are crossed daily by criminals trafficking in all sorts of contraband, including illicit drugs, stolen cars, illegal firearms, diamonds, precious metals, and human beings. The Cabinet interagency “Justice Cluster” works to help coordinate the law enforcement and criminal justice system’s response to those challenges. The Narcotics Bureau (SANAB) was integrated into the police organized crime units in 2003. There is also a Central Drug Authority. Other SAG agencies involved in counternarcotics efforts include, to a lesser or a greater degree, the Home Affairs Department (DHA), the National Prosecuting Authority (NPA) and its Directorate of Special Operations (DSO, or more popularly known as “The Scorpions”), the Customs Service (SARS), and the Border Police (a part of SAPS). The U.S. helped in the training of the DSO. The Border Police have 53 land border posts, 10 air-border posts and 9 sea-border posts. Intelligence organizations and the port and airport authorities also have a role in identifying and suppressing drug trafficking.

Accomplishments. In 2004, the SAG and the law enforcement agencies met the goals and objectives of the 1988 UN Drug Convention and the National Anti-Drug Strategy through arrests, seizures of drugs, spraying cannabis, dismantling labs, controlling precursor chemicals, extraditing criminals and seizing assets. The courts used the Prevention of Criminal Activity Act successfully and the Financial Intelligence Center Act gave more credibility to the anti-money laundering efforts. The Financial Intelligence Center has grown into a viable center to identify and analyze most suspicious financial transactions, which will ultimately also help the fight against drug trafficking.

The number of detected drug-related crimes, according to the SAPS Report, grew in 2004 to 135.1 per 100,000 of population (from 118.4 in the previous year). There were 376 arrests. About 90 percent of those crimes are presented to courts. The conviction rate is about 70 percent (i.e. relatively high).

The SAPS reorganization appears to be having a positive effect in this area. The organized crime units around the country have expanded the base of counternarcotics police action. Some of those units have shown very good results, especially in major cities.

Education of the public at large about the dangers of drug addiction remains a high priority for the government. Two major campaigns took place in 2004: 1) the SAPS organized visits and counternarcotics lectures in more than 25,000 schools; and 2) the National Awareness Program, sponsored by the United Nations Office for Drug Control and Crime (UNODC), the Department of Safety and Security and the Central Drug Authority—and originally launched in Cape Town in 2003—brought facts on drugs and their dangers to young people, students and others, under the slogan “Ke Moja” (“No Thanks, I’m Fine!”).

Certain successes have been achieved within the correctional system as well, mainly through efforts of NGOs. In South African prisons, up to 70 percent of inmates are drug users (with an even higher percentage among those awaiting trial), according to NGO contacts. Among the main rehabilitation programs organizers is KHULISA, an NGO partly funded by State Department narcotics assistance. "Peer" counselors, trained by KHULISA within the prison system, continue to organize counternarcotics lectures and seminars for inmates. Some of the government-employed prison officials have also received basic training in this area.

The South African government pursued two major anticrime initiatives in 2004. The first was the confiscation of illegal arms, initiated on April 1, 2003, and continued until the end of September 2004. About 26,000 unregistered weapons (and 1.6 million pieces of illegal ammunition) were seized during this effort. In addition, almost 6,000 people were arrested for possession of illegal weapons. In May 2004, President Mbeki announced his new government's "War On Poverty and Crime" in which Joint Task Forces were formed and targeted on the most serious crimes in the country, with the stated objective of apprehending the 200 most important criminals in South Africa.

Law Enforcement Efforts. Some observers have called 2004 "the most successful year in South African drug enforcement history." SAG authorities, on occasion working closely with other nations to include the U.S., achieved tremendous success: the total street value of drugs seized by various law enforcement agencies during the previous 18 months was almost \$1 billion. The South African Police Service (SAPS) Annual Report (covering the fiscal year from April 1, 2003, to March 31, 2004, and published in August) shows a high level of seizures of illicit drugs. The figures do not include seizures by the special "Scorpion" unit.

Mandrax seizures rose sharply this year in South Africa and in China because excellent police work and good international cooperation cracked a major mandrax smuggling operation.

Additional successes were reported in the press. On August 16, 2004, "Pretoria News" announced the world's biggest mandrax seizure. The Kwazulu-Natal (KZN) Scorpions' office, together with the Durban police (SAPS), at the Port of Durban seized an estimated six tons of pure methaqualone powder, used to manufacture mandrax tablets. About 18 million tablets could have been produced with this quantity of methaqualone, worth about \$166 million. The consignment was hidden among barrels of paint powder shipped from China to Mozambique (via Durban). According to Bulelani Ngcuka, then the National Director of Public Prosecutions, this operation was one of three in about 18 months involving shipments from China. This seizure was not included in published SAPS seizures, as the special "Scorpion" Unit was involved.

In early July, the Scorpions were reported to have seized four tons of uncut cocaine in a Johannesburg suburb, after a shootout with suspected members of a Chinese syndicate. Cocaine powder was found in 200 boxes, mandrax in 20 boxes. The value of the seized drugs was estimated at \$116.3 million.

A few cases of cocaine smuggling were discovered at the Johannesburg Airport. In early June, about three kilograms of cocaine worth about \$216,000 were seized from a Gambian citizen arriving from Sao Paulo. Two Uruguayan women, arriving from Buenos Aires were also arrested in connection with this smuggling operation. The police service also detected, seized and dismantled some 44 clandestine laboratories (in Gauteng province only) that were producing methamphetamines and other man-made drugs.

The Border Control Police, having received training from UNODC (financially supported in part by the U.S.) on seaport security operations, has also contributed to seizures of mandrax, cocaine and other illicit drugs. SARS has successfully upgraded its technology at border points, thus contributing to the overall effort in suppressing the drug trade during the last two years. SARS and the DHA have also sent representatives to the USG sponsored training at ILEA-Botswana on land border interdiction.

Corruption. About 10.5 percent of all offenses reported against police officers are classified as corruption in diverse forms—according to the latest Internal Complaints Division (ICD) Report. Accusations of police corruption are frequent—although the experience of enforcement officers working from the U.S. Embassy is that many of the failures and lapses by the police can be attributed as much to a lack of training and poor morale. Credible evidence of narcotics-related corruption among South African law enforcement officials has not been brought to light, although many suspect such corruption exists. Some suspect that the reported quantities of seized drugs are lower than actual seizures, and that the difference finds its way back out on the street. Some amount of corruption among border control officials does appear to contribute to the permeability of South Africa's borders.

Agreements and Treaties. South Africa is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention as amended by the 1972 Protocol. South Africa is also a party to the UN Convention against Transnational Organized Crime and its three protocols. The U.S. and South Africa have bilateral extradition and mutual legal assistance agreements in force, as well as a Letter of Agreement on Anticrime and Counter-Narcotics Assistance. The Letter of Agreement provides for U.S. training and commodity assistance to several South African law enforcement agencies. In 2000 the U.S. and South Africa signed a Customs Mutual Assistance Agreement, which is not yet in force.

