MONEY LAUNDERING AND FINANCIAL CRIMES

The 2005 report on Money Laundering and Financial Crimes is a legislatively mandated section of the U.S. Department of State's annual International Narcotics Control Strategy Report. This report on Money Laundering and Financial Crimes is based upon the contributions of numerous U.S. Government agencies and international sources. A principal contributor is the U.S. Treasury Department's Financial Crimes Enforcement Network (FinCEN), which, as a member of the international Egmont Group of Financial Intelligence Units, has unique strategic and tactical perspective on international anti-money laundering developments. FinCEN is the primary contributor to the individual country summaries and the suspicious activity report analyses. Other key contributors are the U.S. Department of Justice's Asset Forfeiture and Money Laundering Section of Justice's Criminal Division, for its central role in constructing the Money Laundering and Financial Crimes Comparative Table and its role in providing international training, as well as the Office of Counterterrorism, that provided law enforcement case data. Many agencies provided information on international training, technical and other assistance and/or law enforcement cases including the Department of Homeland Security's Bureau of Immigration and Customs Enforcement; Justice's Drug Enforcement Administration, Federal Bureau of Investigation, and the Office for Overseas Prosecutorial Development Assistance; Treasury's Internal Revenue Service, the Office of the Comptroller of the Currency, and the Office of Technical Assistance. Also providing information on training and technical assistance are independent regulators, the Federal Deposit Insurance Corporation and the Federal Reserve Board.

Legislative Basis for the INCSR

The Money Laundering and Financial Crimes section of the Department of State's International Narcotics Control Strategy Report (INCSR) has been prepared in accordance with section 489 of the Foreign Assistance Act of 1961, as amended (the "FAA," 22 U.S.C. § 2291). The 2005 INCSR is the nineteenth annual report prepared pursuant to the FAA. In addition to addressing the reporting requirements of section 489 of the FAA (as well as sections 481(d)(2) and 484(c) of the FAA and section 804 of the Narcotics Control Trade Act of 1974, as amended), the INCSR provides the factual basis for the designations contained in the President's report to Congress on the major drug-transit or major illicit drug producing countries initially set forth in section 591 of the Kenneth M. Ludden Foreign Operations, Export Financing, and Related Programs Appropriations Act, 2002 (P.L. 107-115) (the "FOAA"), and now made permanent pursuant to section 706 of the Foreign Relations Authorization Act, Fiscal Year 2003, (P.L. 107-228)(the "FRAA").

The FAA requires a report on the extent to which each country or entity that received assistance under chapter 8 of Part I of the Foreign Assistance Act in the past two fiscal years has "met the goals and objectives of the United Nations Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances" (the "1988 UN Drug Convention"). FAA § 489(a)(1)(A).

Although the Convention does not contain a list of goals and objectives, it does set forth a number of obligations that the parties agree to undertake. Generally speaking, it requires the parties to take legal measures to outlaw and punish all forms of illicit drug production, trafficking, and drug money laundering, to control chemicals that can be used to process illicit drugs, and to cooperate in international efforts to these ends. The statute lists action by foreign countries on the following issues as relevant to evaluating performance under the 1988 UN Drug Convention: illicit cultivation, production, distribution, sale, transport and financing, and money laundering, asset seizure, extradition, mutual legal assistance, law enforcement and transit cooperation, precursor chemical control, and demand reduction.

In attempting to evaluate whether countries and certain entities are meeting the goals and objectives of the 1988 UN Drug Convention, the Department has used the best information it has available. The 2005 INCSR covers countries that range from major drug producing and drug-transit countries, where drug control is a critical element of national policy, to small countries or entities where drug issues or the capacity to deal with them are minimal. In addition to identifying countries as major sources of precursor chemicals used in the production of illicit narcotics, the INCSR is mandated to identify major money laundering countries (FAA §489(a)(3)(C)). The INCSR is also required to report findings on each country's adoption of laws and regulations to prevent narcotics-related money laundering (FAA §489(a)(7)(c)). This report is that section of the INCSR that reports on money laundering and financial crimes.

A major money laundering country is defined by statute as one "whose financial institutions engage in currency transactions involving significant amounts of proceeds from international narcotics-trafficking" (FAA § 481(e)(7)). However, the complex nature of money laundering transactions today makes it difficult in many cases to distinguish the proceeds of narcotics trafficking from the proceeds of other serious crime. Moreover, financial institutions engaging in transactions involving significant amounts of proceeds of other serious crime are vulnerable to narcotics-related money laundering. This year's list of major money laundering countries recognizes this relationship by including all countries and other jurisdictions, whose financial institutions engage in transactions involving significant amounts of proceeds from all serious crime. The following countries/jurisdictions have been identified this year in this category:

Major Money Laundering Countries in 2004

Antigua and Barbuda, Australia, Austria, Bahamas, Belize, Bosnia and Herzegovina, Brazil, Burma, Cambodia, Canada, Cayman Islands, China, Colombia, Costa Rica, Cyprus, Dominican Republic, France, Germany, Greece, Guernsey, Haiti, Hong Kong, Hungary, India, Indonesia, Isle of Man, Israel, Italy, Japan, Jersey, Latvia, Lebanon, Liechtenstein, Luxembourg, Macau, Mexico, Netherlands, Nigeria, Pakistan, Panama, Paraguay, Philippines, Russia, Singapore, Spain, Switzerland, Taiwan, Thailand, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Uruguay, and Venezuela.

The Money Laundering and Financial Crimes section provides further information on these countries/entities and United States money laundering policies, as required by section 489 of the FAA.

Introduction

Following the money as a way of combating crime and terrorism continues to require nimble action by authorities to keep pace with the alternative methods of operations criminals and terrorists seek to employ to acquire and move their funds. The closer we looked at banks, the faster the money seemed to shift to non-traditional money movers—gem and jewelry dealers, real estate, charities, and attorneys or other intermediaries. As these entities were brought under the purview of anti-money laundering laws and regulations, the money moved further underground—to alternative remittance systems such as hawala, trade or commodity based systems, or to cash couriers. In 2004, we came to more fully understand the workings of those methods and to realize that we must concentrate increasingly on the workings of these hard-to-detect systems. The challenges presented by the use of these methods are influencing the responses of authorities worldwide with regard to setting of standards, training, institution building, data collection, and investigations.

The use of these underground systems reflects the strides the international community has made since 9/11 in intensifying its efforts to develop coordinated, targeted actions to thwart money laundering and terrorist financing. By the end of 2004, important gains had been made across all fronts. Stronger international anti-money laundering and counterterrorist financing standards focused on banks and financial intermediaries were in effect in more countries. The countries most vulnerable to terrorist financing were well on their way to receiving technical assistance packages to develop comprehensive anti-money laundering regimes to eliminate vulnerabilities. Twenty-six additional countries criminalized terrorist financing in 2004, bringing the total number of countries that have criminalized terrorist financing to 113. As of December 2004, there were 94 financial intelligence units in the Egmont Group, an increase of ten new members in the past year. Intelligence led to the identification and subsequent investigation of key criminals and terrorists or terrorist supporters. And scarce assistance assets also were used more efficiently; burden sharing among our allies in the donor community expanded and reliance on regionally focused training programs grew.

Because criminals or terrorists cannot now move or acquire funds through formal channels as easily as they did before, they are seeking alternative laundering and financing methods to undermine international efforts and overcome the law enforcement and regulatory obstacles placed in their paths. Evidence of this search can be seen as investigation after investigation reveals the increasingly important role of “alternative remittance systems”—hawalas, the black market peso exchange, various charitable organizations, and trade-based money laundering—in facilitating transnational crime and terrorism. Charities are typically not subject to adequate oversight or regulation and have been cited in several transnational terrorist financing investigations as the intermediaries through which funds are moved. Trade-based money laundering, often based simply on the alteration of shipping documents or invoices, is frequently undetected unless jurisdictions work together to share information and compare

documentation. Couriers are devising new ways to conceal currency and easily transportable high-value items such as gems to carry them across borders. Our efforts in the next few years must be geared toward fully understanding these mechanisms and developing tools to prevent their use.

The Financial Action Task Force (FATF) continued to provide critical guidance on the development of comprehensive regimes to attack the full range of financial crime. The FATF added a ninth Special Recommendation on Terrorist Financing, addressing the problem of cash couriers. It also continued its efforts to clarify and refine these Special Recommendations by publishing interpretive notes and best practices guidelines to help regulators, enforcers, financial institutions and others better understand and implement the most technical Recommendations. The FATF also continued to work closely with the IMF and World Bank to develop a common methodology to incorporate FATF's Recommendations into the financial sector reviews all three entities undertake. The FATF-style regional bodies worked throughout the year to adopt the Recommendations in line with their particular regional requirements. The FATF welcomed two new FATF-style regional bodies in 2004, the Eurasian Group, with six members including Russia and China, and the Middle Eastern North African Group, with 14 members. The addition of these two new groups brings the total number of countries participating in the FATF-initiated process to more than 150.

The FATF sustained the behavior-changing pressure of its Non-cooperative Countries and Territories (NCCT) process. Of the 23 jurisdictions the FATF has designated as NCCTs over the past six years, only six remained on the list as of the end of 2004. The threat of countermeasures has motivated countries to improve their compliance, and the provision of assistance from major donors has helped countries pass legislation and establish anti-money laundering and counterterrorist financing regimes that meet international standards.

The United States remains particularly concerned about terrorist financing activity in a core set of approximately two- dozen countries around the world. Accordingly, the bulk of U.S. anti-money laundering technical assistance is focused on making these countries less vulnerable to the terrorist financing threat. The U.S. State Department is funding most of this interagency effort and is coordinating and leading the undertaking of technical assistance. So far, the Department has led comprehensive vulnerability and needs assessments of, and produced training and technical assistance implementation plans for, the most vulnerable of countries. Assistance is being provided to 22 of these priority countries. The program takes a systemic and comprehensive approach, with assistance delivered in both sequential and parallel stages to help countries do the following: put in place anti-money laundering/counterterrorist financing laws that include measures to block and freeze assets and comply with the FATF's Special Recommendations; establish a regulatory scheme to oversee the financial sector; provide law enforcement agencies, prosecutors and judges with the training and skills to successfully investigate and prosecute financial crime; and create a Financial Intelligence Unit (FIU) capable of collecting, analyzing and disseminating reports of suspicious transactions and other intelligence to both help develop cases domestically and share information internationally through FIUs in other countries as part of transnational investigations.

Not all of the assistance is provided bilaterally. The United States supports a number of regional training programs around the world in which officials from neighboring countries are brought together for specialized anti-money laundering and counterterrorist financing training. The global network of International Law Enforcement Academies (ILEAs), funded and managed by the State Department's Bureau of International Narcotics and Law Enforcement Affairs (INL), has enhanced its anti-money laundering curricula, including the incorporation of new segments on terrorist financing. The State Department's Anti-terrorist Assistance (ATA) Program similarly includes terrorist financing segments in the curricula it delivers at various counterterrorism training centers around the world. These and other broad-based training initiatives allowed the U.S. to provide some form of anti-money laundering or counterterrorist financing assistance to over 120 countries in 2004.

International efforts to identify, block, and freeze terrorist assets persisted in 2004; however, the task is growing more challenging as terrorists move away from the formal financial sector and into informal and underground systems to protect their funds. Evidence of this movement is reflected in the U.S. Treasury report that, in 2004, some \$9 million worth of terrorist assets worldwide were blocked. Since the concentrated effort began shortly after September 11, 2001, 45 countries have blocked a total of approximately \$147 million.

A movement away from the formal financial sector is a major factor in the slower pace of asset freezes in 2004. Terrorist organizations appear to be making more use of couriers to carry currency, gems and other easily transportable, high-value items; traditional, ethnic-based alternative remittance systems; and charities. Identifying and tracking funds through these alternative networks—a tough enough assignment even for countries with sophisticated anti-money laundering regimes—is a staggering challenge for many of the key terrorist financing countries who are only now beginning to develop competent anti-money laundering institutions. The FATF has sought to help overcome this challenge by issuing various interpretative notes and best practices guidelines for its Special Recommendations dealing with charities, cash couriers and the blocking and freezing of assets. Indeed, at its 2004 annual typologies exercise, which addressed such issues as money laundering trends and best practices in the areas of law enforcement and regulation, the FATF focused on alternative remittance systems, particularly the challenge of tracking and monitoring funds when they are moved in areas that depend on cash economies and in systems with no formal accounting or record keeping infrastructure.

Important substantive strides were made with regard to international burden sharing. The proliferation of attacks around the world brought the threat of terrorism home to more and more countries and underscored the fact that no one country has the sole ability or responsibility to meet the entire challenge. U.S. technical experts are particularly stretched because of their frequent need to undertake, nearly simultaneously, assessment, training, and investigative missions. We have worked particularly closely with the United Kingdom, Australia, Japan, the UN Global Programme against Money Laundering, the OAS, the Asia Development Bank, the IMF and the World Bank on regional and country-specific projects as a way of sharing resources. Efforts to identify priorities and coordinate assistance by the major donor countries took a step forward at the June 2003 G-8 Summit with the establishment of the Counter-Terrorism Action Group (CTAG). The CTAG members have demonstrated a willingness and ability to provide counterterrorism assistance. The CTAG has partnered with the FATF, providing that organization with a list of countries to which CTAG members are interested in providing counterterrorist financing assistance, so that the FATF could assess their counterterrorist financing technical assistance needs. The FATF delivered those assessments to the CTAG in 2004, and the donors are now beginning to follow through with coordinated, cost-saving counterterrorism technical assistance programs.

As we look beyond the accomplishments of 2004, we see that our task to combat money laundering and terrorist financing is ongoing. There remain significant challenges in keeping abreast of the new methods and systems criminals and terrorists use to hide and move their money. This will press intelligence collection and criminal investigation skills to their limits as they struggle to be effective in very closed, often hostile foreign environments. One of the means being considered to attack this challenge is the creation of an international network of Trade Transparency Units (TTUs). Patterned after the international network of financial intelligence units that, among other missions, collect, analyze and disseminate information on suspicious transactions, the TTUs would similarly focus on detecting anomalies in trade data—such as deliberate over- and under-invoicing—that can be a powerful predictor of trade-based money laundering. By focusing on commodities that often serve as stores-of-value and are used to settle accounts without involving the formal financial sector, such as gold and precious gems, the TTUs would get to the heart of much of the alternative remittance challenge and help expose criminals, terrorists, and their associates and assets to punitive and deterrent enforcement

action. Brazil, Panama and the Philippines have expressed interest in TTUs and are working with the Department of Homeland Security to move this effort forward.

Sustained efforts will be essential to realizing further progress against money laundering and terrorist financing. Such progress will continue to require strong and creative leadership from the United States. But we have help. The international community is increasingly willing to cooperate in this fight—to comply with the measures needed to block, deter, and expose money laundering and terrorist financing, and to provide the assistance needed to turn the political will to comply into the operational ability to enforce the laws and regulations that lead to the confiscation of crime and terrorist-related assets and the prosecution and conviction of money launderers and terrorist financiers.

Money Laundering and Terrorist Financing—A Global Threat

International recognition of, and action against, the threat posed by money laundering continue to increase. Money laundering poses international and national security threats through corruption of officials and legal systems, undermines free enterprise by crowding out the private sector, and threatens the financial stability of countries and the international free flow of capital. Undeniably, the revenue produced by some narcotics-trafficking organizations can far exceed the funding available to the law enforcement and security services of some countries.

After the terrorist attacks of September 11, 2001, the United States and its allies launched a global war on terror focused on five fronts: diplomatic, financial, military, intelligence, and law enforcement. The United States and the global community quickly recognized the critical role that combating terrorist financing should play in the overall global effort against terrorism.

Money Laundering and Terrorist Financing: Differences and Similarities

Most crime is committed for financial gain. The primary motivation for terrorism, however, is not financial; rather, terrorist groups usually seek goals such as publicity for their cause and political influence. Ordinarily, criminal activity produces funds and other proceeds that traditional money launderers must disguise by taking large cash deposits and entering them into the financial system without detection. Funds that support terrorist activity may come from illicit activity but are also generated through means such as fundraising through legal non-profit entities. In fact, a significant portion of terrorists' funding comes from contributors, some who know the intended purpose of their contributions and some who do not. Because terrorist operations require relatively little money (for example, the attacks on the World Trade Center and the Pentagon are estimated to have cost approximately \$500,000), terrorist financiers need to place relatively few funds into the hands of terrorist cells and their members in order to carry out their objectives. This is a significantly easier task than seeking to disguise the large amounts of proceeds generated by criminal and drug kingpins.

Funding Sources

Transnational organized crime groups have long relied on criminal proceeds to fund and expand their operations, and were pioneers in using corporate structures to commingle funds to disguise their origin. It is the terrorists' use of social and religious organizations, and to a lesser extent, state sponsorship, that differentiates their funding sources from those of traditional transnational organized criminal groups. While actual terrorist operations require only comparatively modest funding, international terrorist groups need significant amounts of money to organize, recruit, train and equip new adherents, and otherwise support their activities.

Because of these larger organizational costs, terrorists often finance their terrorism efforts with a portion of the proceeds gained from traditional crimes such as kidnapping for ransom, narcotics trafficking, extortion, credit card fraud, counterfeiting, and smuggling. Indeed, some Foreign Terrorist Organizations (FTOs), such as the Revolutionary Armed Forces of Colombia, (FARC), the United Self Defense Forces of Colombia (AUC) and Sendero Luminoso (Shining Path) in Peru, are so closely linked to the narcotics trade that they are often referred to as “narcoterrorists.”

Like narcotics-related money launderers, terrorist groups also utilize front companies; that is, commercial enterprises that engage in legitimate enterprise, but which are also used to commingle illicit revenues with legitimate profits. Front companies are frequently established in offshore financial centers that provide anonymity, thereby insulating the beneficial owners from law enforcement. In addition to commingling the proceeds of crime, terrorist front companies also commingle donations from witting and unwitting sympathizers.

Movements of Criminal and Terrorist Funds

The methods used to move money to support terrorist activities are nearly identical to those used for moving and laundering money for general criminal purposes. In many cases, criminal organizations and terrorists employ the services of the same money professionals (including accountants and lawyers) to help move their funds.

In addition to the continued use of the formal financial sector, terrorists and traffickers alike employ informal methods to move their funds. One common method is smuggling cash, gems or precious metals across borders either in bulk or through the use of couriers. Likewise, both traffickers and terrorists rely on moneychangers. Moneychangers play a major role in transferring funds, especially in countries where currency or exchange rate controls exist and where cash is the traditionally accepted means of settling accounts. These systems are also commonly used by large numbers of expatriates to remit funds to families abroad.

Both terrorists and traffickers have used alternative remittance systems, such as “hawala” or “hundi,” and underground banking; these systems use trusted networks that move funds and settle accounts with little or no paper records. Such systems are prevalent throughout Asia and the Middle East as well as within expatriate communities in other regions.

Trade-based money laundering is used by organized crime groups and, increasingly, by terrorist financiers as well. This method involves the use of commodities, false invoicing, and other trade manipulation to move funds. Examples of this method include the Black Market Peso Exchange in the Western Hemisphere, the use of gold in the Middle East, and the use of precious gems in Africa.

Some terrorist groups may also use Islamic banks to move funds. Islamic banks operate within Islamic law, which prohibits the payment of interest and certain other activities. They have proliferated throughout Africa, Asia, the Middle East, and most recently Europe, since the mid-1970s. Many of these banks are not subject to the anti-money laundering regulations and controls normally imposed on secular commercial banks. While they may voluntarily comply with banking regulations, and in particular, anti-money laundering guidelines, there is often no control mechanism to assure such compliance or the implementation of updated anti-money laundering policies.

Combating Money Laundering and Terrorist Financing: An Integrated Approach

Building the capacity of our coalition partners to combat money laundering and terrorist financing through cooperative efforts, and through training and technical assistance programs, is critical to our national security. While there are some important differences between how money laundering and

Money Laundering and Financial Crimes

terrorist financing are conducted, and also some counter efforts that are unique to each activity, there are no appreciable differences in terms of capacity building through training and technical assistance.

The U.S. has developed an “anti-money laundering/counterterrorist financing” (AML/CTF) strategy based on three pillars:

- Development of capacity-building programs aimed at reinforcing the institutions of our foreign allies to combat money laundering and terrorist financing. Capacity building is the linchpin of the strategy because of its forward-looking and preventative approach that focuses on enhancing countries’ capabilities to safeguard their financial systems from abuse by criminals and terrorist financiers.
- The use of traditional and non-traditional law enforcement techniques and intelligence operations aimed at identifying criminals and terrorist financiers and their networks in order to disrupt and dismantle their organizations. Such efforts include investigations, diplomatic actions, criminal prosecutions, designations and other actions designed to identify, nullify, and disrupt the flow of terrorist financing and those who make such crimes possible. In order to achieve ultimate results, the intelligence community, law enforcement and the diplomatic corps must assert a concerted proactive approach that develops and exploits investigative leads, employs advanced law enforcement techniques and increases cooperation between financial investigators and prosecutors.
- Participation in global efforts to deter terrorist financing by publicly naming, shaming, and blocking the assets, financial transactions, and property of terrorist groups and their supporters. Under United Nations Security Council Resolutions (UNSCR) 1333 and 1373 all member states have an obligation to identify terrorist assets and freeze them without delay. UNSCR 1267 and related resolutions require blocking actions against the financial resources, travel, and access to arms of specific individuals and entities linked to Usama bin Ladin, Al-Qaida, or the Taliban, as well as measures to deprive terrorists and their supporters of access to the financial system.

Integrating Efforts

The U.S. has found that combining these pillars into an integrated strategy is the most effective approach to tackle the challenges of money laundering and terrorist financing. Only by integrating our AML/CTF efforts in a cooperative way, both domestically and internationally, can we continue our common goal of detecting, deterring, and dismantling global terrorist networks.

While well-established mechanisms of interagency cooperation to fight money laundering have existed for a number of years, in order to more quickly effect this integration within the U.S. Government for terrorist financing, the President established a Policy Coordination Committee (PCC) under the auspices of the National Security Council to ensure the proper coordination of counterterrorist financing activities and information sharing among all agencies. The PCC coordinates and integrates the efforts of the disparate entities and focuses them on collectively pursuing terrorists and their financiers. Other countries have also taken a similar approach at integrating AML/CTF efforts either through a coordinating ministry, national anti-money laundering council, or counterterrorist center.

Many governments have used specialized task forces to integrate successfully domestic operations aimed at combating money laundering and/or terrorist financing. These task forces typically include FIU personnel, financial investigators, central bank employees, and prosecutors. Indeed, the USG, based on its experience in training its counterparts around the world, is increasingly employing cross

training (e.g., select financial regulators taking part in financial investigative courses for law enforcement) as a means of encouraging practical integration of AML/CTF efforts.

Internationally, governments are recognizing the need to integrate their efforts more closely in order to implement new international standards designed to counter money laundering activity and the collection and movement of terrorists' funds. Effective integration will increase as members of the Financial Action Task Force (FATF) and FATF-style regional bodies implement the new Special Recommendation on Terrorist Financing, Special Recommendation IX (SR IX), which is intended to ensure that terrorists and other criminals can not finance their activities or launder the proceeds of their crimes through physical cross-border transportation of currency and negotiable bearer instruments. Implementing SR IX on Cash Couriers will require unprecedented cooperation among border, customs, law enforcement, and FIU authorities both domestically and internationally.

International organizations and bodies, as well, are increasing coordination of their AML/CTF efforts. For example, there is now unprecedented cooperation between the FATF and the IMF and World Bank. The FATF and these international financial institutions have adopted a joint methodology to evaluate AML/CTF regimes and are cooperating in their respective on-site assessment programs.

The FATF and the G-8 Counter-Terrorist Action Group (CTAG) are also engaging in a cooperative effort to build CTF capacity by integrating FATF training and technical assistance reports with efforts by CTAG to coordinate donor assistance. Other organizations, such as the United Nations, the Egmont Group of FIUs, the FATF style regional bodies, and regional organizations, such as the Organization of American States, are also increasing their cooperative efforts.

Trade Transparency Units

For the past several decades, the United States has championed the concept of financial transparency in the formal financial sector, particularly banks, and most recently non-bank financial institutions. Working primarily with the Financial Action Task Force (FATF) and the FATF-style regional bodies, and exerting bi-lateral and regional leadership globally, the United States has helped create internationally recognized anti-money laundering programs, policies, and standards.

However, as entities in the formal financial sector are brought under the purview of anti-money laundering laws and regulations and illicit funds move further underground, we come to more fully understand the threats posed by financial flows outside the recognized formal financial sectors. Alternative remittance systems are able to bypass, in whole or part, regulations designed to make money laundering and financial crimes more transparent. Although there are a variety of alternative remittance systems, they all have one thing in common; they are dependent to various degrees on the misuse of international trade to transfer value.

Trade-based systems act as a kind of parallel method of transferring money and value around the world. The 2003 and 2004 editions of the INCSR have profiled the use and growing recognition of "trade-based" money laundering. Systems such as hawala, the black market peso exchange, and the use of commodities such as gold and diamonds are not captured by current financial reporting requirements. These systems pose tremendous challenges for law enforcement around the world. Moreover, many of these alternative remittance systems are indigenous and ethnic-based, making them even more difficult for U.S. investigators to understand, penetrate, and target. As the United States and other countries worldwide tighten financial regulation and reporting for the formal and even informal financial sectors, the use of trade-based money laundering and alternative remittance systems will assuredly grow. As in the past, when the United States advanced global financial transparency, today it is likewise essential that we work to establish an international mechanism capable of detecting

Money Laundering and Financial Crimes

trading anomalies that could point to fraudulent value transfer, money laundering, terrorist financing, and other financial crimes.

Customs and law enforcement experience has shown the best way to analyze and investigate suspect trade-based activity is to have systems in place that can monitor specific imports and exports to and from given countries. In fact, the former U.S. Customs Service (now the Bureau of Immigration and Customs Enforcement (ICE), in the Department of Homeland Security) pioneered this approach through its creation of a computer system that uses U.S. trade data, examines suspect anomalies, and identifies likely targets of investigation.

However, using U.S. data alone has its limitations. To maximize effectiveness, analysts need to compare corresponding trade data from other countries. If country X exports goods to country Y, in theory country X's export records regarding price, quantity, and general description should match (with some recognized variables) the corresponding import records of country Y. However, the analysis becomes increasingly complex if the trade goods are transshipped from country X to Y via Z. An additional challenge occurs for U.S. law enforcement when suspect trade does not enter into the commerce of the United States.

There is a growing worldwide recognition of entrenched patterns of trade fraud. For example, the Kimberley Process was created—in part—due to findings that conflict diamonds from non-diamond producing West African countries were being exported into Belgium. U.S. Customs has used this same technique of examining trade anomalies to combat the Colombia black market peso exchange, to examine suspect gold shipments from non-gold producing countries in the Caribbean, and to examine transshipped textiles from the Middle East. In these instances, Customs was able to match U.S. trade data with cooperating countries' trade data and look for suspicious indicators. In the case of Colombia, the examination of the trade data revealed the link between the drug cartels and the country's largest insurgency—the FARC.

Every country around the world collects the desired trade data. All countries have customs services and all countries impose tariffs and duties for revenue purposes. In fact, lesser-developed countries are dependent on customs duties to generate revenue. Although there are some differences in the way trade data is gathered and warehoused, disparate customs services worldwide are adopting uniform norms and standards. There is presently enough commonality among systems that specific and targeted trade transactions can be compared and examined for indications of customs fraud and other crimes using software pioneered by the former U.S. Customs and further refined by Department of Homeland Security's Bureau of Immigration and Customs Enforcement (DHS/ICE).

Borrowing from the successful Financial Intelligence Unit (FIU) model that examines suspect financial transactions, over the last two years the United States has studied the feasibility of establishing a prototype Trade Transparency Unit (TTU) that will collect and analyze suspect trade data and then disseminate findings for appropriate enforcement action. The objective is a new investigative tool to combat previously entrenched trade-based alternative remittance systems and customs fraud that eventually could result in a worldwide TTU network somewhat analogous to the Egmont Group of Financial Intelligence Units.

ICE, in cooperation with the U.S. Departments of State and Treasury, has begun a Trade Transparency Unit initiative. This initiative is designed to protect the integrity and security of the U.S. economy by targeting and eliminating systemic vulnerabilities in commercial trade and the financial and transportation sectors susceptible to exploitation by criminal and terrorist organizations. Under the auspices of trade transparency, ICE will form partnerships with participating foreign governments to establish a network of TTUs. The United States and foreign governments will create dedicated enforcement units to detect discrepancies or anomalies in international trade data, which may be indicative of trade-based money laundering or other criminal activities. TTUs will support investigations and prosecutions related to trade-based money laundering, the illegal movement of

criminal proceeds across international borders, alternative remittance systems, terrorist financing, and other financial and trade crimes.

To assist the proposed TTUs, ICE has developed an analytical database called “Data Analysis and Research for Trade Transparency” (DARTT), which is designed to detect and track money laundering, contraband smuggling and trade fraud. DARTT is an outgrowth of earlier analytical systems, which the former U.S. Customs Service and ICE had successfully used to detect trade-based money laundering and fraud. DARTT will allow investigators to identify discrepancies in trade and financial transactions, facilitating the dissemination of investigative referrals to field entities.

Under Plan Colombia, ICE formed the first TTU with the Government of Colombia. In furtherance of this trade transparency initiative, ICE is actively working with the Colombian TTU on several Black Market Peso Exchange (BMPE) investigations and has already demonstrated the links between the BMPE and the FARC. ICE has taken specific steps to improve the organizational infrastructure of DIAN, the Colombian customs and tax authority. These steps include a Mutual Assistance Agreement, which provides the framework for ICE and DIAN to share trade information. ICE has several initiatives incorporated into Plan Colombia targeting BMPE schemes. Dedicated funds have been allocated to temporarily assign agents and analysts in Colombia to assist DIAN in analyzing BMPE data to develop leads for ICE field offices. Additionally, computers and equipment have been purchased for DIAN to track imports/exports data. There are promising indications that the pioneering work of TTU development will begin to show specific results in 2005. Several countries have approached ICE to participate in the Trade Transparency Unit initiative. These countries include Brazil, Paraguay, Argentina, Panama, India and the Philippines. Additionally, the concept of Trade Transparency Units has been presented to several Eastern and Central European countries. The regionalization of TTUs will ultimately provide for the open exchange of trade data among participating countries and will play an increasingly important role in the global effort to thwart money laundering, international organized crime and terrorism.

Law Enforcement Cases

Trade-Based Money Laundering

Money Laundering via Gold Smuggling

In August 2001, the ICE Boston office received information that narcotics traffickers were laundering drug proceeds through the smuggling of gold, which they had disguised as other commodities. ICE officers used the Data Analysis and Research for Trade Transparency (DARTT) database to corroborate the information and provide additional leads. The scheme centered on gold refineries located in the Northeastern United States. Investigators determined that narcotics traffickers were using a number of overvaluation schemes to move the gold into and out of the U.S. Overvaluation schemes, which are common in trade-based money laundering, allow a launderer to send excess funds overseas, while providing documents to conceal the nature of the criminal activity. On several occasions, the traffickers sent lead bars plated with gold to the refinery. Nevertheless, they invoiced these shipments as pure gold bullion. The false invoices allowed the launderers to send payments overseas for the “gold”, which greatly exceeded the shipments’ true values. In another variation of the overvaluation scheme, the traffickers shipped a commodity described as “slag,” which they invoiced at a very low value, to the U.S. refinery. This commodity was actually refinery waste mixed with pure gold. When the U.S. refinery received the slag, it melted the waste material down and extracted the gold, which constituted most of the weight and nearly all of the value of the shipment. The process resulted in a substantial transfer of value into the U.S. Finally, the traffickers also imported

commodities that they described as finished jewelry parts. In fact, these items were crude pieces that cost very little to manufacture, although their gold content was high. This method allowed the launderers to file fraudulent tax credit claims under the export laws of various South American countries, many of which provide tax credits for exporting a manufactured product. In August 2004, one U.S. refiner pleaded guilty to money laundering charges. The corporation received five years probation, a \$2.25 million fine and had to forfeit \$425,000.

Smuggling Freon and Tax Evasion: Businessman Laundered Profits through Panamanian Accounts and Shell Corporations

In a joint investigation with the Environmental Protection Agency, the IRS-CID convicted a businessman of conspiracy to commit money laundering and to evade excise taxes on the sale of illegally imported freon. The businessman and his accomplices filed phony paperwork to conceal the sales of the freon to customers in south Florida. They also created and used domestic and foreign shell corporations and related bank accounts to conceal the proceeds of the illegal sales. The businessman laundered more than \$8 million in proceeds from the illicit sales by use of wire transfers through Panamanian corporations and bank accounts. He also diverted corporate income—disguised as loans—into bank accounts in Panama for the personal benefit of his co-conspirators. As a result of the scheme, between January 1993 and June 1994, the businessman evaded approximately \$6.2 million in excise taxes and also helped his co-conspirators allegedly to evade additional individual and corporate income taxes on the profits from the freon sales. The businessman received 17 years in prison, a \$20.3 million fine, and had to pay restitution to the IRS in the amount of \$6.5 million.

Black Market Peso Investigation Nabbed Prominent Colombian Businessman

In May 2004, authorities in the United States, Colombia, Canada, and the United Kingdom announced the dismantling of a massive network that used the Black Market Peso Exchange (BMPE) system to launder millions of dollars in drug proceeds. Dubbed “Operation White Dollar”, the two-year multinational investigation targeted the BMPE system from the peso brokers dealing directly with narcotics traffickers down to the Colombian companies and individuals who facilitate the system by purchasing dollars. Operation White Dollar led to the indictment of 34 individuals and companies in Colombia, the United States, and Canada. The U.S. indictment charged that the 34 defendants included: “First-tier peso brokers”, those who make contacts directly with narcotics-trafficking organizations; “ Second-tier peso brokers”, those who concentrate on arranging for the pickup of street-level cash narcotics proceeds and the placing of those funds into the banking system; and “Third-tier peso brokers”, those who make contracts directly with Colombian dollar purchasers. In addition to the indictments against the 34 individuals, a prominent Colombian industrialist, who repeatedly purchased millions of dollars in the BMPE system over a period of years, agreed to forfeit to the United States \$20 million constituting the dollars that he purchased from the indicted peso brokers. This investigation also involved the issuance of warrants authorizing the seizure of over \$1 million from more than 20 separate bank accounts.

Commodity Overvaluation to Hide Tax Fraud

In 1989, ICE agents began investigating a firm in Los Angeles on suspicion of overvaluing imports. ICE used DARTT to identify forty commodities that the company imported, all at values well in excess of world market prices. For instance, the company declared a value of \$99 per kilogram for licorice root, when the common value of imports was \$0.99 per kilogram. The investigation revealed that the company had intentionally over-deposited customs duties, in an effort to conceal the crime of tax evasion. The scheme allowed the company to transfer \$98 offshore for each kilogram of licorice root imported (for which it was actually paying fair market value of about \$0.99). The firm paid duty

on the higher value to conceal the scheme, resulting in the over-deposit. In 1997, a federal court convicted two officers of the company for tax fraud and money laundering, and sentenced them to incarceration and supervised release, respectively. The company was fined \$500,000. The firm and its officers paid approximately \$6.3 million to the U.S. Customs Service for customs violations, and paid over \$93 million to the IRS as a settlement for civil tax liability.

Bulk Cash Movements

Smuggling Drug Cash from U.S. to Mexico: Operation Money Clip

In October 2004, DEA announced the dismantling of an international money laundering and drug trafficking organization that resulted in the arrest of 83 defendants and the seizures of over \$4.4 million in cash, 2,526 kilograms of cocaine, 74 pounds of crystallized methamphetamine (known as “Ice”), 2.8 pounds of methamphetamine, over 40,000 pounds of marijuana, and 1 kilogram of heroin. The investigation, called “Operation Money Clip,” began in October 2003 when a sheriff’s officer in Kimble County, Texas seized \$2.2 million in cash in a routine traffic stop. Acting on a DEA directive to focus investigations on the abilities, methods, and routes used to smuggle large amounts of currency from the United States to the narcotics source countries, DEA was able to expand the case to 43 investigations spanning the nation. The investigation targeted a Mexican-based poly-drug-trafficking organization with ties to the Mexican drug-trafficking “Federation of Traffickers.” DEA agents in 25 cities found that the organization allegedly laundered as much as \$200 million from various rural and urban American cities to Mexican targets over approximately two years. The ensuing investigation established that this organization allegedly distributed approximately 500 kilograms of cocaine, 200 pounds of methamphetamine, 20 kilograms of heroin, and 10,000 pounds of marijuana per month in that same period. In addition to transporting the money physically across the border, the traffickers laundered the illicit funds through remitter services, businesses, and foreign bank accounts. The network reached to metropolitan areas of Chicago, Atlanta, New York, and Los Angeles, and rural sections in Virginia, Pennsylvania, Iowa, South Carolina, and North Carolina.

Politically Exposed Persons and Money Laundering

Money Laundering and Political Corruption: Prosecution of Former Ukrainian Prime Minister

On June 3, 2004, a federal jury found former Ukrainian Prime Minister Pavel Lazarenko guilty of seven counts of money laundering and 22 other related charges, including wire fraud and interstate transportation of stolen property. Lazarenko, who was arrested in 1999 just three years after he became prime minister of the Ukraine, left a complex trail of money transfers, deposits, and withdrawals over three continents that investigators were able to piece together. Among other things, Lazarenko and his associates obtained a controlling interest in a bank located in Antigua and Barbuda, and transferred millions of dollars in criminal proceeds through correspondent accounts in the United States to these accounts in Antigua. In 2000, a federal grand jury indicted Lazarenko with laundering money through these correspondent accounts in the United States. The prosecution is the result of a six-year investigation led by agents of the Federal Bureau of Investigation and Internal Revenue Service. Although post-trial motions and, therefore, final conviction remain pending, the prosecution and jury verdict demonstrate the U.S. commitment to prosecute transnational crime, as well as the reach of U.S. money laundering laws. If ultimately convicted, Lazarenko would be the first foreign head of state to be convicted for laundering the proceeds of foreign crimes via U.S. banks, and only the second head of state, along with Manuel Noriega, to be prosecuted in the United States. The U.S. is seeking criminal

forfeiture of all property involved in the money laundering offenses. In May 2004, the Department of Justice filed a civil forfeiture complaint in the U.S. District Court for the District of Columbia, seeking forfeiture of foreign proceeds and instrumentalities of the criminal conduct of Mr. Lazarenko and his associates. Among other things, the complaint alleges that Mr. Lazarenko and his associates repeatedly used the U.S. financial system in violation of U.S. law both in the generation of illegal proceeds and in an effort to launder them. The funds identified for civil forfeiture include more than \$145 million in U.S. currency located in Guernsey, and more than \$87.1 million in U.S. currency located in Antigua and Barbuda.

Asset Forfeiture and Foreign Official Corruption: Repatriation of Funds to Peru and Nicaragua

In 2004, the United States repatriated funds to Peru and Nicaragua, in conjunction with investigations and forfeiture actions involving foreign official corruption. In August 2004, the United States repatriated \$20.2 million to the Government of Peru, representing 100 percent of the net assets forfeited in two Department of Justice civil forfeiture actions filed in connection with an FBI investigation into fraud, corruption and money laundering committed by former Peruvian intelligence chief Vladimiro Montesinos, his associate Victor Alberto Venero-Garrido, and other associates of the government of former Peruvian President Alberto Fujimori. The funds were transferred in accordance with an agreement entered into between the United States and Peru at the 2004 Special Summit of the Americas that provides for transparency as well as special consideration for the compensation of victims and support for Peruvian anticorruption efforts. This financial investigation also contributed to the successful apprehension of Montesinos in Venezuela and the successful repatriation of additional funds to Peru, including more than \$14 million voluntarily repatriated by Venero. In December 2004, the Treasury Department transferred \$2.7 million to the Government of Nicaragua, representing 100 percent of the net assets forfeited in a Department of Justice civil forfeiture action filed in conjunction with a Department of Homeland Security/Immigration and Customs Enforcement investigation related to the criminal conduct of Byron Jerez, former Nicaraguan Director of Taxation and associate of former President Aleman. Pursuant to the agreement authorizing the transfer of these funds, almost all of the funds will be utilized for education projects, with \$100,000 going to support anticorruption efforts of the Nicaraguan Prosecutor General's Office. These cases exemplify the effective use of asset forfeiture and financial investigations to combat transnational money laundering and demonstrate the commitment of the United States to finding, seizing, forfeiting and recovering the proceeds of foreign official corruption on behalf of other countries.

Terrorist Financing

Fronting for Hamas: the Holy Land Foundation

In July 2004, federal prosecutors in Dallas charged seven principals of the Holy Land Foundation for Relief & Development (HLF), on 42 counts, including conspiracy and IEEPA violations for dealing in the property of a Specially Designated Global Terrorist (SDGT) organization; providing material support to a SDGT; money laundering; and filing false tax returns. The HLF was the largest Muslim charity in the United States until the U.S. government declared it a SDGT organization after federal investigators determined that it had raised millions of dollars for HAMAS over a 13-year period. HLF received start-up assistance from Mousa Abu Marzook, a leader of Hamas and a specially designated terrorist (SDT), and has ties to INFOCOM Corporation, an Internet service provider and computer exporter. Federal prosecutors indicted both Marzook and INFOCOM on IEEPA and money laundering charges in August 2003.

Oregon Charitable Organization Supported Chechen Terrorists

In February 2004, federal officials blocked the assets of and searched all properties purchased on behalf of the Al Haramain Foundation's (AHF) branch in Oregon. A joint task force of IRS-CID, FBI, and ICE officers executed the orders on the basis of an affidavit that alleged the AHF had violated currency and monetary instrument reporting requirements, tax laws, and other money laundering related offenses. Moreover, individuals connected with AHF in Oregon appear to have concealed the movement of funds to Chechnya. Russian officials have indicated that the Chechen mujahideen have received substantial funding from Islamic charities and non-governmental organizations. The allegations arose around a particular transaction in which funds were wired from a foreign country, through a bank in London, to AHF in Oregon. Documents related to this wire transfer indicate that the donor intended the funds to be used to support efforts of "Muslim brothers in Chechnya." AHF founder Al-Aqil assured the donor that the money would be used to "help end the Chechen crisis." After this wire transfer, an individual traveled from Saudi Arabia to the U.S. and obtained the wired funds in the form of traveler's checks and a cashier's check. The cashier's check included a notation: "Donations for Chichani Refugees." The individual then left the country without declaring he was taking out over \$100,000 in traveler's checks. AHF employees then attempted to conceal this transaction, including omitting it from tax returns and mischaracterizing the use of the funds. They failed to provide information on the transaction to the accountant who prepared the organization's tax returns. In fact, the AHF employees told the accountant that all the funds went to purchase a prayer house in Springfield, Missouri, furnished the accountant with documentation that overstated the purchase price of the property. In addition, officers of the charity characterized other portions of the funds—\$21,000—as reimbursements rather than as contribution income and funds distributed to Chechnya.

Narcoterrorism: Arms for the FARC

In April 2004, ICE agents arrested Carlos Enrique Gamarra-Murillo, a Colombian national, on charges of trying to provide material support to a designated foreign terrorist organization, attempting to export defense weapons without a license, conspiracy to distribute cocaine, and possession of machine guns. In a meeting with undercover officers in July 2003 in Florida, he provided a shopping list of weapons that he wanted to buy, including 16 assault rifles, 60 machine guns, grenade launchers, and grenades. He also expressed interest in buying "Stinger" anti-aircraft missiles. Undercover ICE agents later lured him back to Florida again in April 2004 under the ruse of arranging the sell of almost \$4 million dollars worth of weapons for the FARC. Before being arrested, Gamarra produced \$92,000 as a down payment for the weapons and arranged for their delivery to a clandestine airstrip in Venezuela. The remainder of the payment was to be made in cash and cocaine.

Human Trafficking and Related Cases and Money Laundering

Adoption Agency Used Cambodian Children in Immigration Fraud and Money Laundering Scheme

In November 2004, a federal judge in Seattle, Washington sentenced Lauryn Galindo for conspiracy to commit U.S. Immigration visa fraud, conspiracy to launder money, and structuring financial transactions. In a joint investigation, IRS-CID and ICE investigators had focused on Galindo, who admitted she organized a scheme whereby some Cambodian children were taken from their families and represented on immigration forms as orphans. Along with her sister, Galindo ran Seattle

International Adoptions (SIA), the largest agency in the United States handling the adoption of Cambodian children. While the agency billed itself as humanitarian in focus, it turned out that some of the children had been taken from their mothers for a small payment, and some of their visas had been obtained through fraud. During the investigation, agents traveled to Cambodia and determined that all of the children being adopted through SIA had “unknown” placed on the U.S. visa applications for the names of the birth parents of the children. Officers also determined from interviewing some of those children that they had lived with their families until being brought to an orphanage and processed out for adoption. Some of the U.S. parents actually met the “orphan’s” birthparents, and gave them money at Galindo’s direction. Many of them thought at the time that they were giving money to the child’s caretaker, but later learned that the recipients were in fact their biological parents. ICE agents also found out subsequently that many other children did not qualify under the U.S. definition of “orphan” and, therefore, were not immediately available to be adopted. In addition, there were instances when a baby whose paperwork had been processed became too ill, died, or was rejected by the U.S. parent coming to adopt. In several instances “switches” occurred where a new baby was provided and just assumed the ID of the other child and then entered the U.S. under the other child’s biographical information. Money given to Galindo was used as “grease” to move adoptions along. Galindo had U.S. parents wire money to Cambodia to be used for this purpose, although the parents were told it was an orphanage donation. Cambodian officials have levied charges against individuals in Cambodia who were complicit in the scheme.

Hawala Dealer Arrested for Facilitating Alien Smuggling Ring

In a recent case, federal officers arrested Gunvant Shah, a hawaladar based in New Jersey and Boston, on the following charges: sending money by way of exchange to promote alien smuggling; operating an illegal banking entity; structuring money order purchases; conspiracy and tax fraud. By using phone taps to intercept telephone calls and faxed items between Shah and his co-conspirators, investigators discovered that the men funneled alien smuggling fees through legitimate companies’ bank accounts and into foreign countries, thereby evading any countries reporting requirements. Shah typically sent money to India through direct hawala transfers or via packages of monetary instruments to other hawaladars, Zakhir and Piyush Patel, who in turn utilized legitimate businesses such as Jack Filled Trading, CNA Metals, and A.R.Y. International, to transfer money overseas. Authorities seized several of these packages, which confirmed that in 1997 and 1998, Shah received large sums of cash, cashier’s checks, money orders, and personal checks connected to the alien smuggling activity. Moreover, officers learned that Shah and his associates also structured money order purchases—they bought high volumes of U.S. Postal Money Orders in limited amounts to avoid currency transaction reporting requirements. Investigators reviewed the records of Zakhir Patels’ money transmittal business and discovered that from March to November 1998 Patel received approximately \$2.9 million from Shah. From February to October 1998, Zakhir Patel wired approximately \$1.5 million to the bank account of A.R.Y. International in New York. Supported by his own ledgers, Piyush Patel admitted that he received between \$200,000 and \$500,000 per month from Shah between February and November 1998, or about \$2.5 million.

Money Laundering and Forced Prostitution

In a recent case, Immigration and Customs Enforcement (ICE) officers investigated a family-run smuggling organization that smuggled Mexican women into the United States and forced them into prostitution. Two brothers, both Mexican nationals, supervised a ring that smuggled the women into Arizona and then moved them to New Jersey. The ring offered several of the women legitimate employment to lure them into the United States, but later coerced them into prostitution. The smugglers kept all proceeds earned by the women through prostitution. The criminal organization used the same individuals who transported the women to New Jersey to remit the profits earned from

prostitution back to Mexico. The two sisters in the family also sent some of the prostitution profits via wire transfers to Mexico. Other members of the ring used the profits to purchase real estate, using the names of other family members to help hide the identities of the smugglers.

Fraud and Money Laundering

Australian Investor Fraud Scheme

In a recent case, a federal jury convicted Geoffrey Chris Clement for fraud and money laundering violations and a federal court sentenced him to serve 13 years in prison. Clement falsely represented to prospective investors in Australia that he had the ability to make high yield, low risk investments through a company controlled by him, which was organized under the laws of the Isle of Man and the United Kingdom. Clement offered investors a return of four to eight percent per month on their investment in what he referred to as a “High Asset Management Program” or HAMP in Europe. The investors borrowed money to invest by obtaining five loans from the Bank of New Zealand in Perth, Western Australia. As part of the scheme, Clement and his agent provided collateral for the loans in the form of a company named the Australia Queensland Treasury Corporation (AQTC), which proved to be insufficient to cover the outstanding loans. Clement and his agent also offered United States Treasury bills as collateral, whose values were also not enough to cover the outstanding loans. As part of the fraud, Clement directed funds to be wire transferred from England to the United States, as well as from the United States to Australia. The victims lost an estimated \$5 million as a result of this scheme. Working jointly with the FBI, IRS-CID used complex financial investigative techniques to track the wire transfers and uncovered the fraudulent scheme. Based on the funds identified in the investigation, the court ordered Clement to pay restitution to the victims totaling \$3.9 million.

Tax Evasion Scheme Uses Antigua Offshore Bank

IRS-CID conducted an investigation of Albert Carter of Provo, Utah who was convicted of tax crimes after agents uncovered a scheme that Carter devised to defraud investors of their money through an investment program, often referred to as a “doubling program”. Even though Carter had gross income in excess of \$215,000 and owed federal taxes in excess of \$75,000, Carter not only failed to file his tax return, but also committed acts of tax evasion, including the use of a VISA card account from an offshore bank to pay personal expenses, the transfer of money to the VISA card account, and the transfer of records reflecting income and expenses offshore. Carter was “managing director” of Allied International Resources (AIR) and represented the company as having offices in Utah and Antigua. During this time, Carter devised what turned out to be a non-existent prime bank instrument investment scheme to defraud investors of their money through an investment program involving the international trading of bank debentures. Carter and his associates solicited approximately \$3 million from investors for the “doubling program.” Through letters mailed to investors, Carter represented that the investment was for a 12-month term, was protected by a guarantee against loss for 108 percent of the investment, and was backed by a trust fund of over five times the amount that AIR was obligated to pay out. The letter represented that an investor could expect 200 percent of the investment at the annual anniversary date. Carter represented to his clients that the international trading of bank debentures is a privileged and highly lucrative profit source for participating banks and, as a result, these opportunities are not made known to the public. He also claimed that the proposed investment is “safer than Certificates of Deposit at your local bank.” Carter sent another letter to investors eleven months after their investment had been made, which misrepresented that the initial investment had “dramatically increased” to an amount equal to twice the initial investment. The second letter misled investors into believing that the program was generating a return for them when, in fact, no return had been received by AIR. Carter admitted he did not inform investors that investor funds brought in

through the program would be used to pay off other investors—essentially a Ponzi scheme—and also used to pay his personal expenses and the operating expenses of AIR. He used about \$1,200,000 of investor funds to repay other investors.

Internet Gambling

IRS-CID seizes millions in offshore gaming investigation involving Antigua and Belize

In a recent case, IRS-CID charged a large-scale offshore gaming operation with money laundering. Peter Mowad and John Reyes were partners in “Carib”, an offshore Sports Book and Casino that operated in Antigua, Belize and in the United States. Since 1993, Mowad and his associates accepted wagers on sporting events from bettors located in the United States using the Internet or other telephone communications. Mowad, or associates acting under his control, while physically located in Antigua or Belize, knowingly accepted wagers in interstate and foreign commerce from persons physically located in states within the U.S. where sports gambling is prohibited. As part of his unlawful scheme, Mowad and his associates established a Florida corporation to supply the offshore gaming business with equipment and supplies necessary to operate. Mowad and his associates accepted millions of dollars in wagers every year and advertised Carib via direct mailings, sports publications and on the Internet. The illegal activity generated millions of dollars in income. Mowad used his position as a principal of the business to divert millions of dollars from the business to his own financial benefit. Mowad arranged these transactions by writing checks or transferring funds by wire, or by directing subordinate employees to do so, from Carib’s various business bank accounts to accounts that were owned and controlled either by Mowad or his family members. IRS-CID seized over \$2.6 million held by Mowad or for his benefit in accounts at the International Bank of Miami.

Bilateral Activities

Training and Technical Assistance

During 2004, a number of U.S. law enforcement and regulatory agencies provided training and technical assistance on money laundering countermeasures and financial investigations to their counterparts around the globe. These courses have been designed to give financial investigators, bank regulators, and prosecutors the necessary tools to recognize, investigate, and prosecute money laundering, financial crimes, terrorist financing, and related criminal activity. Courses have been provided in the United States as well as in the jurisdictions where the programs are targeted.

Department of State

The Department of State’s Bureau for International Narcotics and Law Enforcement Affairs (INL) and the Department’s Office of the Coordinator for Counter-Terrorism (SCT) are together implementing a multi-million dollar training and technical assistance program designed to develop or enhance the capacity of a selected group of more than two dozen countries whose financial sectors have been used to finance terrorism. As is the case with the more than 100 other countries to which INL-funded training was delivered in 2004, the capacity to thwart the funding of terrorism is dependent on the development of a robust anti-money laundering regime. Supported by and in coordination with the State Department, the Department of Justice, Department of Homeland Security, Treasury Department component agencies, the Board of Governors of the Federal Reserve System, the Federal Deposit

Insurance Corporation, and various non-governmental organizations offered law enforcement, regulatory and criminal justice programs worldwide. This integrated approach includes assistance with the drafting of legislation and regulations that comport with international standards, the training of law enforcement, the judiciary and bank regulators, as well as the development of financial intelligence units capable of collecting, analyzing and disseminating financial information to foreign analogs.

Nearly every federal law enforcement agency assisted in this effort by providing basic and advanced training courses in all aspects of financial criminal investigation. Likewise, every bank regulatory agency participated in providing advanced anti-money laundering/counterterrorist financing training to supervisory entities. In addition, INL made funds available for intermittent posting of legal and financial advisors at selected overseas locations. These advisors work directly with host governments to assist in the creation, implementation, and enforcement of anti-money laundering and financial crime legislation. INL also provided several federal agencies funding to conduct multi-agency financial crime training assessments and develop specialized training in specific jurisdictions to combat money laundering.

INL and the Government of the United Kingdom continued to fund the Caribbean Anti-Money Laundering Programme (CALP). INL contributed \$600,000 to the CALP in 2004. The objectives of the highly successful, now-concluded CALP were to reduce the laundering of the proceeds of all serious crime by facilitating the prevention, investigation, and prosecution of money laundering. CALP also developed a sustainable institutional capacity in the Caribbean region to address the issues related to anti-money laundering efforts at a local, regional and international level.

In 2004, INL reserved \$900,000 for the United Nations Global Programme against Money Laundering (GPML). In addition to sponsoring money laundering conferences and providing short-term training courses, the GPML instituted a unique longer-term technical assistance initiative through its mentoring program. The mentoring program provides advisors on a yearlong basis to specific countries or regions. A GPML mentor provided assistance to the Secretariat of the Eastern and Southern Africa Anti-Money Laundering Group (ESAAMLG).

In 2004, INL also funded the \$2 million terrorist finance component of the President's East Africa Counter-Terrorist Initiative. INL continues to provide significant financial support for many of the anti-money laundering bodies around the globe. During 2004, INL support was furnished to the Financial Action Task Force on Money Laundering (FATF), the international standard setting organization. INL continued to be the sole U.S. Government financial supporter of the FATF-style regional bodies (FSRBs) including the Asia/Pacific Group on Money Laundering (APG), the Council of Europe's MONEYVAL, the Caribbean Financial Action Task Force (CFATF), the Eastern and Southern Africa Anti-Money Laundering Group (ESAAMLG) and the South American Financial Action Task Force, Grupo de Accion Financiera de Sudamerica Contra el Lavado de Activos (GAFISUD). INL also financially supported the Pacific Island Forum and the Organization of American States (OAS) Inter-American Drug Abuse Control Commission (CICAD) Office of Money Laundering and the OAS Counter-Terrorism Committee.

As in previous years, INL training programs continue to focus on an interagency approach and on bringing together, where possible, foreign law enforcement, judicial and Central Bank authorities. This allows for an extensive dialogue and exchange of information. This approach has been used successfully in Asia, Central and South America, Russia, the Newly Independent States (NIS) of the former Soviet Union, and Central Europe. INL also provides funding for many of the regional training and technical assistance programs offered by the various law enforcement agencies, including assistance to the International Law Enforcement Academies.

International Law Enforcement Academies (ILEAs)

The mission of the regional ILEAs has been to support emerging democracies, help protect U.S. interests through international cooperation, and promote social, political and economic stability by combating crime. To achieve these goals, the ILEA program has provided high-quality training and technical assistance, supported institution building and enforcement capability, and fostered relationships of American law enforcement agencies with their counterparts in each region. ILEAs have also encouraged strong partnerships among regional countries, to address common problems associated with criminal activity.

The ILEA concept and philosophy is a united effort by all the participants-government agencies and ministries, trainers, managers, and students alike-to achieve the common foreign policy goal of international law enforcement. The goal is to train professionals that will craft the future for the rule of law, human dignity, personal safety and global security.

The ILEAs are a progressive concept in the area of international assistance programs. The regional ILEAs offer three different types of programs. The Core program, a series of specialized training courses and regional seminars tailored to region-specific needs and emerging global threats, typically includes 50 participants, normally from three or more countries. The Specialized courses, comprised of about 30 participants, are normally one or two weeks long and often run simultaneously with the Core program. Lastly, topics of the Regional Seminars include transnational crimes, financial crimes, and counterterrorism.

The United States has amended the money laundering portion of the Core program presented at each ILEA to address terrorist financing, significantly increasing the number of instruction hours dedicated to this critical topic. The ILEA program partner agencies are working on finalizing a new Specialized course that would focus specifically and in detail on terrorist financing, to be offered at all the ILEAs.

The ILEAs help develop an extensive network of alumni that exchange information with their U.S. counterparts and assist in transnational investigations. These graduates are also expected to become the leaders and decision-makers in their respective societies. The Department of State works with the Departments of Justice (DOJ), Homeland Security (DHS) and Treasury, and with foreign governments to implement the ILEA programs. To date, the combined ILEAs have trained over 13,000 officials from 68 countries in Africa, Asia, Europe and Latin America. The ILEA budget averages approximately \$16-17 million annually.

Africa. ILEA Gaborone (Botswana) opened in 2001. The main feature of the ILEA is a six-week intensive personal and professional development program, called the Law Enforcement Executive Development Program (LEEDP), for law enforcement mid-level managers. The LEEDP brings together approximately 45 participants from several nations for training on topics such as combating transnational criminal activity, supporting democracy by stressing the rule of law in international and domestic police operations, and by raising the professionalism of officers involved in the fight against crime. ILEA Gaborone also offers specialized courses for police and other criminal justice officials to enhance their capacity to work with U.S. and regional officials to combat international criminal activities. These courses concentrate on specific methods and techniques in a variety of subjects, such as counterterrorism, anticorruption, financial crimes, border security, drug enforcement, firearms and many others.

Instruction is provided to participants from Angola, Botswana, Lesotho, Malawi, Mauritius, Mozambique, Namibia, Seychelles, South Africa, Swaziland, Tanzania and Zambia. This area of focus was expanded to include key countries (Djibouti, Ethiopia, Kenya, Uganda) in East Africa and Nigeria in West Africa. Eventually this gradual expansion will reach other sub-Saharan African countries. United States and Botswana trainers provide instruction. ILEA Gaborone has offered specialized courses on money laundering/terrorist financing-related topics such as Criminal Investigation

(presented by FBI) and International Banking & Money Laundering Program (presented by DHS/Federal Law Enforcement Training Center). ILEA Gaborone trains approximately 450 students annually.

Asia. ILEA Bangkok (Thailand) opened in March 1999. The ILEA focuses on enhancing the effectiveness of regional cooperation against the principal transnational crime threats in Southeast Asia-illicit drug-trafficking, financial crimes, and alien smuggling. The ILEA provides a Core course (the Supervisory Criminal Investigator Course or SCIC) of management and technical instruction for supervisory criminal investigators and other criminal justice managers. In addition, this ILEA presents one Senior Executive program and eight to ten specialized courses-lasting one to two weeks-in a variety of criminal justice topics. The principal objectives of the ILEA are the development of effective law enforcement cooperation within the member countries of the Association of Southeast Asian Nations (ASEAN), plus China, and the strengthening of each country's criminal justice institutions to increase their abilities to cooperate in the suppression of transnational crime.

Instruction is provided to participants from Brunei, Cambodia, China, Hong Kong, Indonesia, Laos, Macau, Malaysia, Philippines, Singapore, Thailand and Vietnam. Subject matter experts from the United States, Thailand, Japan, Netherlands, Australia, Philippines and Hong Kong provide instruction. ILEA Bangkok has offered specialized courses on money laundering/terrorist financing-related topics such as Computer Crime Investigations (presented by FBI and DHS/Bureau of Customs and Border Protection (BCBP)) and Complex Financial Investigations (presented by IRS, DHS/BCBP, FBI and DEA). Total annual student participation is 550.

Europe. ILEA Budapest (Hungary) opened in 1995. Its mission has been to support the region's emerging democracies by combating an increase in criminal activity that emerged against the backdrop of economic and political restructuring following the collapse of the Soviet Union and its former satellite regimes. ILEA Budapest offers three different types of programs: an eight-week Core course, Regional Seminars and Specialized courses in a variety of criminal justice topics. Instruction is provided to participants from Albania, Armenia, Azerbaijan, Bulgaria, Croatia, Czech Republic, Estonia, Georgia, Hungary, Kazakhstan, Kyrgyz Republic, Latvia, Lithuania, Macedonia, Moldova, Montenegro, Poland, Romania, Russia, Serbia, Slovakia, Slovenia, Tajikistan, Turkmenistan, Ukraine and Uzbekistan.

Trainers from 17 federal agencies and local jurisdictions from the United States and also from Hungary, Canada, Germany, United Kingdom, Netherlands, Ireland, Italy, Russia, Interpol and the Council of Europe provide instruction. ILEA Budapest has offered specialized courses on money laundering/terrorist financing-related topics such as Investigating/Prosecuting Organized Crime and Transnational Money Laundering (both presented by DOJ/OPDAT). ILEA Budapest trains approximately 950 students annually.

Global. ILEA Roswell (New Mexico) opened in September 2001. This ILEA offers a curriculum comprised of courses similar to those provided at a typical Criminal Justice university/college. These four-week courses have been designed and are taught by academicians for foreign law enforcement officials. This Academy is unique in its format and composition with a strictly academic focus and a worldwide student body. The participants are mid-to-senior level law enforcement and criminal justice officials from Eastern Europe; Russia, the Newly Independent States (NIS); Association of Southeast Asian Nations (ASEAN) member countries; and the People's Republic of China (including the Special Autonomous Regions of Hong Kong and Macau); and member countries of the Southern African Development Community (SADC) plus other East and West African countries. The students are drawn from pools of ILEA graduates from the Academies in Bangkok, Budapest and Gaborone, and other selected participants mainly from Latin America and the Caribbean. ILEA Roswell trains approximately 400 students annually. In January 2005, INL attended the groundbreaking ceremony for a new building for the Roswell ILEA.

Board of Governors of the Federal Reserve System (FRB)

The FRB participates in the effort to deter money laundering primarily through ensuring compliance with the Bank Secrecy Act and the USA PATRIOT Act by the domestic and foreign banking organizations that it supervises. In another important initiative to counter money laundering on a global basis, the FRB is a regular participant in the U.S. delegation to the Financial Action Task Force.

On another important front to combat money laundering, FRB staff conducts training and provides technical assistance to banking supervisors and law enforcement officials on anti-money laundering and counterterrorist financing tactics throughout the world. Programs for Mexico, Israel, Switzerland, Hungary, the United Arab Emirates, China, Kazakhstan, and Jamaica were provided in 2004.

In addition to its international training programs, the FRB presented training courses to U.S. law enforcement agencies, including the Internal Revenue Service, the Federal Bureau of Investigation, the U.S. Postal Inspection Service, the Department of Homeland Security's Bureau for Immigration and Customs Enforcement, and the Drug Enforcement Administration as well as at the Federal Law Enforcement Training Center.

**Click for [Department of Homeland Security: Immigration and Customs Enforcement \(ICE\)/Financial Investigations Division](#)

Drug Enforcement Administration (DEA)

The International Training Section of the DEA conducts its International Asset Forfeiture and Money Laundering courses in concert with the Department of Justice (DOJ). In 2004, a total of 235 participants from Australia, Philippines, Belgium, Trinidad and Tobago, Austria and Tajikistan received this training. A wide range of DEA international courses contain training elements relating to countering money laundering and other financial crimes. The DEA training division also provides training at the International Law Enforcement Academies in Bangkok, Budapest and Gaborone.

The basic course curriculum, which was conducted in Tajikistan, Philippines, Austria and Belgium, includes instruction addressing money laundering and its relation to Central Bank operations, asset identification, seizure and forfeiture techniques, financial investigations, document exploitation, and international banking. Overviews of U.S. asset forfeiture law, country forfeiture and customs law, and prosecutorial perspectives are also included.

A new advanced course was added in 2004 in Australia and included money laundering investigative techniques, tracing the origin of financial assets, international banking and money laundering, Internet/cyber banking, asset forfeiture and financial investigations, and international issues in money laundering and forfeiture.

Federal Bureau of Investigation (FBI)

In 2004, Special Agents of the FBI continued extensive training in various regions of the world, covering basic and more advanced courses in terrorism financing and money laundering, financial fraud, racketeering enterprise investigations, complex financial crimes and countering international money laundering.

In concert with other U. S. and international trainers, the FBI conducted aspects of the full range of its training for a variety of countries on a regional basis through the International Law Enforcement Academies (ILEAs) in Bangkok, Thailand, and Budapest, Hungary. In other programs, FBI training reached numerous officials representing various levels of the judiciary and law enforcement as well as government banking regulators and private sector banking officials.

Students worldwide participated in FBI training, in several instances in concert with the U. S. Internal Revenue Service (IRS). Training was provided to the countries of Indonesia, Jordan, Venezuela,

Philippines, Kazakhstan, Bosnia, Pakistan, Saudi Arabia, Morocco, Brazil, Turkey, Nigeria, Ghana, Thailand, Romania and Latvia. In addition, 36 law enforcement officials from 17 Latin American countries traveled to the FBI Academy, Quantico, Virginia, to participate in the Latin American Law Enforcement Executive Development Seminar, which includes coursework in money laundering and other financial crimes.

Federal Deposit Insurance Corporation (FDIC)

In 2004, the FDIC continued to work in partnership with several agencies to combat money laundering and the global flow of terrorist funds. Additionally, the agency participates in the planning and conduct of missions to assess vulnerabilities to terrorist financing activity worldwide and to develop and implement plans to assist foreign governments in their efforts in this regard. To better achieve this end, the FDIC has 22 individuals available to participate in foreign missions and is working to double the number of participants available to assist in future missions.

Periodically, FDIC staff meets with supervisory and law enforcement representatives from various countries to discuss anti-money laundering (AML) issues, including examination policies and procedures, the USA PATRIOT Act and its requirements, the FDIC's asset forfeiture programs, suspicious activity reporting requirements and interagency information sharing mechanisms. In 2004, such presentations were given to representatives from the Netherlands, Romania and Georgia.

In March 2004, the FDIC responded to a request from the Department of the Treasury to provide comments on a draft anti-money laundering/counterterrorist financing law for Iraq. This draft law was adopted by the Coalition Provisional Authority and implemented into law.

The FDIC responded to a request to participate in an assessment of the Romanian government's suspicious transaction reporting process and a review of the country's AML laws and regulations. The FDIC participated with FinCEN in this review.

The FDIC participated on an interagency Financial Systems Assessment Team to Morocco in January 2004. The group reviewed the country's proposed AML law and provided information in the areas of customer identification programs, financial intelligence units and the monitoring of non-bank financial institutions.

The FDIC also provided staff to participate in three conferences and training sessions. The first conference was held in Buenos Aires, Argentina, with financial intelligence unit representatives from Argentina, Brazil, Paraguay and the United States. The FDIC discussed the role of the financial regulator in providing information to the financial intelligence units. The second training session was held in Abu Dhabi, United Arab Emirates. The purpose of the seminar was to provide guidance to Asian countries that are presently developing their own anti-money laundering policies and procedures. Twenty-nine representatives from Afghanistan, Bangladesh, India, Maldives, Pakistan, Sri Lanka, and the United Arab Emirates attended the three-day conference. The third training session was held in Bangkok, Thailand, and was sponsored by DOJ/OPDAT. The conference was titled "Safeguarding Charities from Abuse." Representatives from Brunei, Indonesia, Malaysia, Philippines, Singapore, Thailand, the United Kingdom, the United States and the Asia/Pacific Group on Money Laundering attended the three-day session.

Financial Crimes Enforcement Network (FinCEN)

FinCEN, the U.S. Financial Intelligence Unit (FIU), a bureau of the U.S. Department of the Treasury, coordinates and provides training and technical assistance to foreign nations seeking to improve their capabilities to combat money laundering, terrorist financing, and other financial crimes. FinCEN's particular focus is the creation and improvement of FIUs—a valuable component of a country's anti-

Money Laundering and Financial Crimes

money laundering (AML) regime. FinCEN's international training program has two components: (1) instruction and presentations to a broad range of government officials, financial regulators, law enforcement officers, and others, on the subjects of money laundering and financial crime and on FinCEN's mission and operation; and (2) training regarding FIU operations and analysis via personnel exchanges. Much of FinCEN's work involves strengthening existing FIUs and the channels of communication used to share information to support anti-money laundering investigations. Participation in personnel exchanges (from the foreign FIU to FinCEN and vice versa), delegation visits to foreign FIUs, and regional and operational workshops are just a few examples of FinCEN activities designed to assist/support FIUs.

For those FIUs that are fully operational, FinCEN's goal is to assist the unit in increasing effectiveness, improving information sharing capabilities, and better understanding the phenomena of money laundering and terrorist financing. As a member of the Egmont Group of FIUs, FinCEN works closely with other member FIUs to provide training and technical assistance to countries and jurisdictions interested in establishing their own FIUs and having those units become candidates for membership in the Egmont Group.

During 2004, FinCEN conducted training courses, both independently and with other agencies including the Federal Bureau of Investigation and the Treasury Department's Office of Technical Assistance (OTA). Occasionally, FinCEN's training and technical assistance programming is developed jointly with these other agencies in order to address specific needs of the jurisdiction/country receiving assistance. In 2004, FinCEN conducted several training programs abroad to maximize participation by foreign FIUs.

Over the last twelve months, in an effort to reinforce the sharing of information among established FIUs, FinCEN conducted personnel exchanges and other training with a number of Egmont Group members and non-members. Examples include Argentina, Brazil, Paraguay, Thailand, Russia, Qatar, Romania, Guatemala, Italy, Spain and Turkey. Such training offers the opportunity for FIU personnel to see first-hand how another FIU operates. It is hoped that the participants in these exchanges will share ideas, innovations, and insights that will lead to improvements in such areas as analysis, information flow, and information security at their home FIUs.

Analysis training typically consists of a group of analysts from a country's FIU spending one to two weeks at FinCEN. Occasionally, FinCEN will conduct these training sessions abroad. FinCEN's analysis training program provides foreign analysts with basic skills in critical thinking and analysis; data collection; report writing; database research; financial analysis (such as bank records and net worth analysis); and case presentation. Training topics such as regulatory issues, international case processing, technology infrastructure and security, and terrorist financing and money laundering trends and typologies provide analysts with broader knowledge and a better understanding of the topic of money laundering. Finally, analysts gain an extensive knowledge of the U.S. AML regime by meeting with representatives from other Federal agencies involved in the fight against money laundering and terrorist financing. These include the Justice Department's Asset Forfeiture and Money Laundering Section, the State Department's Bureau of International Narcotics and Law Enforcement Affairs and Office of the Coordinator for Counter-Terrorism, the Internal Revenue Service's Criminal Investigation Division and the Homeland Security Department's Bureau of Immigration and Customs Enforcement.

In 2004, in support of the State Department's "3+1" initiative designed to address security challenges in South America's tri-border region, FinCEN designed and managed an FIU Conference in Buenos Aires, Argentina. This conference, co-hosted by Argentina's FIU, focused on strengthening information sharing among the FIUs of the "3+1" partners: Argentina, Brazil, and Paraguay. FinCEN provided training to two members of the Thailand FIU's IT staff on "data mining" software used for information analysis. FinCEN also partnered with Treasury/OTA and FINTRAC (Canada's FIU) to

provide IT training for staff from the Philippines FIU, the Anti-Money Laundering Council. FinCEN also partnered with OTA to coordinate training in Argentina, Peru, Paraguay, and Russia. In 2004, efforts continued to better understand the role of, and collaborate with international organizations involved in providing anti-money laundering/counterterrorist financing training and technical assistance. Over the last year, FinCEN has significantly increased its coordination with organizations such as the Organization of American States, the International Monetary Fund and the World Bank.

In 2004, FinCEN hosted representatives from over 60 countries. These visits focused on topics such as money laundering trends and patterns, the Bank Secrecy Act, USA PATRIOT Act, communications systems and databases, case processing, and the goals and mission of FinCEN. Representatives from foreign financial and law enforcement sectors generally spend one to two days at FinCEN learning about money laundering, the U.S. AML regime and reporting requirements, the national and international roles of a financial intelligence unit, and various other topics. During 2004, this type of orientation was offered to officials from a number of countries including Kuwait, Taiwan, Mauritius, Canada, Italy, Spain, and Nigeria.

Internal Revenue Service (IRS)

In 2004, the IRS Criminal Investigative Division (IRS-CID) increased its involvement in international training efforts designed to help share expertise needed to detect and dismantle money laundering organizations and the proliferation of terrorist organizations that facilitate terrorist financing activities. IRS-CID provided significant contributions through agency and multi-agency technical assistance programs to foreign law enforcement agencies during the past fiscal year. Training included instruction in financial investigative techniques, combating money laundering and combating transnational terrorism.

IRS-CID is one of the participating agencies to provide support to the International Law Enforcement Academies (ILEA) at Bangkok, Budapest and Gaborone. This is accomplished by providing training in Financial Investigative Techniques/Money Laundering and Anti-Terrorism Financing. In Fiscal Year 04, IRS-CID provided a class coordinator to the ILEA program in Gaborone to share experience and expertise in financial investigative matters with the participants. In furtherance of this commitment, IRS-CID has a special agent detailed as one of the Deputy Directors at the ILEA in Bangkok, Thailand. IRS-CID also serves as coordinator of the annual Complex Financial Investigations course, which is provided to senior, mid-level, and first-line law enforcement supervisors, inspectors, investigators, prosecutors and customs officers from Brunei, Cambodia, Hong Kong, Indonesia, Laos, Macau, Malaysia, People's Republic of China, Philippines, Singapore, Thailand, and Vietnam.

In the ongoing efforts to facilitate the creation of ILEA South America, IRS-CID conducted assessments and curriculum studies to assist in building a course that would be most beneficial to South American countries. IRS-CID assigned a Supervisory Academy Instructor to serve as a member of the ILEA-South America board, which will help formulate the curriculum and assist in identifying the permanent site to host the new ILEA facility.

IRS-CID completed an assignment as a Criminal Investigations Division (CID) Advisor to the Board of Inland Revenue (BIR), Government of Trinidad and Tobago as part of an agreement with IRS' Tax Administration Advisory Services (TAAS) project for technical assistance and guidance as it relates to the creation of a law enforcement unit attached to BIR. Through our CID representative's efforts, the unit is now in operation and actively working criminal tax cases.

IRS-CID conducted a one-week Advanced Money Laundering/Financial Investigative Techniques course in Spindlerov Mlyn, Czech Republic. The participants were financial investigators, supervisors and prosecutors from the Ministry of the Interior. Their responsibilities are to investigate serious

economic crimes. IRS-CID presented a two-week Advanced Financial Investigative Techniques course to investigative officers and supervisors of the Inland Revenue Board of Malaysia and investigators of the Malaysian Securities Commission and Ministry of Finance. This course presented the participants with an opportunity to work a case from the development of potential criminal information through conducting the investigation, preparing reports for recommendation of charges and preparing for trial.

IRS-CID delivered a one-week Money Laundering/Anti-Terrorist Financing course in Solenice, Czech Republic. The participants were all financial investigators, supervisors and prosecutors from the Ministry of the Interior who investigate serious economic crimes. A one-week Money Laundering and Anti-Terrorist Financing course was presented in Rarotonga, Cook Islands. The Solicitor General and all heads of the ministries participated in this training. A one-week Money Laundering and Anti-Terrorist Financing course was presented to senior law enforcement officials from the various fraud and narcotics law enforcement agencies in Cairo, Egypt.

IRS-CID assisted the Office of Overseas Prosecutorial Development Assistance and Training (OPDAT) in a one-week conference on Complex Financial Investigations in Corruption Cases in Tulcea, Romania. The participants were prosecutors, judges and governmental officials from Romania who were involved in investigating and prosecuting money laundering, tax evasion, fraud and public corruption. A one-week course in Combating Money Laundering was presented to Thailand's Anti-Money Laundering Organization (AMLO) in Bangkok, Thailand. A four-day Anti-Terrorist Financing course was held in Kuala Lumpur, Malaysia for investigators and prosecutors from Malaysia, Thailand, Indonesia, the Philippines, and Brunei.

IRS-CID has assisted the Federal Bureau of Investigation (FBI) in developing and delivering a one-week and an eight-day Anti-Money Laundering and Anti-Terrorism Financing course. The course was successfully delivered to participants in Indonesia, Jordan, Philippines, Brazil, Qatar, Malaysia, Kazakhstan, and Venezuela. A one-week course was delivered in Washington, D.C. to Pakistanis and in ILEA Budapest to Bosnians. Participants in the class were investigators, prosecutors, and Judges from the Financial Intelligence Unit, Central Bank, Securities and Exchange Commission, Insurance Commission, Department of Finance, Department of Justice, and the Drug Enforcement Agency.

IRS-CID is a member of the Anti-Terrorism Financing Task Force that recently met to discuss the development of a one-week Anti-Terrorism Financing Course to be presented at ILEA Budapest. The Department of State (DOS) funded DOS Anti-Terrorism Assistance (ATA) to provide training relating to counterterrorism financing to countries at the ILEAs. As part of this initiative, ATA asked IRS-CID to participate in the training. A pilot two-week course was successfully presented at ILEA Budapest. The participating countries were Romania, Turkey and Hungary.

Office of the Comptroller of the Currency (OCC)

The OCC conducted and sponsored a number of anti-money laundering (AML) training initiatives for foreign banking supervisors during 2004.

In February 2004, the OCC sponsored a three-day Anti-Money Laundering workshop in Belize through the International Monetary Fund. The session focused on Anti-Money Laundering bank supervision and best practices. Material was incorporated from the revised FATF Forty Recommendations, the Basel Committee's Customer Due Diligence paper, and other reference material including the OCC's handbook on AML. There were approximately 30 examiners in attendance.

In February 2004, the OCC participated with FinCEN in an Egmont Group FIU assessment of the Philippines' Anti-Money Laundering Council (AMLC). The assessment focused on legislative, regulatory, IT, and law enforcement capabilities within the scope of the Philippine FIU.

In March 2004, the OCC sponsored an Anti-Money Laundering/Anti Terrorist Financing School in Washington, D.C. The school was designed specifically for foreign banking supervisors to increase their knowledge of money laundering and terrorist financing activities and of how these acts are perpetrated. The course provided a basic overview of AML examination techniques, tools, and case studies. Twenty-three banking supervisors from the following countries were in attendance: Cayman Islands, Guatemala, Indonesia, Japan, Luxembourg, Netherlands, Nigeria, Pakistan, Panama, Philippines, Romania, Turkey, United Kingdom, and Singapore. The course was videotaped, and the OCC and World Bank are jointly working to produce a video that can be distributed in 2005 as a training tool for banking supervisors around the world.

In June 2004, through the Association of Banking Supervisors of America (ABSA), the OCC presented the Anti-Money Laundering/Anti-Terrorist Financing School in Chile. At this session, there were 25 banking supervisors from the following countries: Chile, Guatemala, Honduras, Mexico, Nicaragua, and Peru.

Overseas Prosecutorial Development Assistance and Training & the Asset Forfeiture and Money Laundering Section (OPDAT and AFMLS)

Training and Technical Assistance

OPDAT is the office within the Justice Department responsible for assessing, designing and implementing training and technical assistance programs for criminal justice sector counterparts overseas. OPDAT draws upon components within the Department, such as AFMLS, to provide programmatic expertise and to develop good partners abroad.

In 2004, OPDAT provided training in the areas outlined below. In addition to programs that are tailored to each country's needs, OPDAT also provides long term, in-country assistance through Resident Legal Advisors (RLAs). RLAs are U.S. federal prosecutors who provide in-country technical assistance to improve the skills, efficiency and professionalism of foreign criminal justice systems. Typically, RLAs live in a country for one or two years to work with ministries of justice, prosecutors and the courts. To promote reforms in the criminal justice system, RLAs provide assistance in legislative drafting, modernizing institutional policies and practices, and training law enforcement personnel including prosecutors, judges, police and other investigative or court officials. AFMLS, however, is the lead Justice section that provides countries with technical assistance in the drafting of money laundering and asset forfeiture statutes compliant with international standards.

Money Laundering/Asset Forfeiture

During 2004, the Justice Department's OPDAT and AFMLS continued to provide training to foreign prosecutors, judges and law enforcement, and assistance in drafting anti-money laundering statutes compliant with international standards. The assistance provided by OPDAT and AFMLS enhances the ability of participating countries to prevent, detect, investigate, and prosecute money laundering, and to make appropriate and effective use of asset forfeiture. The content of individual technical assistance varies depending on the specific needs of the participants, but topics addressed in 2004 included developments in money laundering legislation and investigations, complying with international standards for an anti-money laundering/counterterrorist financing regime, illustrations of the methods and techniques to effectively investigate and prosecute money laundering, inter-agency cooperation and communication, criminal and civil forfeiture systems, the importance of international cooperation, and the role of prosecutors. In 2004, officials in Panama, Thailand, South Africa, Malaysia, Bosnia,

Uzbekistan, Bangladesh, and Russia attended in-depth sessions on money laundering and international asset forfeiture. In 2004, OPDAT's RLA in Kosovo worked with the UN as Chief of the Special Information and Operations Unit at the DOJ/UN Administrative Mission in Kosovo to help implement a new money laundering law.

On February 3-6, 2004, AFMLS co-sponsored an international forfeiture conference with the National Prosecuting Authority of the Government of South Africa and tackled the sensitive subject of "Forfeiting the Proceeds of Public Corruption." Representatives from ten African countries, in addition to South Africa, participated in this conference, including Botswana, Kenya, Uganda, Tanzania, Nigeria, Zambia, Mozambique, Lesotho, Swaziland, and Mauritius.

Participants in the February conference consisted of prosecutors, senior police officials, judges/magistrates, and even a member of Parliament. Through interactive presentations and panel discussions, participants actively articulated their countries' concerns about and experience with public corruption, as well as their practical experience in forfeiture and obtaining mutual legal assistance from other countries. In addition to a more general discussion of forfeiture legislation, forfeiture best practices, and mutual legal assistance procedures, this year's conference also concentrated on some of the particular difficulties inherent in carrying out a complex financial fraud investigation into corruption, ranging from putting together an investigative team, financial tracing, and identifying beneficial owners to dealing with particular challenges in investigating corruption in different sectors.

From October 19-21, 2004, AFMLS sponsored a seminar entitled "Forfeiting the Proceeds of Human Trafficking" in Prague, Czech Republic. OPDAT funded all of the country delegations and worked closely with AFMLS to coordinate this event. Prosecutors and legislators from Albania, Bosnia, Bulgaria, Croatia, Czech Republic, Kosovo, Macedonia, Romania, and Serbia & Montenegro attended the seminar. The primary goal of this conference was to strengthen international cooperation in forfeiting the proceeds of alien smuggling and human trafficking. This seminar also provided a forum to exchange information on improving national forfeiture and anti-money laundering systems and on achieving greater cooperation in combating transnational financial crime. In Azerbaijan in 2004, OPDAT and AFMLS experts provided guidance to the drafters in crafting a new anti-money laundering/counterterrorist financing law that complies with Council of Europe and FATF standards. The government expects to enact the draft law in 2005.

Also in 2004, OPDAT assisted with the creation of a specialized unit at the Georgian Prosecutor's Office to handle money laundering and terrorist financing cases. With OPDAT support, in December 2003, FBI polygraphers vetted the prosecutors, investigators and support staff who are permanently assigned to this unit. Throughout 2004, the new unit received ongoing assistance from OPDAT and the RLA in developing cases under Georgia's new FATF-compliant money laundering law; two major investigations are now underway.

As part of Plan Colombia, in 2004, OPDAT continued to provide assistance to enhance the capability of Colombia's National Asset Forfeiture and Money Laundering Task Force to investigate and prosecute money laundering and other complex financial crimes, and to execute the forfeiture of profits from illegal narcotics-trafficking and other crimes.

Organized Crime

During 2004, OPDAT organized a number of programs for foreign officials on transnational or organized crime, which included such topics as corruption, money laundering, implementing complex financial investigations and special investigative techniques within a task force environment, international standards, legislation, mutual legal assistance, and effective investigation techniques.

In addition in 2004, OPDAT's Intermittent Legal Advisor (ILA) assisted the South African National Director of Public Prosecutions in implementing its new organized crime statute.

In Ukraine, OPDAT's grantee, the American University Transnational Crime Study and Corruption Center, supported indigenous research and conducted training seminars on economic crimes and organized crime.

OPDAT RLAs continued to support Bosnia's Organized Crime Anti-Human Trafficking Strike Force and Serbia and Montenegro's judges, prosecutors and police through mentoring and training programs on investigating and developing organized crime case strategies.

Fraud/Anticorruption

OPDAT placed two prosecutors overseas to provide technical assistance on a long-term basis specifically on corruption cases. Moreover, OPDAT deployed an ILA to Nigeria in 2004 to support its relatively new anticorruption commission. Also in May 2004, OPDAT placed the first RLA dedicated to anticorruption issues in Managua, Nicaragua. In September 2004, he provided assistance to the Nicaraguan Attorney General's Office on corruption cases. In January 2005, he conducted a program for 50 Nicaraguan prosecutors and police on the techniques and tools involved in preparing and bringing corruption cases to trial in an accusatory criminal justice system. Although Nicaragua switched over from an inquisitorial criminal justice system in 2002, it is still in the process of training prosecutors, investigators, and judges in the trial advocacy skills needed to implement the new criminal procedure code.