Cultivation/Production. Cannabis or “dagga” grows wild in Southern Africa and is a traditional crop in many rural areas of South Africa, particularly the Eastern Cape and Kwa-Zulu Natal provinces. It also grows wild and is cultivated in neighboring Swaziland and Lesotho. It is possible to have three cannabis crops a year in South Africa. Most South African cannabis is consumed domestically or in the region. Increasing amounts are, however, being seized in continental Europe and the UK. Some estimates are that 20,000 to 30,000 hectares of SA arable land are used to grow cannabis, although most observers estimate the area dedicated to illicit cannabis to be about 1500-2000 hectares. Although the police force, with some success, sprays cannabis in South Africa, Swaziland, and Lesotho, illicit street prices never seem to rise—an indication of uninterrupted supply.

Mandrax, amphetamine and methamphetamine are also produced in South Africa for domestic consumption. Among South Africans, “dagga” and mandrax are the traditional drugs of choice; in more recent years, there has been rising interest in domestically produced ATS and imported heroin.

Drug flow/Transit. Significant amounts of cocaine reach South Africa from South America. While there are no exact statistics available, cocaine is constantly available on the local illicit market. The amounts seized oscillate between 78.4 kilogram in 1993 and 635.9 kilogram in 1998. This year's seizure of 30 kilogram is lower than the level of last year's (210 kilogram), but higher than the levels of 4 other recent years. Cocaine is mainly imported by Nigerian syndicates—or the people who work for them—from South America. South Africa, once a country of transshipment, has become a country with its own market. The consumption of cocaine, both powder and crystalline (“crack”), is on the increase.

Heroin is smuggled into South Africa from Southeast and Southwest Asia, with some moving on to the U.S. and Europe. Thus South Africa is also a country of transshipment of heroin. According to a UN study, however, most heroin trafficked into South Africa is intended for domestic consumption. Consumption of heroin among South African youth has increased with the advent of smokable heroin. South Africans do not like injectable drugs of any kind, although there are cases of people injecting heroin. An additional risk in terms of intravenous drug abuse is, of course, HIV/AIDS, a major health issue in South Africa.

South Africans also import “dagga” from Swaziland and Lesotho, considering it to be of higher quality than the domestic version. Abuse of methaqualone (Mandrax) and other ATS tablets is on the rise too, especially among urban youth. Even Ecstasy finds its way into townships, according to a new study.

Diverted precursor chemicals, produced locally and imported into South Africa, are also growing problems. Many drug liaison officers, as well as South African Police Service officers, believe that South Africa is becoming a place for traffickers to warehouse their stocks of various drugs before sending them on to other countries. They believe that criminals view South Africa as a "weak enforcement" option for such warehousing operations. Nigerian, Pakistani, Indian, Colombian, Venezuelan, and Chinese syndicates are all taking advantage of South Africa, which, in addition to "weak enforcement," has excellent financial, transportation, and communications facilities.

Traffickers of Nigerian origin may be the most organized of organized crime groups operating in South Africa. Using South Africa as their base for world-wide operations, they are involved in virtually every aspect of drug trafficking.

Domestic Programs. South Africa has had a long history of mandrax and "dagga" (cannabis) abuse; drug counselors have noted in the past two to five years large increases in the number of patients seeking treatment for crack and heroin addiction. SAG treatment facilities and non-government drug rehabilitation agencies have seen their allotments for treatment cut the last four to five years. There are many people seeking treatment who are unable to register with any program, and those who manage to enter a rehabilitation program find that available services are constrained by lack of resources.

IV. U.S. Policy Initiatives and Programs.

Policy Initiatives. U.S. law enforcement officers from the DEA, FBI, DHS (Customs/Immigration), the Secret Service and the State Department successfully cooperate with their South African counterparts. The U.S. also urges the SAG to strengthen its legislation and its law enforcement system and thus become able to prosecute more sophisticated organized criminal activities, including drug trafficking. The Scorpions, with U.S. training, have targeted organized crime and high-profile crime of all sorts. Some training has also been provided to the national police, the metropolitan police forces of Johannesburg and Tshwane, the Special Investigating Unit, the Department of Home Affairs, the Customs and Revenue Service, and others.

The Road Ahead. Bilateral links between the United States and South African law enforcement communities are in the interest of both countries and even closer cooperation is needed. Assistance from the U.S. and other donors is essential to help develop the law enforcement system in South Africa.

Swaziland

Swaziland is an important transit country for drug trafficking within Southern Africa, and also a significant marijuana producer. In 2004, authorities seized marijuana, heroin (brown sugar and Thai White), Ecstasy (MDMA), mandrax, and cocaine that were en route from Mozambique to South Africa. Marijuana is the main, if not only, drug cultivated in Swaziland. It is grown primarily in the Piggs Peak area, in the northwest of the country. Although cocaine and mandrax use appears to be growing among high school and university students, the vast majority of all drugs are destined for South Africa and elsewhere.

Swaziland produces high-quality marijuana (known locally as dagga), a certain amount of which is grown for export. In 2004, authorities seized Swazi marijuana destined for the U.S., UK, Europe, and Japan, but not in quantities sufficient to have a major effect. The Royal Swaziland Police Service (RSPS) does its best to eradicate marijuana crops and combat trafficking. Weak legislation and poor resources, however, have prevented them from making more progress in these areas. For example, under Swaziland's outdated criminal code, Ecstasy is not an illegal substance, and police can seize the drug but cannot arrest for possession. Furthermore, because prosecution for listed narcotic drug offenses is limited to possession, organizers and conspirators cannot be prosecuted unless they also possess drugs. As a result, the RSPS remains a reactive rather than a proactive force. Swaziland is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Convention as amended by its 1972 Protocol. Swaziland has also signed, but has not yet ratified, the UN Convention against Transnational Organized Crime.

Though there have been arrests of Anti-Drug Unit officers in the past, corruption in general appears to be minimal and not tolerated by commanding officers. As a matter of government policy and practice, Swaziland does not encourage or facilitate the illicit production or distribution of drugs or the laundering of proceeds from illegal drug transactions. As for the production of designer drugs, there is no indication that these are manufactured in Swaziland, and no labs have been identified or arrests made. South African Police Service officials are training RSPS so that they may better assess, identify, and seize such operations if necessary in the future.

Syria

I. Summary

In 2004, the Syrian government continued to give a high priority to, and devote significant resources to combating the drug trade. Although drug seizures increased measurably, domestic usage was negligible. Thus, Syria remains an important transit country. Jordan and the Gulf States remain the primary destinations for drugs transiting Syria from Lebanon and Turkey. Syrian authorities reported a reduction in the amount of opium transiting Syria from Pakistan and Afghanistan to Turkey. The Syrian government cooperated with Lebanese authorities on successful opium and cannabis eradication programs in the Syrian-controlled Lebanese Biqa' Valley. The government continued its strong counternarcotics cooperation with neighboring Turkey and Jordan, and in 2003 initiated cooperation with Saudi Arabia. Syria's domestic drug abuse problem remained small, due largely to the active enforcement of existing laws and the cultural and religious norms that stigmatize substance abuse. Syria is a party to the 1988 UN Drug Convention.

II. Status of Country

Most narcotics transiting Syria go to other parts of the region and to Europe. Syria is a transit country for hashish, cocaine, and heroin, particularly from Turkey, but also from Lebanon. Syria is a transit country for Captagon (fenethylline), a synthetic amphetamine-type stimulant, entering Turkey destined for Gulf Countries.

After almost a decade of essentially no illicit drug production (Opium poppy or commercial quantities of marijuana), in 2001, the production of both hashish (cannabis) and opium poppy escalated. Lebanon and Syria are not considered as important source countries for hashish and opium. A very effective eradication program in the Biqa' Valley by Lebanese and Syrian authorities from 2002 to 2004, sharply reduced the amounts of cannabis and opium cultivated in the valley. Both Syrian and Lebanese authorities expressed concerns that the international community has not fulfilled its promise to provide alternative crop substitutes for the farmers to cultivate in the Biqa' Valley. The authorities fear that due to a lack of alternative crops and economic opportunities, farmers may go back to cultivating cannabis and opium in the Biqa' on a larger scale. Syria occupies Lebanon, and thus Syria is an important factor in Lebanese affairs.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In 2002 Syria upgraded the Counternarcotics Unit from a branch to a directorate of the Interior Ministry. The government also opened regional counternarcotics offices in Aleppo province, covering the Turkish border, and in Homs province, to monitor the Lebanese border, and eventually plans to open offices in every province, although no additional offices were opened in 2004.

In 2002 Syrian authorities prepared a draft decree, with an expected release date of early 2003, that was to provide financial incentives of up to several million Syrian pounds (1SP = \$51.50) to anyone providing information about drug trafficking and/or cultivation in Syria. The draft decree was not enacted in 2004 because of a lack of funding and there is no expectation that there will be sufficient funding to do so in 2005.

Accomplishments. In 2004, hashish, opium, and heroin seizures decreased, and there was a slight increase in cocaine seizures. Arrests and convictions for drug related offenses also increased. Within Syria, the Syrian authorities confiscated 40 kilograms of cocaine, 2 kilograms of opium, 563

kilograms of hashish, and 2.0 million Captagon pills. Syrian authorities reported the arrest of 3,677 individuals on narcotics-related charges in 2,540 narcotics-related cases in 2004.

In 2004, Lebanese authorities reported that over 130,014 square meters of cannabis fields were eradicated in the Biqa' as a result of cooperation between Syrian and Lebanese authorities. Key border stations were staffed with personnel and specialized dogs trained in detecting concealed drugs.

Law Enforcement Efforts. Syrian officials characterized cooperation on drug issues with neighboring Saudi Arabia, Jordan, and Lebanon as "excellent." Syria has legislation, which provides for seizure of assets financed by profits from the drug trade. The government has used this legislation to seize assets.

Corruption. In the past there have been unconfirmed reports of corruption among some Syrian military officials in Lebanon involving the issuance of passes permitting the free movement of goods and persons in return for bribes. The Syrian government has an Investigations Administration (Internal Affairs Division) responsible for weeding out corrupt officers in the counternarcotics unit and the national police force. The Investigations Administration is independent of both the counternarcotics unit and the national police and reports directly to the Minister of the Interior. According to Syrian authorities, there were no arrests or prosecutions of officers in the counternarcotics unit for corruption in 2004; information was not provided on whether any investigations were conducted.

Agreements and Treaties. Syria is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention on Narcotic Drugs and its 1972 Protocol, and the 1971 Convention on Psychotropic Substances. Syria has signed but has not yet ratified the UN Convention against Transnational Organized Crime. Syria and the U.S. do not have a counternarcotics agreement, nor is there an extradition treaty between the two countries.

Cultivation/Production. The government of the Syrian Arab Republic (SARG) has an effective counternarcotics system in place that has reduced cultivation and production in Syria to negligible levels.

Drug Flow/Transit. Drug interdiction remains the focus of the Syrian counternarcotics effort. Syrian officials estimate that in 2004, the overall flow of narcotics transiting Syria and destined for other countries in the region was approximately the same as in 2003. Transshipment of narcotics from Turkey continues to represent the major challenge to Syria's counternarcotics efforts. The SARG's reported seizure statistics suggest that either the overall flow of narcotics has increased, or that SARG counternarcotics efforts have been more effective in capturing shipments of hashish and cocaine transiting through Syria to Europe and other countries in the region, of opium transiting from Pakistan and Afghanistan through Syria to Turkey, and of Captagon pills transiting from Turkey through Syria to Saudi Arabia.

Domestic Programs/Demand Reduction. Due to the social stigma attached to drug use and stiff penalties under Syria's strict antitrafficking law, the incidence of drug abuse in Syria remains low. The Syrian government's counternarcotics strategy, which is coordinated by the Ministry of the Interior, uses the media to educate the public on the dangers of drug use, and drug awareness is also part of the national curriculum for schoolchildren. The Ministry also conducts awareness campaigns through university student unions and trade unions.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. In meetings with Syrian officials, DEA officials continue to stress the need for diligence in preventing narcotics and precursor chemicals from transiting Syrian territory; the need to work with the Lebanese government on crop eradication programs and on dismantling drug laboratories in Syrian-controlled areas of Lebanon; and the necessity of terminating any involvement, active or passive, of individual Syrian officials in the drug trade.

Bilateral Cooperation. DEA officials based in Nicosia maintain an ongoing dialogue with Syrian authorities in the Counternarcotics Directorate. In February, DEA officials based in Nicosia and Syrian Anti-Narcotics Department coordinated efforts, which led to the seizure of 18.8 kilograms of cocaine at Damascus Airport. Syrian Ministry of Interior officials characterize cooperation with the Nicosia DEA office as excellent.

The Road Ahead. The U.S. will continue to encourage the Syrian government to maintain its commitment to combating drug transit and production in the region; to follow through on plans to enact anti-money laundering legislation; and to continue to encourage Syria to improve its counternarcotics cooperation with neighboring countries. The U.S. will also encourage Syrian officials to continue their work with their Lebanese counterparts to ensure that drug production in Lebanon remains at low levels; to find and destroy drug processing laboratories in those areas where Syrian forces are present; and to work to minimize the involvement of Syrian officials in drug trafficking.