In March 2004, OPDAT conducted a technical assistance program for Uruguayan prosecutors and investigators to improve their investigative and prosecutorial ability to combat public corruption. In October 2004, OPDAT conducted a Caribbean-regional workshop on investigating and prosecuting corruption. It provided substantive technical assistance and promoted collaboration among prosecutors and investigators in the Caribbean. Prosecutors and investigators from Antigua and Barbuda, Bahamas, Barbados, Belize, Dominica, Grenada, Guyana, Jamaica, St. Kitts and Nevis, Trinidad and Tobago, St. Lucia, St. Vincent and the Grenadines, and Suriname attended the workshop.

Terrorism/Terrorist Financing

OPDAT and AFMLS have intensified their efforts since 2001 to assist countries in developing their legal infrastructure to combat terrorism and terrorist financing. OPDAT and AFMLS, with the assistance of the Counter-Terrorism Section and other Department of Justice (DOJ) components, play a central role in providing technical assistance to foreign counterparts both to attack the financial underpinnings of terrorism and to build legal infrastructures to combat it. In this effort, OPDAT and AFMLS work as integral parts of the U.S. Interagency Working Group on Terrorist Financing, and in partnership with the Departments of State, Treasury and Commerce, and several other DOJ components.

In 2004, OPDAT assigned overseas the second RLA supported by the Interagency Working Group on Terrorist Financing. Working in a country where terrorist cells may exist or where there is suspected terrorist financing, RLAs focus on money laundering and financial crimes and developing counterterrorism legislation that criminalizes terrorist acts, terrorist financing, and the provision of material support to terrorist organizations. They also develop technical assistance programs for prosecutors, judges and, in collaboration with DOJ's International Criminal Investigative Training Assistance Program, police investigators to assist in the implementation of new money laundering and terrorist financing procedures.

In December 2004, OPDAT sent a counterterrorism RLA to Kenya to work on financial crimes and money laundering issues and, in general, to bolster the capacity of the prosecutor's office and assist

the Kenyans in establishing a Financial Intelligence Unit. In 2004, the RLA in Paraguay, now in his second year, organized conferences to finalize a draft anti-money laundering law, including a meeting with representatives from the UN Counter Terrorism Center in New York and the UN Office of Drugs and Crime, Terrorism Prevention Branch, in Vienna. The final draft law has been presented to the Paraguayan legislature, which will consider it in February 2005. In 2005, OPDAT will place RLAs in Abu Dhabi, Egypt, Morocco, Bangladesh, Indonesia, and Pakistan. OPDAT will also assign ILAs to Malaysia and Turkey.

In April 2004, OPDAT conducted a regional conference on terrorist financing for Southeast Asia. Law enforcement officers, prosecutors, and financial sector officials from Thailand, Philippines, Indonesia and Malaysia participated in the event.

In December 2004, OPDAT organized a regional conference in Thailand, bringing together officials from Indonesia, the Philippines and Malaysia, to discuss Safeguarding Charities from Abuse by Terrorists. The conference focused on typologies where charitable organizations either wittingly or unwittingly support terrorism, as well as the methods of criminalizing, investigating and prosecuting such acts, the regulation of charities, and practical means for “red-flagging” suspicious activities. Presenters included representatives of the United Kingdom Charity Commission, the nongovernmental organization, Save the Children, officials from the Asia/Pacific Group on Money Laundering, and representatives from the Departments of Justice, State and Treasury, including the Internal Revenue Service. Following the conference the four governments requested follow-up bilateral assistance.

AFMLS provides technical assistance directly in connection with legislative drafting on all matters involving money laundering, asset forfeiture and the financing of terrorism. During 2004, AFMLS provided such assistance to 16 countries and actively participated in the drafting of the terrorist financing provision of the OAS/CICAD Model Regulations. AFMLS continues to participate in the UN Working Group to draft a model non-conviction based asset forfeiture law and the G-8 working groups on corruption and asset sharing. In 2004, AFMLS provided technical assistance to Afghanistan, Albania, Azerbaijan, Bangladesh, Brazil, Pakistan, Indonesia, Iraq, Kenya, Philippines, Paraguay, Sri Lanka, the Republic of Korea, Thailand, Turkey, and Uzbekistan.

During 2004, AFMLS and OPDAT participated in four Financial Systems Assessment Teams (FSAT) led by the Department of State’s Coordinator for Counter-Terrorism Office and the Bureau for International Narcotics and Law Enforcement Affairs. These teams traveled to Morocco and Nigeria to determine the capacities and skills of prosecutors and judges, and the criminal justice system in general, to effectively address terrorist financing.

Office of Technical Assistance (OTA)

Treasury’s OTA is located within the Treasury Department’s Office of the Assistant Secretary for International Affairs. The office delivers interactive, advisor-based assistance to senior level representatives in various ministries and Central Banks in the areas of tax reform, government debt issuance and management, budget policy and management, financial institution reform, and more recently, financial enforcement reforms related to money laundering and other financial crimes. The program receives funding from the State Department’s Bureau for International Narcotics and Law Enforcement Affairs (INL), USAID country missions, and direct appropriations from the U.S. Congress.

In 2004, advisors provided assistance to the governments of Albania, Armenia, Azerbaijan, Bulgaria, Chile, China, Colombia, El Salvador, Ethiopia, Georgia, Honduras, Hungary, Kazakhstan, Macedonia, Moldova, Mongolia, Montenegro, Morocco, Panama, Paraguay, the Philippines, Poland, Peru, Romania, Russia, Ukraine, Sri Lanka and the Maldives, Tanzania, Thailand, Uganda, Ukraine, Serbia,

Venezuela, Zambia, Senegal, Lesotho, Kenya, Tunisia, Burkina Faso, Haiti and the Eastern Caribbean countries.

Training

OTA conducted several assessments of anti-money laundering regimes in 2004, often working in concert with the U.S. Embassies, other U.S. Government agencies and/or international bodies. These assessments addressed legislative, regulatory, law enforcement and judicial components of the various programs. The assessments included the development of technical assistance plans to enhance a country's efforts to fight money laundering and terrorist financing. In 2004, such assessments were carried out in Mexico, Colombia, Costa Rica, Venezuela, Ethiopia, Mongolia, Kazakhstan, the Philippines, Sri Lanka and the Maldives, Ethiopia, Kenya, Lesotho, Albania, Romania, and Bulgaria.

OTA provided a variety of training in a number of countries around the world. In Africa, OTA specialists provided a course on anti-money laundering and the countering of the financing of terrorism to the African Development Bank in Tunis, Tunisia, and held a series of awareness-raising seminars on money laundering and terrorist financing for officials of the government of Burkina Faso. In Europe: the OTA team in Bulgaria conducted financial investigation training programs including financial profiling; Romanian examiners and banks were trained in mortgage practices to manage the credit risk arising from the dramatic expansion of the mortgage market in Romania; in Armenia, OTA conducted a "train-the-trainer" program on auditing techniques for concerned officials; and in Montenegro, anti-money laundering seminars were conducted for Customs Administration, Securities Commission, Central Bank and Tax Administration, bank and non-bank institutions. In the Americas, OTA training included a course on anti-money laundering concepts and FIUs to Salvadoran and Honduran officials, a course on anticorruption to Honduran investigators, on-the-job training on suspicious activity detection for financial analysts in Paraguay, and a course on how to probe tax evasion cases for Paraguayan analysts, prosecutors and investigators. It also included a course on anticorruption practices for high-level executives, investigators and prosecutors, and a course on anti-money laundering and terrorist financing for judges in Peru. OTA has sent a team to Haiti to assist in the creation of a Haitian Financial Crimes Task Force and to continue mentoring investigators on a monthly basis. In China, OTA has partnered with the Financial Crimes Enforcement Network (FinCEN) and the Treasury's Office of Terrorism and Financial Intelligence (TFI) to assess China's need for an effective anti-money laundering regime. In Kazakhstan, OTA partnered with the Federal Law Enforcement Training Center (FLETC) to conduct the "Senior Executive Seminar" in Astana and Almaty in June 2004 to inform Kazakh officials of the nature and international requirements of an effective anti-money laundering and counterterrorist financing program, and what constitutes an effective financial intelligence unit

Support for Financial Intelligence Units

OTA also continued its training and technical support for the refinement and establishment of Financial Intelligence Units (FIUs) in various regions of the world. In Paraguay, OTA provided expert advice to the Paraguayan FIU. It also co-funded with OAS/CICAD and INL the procurement of software and hardware for the FIU, and two other Paraguayan entities that deal with anti-money laundering. In Montenegro, OTA experts undertook a variety of initiatives to help the country establish an FIU and make it operational. Similar assistance was provided to the Russian FIU. In Ukraine, OTA continued efforts to help streamline the national FIU and assisted Ukraine in developing a strategy for meaningful engagement with international money laundering control organizations and specific foreign enforcement and financial intelligence agencies. In Central America, additional training and technical assistance was provided to FIUs in Honduras, El Salvador, Panama and Venezuela.

Resident Advisors

OTA resident advisors continued international support in the areas of money laundering and terrorist financing. The resident advisors in Bulgaria and Serbia continued efforts to streamline and enhance host governments' FIUs. Supporting national efforts against financial crimes was the focus of the OTA resident advisors in Peru, Paraguay, Albania, the Philippines, Ukraine, Zambia and Romania. OTA no longer has a resident advisor in Thailand, but continues to provide intermittent technical assistance to the Thai Department of Special Investigation. OTA has placed a second Resident Advisor for the Caribbean with a focus on bank regulatory compliance. OTA finalized arrangements this year for the placement of a resident advisor in Dakar, Senegal. This advisor will work closely with the government of Senegal as well as other countries in the West Africa region to facilitate further development of GIABA, the FATF-style regional body for western African nations.

Treaties and Agreements

Treaties

Mutual Legal Assistance Treaties (MLATs) allow generally for the exchange of evidence and information in criminal and ancillary matters. In money laundering cases, they can be extremely useful as a means of obtaining banking and other financial records from our treaty partners. MLATs, which are negotiated by the Department of State in cooperation with the Department of Justice to facilitate cooperation in criminal matters, including money laundering and asset forfeiture, are in force with the following countries: Antigua and Barbuda, Argentina, Australia, Austria, the Bahamas, Barbados, Belgium, Belize, Brazil, Canada, Cyprus, Czech Republic, Dominica, Egypt, Estonia, France, Grenada, Greece, Hong Kong (SAR), Hungary, Israel, Italy, Jamaica, Latvia, Liechtenstein, Lithuania, Luxembourg, Mexico, Morocco, the Netherlands, the Netherlands with respect to its Caribbean overseas territories (Aruba and the Netherlands Antilles), Nigeria, Panama, the Philippines, Poland, Romania, Russia, South Africa, South Korea, Spain, St. Kitts and Nevis, St. Lucia, St. Vincent and the Grenadines, Switzerland, Thailand, Trinidad and Tobago, Turkey, Ukraine, the United Kingdom, the United Kingdom with respect to its Caribbean overseas territories (Anguilla, the British Virgin Islands, the Cayman Islands, Montserrat, and the Turks and Caicos Islands) and Uruguay. MLATs have been signed by the United States but not yet brought into force with the European Union and the following countries: Colombia, Germany, India, Ireland, Japan, Sweden and Venezuela. The United States has also signed and ratified the Inter-American Convention on Mutual Legal Assistance of the Organization of American States. The United States is actively engaged in negotiating additional MLATS with countries around the world. The United States has also signed executive agreements for cooperation in criminal matters with the Peoples Republic of China (PRC) and Nigeria.

Agreements

In addition, the United States has entered into executive agreements on forfeiture cooperation, including: (1) an agreement with the United Kingdom providing for forfeiture assistance and asset sharing in narcotics cases; (2) a forfeiture cooperation and asset sharing agreement with the Kingdom of the Netherlands; and (3) a drug forfeiture agreement with Singapore. The United States has asset sharing agreements with Canada, the Cayman Islands (which was extended to Anguilla, British Virgin Islands, Montserrat, and the Turks and Caicos Islands), Colombia, Ecuador, Jamaica, Mexico and the United Kingdom.

Financial Information Exchange Agreements (FIEAs) facilitate the exchange of currency transaction information between the U.S. Treasury Department and other finance ministries. The U.S. has FIEAs with Colombia, Ecuador, Mexico, Panama, Paraguay, Peru, and Venezuela. Treasury's Financial

Crimes Enforcement Network (FinCEN) has a Memorandum of Understanding (MOU) or an exchange of letters in place with other FIUs to facilitate the exchange of information between FinCEN and the respective country's FIU. FinCEN has an MOU or an exchange of letters with the FIUs in Argentina, Australia, Belgium, Canada, France, Guatemala, Italy, Japan, Netherlands, Netherlands Antilles, Panama, Poland, Russia, Singapore, Slovenia, South Korea, Spain, and the United Kingdom.

Asset Sharing

Pursuant to the provisions of U.S. law, including 18 U.S.C. § 981(i), 21 U.S.C. § 881(e)(1)(E), and 31 U.S.C. § 9703(h)(2), the Departments of Justice, State and Treasury have aggressively sought to encourage foreign governments to cooperate in joint investigations of narcotics-trafficking and money laundering, offering the possibility of sharing in forfeited assets. A parallel goal has been to encourage spending of these assets to improve narcotics-related law enforcement. The long-term goal has been to encourage governments to improve asset forfeiture laws and procedures so they will be able to conduct investigations and prosecutions of narcotics-trafficking and money laundering, which include asset forfeiture. The United States and its partners in the G-8 are currently pursuing a program to strengthen asset forfeiture and sharing regimes. To date, Canada, Cayman Islands, Hong Kong, Jersey, Liechtenstein, Switzerland, and the United Kingdom have shared forfeited assets with the United States.

From 1989 through December 2004, the international asset sharing program, administered by the Department of Justice, shared \$226,178,903 with foreign governments that cooperated and assisted in the investigations. In 2004, the Department of Justice transferred \$44,451,370 in forfeited proceeds to: Antigua-Barbuda (\$614,656), Colombia (\$13,322,028), Jordan (\$238,774), Peru (\$20,275,912) and the United Kingdom (\$10,000,000). Prior recipients of shared assets include: Anguilla, Argentina, the Bahamas, Barbados, British Virgin Islands, Canada, Cayman Islands, Colombia, Costa Rica, Dominican Republic, Ecuador, Egypt, Greece, Guatemala, Guernsey, Hong Kong (SAR), Hungary, Isle of Man, Israel, Liechtenstein, Luxembourg, Netherlands Antilles, Paraguay, Romania, South Africa, Switzerland, Turkey, the United Kingdom, and Venezuela.

From Fiscal Year (FY) 1994 through FY 2004, the international asset-sharing program administered by the Department of Treasury shared \$27,408,032 with foreign governments which cooperated and assisted in successful forfeiture investigations. In FY 2004, the Department of Treasury transferred forfeited proceeds to: Australia (\$1,407,190), Canada (\$1,323,167), Netherlands (\$25,834) and Switzerland (\$2,168). Prior recipients of shared assets include: Aruba, Australia, the Bahamas, Cayman Islands, Canada, China, Dominican Republic, Egypt, Guernsey, Honduras, Isle of Man, Jersey, Mexico, Netherlands, Nicaragua, Panama, Portugal, Qatar, Switzerland, and the United Kingdom.

Multilateral Activities

United Nations

United Nations Security Council Resolutions

UN Security Council Resolutions (UNSCR) 1267, 1390 and 1455 obligate UN Member States to impose certain measures-namely, asset freezes, travel restrictions and an arms embargo-against individuals and entities associated with Usama Bin Ladin, or members of al-Qaida or the Taliban that are included on the consolidated list maintained and regularly updated by the UN 1267 Sanctions Committee. UNSCR 1452 allows for limited exceptions to the asset freeze provisions under certain

circumstances. A Monitoring Group reports to the UN 1267 Sanctions Committee on the implementation of the resolutions.

United Nations Security Council Resolution 1373

On September 28, 2001 the United Nations Security Council adopted Resolution 1373 (UNSCR 1373) concerning terrorism. UNSCR 1373 requires States to take certain specified measures to combat terrorism. Among other things, it requires States to do the following: to freeze without delay funds, financial assets or other economic resources of persons who commit, attempt to commit, facilitate or participate in the commission of terrorist acts; to prohibit their nationals or any persons and entities within their territories from making any funds, financial assets or economic resources or other related services available-directly or indirectly-for the benefit of persons who commit, attempt to commit, facilitate or participate in the commission of terrorist acts; to ensure that terrorist acts are established as serious criminal offenses in domestic laws and regulations and that punishment duly reflects the seriousness of such terrorist acts; to deny safe haven to those who finance, plan, support or commit terrorist acts; and, to ensure that any person who participates in the financing, planning, preparation or perpetration of terrorist acts is brought to justice. UNSCR 1373 calls upon States to exchange information and cooperate to prevent the commission of terrorist acts.

UNSCR 1373 establishes a committee, the UN Counter-Terrorism Committee (CTC), to monitor implementation of the resolution and to receive reports from States on steps they have taken to implement the resolution.

UN International Convention for the Suppression of the Financing of Terrorism

On December 9, 1999, the United Nations General Assembly adopted the International Convention for the Suppression of the Financing of Terrorism. It was opened for signature from January 10, 2000 to December 31, 2001. This Convention requires parties to criminalize the provision or collection of funds with the intent that they be used, or in the knowledge that they are to be used, to conduct certain terrorist activity. Article 18 of the Convention requires states parties to cooperate in the prevention of terrorist financing by adapting their domestic legislation, if necessary, to prevent and counter preparations in their respective territories for the commission of offenses specified in Article 2. To that end, Article 18 encourages implementation of numerous measures consistent with the FATF Forty Recommendations on Money Laundering. These measures, which states parties implement at their discretion, include the following: prohibiting accounts held by or benefiting people unidentified or unidentifiable; verifying the identity of the real parties to transactions; and, requiring financial institutions to verify the existence and the structure of the customer by obtaining proof of incorporation.

The Convention also encourages states parties to obligate financial institutions to report complex or large transactions and unusual patterns of transactions that have no apparent economic or lawful purpose, without incurring criminal or civil liability for good faith reporting; to require financial institutions to maintain records for five years; to supervise (for example, through licensing) money-transmission agencies; and to monitor the physical cross-border transportation of cash and bearer-negotiable instruments. Finally, the Convention addresses information exchange, including through the International Criminal Police Organization (Interpol). As of December 31, 2003, 107 states had become parties to the Convention; by December 31, 2004, 132 countries had become parties to the Convention.

UN Convention Against Transnational Organized Crime

The UN Convention Against Transnational Organized Crime (Convention) was signed by 125 countries, including the United States, at a high-level signing conference December 12-14, 2000 in Palermo, Italy. It is the first legally binding multilateral treaty specifically targeting transnational organized crime. Two supplemental Protocols addressing trafficking in persons and migrant smuggling were also signed by many countries in Palermo. Each instrument enters into force on the ninetieth day after the 40th state deposits an instrument of ratification, acceptance, approval or accession. The Convention entered into force September 29, 2003, and the Protocol to Prevent, Suppress and Punish Trafficking in Persons, Especially Women and Children entered into force December 25, 2003. However, at the end of 2003, the Protocol against the Smuggling of Migrants by Land, Sea and Air had not yet entered into force. As of the end of 2003, 59 countries had become parties to the Convention and by December 31, 2004, 94 countries had become parties.

The Convention takes aim at preventing and combating transnational organized crime through a common toolkit of criminal law techniques and international cooperation. It requires states parties to have laws criminalizing the most prevalent types of criminal conduct associated with organized crime groups, including money laundering, obstruction of justice, corruption of public officials and conspiracy. The article on money laundering regulation requires parties to institute a comprehensive domestic regulatory and supervisory regime for banks and financial institutions to deter and detect money laundering. The regime will have to emphasize requirements for customer identification, record keeping and reporting of suspicious transactions.

UN Convention Against Corruption

The UN Convention Against Corruption (Convention), signed by 96 countries, including the United States, at a high-level signing conference December 9-11, 2003 in Merida, Mexico, is the first legally binding multilateral treaty to address on a global basis the problems relating to corruption. The Convention expands on the provisions of existing regional anticorruption instruments to prevent corruption and provides channels for governments to recover assets that have been illicitly acquired by corrupt former officials. The Convention also provides for the criminalization of certain corruption-related activities such as bribery and money laundering, and for the provision of mutual legal assistance related to those activities. As the Convention against Transnational Organized Crime does, this Convention requires parties to institute a comprehensive domestic regulatory and supervisory regime for banks and financial institutions to deter and detect money laundering. That regime must emphasize requirements for customer identification, record keeping and reporting of suspicious transactions. As of December 2, 2004, 26 countries had become parties to the Convention.

The Financial Action Task Force

The Financial Action Task Force on Money Laundering (FATF), established at the G-7 Economic Summit in Paris in 1989, is an inter-governmental body whose purpose is the development of international standards and the promotion of policies aimed at combating money laundering and the financing of terrorism.

The FATF originally was given the responsibility of examining money laundering techniques and trends, evaluating anti-money laundering measures, and recommending additional steps to be taken. In 1990, the FATF first issued its Forty Recommendations on Money Laundering. These recommendations were designed to prevent proceeds of crime from being utilized in future criminal activities and affecting legitimate economic activity. Revised in 1996, and most recently in 2003, to reflect changes in money laundering patterns, these recommendations, along with the nine FATF

Special Recommendations on Terrorist Financing, are widely acknowledged as the international standards in these areas.

The FATF monitors members' progress in implementing anti-money laundering measures, examines money laundering techniques and countermeasures, and promotes the adoption and implementation of effective anti-money laundering measures globally. In performing these activities, the FATF collaborates with various other international organizations, including several FATF-style regional bodies.

The FATF members include 31 jurisdictions and two regional organizations. The FATF members collectively represent the major financial centers of North America, South America, Europe, Africa, Asia, and the Pacific. The FATF member delegations are drawn from a wide range of disciplines, including experts from Ministries of Finance, Justice, Interior and Foreign Affairs; financial supervisory authorities; and law enforcement agencies. Argentina, Australia, Austria, Belgium, Brazil, Canada, Denmark, European Commission, Finland, France, Germany, Greece, Gulf Co-operation Council, Hong Kong China, Iceland, Ireland, Italy, Japan, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Portugal, Russian Federation, Singapore, South Africa, Spain, Sweden, Switzerland, Turkey, United Kingdom and the United States are members of the FATF.

Non-Cooperative Countries and Territories (NCCT) Exercise

In 2000, the FATF published its first list of jurisdictions deemed to be non-cooperative in the global fight against money laundering (NCCT). Inclusion on the list was determined by an assessment of the jurisdiction against 25 distinct criteria covering the following four broad areas:

- Loopholes in financial regulations;
- Obstacles raised by other regulatory requirements;
- Obstacles to international cooperation; and,
- Inadequate resources for preventing and detecting money laundering activities.

In deciding whether a jurisdiction should be removed from the NCCT list, the FATF membership must be satisfied that a jurisdiction has addressed the previously identified deficiencies. The FATF relies on its collective judgment and on-site visits, and attaches particular importance to reforms in the areas of criminal law, financial supervision, customer identification, suspicious activity reporting, and international co-operation. Legislation and regulations must have been enacted and have come into effect before removal from the list may be considered. Additionally, the FATF seeks to ensure that the jurisdiction is implementing needed reforms. Thus, information related to institutional infrastructure, the filing and utilization of suspicious transaction reports, examinations of financial institutions, and the conduct of money laundering investigations, is considered.

During 2004, the FATF removed Egypt, Guatemala and Ukraine from its list of non-cooperative jurisdictions. At the close of 2004, six jurisdictions remained on the FATF's NCCT list: Burma, Cook Islands, Indonesia, Nauru, Nigeria, and Philippines. (Cook Islands, Indonesia, and the Philippines were removed in February 2005.)

Revision of the FATF Forty Recommendations on Money Laundering

The FATF Forty Recommendations on Money Laundering constitute the generally accepted international anti-money laundering standard and cover such relevant areas as regulatory, supervisory and criminal law, as well as international cooperation. Money laundering methods and techniques change as new measures to combat money laundering are implemented and new technologies are developed. Therefore, in 2001 and again in 2003, the FATF embarked on a review of the FATF Forty

Recommendations to ensure that they were current. The most recent effort was concluded in June 2003, when the FATF released its latest revised Forty Recommendations.

Combating the Financing of Terrorism

Shortly after September 11, 2001, the FATF mandate was expanded beyond money laundering to support the worldwide effort to combat terrorist financing. During an extraordinary plenary meeting in Washington, D.C. in October 2001, the FATF adopted eight Special Recommendations on Terrorist Financing. These Special Recommendations now represent the international standard in this area.

The FATF membership completed self-assessments against the Special Recommendations, and the FATF called upon all countries and jurisdictions to take part in a similar exercise. During 2004, recognizing the growing importance of the use of bulk cash smuggling to move terrorist funds, the FATF added Special Recommendation (SR) IX, Cash Couriers, to address the cross-border transportation of currency and bearer negotiable instruments. The FATF also provided additional interpretation and guidance with respect to its recommendations on terrorist financing. Included in this effort was the issuance of interpretive notes on cash couriers and on countries' obligations to criminalize terrorist financing (SRs II and IX).

The FATF continues to work with jurisdictions that lack appropriate measures to combat terrorist financing. At the October 2003 Plenary, the FATF launched an assessment initiative in collaboration with the G-8's Counter Terrorism Action Group (CTAG). At the request of CTAG, the FATF began assessing the counterterrorist financing technical assistance needs of several jurisdictions. These assessments and follow up assistance by CTAG donor countries will assist countries in strengthening their counterterrorist financing regimes and in meeting the standards set by the FATF Special Recommendations as well as the relevant UN Security Council resolutions.

The FATF and the International Financial Institutions

Money laundering and the financing of terrorism are worldwide concerns that undermine the integrity of domestic and global financial systems, increase risks and may impact national security. Since September 11, 2001, the international community has adopted a broad and comprehensive agenda to address these threats. As an important part of that effort, the International Financial Institutions (IFIs), notably the World Bank and the International Monetary Fund (IMF), agreed to take on an enhanced role in the global fight against money laundering and the financing of terrorism.

A significant part of this enhanced role involves integrating anti-money laundering and counterterrorist financing (AML/CTF) considerations into the IFIs' financial sector assessment, surveillance and diagnostic activities. The IMF and World Bank are now including such assessments in the course of their Financial Sector Assessment Program (FSAP) reviews and in other aspects of their engagement with members. The IMF and World Bank collaborated closely with the FATF, other international standard setters (the Basel Committee of Banking Supervisors, the International Association of Insurance Supervisors, the International Organization of Securities Commissions) and the Egmont Group of Financial Intelligence Units to develop a comprehensive and unified methodology for measuring countries' implementation of AML/CTF principles, based on the FATF Forty Recommendations on Money Laundering and the FATF Special Recommendations on Terrorist Financing.

In 2004, the FATF, in cooperation with the IFIs, completed revising the comprehensive assessment methodology. The revised methodology was adopted by the FATF membership, and the IMF and World Bank Executive Boards agreed to use it to assess member compliance with AML/CTF principles.

The FATF 2004 Typologies Exercise

The FATF conducted its annual typologies exercise (December 6-8, 2004), in Moscow, Russia to examine current and emerging methods, trends, and patterns in money laundering and terrorist financing, and to consider effective countermeasures. For the first time, the FATF invited a FATF style regional body, MONEYVAL, to co-chair the typologies exercise. The 2004 typologies exercise focused upon money laundering vulnerabilities in the insurance sector, human trafficking, and alternative remittance systems, and their relationships to terrorist financing.

FATF-Style Regional Bodies (FSRBs)

The FATF-style regional bodies (FSRBs), which are all observers of the FATF, have similar form and functions to those of the FATF, and some FATF members are also members of these bodies. The FSRBs are regional groups that interpret and implement the international standards developed by the FATF. The groups use peer pressure and mutual evaluations of member jurisdictions to encourage their laws' and practices' consistency with the FATF standards and recommendations. The FSRBs monitor those whose level of compliance is determined to be less than acceptable, and coordinate and/or provide technical assistance to those and other members. In 2004, two new groups were established—the Eurasian Group on Combating Money Laundering and Financing of Terrorism and the Middle Eastern Northern Africa Financial Action Task Force. The formation of these new groups leaves the Central Africa region as the only geographic region lacking a FSRB.

Asia/Pacific Group on Money Laundering

In 2004, the Asia/Pacific Group on Money Laundering (APG) welcomed two new members—Cambodia and Mongolia—and is now comprised of 28 nations from South Asia, Southeast Asia, East Asia and the South Pacific. They include Australia, Bangladesh, Brunei Darussalam, Cambodia, Chinese Taipei, Cook Islands, Fiji Islands, Hong Kong China, India, Indonesia, Japan, Korea (Republic of), Macau China, Malaysia, Marshall Islands, Mongolia, Nepal, New Zealand, Niue, Pakistan, Palau, Philippines, Samoa, Singapore, Sri Lanka, Thailand, United States and Vanuatu. There are also 11 observer jurisdictions and 16 observer international and regional organizations in the APG.

The APG's mission is to contribute to the global fight against money laundering, organized crime and terrorist financing in the Asia/Pacific region by enhancing anti-money laundering and counterterrorist financing efforts.

Caribbean Financial Action Task Force

The Caribbean Financial Action Task Force (CFATF) continues to advance its anti-money laundering initiatives within the Caribbean basin. The CFATF's 30 members include Anguilla, Antigua and Barbuda, Aruba, Commonwealth of the Bahamas, Barbados, Belize, Bermuda, British Virgin Islands, Cayman Islands, Costa Rica, Dominica, Dominican Republic, El Salvador, Grenada, Guatemala, Guyana, Haiti, Honduras, Jamaica, Montserrat, Netherlands Antilles, Nicaragua, Panama, St. Kitts and Nevis, St. Lucia, St. Vincent and the Grenadines, Suriname, Trinidad and Tobago, Turks and Caicos Islands and Venezuela. Additionally, there are seven Cooperating and Supporting Nations (COSUNs) and 14 observer organizations.

Members of the CFATF subscribe to a Memorandum of Understanding (MOU) that delineates the CFATF's mission, objectives, and membership requirements. All members are required to make a political commitment to adhere to and implement the FATF Forty Recommendations on Money Laundering and the FATF Special Recommendations on Terrorist Financing, and to undergo peer

review in the form of mutual evaluations to assess their level of implementation of the recommendations. Members are also required to participate in the activities of the body.

Council of Europe MONEYVAL

MONEYVAL generally includes within its membership those Council of Europe member states that are not members of the FATF. MONEYVAL has 27 members: Albania, Andorra, Armenia, Azerbaijan, Bosnia and Herzegovina, Bulgaria, Croatia, Cyprus, Czech Republic, Estonia, Georgia, Hungary, Latvia, Liechtenstein, Lithuania, Macedonia, Malta, Moldova, Monaco, Poland, Romania, the Russian Federation, San Marino, Serbia and Montenegro, Slovakia, Slovenia and Ukraine. The terms of reference for the MONEYVAL Committee of the Council of Europe were amended in 2003 to permit the Russian Federation to continue its membership even after its accession to the FATF. MONEYVAL aims to encourage legal, financial and punitive measures among its members that are in line with international standards. To accomplish this, it relies on a system of mutual evaluations and peer pressure. MONEYVAL's mandate was most recently extended through the end of 2007.

Like the FATF, MONEYVAL has taken on additional responsibilities in the area of counterterrorist financing. In 2002, the Council's European Committee on Crime Problems revised MONEYVAL's terms of reference to specifically include the issue of financing terrorism. The current text recognizes the FATF Special Recommendations on Terrorist Financing as international standards and authorizes the evaluation of the performance of MONEYVAL member states in complying with these standards. The Council's Multidisciplinary Group on International Action Against Terrorism has pointed to MONEYVAL's evaluation work as a priority for Council of Europe action. The Council of Europe's Parliamentary Assembly, in its Recommendation 1584, has similarly recognized the importance of MONEYVAL's monitoring and evaluation of all aspects connected with the financing of terrorism.

Eastern and Southern African Anti-Money Laundering Group

The Eastern and Southern African Anti-Money Laundering Group (ESAAMLG) was launched at a meeting of ministers and high-level representatives in Arusha, Tanzania, in August 1999 and held its first meeting in April 2000. The group maintains its Secretariat in Dar es Salaam, Tanzania. Its 14 member countries are Botswana, Kenya, Lesotho, Malawi, Mauritius, Mozambique, Namibia, Seychelles, South Africa, Swaziland, Tanzania, Uganda, Zambia and Zimbabwe. The United States, United Kingdom, Commonwealth Secretariat, United Nations and World Bank serve as cooperating nations and organizations.

ESAAMLG coordinates with other international organizations that study emerging regional typologies, develop institutional and human resource capacities, and coordinate technical assistance to accomplish its mission to implement the FATF Forty Recommendations to combat money laundering in the region.

Eurasian Group on Combating Money Laundering and Financing of Terrorism

The Memorandum of Understanding establishing the Eurasian Group on Combating Money Laundering and Financing of Terrorism (EAG) was signed on October 6, 2004 by six member states: Belarus, China, Kazakhstan, Kyrgyz Republic, Russia and Tajikistan. Seven jurisdictions and nine international organizations were admitted as observers.

The EAG held its inaugural plenary on December 8, 2004 in Moscow, Russia. The Secretariat was officially formed, an Executive Secretary named and a 2005 work plan adopted. The primary goals of the EAG are to provide assistance to members in implementation of the FATF Recommendations; to analyze regional trends in money laundering and terrorist financing; and, to promote cooperation

within the region and coordinate technical assistance and programs with international organizations, working groups and interested jurisdictions.

Financial Action Task Force Against Money Laundering in South America

The Memorandum of Understanding establishing the Financial Action Task Force Against Money Laundering in South America, (Grupo de Acción Financiera de Sudamerica Contra el Lavado de Activos or GAFISUD) was signed on December 8, 2000 by nine member states: Argentina, Bolivia, Brazil, Colombia, Chile, Ecuador, Peru, Paraguay and Uruguay. Mexico, Portugal, Spain, France, and the United States participate as cooperating and supporting countries (PACOs). The Inter-American Development Bank, the International Monetary Fund, the United Nations Office for Drug Control and Crime Prevention, the Egmont Group, and the World Bank are observers to GAFISUD. In addition, the Organization of American States' Inter-American Drug Abuse Control Commission (OAS/CICAD) is a special advisory member. GAFISUD is committed to the adoption and implementation of the FATF Forty Recommendations and the FATF Nine Special Recommendations on Terrorist Financing. GAFISUD's mission also includes member self-assessment and mutual evaluation programs. A permanent Secretariat has been established in Buenos Aires, Argentina, and Uruguay has offered a training center as a permanent training venue for GAFISUD. GAFISUD has adopted an Action Plan to Counter Terrorism. GAFISUD has also endorsed the revised AML/CTF Methodology for assessing compliance with the FATF Recommendations and is using the Methodology in conducting its second round of mutual evaluations, which commenced in September 2004.

Middle East and North African Financial Action Task Force

The Middle East North Africa Financial Action Task Force (MENAFATF) was launched at a meeting of ministers and high-level representatives in Bahrain, on November 29, 2004 and held its inaugural plenary the following day. The 14 founding members of the group are Algeria, Bahrain, Egypt, Jordan, Kuwait, Lebanon, Morocco, Oman, Qatar, Saudi Arabia, Syria, Tunisia, the United Arab Emirates and Yemen. An initial work-plan has been drafted for the group.

Inter-Governmental Action Group Against Money Laundering

The Heads of State and Government of the Economic Community of West African States (ECOWAS) established the Inter-Governmental Action Group Against Money Laundering (GIABA) in December 1999. GIABA's first meeting was held in Dakar, Senegal, in November 2000. Members include: Benin, Burkina Faso, Cape Verde Islands, the Gambia, Ghana, Guinea, Guinea-Bissau, Ivory Coast, Liberia, Mauritania, Mali, Niger, Nigeria, Senegal and Togo. A Senegalese magistrate serves as the acting head of GIABA.

At the first meeting, GIABA endorsed the FATF Forty Recommendations on Money Laundering, recognized the FATF as an observer, and provided for self-assessment and mutual evaluation procedures to be carried out by GIABA. While the text prepared by the experts provided for a strong involvement of ECOWAS in the activities of GIABA, the Ministers agreed to give more autonomy to the new body. GIABA is a nascent organization that has not met since 2002, although in 2004 efforts were being made to revive the group.

Other Multi-Lateral Organizations & Programs

Caribbean Anti-Money Laundering Programme

The U.S. Government, in partnership with the European Union and the UK Government, launched the Caribbean Anti-Money Laundering Programme (CALP) on March 1, 1999. The Programme was designed as a four-year project to assist the 21 Caribbean Basin member countries of CARIFORUM (the representative organization for Caribbean countries) to develop their anti-money laundering procedures. In actuality, the CALP ran for five years, terminating in December 2004.

The two primary objectives of the CALP were:

- To reduce the incidence of the laundering of the proceeds of all serious crime by facilitating the prevention, investigation, and prosecution of money laundering and the seizure and forfeiture of property connected to such laundering activity.
- To develop a sustainable institutional capacity in the Caribbean region to address the issues related to anti-money laundering efforts at a local, regional and international level, by strengthening existing institutional capacity at the regional level, and developing new, or enhancing existing, institutional capacity at the local level.

The Programme consisted of three separate, yet interlinked, sub-programs:

Legal/Judicial

After conducting worldwide research of anti-money laundering laws, regulations and working practices, the legal/judicial advisor made appropriate recommendations to the respective member countries to ensure they have the necessary legal structures in place to combat money laundering. Countries with very limited facilities were also provided legislative drafting assistance. Training was given to prosecutors, magistrates and judges. Awareness training also was given to other organizations within the financial and law enforcement sectors. In 2002, the CALP legal advisor developed a Model Terrorist Financing Law for use by the common law countries covered by the CALP. This model legislation is being considered for adoption by other Commonwealth countries, and particularly by member countries of the Eastern and Southern African Anti-Money Laundering Group.

Financial Sector

Experience has shown that much of the intelligence and evidence related to money laundering comes from various financial organizations, in particular, banks, casinos and insurance companies. This sub-program was developed to train staff at all levels within such organizations to identify suspicious financial activity and unusual business transactions. Staff members were made aware of the legal requirements and protection in their respective countries. Particular targets were compliance officers within the financial industry who are normally responsible for some staff training. Most such individuals have anti-money laundering issues as part of their responsibilities, so a “train the trainer” theme was encouraged in an effort to ensure that this aspect of training is sustainable.

Law Enforcement

The Law Enforcement expert was principally concerned with the development of training to enable Caribbean law enforcement officers to effectively investigate offenses brought to their attention. The

training, from basic to advanced level, was developed in association with Caribbean law enforcement training establishments. The objective was for such establishments to continue training once the CALP ended. A further objective of this sub-program was to encourage all member countries to form their own Financial Intelligence Units (FIUs), with staff trained to liaise with the financial sector, analyze reported suspicious financial activity and prepare intelligence reports to assist the law enforcement officers to investigate suspected offenses.

All experts employed within the overall program were always available to advise investigators, prosecutors and judges on any aspect of anti-money laundering issues.

When the Programme commenced, very few Caribbean countries had any form of anti-money laundering legislation. None had used laws to pursue anti-money laundering cases to completion. As a consequence, most investigators, prosecutors and judges had no experience with such cases.

The CALP's major thrust was to assist countries of the Eastern Caribbean to improve their anti-money laundering systems and working practices so as to allow them to be removed from the FATF Non Cooperating Countries and Territories (NCCT) list. As of June 2003, this objective was accomplished.

Throughout its life, the CALP undertook a variety of regulatory, law enforcement and legal/judicial training initiatives in accordance with its primary objective of helping to ensure program sustainability in the region. Jamaica has accepted full responsibility for basic training for financial investigators at its Regional Drug Law Enforcement Training Center (REDTRAC), and the Regional Police Training School in Barbados has taken over the Advanced Investigators Training courses. Moreover, "train the trainer" initiatives in the financial sector have been amplified with the updating and distribution of the CALP's five training videos/CDs so that relevant financial organizations in the region may undertake their own training in the future.

In the legal/judicial sector, the University of the West Indies and the University of Florida have developed a legal faculty in anti-money laundering laws and practices. Via Internet on-line course work, aimed at lawyers, police officers and bankers, successful students will be awarded a diploma, which they may then apply to further study for a university degree.

The holistic approach undertaken by the CALP proved to be very successful. The combination of training and mentoring, using resident advisors, allowed for consistent assistance to the regional jurisdictions on a timely basis and helped to effect the sustainability of the individual regimes. The design of the CALP will serve as a model for future regional programs.

The Organization of American States Inter-American Drug Abuse Control Commission (OAS/CICAD) Group of Experts to Control Money Laundering

The Organization of American States Inter-American Drug Abuse Control Commission (OAS/CICAD) is responsible for combating illicit drugs and related crimes, including money laundering. In 2004, the commission carried out a variety of anti-money laundering and counterterrorist financing initiatives. These included amending model regulations for the Hemisphere to include techniques to combat terrorist financing, developing a variety of associated training initiatives and participating in a number of anti-money laundering/counterterrorism meetings. This work in the area of money laundering and financial crimes also figures prominently in CICAD's Multilateral Evaluation Mechanism (MEM), which involves the participation of all 34 member states, and in 2004, included the updating and revision of some 80 questionnaire indicators through which the countries mutually evaluate regional efforts and projects.

CICAD's Group of Experts on Money Laundering met in July and October 2004 and developed modifications to the model money laundering legislation, which were approved by the 36th session of the CICAD Plenary. The new legislative guidelines include language on the autonomy of the offense, special investigative techniques and measures for effective asset forfeiture. At the two meetings, the money laundering group also reviewed a variety of case studies from the Hemisphere involving, for example, the use of remittance services and exchange houses by money launderers and international cooperation in transnational investigations and forfeiture matters.

In other activity, CICAD worked with the International Development Bank (IDB) and with the Government of France to carry out training for a variety of countries on combating money laundering, conducting effective financial investigations, and recovering financial and other assets diverted through corrupt practices. For example, training seminars for prosecutors and judges focused on new trends in prosecution, in particular, the autonomy of the offense, evidence and judicial cooperation, were held in Colombia, Chile and Uruguay in 2004, and are still ongoing in Brazil. Similarly, the first stage course work on financial investigations was completed. It focused on investigating the assets of criminal organizations and was provided to law enforcement officials from Argentina, Bolivia, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay and Venezuela. The second stage is still ongoing. In Uruguay, CICAD, IDB and the South American Financial Action Task Force (GAFISUD) co-sponsored a seminar for Attorneys, Notaries Public and Accountants focused on raising awareness among professionals who have an obligation to prevent and report money laundering.

Based upon an agreement for nearly \$2 million concluded in 2002 with the Inter-American Development Bank (IADB), CICAD is currently conducting a two-year project to strengthen Financial Intelligence Units (FIUs) in Argentina, Bolivia, Brazil, Chile, Ecuador, Peru, Uruguay and Venezuela. In 2004, activities included evaluation of strategic plans for the various FIUs, development of training modules based upon local circumstances, and execution of specific technical assistance in Bolivia, Argentina, Peru and Venezuela. Upon its request, Colombia is being included in the project.

CICAD participated in a variety of meetings and conferences in 2004, focused on money laundering and financial crimes. These included conferences sponsored by the Colombian FIU and the UN Global Programme Against Money Laundering; two CFATF meetings in Trinidad and Tobago and Panama; the Andean Seminar on Money Laundering and Drug Trafficking in Bogotá, Colombia; and GAFISUD meetings in Buenos Aires and Lima. At the invitation of the UN Global Programme Against Money Laundering, the head of CICAD's Anti-Money Laundering Unit participated in the drafting of the UN, World Bank and IMF Model Law at sessions in Vienna, Brussels and Washington.

In other activity in 2004, CICAD advised Paraguay on the technical design of its FIU and provided equipment to the agency, and published an international assessment of the judiciary's participation in enforcing anti-money laundering laws.

The Egmont Group of Financial Intelligence Units

An important component of the international community's approach to combating money laundering and terrorist financing is the global network of financial intelligence units (FIUs). An FIU is a centralized unit formed by a nation or jurisdiction to detect criminal activity, and ensure adherence to laws against financial crimes, including terrorist financing and money laundering. Since 1995, FIUs have been working together in an informal organization known as the Egmont Group (named for the location of the first meeting at the Egmont-Arenberg Palace in Brussels). Since the first meeting, the number of established FIUs has grown dramatically. At the first Egmont Group meeting in 1995, 20 units met in Brussels; today there are 94 recognized members of the Egmont Group. The following FIUs joined the Egmont Group in 2004: Belize, Cook Islands, Egypt, Georgia, Gibraltar, Grenada, Indonesia, Macedonia, St. Kitts & Nevis, and Ukraine. The Egmont Group is an international network designed to improve interaction among FIUs in the areas of communications, information sharing, and

training coordination. The goal of the Egmont Group is to provide a forum for FIUs around the world to improve support to their respective governments in the fight against money laundering, terrorist financing and other financial crimes. This support includes expanding and systematizing the exchange of financial intelligence information, improving expertise and capabilities of personnel employed by such organizations, and fostering better and more secure communication among FIUs through the application of technology. The Egmont Group's secure Internet system permits members to communicate with one another via secure e-mail, requesting and sharing case information as well as posting and assessing information regarding trends, analytical tools and technological developments. FinCEN, on behalf of the Egmont Group, maintains the Egmont Secure Web (ESW). Currently, there are 87 FIUs connected to the ESW.

In response to the rapid growth of the Egmont Group, in 2002 at the Plenary in Monte Carlo, the group established the "Egmont Committee." The Committee addresses the administrative and operational issues facing Egmont and is comprised of 13 members: six permanent members and seven regional representatives based on continental groupings (i.e., Asia, Europe, the Americas, Africa and Oceania). The Egmont Committee usually meets three times a year; however, additional meetings may be organized if needed.

Within the Egmont Group, there are five working groups (Legal, Operational, Training/Communications, Information Technology (IT), and Outreach). The Legal Working Group reviews the candidacy of potential members and handles all legal aspects and matters of principle within the Egmont Group. The Training/Communications Working Group looks at ways to communicate more effectively, identifies training opportunities for FIU personnel and examines new software applications that might facilitate analytical work. The Outreach Working Group concentrates on expanding and developing the FIU global network by identifying countries that have established or are establishing FIUs. Outreach is responsible for making initial contact with potential candidate FIUs, and conducts assessments to determine if an FIU is ready for Egmont membership.

The Operational Working Group is designed to foster increased cooperation among the operational divisions of the member FIUs and coordinate the development of studies and typologies-using data collected by the FIUs-on a variety of subjects useful to law enforcement. These include such topics as trafficking in women, money laundering using precious metals, and detecting financial activity generated from efforts to procure, transport, or produce weapons of mass destruction (WMD). The fifth and newest working group, the IT Working Group, was established in 2004 at the Egmont Group Plenary in Guernsey. The IT Working Group is designed to promote collaboration and information sharing on IT matters among the Egmont membership. Egmont's leadership is confident this new working group will increase the efficiency in the allocation of resources and technical assistance regarding IT systems.

In 2004, the Egmont Group continued its efforts to educate the public about its important programs and its role in the global fight against financial crimes via the Egmont web site (www.egmontgroup.org), which has been on-line since September 2003. Over the past year, a significant amount of general public documents and information about upcoming meetings of the Egmont Group has been placed on the public site and the site continues to serve as an effective forum for public dialogue on the functions and operations of FIUs.

As of December 2004, the members of the Egmont Group are Albania, Andorra, Anguilla, Antigua and Barbuda, Argentina, Aruba, Australia, Austria, Bahamas, Bahrain, Barbados, Belgium, Belize, Bermuda, Bolivia, Brazil, British Virgin Islands, Bulgaria, Canada, Cayman Islands, Chile, Colombia, Cook Islands, Costa Rica, Croatia, Cyprus, Czech Republic, Denmark, Dominica, Dominican Republic, Egypt, El Salvador, Estonia, Finland, France, Georgia, Germany, Gibraltar, Greece, Grenada, Guatemala, Guernsey, Hong Kong, Hungary, Iceland, Indonesia, Ireland, Isle of Man, Israel, Italy, Japan, Jersey, Latvia, Lebanon, Liechtenstein, Lithuania, Luxembourg, Macedonia, Malaysia,

Malta, Marshall Islands, Mauritius, Mexico, Monaco, Netherlands, Netherlands Antilles, New Zealand, Norway, Panama, Paraguay, Poland, Portugal, Romania, Russia, Serbia, Singapore, Slovakia, Slovenia, South Africa, South Korea, Spain, St. Kitts & Nevis, St. Vincent & the Grenadines, Sweden, Switzerland, Taiwan, Thailand, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Vanuatu and Venezuela.

Pacific Islands Forum

The Pacific Islands Forum (PIF) was formed in 1971 and includes all the independent and self-governing Pacific Island countries, Australia and New Zealand. The 16 members are: Australia, Cook Islands, Federated States of Micronesia, Fiji, Kiribati, Nauru, New Zealand, Niue, Palau, Papua New Guinea, Republic of the Marshall Islands, Samoa, Solomon Islands, Tonga, Tuvalu and Vanuatu. The heads of member governments hold annual meetings, followed by dialogue at the ministerial level with partners Canada, China, European Union, France, Indonesia, Japan, Korea, Malaysia, Philippines, United Kingdom and United States.

The PIF's mission is to work in support of PIF member governments to enhance the economic and social well being of the people of the South Pacific by fostering cooperation between governments and international agencies, and by representing the interests of PIF members. Senior government officials from these jurisdictions meet periodically to discuss mutual concerns and regional issues. Meetings have focused heavily on regional trade and economic development issues and, in recent years, the environment. Acting under the Honiara Declaration, PIF members have developed model legislation on extradition, mutual assistance in criminal matters and forfeiture of the proceeds of crime. In 1994, PIF achieved observer status at the UN. It also is an observer at APEC and APG meetings.

Because many of the PIF members are hampered by a lack of resources, the UN Global Programme against Money Laundering, the United States, Australia, New Zealand and France are providing assistance to the PIF members through the PIF Secretariat. In 2003, border control training sessions were held for the member jurisdictions. In addition, a program was initiated to help maintain stability in the region by promoting regional cooperation through the development of laws and procedures to prevent terrorism and transnational crime, and to comply with the provisions of UNSCR 1373 and the FATF Nine Special Recommendations on Terrorist Financing. A multi-lateral legal experts working group was established to achieve these goals. The group discussed a regional framework, including model legislation, to address terrorism and organized crime. The draft model law was endorsed at the Forum Leaders meeting in August 2003, and member jurisdictions were urged to enact the legislation as soon as it was finalized. Australia, New Zealand and Samoa criminalized terrorist financing prior to 2004. In 2004, the Cook Islands and Nauru did so.

United Nations Global Programme Against Money Laundering

The United Nations is one of the most experienced global providers of anti-money laundering (AML) training and technical assistance, and since 9-11, terrorist financing. The United Nations Global Programme against Money Laundering (GPML), part of the United Nations Office on Drugs and Crime (UNODC), was established in 1997 to assist Member States to comply with the UN Conventions and other instruments that deal with money laundering and terrorist financing. These now include the United Nations Convention against Trafficking in Narcotics and Psychotropic Substances (the Vienna Convention), the United Nations Convention for the Suppression of the Financing of Terrorism, the United Nations Convention against Transnational Organized Crime (the Palermo Convention), and the United Nations Convention against Corruption. The GPML is the focal point for AML within the UN system and provides technical assistance and training in the development of

related legislation, infrastructure and skills, directly assisting Member States in the detection, seizure and confiscation of illicit proceeds and the funding of terrorism.

Since 2001, the GPML has broadened this work to help Member States counter the financing of terrorism. The GPML now incorporates a focus on counterterrorist financing (CTF) in all its technical assistance work. In 2004, the GPML completed model CTF legislative provisions for common law systems, and continued to work closely with the U.S. Department of Justice and the Organization for Security and Cooperation in Europe (OSCE) to deliver CTF training, particularly in the Central Asia region and Africa.

Highlights of GPML's work in the first half of 2004 included the extensive development of its global computer-based training (CBT) initiative. The initiative, based in Bangkok, provided 12 hours of interactive AML/CTF training for global delivery in 2004. Delivery in the Pacific Region includes training to several thousand officials, including law enforcement, legal, and financial personnel, in seven jurisdictions, including Fiji, the Cook Islands and Vanuatu. In the first half of 2004, the GPML produced a French-language version for use in French-speaking Africa, and elsewhere. The pilot was completed in July 2004 in Dakar, Senegal.

In 2004, GPML assigned a staff member to the UNODC Regional Centre, East Asia and the Pacific (RCEAP) in Bangkok to establish and implement the Programme's CBT strategy. During the year, the staff member piloted and implemented CBT for the GPML in multiple locations throughout Africa, Asia, and the Pacific, and assisted in the development of new products.

In October 2004, the GPML produced AML/CFT versions of the CBT in both Spanish and Russian. The GPML entered into a partnership with OAS-CICAD for joint delivery of the Spanish version in Latin America. The training program has flexibility in terms of language, level of expertise, target audience and theme. Computer-based training is particularly applicable in countries and regions with limited resources and law enforcement skills as it can be used for a sustained period of time. As an approach, CBT lends itself well to the GPML's global technical assistance operations.

The GPML provided technical assistance and training to more than 50 countries and jurisdictions throughout the world in 2004. The UN mentor based in the Pacific region, a joint initiative with the Commonwealth Secretariat, the Pacific Islands Forum Secretariat (PIFS) and the United States, gave technical assistance directed towards improving financial investigations to a number of offshore financial center jurisdictions at high risk for abuse by money launderers, including the Cook Islands, Marshall Islands, Fiji, and Vanuatu. He also organized a successful series of workshops on financial investigations, in partnership with PIFS. In August, Fiji made the largest ever drug seizure in the Southern Hemisphere, with the GPML mentor's technical assistance in financial investigations playing a key role in the operation.

The UN mentor based in Tanzania, with the Secretariat of the Eastern and Southern African Anti-Money Laundering Group (ESAAMLG), provided training to 14 countries and assisted the Secretariat and Member States in preparing for FATF-style mutual evaluations. The mentor also participates with U.S. interagency training teams in providing assistance to the President's East Africa Counter-Terrorism Initiative. In collaboration with the World Bank, the GPML also placed a regional mentor for Central Asia in Almaty, Kazakhstan. At the national level, a GPML mentor began work in the financial intelligence unit of the Government of the Philippines. Mentors and experts also gave support to the development of the legal, administrative, analytical and international co-operation capacity of other national governments. In addition, the GPML assisted in legislative drafting for many countries, including Kyrgyz Republic, Kazakhstan, Azerbaijan and South Africa, and conducted a two-day workshop on AML/CTF compliance for Israeli banking, insurance and securities supervisors and regulators.

The GPML's Mentor Programme is one of the most successful and well-known activities of international AML/CTF technical assistance and training, and is increasingly serving as a model for other organizations' initiatives. It is one of the core activities of the GPML technical assistance program. In 2004, the GPML consolidated the program, providing on-the-job training that adapts international standards to specific local/national situations, rather than traditional, generic training seminars. The concept originated in response to repeated requests from Member States for longer-term international assistance in this technically demanding and rapidly evolving field. The GPML provides experienced prosecutors and law enforcement personnel who work side-by-side with their counterparts in a target country for several months at a time on daily operational matters to help develop capacity. Some advise governments on legislation and policy, while others focus on operating procedures.

The GPML's Mentor Programme has key advantages over more traditional forms of technical assistance. First, the mentor offers sustained skills and knowledge transfer. Second, mentoring constitutes a unique form of flexible, ongoing needs assessment, where the mentor can pinpoint specific needs over a period of months, and adjust his/her work plan to target assistance that responds to those needs. Third, the Member State has access to an "on-call" resource to provide advice on real cases and problems as they arise. Fourth, a mentor can facilitate access to foreign counterparts for international cooperation and mutual legal assistance at the operational level by using his/her contacts to act as a bridge to the international community.

The GPML was among the first technical assistance providers to recognize the importance of countries' creating a financial intelligence capacity, and the program's mentors worked extensively with the development and the implementation phases of Financial Intelligence Units (FIUs) in several countries in the Eastern Caribbean and the Pacific regions. Both the Mentor Programme and the CBT program make a priority of technical assistance and training to FIUs, among other institutions. In 2004, the GPML also continued its support of the Egmont Group of FIUs, co-organizing the Egmont Group/GPML Training Workshop for FIU personnel and hosting, with the Egmont Group, a workshop on FIU strategic analysis.

In response to countries' concerns about the difficulties of implementing AML/CTF policies in cash-based economies, and the prevalence in some regions of cash couriers, the GPML organized an informal expert working group entitled: Back to Basics: Targeting Proceeds of Crime in Cash Economies. The group met for the first time in Vienna to work out approaches to identifying, seizing and confiscating criminal proceeds in countries where use of the formal financial system is minimal. The outcome of the deliberations will form the basis of technical assistance planning and delivery options for such countries.

The GPML runs the Anti-Money Laundering International Database (AMLID) on the International Money Laundering Information Network (IMoLIN), an online, password-restricted analytical database of national AML legislation that is available only to public officials. The GPML also maintains an online AML/CTF legal library. IMoLIN (www.imolin.org) is a practical tool in daily use by government officials, law enforcement and lawyers. The Programme runs this database on behalf of the UN and eight major international partners in the field of anti-money laundering: the Asia/Pacific Group on Money Laundering (APG), the Caribbean Financial Action Task Force (CFATF), the Commonwealth Secretariat, the Council of Europe, the Financial Action Task Force (FATF), Interpol, the Organization of American States (OAS) and the World Customs Organization. The GPML is constantly updating the relevant information on national and international measures, conventions and legislation.

Major Money Laundering Countries

Every year, U.S. officials from agencies with anti-money laundering responsibilities meet to assess the money laundering situations in 200 jurisdictions. The review includes an assessment of the significance of financial transactions in the country's financial institutions that involve proceeds of serious crime, steps taken or not taken to address financial crime and money laundering, each jurisdiction's vulnerability to money laundering, the conformance of its laws and policies to international standards, the effectiveness with which the government has acted, and the government's political will to take needed actions.

The 2004 INCSR assigned priorities to jurisdictions using a classification system consisting of three differential categories titled Jurisdictions of Primary Concern, Jurisdictions of Concern, and Other Jurisdictions Monitored.

The "Jurisdictions of Primary Concern" are those jurisdictions that are identified pursuant to the INCSR reporting requirements as "major money laundering countries." A major money laundering country is defined by statute as one "whose financial institutions engage in currency transactions involving significant amounts of proceeds from international narcotics-trafficking." However, the complex nature of money laundering transactions today makes it difficult in many cases to distinguish the proceeds of narcotics trafficking from the proceeds of other serious crime. Moreover, financial institutions engaging in transactions involving significant amounts of proceeds of other serious crime are vulnerable to narcotics-related money laundering. The category "Jurisdiction of Primary Concern" recognizes this relationship by including all countries and other jurisdictions whose financial institutions engage in transactions involving significant amounts of proceeds from all serious crime. Thus, the focus of analysis in considering whether a country or jurisdiction should be included in this category is on the significance of the amount of proceeds laundered, not of the anti-money laundering measures taken. This is a different approach taken than that of the FATF Non-Cooperative Countries and Territories (NCCT) exercise, which focuses on a jurisdiction's compliance with stated criteria regarding its legal and regulatory framework, international cooperation, and resource allocations.

All other countries and jurisdictions evaluated in the INCSR are separated into the two remaining groups, "Jurisdictions of Concern" and "Other Jurisdictions Monitored," on the basis of a number of factors that can include: (1) whether the country's financial institutions engage in transactions involving significant amounts of proceeds from serious crime; (2) the extent to which the jurisdiction is or remains vulnerable to money laundering, notwithstanding its money laundering countermeasures, if any (an illustrative list of factors that may indicate vulnerability is provided below) ; (3) the nature and extent of the money laundering situation in each jurisdiction (for example, whether it involves drugs or other contraband); (4) the ways in which the United States regards the situation as having international ramifications; (5) the situation's impact on U.S. interests; (6) whether the jurisdiction has taken appropriate legislative actions to address specific problems; (7) whether there is a lack of licensing and oversight of offshore financial centers and businesses; (8) whether the jurisdiction's laws are being effectively implemented; and (9) where U.S. interests are involved, the degree of cooperation between the foreign government and U.S. government agencies. Additionally, given concerns about the increasing interrelationship between inadequate money laundering legislation and terrorist financing, terrorist financing is an additional factor considered in making a determination as to whether a country should be considered an "Other Jurisdiction Monitored " or a "Jurisdiction of Concern". A government (e.g., the United States or the United Kingdom) can have comprehensive anti-money laundering laws on its books and conduct aggressive anti-money laundering enforcement efforts but still be classified a "Primary Concern" jurisdiction. In some cases, this classification may simply or largely be a function of the size of the jurisdiction's economy. In such jurisdictions quick, continuous and effective anti-money laundering efforts by the government are critical. While the actual money laundering problem in jurisdictions classified "Concern" is not as acute, they too must

undertake efforts to develop or enhance their anti-money laundering regimes. Finally, while jurisdictions in the “Other” category do not pose an immediate concern, it will nevertheless be important to monitor their money laundering situations because, under the right circumstances, virtually any jurisdiction of any size can develop into a significant money laundering center.

Vulnerability Factors

The current ability of money launderers to penetrate virtually any financial system makes every jurisdiction a potential money laundering center. There is no precise measure of vulnerability for any financial system, and not every vulnerable financial system will, in fact, be host to large volumes of laundered proceeds, but a checklist of what drug money managers reportedly look for provides a basic guide. The checklist includes:

- Failure to criminalize money laundering for all serious crimes or limiting the offense to narrow predicates.
- Rigid bank secrecy rules that obstruct law enforcement investigations or that prohibit or inhibit large value and/or suspicious or unusual transaction reporting by both banks and non-bank financial institutions.
- Lack of or inadequate “know your client” requirements to open accounts or conduct financial transactions, including the permitted use of anonymous, nominee, numbered or trustee accounts.
- No requirement to disclose the beneficial owner of an account or the true beneficiary of a transaction.
- Lack of effective monitoring of cross-border currency movements.
- No reporting requirements for large cash transactions.
- No requirement to maintain financial records over a specific period of time.
- No mandatory requirement to report suspicious transactions or a pattern of inconsistent reporting under a voluntary system; lack of uniform guidelines for identifying suspicious transactions.
- Use of bearer monetary instruments.
- Well-established non-bank financial systems, especially where regulation, supervision, and monitoring are absent or lax.
- Patterns of evasion of exchange controls by legitimate businesses.
- Ease of incorporation, in particular where ownership can be held through nominees or bearer shares, or where off-the-shelf corporations can be acquired.
- No central reporting unit for receiving, analyzing and disseminating to the competent authorities information on large value, suspicious or unusual financial transactions that might identify possible money laundering activity.
- Lack of or weak bank regulatory controls, or failure to adopt or adhere to Basel Committee’s “Core Principles for Effective Banking Supervision”, especially in jurisdictions where the monetary or bank supervisory authority is understaffed, under-skilled or uncommitted.

- Well-established offshore financial centers or tax-haven banking systems, especially jurisdictions where such banks and accounts can be readily established with minimal background investigations.
- Extensive foreign banking operations, especially where there is significant wire transfer activity or multiple branches of foreign banks, or limited audit authority over foreign-owned banks or institutions.
- Jurisdictions where charitable organizations or alternate remittance systems, because of their unregulated and unsupervised nature, are used as avenues for money laundering or terrorist financing.
- Limited asset seizure or confiscation authority.
- Limited narcotics, money laundering and financial crime enforcement and lack of trained investigators or regulators.
- Jurisdictions with free trade zones where there is little government presence or other supervisory authority.
- Patterns of official corruption or a laissez-faire attitude toward the business and banking communities.
- Jurisdictions where the U.S. dollar is readily accepted, especially jurisdictions where banks and other financial institutions allow dollar deposits.
- Well-established access to international bullion trading centers in New York, Istanbul, Zurich, Dubai and Mumbai.
- Jurisdictions where there is significant trade in or export of gold, diamonds and other gems.
- Jurisdictions with large parallel or black market economies.
- Limited or no ability to share financial information with foreign law enforcement authorities.

Changes in INCSR Priorities, 2004

Jurisdiction moving from the Primary Concern Column to the Concern Column: Nauru

Jurisdictions moving from the Concern Column to the Primary Concern Column: Belize and Cambodia

Jurisdictions moving from the Other Column to the Concern Column: Uzbekistan

The following countries were added to the Money Laundering & Financial Crimes report this year and are included in the “Other” Column: Cape Verde, Equatorial Guinea, Iraq, and Mauritania. Comoros was also added to the INCSR this year and is included in the “Concern” Column.

In the Country/Jurisdiction Table on the following page, “major money laundering countries” that are in the “jurisdictions of primary concern” column are identified for purposes of statutory INCSR reporting requirements. Identification as a “major money laundering country” is based on whether the country or jurisdiction’s financial institutions engage in transactions involving significant amounts of proceeds from serious crime. It is not based on an assessment of the country or jurisdiction’s legal framework to combat money laundering; its role in the terrorist financing problem; or the degree of its cooperation in the international fight against money laundering, including terrorist financing. These

factors, however, are included among the vulnerability factors when deciding whether to place a country in the “concern” or “other” column.

Country/Jurisdiction Table

Countries/Jurisdictions of Primary Concern		Countries/Jurisdictions of Concern		Other Countries/Jurisdictions Monitored	
Antigua and Barbuda	Singapore	Afghanistan	Qatar	Algeria	Lithuania
Australia	Spain	Albania	Romania	Andorra	Macedonia

Introduction to Comparative Table

The comparative table that follows the Glossary of Terms below identifies the broad range of actions, effective as of December 31, 2004 that jurisdictions have, or have not, taken to combat money laundering. This reference table provides a comparison of elements that define legislative activity and identify other characteristics that can have a relationship to money laundering vulnerability.

Glossary of Terms

1. “Criminalized Drug Money Laundering”: The jurisdiction has enacted laws criminalizing the offense of money laundering related to drug trafficking.
2. “Criminalized Beyond Drugs”: The jurisdiction has extended anti-money laundering statutes and regulations to include nondrug-related money laundering.
3. “Record Large Transactions”: By law or regulation, banks are required to maintain records of large transactions in currency or other monetary instruments.
4. “Maintain Records Over Time”: By law or regulation, banks are required to keep records, especially of large or unusual transactions, for a specified period of time, e.g., five years.
5. “Report Suspicious Transactions”: By law or regulation, banks are required to record and report suspicious or unusual transactions to designated authorities. On the Comparative Table the letter “M” signifies mandatory reporting; “P” signifies permissible reporting.
6. “Financial Intelligence Unit”: The jurisdiction has established an operative central, national agency responsible for receiving (and, as permitted, requesting), analyzing, and disseminating to the competent authorities disclosures of financial information concerning suspected proceeds of crime, or required by national legislation or regulation, in order to counter money laundering. These reflect those jurisdictions that are members of the Egmont Group.
7. “System for Identifying and Forfeiting Assets”: The jurisdiction has enacted laws authorizing the tracing, freezing, seizure and forfeiture of assets identified as relating to or generated by money laundering activities.
8. “Arrangements for Asset Sharing”: By law, regulation or bilateral agreement, the jurisdiction permits sharing of seized assets with third party jurisdictions which assisted in the conduct of the underlying investigation.
9. “Cooperates w/International Law Enforcement”: By law or regulation, banks are permitted/required to cooperate with authorized investigations involving or initiated by third party jurisdictions, including sharing of records or other financial data.
10. “International Transportation of Currency”: By law or regulation, the jurisdiction, in cooperation with banks, controls or monitors the flow of currency and monetary instruments crossing its borders. Of critical weight here are the presence or absence of wire transfer regulations and use of reports completed by each person transiting the jurisdiction and reports of monetary instrument transmitters.
11. “Mutual Legal Assistance”: By law or through treaty, the jurisdiction has agreed to provide and receive mutual legal assistance, including the sharing of records and data.
12. “Non-Bank Financial Institutions”: By law or regulation, the jurisdiction requires non-bank financial institutions to meet the same customer identification standards and adhere to the same reporting requirements that it imposes on banks.

13. “Know Your Customer”: By law, the jurisdiction requires financial institutions to identify and verify their customers identity using reliable independent source documents, identify beneficial ownership and control, and conduct ongoing due diligence and scrutiny.
14. “States Parties to 1988 UN Drug Convention”: As of December 31, 2001, a party to the 1988 United Nations Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances, or a territorial entity to which the application of the Convention has been extended by a party to the Convention.¹
15. “Criminalized the Financing of Terrorism.” The jurisdiction has criminalized the provision of material support to terrorists and/or terrorist organizations.
16. “States Party to the UN International Convention for the Suppression of the Financing of Terrorism.” As of December 31, 2003, a party to the International Convention for the Suppression of the Financing of Terrorism, or a territorial entity to which the application of the Convention has been extended by a party to the Convention.

¹ The United Kingdom extended its application of the 1988 Convention and the United Kingdom Terrorism Order 2001 to Anguilla, Bermuda, the British Virgin Islands, the Cayman Islands, Gibraltar, Montserrat, Turks and Caicos, Isle of Man, Jersey, and Guernsey. The International Convention for the Suppression of the Financing of Terrorism has not yet been so extended.

The International Convention for the Suppression of the Financing of Terrorism has not yet been so extended.

Country Reports

[*This text has been revised since its original posting; see version as [released to Congress](#).]

Afghanistan

While Afghanistan is not a regional financial or banking center, its informal financial and credit system is extremely robust in scope and scale. Afghanistan is a major drug transit and drug producing country. Afghanistan recently passed anti-money laundering and terrorist financing legislation, and many efforts are being made to strengthen police and customs forces. However, there remain few resources and little expertise to combat financial crimes, or to produce meaningful financial intelligence. The most fundamental obstacles continue to be legal, cultural and historical factors that many times conflict with more Western-style proposed reforms to the financial sector generally.

In early 2004, the Central Bank of Afghanistan, Da Afghanistan Bank (DAB), worked in collaboration with the International Monetary Fund (IMF) and the United Nations Office on Drugs and Crime (UNODC) to establish the legislative framework for anti-money laundering and the suppression of the financing of terrorism. Although Afghanistan was unable to meet its initial commitment to enact both pieces of legislation by September 30, 2004, they were both finalized and signed into law by late October. In addition, the Government of Afghanistan (GOA) has now become a party to all relevant UN Conventions and protocols relating to the financing of terrorism and laundering of funds and other proceeds of crimes, which include the International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Illicit Traffic in Narcotics and Psychotropic Substances.

The Central Bank claims that both the Anti-Money Laundering (AML) and Proceeds of Crime and Combating the Financing of Terrorism laws incorporate provisions for complying with the international standards set forth by the Financial Action Task Force (FATF), meet or exceed international standards, and principally address the criminalization of money laundering and the financing of terrorism, customer due diligence, the establishment of a Financial Intelligence Unit (FIU), international cooperation, extradition, and the freezing and confiscation of funds. In fact, the AML law also includes provisions to address cross-border currency reporting, and establishes authorities to seize and confiscate monies found to be undeclared or falsely declared, or determined to be transferred for illicit purposes. However, the capability to enforce these provisions is nearly non-existent, and furthermore, these provisions are largely unknown in many parts of the country.

Under the new AML law, an FIU must be established and function as a semi-autonomous unit within DAB. Additionally, banks are required to report suspicious transactions and all cash transactions as prescribed by DAB to the FIU, which has the legal authority to freeze assets for up to 7 days. The FIU then directs cases to the Government Prosecutor's office within the Ministry of Justice, which will assign it to the appropriate court. The Department of Financial Supervision is coordinating the development of the FIU, which was originally planned for completion in January 2005. However, a number of key issues remain that must be considered before the FIU can be developed in an effective manner.

At present, there exist three recently re-licensed state-owned banks, four foreign banks, and three additional domestic banks. With the possible exception of the foreign banks, no banks are equipped with the knowledge or technical capacity to produce financial intelligence, and many are looking to both the Central Bank and the Ministry of Finance to provide training on the requirements set forth by the newly passed anti-money Laundering legislation, to include: customer due diligence/know your customer provisions (KYC), record keeping, currency transaction reporting (CTRs), suspicious transaction reporting (STRs), and the establishment of internal AML/CFT controls. There seems to be a lack of knowledge on the part of DAB as to the compliance capabilities of banks other than those

that are state-owned. The majority of their efforts have been devoted to re-licensing efforts, basic training and staffing.

The Ministry of Interior and the Government/Public Prosecutions Office are the primary enforcement authorities, although neither is able to conduct financial investigations, and both lack the training necessary to follow potential leads generated by an FIU, whether within Afghanistan or from international sources. Pursuant to the Central Bank law, there are plans for the development of a Financial Services Tribunal, which will be dedicated to prosecuting cases for a myriad of financial crimes, although there is a need for significant training for prosecutors and judges before this Tribunal can be effectively stood up. At present, all financial fraud cases are being forwarded to the Kabul High Court, where there has been little or no activity in the last two years. The process to prosecute and adjudicate cases is long and cumbersome, and significantly underdeveloped. A resident legal advisor to train prosecutors and judges has recently been placed in Kabul to help develop these mechanisms.

The majority of the money laundering in Afghanistan is linked to the trade of narcotics. Afghanistan accounts for a large majority of the world's opium production and in 2004 its internal production of opium increased. Opium gum itself is often used as a currency, especially for rural farmers, and it is used as a storehouse or bank of value in prime production areas. It is estimated that over 60 percent of Afghanistan's GDP is derived directly from narcotics activities, and proceeds generated from the drug trade have reportedly fueled a growing real estate boom in Kabul, as well as a sharp increase in capital investment in rural poppy growing areas.

Afghan opium is refined into heroin by production labs, more of which are being established within Afghanistan's borders. The heroin is then often broken into small shipments and smuggled across porous borders for resale abroad. Payment for the narcotics outside the country is facilitated through a variety of means, including through conventional trade and the hawala system (money exchange dealers). The narcotics themselves are often used as tradable goods and as a means of exchange for foodstuffs, vegetable oils, electronics, and other goods between Afghanistan and neighboring Pakistan. Many of these goods are smuggled into Afghanistan from neighboring countries or enter through the Afghan Transit Trade without payment of customs duties or tariffs. Invoice fraud, corruption, indigenous smuggling networks, and legitimate commerce are all intertwined.

The Supervision Department within the DAB is newly formed as of the end of 2003, and is broken into four divisions: Licensing, General Supervision (which includes on-site and off-site supervision), Special Supervision (which deals with special cases of enforcement and liquidation), and Regulation. The Department remains poorly staffed and struggles to find the appropriate talent. The Department is charged with administering the AML and CFT legislation, conducting audits, licensing new institutions, overseeing money exchange and money services businesses, and liaising with the commercial banking sector generally.

Afghanistan is dominated by the hawala system, which provides a range of financial and non-financial business services in local, regional, and international markets. Financial activities include money exchange transactions, funds transfers, micro and trade finance, as well as deposit-taking activities. While the hawala network may not provide financial intermediation services in the strict technical use of the term in the formal banking system, i.e., deposit-taking for lending purposes based on the assessment, underwriting, and pricing of risk(s), its robust and widespread use throughout Afghanistan should not be overlooked—given the extent of the service offering, extremely low cost, and greater efficiency than most formal systems world-wide.

In April 2004, Afghanistan issued new regulations for the licensing of money exchange dealers and hawaladars, and required them to submit quarterly transaction reports. Regulations differ for money exchange dealers vs. money services businesses, with more stringent requirements placed on the latter. New regulations also require Money Service Businesses to take appropriate measures to prevent money laundering and terrorist financing, including the submission of suspicious transaction reports to

the FIU. DAB branch managers have been trained on re-licensing, but to date, only one entity-Western Union-has received a license. The DAB is phasing in this process, and has little communication with the exchange dealers themselves, many of whom see the new regulations as overly strict, requiring burdensome capital requirements and fees for agents in each province. The DAB is struggling with administering the new requirements, and lacks the support of enforcement authorities from the Ministry Interior, among others.

There are a little over 300 known exchange dealers in Kabul, with 100-300 additional dealers in each province. These dealers are organized into unions in each province, and maintain a number of agent-principle and partner relationships with other dealers throughout the country and internationally. Contrary to some understanding, their record keeping and accounting activities are quite robust, extremely efficient, and take note of: currencies traded, international pricing, deposit balances, debits and credits with other dealers, lending, cash on hand, etc.

Border security continues to be a major issue throughout Afghanistan. At present there are 21 gateways that have come under federal control, utilizing international donor assistance as well as local and international forces. However much of the border areas continue to be un-policed and therefore susceptible to illicit cross-border trafficking and trade-based money laundering. Many regional warlords also continue to control the international borders in their provincial areas, causing major security risks. Customs authorities, with the help of outside assistance, have made significant strides, but much work remains to be done. Customs collection has also dramatically improved, but there continues to be significant leakage and corruption, as well as trade-based fraud, including false and under-invoicing. Thorough cargo inspections are currently not conducted at any gateway.

Under the Law on Combating the Financing of Terrorism, any nonprofit organization that wishes to collect, receive, grant, or transfer funds and property must be entered in the registry with the Ministry of Auqaf (Islamic Affairs). All non-profit organizations are subject to a due diligence process which includes an assessment of accounting, record keeping, and other activities. However, the capacity for the Ministry to conduct such examinations is near non-existent, and the reality is that any organization applying for registration is granted one. Furthermore, because no adequate enforcement authority exists, many organizations operating under a “tax-exempt” non-profit status in Afghanistan go completely unregistered, and nefarious activities are suspected of a number of organizations.

While the Government of Afghanistan has made significant strides in strengthening overall AML/CFT efforts, much work remains: empowering the informal hawala system through effective regulation; enabling bank and non-bank financial institutions to produce adequate financial intelligence; developing an FIU; bolstering financial investigative capabilities; and, training prosecutors and judges on money laundering and other financial crimes. These efforts must be conducted in tandem, while at the same time combating the overwhelming narcotics trade. A concerted effort on the part of donor states and Afghan authorities would empower rural farmers through effective alternative livelihoods programs, by dismantling the logistical and financial infrastructure that facilitates the opium economy generally.

Albania

As a transit country for trafficking in narcotics, arms, contraband, and humans, Albania remains at significant risk for money laundering. Major sources of criminal proceeds are drug-related crimes, robberies, customs offenses, exploitation of prostitution, trafficking in weapons and automobiles and theft through abuse of office. Tax crime and fraud appear relatively often, as well. Organized crime groups use Albania as a base of operations for conducting criminal activities in other countries, sending large sums of illegitimately earned money back to Albania. The proceeds from these activities are easily laundered in Albania because of weak government controls. Money laundering is believed to be occurring through the investment of tainted money in real estate and business development

projects. Customs controls on large cash transfers are not believed to be effective, due to lack of resources and corruption of Customs officials.

Albania's economy is primarily cash-based. Approximately 80 percent of all economic transactions are still carried out in cash, thereby making it difficult for the police to conduct money laundering investigations. Electronic and ATM transactions are relatively low, but are growing rapidly as more banks introduce this technology. According to the Bank of Albania, the Central Bank, 26 percent of the money in circulation is outside of the banking system, compared to an average of 10 percent in other Central and Eastern European transitioning economies. Until 2004, the Government of Albania (GOA) paid its own civil servants in cash, but a growing number of institutions are using electronic pay systems. All Central Government institutions are now required to convert to electronic pay systems by the end of 2005.

There are 16 banks, but only seven of them are considered to be major players in the system. In late 2003 the Bank of Albania held a roundtable discussion with the Bankers' Association and the Ministry of Finance and Economy, to determine the best way to promote the use of the banking system, and to lure people away from cash circulation.

Albania criminalized all forms of money laundering through Article 287 of the Albanian Criminal Code of 1995 and Law No. 8610 "On the Prevention of Money Laundering" passed in 2000. The laws set forth an "all crimes" definition for the offense of money laundering. However, an issue of concern is the fact that the Albanian court system requires a prior or simultaneous conviction for the predicate crime before an indictment for money laundering can be issued. Albanian law also has no specific laws pertaining to corporate criminal liability. Officials, however state that legal entities can be punished for money laundering under Article 45 of the Criminal Code as well as under Article 14 of Law No. 8610.

In June 2003, Parliament approved Law No. 9084, which strengthened the old Law No. 8610, as well as improving the Criminal Code and the Criminal Procedure Code. The new law redefines the legal concept of money laundering, harmonizing the Albanian definition with that of the European Union (EU) and bringing it into line with EU and international conventions. Under the revised Criminal Code many powers were expanded and improved upon. The definition of money laundering was revised, the establishment of anonymous accounts was outlawed, and the confiscation of accounts was permitted. Currently, no law criminalizes negligence by financial institutions in money laundering cases.

Law No. 8610 requires financial institutions to report all cross-border transactions that exceed approximately \$10,000, as well as those that involve suspicious activity. Financial institutions are required to report transactions within 48 hours if the origin of the money cannot be determined. In addition, private and state entities are required to report all financial transactions that exceed certain thresholds. Financial institutions have no legal obligation to identify customers prior to opening an account. Although, in practice, all banks have internal rules mandating customer identification, Law No. 8610 only requires customer identification prior to conducting transactions exceeding 2 million Albanian leke (approximately \$20,000) or when there is a suspicion of money laundering. Law 9084 mandates identification of beneficial owners. The Bank of Albania has established a task force to confirm banks' compliance with customer verification rules.

Banking groups initially objected to implementation of some aspects of the law, especially with regard to what they see as onerous reporting requirements. Originally, financial institutions were required to complete a 61-question form for all transactions, including bank-to-bank transfers, exceeding \$200,000. Subsequent modifications to the form, however, have somewhat reduced this reporting burden. In addition, financial institutions that submit reports are required to do so within 72 hours.

Money Laundering and Financial Crimes

Banks, bureaux de change, casinos, tax and customs authorities, accountants, postal services, insurance companies, and travel agencies are obligated entities for threshold reporting.

Law No. 8610 also mandates the establishment of an agency to coordinate the GOA's efforts to detect and prevent money laundering. The Agency for Coordinating the Combat of Money Laundering (ACCML) is Albania's Financial Intelligence Unit (FIU). The ACCML falls under the control of the Ministry of Finance and evaluates reports filed by financial institutions. If the agency suspects that a transaction involves the proceeds of criminal activity, it must forward the information to the prosecutor's office. In 2004, ACCML received 58 reports, seven of which were forwarded to the prosecutor's office for further action.

Law 9084 clarifies and improves the role of the ACCML and increases its responsibility. It has been given additional status by its designation as the national center for the fight against money laundering. Also, the duties and responsibilities for the FIU are better specified. The law also establishes a legal basis for increased cooperation between the ACCML and the General Prosecutor's Office, while creating an FIU oversight mechanism to ensure it fulfills, but does not exceed, its responsibilities and authority. Previously, coordination against money laundering and terrorist financing among agencies was sporadic.

There have been seven prosecutions initiated under the new Law No. 9084. In the two years preceding that law, there were seven prosecutions brought under the old law. Of these fourteen prosecutions, ten are pending in the courts and four have yet to be brought to trial. Given the high number of drug-trafficking and fraud-related cases in Albania, the number of money laundering prosecutions is still relatively low. This is largely due to the fact that the Albanian police force still does not have a central database, and investigators lack much-needed training in modern financial investigation techniques.

Through Law 9084, the Code of Criminal Procedure vastly improves the Albanian confiscation regime. Prior to 2004, Albanian law did not allow for asset forfeiture without a court decision. In 2004, Albania passed legislation that made the freezing and seizure of assets much easier. First, Albania passed a comprehensive antimafia law, Law No. 9284, which contains strong asset seizure and forfeiture provisions, subjecting to seizure the assets of suspected persons and their families and close associates. The law also places on the defendant the burden to prove a legitimate source of funding for seized assets. In the past three years the GOA has seized \$3.34 million in liquid criminal and terrorist assets, and about \$2.5 million in real estate (\$1 million in 2004), although some estimates of value are much higher. These seizures were mostly related to actions against terrorist financiers. In 2004, approximately \$2.5 million in cash related to both criminal and terrorist activities was seized.

Law 9084 criminalizes the financing of terrorism, mandating strong penalties for any actions or organizations linked with terrorism. Until 2004, the GOA used its anti-money laundering law to freeze the assets of individuals and organizations on the UN Security Council lists of designated terrorists or terrorist entities. In 2004, Law No. 9258, "On Measures Against Terrorist Financing," was enacted, permitting the GOA to administratively seize assets of any terrorist designated pursuant to Security Council resolutions, as well as pursuant to certain bilateral or multilateral requests. The Ministry of Finance has already implemented this law.

Although the GOA has not passed specific legislation addressing alternative remittance systems or charitable organizations, officials state that such informal transactions are covered under recent laws. The Ministry of Finance has explored additional legislation that would include such oversight, but has not yet proposed amendments. The GOA has aggressively acted against suspected charitable organizations, resulting in their removal from the country.

The ACCML has the ability to enter into bilateral or multilateral information sharing agreements on its own authority and continues to cooperate with its counterparts, signing memoranda of understanding

(MOUs) with Slovenia and Bulgaria, and participating in exchanges for training purposes. The GOA has also agreed to fight corruption jointly with Italy.

Albania is a party to the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds of Crime. The GOA is also a party to the 1988 UN Drug Convention, the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime. In December 2003, Albania signed the UN Convention against Corruption. Albania is a member of the Council of Europe Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL) and participates in the Southeastern Europe Cooperative Initiative (SECI). The ACCML became a member of the Egmont Group in July 2003.

The Government of Albania has taken important steps to enhance its anti-money laundering/counterterrorist financing regime, however, additional improvements can still be made. Albania should incorporate into its anti-money laundering legislation specific provisions regarding corporate criminal liability, customer identification procedures and the adequate oversight of money remitters and charities. Albania should also amend its laws to allow authorities to obtain an indictment for money laundering without a prior conviction of a predicate offense. A central police database should be created in order to assist law enforcement in the investigation of financial crimes. Training in advanced financial investigation techniques should be provided to police investigators.

Algeria

Algeria is not a regional financial center or an offshore financial center. The extent of money laundering through formal financial institutions is thought to be minimal due to stringent exchange control regulations and an antiquated banking sector. On April 7, 2002 the Government of Algeria adopted Executive Order 02-127, which established the Cellule du Traitement du Renseignement Financier (CTRF), an independent Financial Intelligence Unit (FIU) within the Ministry of Finance.

Articles 104 to 110 of the Finance Law of 2003 require financial institutions to report all suspicious activities to the CTRF. All financial institutions are obligated to comply with requests from the CTRF or face criminal penalties. The Executive Order also allows assets to be frozen for up to 72 hours on the basis of suspicious activity. Information collected by the CTRF is governed under the laws protecting professional privacy. State protection is provided for both officials and informants. The partial convertibility of the Algerian dinar enables the Central Bank to monitor all international financial operations carried out by public or private banking institutions. Individuals entering Algeria must declare all foreign currency to the customs authority.

In 2004, Algeria introduced a draft law titled "Law for the Prevention and the Fight Against Money Laundering and Terrorism Financing." This legislation was approved by the administration's Council of Ministers and was in the process of being reviewed by the National Assembly at the end 2004. The National Assembly and Senate enacted the legislation on January 5, 2005. The new law seeks to bring Algerian law into conformity with international standards and conventions. Reportedly, it covers the prevention and detection of money laundering and terrorism financing, institutional and judicial international cooperation, and penal provisions.

According to the new legislation, banks and financial institutions are required to know, record and report the identity of customers and the origin and destination of funds. These institutions must maintain confidential reports of suspicious transactions. Banks must maintain customer records for at least 5 years after the date of the last transaction. Significant authority is given to a banking commission operating under the authority of the Bank of Algeria (the central bank) to supervise banks and financial institutions and to inform the CTRF of suspicious or complex transactions.

Money Laundering and Financial Crimes

Bank and professional secrecy rules do not apply to the bank commission, judicial authorities and the CTRF. Under the proposed legislation, the permitted 72-hour period for freezing assets on the basis of suspicious activity can be extended only with judicial authorization.

Money laundering controls in previous laws have applied to “intermediary,” non-banking financial institutions. Once implemented, the new legislation will extend money laundering controls to apply to specific, non-banking financial professions, including lawyers, accountants, stockbroker and precious metal dealers.

The Ministry of Justice is expected to create a pool of judges who are expert in financial matters. Algeria plans to establish a coordinating committee involving the Ministry of Justice, the Ministry of Finance, and the local police to fight against financial crimes.

Algeria criminalized terrorist financing by adopting Ordinance 95.11 on February 24, 1994, making the financing of terrorism punishable by 5-10 years of imprisonment.

Algeria is a party to both the 1988 UN Drug Convention and the UN International Convention for the Suppression of the Financing of Terrorism. On October 7, 2002 Algeria became a party to the UN Convention against Transnational Organized Crime, which entered into force in September 2003. Algeria became a member of the nascent Middle East and North Africa Financial Action Task Force in November 2004.

Algeria should develop implementing regulations for the new money laundering law and create the appropriate commissions and committees necessary for its successful implementation.

Andorra

Andorra is a very small country with just six banks. However, due to its geographical location in the Pyrenees, its relatively strong financial system, and the free movement of money across its frontiers, Andorra is an attractive destination for those seeking to undertake money laundering operations.

Predicate offenses for money laundering are defined in the Criminal Code and include drug-trafficking, hostage taking, sales of illegal arms, prostitution, and terrorism. Andorra complies with the FATF 40 Recommendations plus the Special Recommendations on Terrorist Financing. Andorra substantially revised its anti-money laundering regime in December 2000 with the passage of its Law on International Criminal Co-operation and the Fight against the Laundering of Money and Securities Deriving from International Delinquency (December 2000 Act). Essentially, this law imposes reporting obligations upon Andorran financial institutions, insurance and re-insurance companies, and natural persons or entities whose professions or business activities involve the movement of money or securities that may be susceptible to laundering. It specifically covers external accountants and tax advisors, real estate agents, notaries, and other legal professionals when they are acting in certain professional capacities, as well as casinos and dealers in precious stones and metals. Reports of suspicious transactions (STRs) are made to the Unit for the Prevention of Laundering Operations (UPB), Andorra’s financial intelligence unit (FIU). Article 49 of the December 2000 Act contains a tipping off prohibition, and Article 50 provides a safe harbor, so that individuals or entities who report suspicious activities or transactions under this law are not liable for violations of any other secrecy or confidentiality statutes.

A decree to establish specific regulations to cover all administrative aspects of the December 2000 Act was approved in August 2002. The decree requires retail establishments to notify the government of any transactions for gems and jewelry where the payment made in cash is greater than 15,000 euros. The law also requires banks to notify the FIU of any currency exchanges where the amount is over 1,250 euros.

Customer identification, including identification of the beneficial owner, is required at the time a business relationship is established and before any applicable transaction. Records verifying identity must be kept for a period of at least ten years from the date when the business relationship ends.

In 2003, Andorra set up a legislative commission that reviewed the Criminal Code and anti-money laundering laws. The explicit criminalization of terrorism financing was included in this review, as were general modifications to hone the banking sector regulations. The Parliament is currently working on changes to the Criminal Code. The new Loi de l'INAF (Institut Nacional Andorrà de Finances) was passed by the Parliament on October 23, 2003, and became effective on November 27, 2003. INAF, which replaced the old Commission Supérieure de Finances (CSF), is a totally independent monitoring body, responsible for monitoring and supervision of the financial system, management of public debt, carrying out field inspections, and taking disciplinary action.

The UPB was established in 2001. UPB, with a staff of five, is an administrative unit with no law enforcement powers of its own. UPB acts in a supervisory role, and provides education regarding compliance and money laundering prevention to financial services providers. In 2003 UPB inspected the two main banks in Andorra, and was instrumental in coordinating outreach. Also in 2003, UPB organized a training program for notaries and lawyers in conjunction with Spain's SEPBLAC, and, with the Andorra Banking Association, held training seminars for banks and police. UPB also organized joint training with KPMG for 180 gatekeepers. UPB works closely with the banking community and provides training in recognizing questionable transactions; as a result, banks have become more cooperative with UPB as well. The most recent figures available reflect that in 2003, UPB received 34 STRs.

In 2003, Andorra was able to obtain its first money laundering conviction as well as its first asset confiscation. On February 26, 2003, three Spaniards were convicted for a major money laundering offense in connection with drug-trafficking in Spain. Two of the convicted received five years' imprisonment and a fine of 150,000 euros, and the third received three years' imprisonment and a 50,000 euros penalty. Andorra also invoked provisional measures, freezing three bank accounts totaling 20 million euros and another bank account of 1.3 million euros, and seizing an additional bank account along with a building. In July 2004, the Spanish and the Andorran police uncovered a drug trafficking network involving more than 20 people, the majority of them Spanish nationals. Drugs were seized in Spain and Andorra's UPB froze a 14 million Euro bank account held in Andorra. The case is still under investigation.

The police work closely with the FIU, and the law authorizes the use of telephone taps and undercover officers in money laundering investigations. The UPB can freeze assets administratively for five days without a judicial order. If the assets need to be held for a longer period, the UPB can seek a judicial order, which normally occurs within the five-day period the UPB is authorized to hold the accounts. Judicial freeze orders can be effective for an indefinite period of time.

The entirety of Title I of the December 2000 Act pertains to the organization of international judicial assistance, generally easing previous restrictions that had applied when a foreign authority requested information protected by Andorran bank secrecy. Information may be furnished in response to requests otherwise conforming to Andorran law.

UPB is the agency that would deal with terrorism financing, but the crimes it has detected run toward drug-trafficking and fraud, rather than to terrorism financing. To date it has not dealt with any cases involving terrorism.

Andorra has signed, but not yet ratified, the UN International Convention on the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime. Andorra has signed but not yet ratified the European Convention on Mutual Legal Assistance. Andorra is a party to

the 1988 UN Drug Convention and the Council of Europe Convention on Laundering, Search, Seizure and Confiscation of the Proceeds from Crime.

Although not a member of the European Union, Andorra has very close cultural and geographic ties to Spain and France. The UPB works closely with its Spanish and French counterparts and has signed cooperation agreements with these jurisdictions as well as with Belgium. In fact, Andorra does not have a requirement for cross-border currency declarations, because with Spain's threshold at 8,000 euros and France's at 6,000 euros, it would be impossible to enforce. The UPB is a member of the Egmont Group. In addition, Andorra is a strong participant in the Council of Europe's MONEYVAL Committee, and underwent that organization's second round mutual evaluation in 2003. Despite its progress and cooperation concerning money laundering, the OECD continues to cite Andorra as a "tax haven" due to its low or nonexistent taxes, and maintains that Andorra still needs to make its banking system more transparent.

Andorra should continue to enhance its anti-money laundering regime by broadening its definition of money laundering to expand the list of predicate offenses. Andorra should enact and fully implement the changes to the Criminal Code it is considering, including a provision to criminalize terrorist financing.

Angola

Angola is not a regional or offshore financial center and has not prosecuted any known cases of money laundering. The laundering of funds derived from high-level corruption is a concern, as is the poorly controlled trade in diamonds and the potential use of diamonds as a vehicle for money laundering. It is possible that links exist between the informal diamond trade and international criminal organizations. Angola is participating in the "Kimberley Process," an international certification scheme designed to halt trade in "conflict" diamonds in countries such as Angola through domestically implemented national rough diamond trade control regimes. Angola has already implemented a domestic system in accordance with the Kimberley Process.

Angola currently has no comprehensive laws, regulations, or other procedures to detect money laundering and financial crime, although some such crimes are addressed through other provisions of the criminal code. For example, Angola's counternarcotics laws criminalize money laundering related to narcotics-trafficking. There is a draft law to reform the banking sector that contains provisions against money laundering that are consistent with international standards. The Government of Angola expects the law to pass in early 2005. The Central Bank of Angola has the authority to freeze assets, but Angola does not presently have an effective system for identifying, tracing, or seizing assets.

Angola is party to the 1988 UN Drug Convention. Angola has signed but not yet ratified the UN Convention against Transnational Organized Crime. Angola has not signed the UN International Convention for the Suppression of the Financing of Terrorism. It has ratified the African Union Anti-Terrorist, Anti-Mercenary, and Money-Laundering Accord.

Angola should pass its pending legislation and criminalize money laundering (beyond drug offenses) and terrorist financing. It should establish a financial intelligence unit. It should then move to implement the legislation. It should become a party to both the UN Convention against Transnational Organized Crime and the UN International Convention for the Suppression of the Financing of Terrorism. It should enhance controls over the diamond trade and increase its efforts to combat official corruption.

Anguilla

Anguilla is a United Kingdom (UK) overseas territory with a population of approximately 12,871. The economy depends greatly on its growing offshore financial sector and tourism. The financial sector is small in comparison to other jurisdictions in the Caribbean, but the ability to register companies online and the use of bearer shares make Anguilla vulnerable to money laundering.

Anguilla has four domestic banks, two of which also conduct offshore banking. The Eastern Caribbean Central Bank (ECCB) supervises the four domestic banks. The ECCB completed on-site anti-money laundering inspections during 2002 at three domestic banks. The fourth bank's on-site inspection is scheduled for early 2005. Two domestic banks have licenses to conduct offshore banking. The ECCB signed a memorandum of understanding with the Governor of Anguilla to regulate the offshore activities of these two domestic banks. Under the Trust Companies and Offshore Banking Act the Governor has the authority to revoke or suspend an offshore bank license for non-compliance.

As of 2003, the offshore sector also includes approximately 3,041 international business companies (IBCs), 128 limited liability companies, seven limited partnerships, 1,466 ordinary companies, 29 licensed company managers, and 12 trust companies. There is one entity operating in securities and one unit trust operating under a trust license. The Anguilla Commercial Online Registration Network (ACORN) enables instant electronic incorporation and registration of companies and trusts. Operational since November 1998, ACORN is available 24 hours a day and accessible in various languages. The Financial Services Department, which is part of the Ministry of Finance, conducts due diligence of ACORN on behalf of the Registrar of Companies. IBCs may be registered using bearer shares that conceal the identity of the beneficial owner of these entities. It was reported in 2003 that legislation was being drafted to immobilize bearer shares; however, no updated information on this draft legislation has been provided.

In November 2003, the Financial Services Commission Act was passed. The Act creates the Financial Services Commission (FSC) as an autonomous regulatory agency that assumed most of the Financial Services Department supervisory authority. The FSC became operational February 2, 2004. The board consists of a director, deputy director, junior regulator, and an office manager. The Act empowers the FSC to approve the appointment of compliance officers of licensees, conduct compliance inspections, monitor activity within the financial sector, and undertake enforcement actions against persons involved in unlawful activity.

The Act also empowers the FSC to "monitor compliance by regulated persons with the Anti-Money Laundering Regulations of 2000 and such other Acts, Regulations, Guidelines, or Codes relating to money laundering or the financing of terrorism as may be prescribed." Anguilla has approximately 20 registered insurance companies. Under the new Insurance Act enacted in 2004, the FSC supervises all insurance intermediaries.

A National Committee on Drugs and Money Laundering was formed to act as the catalyst for Anguilla's anti-money laundering/counterterrorist financing efforts. This Committee proposed Customs Declaration Forms to detect and monitor cross-border transportation of cash or bearer instruments in excess of U.S. \$10,000. The proposal is currently before the Comptroller of Customs.

The Proceeds of Criminal Conduct Act (PCCA) of 2000 extends the predicate offenses for money laundering to all indictable offenses, and allows for the forfeiture of criminally derived proceeds. The Act provides for suspicious activity reporting and a safe harbor for this reporting. In July 2000, the Money Laundering Reporting Authority Act came into force, and amended the Drugs Trafficking Offenses Ordinance of 1988. The Act requires persons involved in the provision of financial services to report any suspicious transactions derived from drugs or criminal conduct, and establishes requirements for customer identification, record keeping, reporting, and training procedures. The Act establishes the Money Laundering Reporting Authority (MLRA) as Anguilla's Financial Intelligence

Unit. The MLRA, with a staff of five, receives suspicious transaction reports (STRs) and is empowered to disclose information to any Anguillan or foreign law enforcement agency.

The Criminal Justice (International Co-operation) (Anguilla) Act, 2000 enables Anguilla to directly cooperate with other jurisdictions through mutual legal assistance. The U.S./ UK Mutual Legal Assistance Treaty concerning the Cayman Islands was extended to Anguilla in November 1990. Anguilla is also subject to the U.S./UK Extradition Treaty. Anguilla is a member of the Caribbean Financial Action Task Force (CFATF) and is subject to the 1988 UN Drug Convention. The MLRA joined the Egmont Group in June 2003.

The Government of Anguilla is a developing financial services jurisdiction and should continue to strengthen its anti-money laundering regime by adopting measures to immobilize bearer shares and ensure that beneficial owners of IBCs are identifiable. Particularly in light of its online registration capabilities, Anguilla must ensure that its oversight and supervision of its offshore center is adequate. Anguilla should also strengthen the MLRA's ability to receive and analyze STRs by providing sufficient resources and training to the unit. Anguilla should criminalize terrorist financing.

Antigua and Barbuda

Antigua and Barbuda (A&B) has comprehensive legislation in place to regulate its financial sector, but it remains susceptible to money laundering because of its loosely regulated offshore financial sectors and its Internet gaming industry. Money laundering in the region is related to both narcotics and fraud schemes, as well as to other crimes, but money laundering appears to occur more often in the offshore sector than in the domestic financial sector.

The Money Laundering (Prevention) Act (MLPA) of 1996 is the operative legislation addressing money laundering. The MLPA is currently being amended to broaden the definition of supervised financial institutions to cover non-banking institutions.

In 2000, the Government of Antigua and Barbuda (GOAB) amended the International Business Corporations Act of 1982 (IBCA). This was done in order to remove 1998 amendments that had given the International Financial Sector Regulatory Authority (IFSRA) responsibility to both market and regulate the offshore sector, as well as permitting members of the IFSRA Board of Directors to maintain ties to the offshore industry. The GOAB further amended the IBCA that year to require that registered agents ensure the accuracy of the records and registers that are kept at the Registrar's office, as well as to know the names of beneficial owners of IBCs, and to disclose such information to authorities upon request.

In 2002, the IFSRA was replaced by a new entity, the Financial Services Regulatory Commission (FSRC). The Director of IFSRA was replaced by a new director. FSRC was reportedly created to unify the regulatory structure of A&B's financial services sector. FSRC is responsible for the regulation and supervision of the offshore banking sector and Internet gaming. The FSRC issues licenses for international business corporations and maintains the register of all corporations, of which there are 14,500, with 5,000 active in 2004. Bearer shares are not permitted. The license application requires disclosure of the names and addresses of directors (who must be natural persons), the activities the corporation intends to conduct, the names of shareholders, and number of shares they will hold. Service providers are required by law to know the names of beneficial owners.

The FSRC conducts examinations and on-site and off-site reviews of the country's offshore financial institutions, and of some domestic financial entities, such as insurance companies and trusts. From 1999 through 2003, the GOAB conducted an extensive review of the offshore banking sector. As a result, over 30 offshore banks had their licenses revoked, were dissolved, placed in receivership, or otherwise put out of business. Currently, A&B has 16 licensed offshore banks in operation. Of these, however, several may not meet international physical presence standards.

In September 2002, the GOAB issued anti-money laundering guidelines for financial institutions, requiring banks to establish the true identities of account holders and to verify the nature of an account holder's business and beneficiaries. Unlike some of the other countries in the Eastern Caribbean, the GOAB has not chosen to initiate a unified regulatory structure or uniform supervisory practices for its domestic and offshore banking sectors. Currently, the Eastern Caribbean Central Bank (ECCB) supervises Antigua and Barbuda's domestic banking sector. The ECCB is not currently able to share examination information directly with foreign regulators or law enforcement personnel. Legislation to permit such sharing is being developed, but to be universal it must be passed by all eight of the ECCB jurisdictions.

The Office of National Drug Control and Money Laundering Policy (ONDCP), which is the financial intelligence unit (FIU), directs the GOAB's anti-money laundering efforts in coordination with the FSRC. The ONDCP is a department in the Prime Minister's office, and has primary responsibility for the enforcement of the MLPA. The ONDCP Act of 2003 establishes the FIU as an independent organization and the Director of ONDCP as the supervisory authority under the MLPA. Additionally, the ONDCP Act of 2003 authorizes the Director to appoint officers to investigate drug-trafficking, fraud, money laundering, and terrorist financing offenses. Auditors of financial institutions review their compliance program and submit a report to the ONDCP for analysis and recommendations. Memoranda of understanding have been drafted to cover all aspects of the ONDCP's relationship with the Royal Antigua and Barbuda Police Force, Customs, Immigration, and the Antigua and Barbuda Defense Force. Through November 2004, the ONDCP had received 29 suspicious activity reports, down from 47 in 2003.

A training program and information kit on anti-money laundering for magistrates and other judicial officers was developed, and training was conducted in 2004. In recent years, a number of GOAB civilian and law enforcement officials, both in and out of the ONDCP, have received anti-money laundering training.

Casinos and sports book-wagering operations in Antigua and Barbuda's Free Trade Zone are supervised by the ONDCP and the Directorate of Offshore Gaming (DOG), housed in the FSRC. The DOG has 13 employees. Antigua and Barbuda has five domestic casinos, which are required to incorporate as domestic corporations. Internet gaming operations are required to incorporate as IBCs; official sources indicate there are 35 such entities. The GOAB receives approximately \$2.8 million per year from license fees and other charges related to the Internet gaming industry. In 2001, the GOAB adopted regulations for the licensing of interactive gaming and wagering, in order to address possible money laundering through client accounts of Internet gambling operations. The 2000 and 2001 amendments to the MLPA expand its coverage to include all types of gambling entities and to set financial limits above which customer identification and source of funds information are required. Internet gaming companies are required to enforce know-your-customer verification procedures and maintain records relating to all gaming and financial transactions of each customer for six years. Suspicious activity reports from domestic and offshore gaming entities are sent to the ONDCP and FSRC. Reportedly, they are receiving approximately four per week. The FSRC and DOG have issued Internet Gaming Technical Standards and guidelines.

In 2003, the GOAB submitted a case to the World Trade Organization's (WTO) Dispute Settlement Body, requesting the establishment of an independent panel to adjudicate a dispute with the United States. The GOAB contends that the United States is in violation of the WTO General Agreement on Trade in Services, because the United States prohibits residents from engaging in Internet gaming and betting services, and prohibits credit card companies and banks from facilitating the transactions. In 2004, the WTO ruled in favor of the GOAB. The United States has appealed the decision to the WTO, and it is under review. The GOAB has stated that U.S. mutual legal assistance treaty (MLAT) requests for information on cases involving Internet gaming will not be honored, as Internet gaming is not illegal in A&B.

Amendments to the MLPA in 2000, 2001, and 2002 enhanced international cooperation, strengthened asset forfeiture provisions, and created civil forfeiture powers. Despite the comprehensive nature of the law, Antigua and Barbuda has yet to prosecute a money laundering case on its own, but is presently seeking the extradition of two individuals from the UK and Canada on money laundering charges. Approximately \$3.4 million has been frozen in A&B in connection with the case.

In October 2001, Antigua enacted the Prevention of Terrorism Act, which empowers the ONDCP to nominate any entity as a “terrorist entity” and to seize and forfeit terrorist funds. The law covers any finances in any way related to terrorism. The GOAB circulates lists of terrorists and terrorist entities to all financial institutions in A&B. No known evidence of terrorist financing has been discovered in Antigua and Barbuda to date. The GOAB has not undertaken any specific initiatives focused on the misuse of charitable and nonprofit entities.

In 1999, a Mutual Legal Assistance Treaty and an Extradition Treaty with the United States entered into force. An extradition request related to a fraud and money laundering investigation remains pending under the treaty. The GOAB signed a Tax Information Exchange Agreement with the United States in December 2001 that allows the exchange of tax information between the two nations. In 2002, the GOAB assisted in the FBI’s investigation into the activities in A&B of John Muhammed, the convicted Washington, D.C. area sniper. In 2004, the GOAB continued its bilateral and multilateral cooperation in various criminal and civil investigations and prosecutions. Because of such assistance, the GOAB has benefited through an asset sharing agreement with Canada and has received asset sharing revenues from the United States. Despite its own civil forfeiture laws, currently GOAB can only provide forfeiture assistance in criminal forfeiture cases. The GOAB has frozen approximately \$6 million in A&B financial institutions as a result of U.S. requests and has repatriated approximately \$4 million. The GOAB has frozen, on its own initiative, over \$90 million that it believed to be connected to money laundering cases still pending in the United States and other countries. In 2004, the GOAB received \$680,000 from asset sharing revenues with the United States.

Antigua and Barbuda is a member of the Organization of American States Inter-American Drug Abuse Control Commission Experts Group to Control Money Laundering (OAS/CICAD), and the Caribbean Financial Action Task Force (CFATF), of which it assumed the chair for 2004. The GOAB underwent its second round CFATF Mutual Evaluation in October 2002. The CFATF found that Antigua and Barbuda’s anti-money laundering framework was consistent with international standards and is being enforced. Antigua and Barbuda is a party to the 1988 UN Drug Convention, the UN Convention against Transnational Organized Crime, and the UN International Convention for the Suppression of the Financing of Terrorism. In June 2003, the ONDCP joined the Egmont Group.

The Government of Antigua and Barbuda should continue its international cooperation, and rigorously implement and enforce all provisions of its anti-money laundering legislation. Antigua and Barbuda should take the necessary legislative and regulatory steps to ensure its gambling sector is properly covered by anti-money laundering legislation and is strictly supervised. Additionally, Antigua and Barbuda should vigorously enforce its anti-money laundering laws by actively prosecuting money laundering and asset forfeiture cases. Antigua and Barbuda should ensure that all offshore banks licensed there have a physical presence, consistent with international standards.

Argentina

Argentina is neither an important regional financial center nor an offshore financial center. Money laundering related to narcotics trafficking, corruption, contraband, and tax evasion is believed to occur throughout the financial system, in spite of the efforts of the Government of Argentina (GOA) to stop it. The financial crisis and capital controls of the past four years may have reduced the opportunities for money laundering through the banking system. However, transactions conducted through non-bank

sectors and professions, such as the insurance industry; financial advisors; accountants; notaries; trusts; and companies, real or shell, remain viable mechanisms to launder illicit funds.

In 2004, the GOA continued efforts to implement the regulations for anti-money laundering law 25.246 of May 2000. Law 25.246 expands the predicate offenses for money laundering to include all crimes listed in the Penal Code, sets a stricter regulatory framework for the financial sectors, and creates a financial intelligence unit (FIU), the Unidad de Informacion Financiera (UIF), under the Ministry of Justice and Human Rights. Under this law, requirements for customer identification, record keeping, and reporting of suspicious transactions by all financial entities and businesses are supervised by the Central Bank, the Securities Exchange Commission (Comisión Nacional de Valores or CNV), and the Superintendence of Insurance (Superintendencia de Seguros de la Nación or SSN). The law forbids the institutions to notify their clients when filing suspicious financial transactions reports, and provides a safe harbor from liability for reporting such transactions. The UIF is expected to establish reporting norms tailored to each type of business. The UIF began operating in June 2002. The UIF has forwarded 48 suspected cases of money laundering to prosecutors for review as of December 2004, some of which could result in prosecutions during 2005.

In 2004, the UIF extended the requirement to report suspicious or unusual transactions to include accountants and notary publics. Previous resolutions issued by the UIF in 2003 had extended this requirement to include the following entities: the Central Bank, CNV, and SSN; the tax authority (Administracion Federal de Ingresos Publicos or AFIP); banks; currency exchange houses; casinos; securities dealers; registrars of real estate; dealers in art, antiques, and precious metals; insurance companies; issuers of travelers checks; credit card companies; and postal money transmitters. The resolutions provide guidelines for identifying suspicious or unusual transactions, and require the reporting of those whose value exceeds 50,000 pesos (approximately \$17,000). Obligated entities are required to maintain a database of all suspicious or unusual transaction reports for at least five years, and must respond to requests from the UIF for further information within 48 hours.

The Central Bank requires by resolution that all banks maintain a database of all transactions exceeding 10,000 Argentine pesos (approximately \$3,400). This data is submitted on a periodic basis to the BCRA. Some banks make this information available to the UIF on request, others do not, citing financial secrecy laws. In 2004, the UIF began receiving all suspicious transaction reports directly from obligated entities. Previously, due to continued budget constraints, only suspicious transactions over 500,000 Argentine pesos (approximately \$170,000) were reported directly to the UIF, while transactions below 500,000 Argentine pesos went to the appropriate supervisory body for pre-analysis and subsequent transmission to the UIF if deemed necessary.

The UIF has also issued a rule for the centralized registration at the UIF of transactions involving the transfer of funds (outgoing or incoming), cash deposits, or currency exchanges that are equal to or greater than 10,000 pesos (approximately \$3,400). The UIF further receives copies of the declarations to be made by all individuals (foreigners or Argentine citizens) entering or departing Argentina with over \$10,000 in currency or monetary instruments. These declarations are required by Resolutions 1172/2001 and 1176/2001 issued by the Argentine Customs Service in December 2001. A law (Law 22.415/25.821) that would have provided for the immediate fine of 25 percent of the undeclared amount, and for the seizure and forfeiture of the remaining undeclared currency and/or monetary instruments, passed the Argentine Congress in 2003, but was vetoed by the President due to alleged conflicts with Argentina's commitments to MERCOSUR (Common Market of the Southern Cone). Argentina's Narcotics Law of 1989 authorizes the seizure of assets and profits, and provides that these or the proceeds of sales will be used in the fight against illegal narcotics trafficking. Law 25.246 provides that proceeds of assets forfeited under this law can also be used to fund the UIF.

The Financial Action Task Force (FATF) conducted a mutual evaluation of Argentina in October 2003. The mutual evaluation report was accepted at the FATF plenary in June 2004 and at the plenary

meetings of the Financial Action Task Force for South America (GAFISUD) in July 2004. While the evaluation of Argentina showed the UIF to be functioning satisfactorily, some weaknesses in Argentina's current anti-money laundering and terrorist financing legislation were identified. Although Law 25.246 of 2000 expanded the number of predicate offenses for money laundering beyond narcotics-related offenses and created the UIF, there have been only two money laundering convictions in Argentina since money laundering was first criminalized in 1989. Under strict interpretation of the law, a prior conviction for the predicate offense is required in order to obtain a conviction for money laundering.

The strict interpretation of the secrecy provisions of Law 25.246 also inhibits the UIF's ability to request additional information from obligated entities. Although Law 25.246 provides that the UIF is able to request information from obligated entities if this information is deemed useful to the UIF in carrying out its functions, the same law applies strict "banking, fiscal, and professional" confidentiality provisions and requires court orders to request information not directly related to a suspicious transaction report. Several government authorities, such as AFIP (the tax authority, which is responsible for overseeing the customs agency and dealing with tax fraud and other economic crimes) and the Central Bank have been uncooperative in responding to the UIF's requests for assistance. From the time the UIF began receiving reports (November 2002) until the time when the evaluation was carried out (October 2003), the UIF had requested additional information from the AFIP in 153 cases (40 percent of which were with regard to suspicious transaction reports sent to the UIF from the AFIP itself) and from the Central Bank in 130 cases. The secrecy law has been lifted in only one case.

An amendment to Law 25.246 has been drafted that will prohibit obligated entities from invoking secrecy as a reason for refusing to comply with UIF requests; however, the draft law has not yet been passed. Another impediment to Argentina's anti-money laundering regime is that, under Argentine law, only transactions (or a series of related transactions) involving over 50,000 pesos can constitute money laundering. Transactions of less than this amount constitute concealment ("encubrimiento"), a lesser offense. GAFISUD has criticized the setting of the amount at 50,000 pesos when the international standard is \$10,000.

Terrorism and terrorist acts are not specifically criminalized under Argentine law. Because these acts are not autonomous offenses, terrorist financing is not a predicate offense for money laundering. On October 21, 2003, draft legislation to criminalize terrorist financing was introduced to the Argentine Chamber of Deputies. The draft law, which modifies the Penal Code, criminalizes the financing of acts of terrorism and provides penalties for the violation of international conventions, including the United Nations International Convention for the Suppression of the Financing of Terrorism. The new law will incorporate into the Argentine Penal Code a penalty of 10 to 20 years for taking part in, or cooperating with, or assisting in, the formation, maintenance, or financing of a terrorist group.

The GOA reportedly will present its own counterterrorism bill, which likely will include a provision on the financing of terrorism. The legislation, when approved, will bring Argentina into compliance with the recommendations of the UN, the Organization of American States, and the Financial Action Task Force (FATF) with regard to terrorist financing. This legislation had not yet been passed at the end of 2004. However, the Central Bank of Argentina has issued Circular B-6986, instructing financial institutions to identify and freeze the funds and financial assets of the individuals and entities listed by the U.S. Government (USG) as possibly engaged in acts of terrorism. Although no assets have been frozen, the Central Bank continues to monitor the financial institutions.

The GOA remains active in multilateral counternarcotics and international anti-money laundering organizations. It is a member of the Organization of American States Inter-American Drug Abuse Control Commission (OAS/CICAD) Experts Group to Control Money Laundering, the FATF, and GAFISUD. In 2004, the GOA held the presidency of GAFISUD; GAFISUD's Secretariat is based in

Buenos Aires. The GOA is a party to the 1988 UN Drug Convention, and has signed, but not yet ratified, the following conventions: the UN International Convention for the Suppression of the Financing of Terrorism, the OAS Inter-American Convention on Terrorism, the UN Convention against Transnational Organized Crime, and the UN Convention Against Corruption. Argentina is a member of the Egmont Group and participates in the “3 Plus 1” Counter-Terrorism Dialogue between the United States and the Tri-border Area countries (Argentina, Brazil and Paraguay). The GOA and the USG have a Mutual Legal Assistance Treaty that entered into force in 1993, and an extradition treaty that entered into force in 2000.

With strengthened mechanisms available under the Law 25.246, proposed terrorist financing legislation, and increased reporting requirements issued by the UIF, Argentina seems poised to prevent and combat money laundering effectively. However, several legislative and regulatory changes would significantly improve the anti-money laundering/counterterrorism finance regime in Argentina. Argentina should pass domestic legislation that criminalizes the financing of terrorism, as well as ratifying both the OAS Convention on Terrorism and the UN International Convention for the Suppression of the Financing of Terrorism. To comply with the latest FATF recommendation on the regulation of bulk money transactions, Argentina also will need to review the legislation vetoed in 2003 to find a way to regulate such transactions consistent with its MERCOSUR obligations.

Disputes over information sharing between the Unidad de Inteligencia Financiera, the Central Bank, and the tax agency, the Agencia Federal de Ingresos Publicos, also need to be resolved for anti-money laundering efforts to succeed. In doing so, the Government of Argentina will need to balance the concerns of the Unidad de Inteligencia Financiera and judicial authorities for quick and efficient access to such information in aid of legitimate investigations of suspected money laundering, and the need to stringently protect that information from disclosure or use for other purposes, which remains a major concern of the financial sector. Further implementation efforts are needed in order to succeed: increased public awareness of the problem of money laundering and the requirements under the new law, forceful sanctioning of officials and institutions that fail to comply with the reporting requirements of the law, the pursuit of a training program for all levels of the criminal justice system, and provision of the necessary resources to the Unidad de Inteligencia Financiera to carry out its mission.

Armenia

Armenia is not a major financial center. Armenia has no offshore banks and few non-banking financial institutions. Nevertheless, high unemployment, low salaries, corruption, a large shadow economy, and the presence of organized crime contribute to Armenia’s vulnerability to money laundering. Armenia’s large shadow economy is largely unrelated to criminal activity other than tax evasion, but schemes that are commonly used in Armenia to avoid taxation are similar to those used for money laundering, including the fraudulent invoicing of imports, double bookkeeping and misuse of the banking system. The large number of diaspora Armenians and those temporarily working abroad helps explain the large volume of money transfers and remittances into Armenia, mostly sent through the banking system. There are also about 30 casinos on the outskirts of Yerevan that will be subject to the new anti-money laundering regime that the Government plans to implement in 2005.

The Government of Armenia (GOA) has made great progress in 2004 in bringing legislation and structural capacity up to international standards in the area of money laundering and terrorist finance. On December 14, 2004, the National Assembly adopted a comprehensive anti-money laundering law, “The Law on Fighting Legalization of Illegally Received Income and Terrorist Financing.” This legislation consolidates old laws into a single piece of legislation, adds new regulatory structures, and specifically criminalizes money laundering and the financing of terrorism. The law was submitted to President Kocharian on December 22, 2004, and will take effect approximately two months after

signature. The new law is part of an anti-money laundering and counterterrorism financing package with which the GOA seeks to meet the recommendations of the Council of Europe (MONEYVAL), UNSCR 1373 requirements and the FATF Forty Recommendations. In addition to the new law, the comprehensive package includes amendments to 12 existing laws and the Criminal Code, affecting banking, credit and non-profit organizations, insurance, and gaming.

The new law designates the Central Bank of Armenia (CBA) as the single authorized body to coordinate anti-money laundering and counterterrorist financing activities in the country. The CBA is working to develop a series of implementing regulations (aiming to have them take effect by June 2005) and plans to set up a financial intelligence unit (FIU) by March 2005. The implementing regulations include the charter regulating CBA activities and defining CBA's, the FIU's and other reporting entities' mandates and the relationships among them. The law creates a single FIU, housed within the CBA, with authority to collect and analyze data from banks, non-banking financial institutions, and non-profit organizations, as well as gambling enterprises. The law requires financial institutions to report any non-real estate transaction of more than 20 million Armenian dram (\$40,000), real estate transactions of more than 50 million dram (\$100,000) and any single money transfer of more than five million dram (\$10,000). The law also requires state registration authorities to report any business purchase exceeding 30 million dram (\$60,000) in a sole proprietorship and 40 million dram (\$80,000) for other types of companies. Failure to comply with any CBA requirement will subject the commercial bank to civil liability. The law also will give financial institutions immunity from civil liability for cooperating with investigations.

Not all institutions covered by the law will have to report directly to the FIU. Casinos and insurance companies will still report directly to their regulator in the Ministry of Finance, which will pass on any suspicious information to the FIU. It is unclear in the proposed law what authority the FIU will have to inspect these institutions directly. Individuals must declare cash in excess of \$10,000 they transport into or out of the country to the Customs service, which will then transmit these records to the FIU. The FIU envisaged by the proposed law will not be a law enforcement agency. The law provides for the FIU to transfer active cases to the Procurator General's office for prosecution. According to the CBA, there are currently five open investigations based on suspicious financial transactions.

The GOA has sought American cooperation concerning information about specific transfers between Armenian and American banks in one of its money laundering investigations.

Financing of terrorism has been criminalized. The CBA has circulated to all banks lists of those named on the UNSCR 1267 sanctions list as associated with terrorist organizations and has instructed the banks to freeze their accounts. There have been no matches as of December 2004.

Armenia is a member of the Council of Europe's Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL). Armenia is a party to the 1988 UN Drug Convention, the UN Convention on Mutual Assistance in Criminal Matters, the UN Convention against Transnational Organized Crime, and the European Convention on Mutual Assistance in Criminal Matters. During 2004, Armenia became party to the UN International Convention for the Suppression of the Financing of Terrorism and the Council of Europe Convention on Laundering Search, Seizure, and Confiscation of the Proceeds From Crime.

Armenia should continue to strive to create a comprehensive anti-money laundering/counterterrorist financing regime. The Government of Armenia should fully enact and implement its new law and ensure its new financial intelligence unit (FIU) will have the authority and powers necessary to meet its responsibilities.

Aruba

Aruba is an autonomous, largely self-governing Caribbean island within the Kingdom of the Netherlands. As a transit country for narcotics-trafficking, Aruba is both attractive and vulnerable to money launderers.

Aruba has a relatively small international financial services sector. As of November 30, 2004, there were 5,526 limited liability companies, of which 493 were offshore limited liability companies or Aruba Offshore Companies. In addition, there are about 4,014 offshore tax-exempt companies referred to as Aruba Exempt Companies, which mainly serve as vehicles for tax minimization, corporate revenue routing, asset protection, asset management, and finance and are almost completely exempt from disclosure of financial condition and beneficial owners. Both types of companies can issue bearer shares.

There are also 11 casinos, 12 credit institutions, four commercial and two offshore banks, two mortgage banks, an investment bank and a finance company. The island also has two credit unions, six registered money transmitters, two exempted U.S. money transmitters (Money Gram and Western Union), eight insurance companies, 14 general insurance companies, two captive insurance companies, and 11 company pension funds.

Aruba's offshore industry constitutes about one percent of the GDP and is due to be phased out by the end of 2005 as part of the government's May 2001 commitment to the Organization for Economic Cooperation and Development (OECD) in connection with the Harmful Tax Practices initiative. In 2002, the Government of Aruba (GOA) initiated a new fiscal framework that contains a dividend tax and imputation credits.

There are two methods widely used for international tax planning in Aruba, the Naamloze Vennootschap (NV) or limited liability company, a low-tax entity with a 35 percent profit tax, and the Aruba Exempt Company (AEC). A local director, usually a trust company, must represent offshore NVs; a legal representative that must be a trust company represents AECs. AECs pay an annual registration fee of approximately \$280, and must have minimum authorized capital of approximately \$6,000. AECs cannot participate in the economy of Aruba, and are exempt from several obligations: all taxes, currency restrictions, and the filing of annual financial statements. Trust companies provide a wide range of corporate management and professional services to AECs, including managing the interests of their shareholders, stockholders, or other creditors.

In May 2000, the GOA issued guidance notes on corporate governance practices. Due to the commitment Aruba made to the OECD, the incorporation of low tax offshore limited liability companies was halted in July 2003. The existing offshore limited liability companies are grandfathered until 2007/2008. In furtherance of this commitment, AECs are to be abolished or modified by the end of 2005.

Following the July 4, 2000, parliamentary approval of the State Ordinance Free Zones Aruba, in July 2001 the Parliament unanimously approved the designation of the Free Zone Aruba NV to operate the free zones. One aspect of this designation requires free zone customers to reapply for authorization to operate within the zones. Aruba took the initiative in the Caribbean Financial Action Task Force (CFATF) to develop regional standards for free zones, in an effort to control trade-based money laundering. The guidelines were adopted at the CFATF Ministerial Council in October 2001. Free Zone Aruba NV is continuing the process of implementing and auditing the standards that have been developed.

The anti-money laundering legislation in Aruba extends to all crimes, including tax offenses, in which the underlying offense must have a potential penalty of more than four years imprisonment. In most cases, money laundering is incorporated into the investigation as the underlying offense. All financial and non-financial institutions are obligated to report unusual transactions to Aruba's financial

Money Laundering and Financial Crimes

intelligence unit, the Meldpunt Ongebruikelijke Transacties (MOT). On July 1, 2001, a State Ordinance was issued that extends reporting and identification requirements to casinos and insurance companies, and also authorizes onsite inspections. The MOT is required to inspect all casinos, banks, money remitters, and insurance companies. In 2002, authorized staffing for MOT was increased from six to 12. During 2004, all the vacancies at the MOT were filled. The MOT shares information with other national government departments. On April 2, 2003, MOT signed an information exchange agreement with the Aruba Tax Office, which is in effect and being implemented. MOT is not linked electronically to the police or prosecutor's office.

The State Ordinance on the Supervision of Insurance Business (SOSIB) and the Implementation Ordinance on SOSIB bring insurance companies under the supervision of Centrale Bank van Aruba, the Central Bank, and require those established after July 1, 2001, to obtain a license from the Central Bank. Effective February 19, 2002, life insurance companies and insurance intermediaries are required to report suspicious transactions. The State Ordinance on the Supervision of Money-Transfer Companies became effective August 12, 2003, and places money transfer companies under the supervision of the Central Bank. Quarterly reporting requirements became effective in 2004. A State Ordinance on the supervision of trust companies, which will designate the Central Bank as the supervisory authority, is being drafted.

In June 2000, Aruba enacted a State Ordinance making it a legal requirement to report the importation and exportation via harbor and airport of currency in excess of 20,000 Aruban guilders (approximately \$11,000). The law also applies to express courier mail services. There were two airport seizures of undeclared excess currency between April and September 2003.

During 2003, 10 persons were accused of money laundering. Initially eight were convicted under the State Ordinance penalizing money laundering, but the convictions were overturned on appeal. The other two were not prosecuted for money laundering under this ordinance.

Aruba signed a multilateral directive with Colombia, Panama, the United States, and Venezuela to establish an international working group to fight money laundering that occurs through the Black Market Peso Exchange (BMPE). The final set of recommendations on the BMPE was signed on March 14, 2002. The working group developed policy options and recommendations to enforce actions that will prevent, detect, and prosecute money laundering through the BMPE. The GOA is in the process of implementing the recommendations.

Through the Netherlands, Aruba participates in the FATF and therefore participates in the FATF mutual evaluation program. The GOA has a local FATF committee that oversees the implementation of the FATF recommendations. The local FATF committee reviewed the GOA anti-money laundering legislation and proposed, in accordance with the FATF Special Recommendations on Terrorist Financing, amendments to existing legislation, and introduction of new laws. In 2004, the Penal Code of Aruba was modified to criminalize terrorism, the financing of terrorism, and related criminal acts. Aruba is in compliance with seven of the Special Recommendations. Aruba will introduce the Sanctions Ordinance to become fully compliant with the Special Recommendations. As part of its commitment to combat the financing of terrorism, the GOA formed a separate committee to ensure cooperation within the Kingdom of the Netherlands.

Aruba is a member of CFATF and served as its Chairman in 2001. In 1999, the Netherlands extended application of the 1988 UN Drug Convention to Aruba. The Mutual Legal Assistance Treaty between the Netherlands and the United States applies to Aruba, though it is not applicable to requests for assistance relating to fiscal offenses addressed to Aruba. The Tax Information Exchange Agreement with the United States, which was signed in November 2003, became effective in September 2004. The MOT is a member of the Egmont Group, and is authorized by law to share information with members of the Egmont Group through a memorandum of understanding.

The Government of Aruba has shown a commitment to combating money laundering by establishing a solid anti-money laundering regime that is generally consistent with the recommendations of the FATF and the CFATF. Aruba should immobilize bearer shares under its fiscal framework and should enact its long-pending ordinance addressing the supervision of trust companies.

Australia

Australia is one of the key centers for capital markets in the Asia-Pacific region, with liquid markets in equities, debt, foreign exchange, and derivatives. Estimated activity across Australian exchange and over-the-counter financial markets amounted to over \$40 trillion in 2004. The market capitalization of domestic equities listed on the Australian Stock Exchange as of October 2004 was \$700 billion.

The Government of Australia (GOA) has maintained a comprehensive system to detect, prevent, and prosecute money laundering. The major sources of illegal proceeds are fraud and drug trafficking. The last three years have seen a noticeable increase in activities investigated by Australian law enforcement agencies that relate directly to offenses committed overseas.

Australia criminalized money laundering related to serious crimes with the enactment of the Proceeds of Crime Act 1987. This legislation also contained provisions to assist investigations and prosecution in the form of production orders, search warrants, and monitoring orders. It has now been replaced by two acts that came into force on January 1, 2003 (although proceedings that began prior to that date under the 1987 law will continue under that law). The Proceeds of Crime Act 2002 provides for civil forfeiture of proceeds of crime as well as for continuing and strengthening the existing conviction-based forfeiture scheme that was in the Proceeds of Crime Act 1987. The Proceeds of Crime Act 2002 also enables freezing and confiscation of property used in, intended to be used in, or derived from, terrorism offenses. It is intended to implement obligations under the UN International Convention for the Suppression of the Financing of Terrorism and resolutions of the UN Security Council relevant to the seizure of terrorism-related property. The Act also provides for forfeiture of literary proceeds where these have been derived by a person from commercial exploitation by the person of notoriety gained from committing a criminal offense.

The second law, the Proceeds of Crime (Consequential Amendments and Transitional Provisions) Act 2002, repealed the money laundering offenses which had previously been in the Proceeds of Crime Act 1987 and replaced them with updated offenses which have been inserted into the Criminal Code. The new offenses are graded according both to the level of knowledge required of the offender and the value of the property involved in the activity constituting the laundering. As a matter of policy all very serious offenses are now being progressively placed in the Criminal Code. The Criminal Code contains the general principles by which offenses are interpreted, as well as other serious offenses that in many cases will be relevant to the money laundering offenses.

The Financial Transaction Reports Act (FTR Act) of 1988 was enacted to combat tax evasion, money laundering, and serious crimes. The FTR Act requires banks and non-banking financial entities (collectively referred to as cash dealers) to verify the identities of all account holders and signatories to accounts, and to retain the identification record, or a copy of it, for seven years after the day on which the relevant account is closed. A cash dealer, or an officer, employee, or agent of a cash dealer, is protected against any action, suit, or proceeding in relation to the reporting process. The FTR Act also establishes reporting requirements for Australia's financial services sector. Required to be reported are: suspicious transactions, cash transactions in excess of Australian \$10,000 (approximately \$7,500), and international funds transfers equivalent to or exceeding Australian \$10,000. The FTR Act also obliges any person causing an international movement of currency of Australian \$10,000 (or a foreign currency equivalent) or more, into or out of Australia, either in person, as a passenger, by post or courier to make a report of that transfer.

FTR Act reporting also applies to non-bank financial institutions such as money exchangers; money remitters; stockbrokers; casinos and other gambling institutions; bookmakers; insurance companies; insurance intermediaries; finance companies; finance intermediaries; trustees or managers of unit trusts; issuers, sellers, and redeemers of travelers checks; bullion sellers; and other financial services licensees. Solicitors (lawyers) also are required to report significant cash transactions. Accountants do not have any FTR Act obligations. However, they do have an obligation under a self-regulatory industry standard not to be involved in money laundering transactions. The FTR Act also provides the GOA broad powers to seize, declare forfeit, or otherwise deny to persons the benefit of unlawful activity. It further creates a national Confiscated Assets Account from which the GOA may transfer assets to other governments.

The Australian Transaction and Reports Analysis Centre (AUSTRAC), Australia's Financial Intelligence Unit (FIU), was established under the FTR Act to collect, retain, compile, analyze, and disseminate FTR information and to monitor compliance with reporting requirements. AUSTRAC also provides advice and assistance to revenue collection and law enforcement agencies, and issues guidelines to cash dealers in terms of their obligations under the FTR Act and regulations. In June 2004, the Australian Taxation Office reported that more than AU \$75 million in assessments and penalties were directly attributed to the use of AUSTRAC intelligence, and that there were more than 1,700 investigations collectively reported by law enforcement agencies that involved the use of AUSTRAC's intelligence. For the year ending June 2004, AUSTRAC received 11,484 suspicious transaction reports, an increase of 42.5 percent over the previous year.

In June 2002, Australia passed the Suppression of the Financing of Terrorism Act 2002 (SFT Act). The aim of the SFT Act is to restrict the financial resources available to support the activities of terrorist organizations. This legislation criminalizes terrorist financing and substantially increases the penalties that apply when a person uses or deals with suspected terrorist assets that are subject to freezing. The SFT Act enhances the collection and use of financial intelligence by requiring cash dealers to report suspected terrorist financing transactions to AUSTRAC, and relaxes restrictions on information sharing with relevant authorities regarding the aforementioned transactions. The SFT Act also addresses commitments Australia has made with regard to the UNSCR 1373 and is intended to implement the UN International Convention for the Suppression of the Financing of Terrorism. The GOA froze three accounts related to an entity listed on the UNSCR 1267 Sanction Committee's consolidated list, the International Sikh Youth Federation, in September 2002. There have been no prosecutions or arrests under this legislation. The Security Legislation Amendment (Terrorism) Act 2002 created new criminal offenses for receiving funds from, or making funds available to, a terrorist organization. There are several investigations currently under way and the GOA is pursuing one prosecution related to the receipt of funds from a terrorist organization.

The SFTA amendments to the FTR Act were a significant milestone in the enhancement of AUSTRAC's international efforts. These amendments gave the Director of AUSTRAC the right to establish agreements with international counterparts to directly exchange intelligence, spontaneously and upon request. A review of the FTR Act is currently being undertaken to improve procedures, implement international best practices, and address further aspects of terrorist financing, including alternative remittance systems.

AUSTRAC has expanded its involvement in the fight against financial crimes by signing agreements for using AUSTRAC's financial transaction data with Centrelink (an Australian public assistance agency) and the Child Support Agency. The GOA believes that the welfare policies will greatly benefit from the availability of AUSTRAC data, and it is anticipated that early results will help reduce welfare fraud and related criminal conduct. The information available to Centrelink officers will relate specifically to significant cash transaction reports, international currency transfer reports, suspect transaction reports, and international funds transfer instructions.

The Internet-based Anti-Money Laundering Electronic Learning Application (AML E-Learning), launched in 2004, has assisted AUSTRAC's ongoing industry education program. The goal of this program is to assist those in the private sector, government agencies, and the public, domestically and internationally, to understand the broader issues within Australia's anti-money laundering environment. The AML E-learning application provides education on a variety of issues including the process of money laundering, terrorist financing, and the role of AUSTRAC. This comprehensive application is currently being market-tested with industry and the formal launch of the application will occur early in the new financial year.

AUSTRAC's work in a range of committees and working groups in the international Egmont Group of financial intelligence units and with the Asia/Pacific Group on Money Laundering has become a larger part of its international activities this year. Following the bombings in Bali in October 2002, the Australian Government announced an Australian \$10 million initiative managed by AusAID, to assist in the development of counterterrorism capabilities in Indonesia. As part of this initiative, AUSTRAC has embarked on a long-term technical assistance program to help Indonesia in developing an effective Financial Intelligence Unit (FIU). AUSTRAC conducted a project with the Government of Vanuatu to identify current issues facing the Vanuatu FIU and the potential strategies to meet these issues and enhance its operations. AUSTRAC is exploring similar assistance to other regional FIUs, with \$7.8 million in funding over the next four years under the Southeast Asia Counter-Terrorism Technical Assistance and Training Package AUSTRAC has provided training and other technical assistance to developing FIUs in its region..

In 2004, AUSTRAC received more than 10.7 million reports from cash dealers, solicitors, and members of the general public through its electronic data delivery system (EDDSWeb system). By encouraging cash dealers to fulfill their reporting requirements through electronic means, AUSTRAC is able to provide high quality data to its partner agencies in a timely manner. The increasing volume of reports submitted to AUSTRAC and the number of cash dealers using the EDDWeb system significantly increase both the volume of FTR intelligence available to partner agencies and the speed with which those agencies can access that intelligence. AUSTRAC believes the increase reflects its ongoing public awareness of suspicious transaction reporting requirements and procedures.

Australia is a member of the Financial Action Task Force (FATF), co-chairs the Asia/Pacific Group on Money Laundering (APG), and is also a member of the Pacific Island Forum, and the Commonwealth Secretariat. Through its funding and hosting of the Secretariat of the APG, Australia has elevated money laundering and terrorist financing issues to a priority concern among countries in the Asia/Pacific region.

AUSTRAC is a member of the Egmont Group, and has bilateral agreements allowing the exchange of financial intelligence with 35 countries. Memoranda of understanding (MOUs) have been signed with Argentina, the Bahamas, Belgium, Canada, Colombia, Cook Islands, Croatia, Cyprus, Denmark, France, Estonia, Guernsey, Indonesia, Ireland, Isle of Man, Israel, Italy, Korea, Lebanon, Malaysia, Mauritius, the Netherlands, New Zealand, Poland, Portugal, Singapore, Slovakia, Slovenia, Spain, South Africa, Thailand, the United Kingdom, the United States, Vanuatu, and Venezuela. In September 1999, a Mutual Legal Assistance Treaty between Australia and the United States entered into force.

AUSTRAC's director is a Co-Vice Chair of the Egmont Committee, a sub-group of the heads of FIUs, and was re-elected this year to that role and to the role as head of the Oceania regional group, which currently comprises the five Oceania region members of the Egmont Group-Australia, Cook Islands, Marshall Islands, New Zealand, and Vanuatu.

Australia is a party to the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime, the 1988 UN Drug Convention, the UN Convention for the

Suppression of the Financing of Terrorism, and the UN Convention against Transnational Organized Crime and its protocol on migrant smuggling.

Australia continues to pursue a well-balanced, comprehensive, and effective anti-money laundering regime that meets the objectives of the revised FATF Forty Recommendations and the Special Recommendations on Terrorist Financing. In December 2003, Australia's Minister of Justice announced that the government would proceed with a fundamental legislative overhaul to implement fully the FATF's revised Forty Recommendations and address further aspects of terrorist financing, including alternative remittance systems. The new standards will oblige Australia to expand customer due diligence to requirements for financial institutions and will extend anti-money laundering obligations to non-financial businesses and professions such as real estate agents, dealers in precious metals and stones, accountants, trust and company service providers, legal professionals, and notaries. It gives high priority to dealing with money laundering and to international cooperation. AUSTRAC officials expect the government to propose legislative revisions to implement the FATF Forty Recommendations in 2005.

The Government of Australia should implement financial transaction reporting by accountants and reporting of suspect transaction reports by solicitors. Australia should also implement a registration or licensing system for alternative remittance agents or non-profit organizations. Australia should also continue its leadership role in emphasizing money laundering/terrorist finance issues and trends within the Asia Pacific region and its commitment to providing training and technical assistance to the Asia/Pacific region.

Austria

Austria is not an important regional financial center, offshore tax haven, or banking center. There is no hard evidence that Austria is a major money laundering country; however, like any highly developed financial marketplace, Austria's financial and non-financial institutions are vulnerable to money laundering. The Austrian Interior Ministry's crime statistics show mixed developments regarding financial crime in Austria in 2003, with a significant increase in serious fraud. The percentage of undetected organized crime is believed to be enormous, with much of it coming from the former Soviet Union. Organized crime is involved in money laundering in connection with narcotics-trafficking and trafficking in persons, but apparently not in connection with contraband smuggling. Money laundering occurs within the Austrian banking system as well as in nonbank financial institutions and businesses. Many of the former-Soviet crime groups are trying to launder money in Austria by investing in real estate, exploiting existing business contacts, and trying to establish new contacts in politics and business. Criminal groups seem increasingly to use money transmitters and informal money transfer systems to launder money.

Austria criminalized money laundering in 1993. Predicate crimes are listed and include terrorist financing and many financial and other serious crimes. Regulations are stricter for money laundering by criminal organizations and terrorist "groupings," in which cases no proof is required that the money stems directly or indirectly from prior offenses.

Amendments to the Customs Procedures Act and the Tax Crimes Act, effective May 1, 2004, address the problem of cash couriers and international transportation of illegal-source currency and monetary instruments. Austrian customs authorities do not automatically screen all persons entering Austria for cash or monetary instruments. However, if asked, anyone carrying more than 15,000 euros must declare the funds and provide information on their source and use. Spot checks for currency at border crossings will continue. Customs has new authority to seize suspect cash at the border.

Adoption of the Banking Act of 1994 creates customer identification, record keeping, and staff training obligations for the financial sector. Entities subject to the Banking Act include banks, leasing

and exchange businesses, safe custody services, and portfolio advisers. The Insurance Act of 1997 includes similar regulations for insurance companies underwriting life policies. The Banking Act requires identification of all customers when entering an ongoing business relationship, i.e., in all cases of opening a checking account, a passbook savings account, a securities deposit account, etc. In addition, customer identification is required for all transactions of more than 15,000 euros for customers without a permanent business relationship with the bank. Banks and other financial institutions are required to keep records on customers and account owners. Bankers are protected with respect to their cooperation with law enforcement agencies. They are also not liable for damage claims resulting from delays in completing suspicious transactions. There is no requirement for banks to report large currency transactions, unless they are suspicious. The Austrian Financial Intelligence Unit (AFIU) is, however, providing information to banks to raise awareness of large cash transactions.

Since October 2003, financial institutions have adopted tighter identification procedures, requiring all customers appearing in person to present an official photo ID. These procedures also apply to trustees of accounts, who are now required to disclose the identity of the account beneficiary. However, the procedures still allow customers to carry out non-face-to-face transactions, including Internet banking, on the basis of a copy of a picture ID.

Some years ago the Financial Action Task Force (FATF) and the European Union (EU) criticized the Government of Austria (GOA) for permitting anonymous numbered passbook savings accounts. The Austrians temporarily “grandfathered” existing accounts, but they have now nearly all been closed. Since 2000, new passbook savings accounts and deposits to existing accounts require customer identification.

The Banking Act includes a due diligence obligation, and individual bankers are held legally responsible if their institutions launder money. In addition, banks have signed a voluntary agreement to prohibit active support of capital flight. On November 26, 2001, the Federal Economic Chamber’s Banking and Insurance Department, in cooperation with all banking and insurance associations, published an official “Declaration of the Austrian Banking and Insurance Industries to Prevent Financial Transactions in Connection with Terrorism.”

The 2003 Amendments to the Austrian Gambling Act, the Business Code, and the Austrian laws governing lawyers, notaries, and accounting professionals, introduce money laundering regulations regarding identification, record keeping, and reporting of suspicious transactions for dealers in high-value goods such as precious stones or metals, or works of art; auctioneers; real estate agents; casinos and dealers; lawyers; notaries; certified public accountants; and auditors.

Since 2002, the AFIU, the central repository of suspicious transaction reports, has been a section of the Austrian Interior Ministry’s Bundeskriminalamt (Federal Criminal Intelligence Service). During the first eleven months of 2004, the AFIU received 330 suspicious transaction reports from banks, and fielded 165 requests for information from Interpol and 85 from the Egmont Group. This represents a marked increase from the 288 suspicious transactions reported by banks in 2003, which led to seven convictions for money laundering. In 2002, 215 suspicious transactions were reported, also resulting in seven convictions for money laundering. Criminals are often convicted for other crimes, however, with money laundering serving as additional grounds for conviction.

Legislation implemented in 1996 allows for asset seizure and the forfeiture of illegal proceeds. The banking sector generally cooperates with law enforcement efforts to trace funds and seize illicit assets. The distinction between civil and criminal forfeiture in Austria is different from that in the U.S. legal system. However, Austria has regulations in the Code of Criminal Procedure that are similar to civil forfeiture, such as forfeiture in an independent procedure. Courts may freeze assets in the early stages of an investigation. While in previous years there had been little evidence of enforcement as law enforcement units tend to be understaffed, in the first eleven months of 2004, Austrian courts froze

assets worth 25.4 million euros, under instructions from the AFIU. This is significantly more than the 2.2 million euros in assets frozen by the courts in 2003, and the 8.1 million euros frozen in 2002.

The amended Extradition and Judicial Assistance Law provides for expedited extradition, expanded judicial assistance, and acceptance of foreign investigative findings in the course of criminal investigations, as well as enforcement of foreign court decisions. Austria has strict banking secrecy regulations, though bank secrecy will be lifted for cases of suspected money laundering. Moreover, bank secrecy does not apply in cases when banks and other financial institutions are required to report suspected money laundering. Such cases are subject to instructions of the authorities (i.e., AFIU) with regard to processing such transactions.

The Criminal Code Amendment 2002, effective October 1, 2002, introduces the following new criminal offense categories: terrorist “grouping,” terrorist criminal activities, and financing of terrorism. “Financing of terrorism” is defined as a separate criminal offense category in the Criminal Code, punishable in its own right. Terrorism financing is also included in the list of criminal offenses subject to domestic jurisdiction and punishment, regardless of the laws where the act occurred. Further, the money laundering offense is expanded to terrorist “groupings”. The law also gives the judicial system the authority to identify, freeze, and seize terrorist financial assets. With regard to terrorist financing, forfeiture regulations cover funds collected or held available for terrorist financing, and permit freezing and forfeiture of all assets that are in Austria, regardless of the place of the crime and the whereabouts of the criminal.

The Austrian authorities have circulated to all financial institutions the names of individuals and entities included on the UNSCR 1267 Sanctions Committee’s consolidated list and those designated by the United States or the EU. According to the Ministry of Justice and the AFIU, no accounts found in Austria ultimately showed any links to terrorist financing. After September 11, 2001, the AFIU froze several accounts on an interim basis, but in the course of trying to establish evidence, only two accounts were designated for seizure. Both later turned out to be cases of mistaken identity.

Since January 1, 2004, money remittance businesses require a banking license from the Financial Market Authority (FMA) and are subject to supervision. Informal remittance systems like hawala exist in Austria, but are subject to administrative fines for carrying out banking business without a license.

The GOA has undertaken some initial efforts that may help thwart the misuse of charitable and/or non-profit entities as conduits for terrorist financing. The law on associations (Vereinsgesetz, published in Federal Law Gazette No. I/66 of April 26, 2002) came into force on July 1, 2002, and covers charities and all other nonprofit associations in Austria (including religious associations, sports clubs, etc.). Materially, the law is very similar to its predecessor, but it calls for record keeping and auditing on the part of non-profit entities. The Vereinsgesetz regulates the establishment of associations, bylaws, organization, management, association register, appointment of auditors, and detailed accounting requirements. The Ministry of Interior’s responsibility is limited to approving the establishment of associations, regardless of the purpose of the association, unless it violates legal regulations.

There are no regular or routine checks made on associations established in Austria. Only in case of complaints will the Interior Ministry start investigations and, in case of serious violations of laws, it may officially prohibit the association from operating. The GOA has implemented the FATF’s Special Recommendations on Terrorist Financing, except for certain aspects of the recommendation regarding non-profit organizations. With regard to the recommendation on wire transfers, the GOA is waiting for an EU regulation, which is expected to be released in 2005 and will be immediately and directly applicable in Austria.

Austria has not enacted legislation that provides for sharing forfeited narcotics-related assets with other governments. However, the mutual legal assistance treaties (MLATs) can be used as an alternative vehicle to achieve equitable distribution of forfeited assets. Work on a bilateral instrument

pursuant to the U.S.-EU Mutual Legal Assistance Agreement, with the effect of supplementing the bilateral MLAT between the GOA and the United States, which has been in force since August 1, 1998, and which contains a provision on asset sharing, is in the final stages.

The GOA has been extremely cooperative with U.S. law enforcement investigations. The Austrian FMA and the New York State Banking Department are negotiating a bilateral agreement regarding bank supervision information exchange (including on-site examinations in the host country). In addition to the exchange of information with home country supervisors permitted within the EU, Austria has defined this information exchange more precisely in agreements with nine other EU members (France, Germany, Italy, Netherlands, United Kingdom, the Czech Republic, Hungary, Slovakia, and Slovenia).

The International Monetary Fund's spring 2004 Financial System Stability Assessment (FSAP) states that Austria has made significant progress in the past few years in bringing its anti-money laundering and counterterrorism financing regime into compliance with international standards. The FSAP notes that the overall legal and institutional framework currently in place is comprehensive and that Austria has achieved a good level of compliance with the FATF Recommendations. The FMA has created an internal Task Force on Money Laundering, and in following up on suggestions for further improvements, started to publish on its homepage circulars with additional guidance for banks and other financial institutions on fighting money laundering and terrorist financing.

Austria is a party to the 1988 UN Drug Convention and the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime. Austria ratified the UN Convention against Transnational Organized Crime on September 23, 2004, and the UN International Convention for the Suppression of the Financing of Terrorism on April 15, 2002. Austria has endorsed fully the Basel Committee's "Core Principles for Effective Banking Supervision." Austria is a member of the FATF and the EU. The AFIU is a member of the Egmont Group.

The Government of Austria has criminalized money laundering for all serious crime, and passed additional legislation necessary to construct a viable anti-money laundering regime. Austria is very cooperative with U.S. authorities in money laundering cases. But some improvements could still be made. There remains a need for identification procedures for customers in "non-face to face" banking transactions. The criminal code should be amended to penalize negligence in reporting money laundering and terrorist financing transactions. The AFIU and law enforcement should be provided with sufficient resources to adequately perform their functions. AFIU and other government personnel should be protected against damage claims because of delays in completing suspicious transactions. Additionally, Austria should adequately regulate its charitable and non-profit entities to reduce their vulnerability to misuse by criminal and terrorist organizations and their supporters.

Azerbaijan

Azerbaijan is not considered a major center for international money laundering, given its small, underdeveloped banking sector. It is difficult, however, to determine the extent of money laundering activity, due to existing bank secrecy laws and the number of "pocket banks." The large number of cash transactions, as well as the legacy of corruption and tax evasion, compounds the problem.

It is reported that Azerbaijan is currently drafting comprehensive anti-money laundering legislation. The Government of Azerbaijan (GOAJ) criminalized money laundering relating to narcotics trafficking in 2000. Additionally, Parliament has made amendments to its banking and currency laws to prevent some money laundering activities. In November 2001, Azerbaijan established a threshold sum of \$50,000 for reporting to its Customs agency currency transfers from abroad. Funds transfers abroad by individuals in excess of \$10,000 must have approval of the National Bank of Azerbaijan (NBA).

Money Laundering and Financial Crimes

In May 2003, the GOAJ established an inter-ministerial experts group responsible for drafting anti-money laundering and counterterrorist finance legislation. As of December 2004, the experts group, led by the NBA, has prepared draft anti-money laundering legislation that would include establishment of a financial intelligence unit (FIU) and would expand the predicate crimes for money laundering beyond narcotics trafficking.

The NBA issues licenses and supervises commercial banks, foreign exchange offices and money remitters. To further its regulatory role, it issues binding regulations for the banking sector; however, neither regulations nor guidance notes have been issued specifically addressing anti-money laundering measures. In August 2004, the NBA established an internal anti-money laundering working group to work with local commercial banks.

In March 2004, the GOAJ enacted a comprehensive new Law on Banks that provides for improved “fit and proper” criteria for bank administrators and improved supervision of commercial banks. In November 2004, the NBA prohibited capital investments in banks operating in Azerbaijan by entities and individuals that are registered in any of the six countries on the FATF list of Non-Cooperative Countries and Territories.

The new Law on Banks prohibits numbered accounts, although existing numbered accounts are allowed to continue until their terms expire. The NBA has issued know your customer directives to banks. The requirements include identification procedures and record keeping. Similar rules do not apply to the insurance or securities sectors. There is no requirement to report suspicious transactions, although some banks voluntarily report such transactions to the NBA. In October 2004, the NBA instructed commercial banks to establish internal procedures to identify every operation and client throughout the transaction process. Also in 2004, the NBA issued new rules on corporate management for all commercial banks.

The Ministry of Finance supervises insurance companies. The Insurance Department at the Ministry follows the anti-money laundering program coordinated by the NBA. The Ministry conducts annual audits of insurance companies; one of the objectives of the audit is to check for money laundering activity. The State Securities Committee, which regulates the securities market, has issued anti-money laundering directives. However, implementation is weak due to the large number of cash transactions and the reliance on the banks’ due diligence for some pre-funded transactions.

Article 214-1 of Azerbaijan’s Criminal Code criminalizes the financing of terrorism, but the Code does not address terrorist fundraising. Another deficiency is that the law provides only for personal liability and does not include criminal liability for entities involved in terrorist financing. The NBA distributes the lists of individuals and entities designated pursuant to U.S. Executive Order 13224 and pursuant to UNSCRs 1267 and 1390. As of 2003, the NBA had identified and frozen the assets of at least one designated entity.

The GOAJ does not have in place a formalized regime to seize and confiscate assets. Investigators can issue seizure orders in urgent cases with no subsequent judicial approval necessary. The NBA has the authority to freeze accounts, but freezing without delay cannot be done readily. Confiscation of assets is an optional action in prosecutions. Mutual legal assistance is limited to narcotics-related offenses.

Azerbaijan is a party to the 1988 UN Drug Convention, the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime. In November 2001, Azerbaijan ratified the Council of Europe Convention on Laundering, Search, Seizure and Confiscation of the Proceeds from Crime. In February 2004, Azerbaijan signed the UN Convention against Corruption. In May 2003, Azerbaijan was the subject of a mutual evaluation by the Council of Europe’s Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL), of which it is a member.

The Government of Azerbaijan (GOAJ) should enact anti-money laundering legislation that establishes a viable anti-money laundering regime, to include expansion of the definition of money laundering beyond narcotics trafficking, reporting suspicious transactions to a financial intelligence unit and the establishment of appropriate mechanisms to seize, freeze and confiscate assets without delay. Azerbaijan should amend current terrorist finance legislation to criminalize terrorist fundraising and establish criminal liability for legal entities. Additionally, Azerbaijan should provide awareness programs and training to its law enforcement and prosecutorial agencies.

Bahamas

The Commonwealth of the Bahamas is an important regional and offshore financial center. Financial services account for approximately 15 percent of the gross domestic product. The U.S. dollar circulates freely in the Bahamas, and is accepted everywhere on par with the Bahamian dollar. Money laundering in the Bahamas falls into two main categories, financial fraud and that related to the proceeds of cocaine and marijuana trafficking.

According to the Royal Bahamas Police Force (RBPF), money laundering methods range from the purchase of real estate, large vehicles, and jewelry to the processing of money through a complex national or international web of legitimate businesses and shell companies. However, in the case of drug-trafficking crimes, the illicit proceeds usually take the form of cash or are quickly converted into cash. Amendments to and implementation of anti-money laundering laws since 2000 have hindered launderers' ability to deposit large sums of cash. As a result, a new trend has developed of storing extremely large quantities of cash in security vaults at properties deemed to be safe houses.

The Bahamas has two 24-hour casinos in Nassau and one in Freeport/Lucaya, and a fourth is scheduled to open in 2005 as part of a new resort in Georgetown. Cruise ships that overnight in Nassau may operate casinos. There are reported to be over 10 Internet gaming sites based in the Bahamas. Under Bahamian law, Bahamian residents are prohibited from gambling in the casinos.

The International Business Companies Act 2000 eliminates anonymous ownership of IBCs by prohibiting bearer shares and imposing know your customer (KYC) requirements. As a result, the Bahamas has become less attractive to both potential and existing IBC owners. The Central Bank of the Bahamas Act 2000 gives the Bank's Governor the right to deny licenses to banks or trust companies he deems unfit to transact business in the Bahamas. During 2001, the Governor revoked the licenses of 55 of these banks, including the British Bank of Latin America and the Federal Bank, both identified in a U.S. Senate report as being at high risk of involvement in money laundering, and Al-Taqwa Bank, which in October 2001 was placed on the list of Specially Designated Global Terrorists, designated by the United States pursuant to Executive Order 13224. Key features of the Act include: provisions upgrading banking supervision, establishment of a Financial Intelligence Unit (FIU); introduction of licensing of financial and corporate service providers, the removal of bearer shares from IBCs' shareholding structures, and the granting of permission for Bahamians to own IBCs.

The number of banks and trusts declined from 301 in 2003 to 270 as of September 2004. This was due to the Central Bank's requirement that "managed banks" (those without a physical presence but which are represented by an agent such as a lawyer or another bank) either establish a physical presence in the Bahamas (an office, separate communications links, and a resident director) or cease operations.

During 2004, the Government of the Commonwealth of the Bahamas (GCOB) continued to implement legislative reforms that strengthen its anti-money laundering regime and make it less vulnerable to exploitation by money launderers and other financial criminals. Since being removed from the Financial Action Task Force (FATF) list of Non-Cooperative Countries and Territories (NCCT) in the fight against money laundering, the Bahamas has been working to implement legislative and regulatory reforms to fulfill international obligations. The FATF has expressed satisfaction with the

progress achieved by the Bahamas in addressing mutual legal assistance requests from member countries but continues to express concerns over regulatory requests. The FATF continues to monitor the progress the Bahamas is making in implementing its anti-money laundering regime.

The Financial Transaction Reporting Act 2000 requires financial institutions (such as banks and trusts, insurance companies, real estate brokers, casino operators, and others which hold or administer accounts for clients) to verify the identity of account holders. The Act also requires financial institutions to report suspicious transactions to the FIU and the police. The Act furthermore establishes KYC requirements. By December 31, 2001, financial institutions were obliged to verify the identities of all their existing account holders and of customers without an account who conduct transactions over \$10,000. All new accounts established in 2001 or later have to be in compliance with KYC rules before they are opened. As of October 2002, only 42 percent of holders of existing accounts had been verified.

From their introduction, the KYC requirements caused complaints by Bahamians who were unable to produce adequate documentation when attempting to open accounts in domestic banks. (The absence of house numbers on most Bahamian streets, the prevailing practice of utility companies' issuing bills only in the name of landlords rather than tenants, and the scarcity of picture identification among Bahamians contribute to these documentation problems.) Some Bahamian bankers contend that under the strengthened anti-money laundering regulations, it is more difficult to make deposits in a Bahamian bank than in other jurisdictions.

In October 2002, the Minister of Financial Services and Investments, a post created by the Progressive Liberal Party government elected in April 2002, lamented that the rigid, overly prescriptive requirements of the KYC rules had caused financial institutions to harass longstanding, well-known clients for documents, and observed that those rules had been applied to accounts of low-risk customers, including pensioners, whose opportunities for money laundering were minimal. The GCOB declined banking officials' recommendations to apply a risk-based approach to "grandfather" Bahamas-based accounts considered to be in compliance, and instead extended the compliance deadline to April 1, 2004.

In 2002, the Bahamian Court of Appeal reversed a controversial lower court decision that had held unconstitutional a provision of the FIU Act 2000, which created Bahamas' FIU. The appellate decision confirmed the power of the FIU to freeze a financial account without first obtaining a court order. The plaintiff, a British Virgin Islands firm, did not pursue a possible appeal to the Judicial Committee of the Privy Council in London.

During 2004, the FIU received over 100 suspicious transaction reports, of which, approximately 14 were passed to the police. The eight-member Tracing and Forfeiture/Money Laundering Investigation Section of the Drug Enforcement Unit of the RBPF is the primary financial law enforcement agency in the Bahamas, with the responsibility for investigating suspicious transaction reports received from the FIU, all reports of money laundering received from law enforcement agencies or the public, and matters of large cash seizures. It also investigates local drug-traffickers and other serious crime offenders, to determine whether they benefited from their criminal conduct.

In November 2004, the Anti-Terrorism Act was passed by Parliament and assented to by the Governor General to implement the provisions of the UN International Convention for the Suppression of the Financing of Terrorism. The Attorney General's office conducted a series of public meetings with representatives from legislature and civil society, and members of public service, to garner support and educate the public on the nature of the Act. In addition to formally criminalizing terrorism and making it a predicate crime for money laundering, the law provides for the seizure and confiscation of terrorist assets, reporting of suspicious transactions related to terrorist financing, and strengthening of existing mechanisms for international cooperation in this regard. This law places the Bahamas in compliance with international standards related to terrorist financing.

As a matter of law, the GCOB seizes assets derived from international drug trade and money laundering. Over the years, joint U.S./GCOB investigations have resulted in the seizure of cash, vehicles and boats. The seized items are in the custody of the GCOB. Some are in the process of confiscation while some remain uncontested. There are currently over 20 extradition requests pending resolution with the GCOB, which all involve money laundering and drug smuggling offenses.

A 1994 U.S.-Bahamas treaty permits the extradition of Bahamian nationals to the United States. However, defendants can appeal a magistrate's decision in a local court and, subsequently, to the Privy Council in London. The Bahamas has a Mutual Legal Assistance Treaty with the United States, which entered into force in 1990, and agreements with the United Kingdom and Canada. The Attorney General's Office for International Affairs manages multilateral information exchange requests. The Central Bank of the Bahamas Act 2000 expands the powers of the Central Bank to enable it to respond to requests for information from overseas regulatory authorities. The Bahamas FIU has signed several memoranda of understanding with other FIUs for the exchange of information. As a result of the Financial Intelligence Unit (Amendment) Act 2001, the FIU is now able to cooperate and render assistance to any foreign FIU that performs functions similar to those of the Bahamian FIU.

In December 2004, the Bahamas signed an agreement for future information exchange with the U.S. Securities and Exchange Commission to ensure that requests can be completed in an efficient and timely manner. During 2003, the GCOB's implementation and enforcement of legislative reforms progressed; however, the GCOB continues to face international criticism in regard to the effectiveness and speed with which these measures are being implemented, and the level of its responses to international requests for assistance.

On October 2, 2001, the Bahamas signed, but has not yet ratified, the UN International Convention for the Suppression of the Financing of Terrorism. In April 2001, the Bahamas signed, but has not yet ratified, the UN Convention against Transnational Organized Crime. The Bahamas is a party to the 1988 UN Drug Convention and is a member of the Offshore Group of Banking Supervisors. The Bahamas is a member of the Caribbean Financial Action Task Force and was Chair in 2003. The FIU is a member of the Egmont Group.

The Government of the Commonwealth of the Bahamas has enacted substantial reforms that could reduce its financial sector's vulnerability to money laundering; however, it must steadfastly and effectively implement those reforms. The Bahamas should provide adequate resources to its law enforcement and prosecutorial/judicial personnel to ensure that investigations and prosecutions are satisfactorily completed, and requests for international cooperation are efficiently processed.

Bahrain

Bahrain has one of the most diversified economies in the Gulf Cooperation Council (GCC). Unlike most of its neighbors, oil accounts for only 25 percent of Bahrain's gross domestic product (GDP). Bahrain has promoted itself as an international financial center in the Gulf region. It hosts a mix of: 367 diverse financial institutions, including 187 banks, of which 51 are offshore banking units (OBUs); 37 investment banks; and 25 commercial banks, of which 17 are foreign owned. In addition, there are 29 representative offices of international banks, 21 moneychangers and money brokers, and several other investment institutions, including 84 insurance companies. The vast network of Bahrain's banking system, along with its geographical location in the Middle East as a transit point along the Gulf and into Southwest Asia, may attract money laundering activities. It is thought that the greatest risk of money laundering stems from questionable foreign proceeds that transit Bahrain.

In January 2001, the Government of Bahrain (GOB) enacted an anti-money laundering law that criminalizes the laundering of proceeds derived from any predicate offense. The law stipulates punishment of up to seven years in prison, and a fine of up to one million Bahraini dinars (\$2.65

million) for convicted launderers and those aiding or abetting them. If organized criminal affiliation, corruption, or disguise of the origin of proceeds is involved, the minimum penalty is a fine of at least 100,000 dinars (approximately \$265,000) and a prison term of not less than five years.

Following enactment of the law, the Bahrain Monetary Agency (BMA), as the principal financial sector regulator, issued regulations requiring financial institutions to file suspicious transaction reports (STRs), to maintain records for a period of five years, and to provide ready access for law enforcement officials to account information. Immunity from criminal or civil action is given to those who report suspicious transactions. Even prior to the enactment of the new anti-money laundering law, financial institutions were obligated to report suspicious transactions greater than 6,000 dinars (approximately \$15,000) to the BMA. The current requirement for filing STRs has no minimum threshold. Additionally, in early 2005, the BMA is preparing to establish a secure online website that banks and other financial institutions can use to file STRs.

The law also provides for the formation of an interagency committee to oversee Bahrain's anti-money laundering regime. Accordingly, in June 2001, the Anti-Money Laundering Policy Committee was established and assigned the responsibility for developing anti-money laundering policies and guidelines. The committee, which is under the chairmanship of the Undersecretary of Finance and National Economy, includes members from the BMA; the Bahrain Stock Exchange; and the Ministries of Finance and National Economy, Interior, Justice, Commerce, Labor and Social Affairs, and Foreign Affairs. The law further provides additional powers of confiscation, and allows for better international cooperation.

In addition, the law provides for the creation of the Anti-Money Laundering Unit (AMLU) as Bahrain's financial intelligence unit (FIU). The AMLU, which is housed in the Ministry of Interior, is empowered to receive reports of money laundering offenses; conduct investigations; implement procedures relating to international cooperation under the provisions of the law; and execute decisions, orders, and decrees issued by the competent courts in offenses related to money laundering. The AMLU became a member of the Egmont Group of FIUs in July 2003.

The AMLU receives suspicious transaction reports (STRs) from banks and other financial institutions, investment houses, broker/dealers, moneychangers, insurance firms, real estate agents, gold dealers, financial intermediaries, and attorneys. Financial institutions must also file STRs with the BMA, which supervises these institutions. Non-financial institutions are required under a Ministry of Commerce (MOC) directive to also file STRs with that ministry. The BMA analyzes the STRs, of which it receives copies, as part of its scrutiny of compliance by financial institutions with anti-money laundering and combating terrorist financing (AML/CFT) regulations, but it does not independently investigate the STRs (responsibility for investigation rests with the AMLU). The BMA may assist the AMLU with its investigations, where special banking expertise is required.

In 2003, the MOC published new anti-money laundering guidelines, which govern all non-financial institutions. The MOC system of requiring dual STR reporting to both it and the AMLU mirrors the BMA's system. Good cooperation exists between MOC, BMA, and AMLU, with all three agencies describing the double filing of STRs as a backup system. The AMLU and BMA's compliance units analyze the STRs and work together on identifying weaknesses or criminal activity, but it is the AMLU that must conduct the actual investigation and forward cases of money laundering and terrorist financing to the Office of Public Prosecutor. From January through December 2004, the AMLU has received and investigated 121 STRs, ten of which have been forwarded to the courts and awaiting verdicts.

There are 51 BMA-licensed offshore banking units (OBUs) that are branches of international commercial banks. OBUs are prohibited from accepting deposits from citizens and residents of Bahrain, and from undertaking transactions in Bahraini dinars (with certain exemptions, such as dealings with other banks and government agencies). In all other respects, OBUs are regulated and

supervised in the same way as the domestic banking sector. They are subject to the same regulations, on-site examination procedures, and external audit and regulatory reporting obligations.

However, Bahrain's Commercial Companies Law (Legislative Decree 21 of 2001) does not permit the registration of offshore companies or international business companies (IBCs). All companies must be resident and maintain their headquarters and operations in Bahrain. Capital requirements vary, depending on the legal form of company, but in all cases the amount of capital required must be sufficient for the nature of the activity to be undertaken. In the case of financial services companies licensed by BMA, various minimum and risk-based capital requirements are also applied (in addition to a variety of other prudential requirements), in line with international standards of Basel Committee's "Core Principles for Effective Banking Supervision."

In March 2004, Bahrain issued a Legislative Decree ratifying the Convention against Transnational Organized Crime. In June 2004, Bahrain published two Legislative Decrees ratifying the UN International Convention for the Suppression of the Financing of Terrorism, and the UN International Convention for the Suppression of Terrorist Bombings. In January 2002, the BMA issued a circular implementing the Financial Action Task Force (FATF) Special Eight Recommendations on Terrorist Financing as part of the BMA's AML regulations, and subsequently froze two accounts designated by the UNSCR 1267 Sanctions Committee and one account listed under U.S. Executive Order 13224. In early 2005, the BMA plans to issue a circular to implement the newest FATF special recommendation (#9) on cash couriers.

BMA Circular BC/1/2002 states that money changers may not transfer funds for customers in another country by any means other than Bahrain's banking system. In addition, all BMA licensees are required to include details of the originator's information with all outbound transfers. With respect to incoming transfers, licensees are required to maintain records of all originator information and to carefully scrutinize inward transfers that do not contain the originator's information, as they are presumed to be suspicious transactions. Licensees that suspect, or have reasonable grounds to suspect, that funds are linked or related to suspicious activities-including terrorist financing-are required to file suspicious transaction reports (STRs). Licensees must maintain records of the identity of their customers in accordance with the BMA's anti-money laundering regulations, as well as the exact amount of transfers. During 2004, the BMA consulted with the industry on changes to its existing AML/CFT regulations, to reflect revisions by the FATF to its Forty plus Nine Recommendations. Revised and updated BMA regulations are expected in early 2005.

Legislative Decree No. 21 of 1989 governs the licensing of non-profit organizations. The Ministry of Labor and Social Affairs (MLSA) is responsible for licensing and supervising charitable organizations in Bahrain. (In January 2005, a cabinet reshuffle split the MLSA into the Ministry of Labor and the Ministry of Social Affairs (MSA), with the MSA keeping the charities portfolio.) In February 2004, as part of its efforts to strengthen the regulatory environment and fight potential terrorist financing, MLSA issued a Ministerial Order regulating the collection of donated funds through charities and their eventual distribution, to help confirm the charities' humanitarian objectives. The regulations are aimed at tracking money that is entering and leaving the country. These regulations require organizations to keep records of sources and uses of financial resources, organizational structure, and membership. Charitable societies are also required to deposit their funds with banks located in Bahrain and may have only one account in one bank. The MLSA has the right to inspect records of the societies to insure their compliance with the laws. Banks must report to the BMA any transaction by a charitable institution that exceeds 20,000 dinars (around \$41,000). MLSA has the right to inspect records of the societies to insure their compliance with the law.

The GOB is contemplating the establishment a special court to try financial crimes, and judges are undergoing special training to handle such crimes.

Bahrain is a leading Islamic finance center in the region. The sector has grown considerably since the licensing of the first Islamic bank in 1979. Bahrain has 28 Islamic banks and financial institutions. Given the large share of such institutions in Bahrain's banking community, the BMA has developed an appropriate framework for regulating and supervising the Islamic banking sector, applying regulations and supervision as it does with respect to conventional banks. In March 2002, the BMA introduced a comprehensive set of regulations for Islamic banks called the Prudential Information and Regulatory Framework for Islamic Banks (PIRI). The framework was designed to monitor certain banking aspects, such as capital requirements, governance, control systems, and regulatory reporting.