Tanzania

I. Summary

Tanzania is located along trafficking routes linking Asia and the Middle East to South Africa, Europe and, to a lesser extent, the United States. Drugs like hashish, Mandrax, cocaine, heroin and opium have found their way into and through Tanzania's porous borders. In addition, the domestic production of cannabis is a significant problem. As a result, drug abuse, particularly involving cannabis, cocaine and heroin, is gradually increasing, especially among younger, more affluent people and in tourist areas. Tanzanian institutions have minimal capacity to combat drug trafficking; corruption reduces that capacity still further. Tanzania is a party to the 1988 UN Drug Convention, and in conjunction with UNODC, is seeking to address objectives of that convention.

II. Status of Country

Until 1989, Tanzania's contact with drugs was largely limited to the traditional cultivation of cannabis in some parts of the mainland. Since then, economic liberalization has brought increased affluence to the expatriate community and some urban Tanzanians. This affluence has driven demand for new drugs like Mandrax, cocaine, heroin, and opium, which have found their way through Tanzania's porous borders.

In addition, the domestic production of cannabis is growing. Drug abuse among younger people is increasing, particularly abuse of the more affordable substances like cannabis and Mandrax. Hard drugs like heroin and cocaine, including some crack cocaine, are used in small quantities within the affluent classes. The growth of the tourism industry, particularly in Zanzibar, has created a larger demand for narcotics there.

Tanzania is located along trafficking routes with numerous possible illegal points of entry. The drugs originate from Pakistan, India, Thailand, Burma, Iran, Syria and South America en route to Europe, South Africa and, to a lesser extent, the United States. Drugs enter Tanzania by air, sea, roads and rail. Major points of entry include airports in Dar es Salaam, Zanzibar and Kilimanjaro, and seaports at Dar es Salaam and Zanzibar, as well as smaller ports like Tanga and Mtwara.

It is widely believed that traffickers conduct a significant amount of narcotics smuggling off-shore in small "dhow" boats that never stop in ports. Anecdotal evidence suggests surveillance at the airports has improved, which may have the effect of driving trafficking to minor ports and unofficial entry points. During the year, there were reports of "mules" carrying hard drugs into and out of Tanzania. An increasing trend is the use of Tanzanian land borders to enter neighboring countries, especially Kenya and Malawi, to catch international and regional flights.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In 2004, the Ministry of Home Affairs (on behalf of the counternarcotics unit of the police force) submitted suggestions for amending counternarcotics legislation to increase penalties and revise asset seizure laws. These suggestions have not yet been acted on. In 2003, the House of Representatives in Zanzibar passed their own Prevention of Illicit Traffic and Drugs Act, which puts Zanzibar narcotics law and sentencing in line with that of the mainland.

Accomplishments. Law enforcement officials have increased their efforts to combat narcotics trafficking but still made only sporadic seizures during the year. Police have escalated cannabis

eradication efforts, seizing or destroying over 733,000 kilograms in 2003, according to the latest figures available and up from 110,000 kilograms in 2002.

Law Enforcement Efforts. Tanzania has increased its counternarcotics police force to nearly 75 officers in three branches located in Dar es Salaam, Zanzibar and Moshi. Additionally, over 300 regional officers throughout the country have received counternarcotics training. However, because of the still limited training and operational capabilities of its counternarcotics officers, Tanzania's efforts against narcotics are narrowly focused on street pushers and individual "mule-carriers" and are not effective at limiting narcotics trafficking. While increasing the number of smugglers apprehended, Tanzanian law enforcement has not been able to translate small seizures into the prosecution of top leaders of organized rings.

Senior Tanzanian counternarcotics officials acknowledge that their officers are under-trained and under-resourced. For example, the harbor unit lacks modern patrol boats and relies on modified traditional wooden dhows to interdict smugglers. As a result of the lack of training and resources, Tanzanian officers and police staff do not effectively implement profiling techniques and seize large amounts of narcotics. Narcotics interdiction seizures generally result from tip-offs from police informants. Moreover, low salaries for law enforcement personnel provide a good deal of impetus to engage in corrupt behavior.

On the positive side, formal cooperation between counternarcotics police in Kenya, Uganda, Rwanda and Tanzania is well established, with bi-annual meetings to discuss regional narcotics issues. This cooperation has resulted in significant increases in effectiveness in each nation's narcotics control efforts.

According to the Criminal Investigative Police, a total 1,727 grams of cocaine and 4,071 grams of heroin were seized in 2003. Also, in that year, 733,222 kilograms of locally grown cannabis sativa were seized in an effort to eradicate cannabis plantations throughout the country. From January through June 2004, police seized 10,650 grams of heroin (in 170 separate cases), 620 grams of cocaine (in three separate cases), and 500 grams of Mandrax (in one case). Over 230,000 kilograms of cannabis were destroyed in the same period.

Corruption. Neither the government nor senior officials encourage or facilitate the production or distribution of illicit drugs; however, pervasive corruption continued to be a serious problem in the Tanzanian Police Force. It is widely believed that corrupt officials at airports facilitate the transshipment of narcotics through Tanzania. There is no specific provision of the anticorruption laws regarding narcotics related cases, and few corruption cases are prosecuted. Many believe that corruption in the courts leads to light sentencing of convicted narcotics offenders. Prosecutors complain that many "swallowers" arrested at ports of entry will plead "not guilty" at first until there has been time to pay off the magistrate. Once confident of the magistrate's help, the suspect changes his plea to guilty, and the magistrate sentences with fines only.

Agreements and Treaties. Tanzania is a party to the 1988 UN Drug Convention. Tanzania also has signed the Southern African Development Community (SADC) Protocol on Drug Control, and the Protocol on Combating Drug Trafficking in the East African Region, which seeks to strengthen regional counternarcotics cooperation within the region, and also with Interpol, UNDCP and the International Narcotics Board. The Southern African Development Community, of which Tanzania is a member, has approved an counternarcotics action plan with the following objectives: 1) acquire information about drug use and trafficking in the region; 2) inform policy makers about the drug situation; and 3) develop legal frameworks to counteract drug use and trafficking. Tanzania also participates in the Southern Africa Regional Police Chiefs Cooperation (SARPCO), which has led to at least one joint counternarcotics operation in Tanzania. The 1931 U.S.-UK Extradition Treaty is applicable to Tanzania.

Cultivation and Production. Traditional cultivation of cannabis takes place in remote parts of the country, mainly for domestic use. No figures on production exist, but police and government officials report that production continues to increase. Given the availability of raw materials, and the simplicity of the process, it is possible that some hashish is also produced domestically. Police have seized equipment used to manufacture Mandrax from clandestine laboratories in Dar es Salaam, suggesting continued efforts to establish domestic production. Most other illegal drugs in Tanzania are probably produced elsewhere.