In November 2004, Bahrain hosted the inaugural meeting of the Middle East and North Africa Financial Action Task Force (MENAFATF), which decided to place its Secretariat in Bahrain's capital city of Manama. An initial planning meeting was held in Manama in January 2004, and the FATF unanimously endorsed the MENAFATF proposal in July 2004. Bahrain's leadership was instrumental in establishing and hosting this entity. As a FATF-styled regional body, it will promote best practices on AML/CFT issues, conduct mutual evaluations of its members against the FATF standards, and work with its members to comply with international standards and measures. The creation of the MENAFATF is critical for pushing the region to improve the transparency and regulatory frameworks of their financial sectors. The selection of Bahrain to host of the Secretariat of MENAFATF further demonstrates its commitment to combat financial crimes.

Bahrain has demonstrated a commitment to establish a strong anti-money laundering and terrorist financing regime and appears determined to engage its large financial sector in this effort. The government should follow through by aggressively enforcing its laws and regulations and developing and prosecuting anti-money laundering cases. The Anti-Money Laundering Unit should continue with its efforts to gain the necessary expertise in tracking suspicious transactions and in initiating and pursuing investigations in anti-money laundering and counterterrorist financing cases.

Bangladesh

Bangladesh is not an important regional financial center. There are no indications that substantial funds are laundered through the official banking system. The principal money laundering vulnerability remains the widespread use of the underground hawala or hundi system to transfer value outside the formal banking network. The vast majority of hawala transactions in Bangladesh are used to repatriate wages from Bangladeshi workers abroad. However, the hawala system is also used to avoid taxes, customs duties and currency controls and as a compensation mechanism for the significant amount of goods smuggled into Bangladesh. Traditionally, trade goods provide counter valuation in hawala transactions.

An estimated \$1 billion dollars worth of dutiable goods is smuggled every year from India into Bangladesh. A comparatively small amount of goods is smuggled out of the country into India. Instead, hard currency and other assets flow out of Bangladesh to support the smuggling networks. Corruption is a major area of concern in Bangladesh. The non-convertibility of the local currency (the taka) coupled with intense scrutiny on foreign currency transactions in formal financial institutions also contribute to the popularity of both hawala and black market money exchanges. Money exchanges outside the formal banking system are illegal. Offshore financial accounts are not permitted in Bangladesh. During the last year, there has been a significant increase in the amount of money transferred through the formal banking system as a result of the efforts by the Bangladesh Government to increase the efficiency of the process.

Money laundering is a criminal offense. In April 2002, Bangladesh enacted the Money Laundering Prevention Act (MLPA), which applies to all forms of money laundering. The MLPA authorizes the country's Central Bank, the Bangladesh Bank, to supervise the activities of banks, investigate all offenses related to money laundering, and take appropriate steps to address any problems. The MLPA

requires financial institutions to accurately identify customers and to report suspicious transactions to Bangladesh Bank. The MLPA requires financial institutions to preserve customer information while an account is open and for five years from the date the account is closed. Financial institutions must supply this information to the Bangladesh Bank upon request and inform the Central Bank of any suspicious transactions. The MLPA imposes penalties for money laundering and allows the Bangladesh Bank to fine financial institutions no more than 100,000 taka (less than \$2000) for failure to retain or report the required data on suspicious transactions.

Banks in Bangladesh are still establishing the implementing procedures and “know your customer” practices as required by the MLPA. Since Bangladesh does not have a national identify card and because most Bangladeshis do not have a passport, there are difficulties in enforcing customer identification requirements. In most cases, banking records are maintained manually with little support technology, although this is changing, especially in head offices. Accounting procedures used by the Bangladesh Bank may not in every respect achieve international standards. Bangladesh does not have “due diligence” or “banker negligence” laws that make individual bankers responsible if their institutions launder money, nor does it have “safe harbor” provisions protecting reporting individuals.

Bangladesh does not have a Financial Intelligence Unit (FIU). However, the Money Laundering Prevention Department of Bangladesh Bank acts as a de facto FIU and has authority to seize assets. The Bangladesh Bank has received 148 suspicious transaction reports since the MLPA was passed in 2002, of which 134 were resolved without further action. The remaining 14 reports are under investigation. The Bureau of Anti-Corruption, which prosecuted cases under the MLPA, was pursuing 17 cases in 2004. These cases were transferred to the Anti-Corruption Commission, which officially came into existence in November 2004, where they remain pending. Police responsible for Zia International Airport have an additional 22 cases under the MLPA pending with the courts.

Bangladeshis are not allowed to take more than 3,000 taka (approximately \$50) out of the country. There is no limit as to how much currency can be brought into the country, but amounts over \$5,000 must be declared. Customs is primarily a revenue collection agency, accounting for 40-50 percent of annual Bangladesh government income.

Bangladesh does not have a law that makes terrorist financing a crime. In 2003, Bangladesh froze a nominal sum in an account of a designated entity on the UNSCR 1267 Sanctions Committee’s Consolidated List and identified an empty account of another entity. In 2004, following investigation of the accounts of an entity listed on the UNSCR 1267 consolidated list, Bangladesh Bank fined two local banks for failure to comply with Bangladesh Bank regulatory directives. Bangladesh has not signed the UN International Convention for the Suppression of the Financing of Terrorism or the UN Convention against Transnational Organized Crime. Bangladesh is a party to the 1988 UN Drug Convention, and is a member of the Asia/Pacific Group on Money Laundering.

In 2004, the Bangladesh Bank issued “Guidance Notes on Prevention of Money Laundering” and designated effective anti-money laundering compliance programs as a “core risk” subject to the annual bank supervision process of the Bangladesh Bank. Banks are required to have an anti-money laundering compliance unit in their head office and a designated anti-money laundering compliance officer in each bank branch. The Bangladesh Bank conducts training programs for compliance officers based on the guidance notes. Bangladesh Bank has identified weaknesses in the existing MLPA as an impediment to effective enforcement of the MLPA. Bangladesh has established a task force, which includes Bangladesh Bank officials, to recommend changes to the MLPA.

The Government of Bangladesh should criminalize terrorist financing. It should also create a centralized FIU to receive suspicious transaction reports and disseminate information to law enforcement. It should sign and ratify the UN International Conventions for the Suppression of the Financing of Terrorism and against Transnational Organized Crime. Customs and law enforcement agencies should be more cognizant of money laundering in general and trade-based money laundering

specifically. Judicial and prosecutorial reforms will be necessary to counteract case backlog and current lengthy delays in dispensing justice. The MPLA task force's recommendations should be considered, and appropriate changes should be made to aid in enforcement of the MPLA.

Barbados

As a transit country for illicit narcotics, Barbados is both attractive and vulnerable to money launderers. The Government of Barbados (GOB) has taken a number of steps in recent years to strengthen its anti-money laundering legislation.

As of November 2004, the Barbados domestic sector consists of six banks, two merchant banks, 38 credit unions and one money remitter. The offshore sector includes 4,635 international business companies (IBCs), 413 exempt insurance companies, and 53 offshore banks, which are all regulated and supervised by the Central Bank. The Central Bank has estimated that there is approximately \$32 billion worth of assets in Barbados' offshore banks. Barbados has no Foreign Sales Corporations (FSCs) and no free trade zones.

The GOB initially criminalized drug money laundering in 1990 through the Proceeds of Crime Act, No. 13, which also authorizes asset confiscation and forfeiture, permits suspicious transaction disclosures to the Director of Public Prosecutions, and exempts such disclosures from civil or criminal liability. The Money Laundering (Prevention and Control) Act 1988 (MLPCA) criminalizes the laundering of proceeds from unlawful activities that are punishable by at least one year's imprisonment. The MLPCA makes money laundering punishable by a maximum of 25 years in prison and a maximum fine of Barbadian dollars (BDS) 2 million (approximately \$1 million).

The MLPCA applies to a wide range of financial institutions, including domestic and offshore banks, IBCs and insurance companies. These institutions are required to identify their customers, cooperate with domestic law enforcement investigations, report and maintain records of all transactions exceeding BDS 10,000 (approximately \$5,000), and establish internal auditing and compliance procedures. Financial institutions must also report suspicious transactions to the Anti-Money Laundering Authority (AMLA). The AMLA was established in August 2000 to supervise financial institutions' compliance with the MLPCA and issue training requirements and regulations for financial institutions.

The definition of a financial institution was widened in an amendment to the MLPCA in 2001 to include "any person whose business involves money transmission services, investment services, or any other services of a financial nature." This amendment was designed to bring entities other than traditional financial institutions under the supervision of the AMLA, and therefore subject to the requirements of the MLPCA.

The International Business Companies Act (1992) provides for general administration of IBCs. The Ministry of International Trade and Business vets and grants licenses to IBCs after applicants register with the Registrar of Corporate Affairs. Bearer shares are not allowed, and financial statements of IBCs are audited if total assets exceed \$500,000. To enhance due diligence efforts, the 2001 International Business (Miscellaneous Provisions) Act requires the provision of more information than was previously provided with IBC license applications or renewals.

The Barbados Central Bank's 1997 Anti-Money Laundering Guidelines for Licensed Financial Institutions were revised in 2001. The revised know your customer guidelines were issued in conjunction with the AMLA, and provide detailed guidance to financial institutions regulated by the Central Bank. The Central Bank undertakes regular on-site examinations of licensees and applies a comprehensive methodology that seeks to assess the level of compliance with legislation and guidelines.

The Ministry of Finance issues banking licenses after the Central Bank receives and reviews applications, and recommends applicants for licensing. The Offshore Banking Act (1985) gives the Central Bank authority to supervise and regulate offshore banks, in addition to domestic commercial banks. The International Financial Services Act replaced the 1985 Act in June 2002, in order to incorporate fully the standards established in the Basel Committee's "Core Principles for Effective Banking Supervision." The 2002 law provides for on-site examinations of offshore banks. This allows the Central Bank to augment its off-site surveillance system of reviewing anti-money laundering policy documents and analyzing prudential returns. The Central Bank may also refer suspicious activity reports (SARs) to the Barbados Financial Intelligence Unit (FIU). Offshore banks must submit quarterly statements of assets and liabilities and annual balance sheets to the Central Bank.

Supervision of the financial sector is shared among the Central Bank; the Ministry of Commerce, Consumer Affairs, and Business Development; the Supervisor of Insurance; the Registrar of Cooperatives; and the Barbados Securities Commission. The aforementioned agencies also supervise compliance with the MLPCA and AMLA requirements. The GOB announced in 2003 that it is considering a consolidation of financial supervision, in which the Central Bank would retain bank supervision and a financial services commission would regulate other financial services.

The FIU, located within the AMLA, was established in September 2000. The FIU was first established by administrative order, but subsequently implemented in statute by the MLPCA (Amendment) Act, 2001. The FIU is fully operational. By the end of December 2004, the FIU had received 55 SARs. The FIU forwards information to the Financial Crimes Investigation Unit of the police if it has reasonable grounds to suspect money laundering. The FIU continues to share information and has a very close working relationship with U.S. law enforcement.

The MLPCA also provides for asset seizure and forfeiture. In November 2001, the GOB amended its financial crimes legislation to shift the burden of proof to the accused to demonstrate that property in his or her possession or control is derived from a legitimate source. Absent such proof, the presumption is that such property was derived from the proceeds of crime. The law also enhances the GOB's ability to freeze bank accounts and to prohibit transactions from suspect accounts.

The Barbados Anti-Terrorism Act, 2002-6, Section 4, gazetted on May 30, 2002, criminalizes the financing of terrorism. The GOB circulates lists of terrorists and terrorist entities to all financial institutions in Barbados. During 2003, no evidence of terrorist financing was discovered in Barbados. The GOB has not taken any specific initiatives focused on alternative remittance systems or the misuse of charitable and nonprofit entities.

Barbados has bilateral tax treaties that eliminate or reduce double taxation with the United Kingdom, Canada, Finland, Norway, Sweden, Switzerland, and the United States. The United States and the GOB ratified amendments to their bilateral tax treaty in 2004. The treaty with Canada currently allows IBCs and offshore banking profits to be repatriated to Canada tax-free after paying a much lower tax in Barbados. A Mutual Legal Assistance Treaty (MLAT) and an Extradition Treaty between the United States and the GOB each entered into force in 2000.

Barbados is a member of the Offshore Group of Banking Supervisors, the Caribbean Financial Action Task Force, and the Organization of American States Inter-American Drug Abuse Control Commission (OAS/CICAD) Experts Group to Control Money Laundering. The FIU was admitted to the Egmont Group in 2002. The Barbados Association of Compliance Professionals, along with the Compliance Associations from Trinidad and Tobago, the Bahamas, the Cayman Islands, and the British Virgin Islands, formed the Caribbean Regional Compliance Association in October 2003.

Barbados is a party to the 1988 UN Drug Convention and the UN International Convention for the Suppression of the Financing of Terrorism. Barbados has signed, but not yet ratified, the UN Convention against Transnational Organized Crime and the UN Convention against Corruption.

Although the Government of Barbados has strengthened anti-money laundering legislation, Barbados must steadfastly enforce the laws and regulations it has adopted. Barbados should be more aggressive in conducting examinations of the financial sector and maintaining strict control over vetting and licensing of offshore entities. There were a disproportionate number of financial institutions to the number of SARs reported in 2004. Barbados should ensure adequate supervision of non-governmental organizations and charities. Barbados should work to improve information sharing between regulatory and enforcement agencies. Additionally, Barbados should continue to provide adequate resources to its law enforcement and prosecutorial personnel, to ensure Mutual Legal Assistance Treaty requests are efficiently processed. Barbados should continue to take steps to bolster its ability to prosecute anti-money laundering cases.

Belarus

Belarus is not a regional financial center. A general lack of transparency in industry and banking sectors makes it difficult to assess the level of or potential for money laundering and other financial crimes. Belarus faces problems with organized crime and therefore is vulnerable to money laundering. Due to persistent inflation and a high level of dollarization of the economy, a significant volume of foreign-currency cash transactions eludes the banking system. Shadow incomes from offshore companies, filtered through small local businesses, constitute a significant portion of foreign investment. Casinos and gaming establishments are abundant. Economic decision-making in Belarus is highly concentrated within the top levels of government. Government agencies have broad powers to intervene in the management of public and private enterprises, which they often do.

In July 2000, Belarus' Law on Measures to Prevent the Laundering of Illegally Acquired Proceeds (AML Law) entered into force. The present version of the law was last amended on January 4, 2003. According to Government of Belarus (GOB) officials, the AML Law criminalizes drug and non-drug related money laundering, although this is not explicitly stated in the law. Article 235 of the Belarusian criminal code ("Legalization of illegally acquired proceeds") stipulates that money laundering crimes may be punishable by fine or prison terms of up to ten years. The law defines "illegally acquired proceeds" as money (Belarusian or foreign currency), securities or other assets, including property rights and exclusive rights to intellectual property, obtained in violation of the law.

In January 2005 Lukashenko signed a decree on the regulation of the gambling sector. The owners of gambling businesses will be subject to stricter tax regulations. Gamblers will have to produce a passport or other identification in order to receive a money prize, a provision intended to combat money laundering.

The measures described in the AML Law apply to all entities able to conduct financial transactions in Belarus. Such entities include bank and non-bank credit and financial institutions; stock and currency exchanges; investment funds and other professional dealers in securities; insurance and reinsurance institutions; dealers' and brokers' offices; notarial offices (notaries); casinos and other gambling establishments; pawn shops; and other organizations conducting financial transactions. Under the law, natural and legal persons, government entities, and entities without legal status are subject to criminal liability.

The AML Law authorizes the following government bodies to monitor financial transactions for the purpose of preventing money laundering: the State Control Committee; the Ministry of Foreign Affairs; the Ministry of State Property and Privatization; the Ministry of Finance; the National Bank; the State Committee for Financial Investigations; the National Tax Inspectorate; the State Committee for Securities; the State Customs Committee; and other State bodies. The AML Law does not ascribe specific areas of responsibility to each agency, nor does it provide a mechanism through which the AML activities should be coordinated.

The Belarusian banking sector consists of 31 banks. Within this number, 26 have foreign investors. Of those 26 banks, seven are foreign institutions (registered as foreign legal entities in Belarus) and 11 have more than 50 percent of their shares owned by foreign companies. The State-owned Belarus Bank is the largest, most influential bank in Belarus. Four other state banks and one private bank comprise the majority of the remaining banking activities in the country. On August 24, 2004, the U.S. Treasury Department designated the privately owned Infobank a financial institution of “primary money laundering concern” under Section 311 of the USA PATRIOT Act. Infobank is a national commercial bank licensed by the National Bank of the Republic of Belarus to engage in foreign trade including foreign exchange transactions and bank operations in gems and precious metals. In issuing its proposed notice of rulemaking FinCEN determined that Infobank was well positioned to coordinate illicit activities using its subsidiary and network of affiliated entities to launder the proceeds of those activities directly through its banking operations. FinCEN has reason to believe that Infobank actively laundered funds for the former Iraqi regime of Saddam Hussein; specifically, that Infobank laundered funds illegally paid to the former regime in order to obtain contracts to purchase Iraqi oil in violation of the United Nations sanctions and programs. FinCEN also has reason to believe that one of Infobank’s subsidiaries entered into contracts for the provision of humanitarian goods to Iraq with inflated values for the goods, and that the funds from the inflated values or illegal surcharges were either returned to the Iraqi government in violation of UN Oil-for-Food (OFF) program or were used to purchase weapons or finance military training through Infobank or its subsidiary. Belarusian authorities and Infobank deny that Infobank undertook these activities.

Financial institutions are obligated to register transactions subject to special monitoring and transmit the information to the relevant monitoring agency. Financial transactions that are subject to special monitoring include cash and deposit transfers, bank account operations, international transfers, wire transfers, asset transfers, transactions involving loans, transfers of movable and immovable property, property donations and grants. A one-time transaction subject to special monitoring, which exceeds approximately \$15,350 for natural persons, or approximately \$153,500 for legal persons and entities, must be registered in accordance with the law. If the total value of transactions conducted in one month exceeds the above thresholds, and there is reasonable evidence suggesting that the transactions are related, then the transaction activity must be registered.

Financial institutions conducting transfers subject to monitoring are required to submit information about such transfers in written form. Financial institutions should identify the natural or legal person ordering the transaction and/or the person on whose behalf the transaction is being placed; disclose information about the beneficiary of a transaction; the account information and document details used in the transaction; the type of transaction; the name and location of the financial institution conducting the transfer; and the date, time and value of the transfer. The law does not specify required timeframes for reporting. The law provides a “safe harbor” for banks and other financial institutions that provide otherwise confidential transaction data to investigating authorities, provided the information is given in accordance with the procedures established by law.

Failure to register and transmit information regarding such transactions may subject the bank or financial institution to criminal liability. For the majority of transactions conducted by banking and financial institutions, the relevant monitoring agency is the National Bank of Belarus. According to the National Bank, information on suspicious transactions should be reported to the Bank’s Department of Bank Monitoring. Although the banking code stipulates that the National Bank has primary regulatory authority over the banking sector, in practice, the Presidential Administration exerts significant influence on central and state commercial bank operations.

The State Control Committee (SCC), the National Tax Inspectorate, and the Ministry of Interior have the legal authority to monitor and investigate suspicious financial transactions. In September 2003, President Lukashenko decreed the establishment of a Financial Intelligence Unit (FIU) within the SCC and named the FIU as the primary government agency responsible for gathering, monitoring and

disseminating financial intelligence. Belarus' FIU is not a member of the Egmont Group. Russia has agreed to sponsor Belarus' membership.

Terrorism is considered a serious crime in Belarus. Under the Belarusian Criminal Code, the willful provision or collection of funds in support of terrorism by nationals of Belarus or persons in its territory constitutes participation in the act of terrorism itself in the form of aiding and abetting. Belarus' law on counterterrorism also states that knowingly financing or otherwise assisting a terrorist organization or group constitutes terrorist activity.

Belarus' AML Law refers to the laundering of all proceeds obtained in violation of the law. The law does not make specific mention of terrorism. In a 2002 report to the UN Counter Terrorism Committee, the GOB refers to its AML legislation as a measure to combat terrorist finance. Despite the belief by the GOB that its terrorism legislation covers terrorist financing, the GOB is working to draft amendments to its AML Law so that it will specifically cover anti-money laundering and counterterrorist financing (AML/CTF). The draft amendment gives Belarus' FIU the powers it needs for receiving, analyzing, and distributing reports on suspicious transactions. On the other hand, the AML/CTF draft still needs improvement. The last available draft does not appear to be completely consistent with all of the FATF recommendations.

The seizure of funds or assets held in a bank requires a court decision, a decree issued by a body of inquiry or pre-trial investigation, or a decision by the tax authorities. In January 2002, the Board of Governors of the National Bank issued a directive prohibiting all transactions with accounts belonging to terrorists, terrorist organizations and associated persons. This directive also outlines a process for circulating to banks the list of individuals and entities included on the UNSCR 1267 Sanctions Committee's consolidated list. The National Bank is required to disseminate to banks the updates to the consolidated list and other information related to terrorist finance as it is received from the Ministry of Foreign Affairs. The directive gives banks the authority to freeze transactions in the accounts of terrorists, terrorist organizations and associated persons. Belarus has not identified any assets as belonging to individuals or entities included on the UNSCR 1267 Sanctions Committee's consolidated list.

Belarus has signed bilateral treaties on law enforcement cooperation with Bulgaria, Lithuania, the People's Republic of China, Poland, Romania, Turkey, the United Kingdom, and Vietnam. Belarus is also a party to five agreements on law enforcement cooperation and information sharing among CIS member states, including the Agreement on Cooperation among CIS Member States in the Fight against Crime and the Agreement on Cooperation among Ministries of Internal Affairs in the Fight against Terrorism. In October, Belarus joined the newly organized Eurasian Regional Group Against Money Laundering. In June 2003, Belarus ratified the UN Convention against Transnational Organized Crime. Belarus is a party to the 1988 UN Drug Convention and nine of the twelve conventions on counterterrorism. In September 2004, Belarus acceded to the UN International Convention for the Suppression of the Financing of Terrorism. In an additional positive step, Belarus signed the UN Convention against Corruption in April 2004.

The Government of Belarus has taken initial steps to construct an anti-money laundering/counterterrorist financing regime. Belarus should continue to enhance and implement its current legislation and should amend its anti-money laundering law in order to meet the revised FATF Recommendations. Belarus should provide adequate resources to enable its designated Financial Intelligence Unit (FIU) to operate efficiently and should establish a mechanism to improve the coordination between agencies responsible for enforcing anti-money laundering measures. Belarus should clarify whether its current AML Law covers terrorist financing, and if not, should specifically criminalize the financing of terrorism. Belarus should take action to ensure that Infobank is not conducting wittingly participating in or supporting illegal activity.

Belgium

Despite Belgium's development of a comprehensive, formalized anti-money laundering regime, issues of concern still exist. Money launderers often use notaries or buy property in an effort to create front or "dummy companies". Selling property below market value, making significant investments on behalf of foreign nationals with no connections to Belgium, making client property transactions with values disproportionate to the socioeconomic status of the client and creating a large number of companies in a short timeframe are also common methods utilized by money launderers. There also is concern that casino operators are not keeping adequate records of the buying and selling of chips or of customer identification documents, as required under anti-money laundering regulations.

With strong legislative and oversight provisions in place in the formal financial sector, Belgian officials note that criminals are increasingly turning to the informal financial sector to conduct illegal activities. The strong presence of the diamond trade within Belgium leaves the nation vulnerable to money laundering. Ninety percent of crude diamonds and 50 percent of cut diamonds pass through Belgium. Authorities have transmitted a number of cases to the Public Prosecutor relating to diamonds, and they are examining the sector closely in cooperation with local police and diamond industry officials. Additionally, the Kimberley certification process (a joint government, international diamond industry, and civil society initiative designed to stem the flow of illicit diamonds) has helped to introduce some much-needed transparency into the global diamond trade. The Government of Belgium (GOB) recognizes the particular importance of the diamond industry, as well as the potential vulnerabilities it presents to the financial sector. As such, it has distributed typologies outlining its experiences in pursuing money laundering cases involving the diamond trade, especially those involving the trafficking of African conflict diamonds.

Another growing problem, according to government officials, is the proliferation of illegal underground banking activities. In 2004, Belgian police raided a number of "phone shops"—small businesses where customers can make inexpensive phone calls and access the Internet. In some phone shops, authorities uncovered money laundering operations and hawala-type banking activities. Authorities believe that approximately 5,000-6,000 phone shops are operating in Belgium; only 1,500 of these shops are formally licensed.

Belgium is also one of the few European countries that permit the issuance of bearer bonds ("titres au porteur"), which are widely used to transfer wealth between generations and to avoid taxes. Belgian authorities are planning legislation that will end issuance of bearer bonds by 2007. Such legislation, however, has not yet been introduced. Belgium also has no reporting requirements on cross-border currency movements. According to Belgian officials, stronger controls of cross-border currency movements will be part of the Third EU Anti-Money Laundering Directive, which authorities expect to be implemented in early 2006.

Money laundering in Belgium is illegal through the Law of January 11, 1993, On Preventing Use of the Financial System for Purposes of Money Laundering. It is criminalized by Article 505 of the Penal Code, which sets penalties of up to five years' imprisonment for money laundering. The law also mandates reporting of suspicious transactions by financial institutions and provided for a Financial Intelligence Unit (FIU), the CTIF-CFI, to receive, process, and analyze the reports. In January 2004, Belgian domestic legislation implementing the Second EU Anti-Money Laundering Directive entered into force, broadening the scope of money laundering predicate offenses beyond drug-trafficking, and to include the financing of terrorist acts or organizations.

Under the Law of January 11, 1993, entities with reporting obligations must submit to the FIU transactions and information involving individuals or legal entities domiciled, registered, or established in a country or territory subject to the FATF countermeasures. The GOB passed a law on May 3, 2002, giving Belgium the authority to invoke countermeasures against countries and territories declared non-cooperative by the FATF. Belgium places appropriate restrictions on any state deemed

Money Laundering and Financial Crimes

non-cooperative. The FIU regularly submits lists of FATF-designated non-cooperative countries to financial institutions.

In 1998, the GOB adopted legislation that mandates the reporting of suspicious transactions by notaries, accountants, bailiffs, real estate agents, casinos, cash transporters, external tax consultants, certified accountants, and certified accountant-tax experts. Under the legislation, the term “casinos” includes any establishment that conducts casino-like gambling activities. In 2004, Belgium’s leading financial institutions implemented automated procedures allowing authorities to detect suspicious transactions more readily. The January 2004 legislation also imposes reporting requirements on lawyers and prohibits cash payments exceeding 15,000 euros (\$19,500) or 10 percent of the total purchase price for goods and real property. An association of Belgian lawyers has appealed the law to Belgium’s highest court, where a decision is expected in 2005.

Belgian financial institutions are required to comply with “know your customer” principles, regardless of the transaction amount. Further, institutions must maintain records on the identities of clients engaged in transactions that are considered suspicious, or that involve an amount equal to or greater than 10,000 euros (\$13,000). Records of suspicious transactions that are required to be reported to the FIU must be kept for five years.

Financial institutions are also required to train their personnel in the detection and handling of suspicious transactions that could be linked to money laundering. Financial institutions or other entities with reporting requirements are liable for illegal activities occurring under their control. Failure to comply with the anti-money laundering legislation, including failure to report, is punishable by a fine of up to 1.25 million euros (\$1.625 million).

The financial sector cooperates actively with the Federal Police as well as with the CTIF-CFI, to guard against illegal activity. No civil, penal, or disciplinary actions can be taken against institutions, or their employees or representatives, for reporting such transactions in good faith. Legislation also exists to protect witnesses, including bank employees, who report suspicions of money laundering or who come forward with information about money laundering crimes. Belgian officials have imposed sanctions on institutions or individuals that knowingly permitted illegal activities to occur.

Since its founding in 1993, the CTIF-CFI has received 83,156 disclosures and has transmitted more than 5,764 cases to the Public Prosecutor aggregating 11.1 million euros (\$14.43 million). Belgium’s FIU and Federal Police both transmit suspected money laundering cases to the Public Prosecutor. In 2003, the FIU transmitted 783 cases (a 24 percent decrease from 2002) to the Public Prosecutor. A majority of the notifications generating these cases resulted from disclosures made by banks and foreign exchange offices, with only 4.5 percent of notifications originating from non-financial institutions.

In 2003, the Federal Police transmitted 431 cases to the Public Prosecutor. The Federal Police utilize a number of tactics to uncover money laundering operations, including investigating significant capital injections into businesses, examining suspicious real estate transactions, and conducting random searches at all international airports. Since 1993, when Belgium criminalized money laundering, predicate charges have shifted away from trafficking of narcotics and goods and services, and more toward tax and financial fraud. In 2003, principal predicate charges were tax fraud (19.7 percent of offenses); narcotics-trafficking (19 percent); illicit trafficking in goods and merchandise, namely automobiles, alcohol, and tobacco (17.4 percent); trafficking in human beings (11 percent); organized crime (9.9 percent); financial fraud (7.8 percent); and exploitation of prostitution (5.4 percent). Terrorism was the predicate offense in 13 cases (1.6 percent) of the total. Government officials believe that the statistics for 2004 will have a similar breakdown.

Belgian courts have convicted 867 individuals for money laundering, who have received combined total sentences of 1,739 years and combined total fines of 22.66 million euros (\$30 million). Belgian

authorities have confiscated more than 474 million euros (\$616 million) connected with money laundering crimes.

Under Belgium's 1993 (and 2004 amended), anti-money laundering law, accounts can be frozen on a case-by-case basis if there is sufficient evidence that a money laundering crime has been committed. Banks must submit to the FIU a written report regarding any transaction of any amount that they suspect may be linked to money laundering. The FIU has the legal authority to suspend a transaction for a period of up to two working days, in order to complete its analysis. If criminal evidence exists, the FIU forwards the case to the Public Prosecutor.

In January 2004, the Belgian Legislature passed domestic legislation implementing the EU Council's Framework Decision on Combating Terrorism, which criminalizes terrorist acts and material support (including financial support) for terrorist acts, allowing judicial freezes on terrorist assets. Belgian authorities issue asset freeze orders for individuals and entities designated by the UNSCR 1267 Sanctions Committee and/or the EU Clearinghouse. Belgium lacks the legislation to administratively freeze terrorist assets, absent a judicial order or UN or EU designation. In 2004, the Federal Police created a Terrorist Financing unit within their Economic Crimes department. Since 1993, the FIU has transmitted a total of 82 cases related to terrorism to the Public Prosecutor-76 of them since September 11, 2001.

Belgium is a party to the 1988 UN Drug Convention, and in August 2004, the GOB ratified the UN Convention against Transnational Organized Crime. Belgium has signed, but not yet ratified, the UN Convention against Corruption and the UN International Convention for the Suppression of the Financing of Terrorism. In 2004, Belgium and the United States signed bilateral instruments implementing the extradition treaty and Mutual Legal Assistance Treaty, pursuant to the 2003 U.S.-EU Agreements on these subjects. The GOB exchanges information with other countries through international treaties. Belgium is a member of the FATF and the European Union. The FIU is active among its European colleagues in sharing information, and is a member of the Egmont Group. The CTIF-CFI heads the secretariat of the Egmont Group from 2005 to 2006.

With the January 2004 legislation, Belgium has a strong anti-money laundering regime. The Government of Belgium should continue to exert vigilance with regard to uncovering, investigating, and prosecuting illegal banking operations related to its diamond sector, which also has potential to be used as means to finance terrorism. Similar attention should be paid to the informal financial sector and non-bank financial institutions. Belgium should also eliminate bearer bonds and should institute more stringent reporting requirements for cross-border currency movements.

Belize

Belize is not a major regional financial center. In an attempt to diversify Belize's economic activities, authorities have encouraged the growth of offshore financial activities and have pegged the Belizean dollar to the U.S. dollar. Belize now offers financial and corporate services to nonresidents. Presently, there are eight licensed offshore banks, approximately 35,205 registered international business companies (IBCs), one licensed offshore insurance company and one mutual fund company operating in Belize. The number of offshore trusts operating from within Belize cannot be readily determined and there are also a number of undisclosed Internet gaming sites operating from within Belize. These gaming sites are currently unregulated. Currently there are no offshore casinos operating from within Belize. Belizean officials suspect that money laundering occurs primarily within the country's offshore financial sector. However, there are indications that local *casas de cambios* have facilitated the laundering of the proceeds from illegal activities. Money laundering, primarily related to narcotics-trafficking and contraband smuggling, also occurs through banks operating in Belize. Criminal proceeds laundered in Belize are derived primarily from foreign criminal activities. There is no evidence to indicate that money laundering proceeds are primarily controlled by local drug-trafficking

organizations, organized criminals or terrorist groups. Indications are that there is a significant black market for smuggled goods in Belize. However, there is no evidence to indicate that the smuggled goods are significantly funded by narcotic proceeds. With the exception of check forgery, Belize is not experiencing any significant increase in financial crimes.

There is one free trade zone presently operating in Belize, at the border with Mexico. Commercial Free Zone (CFZ) businesses are allowed to conduct business within the confines of the CFZ provided the Commercial Free Zone Management Agency (CFZMA) has approved them. All merchandise, articles, or other goods entering the CFZ for commercial purposes are exempted from the national customs regime. However, any trade with the national customs territory of Belize is subject to the national Customs and Excise law. The CFZMA is the supervisory authority of the free zone. The CFZMA, in collaboration with the Customs Department and the Central Bank of Belize, monitors the operations of CFZ business activities. The Commercial Free Zone Act, Chapter 278 of the Laws of Belize, prescribes the establishment, functioning, and responsibilities of the CFZMA. There is no indication that the CFZ is being used in trade-based money laundering schemes or by the financiers of terrorism.

The Money Laundering (Prevention) Act (MLPA), in force since 1996, criminalizes money laundering related to many serious crimes, including drug-trafficking, forgery, terrorism, blackmail, arms trafficking, kidnapping, fraud, illegal deposit taking, false accounting, counterfeiting, extortion, robbery, and theft. Additional legislation has been enacted to discourage individuals from engaging in money laundering, and there have been some arrests. Despite this, the effectiveness of the anti-money laundering regime in Belize remains unclear.

Offshore banks, international business companies and trusts are authorized to operate from within Belize, although shell banks are prohibited within the jurisdiction. The Offshore Banking Act, 1996 governs activities of Belize's offshore banks. The Central Bank of Belize, the same agency that regulates domestic banks, regulates offshore banks. The banking regulations governing offshore banks are different from the domestic banking regulations in terms of capital requirement. Banks are not permitted to issue bearer shares. Nevertheless, all licensed financial institutions in Belize (onshore and offshore) are governed by the same anti-money laundering legislation and must adhere to the same anti-money laundering requirements. To legally operate from within Belize all offshore banks must be licensed. Before an offshore bank is licensed the Central Bank must be satisfied that the shareholders and directors of the proposed bank are fit and proper and that the proposed bank's capital is adequate and its business plan sound. The legislation governing the licensing of offshore banks does not permit directors to act in a nominee (anonymous) capacity.

The International Business Companies Act of 1990 and its 1995 and 1999 amendments govern the operation of IBCs. The 1999 amendment to the Act allows IBCs to operate as banks and insurance companies. The International Financial Services Commission regulates the rest of the offshore sector. All IBCs must be registered. Registered agents of IBCs must satisfy the International Financial Services Commission that they conduct due diligence background checks before IBCs are allowed to register. Although IBCs are allowed to issue bearer shares, the registered agents of such companies, must know the identity of the beneficial owners of the bearer shares. In addition, registered agents must satisfy certain criteria to obtain licenses in order to perform offshore services. Belize's legislation on IBCs allows for the appointment of nominee directors. The legislation for trust companies, the Belize Trust Act, 1992, is not as stringent as the legislation for other offshore financial services and does not preclude the appointment of nominee trustees.

The Central Bank issued Supporting Regulations and Guidance Notes in 1998. Licensed banks and financial institutions are required to "know their customers." Furthermore, banks and financial institutions are required to monitor their customer activity and report any suspicious transaction to the Financial Intelligence Unit (FIU). Banks and financial institutions must maintain records of all

banking and financing transactions for at least five years. Money laundering controls are applicable to non-bank financial institutions such as exchange houses, insurance companies, lawyers, and accountants. An important exception is that of casinos. Financial institution employees are exempted from civil, criminal, or administrative liability for cooperating with regulators and law enforcement authorities in investigating money laundering or other financial crimes.

Belize does not have any bank secrecy legislation that prevents disclosure of client and ownership information. There is no impediment to prevent authorities from obtaining information pertaining to financial crimes. Also, the reporting of all cross-border currency movement is mandatory. All individuals entering or departing Belize with more than BZ \$10,000 (\$5,000) in cash or negotiable instruments, are required to file a declaration with the authorities at the Customs, the Central Bank and the FIU.

There are deficiencies in the investigation process and the gathering of evidence to link assets to money laundering related offences. The establishment of the FIU is expected to address those deficiencies. In 2004 individuals associated with Target Data Processing Limited were arrested on money laundering charges.

Belize criminalized terrorist financing via amendments to its anti-money laundering legislation (The Money Laundering (Prevention) (Amendment) Act, 2002). Belizean Authorities have circulated to all banks and financial institutions in Belize the UNSCR 1267 Sanctions Committee's consolidated list and the list of Specially Designated Global Terrorists designated by the United States pursuant to E.O. 13224. There are no indications that charitable and/or non-profit entities in Belize have acted as conduits for the financing of terrorist activities. Consequently, the country has not taken any measures to prevent the misuse of charitable and non-profit entities from aiding in the financing of terrorist activities. Belizean authorities have attempted to prevent money laundering via casas de cambios and to regulate the informal market for the U.S. dollar through licensing. This is recognized as a vulnerability that needs to be addressed.

Belizean law makes no distinctions between civil and criminal forfeitures. All forfeitures resulting from money laundering are treated as criminal forfeitures. The banking community cooperates fully with enforcement efforts to trace funds and seize assets. The FIU and the Belize Police Department are the entities responsible for tracing, seizing, and freezing assets. Currently, Belize's legislation is silent on the length of time assets can be frozen. With prior court approval, Belizean authorities have the power to identify, freeze, and seize terrorist finance or money laundering related assets. This includes vehicles, vessels, aircraft, and other means of transportation or communication. It would also include any property, tangible or intangible, which may be related to money laundering or is shown to be from the proceeds of money laundering, including legitimate businesses. There are no limitations to the kinds of property that may be seized, and all seized items become the property of the Government of Belize. However, Law enforcement lacks the resources necessary to trace and seize assets. The authorities are considering the enactment of a Proceeds of Crime law, which will address the seizure or forfeiture of assets of narcotics-traffickers, financiers of terrorism, or organized crime. The Belize Police Department reported that during the past year, the dollar amount of assets forfeited and/or seized amounted to \$16,664,850, and increase over the \$5,024,175 of assets forfeited and/or seized in 2003.

No laws have been enacted specifically for the sharing of assets seized in relation to narcotics or other serious crimes, including the financing of terrorism. However, the Government of Belize has entered into a bilateral treaty with the United States for the sharing of seized assets from serious crimes and actively cooperates with the efforts of foreign governments to trace or seize assets relating to financial crimes. The Belizean authorities have indicated to the Guatemalan Government their intention of signing a Memorandum of Understanding to enhance asset tracing and seizure.

Money Laundering and Financial Crimes

Belize has signed a Mutual Legal Assistance Treaty, which provides for mutual legal assistance in criminal matters with the United States. Amendments to the MLPA preclude the necessity of a Mutual Legal Assistance Treaty for exchanging information or providing judicial and legal assistance in matters pertaining to money laundering and other financial crimes to authorities of other jurisdictions. The FIU has cooperated with the United States Department of Justice, FinCEN, FBI, Internal Revenue Service, Drug Enforcement Administration Agency and the Food and Drug Administration.

Belize is a party to the UN International Convention for the Suppression of the Financing of Terrorism, the UN Convention against Transnational Organized Crime, and the 1988 UN Drug Convention. Belize is also a member of the Organization of American States (OAS) and the Egmont Group.

The Government of Belize should increase resources to law enforcement and should provide adequate training to those responsible for enforcing both Belize's anti-money laundering/counterterrorist financing laws and its asset forfeiture regime. Belize should take steps to address the vulnerabilities in its supervision of its offshore sector, particularly the lack of supervision of the gaming sector, including Internet gaming facilities. Belize should immobilize bearer shares and mandate suspicious activity reporting for the offshore financial sector.

Benin

Benin is not a major financial center. However, Government of Benin (GOB) officials believe narcotics traffickers use Benin to launder proceeds. Although the exact nature of money laundering is unknown, GOB officials suspect that the primary methods are through the purchase of assets such as real estate, the wholesale shipment of vehicles or items for resale, and front companies. In addition, some laundering seems to occur through the banking system.

A 1997 counternarcotics law criminalizes narcotics-related money laundering and provides penalties of up to 20 years in prison along with substantial fines. The law requires that all financial institutions report transactions above a certain threshold, but does not specify to whom these transactions should be reported. As a result, compliance with this provision of the Beninese law is very low. Cross-border currency reporting requirements also exist, but are not enforced.

The GOB has the legal authority to seize narcotics-related assets, but as of December 2004, no seizures had been made. Law enforcement authorities lack the training and resources to investigate money laundering cases. No links exist between the banking sector and the authorities to allow the tracking of large deposits.

In 2000, the Economic Community of West African States (ECOWAS) established the Intergovernmental Action Group against Money Laundering (GIABA) based in Dakar, Senegal. In November 2002, GIABA hosted an anti-money laundering seminar for representatives of 14 ECOWAS states, including Benin. The GOB has not participated in additional training since that time.

Benin is a party to the 1988 UN Drug Convention, the UN Convention against Transnational Organized Crime and the UN International Convention for the Suppression of the Financing of Terrorism.

Benin should criminalize terrorist financing and money laundering related to all serious crimes. The Government of Benin also should develop and implement a viable anti-money laundering/counterterrorist financing regime that comports with international standards.

Bermuda

Bermuda, an overseas territory of the United Kingdom (UK), is considered a major offshore financial center and has a reputation internationally for the integrity of its financial regulatory system. The

government of Bermuda (GOB) cooperates with the United States and the international community to counter money laundering and terrorist financing and continues to update its legislation and procedures in conformance with international standards.

Consistent with the GOB's anti-money laundering and counterterrorist financing policy, Bermuda welcomed the March 2003 visit of the International Monetary Fund (IMF). The IMF examined Bermuda's financial sector and regulatory regime, as part of its voluntary review program. The final report has not yet been released.

In further demonstration of the GOB's commitment, Bermuda's National Anti-Money Laundering Committee (NAMLC), of which the Bermuda Monetary Authority (BMA)—Bermuda's independent financial regulatory body—is a member, held hearings in 2003 on the island's anti-money laundering laws, as they pertain to financial institutions, as set out in the Proceeds of Crime Act (PCA) and other legislation, regulations, and procedures. The purpose of the hearings and other consultations was to review thoroughly current law as it relates to the June 2003 recommendations of the Financial Action Task Force (FATF), with the aim of meeting new international requirements. As a result of the hearings, the GOB will propose a number of technical amendments to the PCA in early 2005. Additionally, the NAMLC continues to meet with different industry sectors to update the guidance notes to reflect new FATF recommendations. Implementation of the updated guidance notes is expected to coincide with the implementation of the amended PCA and related regulations.

The GOB first enacted specific money laundering legislation in 1997, passing the PCA to apply money laundering controls to financial institutions such as banks, deposit companies, trust companies, and investment businesses, including broker-dealers and investment managers with respect to the proceeds of certain listed serious offenses. Amendments in 2000, effective June 1, 2001, expanded the scope of the legislation to cover the proceeds of all indictable offenses. The Criminal Code Amendment Act 2004, passed in July 2004, creates the offenses of insider trading and market manipulation in securities markets. Fines up to \$100,000 and prison terms of five years are in place for market manipulation and up to \$175,000 and seven years jail time for insider trading. These provisions are in addition to existing regulations of the Bermuda Stock Exchange (BSX) that prohibit members from insider trading and market manipulation, on penalty of expulsion from the BSX.

The GOB expects to introduce legislation in early 2005 to detect/monitor cross-border transportation of cash and monetary instruments and to include gatekeepers as covered entities under its anti-money laundering laws.

In December 2002, Parliament passed the Bermuda Monetary Authority Amendment Act 2002, expanding the list of BMA objectives to include action to assist with the detection and prevention of financial crime. This legislation provides clear authority for the BMA's existing role in checking systems and controls in financial institutions and paves the way for the BMA to expand its role in administering UN sanctions and other measures on a delegated basis. In order to implement the provisions of relevant UN Security Council counterterrorism resolutions, the act—among other provisions—prescribes the manner by which the finance minister may delegate to the BMA the power to block accounts.

The power to regulate investment providers is legislated through the Investment Business Act 1998 (IBA). The Act authorizes the BMA to obtain any information deemed necessary by regulators to conduct their supervision of investment providers, who are fully subject to "know your customer" requirements under the PCA and its regulations. The BMA's supervision of investment providers includes specific on-site testing of their systems and controls, including their compliance with anti-money laundering requirements.

Parliament enacted the updated Investment Business Act 2003 in the winter of 2003, with an effective date for most of its provisions of January 30, 2004. The Investment Business Act 2003 enhances the

Money Laundering and Financial Crimes

regulatory powers of the BMA by updating and clarifying the provisions for regulating investment business. Among the provisions of the act are measures to strengthen criminal and regulatory penalties. Also, under the Act, oversight of stock exchanges will come under the purview of the BMA, and the BMA's authority to cooperate with foreign regulatory bodies will be enhanced. The legislation imposes licensing obligations on investment business conducted from within Bermuda while also empowering the finance minister to define other circumstances where licensing may be required.

Another mandate of the BMA is the licensing and supervision of deposit-taking institutions, including the worldwide operations of Bermudan banks, as provided by the Banks and Deposit Companies Act 1999. That Act implements the Basel Committee's "Core Principles for Effective Banking Supervision." As part of its oversight responsibilities, the BMA conducts on-site reviews and detailed compliance testing of banks' anti-money laundering controls. The BMA may require reports from auditors, accountants or other persons with relevant professional skills on matters pertinent to the BMA's responsibilities. The BMA has not recently found it necessary to employ its formal enforcement powers to investigate suspicions of illegal deposit taking.

Banks and other financial institutions are required to retain records for a minimum of five years. Bankers and others are protected by law with respect to their cooperation with law enforcement officials. Bermuda has not adopted bank secrecy laws, but does, like the UK, operate under a banker's common-law duty of confidentiality.

"Know your customer" requirements are basic to the PCA, which also provides for the monitoring of accounts for suspicious activity. Additionally, Bermuda reviews the fitness of persons seeking to undertake business on the island. The vetting process is undertaken when an entity is incorporated. The BMA requires that a personal declaration form be submitted for principals (beneficial owners) of international businesses prior to incorporation. Similar requirements apply to proposals to transfer shares. Additionally, a company must detail its business plan and maintain a register of shareholders at its registered office.

The BMA is also charged with oversight responsibility for trust service providers. Bermuda's Trusts (Regulation of Trust Business) Act 2001 invests the BMA with full licensing, supervision and enforcement powers relating to persons who conduct trust business in or from Bermuda. The BMA routinely conducts on-site review visits to determine, among other things, compliance with anti-money laundering laws and regulations.

Collective investment schemes (CISs) are currently regulated pursuant to general regulations of the Bermuda Monetary Authority Act, and fund administrators are regulated persons for the purposes of the PCA. To strengthen regulation, however, CISs, including hedge funds, will be the subject of legislation anticipated for the summer 2005 session of Parliament, with an implementation date late in that year. The proposed legislation will expand the definition of collective investment schemes to include, in addition to mutual funds and unit trusts, other business vehicles that pool and manage investment monies. It will require the licensing of fund administrators who will then be subject to minimum standards and a code of practice. The BMA will also be able to conduct compliance checks of PCA procedures as carried out by CIS administrators. However, the BMA will continue to apply differentiated requirements involving lighter regulation of schemes catering to institutional and sophisticated investors, with greater reliance on transparency and disclosure.

Insurance companies are covered by the PCA to the extent that they are judged susceptible to the risk of money laundering abuse. The Insurance Act 2004 was re-introduced in the House of Assembly in late 2004. In addition to making technical amendments, the act, if adopted, would authorize the BMA to issue guidance to the insurance industry from time to time, provisions that are consistent with the IMF report.

International business forms the backbone of Bermuda's economy. The BMA reviews all proposals to incorporate companies and set up partnerships and also vets beneficial owners. As of June 30, 2004, records indicate that 13,261 international businesses were registered in Bermuda, compared to 2,958 local companies. Of the international businesses, the majority is considered "exempted," meaning that they are exempted from Bermuda laws that apply to local entities, including those restricting the portion that can be owned by non-Bermudans. International companies include 12,151 exempted companies, 546 exempted partnerships, 545 nonresident international companies (incorporated elsewhere to do business in Bermuda), and 19 nonresident insurance companies. As of December 2003, there were 1,682 insurance companies. At the close of 2003, there were 1,321 mutual fund companies and 221 unit trusts in Bermuda. Offshore banking is not permitted in Bermuda. There are no free trade zones in Bermuda.

The majority of Bermuda's exempt companies are shell companies with no physical presence on the island. Local directors (generally a local lawyer and secretary) are designated to manage corporate affairs in Bermuda. The owners and controllers are vetted by the BMA before exempted companies can be established or any shares transferred between nonresidents. The register of members is open to public inspection.

The GOB regulates offshore companies and domestic companies equally from a prudential standpoint. The difference between the two is the ownership restriction. Domestic companies, which must be at least 60 percent Owned-owned, are permitted to do business within Bermuda. Exempted companies are exempt from the 60-percent ownership restriction and in fact can be up to 100 percent foreign-owned, but are normally prohibited from doing business locally. The GOB agreed to remove some minor distinctions between the two categories as part of its advance commitment to the Organization for Economic Cooperation and Development (OECD).

The Bermuda Police Service's Financial Investigation Unit (FIU) serves as the island's financial intelligence unit, which is responsible for the criminal aspects of financial crime, including criminal tax investigations. It has been a member of the Egmont Group since 1999. The FIU is the designated recipient of suspicious activity reports (SARs) in Bermuda. In the past, the majority of SARs were related primarily to conversion of suspected local drug profits to U.S. dollars via the island's Western Union money transmission service, which ceased doing business on October 31, 2002. Because Bermuda law requires money transmission services to be conducted in association with a licensed deposit-taker, conversion of funds is subject to bank reporting standards.

SAR statistics reflect the closure of Western Union. In 2001, 2,827 SARs were filed with the FIU, decreasing to 2,570 in 2002, 275 in 2003 and 139 through November 2004. In 2001, there were two arrests for money laundering; in 2002, eight arrests representing three cases; and in 2003, six arrests. The island's first and only money laundering conviction was prosecuted in 2004. Involving \$136,000, the conviction resulted in an 18-month suspended sentence due to mitigating circumstances.

The PCA establishes procedures for identifying, tracing, and freezing the proceeds of narcotics-trafficking and other indictable offenses, including money laundering, tax evasion, corruption, fraud, counterfeiting, stealing and forgery. Additionally, the PCA provides for forfeiture upon criminal conviction if it is proven that benefit was gained from a criminal act. Under the PCA, there is no provision for seizure of physical assets unless intercepted leaving the island. However, the Supreme Court may issue a confiscation order pursuant to which the convicted person must satisfy a monetary obligation. The amount paid is placed into the Confiscated Assets Fund and may be shared with other jurisdictions at the direction of the Minister of Finance. If the convicted person fails to satisfy the confiscation order, the onus is on the prosecution to apply to the court for appointment of a receiver. Under the Misuse of Drugs Act, physical assets can be seized if used at the time the offense was committed.

Money Laundering and Financial Crimes

There were no confiscation orders in 2000, 2002, or 2003, and only one in 2001 for approximately \$62,000. Through November 2004, the GOB issued two confiscation orders, for a total amount of \$52,335. Forfeitures under the Misuse of Drugs Act are holding steady, with six forfeitures amounting to \$18,122 in the first eleven months of 2004 compared to the \$13,908 forfeited in three separate 2003 cases. Cash seized in 2004 under PCA detention orders exceeded \$56,600, a drop from the \$173,000 seized in 2003. In 2004 three restraint orders continue against assets in three separate cases valued at over \$4.7 million.

The Bermuda Police Service and the courts enforce existing drug-related asset tracing/seizure/forfeiture laws. The PCA will likely be amended in 2005 to provide measures to detect/monitor cross-border transportation of cash and to cover gatekeepers, such as attorneys and accountants. Currently, if there are reasonable grounds for suspicion, Her Majesty's Customs is authorized to seize cash and instruments; monies can also be seized if travelers fail to report the transportation of cash in excess of \$10,000.

The Criminal Justice (International Co-Operation) (Bermuda) Act 1994, as amended in 1996, authorizes the provision of assistance to foreign entities upon their request, including securing of evidence in Bermuda and overseas. The BMA Amendment (No. 3) Act 2004 clarifies the power of the BMA to cooperate with other overseas authorities. Its passage follows challenges in Bermuda courts on a specific case in which the BMA was assisting the U.S. Securities and Exchange Commission. Other Bermuda laws also authorize the sharing of information with overseas regulators: the Banks and Deposit Companies Act 1999, the Trusts (Regulation of Trust Business) Act 2001 and the Investment Business Act 2003.

In December 2004 the Parliament passed "The Anti-Terrorism (Financial and Other Measures) Act 2004." The Act, which must now be considered by the Senate, would criminalize terrorist financing and provides the framework to ensure implementation of the FATF Special Recommendations on Terrorist Financing. It creates specific offenses relating to the raising, use or possession of funds for purposes of terrorism, imposes a duty to report suspicious activity and provides for the forfeiture of terrorist cash. The effect will be to parallel the provisions already in place under the PCA for money laundering and the proceeds of other serious crimes. Financial institutions were given the list of Specially Designated Global Terrorists designated by the U.S. pursuant to E.O. 13224 (on terrorist financing) and the UN 1267 Sanctions Committee consolidated list, but no matches were found.

Bermuda is a member of the Caribbean Financial Action Task Force (CFATF) and the Offshore Group of Banking Supervisors. Through the UK by extension, Bermuda is a party to the 1988 UN Drug Convention and the U.S./UK Extradition Treaty. Although the UK is a signatory to the UN International Convention for the Suppression of the Financing of Terrorism, those provisions have not yet been formally extended to Bermuda. The island is, however, subject by extension to the UK Terrorism (United Nations Measures) (Overseas Territories) Order 2001. The UK Terrorism Order, which implements UN Security Council Resolution 1373, creates the offense of collecting and making funds available for terrorist purposes and provides for identification and freezing of terrorist-related funds.

The Government of Bermuda should continue to strengthen its regulations to prevent and inhibit money laundering and terrorism finance, including the enactment of legislation to implement the provisions of the FATF Special Recommendations on Terrorist Financing and new international anti-money laundering standards. It also should enact the proposed measures to detect/monitor cross-border transportation of cash and monetary instruments and to include gatekeepers, such as accountants and attorneys, as covered entities under its anti-money laundering laws.

Bolivia

Bolivia is not an important regional financial center, but it occupies a geographically significant position in the heart of South America. Bolivia is a major drug producing and drug-transit country. Most money laundering in Bolivia is related to public corruption, contraband smuggling, and narcotics trafficking. Bolivia's long tradition of banking secrecy facilitates the laundering of the profits of organized crime and narcotics trafficking, the evasion of taxes, and laundering of other illegally obtained earnings.

Bolivia's anti-money laundering regime is based on Law 1768 of 1997. Law 1768 modifies the penal code; criminalizes money laundering related to narcotics-trafficking, organized criminal activities and public corruption; provides for a penalty of one to six years for money laundering; and defines the use of asset seizure beyond drug-related offenses. Law 1768 also created Bolivia's financial intelligence unit, the Unidad de Investigaciones Financieras (UIF), within the Office of the Superintendence of Banks and Financial Institutions. The attributions and functions of the unit are defined under Supreme Decree 24771.

Although Law 1768 established the UIF as an administrative financial intelligence unit in 1997, the UIF did not become operational until July 1999. The UIF currently has more than 20 staff members, including the director. The director of the UIF is not a political appointee: the Superintendence of Banks and the Superintendence of Securities and Insurance elect the director to his/her position for a five-year term. It is possible for the director to be re-elected only one time. In January 2004, the term of the UIF's first director ended; he was not re-elected, and his replacement took over the operations of the UIF in February 2004.

The primary responsibility of the UIF is to collect and analyze data on suspected money laundering and other financial crimes, and to request specific information from the financial sector at the request of the Public Ministry prosecutors, investigating and prosecuting money laundering. The UIF is responsible for implementing anti-money laundering controls and has the ability to sanction covered financial institutions for noncompliance. These covered entities include banks, insurance companies and securities brokers; all are required to identify their customers, retain records of transactions for a minimum of ten years, and report to the UIF all transactions that are considered unusual (without apparent economic justification or licit purpose) or suspicious (customer refuses to provide information or the explanation and/or documents presented are clearly inconsistent or incorrect). In 2004, the UIF began to receive some of its reports electronically.

Under the current law, there is no obligation for these entities to report cash transactions above a certain threshold, as is commonplace in many countries' anti-money laundering regimes. Although, by law, the Bolivian Customs agency is permitted to share information with the UIF regarding the movement of currency into or out of Bolivia, it generally does not do so. After analyzing suspicious transaction reports and any other relevant information it may receive, the UIF reports all detected criminal activity to the Public Ministry. The UIF also has the ability to request additional information from obligated financial institutions in order to assist the prosecutors of the Public Ministry with their investigations. In 2005, the UIF plans to begin on-site inspections of covered entities in order to review their compliance with the reporting of suspicious transactions.

In 2002, the Special Group for Investigation of Economic Financial Affairs (GIAEF) was created within Bolivia's Special Counter-Narcotics Force (FELCN) to investigate narcotics-related money laundering. The UIF, the Public Ministry, the National Police and FELCN have established mechanisms for the exchange and coordination of information, including formal exchange of bank secrecy information. The full range of possibilities inherent in this mechanism has yet to be fully explored.

Corruption is a serious issue in Bolivia. However, several major convictions occurred in 2004. In December, three high-ranking police officials and one judge were convicted on charges related to narcotics-trafficking and consorting with narcotics traffickers. These convictions are considered to be truly historic. Traditionally, allegations against high-ranking law enforcement officials were routinely dismissed or forgotten; none reached the point of charges, much less prosecution and conviction. In the case of the convicted judge, a report created in part by the UIF detailing financial transactions related to the case led to the formal charges.

In spite of advances in combating money laundering, Bolivia's anti-money laundering system still has many weaknesses. The Government of Bolivia (GOB) has shown little enthusiasm for strengthening the UIF, in spite of recommendations by both the International Monetary Fund (IMF) and the Financial Action Task Force for South America (GAFISUD). Limitations in its reach and weaknesses in its basic law and regulatory framework continue to hamper the UIF's effectiveness as a financial intelligence unit. The GOB's anti-money laundering regime is also undermined by the lack of support—both legal and bureaucratic—for money laundering investigations carried out by law enforcement officials. In order to prosecute a money laundering case, Bolivian law requires that the crime of money laundering be tied to an underlying illicit activity; at present, the list of these underlying crimes is extremely restrictive and inhibits money laundering prosecution. Although the Public Ministry is the office responsible for prosecuting money laundering offenses, it does not have a specialized unit dedicated to the prosecution of these cases. Judges trying these cases are challenged to understand their complexities. There have been no convictions for money laundering to date, although one case was in the trial stage as of December 2004.

There are also serious deficiencies in Bolivia's legal framework with regard to civil responsibility. Under Bolivian law, there is no protection for judges, prosecutors, or police investigators who make good-faith errors while carrying out their duties. If a case is lost initially or on appeal, or if a judge rules that the charges against the accused are unfounded, the accused can request compensation for damages, or the judges, prosecutors, or investigators can be subject to criminal charges for misinterpreting the law. This is particularly a problem for money laundering investigations, as the law is full of inconsistencies and contradictions and is open to wide interpretation. For these reasons, prosecutors are often reluctant to pursue these types of investigations.

Several entities that move money remittances in Bolivia remain unregulated. Hotels, currency exchange houses, illicit casinos, cash transporters, and wire transfer businesses (such as Western Union), are all unregulated and can be used to transfer money freely into and out of Bolivia. Informal exchange businesses, particularly in the Santa Cruz region, are also used to transmit money in order to avoid law enforcement scrutiny.

While traditional asset seizure continues to be employed by counternarcotics authorities, until recently the ultimate forfeiture of assets was problematic. Prior to 1996, Bolivian law permitted the sale of property seized in drug arrests only after the Supreme Court confirmed the conviction of a defendant. A 1995 decree permitted the sale of seized property with the consent of the accused and in certain other limited circumstances. The Directorate General for Seized Assets (DIRCABI) is responsible for confiscating, maintaining and disposing of the property of persons either accused or convicted of violating Bolivia's narcotics laws. DIRCABI, however, has been poorly managed for years and only just begun to auction confiscated goods at a consistent pace.

The GOB currently lacks legislation regarding terrorist financing. Bolivia is a party to the UN International Convention for the Suppression of the Financing of Terrorism and has signed the Organization of American States (OAS) Inter-American Convention Against Terrorism. But there are no explicit domestic laws that operationalize these treaties to criminalize the financing of terrorism or grant the GOB the authority to identify, seize, or freeze terrorist assets. Nevertheless, the UIF regularly receives and maintains information on terrorist groups and can freeze suspicious assets under its own

authority, as it has done in counternarcotics cases. There have been no terrorist financing cases, however.

In order to address the problems faced by Bolivia's anti-money laundering regime, the UIF has proposed various changes that will amend Law 1768 and the UIF regulations. A set of draft laws—yet to be presented to Congress—would make money laundering an autonomous crime, penalized by a minimum prison term of fifteen years; increase the number of predicate offenses for money laundering, as well as the number of entities obligated to file financial reports with the Financial Intelligence Unit (FIU); and allow for the seizure of assets and the use of certain special investigative techniques. These draft laws would also require financial institutions to report cash transactions above a certain threshold and require the customs authority to provide the UIF with information regarding the physical movement of cash or monetary instruments into or out of Bolivia. In addition, the draft law would also criminalize the financing of terrorism.

Bolivia is a party to the 1988 UN Drug Convention. The GOB has signed, but not yet ratified, the UN Convention against Transnational Organized Crime, and the UN Convention against Corruption. Bolivia is a member of the OAS Inter-American Drug Abuse Control Commission (OAS/CICAD) Experts Group to Control Money Laundering, and held the presidency of the group in 2004. Bolivia is a member of the South America Financial Action Task Force (GAFISUD) and is due to undergo its second mutual evaluation by GAFISUD in 2005. Bolivia's UIF is a member of the Egmont Group of financial intelligence units. The GOB and the United States signed an extradition treaty in June 1995, which entered into force in November 1996.

The Government of Bolivia should strengthen its anti-money laundering regime by improving its current money laundering legislation so that it conforms to the Financial Action Task Force and the standards of the South America Financial Action Task Force. Bolivia should adopt new laws making money laundering a separate offense without requiring a connection to other illicit activities, expanding the list of predicate offenses, criminalizing terrorist financing, and expeditiously blocking terrorist assets. The jurisdiction of the Unidad de Inteligencia Financiera must also be expanded to cover reporting by non-banking financial institutions, as recommended by the IMF and the South America Financial Action Task Force. Bolivia should continue to strengthen the relationships and cooperation between all government entities involved in the fight against money laundering.

Bosnia and Herzegovina

Bosnia and Herzegovina is neither an international, regional, nor offshore financial center. Bosnia and Herzegovina (BiH) is a significant market and transit point for illegal commodities including cigarettes, firearms, fuel oils, and trafficking in persons. Foregone customs revenues due to black marketeering are estimated at \$500 million per annum. Recent studies indicate that as much as 40-60 percent of the economic activity in BiH is in the gray market. International observers believe the laundering of illicit proceeds from criminal activity and for political purposes through existing financial institutions is widespread. However, the proceeds of narcotics-trafficking tend to be diverted outside of BiH. Money laundering tends not to involve U.S. currency or proceeds from narcotics sales in the United States. Although the economy is primarily cash-based, with 40 percent of citizens lacking a bank account, deposits into banks have continued to increase in 2004, indicating that citizens are beginning to trust the banking system and its currency and institutions. Legal entities are required to maintain bank accounts.

There are multiple jurisdictional levels in Bosnia and Herzegovina: the State (or federal) level; the entity level, which includes two entities, the Federation of Bosnia and Herzegovina (Federation) and Republika Srpska (RS) plus the Brcko District; cantons in the Federation; and, municipal governments in both entities and the Brcko District. Each jurisdiction has its own (for the most part) parallel institutions, criminal codes, criminal procedure codes, supporting laws and regulations and

enforcement bodies. Although the institutions at the entity level cooperate with one another and with counterparts in other countries, there is a fair amount of confusion regarding jurisdictional matters between the entities and State-level institutions. Entity, Brcko and State-level criminal and criminal procedure codes were harmonized in 2003. Transferring authority to State-level institutions is a priority for the international community and for the Office of the High Representative (OHR).

Money laundering is a criminal offense in all State and entity criminal codes. New criminal procedure and criminal codes were enacted at the State and entity levels in 2003, with tougher provisions against money laundering, though significant time and resources will be needed to fully implement and enforce the legislation and to develop even the most rudimentary of anti-money laundering regimes. While some legal elements for anti-money laundering measures exist, Bosnia's officials and institutions lack the expertise, capability, and will to control drug-related transactions.

In June 2004, BiH adopted the Law on the Prevention of Money Laundering that came into force on December 28, 2004. This law determines the measures and responsibilities for detecting, preventing, and investigating money laundering and terrorist financing; prescribes measures and responsibilities for international cooperation; and, establishes a financial intelligence unit (FIU) within the newly-created State Investigative and Protection Agency (SIPA). The law requires banks to submit reports on suspicious financial transactions to the State-level FIU in SIPA. SIPA, like many State institutions, remains under-funded and under-resourced. The FIU in SIPA is not yet fully staffed or operational, and its scrutiny of suspicious transactions is therefore limited. It is still unclear what role entity financial enforcement authorities will play in this interim period, and how they will relate to the FIU once it is fully operational.

A National Action Plan, adopted in October 2003, incorporates Council of Europe recommendations against corruption and organized crime. The National Coordination team continued its work in 2004, establishing concrete steps and timelines for accomplishing goals in the areas of institution-building, legislative reform and implementation, and operational cooperation. In implementing the plan, BiH has taken several important steps such as the continued development of the nascent SIPA, the State Intelligence Agency and the Citizen Identification Protection System.

Customs authority rests with the State-level Indirect Tax Authority (ITA), which is not yet fully operational. As a result, in practice, the RS, the Federation and the Brcko district still operate as separate customs agencies that administer the State-level customs law. This has led to uneven interpretation of customs law and created greater opportunities for smuggling into and out of BiH, which makes it an attractive logistical base for terrorists and their supporters.

Current civil statutes governing money laundering are inadequate and insufficiently enforced in an economy that is primarily cash-based and largely unregulated. There is significant ambiguity and overlap in the authorities of investigative and regulatory agencies including the interior ministries, tax and customs administrations, banking agencies, the RS Ministry of Finance Money Laundering Unit and the Federation Financial Police. All have been subject to political interference and/or direct intimidation in the conduct of their duties. Once SIPA and its FIU become completely operational, those ambiguities should lessen, but the exact relationship between all these bodies remains unclear. Governmental authorities throughout all three entities are primarily concerned with tax evasion and customs evasion.

There are 27 banks chartered in the Federation (five under provisional administration) and 10 in the RS (one under provisional administration). Currently, control over the banking sector is vested at the entity rather than the State level, with both the Federation and the RS maintaining separate, but roughly parallel, banking agencies. However, an umbrella banking supervision agency at the State level, within the Central Bank of BiH (CBBH), is expected to be in place in early 2005, once changes and amendments to the law on the Central Bank are passed. Both RS and the Federation have a

Securities Commission and an Insurance Commission. The Commissions act as regulators for their respective sectors.

A number of banks, including all within the Federation, do have compliance officers. Although the respective banking agencies have provided training to compliance officers, bankers note that a State-level working group to assist the banks with various technical, training and compliance issues would be helpful. BiH generally adheres in practice to the Basel Committee's "Core Principles for Effective Banking Supervision," including legal requirements to report suspicious transactions and conduct due diligence. Financial institutions must maintain detailed deposit records and to report suspicious transactions on a daily basis to regulatory authorities.

In order to avoid misuse of the banking system by multiplication of accounts, the CBBH has established a central registry of bank accounts. The Single Transaction Account Registry, which became operational on July 5, 2004, contains all the transactional accounts of the legal entities in BiH. Only the CBBH Main Units can issue data from the Registry. Any legal entity or citizen can submit a request for information from the Single Transactional Accounts Registry, provided they can justify the request and provide proof of fee payment.

The cash threshold for currency transaction monitoring is BAM (Bosnian Convertible Mark) 30,000 (about \$20,000). In 2004, the Federation Financial Police received reports on 77,422 currency transactions totaling BAM 6.8 billion (about \$4.6 billion) from financial institutions and customs authorities. Out of this number, 128 transactions in amount of BAM 11.1 million (about \$7.5 million) were identified as suspicious and reported to prosecutors. The accounts of 1,234 fictitious companies were blocked and assets in amount of BAM 1.3 million (about \$870,000) were frozen. Criminal charges were pressed against 67 individuals. From January 1 through June 30, 2004 the RS FIU received 17,082 currency transaction disclosures in the total amount of BAM 881,859 (about \$600,000). During the same period the FIU issued orders to freeze BAM 57.7 million (about \$39 million) in the bank accounts of 27 companies. Ten cases were sent to the RS and Brcko tax administrations for further investigation, eight cases were referred to SIPA and 6 to the State Prosecutor's Office.

There have been several multiple-defendant indictments for money laundering. Most have been disposed of by plea bargain; however, there were two money laundering trials in 2004 (one at the State level and one at the entity level) which resulted in conviction and forfeiture. In March, an individual pled guilty to money laundering and was sentenced to two years imprisonment and fined BAM 50,000 (about \$34,000). In June, the BiH State Prosecutor's Office filed an indictment against four clerks of the former Kristal Bank on the grounds that they assisted the above individual in laundering BAM 18 million (about \$12 million) during a twenty day period in 2003 for 150 firms.

In August, another individual reached a plea bargain with the BiH Prosecutor's Office and was sentenced to two years imprisonment. The indictment charges the owners of a company with money laundering and tax evasion allegedly involving 115 companies, mostly from the western Herzegovina region of the country. The Deputy BiH Prosecutor expects that these proceedings, which include measures against 65 persons and legal entities charged with laundering BAM 13.5 million (about \$9 million) for tax evasion and document forgery, will collect at least BAM 15 million (about \$10 million) for the BiH budget through fines and profit seizures.

Money laundering and asset forfeiture laws are contained in new Criminal Procedure Codes. There is a new draft law on civil confiscation, which includes an asset management and forfeiture fund. According to the draft law, forfeiture proceedings will be initiated and conducted by the Prosecutor. Asset management will be the responsibility of a unit within the State Court Police under the supervision of the Ministry of Justice. The Ministry of Justice will manage the forfeiture fund, and funds will be parceled out to various law enforcement agencies/prosecutor's offices to assist in their

operations. Adoption is expected in early 2005. There is no established mechanism to identify, trace, or share narcotics-related assets.

On October 21, 2002, UN High Representative put in place amendments to Federation and RS Banking Laws, banning the use of money for terrorism. Citizens of BiH can be prosecuted for terrorism financing when a terrorist act is committed abroad; non-citizens can be extradited. BiH will not extradite its own citizens, but will prosecute them in BiH. The amendments provide Federation and RS Banking Agencies with clear legal authority to freeze assets of suspected terrorists. Federation authorities have taken significant strides to combat terrorist financing and to comply fully with pertinent UN Security Council resolutions (UNSCRs). The Federation authorities have blocked the financial and property assets of all individuals and NGOs on the UNSCR terrorist finance lists and are conducting investigations of other NGOs and individuals suspected of connections to al-Qaida.

Mutual Legal Assistance Treaties that had been signed by either the former Yugoslavia or the Kingdom of Serbia have carried over into BiH. There is no formal bilateral agreement between the United States and BiH regarding the exchange of records in connection with narcotics investigations and proceedings. Local authorities have made good faith efforts to exchange information informally with officials from the USG and regional states, particularly Slovenia and Croatia. However, they lack the professional capacity to conduct complex investigations or participate fully in international financial and law enforcement fora such as Interpol and the FATF. BiH has signed bilateral agreements for information exchange regarding bank supervision with Croatia, Serbia and Slovenia. A draft agreement with Austria is in process.

BiH is a party to the 1988 UN Drug Convention but is hampered by the lack of State-level law enforcement authority. BiH is a party to the UN Convention against Transnational Organized Crime and the UN International Convention for the Suppression of the Financing of Terrorism. Bosnia and Herzegovina is a party to all 12 of the international conventions and protocols relating to terrorism. BiH has historically proven unable or unwilling to pass implementing legislation to ensure the entry-into-force of international conventions to which it is a signatory.

Bosnia and Herzegovina should effectively implement existing laws and banking regulations. The government of Bosnia and Herzegovina should also fully implement centralized regulatory and law enforcement authorities and fully staff the financial intelligence unit within the State Investigative and Protection Agency as soon as possible. Significant additional training should be implemented so that law enforcement, prosecutors and judges will have a better understanding of money laundering and how to pursue it. Bosnia and Herzegovina should consider how best to implement plans to harmonize any remaining legislation, and to work toward the establishment of competent state-level institutions.

Botswana

Botswana is a developing regional financial center as well as a nascent offshore financial center. Botswana has a relatively well-developed banking sector and is vulnerable to money laundering. According to the Directorate on Corruption and Economic Crime (DCEC), the incidence of financial crimes in general increased dramatically in 2004. Seventy-two reports of suspected money laundering transactions were received by the DCEC during 2004, of which 38 cases are currently under investigation. This indicates heightened vigilance within Botswana's institutions with regard to the potential threat of financial crimes. The DCEC has established a special unit to address this threat.

Section 14 of the Proceeds of Serious Crime Act of 1990 criminalizes money laundering. The Bank of Botswana requires financial institutions to report any transaction in which BWP (Botswana Pula) 10,000 (roughly \$2,500) or more is transferred. The Bank of Botswana has the discretion to provide information on large currency transactions to law enforcement agencies. As of early 2004, the Bankers Association of Botswana was meeting on a monthly basis; the meetings are attended by the Botswana

Police Service's investigator of serious crimes. In 2001, Botswana amended the Proceeds of Serious Crimes Act to require identification of financial bodies and owners of corporations and accounts. Additionally, Section 44 of the Banking Act of 1995 requires banks to exercise due diligence, and any bank which acts in breach of the requirements of this section is guilty of an offense and liable for a fine. The Bank of Botswana may revoke the license of a bank where the bank in question has been convicted by any court of competent jurisdiction of an offense related to the practice of laundering or otherwise dealing in illegal proceeds, or where the bank is the affiliate, subsidiary or parent company of a bank which has been convicted.

In 2003, the Government of Botswana (GOB) enacted the Banking (Anti-Money Laundering) Regulations, which are minimum guidelines to banks on the application of international best practices on anti-money laundering practices. The new regulations require banks to record and verify the identity of all personal and corporate customers. Banks must maintain all records on transactions, both domestic and international, for at least five years in order to comply expeditiously with information requests from the DCEC, (which acts as a financial intelligence unit) and other law enforcement authorities. In 2004, the GOB assessed the implementation of these regulations and concluded that compliance was satisfactory.

The 2003 Banking Regulations also require financial institutions to report suspicious transactions. For reporting purposes, banks must designate an employee at management level as a money laundering reporting officer, who serves as a contact between the bank, the Central Bank, and the DCEC. Financial institutions regularly submit reports of suspicious transactions to the DCEC. In suspected cases, the Botswana Police Service can obtain a court order to intercept communications; evidence so gathered would be admissible in court. In 2004, the Government issued regulations governing bureaux de change, including measures to prevent use of these institutions to launder money.

Botswana is in the early stages of developing an offshore financial center and, consequently, licenses offshore banks and businesses. Background checks are performed on applicants for offshore banking and business licenses, as well as on their directors and senior management. The supervisory standards applied to domestic banks are applicable to offshore banks as well. The Bank of Botswana has licensed two offshore banks, but only one has commenced operations.

Bank and business directors are subject to the "fit and proper test" required by Section 29 of the Banking Act of 1995. Anonymous directors and trustees are not allowed. Currently, no offshore trusts operate in Botswana. Shell companies are prohibited in Botswana.

There were no prosecutions for money laundering or terrorist financing in 2004. Terrorist financing is not criminalized as a specific offense in Botswana, but is prosecuted under the Proceeds of Serious Crimes Act. Also, acts of terrorism and related offenses, such as aiding and abetting, can be prosecuted under the Penal Code and under the Arms and Ammunitions Act. The Bank of Botswana has circulated to financial institutions the names of suspected terrorist individuals and groups on the UNSCR 1267/1390 consolidated list, as well as lists provided by the United States Government and the European Union. Under the Proceeds of Serious Crime Act of 1990, Botswana has the authority to confiscate proceeds of terrorist finance-related assets.

Botswana is a party to the 1988 UN Drug Convention, the UN International Convention for the Suppression of the Financing of Terrorism, and the UN Convention against Transnational Organized Crime. Botswana officially became a member of the Eastern and Southern African Anti-Money Laundering Group (ESAAMLG) in February 2003. It is also a member of the Southern African Forum Against Corruption (SAFAC), which combats money laundering.

While the Government of Botswana's laws and policies have been sufficient to contain the threat of money laundering and financial crimes in the past, further expansion of the international financial sector in Botswana would render them inadequate. Although the Directorate on Corruption and

Economic Crime (DCEC) is acting as a financial intelligence unit, no law specifically mandates it to do so. Botswana has yet to draw up legislation governing the micro lending sector: the DCEC expects this to take place in 2005. The Directorate on Corruption and Economic Crime (DCEC) is advocating establishment of one regulatory body for all financial organizations. The Government of Botswana is preparing a draft strategy to combat money laundering and the financing of terrorism. That strategy should include legislation to establish a financial intelligence unit with robust investigative authority and the allocation of adequate resources to ensure that such an institution possesses the skills to effectively track suspect international transactions. The legislation should also specifically criminalize terrorist financing.

Brazil

Due to its great size and large economy, Brazil is considered a regional financial center but not an offshore financial center. Brazil is a major drug-transit country. Brazil maintains adequate banking regulation, retains some controls on capital flows, and requires disclosure of the ownership of corporations. Brazilian authorities report that money laundering in Brazil is primarily a problem of domestic crime, including the smuggling of contraband goods and corruption, both of which generate funds that may be laundered through the banking system, real estate investment, or financial asset markets. The proceeds of narcotics- trafficking and organized criminal activities are laundered in a similar fashion. An Inter-American Development Bank study of money laundering in the region found that Brazil's relatively strong institutions helped reduce the incidence of money laundering to well below the average for the region.

Money laundering in Brazil is primarily related to drugs, corruption, and trade in contraband. The Triborder Area shared by Argentina, Brazil, and Paraguay is well known for its multi-billion dollar contraband re-export trade and arms and drug trafficking. A wide variety of counterfeit goods, including cigarettes, CDs, DVDs, and computer software, are imported into Paraguay from Asia and transported primarily across border into Brazil, with a significantly smaller amount remaining in Paraguay for sale in the local economy. The area is also suspected to be a source of terrorist financing. In 2004 the Government of Brazil (GOB) continued investigating corrupt public figures, including customs inspectors, federal tax authorities, and high-ranking politicians, and the use of offshore companies to launder money.

Brazil's financial intelligence unit, the Conselho de Controle de Atividades Financieras (COAF) has also investigated instances of money laundering linked to the sale and purchase of luxury automobiles. This market is currently an unregulated sector in Brazil. Other schemes involve the purchase of winning lottery tickets to justify the increase of funds. Under Brazil's anti-money laundering law, the lottery sector must notify COAF of the names and data of any winners of three or more prizes equal to or higher than 10,000 reais within a 12-month period. According to Brazilian authorities, Brazilian institutions do not engage in currency transactions that include significant amounts of U.S. currency, currency derived from illegal drug sales in the United States, or that otherwise significantly affect the United States. The authorities believe that organized crime groups use the proceeds of domestic drug trafficking to purchase weapons from Colombian guerilla groups.

The GOB has a comprehensive anti-money laundering regulatory regime in place. Law 9.613 of March 3, 1998, criminalizes money laundering related to drug trafficking, terrorism, arms trafficking, extortion, and organized crime, and penalizes offenders with a maximum of 16 years in prison. The law expands the GOB's asset seizure and forfeiture provisions and exempts "good faith" compliance from criminal or civil prosecution. Regulations issued in 1998 require that individuals transporting more than 10,000 reais (then approximately \$10,000, now approximately \$3,690) in cash, checks, or traveler's checks across the Brazilian border must fill out a customs declaration that is sent to the Central Bank. Financial institutions remitting more than 10,000 reais also must make a declaration to

the Central Bank. Law 10.467, which modified Law 9.613, was passed in June 2002. The new law put into effect Decree 3,678 of November 30, 2000, which penalizes active corruption in international commercial transactions by foreign public officials. Law 10.467 also added penalties for this offense under Chapter II of Law 9.613.

Law 9.613 also created a financial intelligence unit, the COAF, which is housed within the Ministry of Finance. The COAF includes representatives from regulatory and law enforcement agencies, including the Central Bank and Federal Police. The COAF regulates those financial sectors not already under the jurisdiction of another supervising entity. Currently, the COAF has a staff of approximately 28, comprised of 18 analysts, two international organizations specialists, a counterterrorism specialist, and support staff. A new director was appointed in February 2004.

Between 1999 and 2001, the COAF issued a series of regulations that require customer identification, record keeping, and reporting of suspicious transactions to the COAF by obligated entities. Entities that fall under the regulation of the Central Bank, the Securities Commission (CVM), the Private Insurance Superintendence (SUSEP), and the Office of Supplemental Pension Plans (PC), file suspicious activity reports (SARs) with their respective regulator, either in electronic or paper format. The regulatory body then electronically submits the SARs to COAF. Entities that do not fall under the regulations of the above-mentioned bodies, such as real estate brokers, money remittance businesses, factoring companies, gaming and lotteries, dealers in jewelry and precious metals, bingo, credit card companies, commodities trading, and dealers in art and antiques, are regulated by the COAF and send SARs directly to the Financial Intelligence Unit (FIU) either via the Internet or using paper forms. All of these regulations include a list of guidelines that help institutions identify suspicious transactions. COAF has direct access to the Central Bank database so that it has immediate access to the SARs reported to the Central Bank. The COAF has access to a wide variety of government databases, and is authorized to request additional information directly from the entities it supervises and the supervisory bodies of other obligated entities. Domestic authorities that register with COAF may directly access the COAF databases via a password-protected system. The COAF receives roughly 300 to 500 SARs per month, about two percent of which lead to investigations by law enforcement.

The Central Bank has established the Departamento de Combate a Ilícitos Cambiais e Financeiros (Department to Combat Exchange and Financial Crimes, or DECIF) to implement anti-money laundering policy, examine entities under the supervision of the Central Bank to ensure compliance with suspicious transaction reporting, and forward information on the suspect and the nature of the transaction to the COAF. Until January 2001, bank secrecy protected the name of the bank and the account number, and transaction details. While the Central Bank had access to the information, other government agencies-except for congressional investigative committees-required a court order to access detailed bank account information. The GOB addressed this problem by enacting Complementary Law No. 105 and its implementing Decree No. 3,724 in January 2001. These allow for complete bank transaction information to be provided to government authorities, including the COAF, without a court order. On January 11, 2002, Brazil's new omnibus drug legislation was passed, allowing for the suspension of bank secrecy during drug trafficking investigations. The president vetoed Chapter III of this law, which would have reduced the penalty for money laundering from the previous legislation's three to ten years, to one to two years, plus fines.

On July 9, 2003, Law 10.701 was passed to modify Law 9.613 of 1998. Law 10.701 criminalizes terrorist financing as a predicate offense for money laundering. The law also establishes crimes against foreign governments as a predicate offenses, requires the Central Bank to create and maintain a registry, expected to come on-line in 2005, of information on all bank account holders, and enables the COAF to request from all government entities financial information on any subject suspected of involvement in criminal activity. Other measures enacted in 2003 require banks to report cash transactions exceeding 100,000 reais (approximately \$36,900) to the Central Bank, establish a

Money Laundering and Financial Crimes

department within the Ministry of Justice to recover financial assets, and designate a representative from the Ministry of Justice to the COAF.

In 2004, the GOB adopted and began implementing a new national strategy document for combating money laundering. The strategy includes 32 actions, grouped into six strategic goals: improve coordination of disparate federal and state level anti-money laundering efforts, utilize computerized databases and public registries to facilitate the fight against money laundering, evaluate and improve existing mechanisms to combat money laundering, increase international cooperation to fight money laundering and recover assets, promote an anti-money laundering culture, and prevent money laundering before it occurs. The first major coordination action taken under the new plan was the creation of a new high-level coordination council, known as the GGI-LD, led by the Ministry of Justice's Office for Asset Seizure and International Judicial Cooperation. The GGI-LD determines overall strategy and priorities, which are then implemented by COAF, which has been strengthened with additional analysts. Specific cases are then assigned to law enforcement task forces for investigation.

Implementation of much of the strategy is ongoing. Among the more ambitious efforts is the drafting of legislative changes to facilitate greater law enforcement access to financial and banking records during investigations, criminalize illicit enrichment, allow administrative freezing of assets, and facilitate prosecutions of money laundering and terrorist financing cases by refining the legal definition of money laundering and de-linking it from the current exhaustive list of predicate crimes. The GOB reportedly plans to present to Congress a bill enacting these changes in early 2005. The creation of a unified database of all money laundering investigations and of a national-level registry of real estate, which would aid investigators, is also being considered. An existing effort to create a database of all current accounts in the country, updated in real time, is also expected to come to fruition in 2005.

Brazil has established systems for identifying, tracing, freezing, seizing, and forfeiting narcotics-related assets. The COAF and the Ministry of Justice manage these systems jointly. Police authorities and the customs and revenue services are responsible for tracing and seizing assets, and have adequate police powers and resources to perform such activities. The judicial system has the authority to forfeit seized assets. Brazilian law permits the sharing of forfeited assets with other countries. Traffickers have not taken any retaliatory actions related to money laundering investigations, government cooperation with the U.S. Government, or the seizure of assets.

Brazil has a limited ability to employ advanced law enforcement techniques such as undercover operations, controlled delivery, and use of electronic evidence and task force investigations that are critical to the successful investigation of complex crimes, such as money laundering. Generally such techniques can be used only for information purposes, and are not admissible in court. In 2003, Brazilian courts handed down their first criminal conviction for money laundering. The case involved illegal transfers of money overseas through a currency exchange in Foz do Iguacu. A flood of new investigations—over 1000 money laundering investigations since 2000—has led to a sharp spike in the number of money laundering cases going to court. To deal with the increased caseload, Brazilian authorities passed legislation in 2003 to create seven special money laundering courts. The judges in these courts generally have received some specialized training to deal with money laundering cases.

Investigations into the scandal involving Banestado, the state bank of Parana, continued in 2004. In 1995, five banks in the Triborder region of Brazil, Paraguay, and Argentina, including Banestado, were authorized to open currency exchange accounts, known as CC-5 accounts. CC-5 accounts quickly became used as a means of laundering money. Money changers opened hundreds of fake CC-5 accounts, into which criminals deposited millions of reais. The money was then wired in dollars to the Banestado branch in New York City and from there to other banks, usually in countries considered to be tax havens. The money changers and Banestado officials took cuts from each transaction. Over 250

phony CC-5 accounts have been identified, and it is suspected that as much as \$30 billion passed through CC-5 Banestado accounts in the United States between 1996 and 1999, a portion of which was likely laundered. Many high-level GOB officials were implicated in this case. The Brazilian Congress began an investigation into the matter in June 2003, but the inquiry committee was considered to be polarized along party lines, and information gathered by the inquiry was leaked to the press prior to the October 2004 municipal elections. The committee concluded its inquiry on December 14, 2004, with a politicized final report recommending that law enforcement agencies indict 91 individuals in the case. Out of the 91 implicated, only two are high-level GOB officials. The final report has not yet been approved by the full Congress. The Brazilian Federal Police and the Public Ministry are expected to continue with their own investigations.

The main weakness in Brazil's anti-money laundering regime lies in the lack of legislation criminalizing the financing of terrorism. Although terrorist financing is considered to be a predicate offense for money laundering under Law 10.701 of 2003, terrorist financing is not an autonomous crime. There have been no money laundering prosecutions to date in which terrorist financing was a predicate offense, and so it remains to be seen if the financing of terrorism could be contested as an enforceable predicate offense due to the lack of legislation specifically criminalizing terrorist financing. No known laws have been drafted to criminalize the financing of terrorism. However, the GOB has responded to U.S. Government efforts to identify and block terrorist-related funds. Since September 11, 2001, COAF has run inquiries on hundreds of individuals and entities, and has searched its financial records for entities and individuals on the UNSCR 1267 Sanctions Committee's consolidated list. None of the individuals and entities on the consolidated list was found to be operating or executing financial transactions in Brazil, and the GOB insists there is no evidence of terrorist financing in the area. The United States, however, remains concerned that the Triborder area with Paraguay and Argentina,—infamous for contraband of all kinds, including arms, drugs and pirated goods—lacks enforcement of currency controls and cross-border reporting requirements, and is suspected to be a source of terrorist financing. In November 2003, the GOB extradited an alleged financier, Assad Ahmad Barrakat, to Paraguay on charges of tax evasion; he was convicted in May 2004 and sentenced to six and one-half years in prison. Because of his suspected links to the terrorist group Hizballah, the U.S. Government designated and froze the assets of Barrakat and two of his businesses in June 2004 under Executive Order 13224 on Terrorist Financing.

The GOB has signed, but not yet ratified, the UN International Convention for the Suppression of the Financing of Terrorism and the OAS Inter-American Convention on Terrorism. In 2000 Brazil became a full member of the Financial Action Task Force (FATF), and a founding member of GAFISUD, the FATF for South America, and has sought to comply with the FATF Special Recommendations on Terrorist Financing. Brazil is a party to the 1988 UN Drug Convention and has signed, but not ratified, UN Convention against Corruption. On January 29, 2004, the GOB ratified the UN Convention against Transnational Organized Crime, which entered into force on September 29, 2003. Brazil is also a member of the Organization of American States Inter-American Drug Abuse Control Commission (OAS/CICAD) Experts Group to Control Money Laundering. The COAF has been a member of the Egmont Group since 1999. In February 2001, the Mutual Legal Assistance Treaty between Brazil and the United States entered into force, and a bilateral Customs Mutual Assistance Agreement was negotiated in 2002 and signed in 2004, and is expected to enter into force in February 2005. The GOB also participates in the "3 Plus 1" Counter-Terrorism Dialogue between the United States and the Triborder Area countries.

The Government of Brazil should criminalize terrorist financing as an autonomous offense, and should become a party to the UN International Convention for the Suppression of the Financing of Terrorism and to the OAS Inter-American Convention on Terrorism. In order to continue to successfully combat money laundering and other financial crimes, Brazil should also develop legislation to regulate the sectors in which money laundering is an emerging issue. Brazil should enact and implement

legislation to provide for the effective use of advanced law enforcement techniques, in order to provide its investigators and prosecutors with more advanced tools to tackle sophisticated organizations that engage in money laundering, financial crimes, and terrorist financing. Brazil should also enforce currency controls and cross-border reporting requirements, particularly in the Tri-border region. Additionally, Brazil and the Conselho de Controle de Atividades Financeiras (COAF), the Financial Intelligence Unit, must continue to fight against corruption and ensure the enforcement of existing anti-money laundering laws.

British Virgin Islands

The British Virgin Islands (BVI) is a Caribbean overseas territory of the United Kingdom (UK). The BVI is vulnerable to money laundering due to its financial services industry. Tourism and financial services account for approximately 50 percent of the economy. The offshore sector offers incorporation and management of offshore companies, and provision of offshore financial and corporate services. The BVI has 11 banks, 2,023 mutual funds with 448 licensed mutual fund managers/administrators, 312 local and captive insurance companies, 1000 registered vessels, 90 licensed general trust companies, and 544,000 international business companies (IBCs). According to the International Business Companies Act of 1984, BVI-registered IBCs cannot engage in business with BVI residents, provide registered offices or agent facilities for BVI-incorporated companies, or own an interest in real property located in the BVI except for office leases. BVI has approximately 90 registered agents that are licensed by the Financial Services Commission (FSC), which was established December 7, 2001. The law transfers responsibility for regulatory oversight of the financial services sector from a government body, the Financial Services Department, to the FSC, an autonomous regulatory body. The process for registering banks, trust companies, and insurers is governed by legislation that requires detailed documentation, such as a business plan and vetting by the appropriate supervisor within the FSC. Registered agents must verify the identities of their clients.

The Proceeds of Criminal Conduct Act of 1997 expands predicate offenses for money laundering to all criminal conduct, and allows the BVI Court to grant confiscation orders against those convicted of an offense or who have benefited from criminal conduct. The law also creates a Financial Intelligence Unit (FIU), referred to as the Reporting Authority-Financial Services Inspectorate and responsible for the collection of suspicious activity reports. Under the Financial Investigation Agency Act 2003, implemented in 2004, the FIU was reorganized and renamed the Financial Investigation Agency.

The Joint Anti-Money Laundering Coordinating Committee (JAMLCC) was established in 1999 to coordinate all anti-money laundering initiatives in the BVI. The JAMLCC is a broad-based, multi-disciplinary body comprised of private and public sector representatives. The Committee has drafted Guidance Notes based on those of the UK and Guernsey.

On December 29, 2000, the Anti-Money Laundering Code of Practice of 1999 (AMLCP) entered into force. The AMLCP establishes procedures to identify and report suspicious transactions. The AMLCP also requires covered entities to create a clearly defined reporting chain for employees to follow when reporting suspicious transactions, and to appoint a reporting officer to receive these reports. The reporting officer must conduct an initial inquiry into the suspicious transaction and report it to the authorities, if sufficient suspicion remains. Failure to report could result in criminal liability.

The BVI proposed the Code of Conduct (Service Providers) Act (CCSPA), which would encourage professionalism, enhance measures to deter criminal activity, promote ethical conduct, and encourage greater self-regulation in the financial sector. The CCSPA also would establish the Council of Service Providers, a body that would regulate the conduct of individuals within the financial services industry. Additionally, the CCSPA would formulate policy, procedures, and other measures to regulate the industry, advise the government on legislation and policy matters, and monitor compliance within the industry. The current status of this proposal is not available.

In 2000, the Information Assistance (Financial Services) Act (IAFSA) was enacted to increase the scope of cooperation between BVI's regulators and regulators from other countries.

The BVI has criminalized terrorism and terrorist financing through the Terrorism (United Nations Measures)(Overseas Territories) Order 2001 and the Anti-Terrorism (Financial and Other Measures)(Overseas Territories) Order 2002. The BVI is a member of the Caribbean Financial Action Task Force and received a second mutual evaluation of its financial sector and regulations during November 17-21, 2003. The BVI is subject to the 1988 UN Drug Convention and as a British Overseas Territory has implemented measures in accordance with this convention and the UN Convention against Transnational Organized Crime. Application of the U.S./UK Mutual Legal Assistance Treaty concerning the Cayman Islands was extended to the BVI in 1990. The Financial Investigation Agency is a member of the Egmont Group.

The Government of the British Virgin Islands should continue to strengthen its anti-money laundering regime by fully implementing recently passed legislation.

Brunei

In 2000, The Government of Brunei Darussalam adopted anti-money laundering legislation referred to as the Money Laundering Order and created a presiding organization called the National Anti-Money Laundering Committee (NAMLC), comprised of the: Financial Institutions divisions; Ministry of Finance (Domestic); Brunei International Financial Center (BIFC); Attorneys General's Chambers (AGC); Royal Brunei Police Force (RBPF); Royal Customs and Excise Department; Anti-Corruption Bureau; Narcotics Control Bureau; Immigration Department and Brunei Currency and Monetary Board. Brunei also implemented an asset seizure and forfeiture law, and the Criminal Conduct (Recovery of Proceeds) Order. This legislation applies both domestically and offshore. There are three offshore banks: Royal Bank of Canada, HSBC, and Hong Kong-based Sun Hun Kai.

In 2001, Brunei set into motion its plans to become an offshore financial center by bringing into effect a series of laws that established the Brunei International Financial Center (BIFC). The relevant laws are: the International Business Companies Order 2003 (amended from 2000); the International Banking Order 2000; the Registered Agents and Trustees Licensing Order 2000; the International Trusts Order 2000; the International Limited Partnerships Order 2000; the Mutual Fund Order 2001; the Securities Order 2003 (originally established in 2001) and the International Insurance and Takaful Order 2002.

The BIFC offers general banking, Islamic banking, insurance, international business companies (IBCs), trusts (including asset protection trusts), mutual funds, and securities services. The BIFC also launched a virtual Stock Exchange in 2002. Bearer shares are not permitted, but nominee shareholders are allowed for IBCs. Brunei residents are allowed to become shareholders of IBCs. Currently more than 2,500 companies are in the BIFC database, although many appear to be inactive. The Government also recently established the Brunei Economic Development Board to attract more foreign direct investment. There are no exchange controls.

Brunei has no Central Bank. Acting through the Financial Institutions Division and the Head of Supervision, a segregated unit of the Ministry of Finance oversees the BIFC. This unit combines both regulatory and marketing responsibilities. The multi-disciplinary group is comprised of persons responsible for the supervision of banking, insurance, corporations, and trusts.

In 2002, Brunei enacted the Drug Trafficking Recovery of Proceeds Act and the Anti-Terrorism Financial and other Measures Orders. The latter explicitly criminalize the financing and support of terrorism.

Brunei is a party to the 1998 UN Drug Convention and to the UN International Convention for the Suppression of the Financing of Terrorism. Brunei became a member of the Asia/Pacific Group on Money Laundering (APG) in 2003. The APG's Terms of Reference include a commitment to adopt the international standards contained in the revised FATF Forty Recommendations on Money Laundering and the Special Nine Recommendations on Terrorist Financing.

The Government of Brunei should continue to enhance its anti-money laundering regime by separating the regulatory and marketing functions of the Authority to avoid potential conflict of interest. Additionally, Brunei should adequately regulate its offshore sector to reduce its vulnerability to misuse by terrorist organizations and their supporters. For all IBCs, Brunei should provide for identification of all beneficial owners, or immobilized the bearer shares.

Bulgaria

Bulgaria is not considered an important regional financial center. However, Bulgaria is a major transit point for drugs into Western Europe, and financial crimes, including fraud schemes of all types; smuggling of persons and commodities; and other organized crime offenses also generate significant proceeds. Financial crimes—including significant tax fraud and credit card fraud—are prevalent. The sources for money laundered in Bulgaria likely derive from both wholly domestic as well as international criminal activity. Organized crime groups operate very openly in Bulgaria. There have been significant physical assaults on Bulgarian public officials as well as journalists who challenge organized crime operations. Smuggling remains a problem in Bulgaria and is undoubtedly sustained by ties with the financial system.

Government of Bulgaria (GOB) officials believe the operation of duty free shops within Bulgaria plays a major role in facilitating the smuggling of cigarettes, alcohol and luxury goods, and the execution of financial crimes. Ministry of Finance (MOF) customs and tax authorities have supervisory authority over the duty free shops. According to these authorities, reported revenues and expenses by the shops very clearly have included activities other than duty free trade. Identification procedures are also lacking. MOF inspections have revealed that it is practically impossible to monitor whether people who buy commodities at the numerous duty free shops actually cross the state border. Attempts by the MOF to close down 44 of the 57 shops operating in Bulgaria have been defeated, particularly due to the efforts of the government's junior coalition partner

Criminal proceeds are moved through Bulgaria from Eastern Europe, the former Soviet Union, Turkey, and the Middle East, with the aim of introducing such proceeds into the Western European and United States financial systems. Bulgaria remains largely a cash economy. Although euro-based transactions have recently increased, the U.S. dollar remains a favored currency for financial transactions. The presence of organized criminal groups and official corruption contribute to Bulgaria's money laundering problem.

In February 2004, Parliament adopted a revised National Strategy for fighting serious crime. The crime strategy covers a two-year period and focuses on the importance of cooperation between various government agencies such as the Tax and Customs Administration, the Interior Ministry, and Bulgaria's financial intelligence unit (FIU), the Financial Intelligence Agency. However, despite the GOB's efforts to address serious crime, lax enforcement remains an issue.

Money laundering was criminalized in 1997 via Articles 253 and 253(a) of the Penal Code. In 2001, the code was amended to add a 30-year prison penalty if the money laundering is linked with narcotics-trafficking. The legislation takes an "all-crimes" approach, as opposed to a list approach, meaning that any crime may serve as a predicate crime for money laundering.. Penalties for predicate crimes are addressed elsewhere in the Penal Code.

Other administrative money laundering provisions contained in the Law on Measures Against Money Laundering (LMML) address customer identification and record keeping requirements, suspicious transaction reporting and internal rules for financial institutions on implementation of an anti-money laundering program. Banks, securities brokers, auditors, accountants, insurance companies, investment companies and other businesses are subject to these reporting requirements. Customs rules require the declaration by travelers of all Bulgarian and foreign currency in cash, including traveler's checks, in excess of approximately 2,500 euros. Due to corruption and inefficiency in the Customs Service, enforcement of this requirement is irregular.

During April 2003, Parliament passed legislation amending the (LMML)-further strengthening anti-money laundering measures. The amendments expand the types of covered institutions and groups to a total of 29 different categories of covered institutions, all of which are subject to suspicious and currency transaction reporting requirements. These include lawyers, real estate agents, auctioneers, tax consultants and security exchange operators. The amendments also require covered institutions to demand an explanation of the source of funds for "operations or transactions in an amount greater than Bulgarian leva 30,000 (approximately 15,000 euros) or its equivalent in foreign currency; or exchange of cash currency in an amount of leva 10,000 (approximately 5,000 euros) or its equivalent in foreign currency." However, shortly after passage of the new law, the requirements for reporting for lawyers were amended to mandate actual knowledge of money laundering by a client to prevent a conflict with legal ethic rules.

The legislation also introduces a currency transaction reporting requirement of 30,000 leva (15,000 euros), thus bringing Bulgaria into compliance with the European Union's (EU) Second Directive on Money Laundering. The LMML obligates financial institutions to a five-year record keeping requirement and provides a "safe harbor" to reporting entities. Penal Code Article 253B was enacted in 2004 to establish criminal liability for noncompliance with LMML requirements. Although case law remains weak, in September 2003 for purposes of EU accession, Bulgaria's anti-money laundering legislation was determined to be in full compliance with all EU standards. To date, the banking sector has exhibited the most awareness of anti-money laundering standards and has been responsible for the largest number of suspicious transaction reports (STRs) of suspected money laundering. The absence of reports from exchange bureaus, casinos, non-bank financial institutions, dealers in high-value goods and other reporting entities can be attributed to a number of factors, including lack of understanding of money laundering reporting requirements, lack of resources (e.g., inspection staff) and effective regulatory controls, and an overall lax enforcement of the anti-money laundering policy by government officials.

The LMML amendments also changed the name of Bulgaria's FIU from the Bureau of Financial Intelligence to the Financial Intelligence Agency (FIA), commensurate with its status as a full agency within the Ministry of Finance. They further institutionalize and guarantee functional independence of the FIU's director and provide for a supervisor within the Ministry of Finance who can oversee the activities of the FIA but is prohibited by law from issuing operational commands. The FIA is also authorized to perform on-site compliance inspections. Since high-value goods dealers have been required to report since 2001, and there is no supervisory authority, the FIA also acts as the compliance authority for this sector. The FIA is authorized to obtain all information without needing a court order, to share all information with law enforcement, and to receive reports of suspected terrorism financing. Notwithstanding the increase in activity, the FIA remains handicapped technologically, but is working on improving its database and its management to make it more efficient for the analysts' use.

The FIA is an administrative unit and does not participate in active criminal investigations. The FIA forwards reports of potential criminal activity to the Prosecutor's Office, which then has the discretion to open an investigation by referring the case to either law enforcement officers from the Ministry of Interior (MOI) or investigating magistrates from the National Investigative Service (NIS). The MOI

and the NIS are the two agencies responsible for investigating money laundering and the predicate criminal activity leading to it. If the Prosecutor's Office determines that an STR referred by the FIA does not merit prosecution, the FIA has the authority to appeal the Prosecutor's decision. Between November 2003 and October 2004, the FIA received 439 STRs and 65,465 currency transaction reports (CTRs). The STRs had a total combined value of 163.3 million euros. On the basis of the forwarded STRs, 437 cases were opened. Also during the same one-year period, the FIA referred 57 cases, representing over 35 million euros, to the Supreme Prosecutor's Office of Cassation and 167 cases with a total value of over 94 million euros to the Ministry of Interior. During the first 10 months of 2004, the FIA forwarded 37 reports to supervisory authorities for administrative action.

Although money laundering has been pursued in court cases, there has never been a conviction for the crime. In general, there are very few successful prosecutions for other financial crimes and predicate criminal activity that give rise to money laundering. This is mainly due to the fact that prosecutors, investigators, and law enforcement officials, especially at the district level, lack significant training in money laundering. GOB officials, however, hope that this trend is changing. During 2004, 22 money laundering investigations were opened at the NIS under Article 253 of the Penal Code. Also, at least five investigations resulted in arrests for money laundering. The prosecution service has reported that there were three indictments in 2004 specifically for money laundering, with thirty cases presently under investigation.

Bulgaria has strict and wide-ranging banking, tax, and commercial secrecy laws that limit the dissemination of financial information absent the issuance of a court order based on evidence of a committed crime. While the FIA enjoys an exemption from these secrecy provisions, they apply to all other government institutions and often are cited as an impediment to the performance of legitimate law enforcement functions. In a small effort to remedy the situation in 2004, amendments made to the Bulgarian Penal Code to permit the repeal of overly broad tax secrecy provisions, improving dissemination of some information previously covered by tax secrecy laws.

There are few if any indications of terrorist financing connected with Bulgaria. The GOB amended its Penal Code at Article 108a to criminalize terrorism and terrorist financing. Under Article 253 of the Criminal Code, terrorist acts and financing qualify as predicate crimes under Bulgaria's "all crimes" approach. The GOB also enacted the Law on Measures Against Terrorist Financing (LMATF) in February 2003, which links counterterrorist measures with financial intelligence and compels all covered entities to report suspicion of terrorism financing or pay a penalty of 25,000 leva. The law was passed consistent with the FATF Special Recommendations on Terrorist Financing. The law legislates a link between the FIA and terrorism financing, and authorizes the agency to use its financial intelligence to that end as well as in fighting money laundering.

Under the provisions of the LMATF, the state may freeze assets of a suspected terrorist for up to 45 days. The various lists generated by the UN, EU and United States of individuals and entities associated with terrorism have been circulated by the FIA, in cooperation with the Bulgarian National Bank, to the commercial banking sector and elsewhere. To date, no suspected terrorist assets have been identified, frozen, or seized by Bulgarian authorities.

There are no known initiatives underway to address alternative remittance systems. Although they may operate there, Bulgarian officials have not acknowledged their existence. In general, regulatory controls over non-bank financial institutions are still lacking, with some of those institutions engaging in banking activities absent any regulatory oversight. Similarly, exchange bureaus are subject to minimal regulatory oversight, and some anecdotal evidence suggests that charitable and non-profit legal status is frequently abused by some organizations. As part of its ongoing effort to strengthen its anti-money laundering and counterterrorist financing regime, the GOB has made non-bank financial institution oversight deficiencies a top priority for 2005.

In cases where a conviction has been obtained, the Bulgarian Penal Code provides legal mechanisms for forfeiting assets (including substitute assets in money laundering cases) and instrumentalities. Bulgaria's money laundering and terrorist financing laws both include provisions for identifying, tracing, and freezing assets related to money laundering or the financing of terrorism. Key players in the process of asset freezing and seizing, as prescribed in existing law, include the MOI; MOF, including FIA; Council of Ministers; Supreme Administrative Court; Sofia City Court; and the Prosecutor General. However, a comprehensive asset forfeiture law has yet to be enacted. In 2002, the MOI drafted an asset forfeiture law. But some experts have assessed the draft law as draconian and deficient.

Bulgaria has had several false starts in its attempts to enact asset forfeiture legislation, largely due to concern about the broad powers that could be afforded by the enactment of such a law. In response, the MOI in particular, and with the support of international counterparts, adopted a public awareness campaign to address those issues and re-drafted the legislation to reflect necessary political compromises. At the end of 2004, the Bulgarian Parliament was considering a new draft civil asset forfeiture law that incorporates the experts' recommendations. As a result of the revisions to the draft as well as a high level of political support for the passage of a civil asset forfeiture law, it is anticipated that the new draft law will be enacted before the end of 2005. The draft civil asset forfeiture law envisions an inter-institutional body that will be specifically tasked with criminal asset tracing responsibilities. In addition, MOI officials are in the early stages of collaboration with EU counterparts to establish a formal intelligence sharing network specifically related to asset tracing.

The United States does not have a mutual legal assistance treaty with Bulgaria. Information is exchanged formally through the letter rogatory process. Currently, the FIA has bilateral memoranda of understanding (MOU) regarding information exchange relating to money laundering with Belgium, the Czech Republic, Latvia, the Russian Federation, Slovenia, Canada, Australia, and Spain. Bulgaria is negotiating, and expects in 2005 to execute MOUs with Bolivia, Brazil, Cyprus, the Netherlands Antilles, Serbia and Montenegro, Thailand, and Ukraine. Between November 2003 and October 2004, the FIA sent 261 requests for information to foreign FIUs and received 68 requests for assistance from foreign FIUs (the FIA has replied to 62 so far). Twenty-four of the 68 requests for assistance were submitted by the United States and were related to persons designated as terrorists or supporters of terrorism pursuant to Executive Order 13224. The GOB has also entered into an intergovernmental agreement with Russia that promotes anti-money laundering cooperation.

Bulgarian authorities have a good record of cooperation with USG counterparts. In 2004, Bulgarian law enforcement and prosecutors, joined by international counterparts, took part in international operations that have resulted in arrests and prosecutions in both Bulgaria and the United States for significant financial crimes, including money laundering, credit card fraud, and counterfeiting.

Bulgaria participates in the COE's Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL). The FIA is a member of the Egmont Group and participates actively in information sharing with foreign counterparts. Bulgaria is a party to the 1988 UN Drug Convention and the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime. Bulgaria is a party to the UN Convention against Transnational Organized Crime and the UN International Convention for the Suppression of the Financing of Terrorism. In December 2003, the GOB signed the UN Convention against Corruption.

Although Bulgaria has done well to enact legislative changes consistent with international anti-money laundering standards, lack of enforcement remains an issue. There appears to be no political will to amend unduly broad bank secrecy provisions that are said to hamper law enforcement efforts, and the banking community has a very strong lobby within Parliament. The GOB must take steps to improve and tighten its regulatory regime (especially with regard to non-bank financial institutions) and the consistency of its Customs reporting enforcement.

The Government of Bulgaria should enact and implement proposed measures to address forfeiture and seizure of criminal assets. Bulgaria should also establish procedures to identify the origin of funds used to acquire banks and businesses during privatization. Bulgaria should provide sufficient resources to the Financial Intelligence Agency (FIA) and incorporate technological improvements. The FIA should also continue to work cooperatively with all institutions having a role to play in combating money laundering to ensure full implementation of Bulgaria's anti-money laundering regime and to improve prosecutorial effectiveness in money laundering cases.

Burkina Faso

Burkina Faso is not a regional financial center. Although the economy is primarily cash-based, there are seven banks and a system of credit unions in Burkina Faso. Only an estimated six percent of the population has bank accounts.

The Central Bank of West African States (BCEAO), based in Dakar, Senegal, is the Central Bank for the countries in the West African Economic and Monetary Union (WAEMU): Benin, Burkina Faso, Guinea-Bissau, Cote d'Ivoire, Mali, Niger, Senegal, and Togo, all of which use the French-backed CFA franc currency. All bank deposits over approximately \$7,700 made in BCEAO member countries must be reported to the BCEAO, along with customer identification information.

Burkina Faso is currently transposing WAEMU regulations regarding fighting financial crimes and money laundering into law. In September 2002, the WAEMU Council of Ministers issued a directive laying out the judicial framework for fighting money laundering. The draft aims to define a legal framework for money laundering in order to prevent the use of WAEMU economic, financial, and bank channels to recycle money or other illicit goods.

The law has been sent to member states. Each state will adopt it as a national law on money laundering. The Burkinabe Treasury Department and the Ministry of Justice, which gave its advisory opinion, had approved the draft in 2003. The final stages include approval of the Cabinet and the adoption by the National Assembly which is expected to happen during the spring session ending in March 2005. After the adoption, the Government of Burkina Faso (GOBF) will set up a committee to follow up with all financial data.

In the area of financial crimes, WAEMU issued on June 26, 2003 a decision concerning the list of individuals and entities involved in terrorist finance. The decision aims to implement in WAEMU member countries measures for freezing money and other financial resources taken by the UNSC Sanction Committee as per UNSCR 1267 and 1373. The decision has been forwarded to the Burkinabe Treasury Department and banks for implementation.

In 2000, the Economic Community of West African States (ECOWAS) established the Intergovernmental Group for Action Against Money Laundering (GIABA), based in Dakar, Senegal. In November 2002 GIABA hosted an anti-money laundering seminar for representatives of 14 ECOWAS members, including Burkina Faso. Burkina Faso has signed and ratified the UN Convention against Transnational Organized Crime. Burkina Faso is a party to the 1988 UN Drug Convention and the UN International Convention for the Suppression of the Financing of Terrorism.

Burkina Faso should criminalize money laundering and terrorist financing as part of a viable anti-money laundering regime that would comport with international standards.

Burma

Burma, a major drug producing and trafficking country, has a mixed economy with private activity dominant in agriculture and light industry, and with substantial state-controlled activity, mainly in energy and heavy industry. Burma's economy continues to be vulnerable to drug money laundering

due to its under-regulated financial system, weak anti-money laundering regime, and policies that facilitate the funneling of drug money into commercial enterprises and infrastructure investment.

In October 2004, the Financial Action Task Force (FATF) withdrew countermeasures against Burma that it had called upon member countries to impose in 2003 for Burma's failure to remedy deficiencies to its anti-money laundering regime identified in 2001 when the FATF placed Burma on its Non-Cooperative Country and Territories list. The October FATF decision came in response to passage in April 2004 of the "Mutual Assistance in Criminal Matters Law" (MLA) along with subsequent amendments and implementing regulations to the MLA and the 2002 "Control of Money Laundering Law."

In January 2004, the Government of Burma (GOB) took steps to improve its money laundering law. It set a threshold amount for reporting cash transactions by banks and real estate companies, albeit at a high level of 100 million kyat (approximately \$100,000). The government also formally named representatives to a financial intelligence unit established in December 2003. At the request of the FATF, in October 2004 the government added fraud to its list of predicate offenses for money laundering and made clear that there was not a threshold amount for money laundering offenses associated with any of the listed predicate crimes. Shortly thereafter, in November 2004, Burma further amended its money laundering law to specify a penalty of up to three years imprisonment and/or fine, for "tipping off" that a suspicious transaction report has been filed on a particular individual.

These moves amended regulations instituted in 2003, which had set out 11 predicate offenses, including narcotics activities, human and arms trafficking, cyber crime, and "offenses committed by acts of terrorism," among others. The 2003 regulations also called for suspicious transaction reports (STRs) by banks, the real estate sector, and customs officials, and imposed severe penalties for non-compliance.

Despite the lifting of countermeasures, Burma remains on the FATF's list of non-cooperative countries and territories because of remaining shortcomings in its anti-money laundering regime. As of January, 2005, the United States has maintained the countermeasures it adopted in April, 2004, against Burma. At that time, the United States issued final rules finding the jurisdiction of Burma and two private Burmese banks, Myanmar Mayflower Bank and Asia Wealth Bank to be "of primary money laundering concern," and requiring U.S. banks to take certain special measures with respect to all Burmese banks, including Myanmar Mayflower and Asia Wealth Bank in particular. These rules were issued by FinCEN of the Treasury Department pursuant to Section 311 of the 2001 USA PATRIOT Act.

The rules prohibit certain U.S. financial institutions from establishing or maintaining correspondent or payable-through accounts in the United States for, or on behalf of, Myanmar Mayflower and Asia Wealth Bank and, with narrow exceptions, all other Burmese banks. Myanmar Mayflower and Asia Wealth Bank have been directly linked to narcotics-trafficking organizations in Southeast Asia. In December 2003, the Burmese Government announced an investigation of these two private banks. However, in 2004 there were no publicly available interim reports or other evidence of progress in these investigations.

Burma remains under a separate U.S. Treasury Department advisory, stating that U.S. financial institutions should give enhanced scrutiny to all financial transactions relating to Burma. The Section 311 rules complement the 2003 Burmese Freedom and Democracy Act (renewed in July 2004) and an accompanying executive order. These laws imposed new economic sanctions on Burma following the Burmese government's May 2003 attack on pro-democracy leader Aung San Suu Kyi and her convoy. New sanctions prohibit the import of Burmese-produced goods into the United States, ban the provision of financial services to Burma by U.S. persons, freeze the assets of identified Burmese

institutions including the ruling junta, and expand visa restrictions to include managers of state-owned enterprises, among other officials and family members associated with the regime.

Burma holds observer status in the Asia/Pacific Group on Money Laundering and is a party to the 1988 UN Drug Convention. Over the past several years, the Government of Burma (GOB) has extended its counternarcotics cooperation with other states. The GOB has bilateral drug control agreements with India, Bangladesh, Vietnam, Russia, Laos, the Philippines, China, and Thailand. It is not known whether these agreements cover cooperation on money laundering issues. Burma has signed, but not yet ratified, the UN International Convention for the Suppression of the Financing of Terrorism. In March 2004, Burma ratified the UN Convention against Transnational Organized Crime.

The Government of Burma now has in place a framework to allow mutual legal assistance and cooperation with overseas jurisdictions in the investigation and prosecution of serious crimes. Burma must increase the regulation and oversight of its banking system, and end policies that facilitate the investment of drug money in the legitimate economy or encourage widespread use of informal remittance or “hundi” networks. Burma should create an environment conducive to establishing a viable anti-money laundering regime. Burma should provide the necessary resources to the administrative and judicial authorities that supervise the financial sector and implement fully and enforce its latest regulations to fight money laundering successfully. Burma should become a party to the UN International Convention for the Suppression of the Financing of Terrorism and criminalize the funding of terrorism.

Burundi

Burundi is not a regional financial center, nor does it have occasion to deal in large sums of private money, with the exception of funds provided by the IMF, World Bank, or other donors. The government’s ability to impose compliance on the banking industry is weak, except in matters of foreign currency exchange. The weakness of the local currency and the government’s control of foreign currency exchange are the chief safeguards against money laundering.

There are nine banks operating in Burundi, two of which have partial foreign ownership, Belgium’s Belgolaise Bank and La Generale des Banques. The Burundian Government promulgated a new banking law in October 2003. Money laundering is not specifically mentioned, but article 16 of the new law reads: “Banks and financial institutions are required to refuse the transfer or management of funds connected to illegal activities and to communicate to the Burundi Central Bank all information on such.” In addition, Burundian banks must retain records of financial transactions for a minimum of 15 years, and must surrender banking information if properly requested by judicial authorities. All foreign currency exchanges must be reported to the Central Bank, and all foreign currency exchanges of significant sums must be pre-authorized by the Central Bank. In late 2004, the Government of Burundi indicated that it was drafting legislation on money laundering.

Burundi has signed, but not ratified, both the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime.

The Burundian Government has expressed its willingness to cooperate with the USG on narcotics-trafficking, terrorism, and terrorist financing. Burundi has a history of cooperation through Interpol. To date, there have been no reported cases of money laundering.

The Government of Burundi should establish specific anti-money laundering laws and develop a comprehensive anti-money laundering regime that comports to international standards. Burundi should also become party to the UN International Convention for the Suppression of the Financing of Terrorism and to the UN Convention against Transnational Organized Crime. Burundi should also criminalize terrorism and the financing of terrorism.

Cambodia

Cambodia is not an important regional financial center. Nevertheless, Cambodia remains vulnerable to money laundering. It has a very weak anti-money laundering regime, a cash-based economy with an active hawala system, porous borders with attendant smuggling, and widespread official corruption. The National Bank of Cambodia (NBC) has made some strides in recent years by beginning to regulate the small banking sector, but other non-bank financial institutions, such as casinos, remain outside its jurisdiction. The Ministry of Interior has legal responsibility for oversight of the casinos, but beyond receiving a cut of the proceeds and providing security, it exerts little supervision over them. The GOC continues to work on draft legislation that would criminalize money laundering and the financing of terrorism, but the law is not expected to pass before late 2005. In the meantime, the NBC has a compendium of legally binding regulations (Prakas) that it plans to issue in 2005 that will prohibit money laundering and terrorism financing.

Cambodia's banking sector is small, with thirteen general commercial banks and four specialized commercial banks. There is some evidence of financial deepening but overall lending and banking activity remains limited. Recently, one of Australia's largest banks, ANZ Banking Group Ltd, decided to enter the Cambodian market through a joint venture. Otherwise, the banking sector is largely dominated by a handful of Cambodian-owned banks such as Canadia, Mekong, and the government-owned Foreign Trade Bank.

The National Bank of Cambodia (NBC) has oversight responsibility for the banking sector and, with relatively small numbers of transactions and deposits in the system, believes it exercises comprehensive oversight. There are no reports to indicate that banking institutions themselves are knowingly engaged in money laundering, but some money laundering in relatively small amounts does occur in the banking system, typically involving the proceeds of smuggling, narcotics-trafficking, or corruption. The NBC regularly audits individual banks to ensure compliance with laws and regulations. There is a standing requirement for banks to declare transactions over \$10,000. The NBC says its audits reveal that this requirement is generally followed. There is evidence that at least one major bank has not performed proper due diligence to prevent potential money laundering through its accounts. Having become aware of unusual transfers into some of its accounts from overseas, the bank did not question the source or structuring of the money transfers and may have unwittingly facilitated a money laundering operation. For its part, the NBC did not uncover the nature or source of the money transfers through its audits of this bank. A more likely route for money laundering in Cambodia is through underground banking or unregulated non-banking financial institutions. Neither the NBC nor any other Cambodian entity is responsible for identifying or regulating these informal and underground banking networks.

With political stability and the gradual return of normalcy in Cambodia after decades of war and instability, bank deposits have continued to rise and the financial sector shows some signs of deepening as domestic business activity continues to increase in the handful of urban areas. Nevertheless, foreign direct investment in the general economy remains limited and is on a downward trend, largely due to the high risks of doing business in Cambodia, including an incomplete legal framework, inadequate legal enforcement, and official corruption.

There is no apparent increase in the extent of financial crime over the past year. There is a significant black market in Cambodia for smuggled goods, including drugs, but little evidence that smuggling is funded primarily by drug proceeds. Heroin is smuggled through Cambodia to other countries. Most of the smuggling that takes place is intended to circumvent official duties and taxes and involves items such as fuel, alcohol and cigarettes.

Some government officials and their private sector associates have a significant amount of control over the smuggling trade and thus its proceeds. Cambodia has a cash-based and dollar-based economy, and the smuggling trade is usually conducted in dollars, which facilitates money laundering. Such

proceeds are rarely transferred through the banking system or other financial institutions. Instead, they are readily converted into land, housing, luxury goods or other forms of property. It is also relatively easy to hand-carry cash into and out of Cambodia. In addition, neither money laundering (except in connection with drug trafficking) nor terrorism financing is a specific criminal offense in Cambodia at this time.

The NBC does not have the authority to apply anti-money laundering controls to non-banking financial institutions such as casinos or other intermediaries, such as lawyers or accountants.

The major non-banking financial institutions in Cambodia are the casinos, where foreigners are allowed to gamble but most Cambodians are not. The regulation of casinos falls under the jurisdiction of the Ministry of Interior, although the Ministry of Economy and Finance issues casino licenses. The Interior Ministry stations a few officials at each casino. It does not appear that Interior Ministry staff at the casinos exercise any supervision over casino operations, beyond making sure that the Ministry receives its share of casino payouts. There are roughly a dozen casinos in Cambodia, with several more under construction. Most are located along Cambodia's borders with Thailand or Vietnam. There is one casino located in Phnom Penh that has somehow escaped the regulation that all casinos be at least 200 kilometers from Phnom Penh. It would appear that the casinos operate relatively unregulated and with no real supervision.

Most casino patrons hand-carry their money across the border. For high-dollar patrons, the casinos have accounts with major banks, usually in Thailand. In practice, the patron wires a large amount of money to one of these accounts in Thailand. After a quick phone call to verify the transfer, the casino in Cambodia issues the appropriate amount in chips. The casinos do no due diligence as to the source of the money, regardless of whether it is hand-carried into Cambodia or wired into a Thai bank.

In 1996, Cambodia criminalized money laundering related to narcotics-trafficking through the Law on Drug Control. In 1999, the government also passed the Law on Banking and Financial Institutions. These two laws provide the legal basis for the NBC to regulate the financial sector. The NBC also uses the authority of these laws to issue and enforce new regulations. The most recent regulation, dated October 21, 2002, is specifically aimed at money laundering. The decree established standardized procedures for the identification of money laundering at banking and financial institutions. In October 2003, the NBC issued a circular to assist banks in identifying suspicious transactions. In addition to the NBC, the Ministries of Economy and Finance, Interior, Foreign Affairs and Justice also are involved in anti-money laundering matters.

The 1996 and 1999 laws include provisions for customer identification, suspicious transaction reporting, and the creation of an Anti-Money Laundering Commission (AMLC) under the Prime Minister's Office. The composition and functions of the AMLC have not yet been fully promulgated by additional decrees, and the NBC currently performs many of the AMLC's intended functions. The 1999 Law on Banking and Financial Institutions imposed new capital requirements on financial institutions, increasing them from \$5 million to \$13.5 million. Commercial banks must also maintain 20 percent of their capital on deposit with the NBC as reserves.

Cambodia is not a party to the 1988 UN Drug Convention. On November 11, 2001, Cambodia signed both the UN Convention against Transnational Organized Crime and the UN International Convention for the Suppression of the Financing of Terrorism. It has yet to ratify the former; it has acceded to the latter. Cambodia has assisted neighboring countries with money laundering investigations. While Cambodia is drafting legislation that would specifically address terrorism financing, it currently does not have any laws that do so. It does circulate to financial institutions the list of individuals and entities included on the UN 1267 Sanctions Committee's consolidated list. The NBC reviews the banks for compliance in maintaining this list and reporting any related activity. To date, there have been no reports of designated terrorist financiers using the Cambodian banking sector. Should

sanctioned individuals or entities be discovered using a financial institution in Cambodia, the NBC has the legal authority to freeze the assets but not to seize them.

In June 2004, Cambodia joined the Asia/Pacific Group on Money Laundering (APG) as an observer. The APG has 30 members, including the U.S., and it is run as a FATF-style regional body. Among its other activities, the APG conducts mutual evaluations of members' anti-money laundering and terrorism financing efforts. The APG plans to conduct an evaluation of Cambodia in 2005. Hopefully, that evaluation will facilitate the passage of AML/CFT laws and regulations. The GOC also plans to work with the APG members to establish a Financial Intelligence Unit (FIU). In order to decide where to locate the FIU, an "unofficial" Anti-Money Laundering Committee was formed recently, consisting of the NBC and the Ministries of Commerce, Foreign Affairs, Finance and Justice. The Committee held its first session in December 2004.

A Working Group of the National Anti-Drug Committee was formed on November 26, 2003 to draft legislation that meets international standards. The Working Group includes the NBC and the Ministries of Interior, Justice, Economy and Finance, and Foreign Affairs. In 2004, the Working Group continued its work on draft legislation to update Cambodia's AML/CFT laws and procedures. However, there were no substantive accomplishments in terms of strengthening Cambodia's legal or institutional framework for combating financial crimes. There were no arrests for money laundering in 2004.

Among other priority actions, the Working Group's draft legislation and action plan to fight money laundering and the financing of terrorism envisions the following: criminalizing money laundering and the financing of terrorism; ratification of all relevant UN conventions; regulating and controlling NGOs; reducing the use of cash and encouraging the use of the formal banking system for financial transactions; enhancing the effectiveness of bank supervision; ensuring the use of national ID cards as official documents for customer identification; and regulating casinos and the gambling industry.

The draft legislation also addresses preventive obligations related to customer due diligence, record keeping, internal controls, reporting of suspicious transactions and setting up an FIU to receive, analyze and disseminate information and to supervise compliance with all relevant laws and regulations. Absent passage of the draft legislation in 2005, the NBC plans to issue a series of regulations that have the force of law (Prakas) and that will criminalize money laundering and terrorism financing, as well as update existing financial rules and regulations.

Cambodia should pass the draft anti-money laundering and counterterrorist financing legislation as soon as possible. Cambodia should also engage fully with the Asia/Pacific Group on Money Laundering and take full advantage of its upcoming mutual evaluation to enact whatever additional policies and procedures are necessary to meet international standards. Cambodia should ratify the 1988 UN Drug Convention and the UN Convention against Transnational Organized Crime. The larger question remains the government's ability and will to enforce these measures once they are in place.

Cameroon

Cameroon is not a major regional financial center. Cameroon has not been experiencing an increase in financial crimes, but has dealt with banking irregularities in the past year. Despite creating anti-money laundering legislation, the process of implementing the regulations is not complete, and Cameroon is still vulnerable to money laundering and terrorist financing.

Cameroon is a member of the Central African Economic and Monetary Union (CEMAC), and shares a regional Central Bank (BEAC) with Central African Republic, Chad, Congo-Brazzaville, Equatorial Guinea and Gabon. As a consequence, the Government of Cameroon (GOC) has essentially given up banking regulatory sovereignty to this institution. The GOC is also a member of the Banking

Money Laundering and Financial Crimes

Commission of Central African States (COBAC), an organization within CEMAC. COBAC supervises the banking systems in CEMAC countries, ensuring the legality of the operations carried out by financial institutions. Following the 2001 terrorist attacks in the United States and subsequent United Nations resolutions, CEMAC member countries formed the Central African Action Group Against Money Laundering (GABAC) to draft a common anti-money laundering law to apply to all CEMAC countries. Cameroon, as a member of CEMAC, participates in the Ministerial Committee that adopts regulations, which as supranational laws are enforceable in all member states without specific legislation in each country.

The country-specific offices of GABAC are the National Agencies for Financial Investigation (NAFI). In Cameroon, the creation of this group has been delayed due to economic reasons. In view of these delays, the governor of BEAC, along with the secretariat of COBAC, adopted a new set of regulations giving COBAC the authority to act on money laundering and terrorism financing suspicions. Money laundering, and most financial crimes in general, are criminal offenses, and COBAC has the authority to investigate complaints, seize assets, prosecute individuals (including malfeasant bankers), and revoke banking licenses of banks that knowingly commit financial crimes. The regulations implement the FATF Forty Recommendations and nine UN resolutions on terrorism financing.

COBAC and GABAC require banks to record and report the identity of customers engaging in large transactions once the NAFI is created, and to keep a record of large transactions for five years. The threshold for reporting large transactions will be set at a later date by the CEMAC Ministerial Committee. All investigations are conducted in accordance with banker confidentiality requirements. To date, there have been no arrests related to financial crimes, but COBAC expects to fully implement the regulations in Cameroon once its staff is trained in February 2005.

The largest concern for Cameroon in terms of money laundering and terrorist financing is in the form of cross-border currency transactions and companies that transfer money internationally. BEAC has not addressed this problem to date and there are currently no laws to regulate such transfers. This is particularly troublesome to COBAC because they see it as the most vulnerable section of the financial sector.

COBAC is also responsible for circulating to its financial institutions the list of individuals and entities that have been included on the UN 1267 Sanctions Committee's consolidated list as being linked to Usama Bin Ladin, al-Qaida or the Taliban, or other groups identified by the United States or the European Union. Cameroon is a party to the 1988 UN Drug Convention and is bound by UNSCR 1373 and UNSCR 1267 as a member of the UN, but has only submitted reports to the 1373 committee. Cameroon has not signed the UN International Convention for the Suppression of the Financing of Terrorism. Cameroon has signed, but not yet ratified, the UN Convention against Transnational Organized Crime.

The Government of Cameroon should work with the Banking Commission of Central African States (COBAC) to fully implement applicable regulations and to establish an anti-money laundering regime capable of thwarting terrorist financing, including the enactment of cross-border currency reporting requirements. Cameroon should criminalize terrorist financing and become a party to the UN International Convention for the Suppression of the Financing of Terrorism.

Canada

Canada has implemented several measures in recent years to reduce its vulnerability to money laundering and terrorist financing. Canadian financial institutions, however, remain susceptible to currency transactions involving international narcotics proceeds, including significant amounts of funds in U.S. currency derived from illegal drug sales in the United States. The United States and Canada share a border that sees over \$1 billion in trade a day. Both the U.S. and Canadian

governments are particularly concerned about the criminal abuse of cross-border movements of currency. Canada has no offshore financial centers.

In 2000, the Government of Canada (GOC) passed the Proceeds of Crime (Money Laundering) Act to assist in the detection and deterrence of money laundering, facilitate the investigation and prosecution of money laundering, and create a Financial Intelligence Unit (FIU). The Proceeds of Crime (Money Laundering) Act was amended in December 2001 to become the Proceeds of Crime (Money Laundering) and Terrorist Financing Act (PCMLTFA). The list of predicate money laundering offenses was expanded and now covers all indictable offenses, including terrorism and the trafficking of persons.

The PCMLTFA creates a mandatory reporting system for suspicious financial transactions, large cash transactions, large international electronic funds transfers, and cross-border movements of currency and monetary instruments totaling Canadian \$10,000 or greater. Failure to report cross-border movements of currency and monetary instruments could result in seizure of funds or penalties ranging from Canadian \$250 to \$5,000.

A second set of regulations, published in May 2002, relates to internal compliance regimes, the reporting of large cash transactions and large international electronic funds transfers, the reporting of transactions where there are reasonable grounds to suspect terrorist financing, the reporting of possession or control of terrorist property, and record keeping and client identification requirements. Certain requirements were phased in during 2003. A further set of regulations concerning the reporting of cross-border movements of currency and monetary instruments became effective in January 2003.

Money service businesses, casinos, accountants, and real estate agents handling third-party transactions are required to report suspicious financial transactions. During 2004, the reporting requirements for the legal profession were being clarified. Failure to file a suspicious transaction report (STR) could lead to up to five years' imprisonment, a fine of \$2,000,000, or both.

The FIU, the Financial Transactions and Reports Analysis Center of Canada (FINTRAC), was established in July 2001. FINTRAC operates as an independent agency that receives and analyzes reports from financial institutions and other financial intermediaries and makes disclosures to law enforcement and intelligence agencies. FINTRAC is also mandated to ensure the compliance of these reporting entities with the legislation and regulations. The PCMLTFA expanded FINTRAC's mandate to include counterterrorist financing and to allow disclosure to the Canadian Security Intelligence Service of information related to financial transactions relevant to threats to the security of Canada.

FINTRAC now receives mandatory reports on all international electronic funds transfers, cash transactions, or cross-border movements of Canadian \$10,000 or more. During 2003-2004, FINTRAC received more than 9.5 million reports. The majority of the reports were filed electronically; of these reports, some 350, totaling approximately \$500 million, were thought of as suspicious transactions. The law protects those filing reports on suspicious transactions from civil and criminal prosecution, and there has been no apparent decline in deposits made with Canadian financial institutions as a result of Canada's revised laws and regulations. No prosecutions occurred in 2003 or 2004.

In a November 2004 report to Parliament, Canada's Auditor General stated that "privacy concerns restrict FINTRAC's ability to disclose intelligence to the Police, and as a result, law enforcement and security agencies usually find that the information they receive is too limited to justify launching investigations." Additionally, U.S. law enforcement officials have echoed concerns that Canadian privacy laws and the high standard of proof required by Canadian courts inhibit the full sharing of timely and meaningful intelligence on suspicious financial transactions. Such intelligence may be critical to investigating and prosecuting international terrorist financing or major money laundering investigations. Recently, the concern has been the inability of U.S. and Canadian law enforcement

officers to exchange promptly information concerning suspected sums of money found in the possession of individuals attempting to cross the U.S.-Canadian border.

The PCMLTF enables Canadian authorities to deter, disable, identify, prosecute, convict, and punish terrorist groups. Canada has signed and ratified all 12 United Nations Conventions pertaining to terrorism and terrorist and has listed all terrorist entities designated by the UN. As of June 2002, STRs are required on financial transactions suspected to involve the commission of a terrorist financing offense. The GOC has also searched financial records for groups and individuals on the UNSCR 1267 Sanctions Committee's consolidated list. Canada has listed and frozen the assets of more than 420 entities.

FINTRAC has the authority to negotiate information exchange agreements with foreign counterparts. It has signed 10 memoranda of understanding to establish the terms and conditions to share intelligence with FIUs, and is negotiating several other memoranda. Canada has longstanding agreements with the United States on law enforcement cooperation, including treaties on extradition and mutual legal assistance. Canada has provisions for asset sharing, and exercises them regularly.

Canada is a member of the Financial Action Task Force (FATF) and the OAS Inter-American Drug Abuse Control Commission Experts Group to Control Money Laundering (OAS/CICAD). Canada also participates with the Caribbean Financial Action Task Force (CFATF) as a Cooperating and Supporting Nation, and as an observer jurisdiction to the Asia/Pacific Group on Money Laundering (APG). In June 2002, FINTRAC became a member of the Egmont Group. Canada is a party to the OAS Inter-American Convention on Mutual Assistance in Criminal Matters. Canada is a party to the UN International Convention for the Suppression of the Financing of Terrorism, the UN Convention against Transnational Crime and the 1988 UN Drug Convention. The GOC has signed, but not yet ratified, the UN Convention against Corruption.

The Government of Canada continues to take significant steps to reduce its vulnerability to money laundering and terrorist financing. Canada should continue its efforts to work toward ensuring the timely sharing of financial information that may be critical to international terrorist financing or major money laundering investigations. Canada also should continue its active participation in international fora dedicated to the fight against money laundering and terrorist financing.

Cape Verde

Cape Verde is not a regional financial or banking center, nor is it a significant location for money laundering. There are only four banks that operate in country, and three of these (Banco Comercial do Atlantico, Banco Interatlantico, and Caixa Economica) are subsidiaries of Portuguese banks. The fourth bank was purchased from a Portuguese banking institution by Cape Verdean investors in 2004. Because of the close linkages between the strongest banks and their Portuguese parent companies, there is a great sensitivity in the banking sector to the requirements of the European Union with regard to financial transactions.

The two unique features of banking and financial operations in Cape Verde are the following: The importance of remittances from emigrant Cape Verdeans for the national economy (approximately 16 percent of GDP) and the growth of tourism (primarily on the islands of Sal and Boavista). The country's main vulnerability for money laundering is with the rapid development of tourist infrastructure, but there does not appear to any evidence that money laundering is indeed taking place.

Cape Verde passed money laundering legislation in 2002. Reportedly, no cases of money laundering have been brought under the statute since its enactment. The asset seizure provisions of the legislation therefore remain untested. The legislation has broad provisions to combat money laundering, and it is not limited exclusively to narcotics-related activities. Because the overwhelming amount of banking transactions are carried out with Portuguese-affiliated banks, the levels of information technology and

record keeping in the financial sector is considered quite high. The banks are subject to inspection of an independent Central Bank.

Although Cape Verde is not a narcotics producing country, there is mounting evidence that Cape Verde is being used as a transit country for drugs, particularly drugs being shipped from South America to Europe. There are nonstop flights weekly from Cape Verde to Brazil, and daily nonstop flights from Cape Verde to Portugal or other locations in Western Europe. During calendar year 2004, the Cape Verdean police seized several hundred pounds of pure cocaine, all of which was being prepared for shipment by air from Cape Verde to Europe. In December 2004, a local prosecutor who had allegedly been looking into narcotics matters was shot and seriously wounded, allegedly as a “shock attack” by an individual or group affiliated with narcotics-trafficking.

Cape Verde maintains active contacts with a number of United States and Western European police forces, particularly with the Judiciary Police of Portugal. From all available evidence, cooperation between Cape Verde’s police and its foreign counterparts has been excellent.

Cape Verde is party to the UN International Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances (Vienna Convention) and to the UN Convention against Transnational Organized Crime, as well as the UN International Convention for the Suppression of the Financing of Terrorism. Cape Verde should criminalize terrorist financing.

Cayman Islands

The Cayman Islands, a United Kingdom (UK) Caribbean overseas territory, continued to make strides in its anti-money laundering program in 2004, but the islands remain vulnerable to money laundering due to their significant offshore sector. With a population estimated at around 40,000, the Cayman Islands is home to a well-developed offshore financial center that provides a wide range of services such as private banking, brokerage services, mutual funds, and various types of trusts, as well as company formation and company management. The Cayman Islands has over 500 banks and trust companies, 3000 mutual funds, and 500 captive insurance companies that are licensed in the Caymans.

Since the year 2000, the Cayman Islands has passed and amended several anti-money laundering (AML)-related laws, including the Money Services Law (2000), Building Societies Law (2001 Revision), Cooperative Societies Law (2001 Revision), Insurance Law (2001 Revision), and the Mutual Funds Law (2001 Revision).

Money laundering regulations that entered into force in late 2000 specify record keeping and customer identification requirements for financial institutions and certain financial services providers; the regulations specifically cover individuals who establish a new business relationship, engage in one-time transactions over Cayman Islands (CI) \$15,000 (approximately \$18,000), or who may be engaging in money laundering. Amendments to the Proceeds of Criminal Conduct Law (PCCL) make failure to report a suspicious transaction a criminal offense that could result in fines or imprisonment. A provision of the Banks and Trust Companies Law (2001 Revisions) grants the Cayman Islands Monetary Authority (CIMA) access to audited account information from licensees who are incorporated under the Companies Law (2001 Second Revision) and the power to request “any information” from “any person” when there are “reasonable grounds to believe” that that person is carrying on a banking or trust business in contravention of the licensing provisions of the law.

The Monetary Authority Law enacted in December 2002 grants the CIMA independence with respect to licensing and enforcement powers over financial institutions. Unlike earlier versions of the Monetary Authority Law, this one contains no requirement that the CIMA obtain a court order before accessing account ownership and identification information. Amendments to the Companies Management Law (2001 Revision) expand regulatory supervision and licensing to management

Money Laundering and Financial Crimes

companies that were previously exempted, while the Companies Law (2001 Second Revision) institutes a custodial system in order to immobilize bearer shares.

The Cayman Islands is subject to the U.S./UK Treaty concerning the Cayman Islands, relating to Mutual Legal Assistance in Criminal Matters. The Cayman Islands, through the United Kingdom, is also subject to the 1988 UN Drug Convention. In addition, the Cayman Islands is a member of the Caribbean Financial Action Task Force (CFATF) and the Egmont Group.

The Cayman Islands should continue its efforts to implement its anti-money laundering regime. The Cayman Islands should criminalize terrorist financing.

Chad

Chad is not an important financial center. Chad has a large informal sector that could be used to launder the proceeds of crime. The Bank of Central African States (BEAC), which supervises Chad's banking system, is a regional Central Bank that serves six countries of the Central African Economic and Monetary Community (CEMAC). The Chadian Central Bank is under the direction of the BEAC. The BEAC itself has a formal convention with the French government, in which Central Bank funds are held in the French Treasury.

Money laundering is a criminal offense, and Chadian law holds individual bankers liable if their institutions launder money. Financial institutions are required to report suspicious transactions to the Chadian Central Bank. Banks must report monthly any domestic currency transactions over 500,000 CFA francs (about \$990) to the Central Bank. In addition, all currency transfers above 100,000 CFA francs (about \$194) from Chad to a non-CEMAC country or to Chad from a non-CEMAC country must be reported to both the Central Bank and the Ministry of Finance on a monthly basis. Banks are required to maintain records for between two to 30 years, depending on the type of transaction. Banks must make customer information available to bank supervisors, the judiciary, the customs service, and tax authorities on request.

The Government of Chad (GOC) has the authority to freeze terrorist finance assets. In November 2001, the Ministry of Finance issued a directive to the Chadian Central Bank to freeze all accounts suspected of belonging to terrorist groups. The Central Bank has forwarded to Chadian banks the UNSCR 1267 Sanctions Committee's consolidated list and the list of Specially Designated Global Terrorists designated by the U.S. pursuant to E.O. 13224. As of the end of 2004, no suspect accounts had been identified.

On November 20, 2002, the BEAC Board of Directors approved draft anti-money laundering and counterterrorist financing regulations that would apply to banks, exchange houses, stock brokerages, casinos, insurance companies, and intermediaries such as lawyers and accountants in all six member countries. The BEAC submitted the draft regulations to the Ministerial Committee of the Central African Economic and Monetary Community (CEMAC) for approval in spring 2003. CEMAC's Ministerial Committee has approved the regulations, but the Central African Action Group Against Money Laundering (GABAC), a CEMAC entity created in Chad in December 2000, has not yet formally endorsed them. As a result, Chad has not adopted the regulations into its local law, although Chad has a low threshold for the reporting of transactions already in place. The CEMAC regulations would treat money laundering and terrorist financing as criminal offenses. The regulations would also require banks to record and report the identity of customers engaging in large transactions. The threshold for reporting large transactions would be set at a later date by the CEMAC Ministerial Committee at levels appropriate to each country's economic situation. Financial institutions would have to maintain records of large transactions for five years.

The regulations would also require financial institutions to report suspicious transactions. Under the regulations, each country would establish a National Agency for Financial Investigation (NAFI)

responsible for collecting suspicious transaction reports. Bankers and other individuals responsible for submitting suspicious transaction reports would receive legal protection for cooperating with law enforcement entities. If a NAFI investigation were to confirm suspicions of terrorist financing, the Chadian government could freeze the related assets. The NAFI could cooperate with counterpart agencies in other countries.

Chad is a party to the 1988 UN Drug Convention. It is not a party to either the UN Convention against Transnational Organized Crime or the UN International Convention for the Suppression of the Financing of Terrorism.

The Government of Chad should criminalize terrorist financing and money laundering. Chad should become a party to the UN Convention against Transnational Organized Crime and the UN International Convention for the Suppression of the Financing of Terrorism. Chad should also work with the BEAC to strengthen the region's anti-money laundering and counterterrorist financing regime. Chad should work through the GABAC for the approval of the draft anti-money laundering and counterterrorist financing legislation, and then ensure their domestic application and implementation.

Chile

Chile has a large, well-developed banking and financial sector, and it is a stated goal of the government to turn Chile into a major regional center. The Chilean government does not think there is a significant money laundering problem, but information is lacking as to the extent of money laundering activity. Money laundering appears to be primarily narcotics-related, and until 2003, money laundering was only a crime when it involved the direct proceeds of drug offenses. Chile is not considered to be an offshore financial center, and offshore banking-type operations are not permitted. Bank secrecy laws are strong in Chile, and the privacy rights enshrined in the constitution have been broadly interpreted and present challenges to Chilean efforts to identify and combat money laundering.

Money laundering in Chile is criminalized under Law 19.366 of January 1995 and Law 19.913 of December 2003. Prior to the approval of Law 19.913, Chile's anti-money laundering program was based solely on Law 19.366, which criminalized only narcotics-related money laundering activities. The law required only voluntary reporting of suspicious or unusual financial transactions by banks and offered no "safe harbor" provisions protecting banks from civil liability; as a result, the reporting of such transactions was extremely low. Law 19.366 gave only the Council for the Defense of the State (Consejo de Defensa del Estado, or CDE) authority to conduct narcotics-related money laundering investigations. The Department for the Control of Illicit Drugs (Departamento de Control de Tráfico Ilícito de Estupefacientes) within the CDE functioned as Chile's Financial Intelligence Unit (FIU) until a new FIU with broader powers was created under Law 19.913.

Law 19.913 went into effect on December 18, 2003. Under Law 19.913, predicate offenses for money laundering are expanded to include (in addition to narcotics-trafficking) terrorism in any form (including the financing of terrorist acts or groups), illegal arms trafficking, fraud, corruption, child prostitution and pornography, and adult prostitution. The law also creates the new financial intelligence unit, the Unidad de Análisis Financiero (UAF), within the Ministry of Finance, which has replaced the CDE as Chile's FIU. Law 19.913 requires mandatory reporting of suspicious transactions by banks and financial institutions, brokerage firms, financial leasing companies, general funds-managing companies and investment funds-managing companies, the Foreign Investment Committee, money exchange firms and other entities authorized to receive foreign currencies, credit cards issuers and operators, securities and money transfer and transportation companies, stock exchanges, stock exchange brokers, securities agents, insurance companies, mutual funds managing companies, forwards and options markets operators, tax free zones' legal representatives, casinos, gambling houses and horse tracks, customs general agents, auction houses, realtors and companies engaged in

the land development business, and notaries and registrars. The law also requires that obligated entities maintain registries of cash transactions that exceed 450 unidades de fomento (approximately \$12,000), and imposes record keeping requirements (five years). All cash transaction reports contained in the internal registries must be sent to the UAF at least once per year, or more frequently at the request of the UAF. The movement of funds exceeding 450 unidades de fomento into or out of Chile must be reported to the customs agency, which then files a report with the UAF.

Shortly after the passage of Law 19.913 in September 2003, portions of the new law—specifically those that dealt with the UAF’s ability to gather information, impose sanctions, and lift bank secrecy provisions—were deemed unconstitutional by Chile’s constitutional tribunal. The tribunal held that some of the powers granted to the UAF in the law violated privacy rights guaranteed by the constitution. The tribunal’s decisions eliminate the ability of the UAF to request background information from government databases or from the reporting entities (including information on the reports they submit) and prevent UAF from imposing sanctions on entities for failure to file or maintain reports, or for failure to lift bank secrecy protections. The law went into effect in December 2003 without the above-mentioned powers. A new bill has been drafted to give the UAF the ability to fine or sanction reporting entities for noncompliance with the reporting requirements. The UAF was initially granted this power in the original version of Law 19.913, but the constitutional tribunal objected to this section on grounds of due process. The new bill, if passed, will address the due process issues by allowing the individual or entity 15 days to contest the sanction, and also create sanctions by the regulatory agencies prior to sanctions administered by the UAF. The bill will establish processes through which the UAF can request information from other government entities.

The UAF began operating in April 2004, and began receiving suspicious transaction reports (STRs) from reporting entities in May 2004, and had received 25 STRs as of October 2004. STRs from financial institutions are received electronically, via a system known as SINACOFI (Sistema Nacional de Comunicaciones Financieras) that is used by banks to distribute information in an encrypted format among themselves and the Superintendency of Banks. The UAF has not yet developed a suspicious transaction disclosure form for entities other than banks and financial institutions, and therefore, has not received STRs from non-financial institutions. Non-bank financial institutions currently do not fall under the supervision of any regulatory body. It is estimated that the UAF will average roughly 50-80 STRs per year. Cash transaction reports (CTRs) are only reported upon request, and, as of October 2004, the UAF had only requested CTRs from currency exchange houses. Reports on the transportation of currency and monetary instruments into or out of Chile must be to the customs agency, which sends the reports to the UAF on a daily basis.

After receiving a STR, the UAF may request account information on the subject of the STR from the institution that filed the report. The UAF may also request CTRs from reporting entities at any time, but is required by law to request at least once per year all CTRs filed from each institution. If the draft law is passed, the UAF will be able to request information from any entity that is required to file STRs, even if that entity did not file the STR that is being investigated. The draft law will also permit the UAF to request information from any entity that is not required to report suspicious transactions, if that information is necessary to complete the analysis of an STR, and will allow the UAF access to any government databases necessary for carrying out its duties. In order to perform these functions detailed in the draft law, the UAF will need the authorization of the Santiago Appeals Court. However, in the case of access to government databases, the UAF only needs court authorization for protected information, such as information related to taxes.

The Consejo de Defensa del Estado (CDE) continues to analyze and investigate any cases opened prior to the establishment of the UAF. Until June 2005, all cases that are deemed by the UAF to require further investigation will be sent to the CDE. The UAF has not yet sent any cases to the CDE for further investigation. After June 2005, the Public Ministry (the public prosecutor’s office) will be responsible for receiving and investigating all cases from the UAF. Under the new law, the Public

Ministry has the ability to request that a judge issue an order to freeze assets under investigation, and can also, with the authorization of a judge, lift bank secrecy provisions to gain account information if the account is directly related to an ongoing case. The Public Ministry has up to two years to complete an investigation and prosecution.

Given the above legislative restrictions, no money laundering cases were prosecuted in 2004. At the same time, the Chilean investigative police (PICH) are actively cooperative in pursuing money laundering investigations.

Terrorist financing in Chile is criminalized under Law 18.314 and Law 19.906. Law 19.906 went into effect in November 2003 and modifies Law 18.314 in order to sanction more efficiently terrorist financing in conformity with the UN International Convention for the Suppression of the Financing of Terrorism. Under Law 19.906, the financing of a terrorist act and the provision (directly or indirectly) of funds to a terrorist organization are punishable. The Government of Chile (GOC) circulates the UNSCR 1267 Sanctions Committee's consolidated list to banks and financial institutions. No terrorist assets belonging to individuals or groups named on the list have been identified to date in Chile. If assets were found, the legal process that would be followed to freeze and seize them is still unclear; Law 19.913 contains provisions that allow for prosecutors to request that assets be frozen, based on a suspected connection to criminal activity. Government officials have stated that Chilean law is currently sufficient to effectively freeze and seize terrorist assets; however, the new provisions for freezing assets are based on provisions in the drug law, which at times have been interpreted narrowly by the courts. Until a case emerges, it will be difficult to judge how smoothly the new system will operate. The Ministry of National Property currently oversees forfeited assets, and proceeds from the sale of forfeited assets are passed directly to the national regional development fund to pay for drug abuse prevention and rehabilitation programs. Under the present law, forfeiture is possible for real estate, vehicles, ships, airplanes, other property, money securities and stocks, any instruments used or intended for use in the commission of the underlying crime, all proceeds of such criminal activity, and businesses involved in the criminal activity or purchased with illicit funds.

Chile is a party to the 1988 UN Drug Convention, and ratified the UN Convention against Transnational Organized Crime in November 2004. In November 2001, Chile became a party to the UN International Convention for the Suppression of the Financing of Terrorism. On December 11, 2003, the Chile signed the UN Convention against Corruption. Chile is a member of the OAS Inter-American Drug Abuse Control Commission (OAS/CICAD) Experts Group to Control Money Laundering. Chile is a member of the South American Financial Action Task Force on Money Laundering (GAFISUD) and has pledged to come into compliance with the organization's recommendations. The CDE became a member of the Egmont Group of financial intelligence units in 1997, and the UAF was vetted by the Egmont Group in October 2004 to replace the CDE.

In the establishment of the UAF, the Government of Chile has created an FIU that essentially surmounts the deficiencies of the CDE and meets the Egmont Group's definition of a financial intelligence unit. However, there remain several weaknesses that may hinder the operations of the UAF, such as its inability to sanction reporting entities or individuals for failure to file reports and its lack of access to information from other government agencies. Chile should recognize that the establishment of an effective financial intelligence unit that meets the Egmont Group's standards is imperative in the fight against money laundering and terrorist financing. If the abilities of the UAF remain limited by the current version of the new law, the steps that have been taken in Chile over the past years to create a regime capable of investigating, punishing, and deterring financial crime may be severely limited, if not negated. Chile should take all necessary steps to ensure that its FIU becomes a viable entity capable of combating money laundering and terrorist financing to the best of its abilities.

China, People's Republic of

Money laundering remains a major concern as the People's Republic of China (PRC) restructures its economy. A more sophisticated and globally connected financial system in one of the world's fastest growing economies will offer significantly more opportunities for money laundering activity. Most money laundering cases now under investigation involve funds obtained from corruption and bribery. Narcotics trafficking, smuggling, alien smuggling, counterfeiting, and fraud and other financial crimes remain major sources of laundered funds. Proceeds of tax evasion, recycled through offshore companies, often return to the PRC disguised as foreign investment, and as such, receive tax benefits. Speculation on a possible currency revaluation has also been fueling illicit capital flows into China throughout 2004. Hong Kong-registered companies figure prominently in schemes to transfer corruption proceeds and in tax evasion recycling schemes. The International Monetary Fund estimates that money laundering in China may total as much as \$24 billion.

After conducting studies on how to strengthen the PRC's anti-money laundering regime over the past few years, the People's Bank of China (PBOC) and the State Administration of Foreign Exchange (SAFE) have promulgated a series of anti-money laundering regulatory measures for financial institutions. These include: Regulations on Real Name System for Individual Savings Accounts, Rules on Bank Account Management, Rules on Management of Foreign Exchange Accounts, Circular on Management of Large Cash Payments, and Rules on Registration and Recording of Large Cash Payments.

New measures came into effect in 2003 that further strengthened China's anti-money laundering efforts. In March, a new PBOC regulation entitled "Regulations on Anti-Money Laundering for Financial Institutions" took effect, strengthening the regulatory framework under which Chinese banks and financial institutions must treat potentially illicit financial activity. The regulation effectively requires Chinese financial institutions to take responsibility for suspicious transactions, instructing them to create their own anti-money laundering mechanisms. Banks are required to report suspicious or large foreign exchange transactions of more than \$10,000 per person in a single transaction or cumulatively per day in cash, or non-cash foreign exchange transactions of \$100,000 per individual or \$500,000 per entity either in a single transaction or cumulatively per day.

Banks are also required to report large renminbi transactions, including single credit transfers of over 1 million renminbi (RMB) (\$120,500), cash transactions above 200,000 RMB (\$24,000), and domestic fund transfers of over 200,000 RMB, and are expected to report suspicious RMB transactions and refuse services to suspicious clients. Under the regulation, banks are further required to submit monthly reports to the PBOC outlining suspicious activity and to retain transaction records for five years. Banks which fail to report on time can be fined up to the equivalent of \$3,600.

These measures complement the PRC's 1997 Criminal Code, which criminalized money laundering under Article 191 for three categories of predicate offenses-narcotics-trafficking, organized crime, and smuggling. In 2001, Article 191 was amended to add terrorism as a fourth predicate offense. Additionally, Article 312 criminalizes complicity in concealing the proceeds of criminal activity, and Article 174 criminalizes the establishment of an unauthorized financial institution.

While official scrutiny of cross-border transactions is improving, the Chinese Government is also moving to loosen capital-account restrictions. For example, as of January 1 2005, travelers can take up to 20,000 renminbi (\$2,400) in or out of the country on each trip, up from 3,000 renminbi (\$360) previously. New provisions allowing the use of renminbi in Hong Kong have also created new loopholes for money laundering activity. Authorities are also allowing greater use of domestic, renminbi-denominated, credit cards overseas. Such cards can now be used in Hong Kong, Macau, Singapore, Thailand, and South Korea. SAFE reported that in the first six months of 2004, it uncovered 300 money laundering cases involving more than \$1 billion. Over 50 percent of suspicious transactions came through Hong Kong, followed by the United States, Japan, and Taiwan.

In 2003, the Chinese Government established a new banking regulator, the China Banking Regulatory Commission (CBRC), which assumed substantial authority over the regulation of the banking system. The CBRC has been authorized to supervise and regulate banks, asset management companies, trust and investment companies, and other deposit-taking institutions, with the aim of ensuring the soundness of the banking industry. One of its regulatory objectives is to combat financial crimes. Primary authority for anti-money laundering efforts remains with the PBOC, the country's Central Bank, along with the Ministry of Public Security in terms of enforcement.

A new anti-money laundering law is being drafted under the direction of a ministerial-level coordinating committee that was created in 2004. This new law is expected to broaden the scope of existing anti-money laundering regulations and to establish more firmly PBOC's authority over national anti-money laundering efforts. No date has been set for passing the new law, but authorities expect passage during 2005.

In 2004, the PBOC established a Financial Intelligence Unit (FIU) called the Anti-Money Laundering Monitoring and Analysis Center, which will supervise the monitoring of suspicious transactions. This move was an important accomplishment of the Anti-Money Laundering Strategy Team tasked with developing the legal and regulatory framework for countering money laundering in the banking sector. The team is chaired by a Vice-Governor of the PBOC and is composed of representatives of the PBOC's 15 functional departments. It had earlier set up an office in the PBOC's Payment System and Technology Development Department to design a system for monitoring the movement of suspicious transactions through PBOC-licensed financial entities.

In September 2002, SAFE adopted a new system to supervise foreign exchange accounts more efficiently. The new system allowed for immediate electronic supervision of transactions, collection of statistical data, and reporting and analysis of transactions. A separate Anti-Money Laundering Bureau was established at the PBOC in late 2003 to coordinate all anti-money laundering efforts in the PBOC and among other agencies, and to supervise the creation of the new FIU.

In spite of China's efforts, institutional obstacles and rivalries between financial and law-enforcement authorities continue to hamper Chinese anti-money laundering work and other financial law enforcement. Continuing efforts by some Chinese officials to strengthen the relatively weak legal framework under which money laundering offenses are currently prosecuted in the Chinese criminal code have yet to bear fruit. Also, anti-money laundering efforts are hampered by the prevalence of counterfeit identity documents and cash transactions conducted by underground banks, which in some regions reportedly account for over one-third of lending activities. China has made some efforts in recent years to crack down on underground lending institutions. In an August 2004 speech, PBOC Governor Zhou Xiaochuan said the government had closed 153 underground money centers and illegal banks since 2002.

Another structural impediment is the absence of a nationwide automated network to monitor banking transactions through the PBOC. Many inter-banking transactions from one region to another are conducted manually, which delays the PBOC's ability to prevent money laundering. As a result, weaknesses in the Chinese banking and criminal regulatory structure continue to be exploited by both domestic and foreign criminal enterprises.

To remedy these deficiencies, the PBOC is launching a national credit-information system in early 2005. Using this system, banks will have access to information on individuals as well as on corporate entities. PBOC rules obligate financial institutions to perform customer identification and due diligence, and record keeping. However, there is currently no legislative instrument—only administrative rules—requiring customer due diligence and record keeping. SAFE implemented a new regulation on March 1, 2004 requiring non-residents, including those from Hong Kong, Macau, Taiwan, and Chinese passport holders residing outside mainland China, to verify their real names when opening bank accounts with more than \$5,000.

The PRC supports international efforts to counter the financing of terrorism. Terrorist financing is now a criminal offense in the PRC, and the government has the authority to identify, freeze, and seize terrorist financial assets. Subsequent to the September 11, 2001 terrorist attacks in the United States, the PRC authorities began to actively participate in U.S. and international efforts to identify, track, and intercept terrorist finances, specifically through implementation of United Nations Security Council counterterrorist financing resolutions.

China's concerns with terrorist financing are generally regional, focused mainly on the western province of Xinjiang. Chinese law enforcement authorities have noted that China's cash-based economy, combined with its robust cross-border trade, has led to many difficult-to-track large cash transactions. There is concern that groups may be exploiting such cash transactions in an attempt to bypass China's financial enforcement agencies. While China is proficient in tracing formal foreign currency transactions, the large size of the informal economy—estimated by the Chinese Government at about 10 percent of the formal economy, but probably larger—makes monitoring of China's cash-based economy very difficult. There were examples in 2003 of Chinese law enforcement's ability to link transactions within the state-run banking sector to suspected terrorist entities, but there has been no such example with regard to cash transactions. Senior representatives of the U.S. Government visited China in February 2003 in an effort to improve bilateral ties between the United States and China on the issue of terrorist financing.

The PRC signed the UN International Convention for the Suppression of the Financing of Terrorism on November 13, 2001, but had not ratified it as of December 2004. The United States, PRC, Afghanistan, and Kyrgyzstan jointly referred the Eastern Turkistan Islamic Movement, an al-Qaida linked terrorist organization that carries out activities in the PRC and Central Asia, to the UNSCR 1267 Sanctions Committee for inclusion on its consolidated list. In December 2003, China unilaterally decided to list several individuals and "East Turkistan" groups as terrorists, and requested that domestic and foreign financial entities freeze their financial assets. East Turkistan is the name for Xinjiang province used by these separatist groups.

The PRC has signed mutual legal assistance treaties with 24 countries. The United States and the PRC signed a mutual legal assistance agreement (MLAA) in June 2000, the first major bilateral law enforcement agreement between the countries. The MLAA entered into force in March 2001 and provides a basis for exchanging records in connection with narcotics and other criminal investigations and proceedings. The FBI-staffed legal attaché office opened at the U.S. Embassy in Beijing in October 2002. The PRC is a party to the 1988 UN Drug Convention, and in 2003 ratified the UN Convention against Transnational Organized Crime.

The United States and the PRC cooperate and discuss money laundering and other enforcement issues under the auspices of the U.S.-PRC Joint Liaison Group's (JLG) subgroup on law enforcement cooperation. The JLG meetings are held periodically in either Washington, D.C., or Beijing. The next one is scheduled for February 21, 2005. In addition, the United States and the PRC have established a Working Group on Counter-Terrorism that meets on a regular basis. The PRC has established similar working groups with other countries as well. Bilateral cooperation on anti-money laundering was further strengthened through a series of training seminars conducted by the U.S. Treasury Department and the National Committee on U.S.-China Relations in July 2004.

In late 2004, China joined the newly-created Eurasian Group (EAG), a Financial Action Task Force (FATF)-style regional group which includes Russia and a number of Central Asian countries. China had previously declined to join the Asia/Pacific Group on Money Laundering (APG), the Asia Pacific regional FATF-style body, due to Beijing's concerns over Taiwan's membership in the APG.

The Government of the People's Republic of China should continue to build upon the substantive actions taken in recent years to develop a viable anti-money laundering/terrorist financing regime consonant with international standards. Important steps include expanding its list of predicate crimes

to include all serious crimes, and continuing to develop a regulatory and law enforcement environment designed to prevent and deter money laundering. China should clarify Article 120 of its criminal code to make clear whether the law applies to third parties. China should ensure that the FIU is an independent, centralized body with adequate collection, analysis and disseminating authority, including the ability to share with foreign analogs and law enforcement. China should provide for criminal penalties for non-compliance with requirements that financial institutions perform customer identification, due diligence, and record keeping as well as incorporating the suspicious transaction-reporting requirement into law. China should also become a party to the UN International Convention for the Suppression of the Financing of Terrorism.

Colombia

Colombia, a major drug producer, is a regional leader in the fight against money laundering. Comprehensive anti-money laundering legislation regulations have allowed the government to refine and improve its ability to combat financial crimes and money laundering. Nevertheless, the laundering of drug money from Colombia's large and lucrative cocaine and heroin trade continues to penetrate its economy and affect its financial institutions. Additionally, a complex legal system and limited resources for anti-money laundering programs constrain the effectiveness of the Government of Colombia's (GOC) efforts. The extent of money laundering is related to a number of criminal activities—narcotics-trafficking, commercial smuggling for tax and import duty evasion, kidnapping for profit, and arms trafficking and terrorism connected to violent paramilitary groups and guerrilla organizations)—and is carried out, to a significant degree, by officially recognized Foreign Terrorists Organizations (FTO's). The GOC and post law enforcement organizations (LEO's) are closely monitoring transactions that could disguise terrorist finance activities for local FTOs or Islamic terror organizations.

Colombia's economy is robust and diverse, and is fueled by a significant export sector that ships goods such as oil, flowers, and coffee to the U.S. and beyond. While Colombia is not a regional financial center, the banking sector is mature and well regulated. An increase in financial crimes, such as bank fraud, not related to money laundering or terrorist financing, has not been widely seen in Colombia, although criminal elements have used the banking sector to launder money, under the guise of licit transactions. Money laundering has occurred in the non-bank financial system, and in particular related to transactions that support the informal or underground economy. Colombian money launderers also use offshore centers to move funds, that are generally derived from illicit drug transactions.

Money launderers in Colombia employ a wide variety of techniques. Trade-based money laundering, such as the Black Market Peso Exchange (BMPE)—through which money launderers furnish narcotics-generated dollars in the United States to commercial smugglers, travel agents, investors and others in exchange for Colombian pesos in Colombia—remains a prominent method for laundering narcotics proceeds. Colombia also appears to be a significant destination and transit location for bulk shipment of narcotics-related U.S. currency. Local currency exchangers convert narcotics dollars to Colombian pesos and then ship the U.S. currency to Central America, Ecuador and elsewhere for deposit as legitimate exchange house funds, which are then reconverted to pesos and repatriated by wire to Colombia. Other methods include the use of debit cards to draw on financial institutions outside of Colombia and the transfer of funds out of and then back into Colombia by wire through different exchange houses to create the appearance of a legal business or personal transaction. Colombian authorities have also noted increased body smuggling of U.S. and other foreign currencies and an increase in the number of shell companies operating in Colombia. Smart cards, Internet banking, and the dollarization of the economy of neighboring Ecuador represent some of the growing challenges to money laundering enforcement in Colombia. From a money laundering standpoint, casinos in Colombia lack regulation and transparency, making them a target ripe for abuse. Free trade

zones in some areas of the country likewise present opportunities for smugglers to take advantage of lax customs regulation or the corruption of low-level officials to move products into the informal economy.

Colombian law requires that financial institutions maintain records of account holders and financial transactions. Financial entities must issue Suspicious Activity Reports (SAR's) on any transaction that raises concern. Colombia's banks operate under strict compliance controls, and work closely with the GOC, other foreign governments, and private consultants to ensure system integrity. Secrecy laws have not been an impediment to bank cooperation with law enforcement officials. Authorities often initiate money laundering investigations on the basis of the details provided by SAR reporting. Citizens are afforded rights to privacy, however, and authorities carry out money laundering investigations in accordance with legal requirements to protect those rights. Financial institutions are not protected by law nor are they exempt from compliance with law enforcement obligations. General negligence laws and criminal fraud provisions ensure that the financial sector complies with its responsibilities while protecting consumer rights.

Colombian law is unclear about the government's authority to block assets of individuals and entities on the UNSCR 1267 Sanctions Committee's Consolidated List. The GOC distributes the list widely among financial sector participants and banks are able to close accounts, but not seize assets. Banks also monitor other lists, such as the U.S. Office of Foreign Assets Control (OFAC) publications, to ensure that services are denied to criminal elements, through the closing of accounts and denial of services.

Widespread corruption of government officials has not been reported. The GOC has taken dramatic steps to ensure the integrity of its most sensitive institutions and senior government officials. The government regulates charities and NGOs to ensure compliance with Colombian law and to guard against their involvement in terrorist activity. The NGO regulation consists of several layers of scrutiny, including the regulation of incorporation procedures and the tracing of suspicious financial flows via the collection of intelligence or SAR reporting. Moreover, Colombia is improving its ability to regulate alternative remittance systems. These systems include networks of informal cash remittances through family member connections or the use of smuggling rings that forms the backbone of the Black Market Peso Exchange.

Colombia has broadly criminalized money laundering. In 1995, Colombia established the "legalization and concealment" of criminal assets as a separate criminal offense. In 1997, Colombia more generally criminalized the laundering of the proceeds of extortion, illicit enrichment, rebellion, and narcotics-trafficking. Effective in 2001, Colombia's criminal code extended money laundering predicates to reach arms trafficking, crimes against the financial system or public administration, and criminal conspiracy. Penalties under the criminal code range from two to six years with possibilities for aggravating enhancements of up to three-quarters of the sentence. Persons who serve as nominees for the acquisition of the proceeds of drug trafficking are subject to a potential sentence of six to fifteen years, while illicit enrichment convictions carry a sentence of six to ten years. Failure to report money laundering offenses to authorities, among other offenses, is itself an offense punishable under the criminal code, with penalties increased in 2002 to imprisonment of two to five years.

Colombian law provides for both conviction-based and nonconviction-based asset forfeiture, giving it some of the most expansive forfeiture legislation in Latin America. A general criminal forfeiture provision for intentional crimes has existed in Colombian penal law since the 1930s. Since then, Colombia has adopted more specific criminal forfeiture provisions in other statutes; most notably those contained in Colombia's principal counternarcotics statute, Law 30 of 1986. In 1996, Colombia added non-conviction-based forfeiture with the enactment of Law 333 of 1996, which establishes a process that allows for the extinguishing of ownership rights for assets tainted by criminal activity. This process is only the first step in Colombian law, which requires a second judicial procedure to

transfer the title from the original owner to the GOC. This second procedure can take years if the original owner decides to fight the transfer. Despite an expansive legislative regime, procedural and other difficulties led to only limited forfeiture successes in the past, with substantial assets tied up in proceedings for years. However, in 2002 the Anti-Narcotics and Maritime Unit of the Prosecutor General's office used Law 333 to successfully forfeit \$35 million of U.S. currency seized with the assistance of DEA in 2001.