Drug Flow/Transit. Due to its location and porous borders, seaports and airports, Tanzania has become a significant transit country for narcotics moving in sub-Saharan Africa. Control at the ports is especially difficult as sophisticated methods of forging documents combine with poor controls and untrained and corrupt officials. Afghan heroin entering Tanzania from Pakistan is being smuggled to the U.S. by Nigerian traffickers in small quantities. Traffickers from landlocked countries of Southern Africa, including Zambia, use Tanzania for transit. The port of Dar es Salaam is a major entry point for Mandrax from India headed towards South Africa. An increasing number of Tanzanians are being recruited for trafficking. In a nine-month period in 2004, twenty-four Tanzanians were arrested abroad (most in East Africa, Europe, and Pakistan) for smuggling. Recently, Tanzanian smugglers have been arrested coming into Tanzania through the land borders with Kenya and Malawi, after having arrived at international airports from Brazil, Pakistan or the United Arab Emirates. They are thought to have planned to “unload” the drugs so another mule could smuggle them to Europe or the U.S. This trend suggests a growing local trafficking organization.

Domestic Programs/Demand Reduction. Tanzania traditionally was believed to be only a transit point for narcotics, but signs point to an increase in consumer use, particularly of the lower cost drugs. The spillover from trafficking and increased tourism both have contributed to an increase of domestic demand. The tourist industry has brought ecstasy (MDMA) to Zanzibar, and police reports confirm that crack cocaine is available locally. The Prime Minister’s Office manages a very small demand reduction program, and the police have a public sensitization program. Generally, addicts are either arrested or placed in psychiatry wards of public hospitals.

IV. U.S. Policy Initiatives and Programs

Bilateral Cooperation. U.S. policy initiatives and programs for addressing narcotics problems in Tanzania focus on training workshops and seminars for law enforcement officials. State Department law enforcement assistance includes funding the establishment of a forensics lab and training in its use. At the Tanzanian government’s request these facilities will include narcotics analysis capabilities. The State Department’s counterterrorism bureau is funding the “PISCES” program to improve interdiction capabilities at major border crossings. While the program targets terrorist activities, it has implications for narcotics and other smuggling as well.

The Road Ahead. U.S.-Tanzanian cooperation is expected to continue, with a focus on improving Tanzania’s capacity to enforce its counternarcotics laws.

Togo

I. Summary

Togo is not a significant producer of drugs and its role in the transport of drugs is primarily regional. During 2004, however, the drug trade, particularly of hard drugs, increased substantially. The Togolese drug trade is overshadowed, and to some degree dominated, by Nigerian traffickers. Lome remains a spoke in the Nigerian hub of narcotics trafficking and money laundering. Togo's ability to address the transnational flow of drugs is undercut by its stalled democratic transition and its long, porous borders. In April 2004, Togo began formal consultations with the European Union and as a result of efforts made by Togo to address EU concerns, the EU has agreed to resume limited, conditional aid to Togo. Togo is a party to the 1988 UN Drug Convention.

II. Status of Country

Drug abuse by Togolese citizens and crimes resulting from drug abuse were not numerous in 2004. There are three agencies responsible for drug law enforcement: the police, the gendarmerie, and customs. The only locally produced drug is cannabis and approximately 1-2 metric tons are seized each year. Heroin and cocaine, while not produced in Togo, are available, coming through the Port of Lome from South America (cocaine) and Afghanistan (heroin).

In 2004 Togolese authorities seized 5 grams of heroin valued at \$1,500 and 491 kilograms of cocaine valued at \$5,892,000. The majority of the cocaine seized (412 kilos) occurred when French authorities intercepted a vessel at sea and escorted it to Lome. Lome serves as a transit point for drugs on their way to Nigeria, Burkina Faso, northern Ghana, and Niger. Togolese are not significant consumers. The great majority of smugglers are Lebanese or Nigerians. Togolese buy small amounts for sale to expatriates living in Lome. From January to December 2004, 68 people, of whom 47 were Togolese, were arrested for drug distribution (44 men and 3 women). During the same period, 58 people were tried for narcotics-related offenses. Traffickers find it easy to traverse Togo's long and relatively porous borders. This relatively easy movement through Togo has made Togo a transit point for narcotics such as cocaine and heroin. Most narcotics trafficking arrests in Togo have involved Nigerian nationals traveling from Asia to other West African destinations. The prevalence of widespread official corruption facilitates the drug traffic.

III. Country Actions Against Drugs in 2004

Policy Initiatives. In 2003 a plan to counternarcotics trade was developed under the auspices of the Narcotics Control Coordinating Committee (CNAD). In March 2004 a new Central Office Against Drugs and Money Laundering was created. This Central Office is responsible for investigating and arresting all persons involved in drug related crimes. This office has approximately twenty gendarmes and ten police personnel to conduct investigations and enforcement operations. Security agencies report all drug-related matters to the Director of the Central Office. The Director of the Central Office, in turn, is directly responsible to the Minister of Interior. The National Anti-Drug Committee has been incorporated into the new Central Office. An Idea Bank has been created among Togo, Benin and Ghana to facilitate counternarcotics operations in the sub-region. While Ghana and Togo regularly contribute to the bank, Benin has yet to play an active role.

Law Enforcement Efforts. The number of arrests increased somewhat in 2004. Only occasional spot checks are made of passengers at the airport. The new cargo screening ability at the Port of Lome will, however, aid the interdiction of drugs arriving by sea. Arrests have been most numerous at the land

border crossings and in Lome. Arrests are sometimes made after a tip but are more often made in the course of other routine law enforcement activities, such as traffic security or customs checks. The greatest obstacles that the Government of Togo (GOT) faces in apprehending drug distributors are the government's lack of computer technology, lack of communications and coordination, and mutual distrust among the three agencies responsible for drug law enforcement. While all agencies are required to report narcotics related crimes to the Central Office Against Drugs and Money Laundering, in practice there is no effective reporting, record keeping or cross-agency communication process.

Corruption. The Anti-Corruption Commission (ACC) made no drug-related arrests of government officials. Unsubstantiated rumors abound that unnamed officials in various GOT agencies can be bribed to allow illicit narcotics to transit to or through Togo.

Agreements and Treaties. Togo is a party to the 1988 UN Drug Convention, the 1971 UN Convention on Psychotropic Substances, and the 1961 UN Single Narcotics Convention as amended by its 1972 Protocol. Togo cooperates with other members of ECOWAS (Economic Community of West African States) regarding law enforcement issues. Togo is a party to the UN Convention against Transnational Organized Crime.