In September of 2002, the GOC took additional forceful measures to remove practical obstacles to the effective use of forfeiture to combat crime by issuing a decree to suspend application of Law 333 and implement more streamlined procedures in forfeiture cases. In December, the government refined and formally adopted these reforms when it enacted Law 793 of 2002. In addition, Law 793 repealed Law 333 and establishes new procedures that eliminate interlocutory appeals—which prolonged and impeded forfeiture proceedings in the past—imposes strict time limits on proceedings; and places obligations on claimants to demonstrate their legitimate interest in the property. Law 793 also required expedited consideration of forfeiture actions by judicial authorities, and establishes a fund for the administration of seized and forfeited assets.

In December 2002, the GOC strengthened its ability to administer seized and forfeited assets by enacting Law 785 of 2002. This statute provided clear authority for the National Drug Directorate (DNE) to conduct interlocutory sales of seized assets and contract with entities for the management of assets. Notably, Law 785 also permits provisional use of seized assets before a final forfeiture order, including assets seized prior to the enactment of the new law. In 2004, the Department of Administration of Property within the Prosecutor General's office seized nearly 17,000 properties. The DNE, with assistance from the United States Marshals Service, is developing a modern asset management and electronic inventory system for tracking and managing seized assets.

Colombia, in December 2002, changed its asset forfeiture law to resemble an analogous law in the United States. The GOC shortened the amount of time for challenges and moved the focus from the accused to the seized item (cash, jewelry, boat, etc.), placing a heavier burden on the accused to prove the item was acquired with legitimately obtained resources. There was a 25 percent increase in money laundering prosecutions and a 42 percent increase in asset forfeiture cases in 2004. According to the office of the Prosecutor General, the total value of seized assets held by the GOC is estimated to total over six billion U.S. dollars.

The Colombian government has been aggressively pursuing the seizure of assets obtained by drug traffickers through their illicit activities. As a prime example, for the last two years the Colombian National Police Special Investigative Unit (CNP/SIU), in conjunction with DEA and the Colombian Prosecutor General, has been investigating the Cali Cartel business empire under the Rodriguez Orejuela brothers. A series of investigations designed to identify and seize assets either purchased by money gained through illegal drug activity or assets used to launder drug proceeds took place under Operation DINASTIA. In October 1995, under Executive Order 12978, OFAC named a Colombian national pharmacy chain, "Drogas La Rebaja", as a Specially Designated Narcotics-trafficking (SDNT) entity. After a lengthy investigation by Colombian law enforcement, on September 16, 2004, the CNP/SIU mobilized 3,200 police officers and 465 Colombian prosecutors nationwide in order to seize approximately 480 retail stores of the "Drogas La Rebaja" drug store chain. As part of the operation, authorities also seized the largest pharmaceutical laboratory in Colombia. This is the largest asset forfeiture in Colombia to date. The operation took place in 28 of the 32 Colombian departments over three days. The Colombian Direccion Nacional de Estupefacientes (DNE) took control of the stores and has replaced the top 24 company executives with DNE administrators. All 4,200 company employees will continue to work, but all company profits are to be dedicated to counternarcotics programs.

Money Laundering and Financial Crimes

The public and political response to asset forfeiture has been positive. Press reports have been matter-of-fact concerning asset seizure operations, and the court-sanctioned nature of the seizure orders mitigates political pressure. In general, Colombians recognize the relationship between criminals and their illicitly gotten gains. The banking sector has been cooperative with law enforcement activity based on judicial orders. Banks and other financial sector entities are also mindful of USA PATRIOT Act provisions that require action against criminals that fall under the jurisdiction of that act. Criminals in Colombia often act violently against vigorous law enforcement activities. As a result, GOC officials at all levels of involvement must guard against retaliatory actions.

Colombia formally adopted legislation in 1999 to establish a unified, central financial intelligence unit, the “Unidad de Informacion y Analisis Financiero” (UIAF), within the Ministry of Finance and Public Credit with broad authority to access and analyze financial information from public and private entities in Colombia. Covered entities—including financial institutions, institutions regulated by the Superintendence of Securities and the Superintendence of Notaries, export and import intermediaries, credit unions, wire remitters, exchange houses, and public agencies—are required to file suspicious transaction reports with the UIAF and are barred from informing their clients of their reports. Currency transactions and cross-border movements of currency in excess of \$10,000 must also be reported, and exchange houses must file currency reports for transactions involving \$700 or more. Unfortunately, there is no penalty for non-compliance, and financial institutions are believed to underreport transactions. The UIAF is widely viewed as a hemispheric leader in efforts to combat money laundering and supplies considerable expertise in organizational design and operations to other financial intelligence units in Central and South America. The UIAF is a member of the Egmont Group.

In addition, the Superintendence of Banks has instituted “know your customer” regulations for the entities it regulates, including banks, insurance companies, trust companies, insurance agents and brokers, and leasing companies. Among other things, the Superintendence of Banks also has authority to rescind licenses for wire remitters.

Bilateral cooperation between the GOC and the USG remains strong and active. The U.S. and Colombia exchange information and cooperation based on the 1998 UN Drug Convention. In 1998, DEA established a Sensitive Investigative Unit (SIU) within the Colombian Administrative Security Department (DAS) to investigate drug trafficking and money laundering organizations. In late 2003, the SIU arrested 21 money laundering facilitators in support of a U.S. operation based in South Florida. This operation exposed numerous flower export companies operating in Colombia as fronts for money laundering activities, and resulted in the seizure of over \$17 million. Six defendants in this case await extradition to the U.S.

A financial investigative unit, formed within the Colombian National Police Intelligence and Investigations Unit (DIJIN) in 2002, has worked on 68 cases, some of which have been closed by investigation and arrests. This unit works closely with the Bureau of Immigration and Customs Enforcement of the U.S. Department of Homeland Security. The cases are financial in nature and include money laundering, BMPE, and terrorist financing. Many of the cases involve provisional arrest warrants pursuant to extradition requests, several of which involve high-profile defendants.

In addition to asset seizures, the CNP Airport interdiction groups in Bogota, Medellin, and Cali have seized approximately three million dollars in cash from couriers returning from the United States and Mexico. Also, the DNE reported the seizure of over 1,400 vehicles, 371 boats, and 282 aircraft during CY 2004.

Colombia is a member of the South American Financial Action Task Force (GAFISUD), the Financial Action Task Force (FATF) regional anti-money laundering organization. In 2004, Colombia continued to participate in the mutual evaluation process by providing experts for the mutual legal evaluations of other GAFISUD countries. The Director of UIAF is director of the GAFISUD FIU Working Group,

and in 2004 participated on the GAFISUD Executive Director Selection Committee and on the Budget Committee. Colombia also participates in a multilateral initiative with the governments of the United States, Venezuela, Panama, and Aruba designed to address the problem of trade-based money laundering through the BMPE. Colombia became a signatory to the UN International Convention for the Suppression of the Financing of Terrorism in October of 2001, and ratified the convention in September, 2004. The GOC has not specifically criminalized the financing of terrorism, although terrorist financing crimes can be prosecuted under other sections of law. The GOC has signed, but not ratified the UN Convention against Corruption and the UN Convention against Transnational Organized Crime, along with the protocol on trafficking in persons, in August, 2004.

Despite Colombia's comprehensive anti-money laundering laws and regulations, enforcement continues to be a challenge in Colombia. Limited resources for prosecutors and investigators have made financial investigations problematic. Continued difficulties in establishing the predicate offense further contribute to Colombia's limited success in achieving money laundering convictions and successful forfeitures of criminal property. Congestion in the court system, procedural impediments, and corruption remain as continuing problems.

The Government of Colombia should specifically criminalize the financing of terrorism. Colombia should also amend its anti-money legislation to include all serious crimes and should penalize all covered entities that do not file SARs or CTRs. Colombia should also take legislative action to strengthen forfeiture and other aspects of money laundering enforcement, eliminate procedural impediments, and devote additional resources to prosecutors and investigators dealing with money laundering and asset forfeiture.

Comoros

The Union of the Comoros (the Comoros) is not a principal financial center for the region. An anti-money laundering (AML) law, which addresses many of the primary AML issues of concern, was passed by Presidential Decree prior to the March 2004 elections. However, Comoros authorities lack the capacity and will to effectively implement and enforce the legislation. The Comoros consists of the islands of Grande Comore, Anjouan and Moheli. Since Comoros gained independence from France in 1975, political instability has been a chronic problem. In 1997, the islands of Anjouan and Moheli declared their independence, seceded from the country and formed their own governments. Since that time, the islands have been moving towards a rapprochement. A President was elected in 2004 and a return to relative stability has begun. However, while broad principles have been agreed upon, many of the details of the new federal legal system remain to be decided upon, and both Moheli and Anjouan continue to retain much of their autonomy, particularly with respect to their economies and banking sectors.

The new federal-level AML law is based on the French model. The main features of the law are that it: 1) requires financial and related records to be maintained for five years; 2) permits assets generated or related to money laundering activities to be frozen, seized and forfeited; 3) requires residents to declare all currency or financial instruments upon arrival and departure, and non-residents to declare all financial instruments upon arrival and all financial instruments above Comorian Francs 500,000 (\$1,250) on departure; 4) permits provision and receipt of mutual legal assistance with another jurisdiction where a reciprocity agreement is in existence and confidentiality of financial records is respected; 5) requires non-bank financial institutions to meet the same customer identification standards and reporting requirements as banks; 6) requires banks, casinos and money exchangers to report unusual and suspicious transactions (by amount or origin) to the Central Bank and prohibits cash transactions over Comorian Francs 5 million (\$12,500); and, 7) criminalizes the provision of material support to terrorists and terrorist organizations. There is no financial intelligence unit or comparable agency in existence in the country.

The autonomy of Anjouan and Moheli severely limits the ability of federal authorities to implement its AML laws within their jurisdictions. Although Moheli has its own AML law in effect (the Anti-Money Laundering Act of 2002), the law itself has some serious shortcomings and authorities lack the resources and expertise to enforce its provisions. For example, there is no absolute requirement to report large cash transactions. Comprehensive information on Anjouan's laws and regulations is difficult to obtain, but it does not appear that Anjouan has an AML law, or any legal requirement for offshore banks to maintain records or take any action when confronted with money laundering activities, be they suspected or confirmed. As is the case with Moheli, Anjouan also lacks resources and expertise to address money laundering and related financial crimes.

While the Comoros is not a principal financial center for the region, Moheli and Anjouan are attempting to develop an offshore financial services sector as a means to finance government expenditures. Both Moheli, pursuant to the International Bank Act of 2001, and Anjouan, pursuant to the Regulation of Banks and Comparable Establishments of 1999, license off-shore banks. Together, the islands have licensed more than 100 banks. Applicants for banking licenses in either jurisdiction are not required to appear in person to obtain their licenses. In Anjouan, only two documents (a copy of the applicant's passport and a certificate from a local police department certifying the lack of a criminal record) are required to obtain an offshore license and fax copies of these documents are acceptable. Even if additional information was to be required, it is doubtful that either jurisdiction has the ability or resources to authenticate and verify the information. Neither jurisdiction is capable, in terms of expertise or resources, of effectively regulating an offshore banking center. Anjouan, and probably Moheli as well, has delegated much of its authority to operate and regulate the offshore business to private, non-Comorian domiciled parties.

In addition to offshore banks, both Moheli, pursuant to the International Companies Act of 2001, and Anjouan, pursuant to Ordinance Number 1 of 1 March 1999, license insurance companies, internet casinos, and international business companies (IBC's)—Moheli alone claims to have licensed over 1200 IBC's. Bearer shares of IBC's are permitted under Moheli law. Anjouan also forms trusts, and registers aircraft and ships as well (without requiring an inspection of the aircraft or ship in Anjouan).

The Comoros is a party to the 1988 UN Drug Convention, the UN Convention against Transnational Organized Crime, and the UN Convention for the Suppression of the Financing of Terrorism .

The Government of the Union of the Comoros (GOC) should harmonize anti-money legislation for the three islands that comprise the federal entity. A unified financial intelligence unit should be established and the unregulated offshore financial sectors in Moheli and Anjouan should either be transferred to the federal level from the private sector or be shut down. In either case, bearer shares should be immobilized. The deficiencies in the anti-money laundering/terrorist financing regimes in the Comoros, and the GOC's inability to implement existing legislation make it vulnerable to traditional money laundering and to the financing of terrorism. Comoros should make every effort to comport to international standards. Comoros should criminalize the financing of terrorism.

Congo, Democratic Republic of

The Democratic Republic of the Congo (DRC) is not a regional financial center. However, its porous borders, lack of a well-regulated banking sector and a functional judicial system, and inadequate enforcement resources make it susceptible to money laundering. Smuggling is widespread throughout the DRC, and money laundering often involves the proceeds from illicit import/export activities and diamond sales. Money laundering also is prevalent in the money transfer agencies in the DRC and their associated exchange facilities. Most economic activity in the DRC takes place in the informal sector, estimated to be at least four times the size of the formal sector, with most transactions, even those of legitimate businesses, carried out in cash. Money laundering in the DRC is neither primarily nor significantly related to narcotics proceeds.

With the assistance of the World Bank, the Congolese Central Bank, and the IMF, the GDRC recently passed legislation criminalizing money laundering and terrorist financing. Banks and non-banking financial institutions are now required to report all transactions over \$10,000. Banks find this requirement burdensome, as 90 percent of transactions using the banking system meet this threshold. There are no legal restrictions in the DRC prohibiting the sharing of financial account information with foreign entities. The President and courts have the legal authority to freeze the assets of terrorist organizations.

The DRC is in an ongoing effort to reform and restructure its banking system with the assistance of the IMF. Several insolvent banks have been liquidated. New computerized communications and accounting networks are to be installed that will make it easier to trace formal financial transactions.

The DRC has signed, but not yet ratified, both the 1999 International Convention for the Suppression of the Financing of Terrorism and the 1988 UN Drug Convention. It has not signed the UN Convention against Transnational Organized Crime.

The Government of the Democratic Republic of the Congo (GDRC) should take steps to enforce the new legislation criminalizing money laundering and terrorist financing. It should become a party to the 1988 UN Drug Convention, the 1999 UN International Convention for the Suppression of the Financing of Terrorism, and the UN Convention against Transnational Organized Crime

Congo, Republic of

The Republic of Congo (also called Congo-Brazzaville) is not a regional financial center. Neither drug trafficking nor money laundering is thought to be a problem. The Bank of Central African States (BEAC) supervises Congo's banking system, which is still recovering from the looting and neglect it received during Congo's civil unrest in the 1990s. BEAC is a regional Central Bank that serves six countries of Central Africa.

Congo-Brazzaville strengthened its laws against money laundering in 2003. As a member of the Central African Regional Monetary Union (CEMAC), it adopted CEMAC's new April 2003 regional regulations for prevention and repression of money laundering and financing of terrorism in central Africa. These rules establish penalties of both fines and imprisonment for money laundering and financing of terrorism. They also regulate the operations of banks, moneychangers and casinos.

Export and import of CFA franc bank notes, the regional currency, is prohibited outside the CFA franc zone. Travelers may not enter or leave the country with more than 1,000,000 FCFA (\$1,980). In addition, Congo-Brazzaville requires that foreign transfer of more than 500,000 FCFA (\$990) must receive the prior approval of banking regulators. In 2003, Congo-Brazzaville applied the anti-money laundering laws against Salu Humberto Brada, an export-import company accused of inappropriate micro-finance operations and charging excess interest. No money laundering cases were tried during 2004.

Congo-Brazzaville has bilateral extradition treaties with France, the Democratic Republic of Congo (Congo-Kinshasa) and Cuba. It is a party to the multilateral Antananarivo Convention on Matters of Justice of 1961. Congo-Brazzaville reported to the UN Security Council in 2003 that no inter-agency coordination mechanism existed to control drugs at the country's borders. That situation continued in 2004. In the same report, Congo-Brazzaville reported that it did have a national Committee against Criminality, a national Council of Security, and an Action Group against Money Laundering in Central Africa. Congo has signed, but not yet ratified, both the UN Convention against Transnational Organized Crime and the UN International Convention for the Suppression of the Financing of Terrorism.

Congo should continue to work with the Central African Regional Monetary Union to strengthen its anti-money laundering and counterterrorist financing efforts in the region. Congo should become a party to the UN International Convention for the Suppression of the Financing of Terrorism and to the UN Convention against Transnational Organized Crime.

Cook Islands

The Cook Islands is a self-governing parliamentary democracy in free association with New Zealand and a member of the British Commonwealth. Cook Islanders are citizens of New Zealand. By passing nine new legislative acts on May 7, 2003 and additional legislation in 2004, the Cook Islands authorities strengthened its anti-money laundering/counterfinancing (AML/CFT) legal and institutional framework.

The new laws remedy several of the deficiencies identified by the Financial Action Task Force's Non-Cooperative Countries and Territories initiative and the joint Asia/Pacific Group on Money Laundering/Offshore Group of Banking Supervisors (APG/OGBS) mutual evaluation report.

The Financial Transactions Reporting Act 2003 (FTRA 2003) imposes certain reporting obligations on financial and non-bank financial institutions such as banks, offshore banking businesses, offshore insurance businesses, casinos, and gambling services. Financial institutions are required to make currency transaction reports and suspicious transaction reports. Financial institutions are required to retain all records related to the opening of accounts and financial transactions for a minimum of six years. The records must include sufficient documentary evidence to prove the identity of the customer. In addition, financial institutions are required to develop and apply internal policies, procedures, and controls to combat money laundering, and to develop audit functions to evaluate such policies, procedures, and controls. Financial institutions must comply with any guidelines and training requirements issued under the FTRA 2003.

The Financial Transactions Reporting Act 2004 (FTRA) redefined obligations and procedures relating to customer identification, record keeping, internal controls and reporting of suspicious or other types of transactions. It also reorganized the supervisory structure, by allocating compliance checking functions for licensed entities to the Financial Supervisory Commission (FSC). The FTRA addresses confidentiality/secretcy of financial transactions, and provides authority that supersedes other related legislation in Sections 35 and 36. These sections compel financial institutions to comply with the reporting and other requirements of the FTRA, and to provide transaction information to the Cook Islands Financial Intelligence Unit (FIU), established under the law.

The FTRA mandates due diligence, ongoing monitoring of customers and transactions, suspicious activity reporting, development and maintenance of internal procedures for compliance, audit and record keeping. Furthermore, the FTRA establishes the supervision and authority of the FIU, including cooperation with supervisors, and provides for administrative and penal sanctions for noncompliance.

The FIU became legally established pursuant to Section 20 of the FTRA. With the assistance of a Government of New Zealand technical advisor, the FIU became fully operational. The FIU is the competent authority responsible for receiving, suspicious transaction reports (STRs). The FIU also receives currency transaction reports, as well as reports of telegraphic transfers over NZD\$10,000. If the Financial Intelligence Unit (FIU), after analyzing these reports determines that a money laundering offense has been, or is being committed, the FIU must refer the matter to law enforcement for investigation. The 2003 FTRA also authorizes the FIU to request information from any law enforcement agency and supervisory body. The FIU is required to destroy a suspicious transaction report received or collected after six years since the receipt of the report, if there has not been activity or information relating to the report or the person named in the report. Covered institutions obligated to file STRs to the FIU are banks, insurers, financial advisors, bureaux de change, solicitors/attorneys,

accountants, financial regulators, casinos, lotteries, money remitters, and pawn shops. Administrative oversight is vested with the Minister of Finance, who appoints the Head of the FIU. FIU has the authority to require reporting parties to supplement reports, and has broad powers to obtain relevant information needed to combat money laundering and the financing of terrorism. The FIU does not have an investigative mandate.

The FIU has delegated responsibility for assessing AML compliance by licensed financial institutions to the FSC. The resulting reports and relevant documentation are to be provided to the FIU. However, the FIU retains responsibility for assessing compliance by non-licensed reporting institutions. In 2004, it did not conduct any on-site compliance visits, as it is still in the process of hiring a compliance officer and of identifying the non-licensed reporting institutions.

In May 2003 the Government enacted legislation to establish the Financial Supervisory Commission (FSC) as the sole regulator of the licensed financial sector. The FSC is empowered to license, regulate, and supervise the business of banking, and serves as the administrator of the legislation that regulates the offshore financial sector. Its policy is to seek to respond to requests from overseas counterparts to the utmost extent possible. The Board has also taken a broad interpretation of the concept of “counterpart,” and does not need to establish general equivalence of function before being able to cooperate.

The only known request to the FSC in 2004 was a request from the New Zealand Securities Commission. The FSC advised the Securities Commission that, owing to the requirements of Cook Islands law, the information requested could be provided only if there were appropriate confidentiality arrangements in place. The Securities Commission developed confidentiality orders, advised the FSC of this in June 2004, and received the information sought in August 2004. The Securities Commission reports that it found the FSC willing to assist, and that it received all the information it sought.

The Cook Islands reporting requirements apply to all currency transaction reports (CTRs) of NZ\$10,000 (\$7,100) and above, electronic funds transfer reports (EFTR) of NZ\$10,000 (\$7,100) and above, as well as all suspicious transactions. Currency taken in and out of the Cook Islands in excess of NZ\$10,000 must be reported, as well. The FIU received 14 STRs in 2004. In 2004, the FIU received 862 CTRs, 2,613 EFTRs, and 11 border currency reports (BCRs). To date, 30 of the 36 suspicious transaction reports have related to non-residents.

Under Sections 10 and 11 of the FTRA banks and a broad range of non-bank financial institutions are required to report telegraphic transfers above NZ\$10,000 (approximately \$7,100). CTRs must be filed when NZ\$10,000 and above is transported over the border.

The domestic banking system is comprised of branches of two major Australian banks, and the local Bank of the Cook Islands (BCI). The latter is the result of a 2001 merger of the government-owned Cook Islands Development Bank and the Post Office Savings Bank. The primary business of the domestic banks operating in the Cook Islands is traditional deposit taking and lending. The BCI operates as a stand-alone institution competing against the two Australian banks, and is no longer engaged in development lending. Legislation allows for development lending to be undertaken in the future by a separate company not subject to supervision by the FSC. In addition, non-performing loans made by the Cook Islands Development Bank have been transferred to another affiliated company.

Licensing requirements, as set out in the legislation, are comprehensive. The Banking Act 2003 and a Prudential Statement on Licensing issued in February 2004 contain detailed licensing criteria for both locally incorporated and foreign banks, including “fit and proper” criteria for shareholders and officers, satisfactory risk management, accounting and management control systems, and minimum capital requirements. The Banking Act 2003 defines banking business, prohibits the unauthorized use of the word “bank” in a company name, and requires prior approval for changes in significant shareholding.

The Cook Islands has an offshore financial sector that licenses international banks and offshore insurance companies and registers international business companies. It also offers company services and trusts—particularly asset protection trusts that contain a “flee clause”. Flee clauses state that if an inquiry is made by a foreign law enforcement agency regarding the trust, the trust will be automatically transferred to another jurisdiction.

The Banking Act 2003 and the Financial Supervisory Commission Act 2003 (FSCA 2003) established a new framework for licensing and prudential supervision of domestic and offshore financial institutions in the Cook Islands. The FSCA required all banks, onshore and offshore, to reapply for a license within 12 months of the commencement of the FSCA—May 2004. All offshore banks that had been licensed under the previous legislation were required to re-apply for an international banking license under the Banking Act 2003.

The effect of the legislation is to require offshore banks to have a tangible physical presence in the Cook Islands (the “mind and management” principle), transparent financial statements, and adequate records prepared in accordance with consistent accounting systems. All banks are subject to a vigorous and comprehensive regulatory process, including on-site examinations and supervision of activities on a consolidated basis. This physical presence requirement was intended to ensure that the Cook Islands would have no “shell banks” by June 2004.

Nine applications were received by the FSC for international banking licenses. Seven of the pre-existing banks decided not to re-apply. Two licenses were granted on May 28, 2004, and three on July 1, 2004. Four applications were declined: three on the grounds that the shareholders and/or directors were not fit and proper, and the fourth on the grounds that the ownership structure included bearer shares. One of the four banks refused a license appealed to the courts, and an interim injunction instructing the Commission to issue a license was granted. The FSC is challenging the decision, and is hopeful that the matter will be resolved by March 2005.

The FIU may, with the approval of Cabinet, enter into negotiations, orally or in writing, relating to an agreement or arrangement, with an institution or agency of a foreign state or an international organization. The Cabinet must approve final agreements or arrangements. In regard to disclosure of information to foreign agencies, the FIU may share information with foreign institutions or international organizations that have powers similar to the FIU after the signing of an information exchange agreement.

The GOCI is a party to the UN Convention against Transnational Organized Crime and the UN International Convention for the Suppression of the Financing of Terrorism. The Terrorism Suppression Act 2004 is based on the model law drafted by an expert group established under the auspices of the Pacific Islands Forum Secretariat. The Act criminalizes the commission and financing of terrorism.

The GOCI is a member of the Asia/Pacific Group on Money Laundering. The FIU became a member of the Egmont Group in June 2004, and has bilateral agreements allowing the exchange of financial intelligence with Australia. It is currently in negotiations with Thailand.

The United Nations (Security Council Resolutions) Bill is currently in Parliament. The Bill will allow the Cook Islands, by way of regulations, to give effect to the Security Council Resolutions concerning international peace and security. The GOCI is also finalizing regulations to give effect to UN Security Council Resolution 1373.

The Financial Action Task Force (FATF) placed the Cook Islands on its Non-Cooperative Countries and Territories (NCCT) list in 2000. In the interim, the Government of the Cook Islands has remedied the deficiencies of its anti-money laundering regime. A FATF Review Group conducted an on-site visit in November 2004 to determine the effectiveness of those remedies. The Cook Islands should continue

to implement legislation designed to strengthen its nascent institutions and should maintain vigilant regulation of its offshore financial sector to ensure that it comports with international standards.

Costa Rica

Costa Rica is not a major financial center, but it remains vulnerable to money laundering and other financial crimes, due in part to narcotics trafficking in the region and the presence in Costa Rica of Internet gaming companies. Reforms to the Costa Rican counternarcotics law in 2002, which expand the scope of anti-money laundering regulations, also create a loophole by eliminating the government's licensing and supervision of casinos, jewelers, realtors, attorneys, and other non-bank financial institutions. Gambling is legal in Costa Rica, and there is no requirement that the currency used in Internet gaming operations be transferred to Costa Rica. Currently, over 200 sports book companies have registered to operate in Costa Rica. Many of these registered firms have the same owners and addresses.

In 2002, the Government of Costa Rica (GOCR) expanded the scope of Law 7786 via Law 8204. This expansion criminalizes the laundering of proceeds from all serious crimes. Law 8204 also obligates financial institutions and other businesses (such as money exchangers) to identify their clients, report currency transactions over \$10,000, report suspicious transactions, keep financial records for at least five years, and identify the beneficial owners of accounts and funds involved in transactions. While Law 8204, in theory, covers the movement of all capital, current regulations based on 8204, Chapter IV, Article 14, apply a restrictive interpretation that covers only those entities which are involved in the transfer of funds as a primary business purpose. As stated earlier, the 2002 law does not cover casinos, jewelry dealers, or Internet gambling operations whose primary business is not the transfer of funds. New legislation/regulations are being drafted to close this loophole and may be enacted in 2005.

The formal banking industry in Costa Rica is tightly regulated. However, the offshore banking sector that offers banking, corporate, and trust formation services remains open and is an area of concern. Foreign-domiciled "offshore" banks can only conduct transactions under a service contract with a domestic bank, and they do not engage directly in financial operations in Costa Rica. In 2004, Costa Rican authorities implemented several measures to enhance supervision of offshore banks, but acknowledge that they are still unable to adequately assess risk. Due in part to the new controls, two offshore banks ceased operations in Costa Rica in 2004 and another is expected to close in 2005. Currently, six offshore banks maintain correspondent operations in Costa Rica, three from the Bahamas and three from Panama. The GOCR has supervision agreements with its counterparts in Panama and the Bahamas, permitting the review of correspondent banking operations. Unfortunately, these counterpart regulatory authorities occasionally interpret the agreements in ways that limit review by Costa Rican officials. Despite inadequate supervision of the offshore sector, Costa Rican authorities were able to rapidly and effectively trace money in the wake of high-level corruption scandals.

During 2004, the incidents of cash couriers depositing large sums of declared currency at private banks in Costa Rica virtually disappeared. Couriers appear to have reverted to smuggling cash, and the only four convictions in 2004 on money laundering charges involve undeclared currency (over \$1.2 million) detected at airports or along the border. All four convictions have been appealed.

Costa Rica's Financial Intelligence Unit (FIU), the Centro de Inteligencia Conjunto Antidrogas/Unidad de Analisis Financiero (CICAD/UAF), became operational in 1998 and was admitted into the Egmont Group in 1999. Despite its committed and professional staff, the unit remains ill equipped and under-funded to handle its current caseload (over 200 cases) and to provide the information needed by investigators. Nevertheless, the unit developed evidence it considers formidable in four high-profile cases of money laundering during 2004. The cases have been referred for prosecution to the special prosecutor for financial crimes.

Costa Rican authorities cannot block, seize, or freeze property without prior judicial approval. Thus, Costa Rica lacks the ability to expeditiously freeze assets connected to terrorism. An interagency effort is underway to reduce the time required to obtain judicial approval.

The GOCR has ratified the major UN counterterrorism conventions. Additionally, a government task force drafted a comprehensive counterterrorism law with specific terrorist financing provisions in 2002. The draft law would expand existing conspiracy laws to include the financing of terrorism. It would also enhance existing narcotics laws by incorporating the prevention of terrorist financing into the mandate of the Costa Rican Drug Institute. In 2004, the Legislative Assembly also considered a separate draft terrorism law. GOCR officials are currently working to combine the two proposals in a way that will meet all of Costa Rica's international obligations, and they are hopeful the law will be enacted in early 2005.

Costa Rica is a party to the 1988 UN Drug Convention, the UN International Convention for the Suppression of the Financing of Terrorism, and the UN Convention against Transnational Organized Crime. The GOCR has signed, but not yet ratified, the UN Convention against Corruption. The GOCR has also signed the OAS Inter-American Convention on Mutual Assistance in Criminal Matters, and is a member of the Caribbean Financial Action Task Force (CFATF) and the aforementioned Egmont Group.

The Government of Costa Rica should improve the supervision of its offshore banking sector and should extend its anti-money laundering regime to cover the Internet gaming sector, exchange houses, gem dealers, casinos and other non-bank financial institutions. Costa Rica also should pass counterterrorism and terrorist financing legislation. Greater attention should be given to the concerns of the FIU, so that it is able to adequately support the needs of law enforcement. Costa Rican authorities are aware of these deficiencies in Costa Rica's anti-money laundering regime, and should continue to address them in 2005, if the country is to build on the progress it has made in this area.

Côte d'Ivoire

Côte d'Ivoire has been an important regional financial center in West Africa. However, porous borders, an ongoing armed rebellion, and regional instability contribute to Côte d'Ivoire's current vulnerability to money laundering from narcotics-trafficking, fraud, corruption, and arms-trafficking. Criminal proceeds laundered in Côte d'Ivoire are reportedly derived mostly from regional criminal activity organized chiefly by nationals from Nigeria and the Democratic Republic of the Congo, but increasingly from Ivoirians and some Liberian nationals.

Economic and financial police have continued to notice an increase in financial crimes related to credit card theft and foreign bank account fraud, to include suspicious wire transfers of large sums of money involving mainly British, American, and French account holders through use of the Internet. A part of these funds consist of money solicited through West African advanced fee scams ("419 frauds"). The cross-border trade over Côte d'Ivoire's porous borders generates large amounts of contraband funds that are introduced into the banking system through informal or unregulated moneychangers.

The Central Bank of West African States (BCEAO), based in Dakar, Senegal, is the Central Bank for the countries in the West African Economic and Monetary Union (WAEMU), all of which use the French-backed CFA franc currency: Benin, Burkina Faso, Guinea-Bissau, Côte d'Ivoire, Mali, Niger, Senegal, and Togo. All bank deposits over approximately \$7,700 made in BCEAO member countries must be reported to the BCEAO, along with customer identification information. Côte d'Ivoire's economy accounts for 40 percent of the GDP of the WAEMU region. In September 2002, the WAEMU Council of Ministers, which oversees the BCEAO, approved an anti-money laundering regulation applicable to banks and other financial institutions, casinos, travel agencies, art dealers, gem

dealers, accountants, attorneys, and real estate agents. The regulation is subject to review by member countries, which would be responsible for implementing many provisions of the regulation.

Under the WAEMU regulation, financial institutions would be required to verify and record the identity of their customers before establishing any business relationship. The regulation would require financial institutions to maintain customer identification and transaction records for ten years. The regulation would also impose certain customer identification and record maintenance requirements on casinos. All financial institutions, businesses, and professionals under the scope of the WAEMU regulation would be required to report suspicious transactions. The regulation calls for each member country to establish a National Office for Financial Information Process (CENTIF), which would be responsible for collecting suspicious transactions and would have the authority to share information with other CENTIFs within the WAEMU as well as with the financial intelligence units of non-WAEMU countries.

The WAEMU Council of Ministers issued another directive in September 2002 requesting member countries to pass legislation requiring banks to freeze the accounts of any individuals or entities on the UNSCR 1267 Sanctions Committee's consolidated list. On September 17, 2004, the WAEMU Council of Ministers issued a directive to encourage member states to take necessary measures to hasten the adoption of legislation to enact the various WAEMU directives against money laundering and terrorist financing. For instance, Côte d'Ivoire does not yet have a specific law authorizing the identity, freezing and seizing of terrorist assets. However, while such a law was being prepared, legislative action on this and other measures was suspended due to the ongoing political crises. Until the political situation stabilizes and new legislation is in place, relevant measures and procedures by the BCEAO and their application by bankers and financial institutions must substitute for the deficiencies in Ivorian legislation.

Laundering of money related to any criminal activity is a criminal offense. It applies to narcotics-related money laundering as well as to other fraudulent activities and corruption. Banks are required to maintain the records necessary to reconstruct significant transactions through financial institutions. Law enforcement authorities can access these records to investigate financial crimes upon the request of a public prosecutor. There are no mandatory time limits for keeping records. Côte d'Ivoire enacted a banking secrecy law in 1996 that prevents disclosure of client and ownership information, but it does allow the banks to provide information to the court in legal proceedings or criminal cases. Banks are required to adhere to "due diligence" standards.

Law 97/1997 regulates cross-border transport of currency. When traveling from Côte d'Ivoire to another WAEMU country, Ivorians and expatriate residents must declare the amount of currency being carried out of the country. When traveling from Côte d'Ivoire to a destination other than another WAEMU country, Ivorians and expatriate residents are prohibited from carrying an amount of currency greater than the equivalent of 500,000 CFA francs (approximately \$1,000) for tourists, and two million CFA francs (approximately \$4,000) for business operators. Carrying currency greater than those thresholds is only permissible with approval from the Department of External Finance of the Ministry of Economy and Finance. Even with governmental authorization, there is a cash limit of \$4,000 for tourists and \$5,500 for business. Any surplus must be in travelers or bank checks. However, due to the ongoing political crises, there has been a marked increase in cross-border migration from Côte d'Ivoire. Usually, migrating individuals carry out foreign currency that was exchanged on the black market. Given the porous borders, a large quantity of foreign currency is being recycled back into the region through informal channels. In 2004, police seized the equivalent of \$1,300,000 in mixed foreign currency bound for Dubai, Hong Kong and Bangkok.

Under article 42 of the law No.90-589 of July 1990 on banking regulations, criminal assets may be frozen. Côte d'Ivoire's asset seizure and forfeiture law applies to both real and personal property, including bank accounts and businesses used as conduits for money laundering. The Government of

Côte d'Ivoire (GOCI) is the designated recipient of any narcotics-related asset seizures and forfeitures. The law does not allow for the sharing of assets with other governments. GOCI does not have a specific law against terrorist financing or authorizing the seizure and forfeiture of terrorist funds. The GOCI has, however, prepared draft counterterrorism finance legislation specifically targeting money laundering operations. The GOCI is also considering legislative proposals regarding the regulation of alternative remittance systems.

Côte d'Ivoire has demonstrated a willingness to cooperate with the U.S. in investigating financial or other crimes. For example, in one case from 2004, an American citizen was being defrauded by someone posing as a GOCI Customs Official requesting demurrage fees for a shipment of goods. With a short window of opportunity for action, the U.S. Embassy notified the Economic Police, who then instructed the Bank Examiner to monitor the suspect's account. The next morning, the Economic Police arrested a Nigerian who came in to retrieve the funds. Armed with a search warrant, the police searched the suspect's house, gathered evidence of a boiler-room operation, and arrested three other Nigerians. The funds (\$15,000) were successfully wired back to the victim.

The GOCI has also continued to expand its regional cooperation on money laundering, working with other ECOWAS member nations on plans to establish, by early 2004, the organization's Intergovernmental Group for Action Against Money Laundering (GIABA). Côte d'Ivoire is a party to the UN International Convention for the Suppression of the Financing of Terrorism and the 1988 UN Drug Convention. Côte d'Ivoire has signed, but not yet ratified, the UN Convention against Transnational Organized Crime.

The Government of Côte d'Ivoire should criminalize terrorist financing and enact legislation allowing for the freezing and seizing of terrorist assets. It should ratify the UN Convention against Transnational Organized Crime.

Croatia

Croatia is neither a regional financial nor a money laundering center; tourism is the nation's most lucrative economic sector, serving 6.5 million people each year. Much of the money laundering that does occur is related to domestic financial crimes such as tax evasion, fraud from privatization schemes, and other business-related fraud. There has, however, been a recent rise in money laundering cases, with drug-trafficking via the "Balkan Route" into Western Europe as the predicate crime. The proceeds of regional narcotics-trafficking tend to be converted into real estate and luxury goods.

In 1996, the Government of Croatia (GOC) passed legislation that amended its penal code to criminalize money laundering in all forms related to serious crimes. Croatian law prohibits anonymous accounts. In 2000, Croatia's Parliament strengthened the country's penal code to ensure that all indicted individuals could be charged with the money laundering offense where applicable. Prior to this change, a person could not be charged with money laundering if the predicate offense carried a maximum penalty of fewer than five years in prison.

Croatia continued the development of its anti-money laundering regime throughout 2002 and 2003. In 2002, the Croatian Parliament enacted a variety of legislative acts related to the fight against money laundering. These laws include the Law on Penal Responsibility of Legal Persons, the Law on Suppression of Organized Crime and Corruption, the Law on Banks, and amendments to the Law on Legal Proceedings. In 2003, Parliament approved the new Law on the Prevention of Money Laundering (new LPML) that follows the European Union (EU) Directives. The new law also incorporates terrorism financing as well as drug smuggling and trafficking in persons, and requires that all cross-border transactions with cash or monetary instruments exceeding \$6,500 be reported to Croatia's Financial Intelligence Unit (FIU).

In 1997, Croatia passed its Law on the Prevention of Money Laundering (LPML), requiring banks and non-bank financial institutions to report transactions that exceed approximately \$30,000, as well as any cash transactions that seem suspicious. Aside from cash, the LPML also requires covered entities to report all transactions involving gold, precious metals, and stones, as well as other types of monetary instruments and financial paper. The new LPML expands the list of entities subject to reporting requirements to include lawyers and notaries.

Through its regulatory authority, the Ministry of Finance requires financial institutions to use specific software to facilitate compliance with reporting requirements. Cooperation with regulators is generally good, with major financial institutions readily cooperating with Croatian authorities. Money exchange houses are licensed and operate as outposts of banks, with rates tied to those offered by the banks.

The LPML also authorizes establishment of a FIU, the Ured za Sprjecavanje Pranja Novca (Anti-Money Laundering Department or AMLD), within the Ministry of Finance. Over its seven years of existence, the 17-member AMLD has investigated over 1,150 cases of suspicious transactions, nearly 500 of which have occurred since 2002, and forwarded 250 reports (130 since 2002 alone) on suspicious transactions (STRs) to the authorities; 40 of these reports went to foreign authorities. Between October 2003 and December 2004, the AMLD received approximately 3,000 STRs and opened 260 new analytical cases. Upon completion of analysis, the AMLD forwarded 70 of these cases to authorities for further investigation and action. AMLD has increased the number of STRs released to prosecutors within Croatia by 70 percent.

In 2001, the GOC established a National Center for the Prevention of Corruption and Organized Crime (USKOK) within the State Prosecutor's Office. This office has the authority to freeze assets, including securities and real estate, for up to a year. The office also has enhanced powers to seek financial transaction information and to coordinate the investigation of financial crimes. In October 2004, the Parliament revised the law governing USKOK's work. The revisions strengthen the tools USKOK can use to combat organized crime and grant USKOK jurisdiction to investigate narcotics-linked organized crime cases.

Croatia has a history of strict separation of operations. Responsibility for investigating financial crimes remains divided between the police, prosecutor's office, and ministry of finance. In an effort to strengthen domestic inter-agency cooperation and information sharing, the Ministry of Finance is currently negotiating memoranda of understanding (MOUs) with the Central Bank, the Securities and Exchange Commission, the pension fund supervisory body, and the insurance industry regulatory body.

Despite the GOC's efforts, there were only a small number of arrests and prosecutions for money laundering or terrorism financing during 2004. During 2004, the Croatian police conducted a total of five money laundering investigations (two of which involved narcotics-related offenses). In 2003, one of four money laundering investigations was drug related. To date, the GOC has succeeded in obtaining three convictions for money laundering. Weak interagency cooperation, inadequate technical skills of the police and prosecutors when analyzing and dealing with complex financial crimes, and a general lack of knowledge among members of the banking community as to what exactly constitutes a money laundering offense are all factors that impede Croatia's anti-money laundering efforts. The judicial backlog of 1.4 million cases, understaffing and severe resource constraints also are deterrents to effective prosecution of all criminal cases, including money laundering cases.

Although Croatian investigators have the authority to temporarily seize property in the course of an investigation, asset seizure legislation needs strengthening. Croatian legislation provides that, with regard to asset seizure, the burden falls on the state to prove that the property of a criminal was purchased with illegal proceeds. There is no civil asset forfeiture provision in Croatian law. Therefore, it is extremely difficult to seize the assets of those who are not directly involved in the street-level work of organized crime. An interagency working group headed by the Ministry of Internal Affairs

and funded by the EU is looking at the issue of establishing a more reasonable burden of proof for asset seizures.

In 2003, the AMLD worked with authorities in an EU country to block \$3 million in suspected criminal proceeds. Despite the fact that there is also no specific legislation regulating the sharing of seized assets with foreign governments, Croatian officials advise that, under existing law, judges do have the power to authorize asset sharing with another country.

Croatia has criminalized terrorist financing. In addition, Croatia made various changes in the criminal code during 2003 to provide for implementation of the UN Convention Against Corruption and the International Convention for the Suppression of the Financing of Terrorism. Croatia has established an inter-ministerial body to evaluate and improve the country's counterterrorism regime. It also circulates throughout its financial system all international lists of designated individuals and entities. Authorities have the right to identify and, with a court order, to freeze and seize terrorist finance assets. Law enforcement authorities are able to move quickly to seek the required court order to freeze suspect accounts and assets of those individuals or organizations named by the UNSCR 1267 Sanctions Committee. In fact, Croatian law enforcement officials have greater authority to freeze assets linked to individuals and entities included in UNSCRs 1267, 1333, and 1390.

The AMLD has the authority to freeze assets and can do so with relatively little difficulty for an initial 72-hour period. However, obtaining an extension of the initial 72-hour period is more complicated, with the Prosecutor's Office requiring either an international instrument or a formal legal request for an asset freeze. Therefore, if assets identified by authorities do not relate to an individual or entity cited by the UN, it is very difficult for the Prosecutor's Office to obtain a long term legal freeze. In May 2003, after its own investigation dovetailed with its investigation of individuals on the UN-distributed terrorist lists, and in the environment of the related UN Resolutions, AMLD recommended the freezing of two accounts. The Croatian judiciary agreed and froze the accounts, which allegedly were being used to funnel funds through Croatia to neighboring Bosnia and Herzegovina, and ultimately used to fund al-Qaida activities. During 2004, the AMLD received three STRs related to possible terrorist financing activity, and to date has frozen funds in four cases associated with terrorist financing.

In the international arena, the AMLD cooperates fully with foreign FIUs. Croatia does not have limitations on exchanging information with international law enforcement on money laundering investigations. Croatia actively cooperates with its Balkan neighbors in the law enforcement arena, especially in the fight against money laundering, where Croatia worked to establish a regional working group to address the issue. This working group meets twice yearly. Croatia is party to a number of bilateral agreements on law enforcement cooperation with its neighbors, as well as the Southeastern Europe Cooperative Initiative's Agreement to Prevent and Combat Trans-border Crime.

In addition, Croatia is working in concert with Bosnia and Herzegovina to stem cross-border money laundering and smuggling. The joint efforts include the participation by authorities from both countries as well as the use of new technology and computer programs developed specifically for this purpose. With a thousand-mile border between the two countries, and numerous loopholes caused by the jurisdictional irregularities throughout Bosnia and Herzegovina, this is one of Croatia's most important projects.

In the fall of 2004, Croatia's chief State Prosecutor initiated discussions with his counterparts in neighboring countries toward signing bilateral agreements to facilitate cross-border criminal prosecutions. In December 2004, Croatia joined 11 other regional prosecutors in signing a memorandum of understanding to work jointly to fight organized crime. Croatia also participates as a member in the EU's Community Assistance for Reconstruction, Development, and Assistance (CARDS) Program, which seeks to assist countries of the Western Balkans to achieve a greater level of EU integration. As part of the CARDS Program, in 2005 Croatia expects to sign a multilateral

memorandum of understanding among the FIUs of Albania, Bosnia and Herzegovina, Serbia, Montenegro, and Macedonia.

Croatia has also intensified its cooperation with Austria, Germany, Italy, and Slovenia regarding border control and crime. As a member of the Council of Europe's Select Committee of Experts (MONEYVAL), Croatia has participated in mutual evaluations with the other members, both by being evaluated, and by sending experts to evaluate the progress of other member states. Regionally, Croatia has assisted and supported the creation of anti-money laundering legislation and the establishment of FIUs in Albania, Macedonia, Serbia, and Bosnia and Herzegovina. Croatia is also an active member of the Egmont Group.

The 1902 extradition treaty between the Kingdom of Serbia and the United States remains in force and applies to present-day extradition between Croatia and the United States. However, according to the Croatian Constitution, citizens of Croatia may not be extradited, except to The Hague for the War Crimes Tribunal.

Croatia is a party to the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime. In December 2003, the GOC signed, but has not yet ratified, the UN Convention against Corruption. Croatia also is a party to the 1988 UN Drug Convention; the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime; and the Convention on Transnational Organized Crime. In June 2003, Croatia signed the European Convention on the Transfer of Proceedings in Criminal Matters.

The Government of Croatia should work to improve interagency cooperation on money laundering matters. Croatia should provide training to improve the technical skills of police investigators, prosecutors, and judges to enable them to deal with complex financial crimes so that money laundering and terrorist financing cases can be successfully prosecuted. Croatia should improve its asset forfeiture regime to enable the freezing and seizing of assets in an efficient and timely manner and continue its important leadership role within the Egmont Group.

Cuba

The Department of State has designated Cuba as a State Sponsor of Terrorism. Cuba is not an international financial center. The Government of Cuba (GOC) controls all financial institutions, and neither of Cuba's dual peso currencies is freely convertible. No significant changes are noted for 2004.

The GOC is not known to have prosecuted any money laundering cases since the National Assembly passed legislation in 1999 that criminalized money laundering related to trafficking in drugs, arms, or persons. The Cuban Central Bank has issued regulations that encourage banks to identify their customers, investigate unusual transactions, and identify the source of funds for large transactions. Cuba also has cross-border currency reporting requirements. Cuba has solicited anti-money laundering training assistance from the United Kingdom, Canada, France, and Spain.

Cuba is a party to both the UN International Convention for the Suppression of the Financing of Terrorism and the 1988 UN Drug Convention. Cuba has signed, but not yet ratified, the UN Convention against Transnational Organized Crime.

Cuba criminalized terrorist financing in a 2001 law against terrorist acts.

The Government of Cuba should ensure its prosecutors and judges have received sufficient training to enable the successful prosecution of money laundering cases.

Cyprus

Cyprus has been divided since the Turkish military intervention of 1974, following a coup d'état directed from Greece. Since then, the southern part of the country has been under the control of the Government of the Republic of Cyprus. The northern part is controlled by a Turkish Cypriot administration that in 1983 proclaimed itself the "Turkish Republic of Northern Cyprus." The U.S. Government recognizes only the Government of the Republic of Cyprus.

Republic of Cyprus. The Republic of Cyprus is a major regional financial center with a robust financial services industry, both domestic and offshore, which contributes about 6.1 percent of the country's gross domestic product. Like other such centers, it remains vulnerable to international money laundering activities. Fraud and, to some extent, narcotics-trafficking are the major sources of illicit proceeds laundered in Cyprus. Casinos, Internet gaming sites, and bearer shares are not permitted in the Government of Cyprus (GOC)-controlled area of Cyprus.

The development of the offshore financial sector in Cyprus has been facilitated by the island's central location, a preferential tax regime, double tax treaties with 33 countries (including Eastern European and former Soviet Union nations), a labor force particularly well trained in legal and accounting skills, a sophisticated telecommunications infrastructure, and relatively liberal immigration and visa requirements. In July 2002, Cyprus introduced a major amendment to its tax laws resulting in a uniform tax rate of 10 percent for all enterprises in Cyprus, irrespective of the permanent residence of their owners. As of January 1, 2003, the so-called "ring fencing" of business enterprises and banks, owned by non-residents has been abolished. As a result, there is reportedly no longer any distinction between local companies and offshore international business companies (IBCs). Both the prohibition from doing business locally and the preferential tax treatment that distinguished IBCs from local companies have been abolished. The tax revision includes a grandfather clause, allowing existing IBCs to opt to maintain their former tax status of 4.25 percent for a transitional period until the end of 2005. The Cypriots state the distinction between domestic companies and IBCs will cease entirely on January 1, 2006, when the transition period expires, effectively ending the offshore IBC sector in Cyprus.

Similar provisions were introduced for offshore International Banking Units (IBUs), branches or subsidiary companies of established foreign banks, which had cumulative assets of \$9.8 million at the end of 2004. According to the GOC, as with IBCs the distinction between domestic banks and IBUs will cease on January 1, 2006 once the transition period expires. The only exception is that IBUs will still be prohibited from offering any banking services whatsoever in Cyprus Pounds to either residents or non-residents. As with IBCs, IBUs established before 2002 have the option of maintaining their preferential tax rate of 4.25 percent until the end of 2005. IBUs are also prohibited from providing other foreign currency services and accepting deposits from residents of Cyprus until January 1, 2006, unless they agree to be immediately subject to the standard 10 percent tax rate. In the meantime, IBUs are required to adhere to the same legal, administrative, and reporting requirements as domestic banks. The Central Bank requires prospective IBUs to face a detailed vetting procedure to ensure that only banks from jurisdictions with proper supervision are allowed to operate in Cyprus. IBUs must have a physical presence in Cyprus and cannot be shell banks. Once an IBU has registered in Cyprus, it is subject to a yearly on-site inspection by the Central Bank. The GOC-controlled area of Cyprus hosts 12 domestic banks, and 26 IBUs.

Since May 2004, when Cyprus joined the European Union (EU), banks licensed by competent authorities in EU countries may establish branches in Cyprus or provide banking services on a cross-border basis without obtaining a license from the Central Bank of Cyprus, under the EU's "single passport" principle. By the end of 2004, three EU banks that had already been operating as IBUs had elected to continue their presence in Cyprus under the "single passport" arrangement.

Over the past nine years, Cyprus has put in place a comprehensive anti-money laundering legal framework that comports with international standards. The GOC continues to revise these laws to meet evolving international standards. In 1996, the GOC passed the Prevention and Suppression of Money Laundering Activities Law. This law criminalizes both drug and non-drug-related money laundering, provides for the confiscation of proceeds from serious crimes, codifies actions that banks and non-bank financial institutions must take (including customer identification), and mandates the establishment of a Financial Intelligence Unit (FIU). The anti-money laundering law authorizes criminal (but not civil) seizure and forfeiture of assets. Subsequent amendments to the 1996 law broadened its scope by eliminating the separate list of predicate offenses (now defined as any criminal offense punishable by a prison term exceeding one year), addressing government corruption, and facilitating the exchange of financial information with other FIUs, as well as the sharing of assets with other governments. A law passed in 1999 criminalizes counterfeiting bank instruments, such as certificates of deposit and notes.

Amendments passed in 2003 and 2004 implement the EU's Second Money Laundering Directive. These amendments authorize the FIU to instruct banks to delay or prevent execution of customers' payment orders; extend due diligence and reporting requirement to auditors, tax advisors, accountants, and, in certain cases, attorneys, real estate agents, and dealers in precious stones and gems; permit administrative fines of up to \$6,390; and increase bank due diligence obligations concerning suspicious transactions and customer identification requirements, subject to supervisory exceptions for specified financial institutions in countries with equivalent requirements.

Also in 2003, the GOC enacted new legislation regulating capital and bullion movements and foreign currency transactions. The new law requires all persons entering or leaving Cyprus to declare currency (whether local or foreign) or gold bullion worth \$15,500 or more. This sum is subject to revision by the Central Bank. This law replaces exchange control restrictions under the Exchange Control Law, which expired on May 1, 2004.

The supervisory authorities for the financial sector are the Central Bank of Cyprus, the Securities Commission of the Stock Exchange, the Superintendent of Insurance, the Superintendent of Cooperative Banks, the Councils of the Bar Association and the Institute of Certified Public Accountants. The supervisory authorities may impose administrative sanctions if the legal entities or persons they supervise fail to meet their obligations as prescribed in Cyprus's anti-money laundering laws and regulations.

All banks must report to the Central Bank, on a monthly basis, individual cash deposits exceeding \$21,200 in local currency or \$10,000 in foreign currency. Bank employees currently are required to report all suspicious transactions to the bank's compliance officer, who determines whether to forward the report to the Unit for Combating Money Laundering (MOKAS), the Cypriot FIU, for investigation. Banks retain reports not forwarded to MOKAS, and these are audited by the Central Bank as part of its regular on-site examinations. Banks must file monthly reports with the Central Bank indicating the total number of suspicious activity reports (SARs) submitted to the compliance officer, and the number forwarded by the compliance officer to MOKAS. By law, bank officials may be held personally liable if their institutions launder money. Cypriot law protects reporting individuals with respect to their cooperation with law enforcement. Banks must retain transaction records for five years.

In 2001, the Central Bank issued rules requiring banks to ascertain the identities of the natural persons who are the "principal/ultimate" beneficial owners of new corporate or trust accounts. This rule was extended to existing accounts in 2002. In 2003, the Central Bank issued new rules that require all banks to obtain as quickly as possible identification data on the natural persons who are the "principal/ultimate" beneficial owners when certain events occur, including an unusual or significant transaction or change in account activity; a material change in the business name, officers, directors

and trustees, or business activities of commercial account holders; or a material change in the customer relationship, such as establishment of new accounts or services or a change in the authorized signatories. Banks must also adhere to the Basel Committee on Banking Supervision's October 2001 paper titled "Customer Due Diligence for Banks."

In January 2003 the Central Bank issued a guidance note requiring banks to pay special attention to business relationships and transactions involving persons from jurisdictions identified by the Financial Action Task Force (FATF) as non-cooperative. This list is updated regularly in line with the changes effected to the non-cooperative list by the FATF.

In November 2004, the Central Bank issued a revised money laundering guidance note that places several significant new obligations on banks, including requirements to develop a customer acceptance policy; renew customers' identification data on a regular basis; construct customers' business profiles; install computerized risk management systems in order to verify whether a customer constitutes a "politically exposed person"; provide full details on any customer sending an electronic transfer in excess of \$1,000; and implement (by June 5, 2005) adequate management information systems for on-line monitoring of customers' accounts and transactions. Cypriot banks reportedly have responded by adopting dedicated electronic risk management systems, which they typically use to target transactions to and from high-risk countries. Cyprus's Exchange Control Law expired on May 1, 2004, ending Central Bank review of foreign investment applications for non-EU residents. Individuals wishing to invest on the island now apply through the Ministry of Finance. The Ministry also supervises collective investment schemes.

The Central Bank also requires compliance officers to file an annual report outlining measures taken to prevent money laundering and to comply with its guidance notes and relevant laws. In addition to the Central Bank's routine compliance reviews, MOKAS is now authorized to conduct unannounced inspections of bank compliance records. MOKAS also maintains an active outreach and education program targeted at compliance officers, lawyers and accountants. In July 2002, the U.S. Internal Revenue Service (IRS) officially approved Cyprus's "know-your-customer" rules, which form the basic part of Cyprus' anti-money laundering system. As a result of the above approval, banks in Cyprus that may be acquiring United States securities on behalf of their customers are eligible to enter into a "withholding agreement" with the IRS and become qualified intermediaries.

MOKAS, the Cypriot FIU, was established in 1997. A representative of the Attorney General's Office heads the unit and its 20-member staff includes 14 full-time personnel, three part-time police officers, and three part-time Customs officers. However, MOKAS staffing is not sufficient to allow it to meet all its responsibilities. Plans to hire eight additional full-time employees have consistently been put on hold due to GOC-wide hiring freezes. MOKAS cooperates closely with FinCEN and other U.S. Government agencies in money laundering investigations.

All banks and non-bank financial institutions-insurance companies, the stock exchange, cooperative banks, lawyers, accountants, and other financial intermediaries-must report suspicious transactions to MOKAS. Sustained efforts by the Central Bank and MOKAS to strengthen reporting have resulted in an increase in the number of SARs being filed from 25 in 2000 to 123 in 2004. During 2004 MOKAS received 156 information requests from foreign FIUs, other foreign authorities, and INTERPOL. Two of the information requests were related to terrorism. MOKAS evaluates evidence generated by its member organizations and other sources to determine if an investigation is necessary. It has the power to suspend financial transactions for up to 24 hours. MOKAS also has the power to apply for freezing or restraint orders affecting any kind of property, at a very preliminary stage of an investigation. MOKAS conducts anti-money laundering training for Cypriot police officers, bankers, accountants, and other financial professionals. Training for bankers is conducted in conjunction with the Central Bank of Cyprus. Since late 2003, the MOKAS computer network has been connected with that of the central government, thus giving MOKAS direct access to other GOC agencies and ministries.

During 2004, MOKAS opened 299 cases and closed 123. During the same period, it issued 16 Information Disclosure Orders and seven freezing orders, resulting in the freezing of \$1,964,450 in bank accounts and four pieces of real estate. Additionally, during 2004, MOKAS issued four confiscation orders for the total amount of \$2,461,000. Government actions to seize and forfeit assets have not been politically or publicly controversial, nor have there been retaliatory actions related to money laundering investigations, cooperation with the United States, or seizure of assets. There have been at least ten convictions recorded under the 1996 Anti-Money Laundering law, and a number of other cases are pending.

Cyprus has implemented the FATF's Special Recommendations on Terrorist Financing. On November 30, 2001, Cyprus became a party to the UN International Convention for the Suppression of the Financing of Terrorism. The implementing legislation amended the anti-money laundering law to criminalize the financing of terrorism. In November 2004, MOKAS designated two employees to be responsible for terrorist finance issues. MOKAS routinely asks banks to check their records for any transactions by any person or organization designated by foreign FIUs as a terrorist or a terrorist organization. If a person or entity is so designated by the UNSCR 1267 Sanctions Committee or the EU Clearinghouse, the Central Bank automatically issues a "search and freeze" order to all banks, both domestic and IBUs. As of mid-December 2004, no bank had reported holding a matching account. The lawyers' and accountants' associations cooperate closely with the Central Bank. The GOC cooperates with the United States to investigate terrorist financing.

There is no evidence that alternative remittance systems such as hawala or black market exchanges are operating in Cyprus. The GOC believes that its existing legal structure is adequate to address money laundering through such alternative systems. The GOC licenses charitable organizations, which must file with the GOC copies of their organizing documents and annual statements of account. Reportedly, the majority of all charities registered in Cyprus are domestic organizations.

Cyprus is a party to the 1988 UN Drug Convention and the UN Convention against Transnational Organized Crime. Cyprus is a member of the Council of Europe's MONEYVAL, and the Offshore Group of Banking Supervisors. MOKAS is a member of the Egmont Group and has signed memoranda of understanding (MOUs) with the FIUs of Belgium, France, the Czech Republic, Slovenia, Malta, Ireland, Australia, Ukraine, Poland, Canada, Russia, and Israel. Although Cypriot law specifically allows MOKAS to share information with other FIUs without benefit of an MOU, Cyprus is negotiating MOUs with the United States, Venezuela, Bulgaria, Italy, and Romania. A Mutual Legal Assistance Treaty between Cyprus and the United States entered into force September 18, 2002. In 1997, the GOC entered into a bilateral agreement with Belgium for the exchange of information on money laundering. Cyprus is scheduled to undergo a MONEYVAL mutual evaluation in April 2005.

The Government of the Republic of Cyprus has put in place a comprehensive anti-money laundering regime. It should continue to take steps to tighten implementation of its laws. In particular, it should ensure that regulation of charitable and nonprofit entities is adequate. Cyprus should enact provisions that allow for civil forfeiture of assets.

North Cyprus ("Turkish Republic of Northern Cyprus"). It is more difficult to evaluate anti-money laundering efforts in the self-proclaimed "Turkish Republic of Northern Cyprus" ("TRNC"), but there continues to be evidence of trade in narcotics with Turkey and Britain, as well as of money laundering activities. "TRNC" officials believe the 22 essentially unregulated, and primarily Turkish-mainland owned, casinos are the primary vehicles through which money laundering occurs. Casino licenses are fairly easy to obtain, and no background checks are done on applicants. Funds generated by these casinos are reportedly transported directly to Turkey without entering the "TRNC" banking system, and there are few safeguards to prevent the large-scale transfer of cash from the "TRNC" to Turkey. Another area of concern is the 500 "finance institutions" operating in the "TRNC" that extend credit and give loans. Although they must register with the "Office of the Registrar of Companies"

they are unregulated. Some are owned by banks and others by auto dealers. The fact the “TRNC” is recognized only by Turkey limits the ability of “TRNC” officials to receive training or funding from international organizations with experience in combating money laundering.

The offshore banking sector also remains a concern. In August 2004, the U.S. Department of the Treasury’s FinCEN issued a notice of proposed rulemaking to impose a special measure against First Merchant Bank OSH Ltd in the “TRNC” as a financial institution of primary money laundering concern. Pursuant to Section 311 of the USA PATRIOT Act, FinCEN found First Merchant Bank to be of primary money laundering concern based on a number of factors, including: (1) It is licensed as an offshore bank in the “TRNC”, a jurisdiction with inadequate anti-money laundering controls, particularly those applicable to its offshore sector; (2) it is involved in the marketing and sale of fraudulent financial products and services; (3) it has been used as a conduit for the laundering of fraudulently obtained funds; and (4) the individuals who own, control, and operate First Merchant Bank have links with organized crime and apparently have used First Merchant Bank to launder criminal proceeds. As a result of the finding and in consultation with federal regulators and the Departments of Justice and State, FinCEN proposed imposition of the special measure that would prohibit the opening or maintaining of correspondent or payable-through accounts by any domestic financial institution or domestic financial agency for, or on behalf of First Merchant Bank OSH Ltd.

In 1999, a money laundering law for northern Cyprus went into effect with the stated aim of reducing the number of cash transactions in the “TRNC” as well as improving the tracking of any transactions above \$10,000. Banks are required to report to the “Central Bank” any electronic transfers of funds in excess of \$100,000. Such reports must include information identifying the person transferring the money, the source of the money, and its destination. Banks, non-bank financial institutions, and foreign exchange dealers must report all currency transactions over \$20,000, and suspicious transactions in any amount. Banks must follow a know-your-customer policy and require customer identification. Banks must also submit suspicious transactions to a central multi-agency committee that is supposed to function as a quasi-FIU and have investigative powers. The five-member committee is composed of representatives of the police, customs, the “Central Bank,” and the “Ministry of the Economy and Tourism.” However, the 1999 anti-money laundering law has never been fully implemented or enforced. Furthermore, very few suspicious transaction reports have been filed since the inception of the law and the “Anti-Money Laundering Committee” has been largely inactive. There are currently 26 domestic banks in the “TRNC”. Internet banking is available.

Although the 1999 “TRNC” law prohibits individuals’ entering or leaving the “TRNC” from transporting more than \$10,000 in currency, “Central Bank” officials note that this law is difficult to enforce, given the large volume of travelers between Turkey and the “TRNC”. In 2003, the “TRNC” relaxed restrictions that limited travel across the UN-patrolled buffer zone. As a result, an informal currency exchange market is developing, principally to convert Cypriot pounds into U.S. dollars.

The “Ministry of Economy and Tourism” has drafted a new anti-money laundering law that it says will, among other things, better regulate casinos, currency exchange houses, and both onshore and offshore banks. A “TRNC” official stated that the “TRNC” wants to ensure the draft law meets international standards.

The offshore sector consists of 21 banks and approximately 50 IBCs. The offshore banks may not conduct business with “TRNC” residents and may not deal in cash. The offshore entities are audited by the “Central Bank” and are required to submit a yearly report on their activities. However, the “Central Bank” has no regulatory authority over the offshore banks and can neither grant nor revoke licenses. Instead, the “Ministry of the Economy” performs this function, which leaves the process open to politicization and possible corruption. Although a proposed new law would have restricted the granting of new bank licenses to only those banks already having licensees in an OECD country, the law never passed.

In spite of a growing awareness in the “TRNC” of the danger represented by money laundering, it is clear that “TRNC” regulations fail to provide effective protection against the risk of money laundering. The 1999 law does provide better banking regulations than were previously in force, but it is still not adequate. The major weakness continues to be the “TRNC’s” many casinos, where a lack of resources and expertise leave that area, for all intents and purposes, unregulated, and therefore especially vulnerable to money laundering abuse. The “TRNC” should move quickly to enact a new anti-money laundering law and to tighten regulation of its casinos, money exchange houses, and offshore sector.

Czech Republic

Both geographic and economic factors render the Czech Republic vulnerable to money laundering. Narcotics-trafficking, smuggling, auto theft, arms trafficking, tax fraud, embezzlement, racketeering, and trafficking in persons are the major sources of funds that are laundered in the Czech Republic. Domestic and foreign organized crime groups target Czech financial institutions for laundering activity. Banks, currency exchanges, casinos and other gaming establishments, investment companies, and real estate agencies have all been used to launder criminal proceeds.

Money laundering was technically criminalized in September 1995 through additions to the Czech Criminal Code. Although the Criminal Code does not explicitly mention money laundering, its provisions apply to financial transactions involving the proceeds of all serious crimes. A July 2002, amendment to the Criminal Code introduces a new, independent offense called “Legalization of Proceeds from Crime.” This offense has a wider scope than previous provisions in that it enables prosecution for laundering one’s own illegal proceeds. Also in July 2002, the legalization of proceeds from all serious criminal activity became punishable by five to eight years imprisonment.

The Czech anti-money laundering legislation (Act No. 61/1996, Measures Against Legalization of Proceeds from Criminal Activity) became effective in July 1996. A 2000 amendment to the money laundering law requires a wide range of financial institutions to report all suspicious transactions to the Czech Republic’s Financial Intelligence Unit (FIU), known as the Financial Analytical Unit (FAU) of the Ministry of Finance. In September 2004, the latest amendments to the money laundering law came into force. The amendments introduce several major changes to the Czech Republic’s money laundering laws and harmonize the nation’s legislation with the requirements of the European Union’s (EU) Second Money Laundering Directive. As a result, the list of covered institutions now includes attorneys, casinos, realtors, notaries, accountants, tax auditors, and entrepreneurs engaging in transactions exceeding 15,000 euros. In addition to reporting all suspicious transactions possibly linked to money laundering, covered institutions are now required to report all transactions suspected of being tied to terrorist financing.

For years, the Czech Republic had been criticized for allowing anonymous passbook accounts to exist within the banking system. Legislation adopted in 2000 prohibits new anonymous passbook accounts. In 2002, the Act on Banks was amended to abolish all existing bearer passbooks by December 31, 2002, and by June 2003 approximately 400 million euros had been converted. While account holders can still withdraw money from the accounts for the next decade, the accounts do not earn interest and cannot accept deposits. In 2003 the Czech National Bank introduced new “know your customer” measures, based on the recommendations of the Basel Committee, and created an on-site inspector team. New due diligence provisions became effective in January 2003. The Czech Government is considering placing a limit of 500,000 Czech crowns, or approximately \$19,250, on the amount of cash that can change hands in cash transactions.

The FAU is an administrative FIU without law enforcement authority. One of the FAU’s primary purposes is the identification of tax evasion. The 2004 amendments to the Anti-Money Laundering Act also extend the anti-money laundering/counterterrorist financing responsibilities of the FAU. To

fulfill these additional responsibilities, the new legislation provides for an increase in the number of FAU staff. The FAU will also be authorized to share all information with the Czech Intelligence Service (BIS) and Czech National Security Bureau (NBU). It is hoped that this type of information sharing will improve the timeliness and nature of exchanges between the different agencies within the Czech government.

The number of suspicious transaction reports transmitted to the FAU has increased significantly, while the number of reports evaluated and forwarded to law enforcement remains unchanged. This is interpreted as evidence of the active participation of mandated entities in the anti-money laundering regime. After clarifications to the reporting requirements in 1996, reporting of unusual transactions rose significantly. In 2002, 1,260 suspicious transactions were reported, 1,970 in 2003, and 3267 in 2004; 85 percent of these reports came from the formal banking sector. The number of reports forwarded to the police remained steady at 115 in 2002 and 114 in 2003. In 2004, the number dropped slightly to 103. Every case that was passed to law enforcement was investigated.

In July 2004, a new specialized police unit called the Financial Police (known also as Illegal Proceeds and Tax Crime Unit) was established. The Department of Criminal Proceeds and Money Laundering, which used to be part of the unit fighting organized crime, became a part of the newly established Financial Police. It is still the main law enforcement counterpart to FAU, a partnership which has led to the first formal charges on money laundering. In 2004, the Department of Criminal Proceeds and Money Laundering investigated 139 cases and secured assets valued at roughly \$90,000. This figure is an increase over 2003 when police investigated 113 cases and secured approximately \$29,000. In 2004 the Department participated in 25 cases investigated by the Czech National Drug Headquarters and secured assets valued at \$700,000, as compared to 2003, when 23 cases related to drug crimes were investigated and the department succeeded in securing assets valued at \$7,250,000.

Prior to 2004, the Czech Republic had not yet had a successful prosecution in a money laundering case. However, during the first half of 2004, Ministry of Justice statistics show that prosecutors were able to obtain the first two money laundering convictions. Four people were prosecuted; three were actually accused. One case was suspended and the only penalties imposed were a suspended sentence and a fine. In 2003, there were 36 money laundering cases; five were suspended. There were no resulting convictions in 2003. One ongoing issue is that law enforcement must prove that the assets in question were derived from criminal activity. The accused is not obligated to prove that the property or assets were acquired legitimately.

The Czechs have specific laws criminalizing terrorist financing and have legislation permitting rapid implementation of UN and EU financial sanctions, including action against accounts held by suspected terrorist entities or individuals. The Czech Government approved the National Action Plan of the Fight Against Terrorism in April 2002. This document covers topics ranging from police work and cooperation to protection of security interests, enhancement of security standards and customs issues. The latest amendment of the Criminal Code, that came into force in November 2004, adds new definitions for terrorist attacks and for terrorist financing. A penalty of up to 15 years imprisonment can be imposed on those who support terrorists financially, materially or with other means.

A new government body called the Clearinghouse was instituted in October 2002. It was established under the FAU, and functions to streamline input from institutions in order to enhance cooperation and response to a terrorist threat. The FAU is currently distributing lists of designated terrorists to relevant financial and governmental bodies. Czech authorities have been cooperative in the global effort to identify suspect terrorist accounts. Since September 11, 2001, the FAU has checked the accounts of approximately 1,000 people. The 2000 amendment to the anti-money laundering law requires financial institutions to freeze assets that belong to subjects named on lists issued by the UN 1267 Sanctions Committee. To date, no suspect accounts have been identified in Czech financial institutions and no terrorist assets have been confiscated.

A May 2001 revision of the Criminal Code facilitates the seizure and forfeiture of bank accounts. A financial institution that reports a suspicious transaction has the authority to freeze that suspect account for up to 24 hours. However, for investigative purposes, this time limit can be extended to 72 hours in order to give the FAU sufficient time to investigate whether or not there is evidence of criminal activity. Currently, the FAU is authorized to freeze accounts for 72 hours. However, the FAU's efforts can be hampered because it often waits for the annual tax submission of suspected individuals before deciding to forward cases to law enforcement for investigation. This often results in the disappearance of funds and property before the police can seize them. If sufficient evidence of criminal activity exists, the case is forwarded to the Financial Police, who have another three days to gather the necessary evidence. If the Financial Police are able to gather enough evidence to start prosecution procedures, then the account can stay frozen for the duration of the investigation and prosecution. If, within the 72 hour time limit, the Financial Police fail to gather sufficient evidence to convince a judge to begin prosecution, the frozen funds must be released. These time limits do not apply to accounts owned by individuals or organizations on the UN's list of designated terrorists.

In January 2002, further changes to the Criminal Code were effected which allow a judge, prosecutor, or the police (with prosecutor's assent) to freeze an account if evidence indicates that the contents were used, or will be used, to commit a crime, or if the contents are proceeds of criminal activity. In urgent cases the police can freeze the account without previous consent of the prosecutor, but within 48 hours have to inform the prosecutor, who then confirms the freeze or releases the funds. The Law on the Administration of Asset Forfeiture in Criminal Procedure, passed in August 2003, and effective on January 1, 2004, implements provisions such as handling and care responsibilities for the seizure of property.

The United States and the Czech Republic have a Mutual Legal Assistance Treaty, which entered into force on May 7, 2000. There is also an extradition treaty in force between the United States and the Czech Republic

The 2004 amendments to the Anti-Money Laundering Act authorize the FAU to cooperate with similar units around the world, regardless of whether these units are administrative or law enforcement, or whether they are members of the Egmont Group. The Czech Republic has signed memoranda of understanding (MOUs) on information exchange with Belgium, France, Italy, Croatia, Cyprus, Estonia, Latvia, Lithuania, Poland, Slovenia, Slovakia, and Bulgaria. Formalization of an agreement between the Czech Republic and Europol, the European police office, took place in 2002. The agreement allows an exchange of information about specific crimes and investigating methods, the prevention of crime, and the training of police. Among the most important crimes cited in the cooperation agreement are terrorism, drug dealing, and money laundering.

The FAU is a member of the Egmont Group. The Czech Republic actively participates in the Council of Europe's Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL), and in 2001, underwent a mutual evaluation by the Committee. The Czech Republic continues to implement changes to its anti-money laundering regime based on the results of the mutual evaluation. In May 2003, the Czech Republic also underwent a financial sector assessment by the World Bank/IMF.

The Czech Republic is a party to the 1988 UN Drug Convention. The Czech Republic has signed, but not yet ratified, the UN Convention against Transnational Organized Crime and the UN International Convention for the Suppression of the Financing of Terrorism. The Czech Republic also is a party to the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime, as well as the World Customs Organization's Convention on Mutual Administrative Assistance for the Prevention, Investigation, and Repression of Customs Offenses. The main obstacle to ratification is the absence of legislation on criminal liability of legal persons (companies). The appropriate legislation has been proposed and will become a part of the re-codification of the criminal

code that officials hope will take effect in 2006. In the interim, the government is trying to satisfy Convention requirements by utilizing administrative or civil procedure.

The Government of the Czech Republic should continue to enhance its anti-money laundering regime and should become a party to the UN International Convention for the Suppression of the Financing of Terrorism. In addition, the Czech Republic should continue to work toward supporting and streamlining its prosecution regime, including changing the burden of proof procedures and making legal persons subject to criminal prosecution for money laundering, so that the Czech Republic can begin to successfully prosecute anti-money laundering cases. Furthermore, the Czech Republic should enhance its asset forfeiture regime by simplifying the forfeiture of jointly owned assets and allowing for the confiscation of substitute assets.

Denmark

Denmark is a regional financial center with 108 commercial banks and 73 local and savings banks. The banking system is under the control of the Financial Supervisory Authority, and the Danish legal and regulatory systems are transparent and consistent with European Union (EU) directives and regulations. Corruption is not a major problem in Denmark. According to the 2004 Corruption Perceptions Index by Transparency International, Denmark is the third least corrupt country in the world. However, Denmark is a transit country for the smuggling of human beings and narcotics to Sweden and Norway, which creates the opportunity for corruption.

Money laundering is a criminal offense in Denmark, regardless of the predicate offense. The 1993 Act on Measures to Prevent Money Laundering covers customer identification and mandatory suspicious transaction reporting. The Gambling Casino Act of 1993 specifically addresses casino money laundering issues and customer registration information. Legislation that went into effect in June 2002 requires that the importation or exportation of any money exceeding 15,000 euros be reported to Customs upon entry into Denmark. Following 2002 amendments to the law, suspicious transaction reporting (STR) requirements apply to credit and financial institutions, life insurance companies, lawyers, accountants, tax advisors, real estate agents, money transmitters, money exchange offices, transporters of currency, insurance brokers, and retailers/auctioneers who deal in cash transactions above 15,000 euros.

Banks and other financial institutions are required to know, record, and report the identity of their customers, and to maintain those records for five years beyond the termination of the relationship. For non-account holders, the financial institutions are only required to collect and store for five years the identification information for transactions over 15,000 euros. There are no secrecy laws in Denmark that prevent disclosure of financial information to competent authorities, and there are laws that protect bankers and others who cooperate with law enforcement authorities.

Denmark's Financial Intelligence Unit (FIU), the Money Laundering Secretariat within the Public Prosecutor's office, provides a central point for collection of all intelligence related to money laundering. The FIU is also responsible for receiving STRs. STRs from the credit and financial sectors have ranged from 249 to 357 over the last five years. Denmark's Office of the Public Prosecutor for Serious Economic Crime consists of both public prosecutors and police officers specially trained in fighting economic crime. Denmark has cooperated fully with U.S. authorities with regard to money laundering investigations.

The blocking of assets either belonging to, or at the disposal of, a suspect is covered under the Danish Administration of Justice Act. Asset blocking may take place concurrent with an investigation or when charges have been filed. The Danish Penal Code provides for seizures or forfeitures of proceeds from a criminal act upon conviction.

Denmark passed comprehensive counterterrorism legislation in 2002, which was incorporated into Consolidated Act 129 in February 2004, specifically addressing terrorist financing and implementing the provisions of UNSCR 1373. Act 129 extends the Act on Measures to Prevent Money Laundering so that if a transaction is suspected of ties to terrorism financing it must have the prior consent of the Money Laundering Secretariat before it can be carried out and is subject to STR reporting requirements. Denmark has circulated to its financial institutions the UNSCR 1267 Sanction Committee's consolidated list. To date, no such assets have been identified.

The amendments to the Criminal Code in Denmark do not apply to the Faroe Islands, but the Ministry of Justice in Denmark and representatives from the Faroe Home Rule are deliberating on how to fulfill and comply with the UNSCR 1373. The existing special Criminal Code for Greenland contains provisions concerning acts committed with a terrorist purpose. The Danish Ministry of Justice will examine the revised criminal code when it becomes available, to ensure that all requirements in UNSCR 1373 are fully satisfied.

In an effort to prevent terrorist financing or transnational crime, Denmark signed an agreement in 1999 with Australia to combat money laundering and break up illegal networks. Denmark and the United States signed a Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income in March 2000. The treaty provides for the exchange of information for investigative purposes. In December 2002, Denmark helped negotiate, on behalf of the EU, a U.S.-Europol agreement on the exchange of personal data and related information that aids in tracing financial transactions.

Denmark is a party to the 1988 UN Drug Convention, the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime. Denmark has signed, but not yet ratified, the UN Convention against Corruption. Denmark is part of the Nordic Police and Customs Co-operation, the Task Force on Organized Crime in the Baltic Sea Region, Interpol, Europol, and the Schengen Agreement. Denmark is also a member of the Financial Action Task Force (FATF), and its FIU belongs to the Egmont Group. Denmark participates in European Union anti-money laundering efforts and has endorsed the Basel Committee's "Core Principles for Effective Banking Supervision."

The Government of Denmark should continue its efforts to extend its Criminal Code amendments to the Faroe Islands and Greenland, if necessary. Denmark should continue the enforcement of its comprehensive anti-money laundering/counterterrorist financing program and its active participation in international organizations to combat money laundering and the support and financing of terrorists and their organizations.

Djibouti

Djibouti is one of the more stable countries in the Horn of Africa. It is a financial hub in the sub-region, thanks to its U.S. dollar-pegged currency and its unrestricted foreign exchange. Officials from the Central Bank have not reported any recent instances of money laundering. Informal and black markets for goods remain important. Smuggled goods consist primarily of highly taxed cigarettes and alcohol. The Djibouti Free Zone (DFZ), managed by Dubai's Jebel Ali Free Zone, was inaugurated in June 2004. Once fully operational, the DFZ will approve and deliver licenses for up to 85 companies. Djibouti is not considered an offshore financial center but offshore institutions are permitted to settle at the DFZ. Two existing commercial banks handle the bulk of financial transactions. The remainder of the demand is met by a growing number of hawalas. The Central Bank makes efforts to closely monitor the activities of both the commercial banks and hawalas. Due to Djibouti's location on the Horn of Africa and its cultural and historical trading ties, Djibouti based traders and brokers are active in the region. Trade goods often provide counter valuation or a means of balancing the books in hawala transactions.

Djibouti is a party to the 1988 UN Drug Convention, signed the United Nations International Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances, which entered into force on May 23rd, 2001. Djibouti has signed, but not yet ratified, the UN International Convention for the Suppression of the Financing of Terrorism. Legislation criminalizing the financing of terrorism, consistent with UNSCR 1373, is included in the Anti-Money Laundering Law passed in December 2002 as Law No. 196/AN/02/4emeL. Drafted by the three-year-old National Committee on Terrorism, this document contains provisions for prevention of, and punishment for, money laundering.

The Anti-Money Laundering Law applies to financial institutions of all forms as well as professionals involved in financial matters. Regulated activities include money deposits, insurance, investment, real estate, casinos and entertainment. The legislation also addresses international cooperation and allows for the freezing or seizing of assets in suspected terrorist finance cases. The government regularly circulates the names of individuals and entities included on the UNSCR 1267 Sanctions Committee's consolidated list. The law also requires financial institutions to verify customer information, including current residence. This verification process promotes rigorous transparency and strict control of transactions. Furthermore, it imposes criteria for: customer identification; communication of information; documentation related to international cooperation; surveillance procedures for suspect accounts; and legal protection of professional secrecy for individuals reporting suspect transactions.

Professionals convicted of facilitating money laundering or terrorist financing can face five to ten years in jail and a fine of DF 25 to 50 million (\$141,283 to \$282,566). A financial professional who fails to report suspect transactions is liable for fines ranging from DF 10 to 25 million (\$56,513 to 141,283). The Department of Treasury receives the proceeds of any assets seized or forfeited in terrorist financing cases.

Djibouti does not have an agreement with the United States government to exchange information on money laundering, but Central Bank officials have repeatedly indicated they would fully cooperate if requested. Djibouti has a formal, bilateral agreement with Ethiopia for the exchange of information and extradition in criminal cases. Furthermore, the anti-money laundering legislation stipulates that Djibouti will cooperate with other countries by exchanging information, assisting in investigations, providing mutual technical assistance and facilitating the extradition process in money laundering cases. In addition, the Central Bank plans to set up a money laundering investigation bureau. The bureau will also provide expertise to the banking community concerning counterfeit currency, including U.S. bills.

The Government of Djibouti should accede to the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime. While Djibouti took a positive step by adopting anti-money laundering legislation, enforcement of the law remains a major challenge. Notwithstanding the claims of Central Bank officials, it is unlikely that there have not been any recent instances of money laundering. Though Djibouti makes an effort to control all formal transaction points, a large number of hawaladars escape Central Bank regulation. Corruption is also a concern. Corrupt customs officials can easily be tempted to allow large amounts of money to pass through the borders without any declaration. There is also a history of politically powerful and criminally "untouchable" individuals protecting suspicious financial institutions. Finally, Djibouti must also ensure that an effective anti-money laundering regime is extended to the Djibouti Free Zone as it becomes established.

Dominica

The Commonwealth of Dominica initially sought to attract offshore dollars by offering a wide range of confidential financial services, low fees, and minimal government oversight. A rapid expansion of Dominica's offshore sector without proper supervision made it attractive to international criminals and

vulnerable to official corruption. In response to international criticism, Dominica has enacted legislation to address many of the deficiencies in its anti-money laundering regime. Dominica's financial sector includes one offshore and four domestic banks, 17 credit unions, 8,601 international business companies (IBCs) (a significant increase from 1,435 in 2002), 23 insurance agencies, and three operational Internet gaming companies (although reports have indicated over 30 such gaming sites exist). There are no free trade zones in Dominica. Under Dominica's economic citizenship program individuals can purchase Dominican passports as well as official name changes for approximately \$75,000 for an individual and \$100,000 for a family of up to four persons. Although it was not very active in 2004, Dominica's economic citizenship program does not appear to be adequately regulated. Individuals from the Middle East, the former Soviet Union, the Peoples' Republic of China and other foreign countries have become Dominican citizens and entered the United States via a third country without visas. Subjects of United States criminal investigations have been identified as exploiting Dominica's economic citizenship program in the past.

In June 2000, the Financial Action Task Force (FATF) identified Dominica as non-cooperative in international efforts to combat money laundering (NCCT). The U.S. Department of Treasury also issued an advisory to U.S. financial institutions in July 2000 warning them to "give enhanced scrutiny" to financial transactions involving Dominica. In October 2002, Dominica was removed from the NCCT list. The U.S. Treasury advisory was removed in April 2003. The FATF noted in June 2003 that implementation of Dominica's anti-money laundering reforms had continued to improve, as did the cooperation of its Financial Intelligence Unit (FIU) with foreign authorities and its response to mutual legal assistance requests.

The Money Laundering (Prevention) Act (MLPA) No. 20 of December 2000 (effective January 2001) and its July 2001 amendments criminalize the laundering of proceeds from any indictable offense. The MLPA overrides secrecy provisions in other legislation and requires financial institutions to keep records of transactions for at least seven years. The MLPA also requires persons to report cross-border movements of currency that exceed 10,000 Eastern Caribbean dollars (\$3,800) to the FIU.

Following the June 2000 action by FATF, the Minister of Finance announced a comprehensive review of all offshore banks and the establishment of an Offshore Financial Services Council (OFSC). The OFSC mandate is to advise the Government of the Commonwealth of Dominica (GCOD) on policy issues relating to the offshore sector and to make recommendations with respect to applications by service providers for licenses. Under common banking legislation enacted by its eight member jurisdictions, the Eastern Caribbean Central Bank (ECCB) acts as the primary supervisor and regulator of onshore banks in Dominica. A December 2000 agreement between the OFSC and the ECCB places Dominica's offshore banks under the dual supervision of the ECCB and the GCOD International Business Unit (IBU). In compliance with the agreement, the ECCB assesses applications for offshore banking licenses, conducts due diligence checks on applicants, and provides a recommendation to the Minister of Finance. The Minister of Finance is required to seek advice from the ECCB before exercising his powers in respect of licensing and enforcement.

The ECCB also conducts on-site inspections for anti-money laundering compliance of onshore and offshore banks in Dominica. Inspections of the offshore banks are conducted by the ECCB in collaboration with the IBU. The ECCB is unable to share examination information directly with foreign regulators or law enforcement personnel; however, legislation to permit such sharing is under draft. The Offshore Banking (Amendment) Act No. 16 of 2000 (effective January 25, 2001) prohibits the opening of anonymous accounts, prohibits IBCs from direct or indirect ownership of an offshore bank and requires disclosure of beneficial owners and prior authorization to changes in beneficial ownership of banks. All offshore banks are required to maintain a physical presence in Dominica and to have available for review on-site books and records of transactions.

The International Business Companies (Amendment) Act No. 13 of 2000 (effective January 25, 2001) requires that bearer shares be kept with an “approved fiduciary,” who is required to maintain a register with the beneficial owner name and address. Additional amendments to the Act in September 2001 require previously issued bearer shares to be registered. The Act empowers the IBU to “perform regulatory, investigatory, and enforcement functions” over IBCs. The IBU staff normally consists of an Acting Manager, two professional staff (supervisors/examiners), and one administrative assistant. The IBU supervises and regulates offshore entities and domestic insurance companies. The IBU also supervises, regulates, and inspects Dominica’s registered agents, and visits IBCs to ensure that the companies are operating in compliance with requirements imposed by law.

The MLPA establishes the Money Laundering Supervisory Authority (MLSA) and authorizes it to inspect and supervise non-bank financial institutions and regulated businesses for compliance with the MLPA. The MLSA is also responsible for developing anti-money laundering policies, issuing guidance notes, and conducting training. The MLSA consists of five members: a former bank manager, the IBU manager, the Deputy Commissioner of Police, a senior state attorney, and the Deputy Comptroller of Customs. The MLPA requires a wide range of financial institutions and businesses, to include any offshore institutions, to report suspicious transactions simultaneously to the MLSA and the FIU.

The May 2001 Money Laundering (Prevention) Regulations apply to all onshore and offshore financial institutions (including banks, trusts, insurance companies, money transmitters, regulated businesses, and securities companies). The regulations specify customer identification, record keeping, and suspicious transaction reporting procedures, and require compliance officers and training programs for financial institutions. The regulations require that the true identity of the beneficial interests in accounts be established, and the verification of the nature of the business and the source of the funds of the account holders and beneficiaries. Anti-Money Laundering Guidance Notes, also issued in May 2001, provide further instructions for complying with the MLPA and provide examples of suspicious transactions to be reported to the MLSA.

The FIU was also established under the MLPA, and became operational in August 2001. The FIU’s staff consists of two certified financial investigators, a Director, Deputy Director, and an administrative assistant. The FIU analyzes suspicious transaction reports (STRs) and cross-border currency transactions, forwards appropriate information to the Director of Public Prosecutions, and carries on liaison with other jurisdictions on financial crimes cases. In 2004, the FIU received 109 STRs. There have been no known convictions on money laundering charges in Dominica. Since 2003, the GCOD has collaborated closely with U.S. and foreign law enforcement agencies in a widespread money laundering case involving European narcotics-trafficking proceeds in one of the now closed offshore banks in Dominica. As a result of this case, money laundering prosecutions are being brought in the United States, the United Kingdom, and Germany.

On June 5, 2003, Dominica gazetted the Suppression of Financing of Terrorism Act (No. 3 of 2003), which provides authority to identify, freeze, and seize terrorist assets, and to revoke the registration of charities providing resources to terrorists. Dominica circulates lists of terrorists and terrorist entities to all financial institutions in Dominica. To date, no accounts associated with terrorists or terrorist entities have been found in Dominica. The GCOD has not taken any specific initiatives focused on alternative remittance systems. Dominica is the only Caribbean country that has not signed the Inter-American Convention Against Terrorism.

In May 2000, a Mutual Legal Assistance Treaty between Dominica and the United States entered into force. The GCOD also has a Tax Information Exchange Agreement with the United States An Amendment to the Mutual Assistance in Criminal Matters Act, which will provide for judicial cooperation between Dominica and non-Commonwealth countries that have no mutual legal assistance treaties, passed Parliament in September 2002, but has not come into effect. The MLPA authorizes the

FIU to exchange information with foreign counterparts. The 2002 Exchange of Information Act provides for information exchange between regulators. The MLPA provides for freezing of assets for seven days by the FIU, after which time a suspect must be charged with money laundering or the assets released; assets may be forfeited after a conviction.

Dominica is a member of the Organization of American States Inter-American Drug Abuse Control Commission Experts Group to Control Money Laundering (OAS/CICAD). Dominica is also a member of the Caribbean Financial Action Task Force (CFATF), and underwent its second round mutual evaluation in September 2003. Dominica's FIU was accepted into the Egmont Group in June 2003. Dominica is a party to the 1988 UN Drug Convention. In September 2004, Dominica acceded to the UN International Convention for the Suppression of the Financing of Terrorism.

The Government of the Commonwealth of Dominica should fully implement and enforce the provisions of its legislation and provide additional resources for regulating offshore entities, including its gaming sites. Dominica should eliminate its program of economic citizenship. Dominica should continue to develop the FIU to enable it to fulfill its responsibilities and cooperate with foreign authorities. If it has not already done so, Dominica should criminalize terrorist financing. Complete implementation of its reforms remains vital to the country's ability to combat financial crime including money laundering.

Dominican Republic

The Dominican Republic continues to be a major transit country for drugs, mostly cocaine and heroin, moving to Europe and the United States. The Dominican Republic's financial institutions engage in currency transactions involving international narcotics-trafficking proceeds that include significant amounts of U.S. currency or currency derived from illegal drug sales in the United States. The smuggling of bulk cash by couriers and wire transfer remittances are the primary methods for moving illicit funds from the United States into the Dominican Republic. Once in the Dominican Republic, currency exchange houses, money remittance companies, free trade zones and casinos facilitate the laundering of these illicit funds. The Dominican Republic held elections in May 2004 and inaugurated a new President on August 16, 2004. The Government of the Dominican Republic (GODR) continues its legislative and regulatory efforts to combat drug-trafficking, corruption, money laundering, and terrorism.

Banco Intercontinental (Baninter), which was the third largest bank in the nation, is a significant example of the corruption and money laundering scandals that have occurred in the financial sector. Approximately \$2.2 billion evaporated over several years due to the fraudulent schemes orchestrated by senior officials, which caused the bank to collapse. On May 13, 2003, the Banco Intercontinental president was arrested, in addition to five other bank employees. All were released on bail, and as of December 2004 none of the cases had reached the prosecution phase. The Central Bank took over the bank's companies and confiscated the assets of its principal shareholders. Despite the Central Bank's intervention and assumption of Banco Intercontinental's liabilities, the Dominican peso depreciated to about 40 to one U.S. dollar. In 2003, Banco Mercantil and Bancredito also failed and brought the combined total loss to approximately \$3 billion.

Narcotics-related money laundering has been deemed a criminal offense since the enactment of Act 17 of December 1995 (the "1995 Narcotics Law"). In 2002, the GODR passed Law 72-02 to expand money laundering predicate offenses beyond illegal drug activity and controlled substances, to include other serious crimes, such as any act related to terrorism, illicit trafficking in human beings or human organs, arms trafficking, kidnapping, extortion related to recordings and electronic tapes made by physical or moral entities, theft of vehicles, counterfeiting of currency, fraud against the State, embezzlement, and extortion and bribery related to drug trafficking.

Money Laundering and Financial Crimes

Under Decree No. 288-1996, the Superintendency of Banks decree, banks, currency exchange houses, and stockbrokers are required to know and identify their customers, keep records of transactions (five years), record currency transactions greater than \$10,000, and file suspicious transactions reports (STRs). Law 72-02 broadens the requirements for customer identification, record keeping of transactions, and reporting of suspicious activity reports (SARs). Numerous other financial sectors are now covered, including securities brokers, the Central Bank, cashers of checks or other types of negotiable instruments, issuers/sellers/cashers of travelers checks or money orders, credit/debit card companies, funds remittance companies, offshore financial service providers, casinos, real estate agents, automobile dealerships, insurance companies, and certain commercial entities such as those dealing in firearms, metals, archeological artifacts, jewelry, boats, and airplanes. The law mandates that these entities are to report currency transactions exceeding \$10,000, and suspicious transactions. Prior to passage of Law 72-02 financial institutions, money exchangers and remitters were the only entities required to report. Moreover, the legislation requires individuals to declare cross-border movements of currency that are equal to or greater than the equivalent of \$10,000 in domestic or foreign currency.

The Unidad de Inteligencia Financiera (UIF) was created in 1997 and is located within the Superintendency of Banks. The UIF is an administrative financial intelligence unit that regulates the financial sector and has the ability to seize and freeze assets. Law No. 72-02 creates the Unidad de Analisis Financiero, to receive STRs from the newly mandated entities and to ensure efficient function of the system of registrations and analysis of information supplied by accountable entities. The powers of Unidad de Analisis Financiero supersede those of the UIF. This unit has investigative authority and will also provide support to other competent authorities on any phase of a financial investigation. Law 72-02 obligates the UIF to forward all STRs it receives from financial institutions, money exchangers, and remittance companies to the Unidad de Analisis Financiero. Those reports are to be sent within the first 15 days of each month, by means of a form or through magnetic media.

While numerous narcotics-related investigations were initiated under the 1995 Narcotics Law, and substantial currency and other assets were confiscated, there have been only three successful money laundering prosecutions under the 1995 Narcotics Law. In 2004, counternarcotics authorities submitted to the justice system 12 cases of money laundering related to narcotics, arresting three persons and seizing a total of 16 vehicles, three firearms, 62 buildings, and \$1,273,536 in cash. Another 12 money laundering investigations are ongoing.

The Act allows preventive seizures and criminal forfeiture of drug-related assets, and authorizes international cooperation in forfeiture cases. In 1998, the GODR passed legislation that allows extradition of Dominican nationals on money laundering charges. Although the GODR and the United States have not put in place a mutual legal assistance treaty, according to U.S. law enforcement officials cooperation between law enforcement agencies on drug cases, human trafficking, and extradition matters remains strong.

The GODR responded to U.S. Government efforts to identify and block terrorist-related funds. Although no assets were identified or frozen, the GODR's efforts to identify and block terrorist-related funds continue through orders and circulars issued by the Ministry of Finance and the Superintendency of Banks that instruct all financial institutions to continually monitor accounts.

The UIF has been a member of the Egmont Group since June 2000. The Dominican Republic is a member of the Organization of American States Inter-American Drug Abuse Control Commission (OAS/CICAD) Experts Group to Control Money Laundering. On November 15, 2001, the GODR signed, but has not yet become a party to, the UN International Convention for the Suppression of the Financing of Terrorism. The Dominican Republic is a party to the 1988 UN Drug Convention; and the GODR has signed, but not yet ratified, the UN Convention against Transnational Organized Crime and the UN Convention against Corruption.

The Government of the Dominican Republic has the legislative framework to combat money laundering and terrorist financing, but insufficient implementation leaves the country vulnerable to criminal financial activity and abuse. The Dominican Republic should remain vigilant concerning controls relating to its many free zones, which may represent vehicles to facilitate money laundering.

East Timor

East Timor is the world's newest nation and is still in the process of establishing legislation and regulations governing the financial sector. Many basic laws governing the financial sector have not been completed and capacity to monitor the sector is limited. At present, there are three banks operating in East Timor with international linkages. All three are branches of foreign banks. The largest of these is BNU, a Portuguese bank, followed by Australian ANZ bank, and Indonesian bank Mandiri. In the absence of local legislation and regulations, East Timor requires these banks to follow their host country banking laws. East Timor acknowledges the need to criminalize the financing of terrorism, but lacks the internal capacity to draft the legislation and implementing regulations. A team of advisers from the International Monetary Fund is currently assisting the Government in drafting legislation against terrorist finance and money laundering. Once such a law is enacted, additional time will likely be necessary before the country has sufficient human and monetary resources to ensure allegations of money laundering or terrorist finance can be thoroughly investigated. There is no evidence that the country's financial system has been used to finance terrorism or to launder money.

In addition to working towards criminalizing the financing of terrorism, the government of East Timor is in the process of acceding to the U.N International Convention for the Suppression of Terrorism

Ecuador

Ecuador, a major drug-transit country, with a dollar economy and a geographical situation between Colombia and Peru—both major drug-producing countries—is highly vulnerable to money laundering. With its partial and inadequate anti-money laundering controls. Real estate, sales of businesses and commercial contraband are other vehicles for money laundering. In addition to concerns about illicit transactions through financial institutions, the public identification in 2003 of two Ecuadorian front companies for the Cali drug cartel gave credence to suspicions that money laundering is taking place through “normal” commercial activity. Recurrent detections of large amounts of unexplained currency entering and leaving Ecuador indicate that transit and laundering of illicit cash are also significant activities.

The Narcotics and Psychotropic Substance Act of 1990 (Law 108) criminalizes money laundering activities only in connection with illicit drug trafficking. These activities include illegal enrichment (Article 76), conversion or transfer of assets (Article 76, 77), and creation of front men or figureheads (Article 78). A further revision of Law 108 is pending. However, there is broad agreement that Law 108 is an inappropriate vehicle for money laundering provisions that extend beyond drug offenses. In November 2003, an interagency group completed a draft of a stand-alone law criminalizing the laundering of proceeds of any crime. In addition to establishing money laundering as an autonomous offense, the draft law also provides a legal framework for establishment of a financial intelligence unit. The draft law was submitted to Congress in January 2004 and was reported out of committee in December. Its first reading is expected in January 2005.

Regulations issued pursuant to Law 108, the 1994 Financial System Law, and a 1996 Banking Superintendence Resolution require financial institutions to report to the National Drug Council (CONSEP). Within CONSEP, the Reserved Information Processing Unit (UPIR) was created to collect information related to preventing the laundering of drug money. Under Resolution JB-97-020, financial institutions are required to report suspicious transactions to CONSEP. CONSEP mandates

through internal control manuals that institutions in the national financial sector must report cash transactions that equal or exceed \$5000 to the UPIR, while the financial services sector must report to the UPIR transactions equal to or greater than \$2000. For example, mutual societies are required to report transactions of \$5,000 and above, while financial cooperatives must report transactions of \$2,000 and higher. Electronic reporting of this information was implemented in 1999. The Superintendence of Banks also requires that financial institutions under its control maintain a registry of transactions equal to or greater than \$10,000 and file a monthly report with the Superintendence. Therefore, many institutions in the private sector are required to file CTRs with both the UPIR and the Superintendence. At the same time, several sectors—securities and money remitters—are not required to report to either supervisory authority. Both CONSEP and the Superintendence of Banks have the ability to sanction institutions for failure to report. Banks operating in Ecuador are also required to maintain financial transaction records for six years. There are no due diligence or banker negligence laws that hold individual bankers responsible if their institutions launder money. However, a bank's board of directors can be held legally responsible if drug money laundering occurs in their institution.

Neither the Superintendence of Banks nor CONSEP function as a financial intelligence unit. The Superintendence acts mainly as a regulatory body, while CONSEP/UPIR requests and receives information from the obligated institutions. Although CONSEP/UPIR receives suspicious transaction reports (STRs) and cash transaction reports (CTRs) and the Superintendence receives cash transaction reports, neither unit analyzes the information that is received. CONSEP provides the Public Ministry with statistical data on the suspicious activity reports (SARs) without first analyzing the data to determine if any of the SARs may be connected with money laundering, making it virtually impossible for a case to be developed or prosecuted. In 2003, the Superintendence of Banks created an investigative unit, the Unidad de Investigación Financiera, to reinforce the functions of the UPIR. The Public Ministry also has a unit for investigating general financial crimes, the Unidad de Investigaciones Financieras, which works in conjunction with the financial investigations section (SIF) of the National Police.

Some existing laws conflict with the goal of combating money laundering. For example, the Bank Secrecy Law severely limits the information that can be released by a financial institution directly to the police as part of any investigation, and the Banking Procedures Law reserves information on private bank accounts to the Banking Superintendence. In addition, the Criminal Defamation Law sanctions banks and other financial institutions that provide information about accounts to police or advise the police of suspicious transactions if no criminal activity is proven. As a result of this contradictory legal framework, cooperation between other Government of Ecuador (GOE) agencies and the police falls short of the level needed for effective enforcement of money laundering statutes. In addition, CONSEP historically refused to share financial reporting such as suspicious financial transaction reports with the Central Bank or other financial regulatory agencies such as the Banking Superintendence. As a result, Superintendence auditors could not verify if a bank was complying with the mandatory reporting required under the money laundering statutes.

Other problems conflicting with an anti-money laundering regime include the absence of regulations requiring financial institutions to exercise due diligence, the lack of reporting requirements on large amounts of currency brought into or taken out of the country, and the weak regulation of currency exchange businesses (casas de cambio). As a result of these problems, during the past five years there have been no serious investigations of drug money laundering in Ecuador. The extent money to which money laundering may be related to narcotics proceeds, or may be generated by other crimes such as contraband smuggling, illegal migration, corruption, bank fraud, or terrorism is not known. Steps taken by the GOE since 2002 to remedy this situation have been only partially effective due to the lack of a comprehensive legal framework to clarify and legitimize them. The Banking Superintendence and CONSEP still have conflicting responsibilities and authorities to receive and analyze reports from financial institutions and agencies. The draft money laundering law developed in 2003 by a GOE

interagency commission, if passed essentially as drafted, will overcome most of the current conflicts and obstacles.

Several Ecuadorian banks maintain offshore offices. The Superintendence of Banks is responsible for oversight of both offshore and onshore financial institutions. Regulations are essentially the same for onshore and offshore banks, with the exception that offshore deposits no longer qualify for the government's deposit guarantee. Anonymous directors are not permitted. Licensing requirements are the same for offshore and onshore financial institutions. However, offshore banks are required to contract external auditors pre-qualified by the banking Superintendence. These private accounting firms perform the standard audits on offshore banks that would generally be undertaken by the Superintendence in Ecuador. Bearer shares are not permitted for banks or companies in Ecuador.

Terrorist financing has not been criminalized in Ecuador. However, the Ministry of Foreign Affairs, Superintendence of Banks and the Association of Private Banks formed a working group in December 2004 to draft a law against terrorist financing. In June 2004, the Government of Ecuador (GOE) ratified the UN International Convention for the Suppression of the Financing of Terrorism. The Banking Superintendence has cooperated with the USG in requesting financial institutions to report transactions involving known terrorists, as designated by the United States as Specially Designated Global Terrorists pursuant to E.O. 13224 (on terrorist financing) or by the UN 1267 Sanctions Committee. No terrorist finance assets have been identified to date in Ecuador, nor would the Superintendence be able to administratively freeze any assets without first obtaining a court order. No steps have been taken to prevent the use of gold and precious metals to launder terrorist assets and there are currently no measures in place to prevent the misuse of charitable or non-profitable entities to finance terrorist activities.

Ecuador is a party to the 1988 UN Drug Convention and the UN Convention against Transnational Organized Crime. The GOE has signed, but not yet ratified, both the Inter-American Convention Against Terrorism and the UN Convention against Corruption. Ecuador is a member of the OAS Inter-American Drug Abuse Control Commission (OAS/CICAD) Experts Group to Control Money Laundering and the South American Financial Action Task Force (GAFISUD). The GOE and the United States have an Agreement for the Prevention and Control of Narcotic Related Money Laundering that entered into force in 1994 and an Agreement to Implement the United Nations Convention Against Illicit Trafficking in Narcotic Drugs and Psychotropic Substances of December 1988, as it relates to the transfer of confiscated property, securities and instrumentalities. There is also a Financial Information Exchange Agreement (FIEA) between the GOE and the U.S. to share information on currency transactions. Because the GOE has yet to establish a financial intelligence unit, it is one of only two South American countries that are not members of the Egmont Group.

By its membership in the United Nations, the OAS and South American Financial Action Task Force (GAFISUD), the Government of Ecuador is committed to adhere to the international standards articulated by these organizations and the Financial Action Task Force. In spite of these commitments and assistance to it by the OAS and the United States, Ecuador has yet to enact comprehensive anti-money laundering legislation or to criminalize the financing of terrorism. Ecuador should pass comprehensive money laundering legislation that encompasses all serious crimes, and includes the establishment of a single independent financial intelligence unit to which all covered institutions would report. Ecuador should also criminalize the financing of terrorism.

Egypt, The Arab Republic of

Egypt is neither a regional financial center nor does it have an offshore financial sector. The Government of Egypt (GOE) implemented changes in late 2004 to streamline cumbersome financial regulations, but the changes have not affected the level of financial crime. Egypt is still largely a cash economy, and many financial transactions do not enter the banking system at all.

While there is no significant market for illicit or smuggled goods in Egypt, authorities say that under-invoicing of imports and exports by Egyptian businessmen is a relatively common practice. The primary goal for businessmen who engage in such activity is reportedly the avoidance of taxes and customs fees. It is unclear to what extent price manipulation may be used for laundering the proceeds of other crimes. Worker remittances, particularly from numerous Egyptians working in the Gulf and elsewhere, are a potential means for laundering funds, but it is unclear if and to what extent laundering occurs through remittances. Some remittances may be sent through couriers and informal channels such as a value transfer system rather than through the banking system, due to either lack of trust or lack of familiarity with banking procedures and the lower transaction costs associated with informal exchange systems.

In 2001, the Central Bank of Egypt (CBE) and other financial regulatory bodies issued a number of anti-money laundering instructions, including “know your customer” and “suspicious transaction reporting” (STR) requirements. Nevertheless, the Financial Action Task Force (FATF) placed Egypt on its non-cooperating countries or territories (NCCT) list in June 2001, citing inter alia, the country’s lack of a law specifically criminalizing money laundering. Following up the FATF designation, the U.S. Department of Treasury’s Financial Crimes Enforcement Network (FinCEN) issued an advisory that instructed all U.S. financial institutions to “give enhanced scrutiny” to all transactions involving Egypt. Since then, Egypt has continued to make substantial reforms and progress toward developing an effective money laundering and terrorist financing regime, incorporating the FATF recommendations, which culminated in the FATF’s removal of Egypt from its list of Non-Cooperative Countries or Territories (NCCTs) in February 2004. Subsequently, the Financial Crimes Enforcement Network (FinCEN) of the U.S. Department of the Treasury withdrew its advisory for U.S. financial institutions.

In May 2002, Egypt passed the Anti-Money Laundering Law (Law no. 80 of 2002). The law criminalizes the laundering of funds from narcotics-trafficking, prostitution and other immoral acts, terrorism, antiquities theft, arms dealing, organized crime, and numerous other activities. The law also requires banks to keep all records for five years, places suspicious transaction reporting (STR) requirements on the full range of financial institutions, and prohibits the opening of numbered or anonymous financial accounts. The law did not repeal Egypt’s existing law on secrecy of bank accounts, but provided the legal justification for providing account information to responsible civil and criminal authorities.

The law also provides for the establishment of the Money Laundering Combating Unit (MLCU) as the Financial Intelligence Unit (FIU), which officially began operating on March 1, 2003. The MLCU is an independent entity with its own budget and staff, and has full legal authority to examine all STRs and conduct investigations with the assistance of counterpart law enforcement agencies, including the Ministry of Interior. The MLCU cooperates with all supervisory and law enforcement authorities.

Presidential Decree No. 164/2002, issued in June 2002, delineates the structure, functions, and procedures of the MLCU. The unit handles implementation of the anti-money laundering law, including publishing the executive directives. The MLCU takes direction from a five-member council, chaired by the Assistant Minister of Justice for Legislative Affairs. Other members include the chairman of the Capital Market Authority (CMA), the Deputy Governor of the Central Bank of Egypt (CBE), a representative from the Egyptian Banking Federation, and an expert in financial and banking affairs. In June 2004 the MLCU was admitted to the Egmont Group of FIUs.

In June 2003, the administrative regulations of the Anti-Money Laundering Law were issued as Prime Ministerial Decree no. 951/2003. The regulations provided the legal basis by which the MLCU derives its authority. The regulations spell out the predicate crimes associated with money laundering, establish a board of trustees to govern the MLCU, define the role of supervisory authorities and financial institutions, and allow for the exchange of information with foreign competent authorities.

The introduction of the regulations, among other things, lowers the threshold for declaring foreign currency at borders from the equivalent of approximately \$20,000 to \$10,000, and extends the declaration requirement to travelers leaving as well as entering the country. However, the authorities have yet to enforce this provision.

On the administrative side, the Executive Director of the MLCU is responsible for the operation of the FIU and the implementation of the policy drafted by the Council of Trustees. His responsibilities include proposing procedures and rules to be observed by different entities involved in combating money laundering, and presenting them to the Chairman of the Council of Trustees; reviewing the regulations issued by supervisory authorities for consistency with legal obligations and to ensure they are up to date; ensuring the capability and readiness of the Unit's database; exchanging information with supervisory entities abroad; acting as point of contact within the GOE; preparing periodical and annual reports on the operational status of the Unit; and taking necessary action on STRs recommended to be reported to the office of the Public Prosecution. Since its inception, the MLCU has received 850 STRs from financial institutions (an increase of about 560 STRs in 2004).

In March 2004, the CBE issued instructions requiring banks to establish internal systems enabling them to comply with the anti-money laundering laws. In addition, banks are now required to submit quarterly reports showing the progress made with respect to their anti-money laundering responsibilities. The CBE has undertaken compliance examinations of all banks operating in Egypt, carried out by a special anti-money laundering (AML) team consisting of five CBE examiners. The assessments consist of questionnaires issued by the CBE and on-site visits, to check that systems and procedures are in place. On the basis of the examinations, banks are divided into three categories: fully compliant, partially compliant, and non-compliant. To date, only one bank has been found to be non-compliant. Where deficiencies are found, the banks are notified of corrective measures to be undertaken, with a deadline for making the necessary changes, and a follow-up program of visits is undertaken to reassess compliance. In addition to the special examinations, AML compliance by banks will also be assessed as part of the comprehensive periodical examinations undertaken by the CBE. The CBE also monitors closely bureaux de change and money transmission companies for foreign exchange control purposes, with close scrutiny of accounts with transactions above certain limits. The CBE sanctions include issuing a warning letter, imposing financial penalties, forbidding banks to undertake certain activities, replacing the board of directors, and revoking the bank's license.

The Capital Market Authority (CMA), which is responsible for regulating the securities markets, has also undertaken the inspection mission of firms under its jurisdiction. The inspections were aimed at explaining and discussing AML regulations and obligations, as well as at evaluating the implementation of systems and procedures, including checking for an internal procedures manual and ensuring the appointment of compliance officers.

Money laundering investigations are carried out by one of the three law enforcement agencies in Egypt, according to the type of predicate offense involved. The Ministry of Interior, which has general jurisdiction for the investigation of money laundering crimes, has established a separate AML department, which includes a contact person for the MLCU and who coordinates with other departments within the ministry. The AML department works closely with the MLCU during investigations. It has established its own database to record all the information it received, including STRs, cases, and treaties. The Administrative Control Authority (ACA) has specific responsibility for investigating cases involving the public sector or public funds. It also has a close working relationship with the MLCU, depending on the nature of the investigation. The third law enforcement entity, the National Security Agency (NSA), plays a more limited direct role in the investigation of money laundering cases, where the predicate offense is more serious or threatens national security.

Because of its own historical problems with domestic terrorism, the GOE has sought closer international cooperation to counterterrorism and terrorist financing. The GOE has shown willingness

to cooperate with foreign authorities in criminal investigations. It has acted promptly on asset freezing requests from the United States, and continually monitors the operations of domestic non-governmental organizations (NGOs) and charities to forestall funding of terrorist groups abroad. In 2002, the GOE passed the Law on Civil Associations and Establishments (Law No. 84/2002), which governs the procedures for setting up NGOs, including their internal regulations, activities, and financial records. The law places restrictions on accepting foreign donations without prior permission from the proper authorities.

In April 2004, citing the importance of the role that the FIU plays in fighting serious financial crimes, the GOE, pursuant to Prime Minister Decree No. 676/2004, decided to grant representatives from the MLCU membership in the Egyptian National Committee for International Cooperation in Combating Terrorism, which was established in 1998. The other members of the Commission are the Ministry of Justice, Ministry of Foreign Affairs, Ministry of Interior, and the National Security Agency. The GOE is considering the establishment of a national committee for coordinating issues regarding anti-money laundering, which will go into effect in 2005.

The United States and Egypt have a Mutual Legal Assistance Treaty, which entered into force November 2001. Egyptian authorities have cooperated with U.S. efforts to seek and freeze terrorist assets, circulating to each of their financial institutions the list of Specially Designated Global Terrorists designated by the United States pursuant to Executive Order 13224. Information about financial and other assets frozen and/or seized in connection with money laundering and terrorist financing investigations is not a matter of public record in Egypt.

Egypt was one of the founding members the Middle East and North Africa Financial Action Task Force (MENAFATF), a FATF-style regional body that promotes best practices to combat money laundering and terrorist financing in the region. In November 2004, Egypt was elected to a one-year term as the first Vice-President of MENAFATF, which was inaugurated on November 30 in Bahrain by 14 Arab countries.

Egypt is a party to the 1988 UN Drug Convention. In March 2004, it ratified the UN Convention against Transnational Organized Crime. It has signed, but not yet ratified, the UN International Convention for the Suppression of the Financing of Terrorism.

The Government of Egypt has taken several significant steps in 2004 to address domestic and international concerns regarding deficiencies in its banking system and monetary policy. Egypt is reportedly eager to improve international cooperation in these areas. However, Egypt should intensify financial institution training in order to enhance the reporting mechanism for suspicious activities; consider ways of improving MLCU feedback on STRs to reporting financial institutions; and enforce cross-border currency controls, including reporting requirements. Egypt should become a party to the UN International Convention for the Suppression of the Financing of Terrorism.

El Salvador

Located on the Pacific coast of the Central American isthmus, El Salvador has one of the largest and most developed banking systems in Central America. Its most significant financial contacts are with neighboring Central American countries, as well as with the United States, Mexico, and the Dominican Republic. The January 2001 adoption of the U.S. dollar as legal tender, along with the size and growth rate of the financial sector, makes the country a potentially fertile ground for money laundering. In 2004, more than \$2.5 billion in remittances was likely sent to El Salvador through the financial system. Most were sent from Salvadorans working in the United States to family members. Additional remittances flow back to El Salvador via other methods such as visiting relatives and regular mail.

Most money laundering is related to narcotics-trafficking, and, to a lesser degree, kidnapping, corruption, counterfeiting, fraud, and contraband. Criminal proceeds laundered in El Salvador are primarily from domestic criminal activity. There is no significant black market for smuggled goods. Most money laundering occurs through fund transfers between local banks and banks in the United States, the Dominican Republic, and Europe. El Salvador's financial institutions engage in currency transactions that include large amounts of U.S. currency, and could involve the proceeds of international narcotics-trafficking. It is believed that money laundering proceeds may be controlled by narcotics-traffickers or organized crime.

Decree 498 of 1998, the "Law Against the Laundering of Money and Assets," criminalizes money laundering related to narcotics-trafficking and other serious crimes, including trafficking in persons, kidnapping, extortion, illicit enrichment, embezzlement, and contraband. The law also establishes the Unidad de Investigación Financiera (UIF), El Salvador's financial intelligence unit (FIU), which is located within the Public Ministry. The UIF has been operational since January 2000. The Policía Nacional Civil (PNC) and the Central Bank also have their own anti-money laundering units.

Under Decree 498, covered entities must identify their customers, maintain records for a minimum of five years, train personnel in identification of money and asset laundering, establish internal auditing procedures, and report all suspicious transactions and transactions that exceed approximately \$57,000 to the UIF. Entities obligated to comply with these requirements include banks, finance companies, exchange houses, stock exchanges and exchange brokers, commodity exchanges, insurance companies, credit card companies, casinos, dealers in precious metals and stones, real estate agents, travel agencies, the postal service, construction companies, and the hotel industry. The law includes a safe harbor provision to protect all persons who report transactions and cooperate with law enforcement authorities, and also contains banker negligence provisions that make individual bankers responsible for money laundering at their institutions. Bank secrecy laws do not apply to money laundering investigations.

To address the problem of international transportation of criminal proceeds, Decree 498 requires all incoming travelers to declare the value of goods, cash, or monetary instruments they are carrying in excess of approximately \$11,400. Falsehood, omission, or inaccuracy on such a declaration is grounds for retention of the goods, cash, or monetary instruments, and the initiation of criminal proceedings. If, following the end of a 30-day period, the traveler has not proved the legal origin of said property, the Salvadoran authorities have the authority to confiscate it. The UIF has proposed legal reforms to require all travelers, both entering and departing El Salvador, to report the value of goods or cash in excess of approximately \$11,400.

There were no arrests for money laundering or terrorist financing in 2004. However, two persons were prosecuted on charges of money laundering in 2003. One was convicted and sentenced to serve a prison term of seven years. This was the first conviction for money laundering under Decree 498.

The Government of El Salvador (GOES) has established systems for identifying, tracing, freezing, seizing, and forfeiting narcotics-related and other assets of serious crimes. The UIF and PNC have adequate police powers to trace and seize assets, but the PNC lacks the resources to do so. Forfeited money laundering proceeds are deposited in a special fund used to support law enforcement, drug treatment and prevention, and other related government programs, while funds forfeited as the result of other criminal activity are deposited into general government revenues. Law enforcement agencies are allowed to use certain seized assets while a final sentence is pending. In 2003, the dollar amount of assets seized and forfeited totaled \$4.23 million, mostly derived from narcotics-trafficking. This amount was almost 10 percent greater than the \$3.85 million seized and forfeited in 2002, and eight times greater than the \$508,712.14 seized and forfeited in 2001. Figures for 2004 are not available. There exists no legal mechanism to share seized assets with other countries.

Money Laundering and Financial Crimes

Salvadoran law currently provides only for the judicial forfeiture of assets upon conviction (criminal forfeiture), and not for civil or administrative forfeiture. A draft law under consideration to reform Decree 498 includes a proposal to expand the existing law to include certain types of civil forfeiture of assets. The proposed law would also incorporate the FATF Special Recommendations on Terrorist Financing, and would include the OAS Inter-American Drug Abuse Control Commission's model regulatory reforms for the laundering of assets.

Although Decree 498 does not specifically mention terrorism or terrorist financing as predicate offenses for money laundering, it criminalizes the laundering of the proceeds of serious criminal acts. This has been interpreted to include terrorism. Therefore, it is illegal to launder money generated by a terrorist act, and assets of terrorists that are derived from criminal activities could be targeted under Decree 498. However, providing legitimate money (money that is not derived from a criminal act) to known terrorist organizations is not considered to be a crime, and the person contributing those funds could not be prosecuted unless it could be shown that he or she was directly involved in the planning or execution of a crime. The GOES has drafted counterterrorism legislation that will further define acts of terrorism and establish tougher penalties for the execution of those acts. The draft legislation, if passed, would also grant the GOES the legal authority to freeze and seize suspected assets associated with terrorists and terrorism. The GOES has provided financial institutions with the names of all individuals and entities listed by the UNSCR 1267 Sanctions Committee. These institutions are required to search for any assets related to the individuals and entities on the lists. Bank accounts belonging to a female companion of a former Red Brigade terrorist arrested in Argentina in 2002 were frozen. The woman's accounts, totaling \$22,000, were frozen pending the completion of Italy's investigation. Both had previously resided in El Salvador. No additional assets linked to terrorism have been found to date. There is no evidence that any charitable or nonprofit entity in El Salvador has been used as a conduit for terrorist financing.

El Salvador has signed several agreements of cooperation and understanding with supervisors from other countries to facilitate the exchange of supervisory information, including permitting on-site examinations of banks and trust companies operating in El Salvador. El Salvador is a party to the Treaty of Mutual Legal Assistance in Criminal Matters signed by the Republics of Costa Rica, El Salvador, Honduras, Guatemala, Nicaragua, and Panama. Salvadoran law does not require the UIF to sign agreements in order to share or provide information to other countries. The GOES is party to the Inter-American Convention on Mutual Assistance on Criminal Matters, which provides for parties to cooperate in tracking and seizing assets. The UIF is also legally authorized to access the databases of public or private entities. The GOES has cooperated with foreign governments in financial investigations related to narcotics, money laundering, terrorism, terrorism financing, and other serious crimes.

El Salvador is a member of the OAS Inter-American Drug Abuse Control Commission Experts Group to Control Money Laundering (OAS/CICAD), the Caribbean Financial Action Task Force and the Egmont Group. The GOES is party to the OAS Inter-American Convention Against Terrorism and the UN International Convention for the Suppression of the Financing of Terrorism, as well as the 1988 UN Drug Convention. El Salvador ratified the UN Convention against Transnational Organized Crime and the UN Convention Against Corruption in March and July of 2004, respectively. El Salvador is also a signatory to the Central American Convention for the Prevention and Repression of Money Laundering Crimes Related to Illicit Drug Trafficking and Related Crimes.

The growth of El Salvador's financial sector, the increase in narcotics trafficking, the large volume of remittances and the use of the U.S. dollar as legal tender make El Salvador vulnerable to money laundering. El Salvador should continue to expand and enhance its anti-money laundering policies and strengthen its ability to seize and share assets. The Government of El Salvador should criminalize the support and financing of terrorists and terrorist organizations.

Equatorial Guinea

Equatorial Guinea (EG) is not a major regional financial center. EG has not been experiencing an increase in financial crimes, but has dealt with banking irregularities in the past year. Despite creating anti-money laundering legislation, the process of implementing the regulations is not complete, and EG is still vulnerable to money laundering and terrorist financing.

Equatorial Guinea is a member of the Central African Economic and Monetary Union (CEMAC), and shares a regional Central Bank (BEAC) with Cameroon, Central African Republic, Chad, Republic of the Congo, and Gabon. The Government of EG (GOEG) also is a member of the Banking Commission of Central African States (COBAC), an organization within CEMAC. COBAC supervises the banking systems in CEMAC countries, ensuring the legality of the operations carried out by financial institutions. Following the 2001 terrorist attacks in the United States and United Nations resolutions, CEMAC member countries formed the Central African Action Group Against Money Laundering (GABAC) to draft a common anti-money laundering law to apply to all CEMAC countries. Equatorial Guinea, as a member of CEMAC, participates in the Ministerial Committee that adopts regulations, which as supranational laws are enforceable in all member states without specific legislation in each country.

The country-specific offices of GABAC (established in each member country) are the National Agencies for Financial Investigation (NAFI). In EG, the creation of this group has been delayed due to economic reasons. In view of these delays, the governor of BEAC, along with the secretariat of COBAC, adopted a new set of regulations giving COBAC the authority to act on money laundering and terrorism financing suspicions. Money laundering and most financial crimes, in general, are criminal offenses, and COBAC has the authority to investigate complaints, seize assets, prosecute individuals (including malfeasant bankers), and revoke the banking licenses of banks that knowingly commit financial crimes. The regulations are intended to implement the Financial Action Task Force (FATF) Forty Recommendations and nine UN resolutions on terrorist financing.

COBAC and GABAC require banks to record and report the identity of customers engaging in large transactions once the NAFI is created and to keep a record of large transactions for five years. The threshold for reporting large transactions will be set at a later date by the CEMAC Ministerial Committee. All investigations are conducted in keeping with banker confidentiality stipulations. To date, there have been no arrests related to financial crimes.

The largest concern for EG in terms of money laundering and terrorist financing is in the form of cross-border currency transactions and companies that transfer money internationally. BEAC has not addressed this problem to date, and there are currently no laws to regulate the amount transferred each day or by whom and for what reason. This is particularly troublesome to COBAC because they see it as the most vulnerable section of the financial sector.

COBAC is also responsible for circulating to its financial institutions the list of individuals and entities that have been included on the UN 1267 Sanctions Committee's consolidated list, or other groups identified by the United States or the European Union. The GOEG is subject to UNSCRs 1373 and UNSCR 1267, but has only submitted reports to the 1373 committee. The GOEG is a party to the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime. EG is not a party to the 1988 UN Drug Convention.

The Government of Equatorial Guinea (GOEG) should work with the Banking Commission of Central African States (COBAC) to fully implement applicable regulations and to establish an anti-money laundering regime capable of thwarting terrorist financing, including the enactment of cross-border currency reporting requirements. EG should criminalize terrorist financing and become a party to the 1988 UN Drug Convention.

Eritrea

Eritrea is not an important regional financial center. It is believed to have little or no significance in terms of money laundering either with respect to narcotics or other criminal proceeds or terrorist financing. Eritrea is not a source of narcotics, nor is it believed to be a significant market or transit route for narcotics. There is no indication that Eritrea is experiencing an increase in financial crimes. The country's banking sector is primitive. Its connections to the rest of the world are rudimentary at best. It has no offshore sector. Given Eritrea's weak economy, the marketing of smuggled goods occurs on a small scale. Relatively little contraband enters this impoverished country and the funds generated from such activity are limited. However, due to its limited regulatory structure and its proximity to regions where terrorist and criminal organizations operate, Eritrea is vulnerable to money laundering and related activities.

Money laundering, to the extent that it occurs, largely occurs through the non-bank financial system. The government has outlawed all but one exchange house, which is controlled by the only legal political party that also controls the government. Unsanctioned exchange operations serve as a main source of foreign exchange given the lack of foreign exchange available from legal sources.

Eritrea's legal system is weak. The ten-year old country's Constitution has yet to be implemented and legal codes for civil and criminal matters remain a work in progress. The country continues to rely on many laws from the period when it was a part of Ethiopia.

Information generated by the financial sector is limited and closely held. All Eritrean banks are government-owned. No foreign banks are yet authorized to operate. The banks and financial institutions are slowly implementing computerized record keeping systems, which are designed to supply standardized reports that will eventually allow for more effective regulation by banking authorities.

The banks and other financial institutions record and report the identity of customers who engage in large currency transactions. All transactions, even for small sums, require that identification be presented. Banks maintain records of significant transactions, allowing for transactions to be traced if necessary. Bank officials claim to report all suspicious transactions to the appropriate authorities. Eritrea has no secrecy laws that would preclude the reporting of information to the authorities as long as appropriate permission is obtained.

All travelers are required to declare the currency they are carrying upon entering and leaving the country at ports, airports and other entry points. In fact, due to the unreliability of the country's financial system and the poor exchange rate offered for funds transferred through official banks and the one authorized exchange house, many travelers carry cash from Eritrea's large diaspora to their relatives living in Eritrea. These cash deliveries, while significant for Eritreans who receive them, are fairly small, typically in the range of thousands rather than tens of thousands of dollars. The Eritrean authorities have tended to tolerate this since it serves as one of the country's most important sources of foreign exchange.

Eritrean authorities do not routinely provide information on specific arrests and prosecutions, nor do they provide reliable aggregate data on crimes. Eritrea has not reached agreement with the U.S. on a mechanism for exchanging records in connection with investigations and proceedings relating to crime investigations. Nor are any negotiations underway to establish such a record exchange mechanism. It is not known whether Eritrea has established formal systems and procedures for identifying, tracing, freezing, seizing, and forfeiting narcotic-related assets or assets derived from other serious crimes including the funding of terrorism. The Eritrean government and regulatory authorities have expressed their readiness to cooperate in identifying and seizing assets generated from serious crimes and terrorism-related activities. It is not known whether authorities have actually seized or frozen such assets.

Eritrea is not a party to the UN International Convention for the Suppression of the Financing of Terrorism or the UN Convention against Transnational Organized Crime. It is party to the 1988 International Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances.

As Eritrea's financial system becomes more integrated with international markets, the government should put a priority on implementing anti-money laundering legislation and criminalizing terrorist financing. Eritrea should become a party to the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime.

Estonia

Estonia has one of the most transparent, developed banking systems among the new European Union countries. The International Monetary Fund and international risk rating agencies closely monitor Estonia's banking system. Estonia has adopted the universal banking model, which enables credit institutions to participate in a variety of activities such as leasing, insurance, and securities. Transnational and organized crime groups are attracted to the territory due to its proximity to the Russian border. However, there have been no reported large-scale money laundering operations for the purpose of narcotics-trafficking or terrorist financing in Estonia.

In 1996, the Government of Estonia (GOE) signed the Riga Declaration on Money Laundering. Money laundering was added as a criminal offense to the Criminal Code in 1999, at the same time the Money Laundering Prevention Act came into force. Money laundering is punishable with a maximum imprisonment term of ten years. Amendments to the Money Laundering Prevention Act and Penal Code (which replaced the Criminal Code), took effect in September 2002. The amendments make money laundering committed by a legal entity a punishable crime with a maximum penalty of the compulsory liquidation of the entity.

The Money Laundering Prevention Act entered into force in 1999. According to the Act, credit and financial institutions are required to identify all individuals or representatives who carry out cash transactions above 100,000 kroons (approximately \$8,600) or non-cash transactions above 200,000 kroons (approximately \$17,100). Estonia's legislation requires the credit or financial institutions to report suspicious or unusual transactions to the "Rahapesu Andmebüro", Estonia's Financial Intelligence Unit (FIU).

On January 1, 2004, the Amendment Law to the Money Laundering and Terrorism Financing Prevention Act (MLTFPA) took effect; this law amends the 1999 Money Laundering Prevention Act. The MLTFPA expands the obligated reporting entities to include lawyers, accountants, tax advisors, notaries, currency exchange companies, money transmitters, lottery/gambling institutions, real estate firms, dealers in high-value goods and other intermediaries for cash transactions subject to reporting. The FIU's authority is extended to cover the supervision of those obliged reporting entities that are not covered by the supervision of the Financial Supervisory Authority.

The Estonian Financial Supervisory Authority (FSA), which unites three previous supervisory authorities (the Banking Supervision Department of the Bank of Estonia, the Securities Inspectorate, and the Insurance Supervisory Agency), began operations in January 2002. The FSA is responsible for monitoring and directing credit and financial institutions. It monitors compliance with reporting requirements and can apply administrative remedies for non-compliance.

In June 2002 the FSA approved a new guideline, "Additional Measures to Prevent Money Laundering in the Credit and Financial Institutions." This guideline conforms to the FATF's "Guidance for Financial Institutions in Detecting Terrorist Financing Activities." The Estonian Banking Association (EBA) has also issued more detailed instructions regarding information and documentation when opening an account or performing a transaction; the documents and data required in relations with

foreign legal persons, with special attention to those founded in offshore regions; and a listing of red flags useful when opening an account, performing transactions, and analyzing transactions.

Estonia established its FIU within the administration of the Police Board in 1999. In 2004 the FIU became an independent unit within the Economic Crime Department of the Central Criminal Police. The FIU's authority includes investigating money laundering cases, the ability to conduct misdemeanor procedures and issue administrative acts against violations. In 2002, the FIU received 1,073 suspicious transaction reports; in 2003 it received 1,293 reports; and, through October 2004, it received 1,189. The Tax Fraud Investigation Center was established in the structure of the Tax Board for investigation of tax crimes and other crimes connected with money laundering in 2001.

There are three free trade zones in Estonia—at the ports of Muuga and Sillamae and on the land border with Latvia. In the free zones, VAT and excise duties do not have to be paid on goods imported and later exported. The main supervisory authority responsibility for monitoring and checking the movement of goods in the free zones is the Estonian Tax and Customs Board, which is governed by the Ministry of Finance. There are strict identification requirements, similar to those used by the Estonian Border Guard, for companies and individuals using the zones. There is no indication that trade-based money laundering schemes or financiers of terrorism are active in these free zones.

The MLTFPA contains provisions that meet the requirements for the prevention of terrorist financing pursuant to United Nations (UN) and European Union directives, including the obligation to report suspicion of terrorist financing (not just money laundering), and authorizing the FIU to seize assets in terrorist financing cases. The GOE regards the financing of terrorism as a form of participation in terrorism. Acts that are aimed at the commission of terrorism (in the preparation stage) are criminalized; therefore, the GOE believes it has criminalized terrorist financing. Nevertheless, the GOE is in the process of reviewing the Penal Code and considering the introduction of terrorism financing as a distinct crime. The MLTFPA allows the FIU to freeze a transaction for two working days, and if the legal origin of the money is not proven, the FIU may seize the assets for up to 10 working days while it seeks a court judgment. The judicial system has the ability to seize the assets of suspected terrorists for an indefinite amount of time.

The FIU may exchange information with its counterparts, provided the information is used for intelligence purposes only. Bank secrecy-protected information that is to be used as evidence in court may only be shared when a mutual assistance agreement is in place. A Mutual Legal Assistance Treaty is in force between the United States and Estonia.

Estonia is a member of the Council of Europe Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL). Estonia has also endorsed and adheres to the Basle Committee's "Core Principles for Effective Banking Supervision" and is an active member of the Offshore Group of Banking Supervisors. The "Rahapesu Andmebüro" is a member of the Egmont Group and joined the European Union's financial intelligence units' net (FIU.NET). The GOE participated in the European Commission's Anti-Money Laundering Project for Economic Reconstruction Assistance (PHARE Project). The purpose of the project was to provide support to Central and Eastern European countries in the development and/or improvement of anti-money laundering regulations. In August 2000, Estonia ratified the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds of Crime. In October 2001, the GOE signed a cooperation agreement with Europol. The GOE is a party to the 1988 UN Drug Convention, the UN Convention against Transnational Organized Crime and the UN International Convention for the Suppression of the Financing of Terrorism.

The Government of Estonia has been active in establishing agencies, amending current laws, and drafting new ones in its effort to strengthen its anti-money laundering regime; it should continue these efforts and enhancements. Estonia should continue its efforts to implement the European Commission's Anti-Money Laundering Project for Economic Reconstruction Assistance (PHARE

project) in order to increase its capacity to fight money laundering on a national and international level. Estonia should clarify that its laws, in fact, criminalize terrorist financing, and if not, should enact appropriate legislation to do so. Estonia should make every effort to enforce best practices within its financial community.

Ethiopia

Due primarily to its archaic financial systems and pervasive government controls, Ethiopia is not considered a regional financial center. There is no offshore sector. Ethiopia's location within the Horn of Africa region make it vulnerable to money laundering related activities perpetrated by transnational criminal organizations, terrorists, and narcotics-trafficking organizations. Sources of illegal proceeds include narcotics-trafficking, smuggling, trafficking in persons, arms trafficking, trafficking of animal products, and corruption. Since government foreign exchange controls limit possession of foreign currency, most of the proceeds of contraband smuggling and other crimes are not laundered through the official banking system. High tariffs also encourage customs fraud and trade-based money laundering.

Historically, money laundering has not been a serious problem. However, while reliable data is not available, the Federal Police have stated that incidents of money laundering have increased in the past few years. Reports indicate that alternative remittance systems, particularly hawala, are also widely used by immigrant communities. The government has closed a number of illegal hawala operations. Proposed revisions to the penal code, likely to be adopted in early 2005, would make money laundering a criminal offense.

The country has an underdeveloped financial infrastructure, containing six small private banks and three government banks. Currently, there are no foreign banks that operate within the country. The Central Bank has mandated that banks report suspicious transactions, but the supervision capability is limited, as most records and communications are not yet computerized. Foreign exchange controls limit possession of foreign currency, and the government controls the exchange of foreign currency into local currency. There are no money laundering controls applicable to non-banking financial institutions or to intermediaries. The Government of Ethiopia (GOE) has proposed terrorist finance legislation, which is still under review in Parliament. The Central Bank has the authority to identify, freeze, and seize terrorist finance related assets, and it has done so in the past. The Central Bank routinely circulates to its financial institutions the list of persons and entities that have been designated by the UNSCR 1267 Sanctions Committee. During 2004, no assets linked to these persons or entities have been identified.

Ethiopia is a party to the 1988 UN Drug Convention. It has signed, but not yet ratified, the UN Convention against Transnational Organized Crime. It has not yet signed UN International Convention for the Suppression of the Financing of Terrorism.

The Government of Ethiopia should act on the pending terrorist finance legislation and pass anti-money laundering and counterterrorist finance legislation that adheres to international standards. Ethiopia should proceed with ratification of the UN Convention against Transnational Organized Crime. It should also become a party to the UN International Convention for the Suppression of the Financing of Terrorism.

Fiji

Money laundering does not appear to be a significant problem in Fiji. Much of the money laundering that does occur results from the use of Fiji as a transshipment point for illegal narcotics. There have also been a number of money laundering investigations involving foreign exchange dealers and overseas remittances. The Director of Public Prosecutions has successfully imposed freezing orders on

several occasions. However, there have not yet been any prosecutions or confiscations of criminal assets.

Money laundering is criminalized under the Proceeds of Crime Act of 1997. In August 2002, Fiji also established an anti-money laundering legislation working group to study needed enhancements to legislation. Key measures include widening the scope and coverage of financial institutions to include non-traditional financial and banking institutions. As a result, a new Financial Transactions Reporting Act was passed by both houses of Parliament in December 2004. The legislation will be implemented in early 2005 and amendments to the Proceeds of Crime Act and Mutual Assistance in Criminal Matters Act are in the final draft stage. Amendments to the Proceeds of Crime and the Mutual Assistance Act have been proposed to allow, among other things, for civil and criminal forfeitures and the extension of mutual assistance to foreign countries. Cabinet has given approval for the review and drafting of the amendments, which will be put before Parliament in early 2005.

The Reserve Bank of Fiji (RBF) has issued anti-money laundering guidelines for licensed financial institutions. These guidelines require licensed financial institutions to develop customer identification procedures, keep transaction and other account records for seven years, and report suspicious financial transactions to both the RBF and the anti-money laundering unit in the Fiji Police Force's Criminal Investigation Department. These guidelines went into effect in January 2001. On-site examinations of licensed banks and other deposit taking institutions for compliance with anti-money laundering laws and guidelines are reportedly ongoing.

The Permanent Secretary for Justice, along with senior representatives from the Attorney General's Office, the Office of the Director of Public Prosecutions, the Office of the Commissioner of Police, the RBF, and the Fiji Revenue and Customs Authority compose the Anti-Money Laundering Officials Committee. The Committee was established in 1998 and meets once a month to discuss the implementation of anti-money laundering measures in Fiji. In September 2002, policy guidelines were issued to authorized foreign exchange dealers and moneychangers, which included requirements to comply with anti-money laundering measures. Also in 2002, the Fiji Police, with input from the RBF and the Association of Banks in Fiji, issued a standardized suspicious transaction reporting form. More than 400 suspicious transaction reports were filed in 2004.

In 2003, Fiji established a Financial Intelligence Unit (FIU). The FIU is currently based in the Reserve Bank of Fiji. Fiji's FIU became operational in November 2003 and is responsible for identifying and referring suspect transactions to the Director of Public Prosecutions for further investigation. More than 100 cases have been developed directly from suspect transaction reports (STRs), all of which are currently being investigated by law enforcement authorities: Police, Customs, Immigration and Tax Authorities.

Fiji is a member of the Asia/Pacific Group on Money Laundering (APG). In February 2002, the APG conducted a mutual evaluation of Fiji. Fiji is a party to the 1988 UN Drug Convention. Fiji is not yet a party to either the UN International Convention for the Suppression of the Financing of Terrorism or the UN Convention against Transnational Organized Crime. In February 2003, a Counter-Terrorism Officials Group was established. The Group has drafted model counterterrorism legislation for Pacific Island countries.

The Government of Fiji has sent representatives to attend a plenary session of the Egmont Group in 2003 and to a training seminar in October 2004 for new and emerging FIUs. Fiji would like to gain admission to the Egmont Group in 2005. Fiji should criminalize terrorist financing and continue to develop its anti-money laundering regime. Fiji should become a party to the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime.

Finland

Finland is not a regional center for money laundering, financial crime, or illegal commerce. A “Corruption Perceptions Index” survey taken by Transparency International in 2004, which evaluates countries based on perceptions of corruption rather than actual statistics, ranked Finland in first place as the country perceived around the world to be the least corrupt. Nonetheless, Finnish authorities are concerned about money laundering links to organized crime, as well as financial crimes arising from fraud or other criminal activities. Criminal proceeds laundered in Finland derive mainly from domestic criminal activity. Local narcotics-trafficking organizations as well as a small number of local organized crime groups control some of the money laundering proceeds.

Finland has four Free Zones and seven Free Warehouse areas. The four designated Free Zones are located in Hanko (Southern Customs District); Hamina and Lappeenranta (Eastern Customs District); and Turku (Western Customs District). The seven Free Warehouses are located in Helsinki (Southern Customs District); Naantali, Pori, Rauma, and Vaasa (Western Customs District); and Kemi and Oulu (Northern Customs District). In Finland, the duty-free free zone and warehouse licenses have, in most cases, been granted to municipalities or cities, but one or several commercial operators, approved by the customs districts, are usually in charge of warehousing operations within the area. The duty-free storage areas are available to both domestic and foreign-owned companies. The Community Customs Code has harmonized the free zone area regulations in the EU.

Finnish free trade zones often serve as transit points for shipments of good to and from Russia. Many goods originating in East Asia and destined for St. Petersburg or Moscow are transported on the trans-Siberian railway to the Lappeenranta Free Zone, where they are temporarily stored. These are mostly high-value goods. There are no indications that the free trade zones are being used in trade-based money launderings schemes or by the financiers of terrorism. There are no supervisory programs and/or due diligence procedures in place to monitor activities in the free trade zones.

In 1994, Finland enacted legislation criminalizing money laundering related to all serious crimes. The Act of Preventing and Clearing Money Laundering (Money Laundering Act), which passed in 1998, compels credit and financial institutions, investment and fund management companies, insurance brokers and insurance companies, real estate agents, pawn shops, betting services, casinos, and most non-bank financial institutions to report suspicious transactions. Management companies and custodians of mutual funds were added as covered entities in the Money Laundering Act in 1999. Apartment rental agencies, auditors, auctioneers, lawyers, accountants, and dealers in high value goods were added when amendments to the Money Laundering Act came into force in 2003. Also included are the businesses and professions that perform other payment transfers that are not referred to in the Credit Institutions Act, such as “hawala.” According to the Money Laundering Act, a covered party must identify customers, exercise due diligence, and report suspicious activity to the Money Laundering Clearing House (MLCH), Finland’s financial intelligence unit or FIU.

Amendments to the Penal Code came into force on April 1, 2003. The amendments include the differentiation of penalty provisions concerning money laundering and the traditional receiving offense in order to clarify the law where some actions could be punishable under both the receiving offense and money laundering penalty provisions, and to emphasize in legislation the criminality of money laundering and its relevance to serious organized crime. Prior to the amendments, the definition of money laundering was limited only to property gained through crime. The new amendments expand the definition to include negligence and the use or transmission of property gained through an offense, and its proceeds or property replacing such property. The amendments also bring under the law those who assist in activities of concealment or laundering. With the differentiation of money laundering from the traditional receiving offense, the receiving offense penal scale now corresponds to the basic penal scale of other economic offenses, and the money laundering penal scale is set to meet international standards, with sanctions of up to six years of imprisonment.

Money Laundering and Financial Crimes

Finland does not have any cross-border transaction reporting requirements. However, Finnish authorities have addressed the problem of the international transportation of illegal source currency and monetary instruments in the Customs Act.

The MLCH, established under the National Bureau of Investigation in March 1998, receives and investigates suspicious transaction reports (STRs) from covered reporting institutions. In 2003 the responsibilities of the MLCH were expanded to include the prevention of terrorist financing. The MLCH received 2,718 STRs in 2002, 2,716 STRs in 2003, and 4,132 STRs in 2004. Approximately four-fifths of the reports concern money laundering; the remainder consists mostly of entities designated on United States, European Union (EU), and/or UN suspected terrorist financing lists. A majority of STRs involve at least one foreign party. Nationals from 84 countries are mentioned in the reports. To some extent, this internationalization is due to the receipt of terrorist financing related STRs. Of the money laundering STRs, the most represented suspect nationalities are Finnish (48 percent), Russian (16.5 percent), Estonian (4.8 percent) and Swedish (1.6 percent).

Of all the reporting agencies, currency exchange companies are the most active in reporting suspicious transactions, accounting for 70 percent of all money laundering STRs. Other reporting entities include banks (19 percent), non-police national authorities such as Customs and the Frontier Guard (7 percent) and insurance companies (1 percent). Reports from the National Police account for approximately 0.6 percent of all STRs. The Act on Preventing and Clearing Money Laundering protects individuals that cooperate with law enforcement entities. Finland has not enacted secrecy laws that prevent disclosure of client and ownership information by financial services companies to bank supervisors and law enforcement authorities.

The MLCH has authority to initiate investigations before the basis of a pre-trial investigation has been established. Of the cases forwarded to law enforcement for pre-trial criminal investigation, the most common offenses were tax fraud (25 percent), narcotics offenses (13 percent), fraud (12 percent) and receiving offense (11 percent). Money laundering represents about 10 percent of all financial crimes in Finland. Financial crimes offenses have remained steady over the past three years (approximately 1,600 cases per year). Between 1994 and 2002, 93 people were arrested, of which 83 were convicted for money laundering.

Finnish authorities do not have national authority to permanently suspend transactions or forfeit assets independent of a judicial process. Although the authority to freeze assets rests with the National Bureau of Investigation, officials at the MLCH consult and coordinate with other branches of government, including the Ministry of Foreign Affairs, the Ministry of Interior, and the Ministry of Finance. The MLCH has the ability to freeze a transaction for up to five business days in order to determine the legitimacy of the funds. From January-November 2004 the MLCH issued 24 orders to freeze assets/suspend transactions. The total value of these transactions was approximately \$1.7 million. With these orders, the MLCH recovered \$630,000 of criminal proceeds. Most cases involved money laundering and financial crime. In 2003, the MLCH issued 16 orders to freeze assets/suspend transactions totaling approximately \$1.8 million, of which authorities recovered approximately \$1.5 million. The 2003 freeze/suspend orders show a significant increase from 2002 (\$900,000 frozen/suspended of which \$5,000 was recovered) and 2001 (\$720,000 frozen/suspended of which \$650,000 was recovered). According to the Penal Code, the proceeds of crime shall be given to the injured party. If a claim for compensation or restitution has not been filed, Finnish authorities can order forfeiture. With some exceptions, only the proceeds of a crime can be forfeited. Legitimate businesses can be seized if used to launder drug money or support terrorist activity. Finland has enacted laws for the sharing of seized narcotics assets, as well as the assets from other serious crimes, with other governments.

The Penal Code of Finland was amended at the end of 2002 with the addition of a new chapter on terrorism (Chapter 34 a). According to Section 5 of the amendment, a person who directly or indirectly

provides or collects funds in order to finance a terrorist act or who is aware that these funds shall finance a terrorist act, commits a punishable offense. Amendments to the Money Laundering Act came into force in the spring of 2003, bringing it in line with the Financial Action Task Force's (FATF) Special Recommendations on Terrorist Financing, the UN International Convention for the Suppression of the Financing of Terrorism, and the amendments to the EU Directive on Money Laundering. The amendments extend the system of money laundering prevention to include suspected terrorist financing.

Finland has national authority to freeze terrorist assets. The MLCH performs investigations on all individuals suspected of financing terrorist acts, including all individuals and entities on the UNSCR 1267 Sanctions Committee's consolidated list. To date, no Finns have been suspected of financing terrorism and no funds of foreign nationals suspected of terrorist financing have been located in Finland. In the event that funds are found, the assets could be frozen without undue delay for five business days. For the funds to remain frozen, a criminal investigation must be launched (either in Finland or abroad). The funds would remain frozen for the period of the investigation.

Finland has concluded numerous bilateral law enforcement cooperation agreements. Finland signed a tax treaty with the United States in September 1989, replacing a previous treaty signed in 1970. The current treaty has provisions to exchange information for investigative purposes. The MLCH may exchange information with other FIUs and with bodies engaged in criminal investigations, such as police services and public prosecutors. Although no Memorandum of Understanding (MOU) is required for this purpose under Finnish law, MOUs have been concluded with Belgium, Bulgaria, France, Latvia, Lithuania, Luxembourg, Poland, Spain, Switzerland, Thailand, Korea, Canada, Russia and Albania. The information exchanged may only be used for the prevention and clearing of money laundering transactions. Consequently, the information obtained may only be used as evidence with the approval of the MLCH.

Finland is party to the 1988 UN Drug Convention; the UN Convention against Transnational Organized Crime; the UN International Convention for the Suppression of the Financing of Terrorism; the Council of Europe Convention on Laundering, Search, Seizure and Confiscation of the Proceeds from Crime and the European Convention on Mutual Assistance in Criminal Matters. Finland has signed, but not yet ratified, the UN Convention against Corruption.

Finland is a member of the FATF and the Council of Europe. The MLCH is a member of the Egmont Group. Finland also co-operates with the EU, Europol, the UN, Interpol, the Baltic Sea Task Force, the Organization for Economic Co-operation and Development, and other international agencies designed to combat organized crime.

Finland should continue to enhance its anti-money laundering/counterterrorist financing regime. Finland should adopt reporting requirements for the cross-border movement of currency and financial instruments and should provide adequate supervision and oversight of its free trade zones.

France

France remains an attractive venue for money laundering because of its sizable economy, political stability, and sophisticated financial system. Common methods of laundering money in France include the use of bank deposits; foreign currency and gold bullion transactions; corporate transactions; and purchases of real estate, hotels, and works of art. A 2002 Parliamentary Report states that, increasingly, Russian and Italian organized crime networks are using the French Riviera to launder assets (or invest previously laundered assets) by buying up real estate, "a welcoming ground for foreign capital of criminal origin." The report estimates that between seven and 60 billion euros of dirty money have already been channeled through the Riviera.

The Government of France (GOF) first criminalized money laundering related to narcotics-trafficking in 1987 (Article L-627 of the Public Health Code). In 1988, the Customs Code was amended to incorporate financial dealings with money launderers as a crime. In 1996 the criminalization of money laundering was expanded to cover the proceeds of all crimes. In January 2004, the French Supreme Court judged that joint prosecution of individuals was possible on both money laundering charges and the underlying predicate offense. Prior to this judgment, the money laundering charge and the predicate offense were considered the same offense and could only be prosecuted as one offense.

In 1990, the obligation for financial institutions to combat money laundering came into effect with the adoption of the Monetary and Financial Code (MFC), and France's ratification of the 1988 UN Drug Convention. The 1996 amendment to the law also obligates insurance brokers to report suspicious transactions. In 1998, the covered parties were expanded to include non-financial professions (persons who carry out, verify or give advice on transactions involving the purchase, sale, conveyance or rental of real property). In 2001, the list of professions subject to suspicious transaction reporting requirements expanded to include legal representatives; casino managers; and persons customarily dealing in or organizing the sale of precious stones, precious materials, antiques, or works of art. Following the 2001 amendments, the law covers banks, moneychangers, public financial institutions, estate agents, insurance companies, investment firms, mutual insurers, casinos, notaries, and auctioneers and dealers in high-value goods. In 2004, the list was expanded again to include chartered accountants; statutory auditors; notaries; bailiffs; judicial trustees and liquidators; lawyers; judicial auctioneers and movable auction houses; groups, clubs, and companies organizing games of chance: lotteries, bets, sports and horse-racing forecasts; institutions/unions of pensions management and intermediaries entitled to handle securities. As a member of the European Union (EU), France is subject to EU money laundering directives, including the revised Directive 91/308/EEC on the prevention of the use of the financial system for the purpose of money laundering (Directive 2001/97/EC), that was enacted into domestic French legislation in 2004. The GOF has enacted legislation consistent with the Financial Action Task Force (FATF) Forty Recommendations.

Decree No. 2002-770 of May 3, 2002, addresses the functioning of France's Liaison Committee against the Laundering of the Proceeds of Crime. This committee is co-chaired by the French Financial Intelligence Unit (FIU), TRACFIN (the unit for Treatment of Intelligence and Action Against Clandestine Financial Circuits), and the Justice Ministry. It comprises representatives from reporting professions and institutions, regulators, and law enforcement authorities; its purpose is to supply professions required to report suspicious transactions with better information and to make proposals in order to improve the anti-money laundering system.

The Banking Commission supervises financial institutions and conducts regular audits of credit institutions, and the Insurance and Provident Institutions Supervision Commission reviews insurance brokers. The Financial Market Authority evolved from the merger of the Securities Exchange Commission and the Financial Markets Council, and monitors the reporting compliance of the stock exchange and other non-bank financial institutions.

TRACFIN is responsible for analyzing suspicious transaction reports (STRs) that are filed by French financial institutions and non-financial professions. TRACFIN is a part of FINATER, a group created within the French Ministry of the Economy, Finance, and Industry in September 2001, in order to gather information to fight terrorist financing. The French FIU may exchange information with foreign counterparts that observe similar rules regarding reciprocity and confidentiality of information. TRACFIN works closely with the Ministry of Interior's Central Office for Major Financial Crimes (OCRGDF), which is the main point of contact for Interpol and Europol in France.

TRACFIN received 3,598 STRs in 2001, 6,896 STRs in 2002, and 9,007 STRs in 2003. Approximately 83 percent of STRs are sent from the banking sector. A total of 226 cases were referred to the judicial authorities in 2001, which resulted in 58 convictions of money laundering; 291 cases

were referred in 2002, which resulted in 14 criminal prosecutions, and 308 cases were referred in 2003, which resulted in 55 preliminary investigations and 21 judicial procedures.

Two other types of reports are required to be filed with the FIU. A report must be filed with TRACFIN (no threshold limit), when the identity of the principal or beneficiary remains doubtful despite due diligence. In addition, a report must be filed in cases where transactions are carried out on behalf of a third party natural person or legal entity (including their subsidiaries or establishments) by a financial entity acting in the form, or on behalf, of a trust fund or any other asset management instrument, when legal or beneficial owners are not known. The reporting obligation can also be extended by decree to transactions carried out by financial entities, on their own behalf or on behalf of third parties, with natural or legal persons, including their subsidiaries or establishments, that are domiciled, registered, or established in any country or territory included on the FATF list of Non-Cooperative Countries or Territories (NCCT). Currently, a reporting decree exists concerning Nauru and Burma.

Since 1986, French counterterrorist legislation has provided for the prosecution of those involved in the financing of terrorism under the more severe offense of complicity in the act of terrorism. However, in order to strengthen this provision, the Act of November 15, 2001, introduced several new characterizations of offenses, specifically including the financing of terrorism. The offense of financing terrorist activities (art. 41-2-2 of the Penal Code) is defined according to the UN International Convention for the Suppression of the Financing of Terrorism and is subject to ten years' imprisonment and a fine of 228,600 euros. The Act also includes money laundering as an offense in connection with terrorist activity (article 421-1-6 Penal Code), punishable by ten years' imprisonment and a fine of 62,000 euros. In March 2004, the GOF passed a law that extends the scope of STR to terrorist financing.

An additional penalty of confiscation of the total assets of the terrorist offender has also been implemented. Accounts and financial assets can be frozen through both administrative and judicial measures. French authorities moved rapidly to freeze financial assets of organizations associated with al-Qaida and the Taliban, and took the initiative to put two groups on the UNSCR 1267 Sanctions Committee consolidated list. France takes actions against non-Taliban and non-al-Qaida-related groups in the context of the EU-wide "clearinghouse" procedure. Within the Group of Eight, which France chaired in 2003, France has sought to support and expand efforts targeting terrorist financing. Bilaterally, France has worked to improve the capabilities of its African partners in targeting terrorist financing. On the operational level, French law enforcement cooperation targeting terrorist financing continues to be good. The GOF also passed the PERBEN II Law, which took effect in January 2004. This new law will make it easier for France to arrest and extradite suspects and cooperate with other judicial authorities in the EU.

The United States and France have entered into a Mutual Legal Assistance Treaty (MLAT), which came into force in 2001. Through MLAT requests and by other means, the French have provided large amounts of data to the United States in connection with terrorist financing. TRACFIN is a member of the Egmont Group and is the Egmont Committee Chair of the newly created Operational Working Group. TRACFIN has information-sharing agreements with 27 FIUs, in Australia, Italy, the United States, Belgium, Monaco, Spain, the United Kingdom, Mexico, the Czech Republic, Portugal, Finland, Luxembourg, Cyprus, Brazil, Colombia, Greece, Guernsey, Panama, Argentina, Andorra, Switzerland, Russia, Lebanon, Ukraine, Guatemala, Korea, and Canada.

France is a member of the FATF and a Cooperating and Supporting Nation to the Caribbean Financial Action Task Force, as well as a Supporting Observer to the Financial Action Task Force of South America Against Money Laundering (GAFISUD). France is a party to the 1988 UN Drug Convention; the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime; the UN Convention against Transnational Organized Crime; and the UN International

Convention for the Suppression of the Financing of Terrorism. In December 2003, France signed, but has not yet ratified, the UN Convention against Corruption.

The Government of France has established a comprehensive anti-money laundering regime. France should continue its active participation in international organizations to combat the domestic and global threats of money laundering and terrorist financing.

Gabon

Gabon is not a regional financial center. The Bank of Central African States (BEAC) supervises Gabon's banking system. BEAC is a regional Central Bank that serves six countries of Central Africa. According to a 2003 letter from the Government of Gabon (GOG) to the UN Counter Terrorism Committee, in matters concerning suspicious financial transactions, banks are bound by the instructions of the Ministry of Economic and Financial Affairs. The actual monitoring of financial transactions is conducted by the Economic Intervention Service that harmonizes the regulation of currency exchanges in the member States of the Central African Economic and Monetary Community (CEMAC).

On November 20, 2002, the BEAC Board of Directors approved draft anti-money laundering and counterterrorist financing regulations that would apply to banks, exchange houses, stock brokerages, casinos, insurance companies, and intermediaries such as lawyers and accountants in all six member countries. The BEAC regulations treat money laundering and terrorist financing as criminal offenses. The regulations would also require banks to record and report the identity of customers engaging in large transactions. The threshold for reporting large transactions would be set at a later date by the CEMAC Ministerial Committee at levels appropriate to each country's economic situation. Financial institutions would have to maintain records of large transactions for five years.

The regulations would require financial institutions to report suspicious transactions. Under the regulations, each country would establish a National Agency for Financial Investigation (NAFI) responsible for collecting suspicious transaction reports. The regulations would allow bankers and other individuals responsible for submitting suspicious transaction reports to be protected by law with respect to their cooperation with law enforcement entities. If a NAFI investigation were to confirm suspicions of terrorist financing, the Gabonese government could freeze and seize the related assets. The NAFI could cooperate with counterpart agencies in other countries.

Gabon signed the 1988 UN Drug Convention in 1989, but has never ratified it. It signed the UN International Convention for the Suppression of the Financing of Terrorism in 2000, but has not yet ratified it. Reportedly, Gabon plans to ratify the latter convention in 2005. Gabon acceded to the UN Convention against Transnational Organized Crime in December 2004.

Gabon should work with the Bank of Central African States (BEAC) to establish a viable anti-money laundering and counterterrorist financing regime. Gabon should become a party to both the 1988 UN Drug Convention and the UN International Convention for the Suppression of the Financing of Terrorism.

The Gambia

The Gambia is not a regional financial center, although it is a regional re-export center. Goods and capital are freely and legally traded in the Gambia, and, as is the case in other re-export centers, smuggling of goods occurs. However, the Customs authorities in The Gambia, with those in Senegal, are working out a scheme to curb smuggling along their shared border.

In 2003, the Government of The Gambia (GOTG) passed the Money Laundering Act (the Act). The Act states that money laundering is a criminal offense and establishes narcotics-trafficking as well as

blackmail, counterfeiting, extortion, false accounting, forgery, fraud, illegal deposit taking, robbery, terrorism, theft and insider trading as predicate offenses. Furthermore, the law requires banks and other financial institutions to know, record, and report the identity of clients engaging in significant and/or suspicious transactions. Even though individual banks may have their own requirements to keep documents longer, the law requires them to maintain records for at least six years. The Act also empowers the GOTG to identify and freeze assets of a person suspected of committing a money laundering offense.

The Gambia is a member of the Economic Community of West African States (ECOWAS) Intergovernmental Action Group against Money Laundering (GIABA), which was created in 2000 to improve cooperation in the fight against money laundering among ECOWAS member states. The GIABA is working on a law to create financial intelligence units in each of the eight West African Economic Monetary Union (WAEMU) countries so that they will be able to share information more effectively.

Banks in The Gambia are supervised by the Central Bank. The Central Bank receives weekly activity reports from all in-country financial institutions, and these reports must include information on any suspicious transactions. Banks and other financial institutions are required to know, record, and report the identities of customers engaging in transactions over the equivalent of \$10,000 for individuals and \$40,000 for institutions. Central Bank officials perform on-site examinations of all banks and trust companies operating in The Gambia on a yearly basis. If necessary, Central Bank officials can examine a bank or trust company more than once a year.

The Central Bank has circulated the list of terrorists designated by the USG under E.O. 13224 among Gambian banks and other financial institutions. There have been no arrests and/or prosecutions for money laundering or terrorist financing since January 2003. However, in March 2004 politician and former Majority Leader of the National Assembly Baba Jobe was sentenced to nearly 10 years in jail for failing to pay taxes and duties to the Gambian Customs and Ports Authority and for other economic crimes. In July 2004, the GOTG froze Jobe's assets in compliance with UN Security Council Resolution 1532 on Liberia, which listed Jobe among the people accused of complicity in international arms trafficking and the trade in "conflict" diamonds, in violation of UN sanctions.

The Criminal Intelligence Unit of The Gambia Police Force works in liaison with the Non-Governmental Organization Affairs Agency to verify the status of NGOs and their sources of funding.

The Gambia is a party to the 1988 UN Drug Convention and the UN Convention against Transnational Organized Crime. The Gambia has not signed the UN International Convention for the Suppression of the Financing of Terrorism.

The Government of the Gambia should examine its re-export sector to determine whether or not it is being used to launder criminal proceeds. The Gambia also should expand its anti-money laundering legislation to include a comprehensive range of predicate offenses and should take steps to develop a financial intelligence unit. If it has not already done so, the Gambia should specifically criminalize terrorist financing and should become a party to the UN International Convention for the Suppression of the Financing of Terrorism.

Georgia

Georgia is not considered an important regional financial center. Prior to 2003, the international community was concerned regarding the Government of Georgia's (GOG) lack of an anti-money laundering regime. In Georgia, the sources of laundered money are primarily corruption, financial crimes, and smuggling, rather than narcotics-related proceeds. Also prior to 2003, smuggling of goods across international borders was one of the country's most serious problems, with thriving black markets in Ergneti (near the uncontrolled territory of South Ossetia), Red Bridge (on the border with

Azerbaijan), and Abkhazia (breakaway region bordering Russia on the Black Sea coast). At the time, law enforcement officials provided protection to smugglers, instead of prosecuting them, helping to maintain the shadow economy that made up to 90 percent of Georgia's economic activity (based on an estimate by the Transnational Crime and Corruption Center). The new government that came into power in November 2003 placed a stronger emphasis on financial crimes and terrorist financing.

On June 6, 2003, the Georgian Parliament adopted the Anti-Money Laundering Law (AML Law) on Facilitating the Prevention of Legalization of Illicit Income. A counterterrorist financing article is also included in the AML Law. The Georgian Ministry of Justice and the Financial Monitoring Service have prepared draft amendments to the Criminal Code and Criminal Procedure Code of Georgia. The drafts have been sent to the Parliament of Georgia and are expected to be finalized by the end of 2005. A draft amendment of Article 194 of the Criminal Code introduces criminal liability of legal persons.

New draft amendments to the AML Law are currently undergoing hearings in several committees within the Parliament of Georgia. The most significant amendment requires Georgian banking and insurance institutions—holding senior management accountable—that reinvest or reinsure their assets with larger western institutions to conduct background checks on their prospective partners to ensure they have not engaged in legalizing illicit funds. One provision stipulates that persons with a criminal record are not permitted to hold prominent positions within the financial institutions or be significant shareholders of the entities.

In accordance with the Georgian Presidential Decree Number 354, Article 74 of the Law on the National Bank of Georgia and the AML Law, the Financial Monitoring Service (FMS) was created as an independent body within the National Bank of Georgia on July 16, 2003. The FMS became fully operational as the Georgian Financial Intelligence Unit (FIU) on January 1, 2004. Based on recommendations of the Council of Europe Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL), the FMS developed a draft of changes and amendments to the AML Law. The Parliament of Georgia adopted the new changes and amendments on February 25, 2004. The most significant change affects Article 5, which requires all covered entities to report cash and non-cash transactions where amounts exceed 30,000 Georgian lari (approximately \$16,900). The change to the law makes Article 5 operational, starting on September 1, 2004. Prior to this change only suspicious transactions (regardless of the amount) had to be reported to the FMS. New draft amendments to the AML Law will expand the covered entities, to include money remitters and pawnshops.

Covered entities which presently must report to the FMS include commercial banks; currency exchange bureaus; non-bank depository institutions; brokerage companies; securities registrars; insurance companies; founders of non-state pension schemes; casinos; entities organizing lotteries and other commercial games; entities engaged in activities related to precious metals, precious stones, antiquities, and other high-value goods; notaries; entities extending grants and charity assistance; customs authorities; and postal organizations. The FMS has received 47 suspicious transaction reports (STRs) from covered entities since the required start date of January 2004, and 4,876 currency transaction reports (CTRs) since the required start date of September 2004.

The FMS is tasked with analyzing cases of money laundering and terrorism financing, and forwarding the necessary information to authorized agencies. The FMS works closely with the General Prosecutor's Office of Georgia, Ministry of Police and Public Safety, the National Central Bureau of Interpol, and the State Department of Statistics. The FMS works with the Supervisory Authorities and monitors entities on a regular basis to increase understanding and cooperation with reporting requirements. The FMS also provides guidelines, methodological examples, recommendations, and specialized training to other government agencies, financial institutions and other monitored entities to increase their abilities to identify and monitor suspicious activity.

The new Administration has launched several investigations relating to financial misdeeds undertaken by former members of the Georgian government and has made an effort to increase law enforcement effectiveness by restructuring the agencies, providing better equipment and paying higher salaries. Economic, tax, and customs crimes have been consolidated into the Financial Police Unit under the Georgian Ministry of Finance. Border controls were strengthened, and the Ergneti market was closed. Law enforcement officials conducted several successful antismuggling operations in the other black market areas and continue to work to decrease the shadow economy.

In 2004, the National Money Laundering Prosecution Unit Special Service on Prevention of Legalization of Illicit Income was established within the Prosecutor General's Office of Georgia. The National Money Laundering Prosecution Unit is comprised of a special task force of investigators and prosecutors. It collects, investigates, and, where appropriate, prosecutes matters arising from receipt of STRs from the FMS. It also investigates and, where appropriate, prosecutes violations of the AML Law which may come to its attention by referral from law enforcement or other agencies of the government and/or because of its own in-house assessment of information suggesting violations of the AML Law or its predicate offenses. In July 2004, based on information provided by the FMS, the Special Service on Prevention of Legalization of Illicit Income opened its first criminal money laundering case, the investigation and arrest of a local bank president and other bank officers for laundering one billion dollars from Russia through Georgia to the U.S. and Caribbean islands.

Until the recent changes in the Georgian leadership, GOG officials perceived asset forfeiture as unconstitutional; therefore, legislators did not include asset forfeiture provisions in their Penal and Criminal Procedure Codes. This interpretation was based on a July 1997 landmark ruling of the Constitutional Court of Georgia to remove the confiscation clause as a form of punishment from the Criminal Code of Georgia. Confiscation as a punitive measure was deemed unconstitutional because it also applied to proceeds that might derive from an individual's legal activity, and was used in Soviet times (according to a 1961 law) to leverage punishment for any type of crime. Soviet legislation also included "special confiscation," which was used to seize assets obtained from illegal proceeds. Instead of strictly adhering to the Court's decision and removing only confiscation as a punitive measure, legislators removed all forms of confiscation from the law. From 1997 through 2003, the GOG made no serious attempts to amend the legislation or to reexamine the constitutionality of the confiscation clause. The new leadership has emphasized revising the Penal and Criminal Procedure Codes of Georgia.

The draft amendments to the Criminal Code introduce forfeiture provisions concerning: objects and/or instruments of crime, items intended for the commission of a crime, property acquired through criminal means (all items, including non-material property and legal acts/documents which grant rights over the property), and proceeds derived from property acquired through criminal means, or property of equivalent value.

Draft amendments to the Criminal Procedure Code reword the definition of "procedural confiscation" to read "forfeiture of the property, manufacturing, use, carrying, storing, transfer, transportation, and disposal of which represents crime according to the Criminal Code of Georgia, and which is executed on the basis of the court's resolution, regardless of the final decision made on the case." Another draft amendment to the Criminal Procedure Code addresses the procedure for the seizure of property. According to the draft, "for the purpose of securing a suit, procedural confiscation, measures of criminal coercion, as well as possible forfeiture of the property, the court may seize property, including bank accounts of the suspect, accused, or person on trial, and the person bearing material responsibility for his actions, provided that there are data to suppose that they may conceal or sell the property, or the property is derived through criminal means."

The draft amendments to the Criminal Code include draft Article 331 that criminalizes terrorist financing. The draft amendments to the Criminal Procedure Code include the authority for the head of

the FMS to apply to the court to seize property, prior to initiating a criminal case, if there is sufficient information to suspect that the property or person may be used for terrorist financing and/or the property belongs to terrorist or persons supporting terrorism. The FMS has issued ordinances on terrorist watch lists and the Financial Action Task Force's (FATF's) designated non-cooperative territories.

The changes and amendments to the AML Law have expanded the role of the FMS in international cooperation. Although a memorandum of understanding (MOU) is not mandatory to exchange information with other FIUs, the FMS has signed agreements with Liechtenstein, Estonia, the Czech Republic, Serbia, and Ukraine. In addition to the Egmont Group members, the FMS has cooperated with the International Monetary Fund (IMF), World Bank, the FATF, MONEYVAL, and the United States Treasury and Justice Departments.

Georgia is a member of MONEYVAL, and, in June 2004, the FMS became a member of the Egmont Group. The GOG is a party to the 1988 UN Drug Convention and the UN International Convention for the Suppression of the Financing of Terrorism, and on February 17, 2004, ratified the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime. In December 2000, the GOG signed, but has not yet ratified, the UN Convention against Transnational Organized Crime.