Cultivation/Production. The only drug cultivated in quantity is cannabis, which can be grown in all five of Togo's regions. Cultivation is primarily for local demand although enforcement officials suspect some cross border distribution by small-scale dealers.

Drug Flow/Transit. There are sizeable expatriate Nigerian and Liberian populations involved in the drug trade in Togo, and they arrange for drug transshipments from many places in the world, through Africa, and onward to final markets. Many observers of drug trafficking in West Africa believe that hard drugs like cocaine and heroin are "warehoused" in the region, before being dispatched to final consumption markets.

Domestic Programs (Demand Reduction). The CNAD opened a youth counseling center that shows films and sponsors counternarcotics discussion groups. The programs have been well attended by NGO's, religious groups, and school groups composed of parents, teachers, and students. Programs designed for high school students focused heavily on prevention/non-use. The CNAD also sponsored programs for security forces that stressed the link between drug use and HIV/AIDS.

IV. U.S. Policy Initiatives and Programs

Policy Initiatives. The primary goal of the USG is to help the GOT combat the international trafficking of drugs. The USG seeks to help the GOT in improving its ability to interdict illicit narcotics entering Togo and to prosecute those traffickers who are caught. The USG did not provide the GOT with material or training assistance in 2004. Togo's emerging willingness to confront the issue of illicit drugs is hampered by the country's ongoing democratic transition and the weak state of GOT finances.

The Road Ahead. U.S. cooperation with Togolese counternarcotics officials will continue. USG funded narcotics assistance will be used for Togolese counternarcotics infrastructure improvements. With the assistance of the regional Drug Enforcement Agency representative based in Lagos, the USG will continue to look for ways to provide counternarcotics trafficking training to Togolese law enforcement personnel.

Tunisia

I. Summary

Tunisia is not a significant drug producing country nor is it a drug transshipment country. Tunisia is not involved in the production, trading and transit of drug precursor chemicals. The government has an active youth demand reduction education program and encourages NGOs' counternarcotics educational activities. During 2004, the government started enforcement of a new money laundering law, created a new department within the Ministry of Interior to root out corruption among police and customs officers, started building the region's first drug rehabilitation center for addicts and continued to punish drug dealers and consumers with maximum sentences as provided under the law. Tunisia is a party to the 1988 UN Drug Convention, and its domestic law contains provisions mandated by the Convention.

II. Status of Country

Tunisia is not a drug producing country and does not produce drug precursor chemicals. The government claims to have totally eradicated cannabis cultivation. However in previous years, there were unconfirmed reports of continued illicit cannabis cultivation in northern Tunisia. Before independence, cannabis cultivation for local use was legal. Tunisia is not a significant drug transshipment country; individual smugglers carry small amounts of hashish from Morocco and Algeria to Europe. Most drugs that enter the country from Algeria or Morocco are for local consumption. The government does not publish figures for narcotics consumption. However, Tunisian media reports on a daily basis on drug-related crimes for warning and prevention. NGOs active in the field report drug consumption is limited, but has increased in recent years, primarily in high schools, universities, and tourist resorts.

III. Country Actions Against Drugs in 2004

Policy Initiatives. On March 17, 2004, the GOT appointed a magistrate to head a newly created inspection department for police and customs officers. The department included in its mandate investigation of narcotics-related corruption. Tunisia has inter-ministerial committees to oversee drug control matters, but lacks a comprehensive counternarcotics master plan. Tunisia enacted a comprehensive penal code and other laws related to drug enforcement in 1992 and updated in 2003; these laws bring Tunisia into conformity with the 1988 UN Drug Convention. Tunisia has adequate legal and law enforcement measures in place to accomplish the 1988 UN Drug Convention objectives.

Accomplishments. The Government of Tunisia (GOT) gives a high priority to counternarcotics law enforcement. Tunisian law contains provisions mandated by the 1998 UN Drug Convention. Tunisia does not have an applicable bilateral narcotics agreement with the USG but is part of narcotics-related multilateral bodies. Tunisian media routinely report on drug seizures (mostly hashish), arrests of drug abusers, and convictions of traffickers. Hard drugs remain difficult to find or buy in Tunisia.

Law Enforcement Efforts. The agency with primary responsibility for counternarcotics law enforcement is the "Surete Nationale." Tunisian authorities did not make publicly available comprehensive information on counternarcotics law enforcement. Media increasingly report on law enforcement efforts. Based on publicly available sources, Tunisia averages 20 seizures annually totaling approximately 580 kilogram of narcotics. Sentences for narcotics cases are a combination of prison time and a fine, depending on the amount and type of drug. The most severe punishment is

reserved for drug traffickers, who can receive 10 to 20 years plus a fine of 20,000 to 100,000 dinars (\$16,300 to \$81,300).

For example, the media reported on the following cases during the month of December 2004: Customs officials interdicted four foreigners with 30 kilogram of heroin; Police arrested 11 drug sellers and users and sized 110 grams of drugs (Tunisian courts sentenced them to six years in prison and a fine of 5,000 dinars, equivalent to \$4,700; Tunisian courts sentenced two Tunisian traffickers from the Algerian border area to 28 years in prison; prison guards confiscated 130 psychotropic pills smuggled into prison; local police in a Tunis suburb arrested five for drug use.

Corruption. Tunisia has taken legal and law enforcement measures to prevent and punish public corruption, including corruption committed by senior government officials. In 2004, the Ministry of Interior established a special department to address corruption by police and customs officers. A special magistrate with investigative power heads the new department. To minimize corruption in the customs service, the government routinely transfers regional customs officials and reassigns senior national-level customs officers. As a matter of government policy, the Government of Tunisia and its senior officials do not engage in, encourage or facilitate illicit production or distribution of narcotic or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal drug transactions. During 2004, Tunisia had no publicized cases of public narcotics-related corruption.

Agreements and Treaties. Tunisia is a party to the 1988 UN Drug Convention, the 1961 UN Single Convention on Narcotic Drugs, as amended by the 1972 Protocol, and the 1971 UN Convention on Psychotropic Substances. Tunisia is also a party to the UN Convention against Transnational Crime and its protocols against migrant smuggling and trafficking in women and children.

Cultivation/Production. There are no current, confirmed reports of cultivation of cannabis. In previous years, some cannabis was reportedly grown in insignificant amounts in northern Tunisia.

Drug Flow/Transit. Tunisia is not a major drug transshipment country. There are regular reports of individual hashish smugglers from Morocco and Algeria who transit Tunisia en route to Europe. An unsubstantiated report indicated increasing transit of heroin from Libya through Tunisia to Europe. There are no reports of synthetic drugs trafficked through Tunisia in 2004.

Domestic Programs (Demand Reduction). Tunisia has no official numbers on drug abuse; however, an informal estimate indicates that Tunisia has roughly two thousand drug abusers, primarily school dropouts and jailed drug users. Tunisian officials reported a rising trend of abuse of illicit drugs, including: cannabis, heroin, cocaine, and volatile substances. The majority of Tunisian drug users consume a form of cannabis.

The GOT conducts drug education programs in schools and encourages NGOs to conduct complementary educational programs. Tunisia's Ministry of Health has yet to develop a comprehensive rehabilitation policy. Addicts are generally imprisoned and currently receive little rehabilitation assistance. In 2005, the government will start construction on the first specialized substance abuse rehabilitation center and halfway house for drug addicts in Tunisia.

IV. U.S. Policy Initiatives and Programs

Bilateral cooperation. DOD Headquarters European Command provided \$322,600 in humanitarian aid for construction of the Sfax rehabilitation center.

The Road Ahead. The U.S. will continue to work closely with Tunisia to improve narcotics law enforcement. The U.S. supports Tunisian efforts to comply fully with the 1988 UN Drug Convention, and it seeks Tunisian support for U.S. international counternarcotics initiatives.

Uganda

I. Summary

Uganda is not a major hub for narcotics trafficking. Nevertheless, there are some reports that certain prominent local businessmen may be involved in organized international money laundering schemes, possibly related to narcotics trafficking. Government of Uganda (GOU) authorities have detected and confiscated heroin, cocaine, and cannabis transiting the Entebbe Airport and along the border with Kenya. The only drug known to be produced in Uganda is cannabis. Uganda has signed the 1988 UN Drug Convention, but has not yet ratified it, and become a party.

II. Status of Country

Drug production and trading within Uganda is not significant. Uganda offers more potential as a transit route (Entebbe Airport and porous borders).

III. Country Actions Against Drugs in 2004

Policy Initiatives. In 1999, the GOU introduced new legislation for a national Uganda Narcotics-Drug Bill, which has yet to gain Parliamentary approval. If adopted, drug law in Uganda would address border areas, introduce seizure of property, increase fines, toughen sentencing guidelines, and increase penalties for repeat offenders.

Law Enforcement Efforts. The GOU has fewer than 100 law enforcement personnel devoted to counternarcotics activities throughout the country. Limited manpower and resources have forced the GOU to concentrate its focus on Entebbe Airport as a transit point. Although the focus is at Entebbe, the GOU also sends forces to participate in cannabis eradication campaigns in certain areas.

Asset Seizure is not a legal option presently. The police report that they seized 6.5 kilogram of heroin in four cases. Marijuana seizures were more than ten metric tons.

Corruption. Corruption is a huge problem that affects most aspects of the Government of Uganda. Although no example exists in the area of counternarcotics, it is reasonable to believe that corruption plays the same role there that it does in the other areas of Ugandan government administration.

The GOU does not encourage or facilitate illicit production or distribution of narcotic or psychotropic drugs or other controlled substances, or the laundering of proceeds from illegal drug transactions. No senior GOU officials engage in, encourage, or facilitate the illicit production or distribution of such drugs or substances, or the laundering of proceeds from illegal drug transactions.

Agreements and Treaties. Uganda has signed the 1988 UN Drug Convention, but has not yet ratified it, and become a party.

The GOU is a party to multilateral agreement with Government of Tanzania (GOT) and Government of Kenya (GOK) known as “the Protocol on Combating Narcotic Drugs in East Africa” whereby these three countries share law enforcement intelligence amongst themselves so as to better interdict and arrest drug traffickers. The GOU also has a Memo of Understanding (MOU) with the Government of Nigeria (GON) to share law-enforcement intelligence.

Drug Flow/Transit. The GOU is primarily concerned with heroin transit through Entebbe Airport, raw cannabis transport into Kenya and processed cannabis transit from Kenya. The United States is not the destination for narcotics transiting Uganda. Uganda Police Anti-Narcotics Unit statistics show a decrease in heroin seizures since 2001, which could suggest either police successes or that narcotics

traffickers have become better at concealment. While detection of illicit goods is a possibility at Entebbe Airport, it is exceedingly difficult along Uganda's porous borders.

Domestic Programs (Demand Reduction). Demand reduction is not addressed in a national or uniform manner. Although heroin addiction and cannabis use is of concern to the GOU and local law enforcement, concern for the impact of other social ills, leaves the concept of demand reduction unfunded and neglected by the GOU.

IV. U.S. Policy Initiatives and Programs

Road Ahead. The U.S. Government continues to engage with the Ugandan Government on a variety of law-enforcement issues. U.S narcotics assistance has been supporting a multi-year up-grade in Uganda's police forensics lab, and a police outreach program designed to bring a police presence to isolated Ugandan villages.

United Arab Emirates

I. Summary

Although not a narcotics-producing country, the United Arab Emirates (UAE) is believed to be a transshipment point for traffickers moving illegal drugs from the major drug-producing countries, especially Afghanistan, westward. Frequent reports of seizures of illegal drugs in the UAE during the past year underscore this conclusion. Most seizures have been of hashish. There are several other factors that render the UAE a waystation, including its proximity to major drug cultivation regions in Southwest Asia and a long (700 kilometers) coastline. High volumes of shipping render UAE ports vulnerable to exploitation by narcotics traffickers.

Published statistics on narcotics seizures and domestic addiction reveal a growing drug problem among UAE and third-country nationals, which is notable given the country's harsh drug laws. A Ministry of Health report in late 1998 asserted that there were approximately 12,500 drug addicts in the country of 3.1 million people. The UAE is a party to the 1988 UN Drug Convention.

II. Status of Country

A major regional financial center and hub for commercial shipping and trade, the UAE is believed to be a transshipment point for illegal narcotics from the drug-cultivating regions of southwest Asia, to Europe, to Africa and, and less significantly, to the United States. Western Europe is the principal market for these drugs, and Africa is becoming an increasingly prominent secondary market. Factors that contribute to the role of the UAE as a transshipment point are the emergence of Dubai and Sharjah as regional centers in the transportation of passengers and cargo, a porous land border with Oman, and the fact that a number of ports in the UAE are de facto "free ports", where transshipped cargo are not subject to inspection, as are other goods that enter the country.

In the first half of 2004, Abu Dhabi Police reported that drug crimes increased 5 percent over 2003, with more than 800 drug-related crimes, of which more than 100 involved drug smuggling.

III. Country Actions Against Drugs in 2004

Policy Initiatives. The UAE continued in 2004 to advance its national drug strategy based on intensifying security at the country's air and sea ports and patrols along the coastline, reducing demand for illegal drugs through educational campaigns, enforcing harsh penalties, and rehabilitating drug addicts. The UAE's Federal Supreme Court issued an important ruling in 2003 regarding proof that drug-offenders actually consume drugs in the UAE before they can be prosecuted. The Supreme Court decided that UAE law enforcement officials could not prosecute drug-users if the consumption took place in another country. A positive blood test for drugs is considered evidence of consumption, but does not, of course, determine whether the drug-taking occurred in the UAE or abroad.

In November, the UAE announced the establishment of a UN sub-office on Drugs and Crimes. The UAE government funded the estimated \$3 million dollar cost of the office and contributed an additional \$50,000 to the UN counternarcotics program. The sub-office will operate under the Cairo-based UN regional Office on Drugs and Crime, and will be responsible for coordinating national counternarcotics strategies and integrating the strategies into the UN's comprehensive global program.

Law Enforcement Efforts. Counternarcotics agencies have been active in 4,774 cases from 1999 to September 2004 involving 7,611 suspected drug dealers. During this same time period, officials seized

more than 18,700 kilogram of hashish, 400 kilogram of heroin, and 100 kilogram of opium, a street value of more than \$25 million dollars.

In 2003, the UAE Ministry of Interior established a countrywide law enforcement database that is accessible to emirate-level police departments. This is a major step forward in coordinating narcotics-related information throughout the UAE.

Punishment for drug offenses is severe. A 1995 law stipulates capital punishment as the penalty for drug trafficking. No executions, however, have ever taken place, and sentences usually are commuted to life imprisonment. In June, an Omani policeman was sentenced to life imprisonment for possessing and smuggling drugs over the land border. In December, an Asian woman was sentenced to death for drug dealing, although she is appealing the verdict.

Several other high-profile seizures in 2004 indicate that UAE authorities continue to take seriously their responsibility to interdict drug smuggling and distribution. In July, federal authorities seized 203 kilogram of hashish in a Pakistani ship destined for Saudi Arabia and docked at Khor Fakkan Port. In a separate operation, the federal authorities seized more than 50 kilogram of heroin en route to Kuwait. Local authorities are also working to further secure land borders, with Abu Dhabi Police seizing more than 600 kilogram of hashish transiting the UAE from Oman to Saudi Arabia.

The UAE is cooperating more with other countries to stop trafficking gangs. Cooperation has resulted in arrests in several countries, including Saudi Arabia, Oman, Yemen, Pakistan, Iran, Australia, Canada, and Holland. Cooperation has also resulted in the arrests of drug gangs in 12 cases with neighboring Oman, Saudi Arabia, and Kuwait. The UAE signed a landmark counternarcotics agreement with Iran in 2003 providing for cooperation against production, distribution, and smuggling of illicit drugs across the UAE-Iran sea border.

Corruption. UAE officials aggressively pursue and arrest individuals involved in illegal narcotics trafficking and/or abuse. There is no evidence that corruption—including narcotics-related corruption—of public officials is a systemic problem.

Agreements and Treaties. The UAE is party to the 1988 UN Drug Convention, the 1961 UN Single Convention as amended by the 1972 Protocol, and the 1988 UN Convention on Psychotropic Substances. The UAE has signed, but has not yet ratified, the UN Convention against Transnational Organized Crime.

Cultivation/Production. There is no evidence of drug cultivation and/or production in the UAE.

Drug Flow/Transit. Narcotics smuggling from south and southwest Asia continues to Europe and Africa and—to a significantly lesser degree—the United States via the UAE. Hashish, heroin, and opium shipments originate in Pakistan, Afghanistan, and Iran and are smuggled in cargo containers, via small vessels and powerboats, and/or sent overland via Oman. The UAE, and Dubai in particular, is a major regional transportation and shipping hub. High volumes of shipping render the UAE vulnerable to exploitation by narcotics traffickers. UAE authorities recognize that the number of human carriers of illicit narcotics transiting local airports is also on the rise. The police also caught a number of traffickers trying to smuggle drugs over the UAE land border by truck and horseback.

Recognizing the need for increased monitoring at its commercial shipping ports, airports, and borders, the UAEG is making an effort to tighten inspections of cargo containers, as well as passengers transiting the UAE. In December 2004, the UAE signed the Container Security Initiative, which will result in the tightening and expansion of cargo-reporting requirements. Customs officials and inspectors received specialized training on ferreting out prohibited items from U.S. DHS and Commerce's Bureau of Industry and Security in 2004. UAE authorities also received training on seaport interdiction and global transshipment this year. Customs officials randomly search containers

and follow up leads of suspicious cargo. Dubai Ports Authority purchased state-of-the-art equipment for rapid, thorough searches of shipping containers and vehicles.

Domestic Programs (Demand Reduction). A 2003 UAE report noted that the majority of UAE drug users take their first dose abroad, primarily because of peer pressure. Statistics reveal that 75 percent of drug users in the UAE prefer hashish, 13 percent use heroin, while 6 percent use morphine. The report illustrates a clear relationship between drug abuse and level of education—75 percent of arrested drug users in 2002 were high school graduates, but only 2 percent were university graduates. Local press reports the street value of one kilogram of Pakistani hashish to be an approximate 5,000 Dirhams (\$1,362) in Abu Dhabi and about 4,500 Dirhams (\$1,226) in Dubai. The price is said to be highest in Abu Dhabi and Dubai because the customer base in these two emirates tends to be more affluent. While the data is a few years old, trends reported are still likely to be reflective of current societal patterns.

The focus of the UAE's domestic program is to reduce demand through public awareness campaigns directed at young people and the establishment of rehabilitation centers. UAE officials believe that adherence to Muslim religious mores and severe prison sentences imposed on individuals convicted of drug offenses effectively deter narcotics abuse. An affluent country, the UAE has established an extensive treatment and rehabilitation program for its citizens. There is a rehab center in Abu Dhabi, two in Dubai, and one each in Ajman and Sharjah for those identified as addicts. In accordance with federal law, UAE nationals who are addicted can present themselves to the police or a rehabilitation center and be exempted from criminal prosecution. Those nationals who do not turn themselves into local authorities are referred to the legal system for prosecution. Third-country nationals or "guest workers," who make up approximately 80 percent of the UAE's population, generally receive prison sentences upon conviction of narcotics offenses and are deported upon completing their sentences.

Most UAE nationals arrested on drug charges are placed in one of the UAE's drug treatment programs. They undergo a two-year drug rehabilitation program, which includes family counseling/therapy.

IV. U.S. Policy Initiatives and Programs

The Road Ahead. The USG will continue to support the UAE's efforts to devise and employ bilateral/ multilateral strategies against illicit narcotics trafficking, border/export control and money laundering. The USG and UAE are starting discussions on MLAT and extradition treaties, which would facilitate the exchange of information related to drug and financial crimes. The USG will encourage the UAEG to focus enforcement efforts on dismantling major trafficking organizations and prosecuting their leaders, and to enact export control and border security legislation.