The Government of Georgia has taken important steps toward the development of a sound anti-money laundering regime. Georgia should enact the pending amendments to its anti-money laundering legislation. Georgia should also take whatever additional action is necessary to bring its anti-money laundering/counterterrorist financing regime into accordance with international standards. Georgia should specifically criminalize the financing and support of terrorism and terrorists.

Germany

With one of the largest financial centers in Europe, German authorities are aware that the country's financial system could be used for money laundering purposes. Russian organized crime groups, the Italian Mafia, and Albanian and Kurdish narcotics-trafficking groups launder money through German banks, currency exchange houses, business investments, and real estate. No significant market for smuggled goods exists in the country.

In 2002, the Government of Germany (GOG) enacted a number of laws to improve authorities' ability to combat money laundering and the financing of terrorism. The Money Laundering Act, amended by the Act on the Improvement of the Suppression of Money Laundering and Combating the Financing of Terrorism of August 8, 2002, criminalizes money laundering related to narcotics-trafficking, fraud, forgery, embezzlement, and membership in a terrorist organization. It also imposes due diligence and reporting requirements on banks and financial institutions, and requires financial institutions to obtain customer identification for transactions conducted in cash or precious metals exceeding 15,000 euros. Germany has had this requirement for some time (in DM), but the information was only used for statistical purposes; only in recent years has the information been used in money laundering investigations. The legislation also calls for stiffer background checks for owners of financial institutions and tighter rules for credit card companies. Banks must report suspected money laundering to the financial intelligence unit within the Federal Criminal Police (Bundeskriminalamt or BKA), as well as to the State Attorney (Staatsanwaltschaft), who can order a freeze of the account in question. Germany's legislation has fully incorporated the Financial Action Task Force (FATF) Forty Recommendations and its Special Recommendations on Terrorist Financing, including coverage of questionable actions carried out via the Internet.

The amendments described above also brought German laws into line with the first and second European Union money laundering directives (Directive 91/308/EEC on The Prevention of The Use of

The Financial System for The Purpose of Money Laundering, as revised by Directive 2001/97/EC). These measures mandate that member states standardize and expand suspicious activity reporting requirements to include information from notaries, accountants, tax consultants, casinos, luxury item retailers, and attorneys. Since 1998, the GOG has licensed and supervised money transmitters, and has issued anti-money laundering guidelines to the industry. Germany also has a law—entered into force in 1998—that gives border officials the authority to compel individuals to declare imported currency above a certain threshold (currently 15,000 euros).

In May 2002, the German banking, securities, and insurance industry regulators were merged into a single financial sector regulator known as the Federal Financial Supervisory Authority (BaFIN). The anti-money laundering legislation requires the BaFIN to compile a centralized register of all bank accounts in Germany, including 300 million deposit accounts. As a result, on April 1, 2003, the BaFIN established a central database, which has electronic access to all key account data held by banks in Germany.

Banks cooperate with authorities and use computer-aided systems to analyze their customers and their financial dealings to identify suspicious activity. This system, which provides regulators with automated access to banks' account records, went into operation in November 2003. In the first seven weeks after its launch, the system processed 2,200 inquiries and provided information for a total of more than 9,600 inquiries. The BaFIN also commissioned 23 special bank audits in 2003 and opened a total of 201 new cases against unauthorized fund transfers and/or foreign currency transactions in 2003.

Also in 2002, Germany established a single, centralized, federal Financial Intelligence Unit (FIU) within the Federal Criminal Police. The FIU functions as an administrative unit and is staffed with financial market supervision, customs, and legal experts. The FIU is responsible for developing a central database for analyzing cases and responding to reports of suspicious transactions. As with other crimes, actual enforcement under the German federal system is carried out at the state (sub-federal) level. Each state has a joint customs/police/financial investigations unit (GFG), which works closely with the federal FIU. The number of money laundering convictions totaled 128 in 2003. U.S. authorities have conducted joint investigations with GFGs on a number of transnational cases.

Regulations for freezing assets are in place and BaFIN's new system allows for immediate freezing of financial assets. The GOG also has established procedures to enforce its asset seizure and forfeiture law. In cases where law enforcement authorities seize assets for evidentiary purposes, German law requires a direct link to the crime before seizures are allowed. Proceeds from asset seizures and forfeitures are paid into the government treasury. German authorities cooperate with U.S. authorities to trace and seize assets to the full extent that German law allows. The GOG investigates leads from other countries. However, German law does not allow for sharing forfeited assets with other countries.

In 2002, the GOG added terrorism and terrorist financing as a predicate offense for money laundering, as defined by Section 261 of the Federal Criminal Code. A 2002 amendment of the Criminal Code also allows for prosecution of members of terrorist organizations based outside of Germany. Previously, German authorities could only prosecute a member of a foreign-based terrorist organization if that group had some organized presence within Germany.

The GOG moved quickly after September 11, 2001, to identify and correct weaknesses in Germany's laws that permitted terrorists to live and study in Germany prior to that date. The first reform package closes loopholes in German law that permitted members of foreign terrorist organizations to raise money in Germany, e.g., through charitable organizations, and extremists to advocate violence in the name of religion. Germany has stepped up its legislative and law enforcement efforts to prevent the misuse of charitable entities. Germany has used its Law on Associations (Vereinsgesetz) to ban by administrative action extremist associations that threaten the constitutional order.

The second reform package, which went into effect January 1, 2002, enhances the capabilities of federal law enforcement agencies, and improves the ability of intelligence and law enforcement authorities to coordinate their efforts and to share information on suspected terrorists. The new law provides Germany's internal intelligence service with access to information from banks and financial institutions, postal service providers, airlines, and telecommunication and Internet service providers.

Germany is an active participant in UN and EU processes to monitor and freeze the assets of terrorists, and possesses the regulatory and legislative framework to identify and freeze rapidly the assets of those designated by the UN, the EU, and/or German authorities. A November 2003 amendment to the Banking Act creates a broad legal basis for the BaFin to order freezing of assets of suspected terrorists who are EU residents. The EU Council continually updates, reviews, and issues revised lists, and Germany adheres to these lists and ensures their circulation to financial institutions. Germany and several other EU member states have taken the view that the EU Council Common Position 2001/931/CSFP requires at a minimum a criminal investigation to establish a sufficient legal basis for freezes under the EU "Clearinghouse" process.

The GOG has responded quickly to freeze over 30 accounts of entities associated with terrorists. After September 11, 2001, Germany froze many millions of euros of Taliban-era Afghan assets, but these accounts have been unfrozen and made available to the new Government of Afghanistan. The release of assets does not include accounts frozen under the administrative banning of extremist organizations under the Law on Associations.

Informal money transfer schemes, such as "hawala," are considered banking activities. Accordingly, German authorities require banking licenses for money transfer services, allowing them to prosecute unlicensed operations and to maintain close surveillance over authorized transfer agents. The BaFin has investigated a total of 2,345 cases of unauthorized financial services since 2003.

A new immigration law that went into effect in January 2005 complements counterterrorism laws. It contains provisions designed to facilitate deporting foreigners who support terrorist organizations. Furthermore, a third counterterrorism package is currently under discussion within the government.

Germany continues to be an active partner in the fight against money laundering and participates actively in a number of international fora. The FIU exchanges information with its counterparts in other countries. The GOG exchanges information with the United States through bilateral law enforcement agreements and other informal mechanisms. German law enforcement authorities also cooperate closely at the EU level, such as through Europol. Germany also has Mutual Legal Assistance Treaties (MLATs) with numerous countries. Germany and the United States signed a MLAT in October 2003. The German Bundestag is expected to ratify the new MLAT in 2005. The MLAT has also been sent to the U.S. Senate for its advice and consent. In addition, the U.S.-EU Agreements on Mutual Legal Assistance and Extradition are expected to improve further U.S.-German legal cooperation. The U.S.-German implementing instrument is currently under negotiation.

Germany is a member of the FATF, the EU, the Council of Europe, and in 2003 became a member of the Egmont Group. Germany is a party to the 1988 UN Drug Convention and the Council of Europe Convention on Laundering, Search, Seizure and Confiscation of the Proceeds from Crime. Germany signed, but has not yet ratified, the UN Convention against Transnational Organized Crime and the UN Convention against Corruption. After signing the UN International Convention for the Suppression of the Financing of Terrorism in 2000, Germany ratified the instrument, effective July 17, 2004.

Since 2001, the Government of Germany has enacted legislation to strengthen its anti-money laundering and counterterrorist financing regime with the support of the German public. The Government of Germany's new anti-money laundering laws and its ratification of international instruments underline Germany's commitment to combat money laundering and to cooperate with the

international community. Information exchange with the U.S. and other countries is likely to increase as the FIU becomes more established. Germany should continue to enhance its anti-money laundering regime and continue its active participation in international fora.

Ghana

Ghana is not a regional financial center, although the government is promoting efforts to model Ghana's financial system on that of the regional financial hub in Mauritius. The government has developed new laws to stimulate financial sector growth, including the revision of the banking law to strengthen the operational independence of the Central Bank (Bank of Ghana). The Bank of Ghana has imposed higher capital requirements to increase competition and force consolidation. Due to continuing turmoil in the region, Ghana's financial sector is likely to become more important regionally as it develops.

Ghana has designated two areas as free trade zone areas and also licenses factories outside the free zone area as free zone companies. Free-zone companies export at least 70 percent of their output. Most of the companies produce garment and processed foods. The Ghana Free Zone Board and the immigration and customs authorities monitor these companies. Immigration and customs officials do not suspect that trade-based money laundering schemes are a major problem in the free trade zones.

The banking sector lacks a strong regulatory framework to prevent money laundering and other suspicious transactions, although it is sensitized to the importance of such a framework. The police suspect that non-bank financial institutions, such as foreign exchange bureaus, are used to launder the proceeds of narcotics-trafficking. They also allege that donations to religious institutions have been used as a vehicle to launder money. The number of "advanced fee" scam letters that originate in Ghana has increased dramatically, as have other related financial crimes, such as use of stolen credit and ATM cards. The informal economy makes up approximately 45 percent of the total Ghanaian economy, according to World Bank estimates. Only a small percentage of the informal economy, however, relies on the banking sector. Ghana's relatively low tariffs do not encourage smuggling. The lack of government resources, however, makes both the informal economy and smuggling difficult to track with accuracy.

Ghana has criminalized money laundering related to narcotics-trafficking and other serious crimes. The Narcotic Drug Law of 1990 provides for the forfeiture of assets upon conviction of a money laundering offense. Law enforcement can compel disclosure of bank records for drug-related offenses, and bank officials are given protection from liability when they cooperate with law enforcement investigations. Local banks are not required to report suspicious transactions, but are required by the Central Bank to report their 20 largest deposits and 20 largest withdrawals on a weekly basis. The Central Bank has circulated the list of individuals and entities on the UNSCR 1267 Sanctions Committee's consolidated list to local banks, but no assets have been identified. Ghana has cross-border currency reporting requirements. In December 2001, the Bank of Ghana began drafting money laundering legislation designed to increase the government's financial oversight capabilities. As of January 2005, the bill had still not been submitted to Parliament and is still under review. The Government of Ghana made no arrests or prosecutions related to money laundering in 2004.

Ghana participated in the formation of the Inter-Governmental Action Group Against Money Laundering (GIABA) at the December 2001 meeting of the Economic Community of West African States in Dakar. Ghana also hosted the 2002 conference of the West African Joint Operation (WAJO), which promotes regional law enforcement cooperation against narcotics-trafficking, terrorism, and money laundering.

Domestic security agencies cooperate in the fight against terrorism but need assistance. Ghana is a party to all twelve UN conventions on terrorism, including the UN International Convention for the

Suppression of the Financing of Terrorism. Ghana is a party to the 1988 UN Drug Convention. Ghana has endorsed the Basel Committee's "Core Principles for Effective Banking Supervision." Ghana has bilateral agreements for the exchange of money laundering-related information with the United Kingdom, Germany, Brazil, and Italy.

The Government of Ghana should pass the anti-money laundering legislation that has been under review for several years, and take practical steps to develop an anti-money laundering regime in accordance with international standards. Ghana should also become a party to the UN Convention against Transnational Organized Crime.

Gibraltar

Gibraltar is a largely self-governing overseas territory of the United Kingdom (UK), which assumes responsibility for Gibraltar's defense and international affairs. As part of the European Union (EU), Gibraltar is required to implement all relevant EU directives, including those relating to anti-money laundering.

The Drug Offenses Ordinance (DOO) of 1995 and Criminal Justice Ordinance of 1995 criminalize money laundering related to all crimes, and mandate reporting of suspicious transactions by any person who becomes concerned about the possibility of money laundering. The DOO covers such entities as banks, mutual savings companies, insurance companies, financial consultants, postal services, exchange bureaus, attorneys, accountants, financial regulatory agencies, unions, casinos, charities, lotteries, car dealerships, yacht brokers, company formation agents, dealers in gold bullion, and political parties.

Gibraltar was one of the first jurisdictions to introduce and implement money laundering legislation that covered all crimes. The Gibraltar Criminal Justice Ordinance to Combat Money Laundering, which related to all crimes, entered into effect in 1996. Comprehensive anti-money laundering Guidance Notes (which have the force of law) were also issued to clarify the obligations of Gibraltar's financial service providers.

The Financial Services Commission (FSC) is responsible for regulating and supervising Gibraltar's financial services industry. It is required by statute to match UK supervisory standards. Both onshore and offshore banks are subject to the same legal and supervisory requirements. Gibraltar has 18 banks, ten of which are incorporated in Gibraltar, and all except one are subsidiaries of major international financial institutions. The FSC also licenses and regulates the activities of trust and company management services, insurance companies, and collective investment schemes. Internet gaming is permitted by the Government of Gibraltar (GOG), and is subject to a licensing regime. Gibraltar has guidelines for correspondent banking, politically exposed persons, bearer securities, and "know your customer" procedures, and has implemented the FATF Special Recommendations on Terrorist Financing.

In 1996, Gibraltar established the Gibraltar Coordinating Center for Criminal Intelligence and Drugs (GCID) to receive, analyze, and disseminate information on financial disclosures filed by institutions covered by the provisions of Gibraltar's anti-money laundering legislation. The GCID serves as Gibraltar's Financial Intelligence Unit (FIU) and is a sub-unit of the Gibraltar Criminal Intelligence Department. The GCID consists mainly of police and customs officers but is independent of law enforcement.

In 2003, the GOG adopted and implemented the European Union Money Laundering Directive 91/308/EEC on the Prevention of the Use of the Financial System for the Purpose of Money Laundering. The GOG has implemented the 1988 UN Drug Convention pursuant to its Schengen obligations. However, the Convention has not yet been extended to Gibraltar by the United Kingdom. The Mutual Legal Assistance Treaty between the United States and the United Kingdom also has not

been extended to Gibraltar. However, application of a 1988 U.S.-UK agreement concerning the investigation of drug-trafficking offenses and the seizure and forfeiture of proceeds and instrumentalities of drug-trafficking was extended to Gibraltar in 1992. Also, the DOO of 1995 provides for mutual legal assistance with foreign jurisdictions on matters related to narcotics-trafficking and related proceeds. Gibraltar has passed legislation as part of the EU decision on its participation in certain parts of the Schengen arrangements, to update mutual legal assistance arrangements with the EU and Council of Europe partners. Gibraltar is a member of the Offshore Group of Banking Supervisors (OGBS) and, in 2004, the GCID became a member of the Egmont Group.

The Government of Gibraltar should continue its efforts to implement a comprehensive anti-money laundering regime capable of thwarting terrorist financing. If it has not already done so, Gibraltar should criminalize terrorist financing and should put in place reporting requirements for cross-border currency movements.

Greece

While not a major financial center, Greece is vulnerable to money laundering related to narcotics-trafficking, prostitution, contraband cigarette smuggling, and illicit gambling activities conducted by criminal organizations originating in former Soviet constituent countries, as well as in Albania, Bulgaria, and other Balkan countries. Money laundering in Greece is controlled by organized local criminal elements associated with narcotics-trafficking, and narcotics are the primary source of laundered funds. Most of the funds are not laundered through the banking system. Rather, they are most commonly invested in real estate, hotels, and consumer goods such as automobiles. Capital disclosure requirements for prospective foreign investors are weak. As a result, Greece's five private and two state-owned casinos are susceptible to money laundering. The cross-border movement of illicit currency and monetary instruments is a continuing problem. Greece is not considered an offshore financial center, and there are no offshore financial institutions or international business companies operating within Greece. Senior Government of Greece (GOG) officials are not known to engage in or facilitate money laundering. Currency transactions involving international narcotics-trafficking proceeds are not believed to include significant amounts of U.S. currency.

The GOG criminalizes money laundering derived from all crimes in the 1995 Law 2331/1995. That law, "Prevention of and Combating the Legalization of Income Derived from Criminal Activities," imposes a penalty for money laundering of up to ten years in prison and confiscation of the criminally derived assets. The law also requires that banks and non-bank financial institutions file suspicious transaction reports (STRs). Legislation passed in March 2001 targets organized crime by making money laundering a criminal offense when the property holdings being laundered are obtained through criminal activity or cooperation in criminal activity. Money laundering became an offense in Greece under Presidential Decree 2181/93.

In 2003 Greece enacted legislation (Law 3148) that incorporates European Union (EU) provisions in directives dealing with the operation of credit institutions and the operation and supervision of electronic money transfers. Under this legislation, the Bank of Greece has direct scrutiny and control over transactions by credit institutions and entities involved in providing services for fund transfers. The Bank of Greece issues operating licenses after a thorough check of the institutions, their management, and their capacity to ensure the transparency of transactions.

Law 3259/August 2004 allows individuals and legal entities that pay taxes in Greece to repatriate capital from any bank account held outside Greece by paying a three percent tax on the transferred funds within six months. The Bank of Greece, the nation's Central Bank, has issued a circular to financial institutions that receive repatriated funds, instructing them on how to scrutinize the transfers

Money Laundering and Financial Crimes

for possible money laundering. The Ministry of Economy and Finance has issued detailed instructions on the documentation and auditing procedures required for repatriating capital.

The Bank of Greece (through its Banking Supervision Department), the Ministry of National Economy and Finance (which supervises the Capital Market Commission), and the Ministry of Development (through its Directorate of Insurance Companies) supervise and closely monitor credit and financial institutions. Supervision includes the issuance of guidelines and circulars, as well as on-site examinations aimed at checking compliance with anti-money laundering legislation. Supervised institutions must send to their competent authority a description of the internal control and communications procedures they have implemented to prevent money laundering. In addition, banks must undergo internal audits. Bureaux de change are required to send to the Bank of Greece a monthly report on their daily purchases and sales of foreign currency.

Under Decree 2181/93, banks in Greece must demand customer identification information when opening an account or conducting transactions that exceed 15,000 euros. If there is suspicion of illegal activities, banks can take reasonable measures to gather more information on the identification of the person. Greek citizens must provide a tax registration number if they conduct foreign currency exchanges of 1,000 euros or more, and proof of compliance with tax laws in order to conduct exchanges of 10,000 euros or more. Banks and financial institutions are required to maintain adequate records and supporting documents for at least five years after ending a relationship with a customer, or in the case of occasional transactions, for five years after the date of the transaction.

Every bank and credit institution is required by law to appoint an officer to whom all other bank officers and employees must report any transaction they consider suspicious. Reporting obligations also apply to government employees involved in auditing, including employees of the Bank of Greece, the Ministry of Economy and Finance, and the Capital Markets Commission. Reporting individuals are required to furnish all relevant information to the prosecuting authorities. Reporting individuals are protected by law.

Greece has adopted banker negligence laws under which individual bankers may be held liable if their institutions launder money. Banks and credit institutions are subject to heavy fines if they breach their obligations to report instances of money laundering; bank officers are subject to fines and a prison term of up to two years. There have been no objections from banking and political groups to the GOG's policies and laws on money laundering.

All persons entering or leaving Greece must declare to the authorities any amount they are carrying over 2,000 euros. Reportedly, however, cross-border currency reporting requirements are not uniformly enforced at all border checkpoints.

Law 2331/1995 establishes the Competent Committee (CC) to receive and analyze STRs and to function as Greece's Financial Intelligence Unit (FIU). The CC is chaired by a senior judge and includes representatives from the Bank of Greece, the nation's Central Bank; various government ministries; and the stock exchange. If the CC believes that an STR warrants further investigation, it forwards the STR to the Financial Crimes Enforcement Unit, a multi-agency group that functions as the CC's investigative arm. In 2004, the Financial Crimes Enforcement Unit was renamed the Special Control Directorate (YPEE) and placed under the direct supervision of the Ministry of Economy and Finance. The CC is also responsible for preparing money laundering cases on behalf of the Public Prosecutor's Office.

There have been several arrests for money laundering since January 2002. These involved the Greek owners (and their spouses) of vessels transporting cocaine from Colombia and other Western Hemisphere countries. The guilty parties received five-year sentences.

With regard to the freezing of accounts and assets, the GOG is preparing draft legislation to harmonize its laws with relevant legislation of the EU and other international organizations. The new law will

incorporate elements of the EU Framework Decision on the freezing of funds and other financial assets and the EU Council regulation on combating the financing of terrorism. The basic law on money laundering, Law 2331/1995, will be amended and supplemented accordingly. YPEE has established a mechanism for identifying, tracing, freezing, seizing, and forfeiting assets of narcotics-related and other serious crimes; the proceeds are turned over to the GOG. According to the 1995 law, all property and assets used in connection with criminal activities is seized and confiscated by the GOG following a guilty verdict. Legitimate businesses can be seized if used to launder drug money. The GOG has not enacted laws for sharing seized narcotics-related assets with other governments.

The Ministry of Justice unveiled legislation on combating terrorism, organized crime, money laundering, and corruption in March 2001; Parliament passed the legislation in July 2002. Under a new counterterrorism law (Law 3251/July 2004), anyone who provides financial support to a terrorist organization faces imprisonment of up to ten years. If a private legal entity is implicated in terrorist financing, it faces fines of between 20,000 and 3 million euros, closure for a period of two months to two years, and ineligibility for state subsidies. The new law incorporates the Financial Action Task Force (FATF) Special Eight Recommendations on Terrorist Financing.

The Bank of Greece and the Ministry of National Economy and Finance have the authority to identify, freeze, and seize terrorist assets. The Bank of Greece has circulated to all financial institutions the list of individuals and entities that have been included on the UNSCR 1267 Sanctions Committee's consolidated list as being linked to Usama Bin Ladin, the al-Qaida organization, or the Taliban, or that the EU has designated under relevant authorities. Suspect accounts (of small amounts) have been identified and frozen.

There are no known plans on the part of the GOG to introduce legislative initiatives aimed at regulating alternative remittance systems. Illegal immigrants or individuals without valid residence permits are known to send remittances to Albania and other destinations in the form of gold and precious metals, which are often smuggled across the border in trucks and buses. The financial and economic crimes police as well as tax authorities closely monitor charitable and nongovernmental organizations; there is no evidence that such organizations are being used as conduits for the financing of terrorism.

Greece is a member of the FATF, the EU, and the Council of Europe. The CC is a member of the Egmont Group. The GOG is a party to the 1988 UN Drug Convention, and in December 2000 became a signatory to the UN Convention against Transnational Organized Crime. On April 16, 2004, Greece became a party to the UN International Convention for the Suppression of the Financing of Terrorism. Greece has signed bilateral police cooperation agreements with Egypt, Albania, Armenia, France, the United States, Iran, Israel, Italy, China, Croatia, Cyprus, Lithuania, Hungary, Macedonia, Poland, Romania, Russia, Tunisia, Turkey, and Ukraine. It also has a trilateral police cooperation agreement with Bulgaria and Romania, and a bilateral agreement with Ukraine to combat terrorism, drug trafficking, organized crime and other criminal activities.

Greece exchanges information on money laundering through its Mutual Legal Assistance Treaty (MLAT) with the United States, which entered into force November 20, 2001. The Bilateral Police Cooperation Protocol provides a mechanism for exchanging records with U.S. authorities in connection with investigations and proceedings related to narcotics-trafficking, terrorism, and terrorist financing. Cooperation between the U.S. Drug Enforcement Administration and YPEE has been extensive, and the GOG has never refused to cooperate. The CC can exchange information with other FIUs, although it prefers to work with a memorandum of understanding in such exchanges.

The Government of Greece should extend and implement suspicious transaction reporting requirements for gaming and stock market transactions, and should adopt more rigorous standards for casino ownership or investments. Additionally, Greece should ensure uniform enforcement of its cross-border currency reporting requirements and take steps to deter the smuggling of precious gems

and metals across its borders. Greece should also enact its pending legislation to bring its asset forfeiture regime up to international standards.

Grenada

Improvement has been noted in Grenada's anti-money laundering regime and the supervision of its financial sector. Like those of many other Caribbean jurisdictions, the Government of Grenada (GOG) raises revenue from the offshore sector by imposing licensing and annual fees upon offshore entities. As of December 2004, Grenada has one offshore bank, which is currently under investigation, one trust company, one management company, and one international insurance company. Grenada is reported to have over 20 Internet gaming sites. There are also 859 international business companies (IBCs). The domestic financial sector includes six commercial banks, 26 registered domestic insurance companies, two credit unions, and four or five money remitters. The GOG has repealed its economic citizenship legislation.

In September 2001, the Financial Action Task Force (FATF) placed Grenada on the list of noncooperative countries and territories in the fight against money laundering (NCCT). The FATF in its report cited several concerns: inadequate access by Grenadian supervisory authorities to customer account information, inadequate authority for Grenadian supervisory authorities to cooperate with foreign counterparts, and inadequate qualification requirements for owners of financial institutions. In April 2002, the U.S. Department of Treasury issued an advisory to banks and other financial institutions operating in the United States, to give enhanced scrutiny to all financial transactions originating in or routed to or through Grenada, or involving entities organized or domiciled, or persons maintaining accounts, in Grenada. Grenada's efforts to put into place the legislation and regulations necessary for adequate supervision of Grenada's offshore sector prompted the FATF to remove Grenada from the NCCT list in February 2003. The Department of Treasury also lifted its advisory on Grenada in April 2003.

Grenada's Money Laundering Prevention Act (MLPA) of 1999, which came into force in 2000, criminalizes money laundering related to offenses under the Drug Abuse (Prevention and Control) Act, whether occurring within or outside of Grenada, or other offenses occurring within or outside of Grenada, punishable by death or at least five years' imprisonment in Grenada. The MLPA also establishes a Supervisory Authority to receive, review, and forward to local authorities suspicious activity reports (SARs) from covered institutions, and imposes customer identification requirements on banking and other financial institutions. The Proceeds of Crime (Amendment) Act of 2003 extends anti-money laundering responsibilities to a number of non-bank financial institutions.

Financial sector legislation was strengthened, and the Grenada International Financial Services Authority (GIFSA), which monitors and regulates offshore banking, was brought under stricter management. An amendment to the GIFSA Act (No. 13 of 2001) eliminates the regulator's role in marketing the offshore sector. GIFSA makes written recommendations to the Minister of Finance in regard to the revocation of offshore entities' licenses and issues certificates of incorporation to IBCs. In the future, GIFSA is expected to assume authority for regulating both onshore and offshore institutions, in some areas sharing supervision with the Eastern Caribbean Central Bank (ECCB). It is expected that GIFSA will be renamed the Grenada Authority for the Regulation of Financial Institutions. Legislation implementing the Grenada Authority for the Regulation of Financial Institutions as the new regulatory body was defeated in the Senate; however, the legislation will be reintroduced in 2005.

The International Companies Act regulates IBCs and requires registered agents to maintain records of the names and addresses of directors and beneficial owners of all shares, as well as the date the person's name was entered or deleted on the share register. Currently, there are 15 registered agents licensed by the GIFSA. There is an ECD\$30,000 (\$11,500) penalty, and possible revocation of the

registered agent's license, for failure to maintain records. The International Companies Act also gives GIFSA the authority to conduct on-site inspections to ensure that the records are being maintained on IBCs and bearer shares. GIFSA began conducting inspections in August 2002.

The International Financial Services (Miscellaneous Amendments) Act 2002 requires all offshore financial institutions to recall and cancel any issued bearer shares and to replace them with registered shares. The holders of bearer shares in nonfinancial institutions must lodge their bearer share certificates with a licensed registered agent. These agents are required by law to verify the identity of the beneficial owners of all shares and to maintain this information for seven years. GIFSA was given the authority to access the records and information maintained by the registered agents, and can share this information with regulatory, supervisory, and administrative agencies.

The Minister of Finance has signed a memorandum of understanding (MOU) with the ECCB that grants the ECCB oversight of the offshore banking sector in Grenada. Legislation that would incorporate the ECCB's new role into existing offshore banking legislation was adopted in 2003, but is not in effect. The ECCB will have the authority to share bank and customer information with foreign authorities. The ECCB already provides similar regulation and supervision to Grenada's domestic banking sector.

Grenada's legal framework effectively enables GIFSA to obtain customer account records from an offshore financial institution upon request, and to share the customer account information that regulated financial institutions must maintain under due diligence requirements with other regulatory, supervisory, and administrative bodies. GIFSA also has the ability to access auditors' working papers, and can share this information as well as examination reports with relevant authorities.

The Supervisory Authority issues anti-money laundering guidelines, pursuant to Section 12(g) of the MLPA, that direct financial institutions to maintain records, train staff, identify suspicious activities, and designate reporting officers. The guidelines also provide examples to help bankers recognize and report suspicious transactions. The Supervisory Authority is authorized to conduct anti-money laundering inspections and investigations. The Supervisory Authority can also conduct investigations and inquiries on behalf of foreign counterpart authorities and provide them with the results. Financial institutions could be fined for not granting access to Supervisory Authority personnel.

Financial institutions must report SARs to the Supervisory Authority within 14 days of the date that the transaction was determined to be suspicious. A financial institution or an employee who willfully fails to file a SAR or makes a false report is liable to criminal penalties that include imprisonment or fines up to ECD\$250,000, and possibly revocation of the financial institution's license to operate.

In June 2001, the GOG established a Financial Intelligence Unit (FIU) that is headed by a prosecutor from the Attorney General's office; the staff includes an assistant superintendent of police, four additional police officers, and two support personnel. In 2003, Grenada enacted an FIU Act (No. 1 of 2003). The FIU, which operates within the police force but is assigned to the Supervisory Authority, is charged with receiving SARs from the Supervisory Authority and with investigating alleged money laundering offenses. By November 2004, the FIU had received 45 SARs. The GOG has obtained two drug-related money laundering convictions and has confiscated \$19,000. Three other drug-related money laundering cases are pending before the courts, and \$56,000 has been frozen in connection with those cases. Grenada has cooperated extensively with U.S. law enforcement in numerous money laundering and other financial crimes investigations. As a result, several subjects in the United States were successfully prosecuted.

In 2003, Grenada enacted counterterrorist financing legislation, which provides authority to identify, freeze, and seize terrorist assets. The GOG circulates lists of terrorists and terrorist entities to all financial institutions in Grenada. There has been no known identified evidence of terrorist financing in

Grenada. The GOG has not taken any specific initiatives focused on alternative remittance systems or the misuse of charitable and nonprofit entities.

During 2003, the GOG passed the Exchange of Information Act No. 2 of 2003, which will strengthen the GOG's ability to share information with foreign regulators. A Mutual Legal Assistance Treaty and an Extradition Treaty have been in force between Grenada and the United States since 1999. Grenada also has a Tax Information Exchange Agreement with the United States. Grenada's cooperation under the Mutual Legal Assistance Treaty has recently been excellent. Grenada also has demonstrated consistently good cooperation with the U.S. Government by responding rapidly to requests for information involving money laundering cases. Grenada is an active member of the Caribbean Financial Action Task Force (CFATF), and underwent a second CFATF mutual evaluation in September 2003. Grenada is a member of the OAS Inter-American Drug Abuse Control Commission Experts Group to Control Money Laundering. Grenada is a party to the 1988 UN Drug Convention, the UN International Convention for the Suppression of the Financing of Terrorism, and as of May 2004, the UN Convention against Transnational Organized Crime.

Although the Government of Grenada has strengthened the regulation and oversight of its financial sector, it must remain alert to potential abuses and must steadfastly implement the laws and regulations it has adopted. Grenada should also continue to enhance its information sharing, particularly with other Caribbean jurisdictions.

Guatemala

Guatemala is a major transit country for illegal narcotics from Colombia and precursor chemicals from Europe. Those factors, combined with historically weak law enforcement and judicial regimes, corruption, and increasing organized crime activity, lead authorities to suspect that significant money laundering occurs in Guatemala. According to law enforcement sources, narcotics-trafficking is the primary source of money laundered in Guatemala; however, the laundering of proceeds from other illicit sources, such as human trafficking, contraband, kidnapping, tax evasion, vehicle theft, and corruption, is substantial. Officials of the Government of Guatemala (GOG) believe that couriers, offshore accounts, and wire transfers are used to launder funds, which are subsequently invested in real estate, capital goods, large commercial projects, and shell companies, or are otherwise transferred through the financial system.

Guatemala is not considered a regional financial center, but it is an offshore center. Exchange controls have largely disappeared and dollar accounts are common, but some larger banks conduct significant business through their offshore subsidiaries. The Guatemalan financial services industry is comprised of 25 commercial banks (3 more in the process of liquidation); approximately 11 offshore banks (all affiliated, as required by law, with a domestic financial group); seven licensed money exchangers (hundreds exist informally); 27 money remitters, including wire remitters and remittance-targeting courier services; 18 insurance companies; 18 financial societies (bank institutions that act as financial intermediaries specializing in investment operations); 15 bonded warehouses; 198 cooperatives, credit unions, and savings and loan institutions; 13 credit card issuers; seven leasing entities; 12 fianzas (financial guarantors); and one check-clearing entity run by the Central Bank.

The Superintendence of Banks (SIB), which operates under the general direction of the Monetary Board, has oversight and inspection authority over the Bank of Guatemala, as well as over banks, credit institutions, financial enterprises, securities entities, insurance companies, currency exchange houses, and other institutions as may be designated by the Bank of Guatemala Act. Guatemala's relatively small free trade zones target regional maquila (assembly line industry) operations and are not considered by GOG officials to be a money laundering concern.

The offshore financial sector initially offered a way to circumvent currency controls and other costly financial regulations. However, financial sector liberalization has largely removed many incentives for legitimate businesses to conduct offshore operations. All offshore institutions are subject to the same requirements as onshore institutions. In June 2002, Guatemala enacted the Banks and Financial Groups Law (No. 19-2002), which places offshore banks under the oversight of the SIB. The law requires offshore banks to be authorized by the Monetary Board and to maintain an affiliation with a domestic institution. It also prohibits an offshore bank that is authorized in Guatemala from doing business in another jurisdiction; however, banks authorized by other jurisdictions may do business in Guatemala under certain limited conditions.

Guatemala completed the process of reviewing and licensing its offshore banks in 2004, which included performing background checks of directors and shareholders. In order to authorize an offshore bank, the financial group to which it belongs must first be authorized, under a 2003 resolution of the Monetary Board. Eleven offshore banks have been authorized. By law, no offshore financial services businesses other than banks are allowed, but there is evidence that they exist in spite of that prohibition. In 2004 the SIB and Guatemala's financial intelligence unit, the *Intendencia de Verificación Especial*, concluded a process of reviewing and licensing all offshore entities, a process which resulted in the closure of two operations. No offshore trusts have been authorized, and offshore casinos and Internet gaming sites are not regulated.

There is continuing concern over the volume of money passing informally through Guatemala. Much of the more than \$2 billion in remittance flows pass through informal channels. The large sums of money seized in airports—totaling over \$2 million in 2004—suggest that proceeds from illicit activity are regularly hand carried over Guatemalan borders. Increasing financial sector competition should continue to expand services and bring more people into the formal banking sector, isolating those who abuse informal channels.

In June 2001, the Financial Action Task Force (FATF) placed Guatemala on the list of Non-Cooperative Countries and Territories (NCCT) in the fight against money laundering. Since that time, authorities have implemented the necessary reforms to bring Guatemala into compliance with international standards, including the creation of a Financial Intelligence Unit (FIU) and the passage of comprehensive anti-money laundering legislation. An inspection in May 2004 by a FATF review team found that the GOG had made excellent progress, and Guatemala was removed from the NCCT list at the FATF plenary in June 2004.

In November 2001, Guatemala enacted Decree 67-2001, the “Law Against Money and Asset Laundering,” to address several of the deficiencies identified by the FATF. Article 2 of the law expands the range of predicate offenses for money laundering from drug offenses to any crime. Individuals convicted of money or asset laundering are subject to a non-commutable prison term ranging from six to 20 years, and fines equal to the value of the assets, instruments, or products resulting from the crime. Convicted foreigners will be expelled from Guatemala. Conspiracy and attempt to commit money laundering are also penalized. Guatemalan authorities have had some success using these conspiracy provisions to target narcotics-traffickers.

Since the FATF designation, the GOG has taken important steps to reform its anti-money laundering program. On April 25, 2001, the Guatemalan Monetary Board issued Resolution JM-191, approving the “Regulation to Prevent and Detect the Laundering of Assets” (RPDLA) submitted by the Superintendence of Banks. The RPDLA, effective May 1, 2001, requires all financial institutions under the oversight and inspection of the SIB to establish anti-money laundering measures, and introduces requirements for transaction reporting and record keeping. Covered institutions must establish money laundering detection units, designate compliance officers, and train personnel to detect suspicious transactions. The Guatemalan financial sector has largely complied with these requirements and has a generally cooperative relationship with the SIB.

Decree 67-2001 adds record keeping and transaction reporting requirements to those already in place as a result of the RPDLA. These new requirements apply to all entities under the oversight of the SIB, as well as several other entities, including credit card issuers and operators, check cashers, sellers or purchasers of travelers checks or postal money orders, and currency exchangers. The law establishes that owners, managers, and other employees are expressly immune from criminal, civil, or administrative liability when they provide information in compliance with the law. However, it holds institutions and businesses responsible, regardless of the responsibility of owners, directors, or other employees, and they may face cancellation of their banking licenses and/or criminal charges for laundering money or allowing laundering to occur. The requirements also apply to offshore entities that are described by the law as “foreign-domiciled entities” that operate in Guatemala but are registered under the laws of another jurisdiction.

Covered institutions are prohibited from maintaining anonymous accounts or accounts that appear under fictitious or inexact names; non-banks, however, may issue bearer shares, and there is limited banking secrecy. Covered entities are required to keep a registry of their customers as well as of the transactions undertaken by them, such as the opening of new accounts, the leasing of safety deposit boxes, or the execution of cash transactions exceeding approximately \$10,000. Under the law, covered entities must maintain records of these registries and transactions for five years.

Decree 67-2001 also obligates individuals and legal entities to report to the competent authorities cross-border movements of currency in excess of approximately \$10,000. At Guatemala City airport, a new special unit was formed in 2003 to enforce the use of customs declarations upon entry to and exit from Guatemala. Compliance is not regularly monitored at land borders.

Decree 67-2001 establishes a FIU, the Intendencia de Verificación Especial (IVE), within the Superintendence of Banks, to supervise covered financial institutions and ensure their compliance with the law. The IVE began operations in 2002 and has a staff of 25. The IVE has the authority to obtain all information related to financial, commercial, or business transactions that may be connected to money laundering. Covered entities are required to report to the IVE any suspicious transactions within twenty-five days of detection and to submit a comprehensive report every trimester, even if no suspicious transactions have been detected. Entities also must maintain a registry of all cash transactions exceeding approximately \$10,000 or more per day, and report these transactions to the IVE. The IVE conducts inspections on the covered entities’ management, compliance officers, anti-money laundering training programs, “know-your-client” policies and auditing programs; it inspected 30 entities in 2004. The IVE may impose sanctions on financial institutions for noncompliance with reporting requirements, and has imposed over \$100,000 in civil penalties to date.

Since its inception, the IVE has received approximately 1,200 suspicious transaction reports (STRs) from the 287 covered entities in Guatemala. All STRs are received electronically, and the IVE has developed a system of prioritizing them for analysis. STRs are given a rating of “A,” “B,” “C,” or “D,” with “A” being high-profile cases that warrant immediate analysis, and “D” being cases that do not appear to be highly suspicious and are filed away for possible analysis in the future. Of the 266 STRs the IVE received as of October 2004, eight have been categorized as class “A,” 69 as class “B,” and 189 as class “C” or “D.”

After determining that an STR is highly suspicious, the IVE gathers further information from public records and databases, other covered entities and foreign FIUs, and assembles a case. Bank secrecy can be lifted for the investigation of money laundering crimes. Once the IVE has determined a case warrants further investigation, the case must receive the approval of the SIB before being sent to the Anti-Money or Other Assets Laundering Unit (AML Unit) within the Public Ministry. Under current regulations, the IVE cannot directly share the information it provides to the AML Unit with any other special prosecutors (principally the anticorruption or counternarcotics units) in the Public Ministry.

The IVE also assists the Public Ministry by providing information upon request for other cases the prosecutors are investigating.

Eight cases have been referred by the IVE to the AML Unit, four of which stem from public corruption. One of these investigations has resulted in nine persons facing charges, with additional arrests still pending. In several cases, assets have been frozen. Two money laundering prosecutions have been concluded, one of which resulted in a conviction. The Public Ministry is appealing the decision of the case that did not result in conviction. Both cases resulted in confiscation of the defendant's assets. Additional cases have been developed from cooperation between the Public Ministry and the IVE. The Public Ministry's AML Unit had initiated 143 cases as of November 2004. Five cases have been concluded, with three sentences handed out and the remaining two awaiting appeal and retrial by the prosecutors. Sixty-five cases are either under continuing investigation or in initial stages of the trials, and the remaining cases were transferred to other offices for investigation and prosecution (such as the anticorruption unit) due to the nature of their particular predicate offenses. Several high profile cases of laundering proceeds from major corruption scandals involving officials of the previous government are currently under investigation and have resulted in arrests and substantial seizures of funds and assets. These seizures have been supported by the cooperating financial institutions along with the vast majority of public and political interests.

Under current legislation, any assets linked to money laundering can be seized. Within the GOG, the IVE, the National Civil Police, and the Public Ministry have the authority to trace assets; the Public Ministry can seize assets temporarily or in urgent cases; and the Courts of Justice have the authority to permanently seize assets. The GOG passed reforms in 1998 to allow the police to use narcotics traffickers' seized assets. These provisions also allow for 50 percent of the money to be used by the IVE and others involved in combating money laundering. In 2003, the Guatemalan Congress approved reforms to enable seized money to be shared among several GOG agencies, but the Constitutional Court temporarily suspended those provisions and this impasse has not yet been addressed under the new administration.

An additional problem is that the courts do not allow seized currency to benefit enforcement agencies while cases remain open. For money laundering and narcotics cases, any seized money is deposited in a bank safe and all material evidence is sent to the warehouse of the Public Ministry. There is no central tracking system for seized assets, and it is currently impossible for the GOG to provide an accurate listing of the seized assets in custody. In 2004, Guatemalan authorities seized more than \$2 million in bulk currency, significantly less than the \$20 million seized in 2003 (although one case alone in 2003 accounted for more than \$14 million). The lack of access to the resources of seized assets outside of the judiciary has made sustaining seizure levels difficult for the resource-strapped enforcement agencies.

Guatemala has taken several initiatives with regard to terrorist financing. According to the GOG, Article 391 of the Penal Code already sanctions all preparatory acts leading up to a crime, and financing would likely be considered a preparatory act. Technically, both judges and prosecutors can issue a freeze order on terrorist assets, but no test case has validated these procedures. The legality of freezing assets in Guatemala when no predicate offense has been legally established remains to be determined. The GOG has been very cooperative in looking for terrorist financing funds. A comprehensive counterterrorism law that includes provisions against terrorist financing was introduced in Congress in 2003; however, the law has not yet been passed. The absence of terrorist financing legislation places the GOG in a position of noncompliance with the FATF Special Recommendations on Terrorist Financing and the UNSCR Resolution 1373 against Terrorism.

The SIB, through the IVE, has signed Memorandums of Understanding (MOUs) with Argentina, the Bahamas, Barbados, Bolivia, Brazil, Colombia, Costa Rica, the Dominican Republic, El Salvador, Honduras, Mexico, Montserrat, Panama, Peru, Spain and Venezuela. During 2004, the SIB signed

MOUs with Belgium, France, South Korea and the United States. Guatemala also signed an agreement with the USG Office of the Comptroller of the Currency to cooperate on supervision issues, and has begun negotiations to sign an MOU with Puerto Rico. Guatemalan law enforcement is actively cooperating with appropriate USG law enforcement agencies on cases of mutual interest.

Guatemala is a party to the 1988 UN Drug Convention, the UN International Convention for the Suppression of the Financing of Terrorism, and the UN Convention against Transnational Organized Crime. The GOG has signed, but not yet ratified, the UN Convention against Corruption. Guatemala is a party to the Central American Convention for the Prevention of Money Laundering and Related Crimes, and is a member of the OAS Inter-American Drug Abuse Control Commission Experts Group to Control Money Laundering (OAS/CICAD) and the Caribbean Financial Action Task Force (CFATF). In 2003, the IVE became a member of the Egmont Group.

Corruption and organized crime remain strong forces in Guatemala and may prove to be the biggest hurdles facing the Government of Guatemala in the long term. Guatemala has made efforts to comply with international standards and improve its anti-money laundering regime. In 2004, Guatemalan authorities completed implementation of new procedures to license and monitor offshore banks, and demonstrated that they could use anti-money laundering laws to successfully target criminals. However, the Guatemala should take steps to immobilize bearer shares, and to identify and regulate offshore financial services and gaming establishments. Guatemala should pass legislation to criminalize terrorist financing and continue efforts to improve enforcement and implementation of needed reforms. Cooperation between the IVE and the Public Ministry has improved since the new administration took office in January 2004, and several investigations have led to prosecutions. However, Guatemala should continue to focus its efforts on boosting its ability to successfully investigate and prosecute money launderers, and on distributing seized assets to law enforcement agencies to assist in the fight against money laundering and other financial crime.

Guernsey

The Bailiwick of Guernsey (the Bailiwick) covers a number of the Channel Islands (Guernsey, Alderney, Sark, and Herm in order of size and population). The Islands are a Crown Dependency because the United Kingdom (UK) is responsible for their defense and international relations. However, the Bailiwick is not part of the UK. Alderney and Sark have their own separate parliaments and civil law systems. Guernsey's parliament legislates criminal law for all of the islands in the Bailiwick. The Bailiwick alone has competence to legislate in and for domestic taxation. The Bailiwick is a sophisticated financial center and, as such, it continues to be vulnerable to money laundering at the layering and integration stages.

There are 16,071 companies registered in the Bailiwick. Non-residents own approximately half of the companies, and they have an exempt tax status. These companies do not fall within the standard definition of an international business company (IBC). Local residents own the remainder of the companies, including trading and private investment companies. Exempt companies are not prohibited from conducting business in the Bailiwick, but must pay taxes on profits of any business conducted in the islands. Companies can be incorporated in Guernsey and Alderney, but not in Sark, which has no company legislation. Companies in Guernsey may not be formed or acquired without disclosure of beneficial ownership to the Guernsey Financial Services Commission (the Commission).

Guernsey has 59 banks, all of which have offices, records, and a substantial presence in the Bailiwick. The banks are licensed to conduct business with residents and non-residents alike. There are 597 international insurance companies and 496 collective investment funds. There are also 19 bureaux de change, which file accounts with the tax authorities. Many are part of a licensed bank, and it is the bank that publishes and files accounts.

Guernsey has put in place a comprehensive legal framework to counter money laundering and the financing of terrorism. The Proceeds of Crime (Bailiwick of Guernsey) Law 1999, as amended, is supplemented by the Criminal Justice Proceeds of Crime (Bailiwick of Guernsey) Anti-Money Laundering/Countering the Financing of Terrorism (AML/CFT) Regulations, 2002. The legislation criminalizes money laundering for all crimes except drug-trafficking, which is covered by the Drug Trafficking (Bailiwick of Guernsey) Law, 2000. The Proceeds of Crime Law and the Regulations are supplemented by Guidance Notes on the Prevention of Money Laundering and Countering the Financing of Terrorism, issued by the Commission. There is no exemption for fiscal offenses. The 1999 law creates a system of suspicious transaction reporting (including about tax evasion) to the Guernsey Financial Intelligence Service (FIS). The Bailiwick narcotics-trafficking, anti-money laundering, and terrorism laws designate the same foreign countries as the UK to enforce foreign restraint and confiscation orders.

The Drug Trafficking (Bailiwick of Guernsey) Law 2000 consolidates and extends money laundering legislation related to narcotics-trafficking. It introduces the offense of failing to disclose the knowledge or suspicion of drug money laundering. The duty to disclose extends beyond financial institutions to cover others as well, for example, bureaux de change and check cashers.

In addition, the Bailiwick authorities recently enacted the Prevention of Corruption (Bailiwick of Guernsey) Law of 2003. They have also resolved to merge existing drug trafficking, money laundering and other crimes into one statute, and to introduce a civil forfeiture law.

On April 1, 2001, the Regulation of Fiduciaries, Administration Businesses, and Company Directors, etc. (Bailiwick of Guernsey) Law of 2000 (“the Fiduciary Law”) came into effect. The Fiduciary Law was enacted to license, regulate and supervise company and trust service providers. Under Section 35 of the Fiduciary Law, the Commission creates Codes of Practice for corporate service providers, trust service providers and company directors. Under the law, the Commission must license all fiduciaries, corporate service providers and persons acting as company directors of any business. In order to be licensed, these agencies must pass strict tests. These include “know your customer” requirements and the identification of clients. These organizations are subject to regular inspection, and failure to comply could result in the fiduciary being prosecuted and/or its license being revoked. The Bailiwick is fully compliant with the Offshore Group of Banking Supervisors Statement of Best Practice for Company and Trust Service Providers.

Since 1988, the Commission has regulated the Bailiwick’s financial services businesses. The Commission regulates banks, insurance companies, mutual funds and other collective investment schemes, investment firms, fiduciaries, company administrators and company directors. The Bailiwick does not permit bank accounts to be opened unless there has been a “know-your-customer” inquiry and verification details are provided. The AML/CFT Regulations contain penalties to be applied when financial services businesses do not follow the requirements of the Regulations. Company incorporation is by act of the Royal Court, which maintains the registry. All first-time applications to form a Bailiwick company have to be made to the Commission, which then evaluates each application. The court will not permit incorporation unless the Commission and the Attorney General or Solicitor General have given prior approval. The Commission conducts regular on-site inspections and analyzes the accounts of all regulated institutions.

The Guernsey authorities have established a forum, the Crown Dependencies Anti-Money Laundering Group, where the Attorneys General from the Crown Dependencies, Directors General and other representatives of the regulatory bodies, and representatives of police, Customs, and the FIS meet to coordinate the anti-money laundering and counterterrorism policies and strategy in the Dependencies.

The FIS operates as the Bailiwick’s financial intelligence unit (FIU). The FIS began operations in April 2001, and is currently staffed by Police and Customs/Excise Officers. The FIS is directed by the Service Authority, which is a small committee of senior Police and Customs Officers who co-ordinate

with the Bailiwick's financial crime strategy and report to the Chief Officers of Police and Customs/Excise. The FIS is mandated to place specific focus and priority on money laundering and terrorism financing issues. Suspicious Transaction Reports (STRs) are filed with the FIS, which is the central point within the Bailiwick for the receipt, collation, evaluation, and dissemination of all financial crime intelligence. The FIS received 777 SARs in 2002, 705 SARs in 2003, and 757 SARs in 2004.

In November 2002, the International Monetary Fund (IMF) undertook an assessment of Guernsey's compliance with internationally accepted standards and measures of good practice relative to its regulatory and supervisory arrangements for the financial sector. The IMF report states that Guernsey has a comprehensive system of financial sector regulation with a high level of compliance with international standards. As for AML/CFT, the IMF report highlights that Guernsey has a developed legal and institutional framework for AML/CFT and a high level of compliance with the FATF Recommendations.

There has been counterterrorism legislation covering the Bailiwick since 1974. The Terrorism and Crime (Bailiwick of Guernsey) Law, 2002, replicates equivalent UK legislation. Legislation consistent with UNSCR 1373 and 1390 was enacted in domestic law at the same time as they were enacted in the UK.

The Criminal Justice (International Cooperation) (Bailiwick of Guernsey) Law, 2000, furthers cooperation between Guernsey and other jurisdictions by allowing certain investigative information concerning financial transactions to be exchanged. Guernsey cooperates with international law enforcement on money laundering cases. In cases of serious or complex fraud, Guernsey's Attorney General can provide assistance under the Criminal Justice (Fraud Investigation) (Bailiwick of Guernsey) Law 1991. The Commission also cooperates with regulatory/supervisory and law enforcement bodies.

On September 19, 2002, the United States and Guernsey signed a Tax Information Exchange Agreement. The agreement provides for the exchange of information on a variety of tax investigations, paving the way for audits that could uncover tax evasion or money laundering activities. Currently, similar agreements are being negotiated with other countries, among them members of the European Union.

After its extension to the Bailiwick, Guernsey enacted the necessary legislation to implement the 1959 Council of Europe Convention on Mutual Assistance in Criminal Matters, the 1990 Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime, and the 1988 UN Drug Convention. The 1988 Agreement Concerning the Investigation of Drug Trafficking Offenses and the Seizure and Forfeiture of Proceeds and Instrumentalities of Drug Trafficking, as amended in 1994, was extended to the Bailiwick in 1996. The Bailiwick has requested that the UK Government seek the extension to the Bailiwick of the UN International Convention for the Suppression of the Financing of Terrorism.

The Attorney General's Office is represented in the European Judicial Network and has been participating in the European Union's PHARE anti-money laundering project. The Commission cooperates with regulatory/supervisory and law enforcement bodies. It is a member of the International Association of Insurance Supervisors, the Offshore Group of Insurance Supervisors, the Association of International Fraud Agencies, the International Organization of Securities Commissions, the Enlarged Contact Group for the Supervision of Collective Investment Funds, and the Offshore Group of Banking Supervisors. The FIS is a member of the Egmont Group.

Guernsey has put in place a comprehensive anti-money laundering regime, and has demonstrated its ongoing commitment to fighting financial crime. Bailiwick officials should continue both to carefully monitor Guernsey's anti-money laundering program to assure its effectiveness, and to cooperate with

international anti-money laundering authorities. The Bailiwick should continue to press the UK to extend the UN International Convention for the Suppression of the Financing of Terrorism to Guernsey.

Guinea

Guinea has an unsophisticated banking system and is not a regional financial center. Banking leaders in Guinea estimate that 70 to 80 percent of business transactions take place in cash. Several expatriate communities in Guinea maintain strong ties to their countries of origin and are sources of international currency transfers. Both formal and informal money transfer services have expanded greatly in Guinea in recent years. Guinea has an active black market for foreign currency-especially euros, U.S. dollars, and CFA francs. Contraband is common. Merchants dealing in small quantities comprise most of the business transactions in Guinea. Guinea's mining industry leads to an influx of foreign currency. In addition to large mining operations, Guinea has an industry of small-scale, traditional mining. This small traditional mining industry, which deals primarily with diamonds and gold, lends itself to money laundering, as few records are kept and sales are made in cash. In 2002, Guinean police seized over \$1.5 million high quality counterfeit U.S. currency tied to the gold and diamond trade. Instability in the region surrounding Guinea also contributes to a permissive environment. Given Guinea's status as a relatively stable country in a troubled region, rebels and refugees from neighboring nations try to bring substantial amounts of cash, counterfeit currency and precious stones into Guinea.

Some narcotics-trafficking occurs in Guinea. Heroin, cocaine, and amphetamines are imported into the country, usually by expatriate communities, while cannabis and Indian hemp are widely cultivated locally. Authorities report that drug use is growing, despite their efforts to combat it.

Article 398 of the Guinean Penal Code criminalizes money laundering related to narcotics-trafficking. Violations are punishable by 10 to 20 years in prison and a fine of \$2,500 to \$50,000. While some commercial banks in Guinea are voluntarily using software or other methods to detect suspicious transactions, no anti-money laundering regime is in place. The Ministry of Finance has approached an international accounting and consulting firm to assist the Government of Guinea in writing an anti-money laundering law.

Authorities have made no money laundering arrests and no prosecutions for money laundering or terrorist financing since January 1, 2004. Authorities seized no monies related to financial crimes. Guinea is a party to the 1988 UN Drug Convention. Guinea is also a party to the UN International Convention for the Suppression of the Financing of Terrorism, but it is not a party to the UN Convention against Transnational Organized Crime. A lack of resources makes full implementation of these international standards difficult for the Government of Guinea.

Guinea should enact comprehensive anti-money laundering legislation that criminalizes money laundering for all serious crimes and also criminalizes terrorist financing. Guinea should become a party to the UN Convention against Transnational Organized Crime.

Guinea-Bissau

Guinea-Bissau is not considered an important regional financial center. It is a Central Bank of West African States (BCEAO) member country. While anecdotal evidence of money laundering exists, Bissau-Guinean officials are not aware of its extent. Guinea-Bissau has an unofficial money transfer system, similar to the hawala alternative remittance system, but authorities are unaware of the scope of this system. However, there are numerous cases of corruption, narcotics-trafficking, arms dealing and other crimes that could engender money laundering. Contraband smuggling exists at border points with neighboring countries, but it is not known whether the resulting funds are being laundered through the banking system. Guinea-Bissau's courts did not function during most of 2003. Public

servants are owed months of salary by a government in arrears and corruption is rampant. Money laundering could occur in all these areas and would be extremely difficult to detect.

Guinea-Bissau is a member of the Intergovernmental Group Against Money Laundering (GIABA), a regional body established by the Economic Union of West African States (ECOWAS) to facilitate regional coordination and harmonization of anti-money laundering programs in the region. GIABA recently hosted a self-evaluation exercise on anti-money laundering capabilities in conjunction with the International Monetary Fund and ECOWAS member states.

Guinea-Bissau is reportedly going to adopt a Uniform Act on Money Laundering that implements standards drafted by the West African Economic and Monetary Union (WAEMU) member states in conjunction with GIABA and the BCEAO. Under the harmonized WAEMU standards, Guinea-Bissau will join the other seven WAEMU countries and ultimately the 15 members of ECOWAS in updating the judicial and penal code concerning money laundering and crimes of corruption, establishing a Financial Intelligence Unit (FIU), and strengthening law enforcement and detection capability of money laundering and corruption.

A regulation at the regional level was approved by the council of ministers of the WAEMU on September 19, 2002; this regulation permits the freezing of accounts and other assets related to the financing of terrorism.

No arrests or prosecutions for money laundering or terrorist financing were made in 2004.

Guinea-Bissau is a party to the 1988 UN Drug Convention and has signed, but has not yet ratified, both the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime. It has not signed the UN Convention against Corruption.

The Government of Guinea-Bissau should criminalize terrorist financing and should take steps to develop an anti-money laundering regime in accordance with international standards. Guinea-Bissau should become a party to the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime. It should avail itself of the opportunity to work closely with BCEAO and GIABA, as well as other international organizations, toward these ends.

Guyana

Guyana is neither an important regional financial center nor an offshore financial center, nor does it have any notable offshore business sector or free trade zones. The scale of money laundering, though, is thought to be large given the size of the informal economy, which is estimated to be at least 40 percent of the size of the formal sector. Some speculate that the number could be as high as 60 percent. Money laundering has been linked to trafficking in drugs, firearms and persons, as well as corruption and fraud. There are suspicions that high levels of drug trafficking and money laundering are propping up the Guyanese economy. Political instability, government inefficiency, an internal security crisis, and a lack of resources have significantly impaired Guyana's efforts to bolster its anti-money laundering regime. Investigating and trying money laundering cases is not a priority for law enforcement. The Government of Guyana (GOG) made no arrests or prosecutions for money laundering in 2004 due to lack of legislation.

The Money Laundering Prevention Act passed in 2000 is not yet fully in force, due to inadequate implementing legislation, difficulties associated with finding suitable personnel to staff the Financial Investigations Unit (FIU) and the Bank of Guyana's lack of capacity to fully execute its mandate. Crimes covered by the Money Laundering Prevention Act include illicit narcotics-trafficking, illicit trafficking of firearms, extortion, corruption, bribery, fraud, counterfeiting, and forgery. The law also

requires that incoming or outgoing funds over \$10,000 be reported. Licensed financial institutions are required to report suspicious transactions, although banks are left to determine thresholds individually according to banking best practices. Suspicious activity reports must be kept for seven years. The legislation also includes provisions regarding confidentiality in the reporting process, good faith reporting, penalties for destroying records related to an investigation, asset forfeiture, international cooperation and extradition for money laundering offenses.

The GOG established a financial intelligence unit in 2003, and as of July 2004 the unit is operational. There is currently enough funding (provided by the GOG with assistance by the USG) to pay for the staff. Funding for operations is still being sought. To date, the FIU has conducted preliminary investigations on approximately 28 cases and is preparing drafts of legislation related to terrorist finance and money laundering. Asset forfeiture is provided for under the Money Laundering Act, although the guidelines for implementing seizures/forfeitures have not yet been finalized.

The Ministry of Foreign Affairs and the Bank of Guyana (the country's Central Bank), continue to assist U.S. efforts to combat terrorist financing by working towards coming into compliance with relevant UNSCRs. In 2001 the Central Bank, the sole financial regulator as designated by the Financial Institutions Act of March 1995, issued orders to all licensed financial institutions expressly instructing the freezing of all financial assets of terrorists, terrorist organizations, individuals and entities associated with terrorists and their organizations. Guyana has no domestic laws authorizing the freezing of terrorist assets, but the government created a special committee on the implementation of UNSCRs, co-chaired by the Head of the Presidential Secretariat and the Director General of the Ministry of Foreign Affairs. To date the procedures have not been tested, due to an absence of identified terrorist assets located in Guyana.

Guyana is a member of the OAS Inter-American Drug Abuse Control Commission (OAS/CICAD) Experts Group to Control Money Laundering. A 2002 CICAD review of Guyana's efforts against money laundering noted numerous deficiencies in implementation, resources, and political will. Guyana is now also a member of the Caribbean Financial Action Task Force (CFATF), but has not yet participated in that organization's mutual evaluation process. Guyana is a party to the 1988 UN Drug Convention. Guyana became a party to the UN Convention against Transnational Organized Crime by accession on September 14, 2004. Guyana has not signed the UN International Convention for the Suppression of the Financing of Terrorism.

Guyana should enact legislation and/or regulations to implement its Money Laundering law. Guyana should provide appropriate resources and awareness training to its regulatory, law enforcement and prosecutorial personnel. Guyana should criminalize terrorist financing and adopt measures that would allow it to block terrorist assets.

Haiti

Haiti is not a major regional financial center, and, given Haiti's dire economic condition and unstable political situation, it is doubtful that it will become a major player in the region's formal financial sector in the near future. Money laundering activity is strongly linked to the drug trade that passes through Haiti, which continues to be a major drug-transit country, especially for cocaine. In 2004, there was no significant decrease in the amount of cocaine coming from Colombia and Venezuela en route to the United States. There also is a significant amount of contraband passing through Haiti. While the informal economy in Haiti is significant and partly funded by narcotics proceeds, smuggling is historically prevalent and pre-dates narcotics-trafficking. Money laundering occurs in the banking system and the non-bank financial system, including in casino, foreign currency, and real estate transactions. Further complicating the picture is the cash that is routinely transported to Haiti from Haitians and their relatives in the United States in the form of remittances. While there is no indication of terrorist financing, Haiti is often a stopover for illegal migrants from several countries.

Flights to Panama City, Panama, remain the main identifiable mode of transportation for money couriers. Usually travelers, predominantly Haitian citizens, hide large sums, \$30,000-\$100,000 on their persons. Haitian Narcotics Officers interdicting these outbound funds often collect a 6-12 percent fee and allow the couriers to continue without arrest. During interviews, couriers usually declare that they intend to use the large amounts of U.S. currency to purchase clothing and other items to be sold upon their return to Haiti.

In March 2004, an interim government was established in Haiti following former President Jean Bertrand Aristide's resignation and departure. The interim government has taken initiatives to establish improvements in economic and monetary policies as well as working to improve governance and transparency. These initiatives include reducing interest rates to facilitate access to credit, implementation of a trade facilitation unit, and an effort to enhance the dialogue between the public and private sectors. Currently, only two foreign banks are operating in Haiti.

In response to the corruption that continues to plague Haiti, the interim government created an Anti-Corruption Unit, in addition to a commission to examine transactions conducted by the government from 2001 through February 2004. Haiti has also taken steps to address its money laundering problems.

In 2002, Haiti formed a National Committee to Fight Money Laundering, the *Comite National de Lutte Contre le Blanchiment des Avoirs (CNLBA)*. The CNLBA is in charge of promoting, coordinating, and recommending policies to prevent, detect, and suppress the laundering of assets obtained from the illicit trafficking of drugs and other serious offenses. The CNLBA, through the *Unite Centrale de Renseignements Financiers (UCREF)*, Haiti's Financial Intelligence Unit (FIU), is responsible for receiving and analyzing reports submitted in accordance with the law. Although established in 2002, the CNLBA is still not fully functional or funded.

Since 2001, Haiti has used the "Law on Money Laundering from Illicit Drug Trafficking and other Crimes and Punishable Offenses" (AML Law) as its primary anti-money laundering tool. All financial institutions and natural persons are subject to the money laundering controls of the AML Law. The AML Law criminalizes money laundering, which it defines as "the conversion or transfer of assets for the purpose of disguising or concealing the illicit origin of those assets or for aiding any person who is involved in the commission of the offense from which the assets are derived to avoid the legal consequences of his acts; the concealment or disguising of the true nature, origin, location, disposition, movement, or ownership of property; and the acquisition, possession, or use of property by a person who knows or should know that this property constitutes proceeds of a crime under the terms of this law."

The AML Law applies to a wide range of financial institutions, including banks, money changers, casinos, and real estate agents. Insurance companies are not covered, but they represent only a minimal factor in the Haitian economy. The AML Law requires natural persons and legal entities to verify the identity of all clients, record all transactions, including their nature and amount, and submit the information to the Ministry of Economy and Finance. Specifically, the AML Law requires financial institutions to establish money laundering prevention programs and to verify the identity of customers who open accounts or conduct transactions that exceed 200,000 gourdes (approximately \$4,550). Banks are required to maintain records for at least five years and are required to present this information to judicial authorities and FIU officials upon request. Bank secrecy or professional secrecy cannot be invoked as grounds for refusing information requests from these authorities.

Since August 2000, Haiti, through Central Bank Circular 95, has required banks, exchange brokers, and transfer bureaus to obtain declarations identifying the source of funds exceeding 200,000 gourdes (approximately \$4,550) or its equivalent in foreign currency. Covered entities must report these declarations to the UCREF on a quarterly basis. Failure to comply can result in fines up to 100,000

gourdes (approximately \$2,275) or forfeiture of the bank's license. Unfortunately, large amounts of money do not flow through the official financial institutions that are governed by these regulations.

The UCREF is referenced in the AML Law and was created through an August 2000 circular by the Ministries of Justice and Public Security. The FIU officially opened in December 2003; however, it remains a fledgling entity. The UCREF has a new staff of eight persons, including police officers seconded to the unit to investigate suspicious transaction reports. The Caribbean Anti-Money Laundering Program (CALP) provided intensive training assistance for the investigators. Entities or persons are required to report to the UCREF any transaction involving funds that appear to be derived from a crime. Failure to report such transactions is punishable by more than three years' imprisonment. During 2004, UCREF seized \$3 million related to money laundering offenses, and submitted three cases for prosecution. In 2004, though there are many pending arrest warrants for money laundering, there was only one arrest.

The AML Law has provisions for the forfeiture and seizure of assets; however, the government cannot declare the asset or business forfeited until there is a conviction, which does not happen often in Haiti. The judicial branch is the deciding organization, but seizures and use of seized assets is on an ad hoc basis. Over one million U.S. dollars were seized in drug-related investigations in 2004. Haiti is considering modifications to the law to strengthen the judicial procedure and asset seizure and forfeiture provisions.

Haiti has made little progress regarding terrorist financing. The government still has not passed legislation criminalizing the financing of terrorists and terrorism, nor has it signed the UN International Convention for the Suppression of the Financing of Terrorism. The AML Law provides for investigation and prosecution in all cases of illegally derived money. Under this law, terrorist finance assets may be frozen and seized. The commission printed and circulated to all banks the list of individuals and entities on the UNSCR 1267 Sanctions Committee's consolidated list. The Central Bank chaired meetings with all bank presidents and requested their cooperation.

UCREF has been gaining credibility since its official opening; it has concluded three Memoranda of Understanding with the Dominican Republic, Panama and Honduras. Though UCREF has applied for membership in the Egmont Group and hopes to be accepted in the upcoming July 2005 Plenary, it has not yet been accepted and accredited. Haiti is a member of the OAS/CICAD Experts Group to Control Money Laundering and the Caribbean Financial Action Task Force. Haiti is a party to the 1988 UN Drug Convention. Haiti has signed, but not yet ratified, the UN Convention against Transnational Organized Crime and the UN Convention against Corruption.

Presidential elections will be held in November 2005, and the incoming administration should work diligently and expeditiously to fully implement and enforce the AML Law. The Government of Haiti should criminalize terrorist financing and work toward becoming a party to the UN International Convention for the Suppression of the Financing of Terrorism.

Honduras

Two years after passing a new law against money laundering, the Government of Honduras (GOH) has made considerable progress in implementing the law, establishing and training the entities responsible for the investigation of financial crimes, and improving cooperation among these entities. In 2004, the products of these efforts became apparent, with 16 arrests related to money laundering, the seizure of over \$6 million in cash and goods, and the first five convictions for the crime of money laundering in Honduras' history. Sustained progress will depend upon increased commitment from the government to aggressively prosecute financial crimes.

Honduras is not an important regional or offshore financial center and is not considered to have a significant black market for smuggled goods, although there have been recent high-profile smuggling

cases involving gasoline and other consumer goods. Money laundering, however, does take place, primarily through the banking sector but also through currency exchange houses and front companies. While the operation of offshore financial institutions is prohibited, casinos remain unregulated. The vulnerabilities of Honduras to money laundering stem primarily from significant trafficking of narcotics, particularly cocaine, throughout the region; the smuggling of contraband may also generate funds that are laundered through the banking system. Money laundering in Honduras derives both from domestic and foreign criminal activity, and the proceeds are controlled by local drug trafficking organizations and organized crime syndicates. It is not a matter of government policy to encourage, facilitate, or engage in laundering, the proceeds from illegal drug transactions, terrorist financing, or other serious crimes; however, corruption remains a serious problem, particularly within the judiciary and law enforcement sectors.

Under Honduran legislation, companies may register for “free trade zone” status, and benefit from the associated tax benefits, regardless of their location in the country. Companies that wish to receive free trade zone status must register within the Office of Productive Sectors within the Ministry of Industry and Commerce. As of December 2004, there are 337 companies, both domestic and foreign, with free trade zone status operating in Honduras, mostly in the textile and apparel industry. There is no indication that these free trade zone companies are being used in trade-based money laundering schemes or by the financiers of terrorism.

In 2002, the National Congress of Honduras passed long-awaited legislation to widen the definition of money laundering and strengthen enforcement measures. Prior to the passage of Decree No. 45-2002, the Honduran anti-money laundering regime was based on Law No. 27-98 of 1998, which criminalized only the laundering of narcotics-related proceeds and introduced customer identification, record keeping, and reporting requirements for financial institutions. However, weaknesses in the law—including an extremely narrow definition of money laundering—made it virtually impossible to prosecute the crime of money laundering. Under Decree No. 45-2002, the Honduran anti-money laundering legislation was expanded to define the crime of money laundering to include any non-economically justified sale or movement of assets, as well as asset transfers connected with trafficking of drugs, arms, human organs, and people; auto theft; kidnapping; bank and other forms of financial fraud; and terrorism. The penalty for money laundering is a prison sentence of 15-20 years. The law includes banker negligence provisions that make individual bankers subject to two- to five-year prison terms for allowing money laundering activities to occur in their institutions. Decree No. 45-2002 also requires all persons entering or leaving Honduras to declare—and, if requested, present—cash and/or monetary instruments in their possession if the amount exceeds \$10,000 or its equivalent.

Under Decree No. 45-2002, the Honduran financial intelligence unit, the Unidad de Información Financiera (UIF), was created within the National Banking and Securities Commission. Banks and other financial institutions are required to report to the UIF currency transactions over \$10,000 in dollar denominated accounts or 200,000 lempiras (approximately \$10,770) in local currency accounts. Obligated entities are also required to report all unusual or suspicious financial transactions to the UIF. These entities, which are supervised by the National Banking and Securities Commission, include state and private banks, savings and loan associations, bonded warehouses, stock markets, currency exchange houses, securities dealers, insurance companies, credit associations, and casinos. In addition to reporting suspicious transactions and transactions over the \$10,000 threshold to the UIF, obligated entities are also required to implement client identification procedures and maintain registries of reported transactions for a minimum of five years.

Decree No. 45-2002 requires that a public prosecutor be assigned to the UIF. In practice, four prosecutors are assigned to the UIF, each on a part-time basis, with responsibility for specific cases divided among them depending on their expertise. The prosecutors, under urgent conditions and with special authorization, may subpoena data and information directly from financial institutions. Public

prosecutors and police investigators are permitted to use electronic surveillance techniques to investigate money laundering.

Under the Honduran Criminal Procedure Code, officials responsible for filing reports on behalf of covered entities are protected by law with respect to their cooperation with law enforcement authorities. However, some officials have alleged that their personal security is put at risk if the information they report leads to money laundering prosecutions. Officials from the Public Ministry (the Honduran equivalent of the U.S. Department of Justice); the National Banking and Insurance Commission; and the private-sector banking association, AHIBA, are looking into ways of treating testimony from these officials differently, in order to protect their identity.

Until 2004, there had been some ambiguity in Honduran legislation concerning the responsibility of banks to report information to the supervisory authorities, and the duty of these institutions to keep customer information confidential. A new law passed in September 2004, the Financial Systems Law (Decree No. 129-2004), clarifies this ambiguity, explicitly stating that the provision of information requested by regulatory, judicial, or other legal authorities shall not be regarded as an improper divulgence of confidential information.

Although there have been no changes or additions to Honduran money laundering or terrorist financing legislation in 2004, four laws—including the Financial Systems Law—were passed in September to strengthen the financial sector and reform the Central Bank and the National Banking and Insurance Commission. While these laws do not touch specifically on money laundering or terrorist financing, they improve the legal and operational capacity of Honduran authorities to regulate the banking sector, and should therefore strengthen their ability to detect and counteract money laundering or terrorist financing activities. While some bank officials and political figures objected to portions of these laws, the laws were developed overall through close consultation with representatives of the financial sector. This greatly supports these changes in their impact on greater clarity and effectiveness in regulatory functions.

Prior to 2004, there had been no successful prosecutions of money laundering crimes in Honduras. To date in 2004, however, Honduran authorities have arrested 16 persons for money laundering crimes, issued six additional outstanding arrest warrants, and secured five convictions. In April 2004, two Guatemalan citizens were caught crossing the border between Guatemala and Honduras carrying \$247,000 in cash that was suspected to be linked to narcotics-trafficking. The two men were brought to trial in June; one was convicted and sentenced to 16 years in prison, while the other was found not guilty. This was the first conviction of a money laundering offense since Decree No. 45-2002 was passed in 2002.

In December 2002, the fishing vessel “Captain Ryan” was seized while departing a Honduran port and found to be carrying \$467,000 in cash believed to be connected to drug trafficking. The Honduran citizens on board the boat were arrested. In June 2004, four of them were convicted of money laundering, while three others were found innocent and released. All four who were convicted are currently serving terms of 19 years in prison. The cash and other assets seized at the time of the arrest, including the boat, were ordered to be forfeited. Another person connected to the same case was apprehended in Panama by Panamanian authorities; his case is still being processed in the Panamanian judicial system.

In early 2004, a Honduran citizen was arrested and charged with running an illegal lottery scheme and laundering the proceeds. Honduran authorities seized approximately \$1.6 million in cash and assets in connection with this investigation. However, defense attorneys filed a motion claiming that the seizure was unconstitutional; this motion has been referred to an appellate court. A denial of the motion is expected in early January 2005, and the case is expected to proceed to trial in February.

The National Congress enacted an asset seizure law in 1993 that subsequent Honduran Supreme Court rulings substantially weakened. Decree No. 45-2002 strengthens the asset seizure provisions of the law, establishing an Office of Seized Assets (OABI) under the Public Ministry. The law authorizes the OABI to guard and administer “all goods, products or instruments” of a crime, and states that money seized or money raised from the auctioning of seized goods should be transferred to the public entities that participated in the investigation and prosecution of the crime. Under the Criminal Procedure Code, when goods or money are seized in any criminal investigation, a criminal charge must be submitted against the suspect within 60 days of the seizure; if one is not submitted, the suspect has the right to demand the release of the seized assets. Decree No. 45-2002 is not entirely clear on the issue of whether a legitimate business can be seized if used to launder money derived from criminal activities. The chief prosecutor for organized crime maintains that the authorities do have this power, because once a “legitimate” business is used to launder criminal assets, it ceases to be “legitimate” and is subject to seizure proceedings. However, this authority is not explicitly granted in the law, and to date there has not yet been a case to set precedent.

The Office of Seized Assets has not yet established firm control over the asset seizure and forfeiture process. Implementation of the existing law, as well as the process of equipping the OABI to maintain control over seized assets and effectively dispose of them, has been slow and ineffective. The implementing regulations governing the OABI were not finalized and published until 2003. Plans to build separate offices and a warehouse for this entity are still incomplete, resulting in seized assets currently being kept in various locations under dispersed authority. Money seized is also kept in a variety of accounts without clear records of control, or kept in cash as evidence. Due to the absence of a clear chain of custody over seized cash, the Public Ministry on one occasion in 2004 used seized cash to pay certain employees’ salaries, without the money’s first having passed through a proper legal process for disposal.

Similarly, goods such as vehicles, properties and boats that are seized are in many cases left unused, rather than being distributed for use by government agencies. In one case in 2004, a house seized in connection with a narcotics-trafficking investigation was nominally put under the OABI’s control, but was in fact left unguarded; as a result, the house was looted and severely damaged. Cases such as this one have led some police agencies—which do not have the proper resources to carry out their operations—to use these assets, again without having first passed through a legal process for their disposal. While these actions are contradictory to proper procedures set forth in the law, the OABI lacks the necessary autonomy or power to resist such actions because the OABI itself is under the Public Ministry. Furthermore, there is currently no external or independent audit of the OABI’s activities to guarantee transparency and proper handling of seized assets.

The total value of assets seized in 2004 was \$6.1 million, including \$4.1 million in cash and \$2 million in goods. This marks a significant increase over 2003 seizures, which included \$2 million in cash and \$584,000 in goods. Most of these seized assets are alleged to have derived from crimes related to narcotics-trafficking; none are suspected of having links to terrorist activity.

The GOH has been supportive of counterterrorism efforts. Decree No. 45-2002 states that an asset transfer related to terrorism is a crime; however, terrorist financing has not been identified as a crime itself. This law does not explicitly grant the GOH the authority to freeze or seize terrorist assets; however, under separate authority, the National Banking and Insurance Commission has issued freeze orders promptly for the organizations and individuals named by the UNSCR 1267 Sanctions Committee and those organizations and individuals on the list of Specially Designated Global Terrorists designated by the United States pursuant to Executive Order 13224 (on terrorist financing). The Ministry of Foreign Affairs is responsible for instructing the Commission to issue freeze orders. The Commission directs Honduran financial institutions to search for, hold, and report on terrorist-linked accounts and transactions, which, if found, would be frozen. The Commission has reported that,

to date, no accounts linked to the entities or individuals on the lists have been found in the Honduran financial system.

While Honduras is a major recipient of flows of remittances (estimated at \$1.1 billion in 2004), there has been no evidence to date linking these remittances to the financing of terrorism. Remittances primarily flow from Hondurans living in the United States to their relatives in Honduras. Most remittances are sent through wire transfer or bank services, although it is likely that some cash is being transported physically from the U.S. to Honduras. There is no significant indigenous alternative remittance system operating in Honduras, nor is there any evidence that charitable or non-profit entities in Honduras have been used as conduits for the financing of terrorism.

The GOH cooperates with U.S. investigations and requests for information pursuant to the 1988 UN Drug Convention. Honduras has signed memoranda of understanding to exchange information on money laundering investigations with Panama, El Salvador, Guatemala, Mexico, Peru, Colombia, and the Dominican Republic. The GOH strives to comply with the Basel Committee's "Core Principles for Effective Banking Supervision," and the new Financial System Law, Decree No. 129-2004, is designed to improve compliance with these international standards. At the regional level, Honduras is a member of the Central American Council of Bank Superintendents, which meets periodically to exchange information.

Honduras is a party to the United Nations Convention for the Suppression of the Financing of Terrorism, and in November 2004 Honduras became a party to the OAS Inter-American Convention on Terrorism. The GOH is also party to the 1988 UN Drug Convention and the UN Convention against Transnational Organized Crime, and in May 2004 signed the UN Convention against Corruption. Honduras is a member of the Organization of American States Inter-American Drug Abuse Control Commission (OAS/CICAD) Experts Group to Control Money Laundering and the Caribbean Financial Action Task Force (CFATF).

In 2004, the Government of Honduras took positive steps to implement Decree No. 45-2002 by establishing and equipping the various government entities responsible for combating money laundering. However, there are only limited resources available for training officials, most of whom lack experience in dealing with money laundering issues. Further progress in implementing the new money laundering legislation will depend on the training and retention of personnel familiar with money laundering and financial crimes, clearer delineation of responsibility between different government entities, and improved ability and willingness of the Public Ministry to aggressively investigate and prosecute financial crimes. Honduras should continue to support the developing government entities responsible for combating money laundering and other financial crime, and ensure that resources are available to strengthen its anti-money laundering regime. Honduras should also criminalize terrorist financing, and ensure full implementation and proper oversight of its asset forfeiture program.

Hong Kong

Hong Kong is a major international financial center. Its low taxes and simplified tax system, sophisticated banking system, the availability of secretarial services and shell company formation agents, and the absence of currency and exchange controls, facilitate financial activity but also make it vulnerable to money laundering. The primary sources of laundered funds are narcotics-trafficking (particularly heroin, methamphetamines, and ecstasy), tax evasion, fraud, illegal gambling and bookmaking, and commercial crimes. Laundering channels include Hong Kong's banking system, and its legitimate and underground remittance and money transfer networks.

Hong Kong is substantially in compliance with the Financial Action Task Force's (FATF) Forty Recommendations on Money Laundering, and has pledged to adhere to the Revised Forty FATF

Money Laundering and Financial Crimes

Recommendations. Overall, Hong Kong has developed a strong anti-money laundering regime, though improvements should be made. It is a regional leader in anti-money laundering efforts. Hong Kong has been a member of the FATF since 1990. It served as President of the FATF for the 2001/2002 term and served on the FATF's Steering Group from 2001 to 2003.

Money laundering is a criminal offense in Hong Kong under the Drug Trafficking (Recovery of Proceeds) Ordinance (DTRoP) and the Organized and Serious Crimes Ordinance (OSCO). The money laundering offense extends to the proceeds of drug-related and other indictable crimes. Money laundering is punishable by up to 14 years' imprisonment and a fine of HK\$5,000,000 (\$643,000).

Money laundering ordinances apply to all persons, including banks and non-bank financial institutions, as well as to intermediaries such as lawyers and accountants. All persons must report suspicious transactions of any amount to the Joint Financial Intelligence Unit (JFIU). The JFIU does not investigate suspicious transactions itself, but receives, stores, and disseminates suspicious transactions reports (STRs) to the appropriate investigative unit. Typically, STRs are passed to either the Narcotics Bureau or the Organized Crime and Triad Bureau of the Hong Kong Police Force, or to the Customs Drug Investigation Bureau of the Hong Kong Customs and Excise Department.

Financial regulatory authorities issue anti-money laundering guidelines reflecting the revised set of FATF Forty Recommendations to institutions under their purview, and monitor compliance through on-site inspections and other means. Hong Kong law enforcement agencies provide training and feedback on suspicious transaction reporting.

Financial institutions are required to know and record the identities of their customers and maintain records for five to seven years. Hong Kong law provides that the filing of a suspicious transaction report shall not be regarded as a breach of any restrictions on the disclosure of information imposed by contract or law. Remittance agents and money changers must register their businesses with the police and keep customer identification and transaction records for cash transactions equal to or over \$2,564 (HK\$20,000).

Hong Kong does not require reporting of the movement of currency above a threshold level across its borders, or reporting of large currency transactions above a threshold level. However, the Narcotics Division is drafting a bill for the legislature's consideration in 2005, that would authorize Hong Kong Customs officials to stop and question passengers about money they are bringing into or taking out of Hong Kong. The draft bill will also mandate that Customs officials maintain records of individuals carrying more than \$15,000 across the border, even if it is not related to a crime.

The bill will not mandate currency declarations at the border, but will widen the Hong Kong Government's ability to seize cash being laundered from all "serious crimes," instead of only cash stemming from narcotics-trafficking or related to terrorism. Under the bill, bankers, lawyers, accountants, real estate agents, precious metals dealers, and other professionals may face criminal sanctions if they assist in money laundering through a failure to "know their customers." The new bill will involve a statutory requirement to obtain sufficient information about the client—including the beneficial ownership of corporate clients and the source of wealth of individuals. This measure extends beyond current regulations, which already make the failure to report suspicious transactions an offense.

There is no distinction made in Hong Kong between onshore and offshore entities, including banks, and no differential treatment is provided for nonresidents, including on taxes, exchange controls, or disclosure of information regarding the beneficial owner of accounts or other legal entities. Hong Kong's financial regulatory regimes are applicable to residents and nonresidents alike. The Hong Kong Monetary Authority (HKMA) regulates banks. The Insurance Authority and the Securities and Futures Commission regulate insurance and securities firms, respectively. All three impose licensing

requirements and screen business applicants. There are no legal casinos or Internet gambling sites in Hong Kong.

In Hong Kong, it is not uncommon to use solicitors and accountants, acting as company formation agents, to set up shell or nominee entities to conceal ownership of accounts and assets. Hong Kong is a global leader in registering international business companies (IBCs), with nearly 500,000 registered in 2002. Many of the IBCs created in Hong Kong are owned by other IBCs registered in the British Virgin Islands. Many of the IBCs are established with nominee directors. The concealment of the ownership of accounts and assets is ideal for the laundering of funds. Additionally, some banks permit the shell companies to open bank accounts based only on the vouching of the company formation agent. However, solicitors and accountants have filed a low number of suspicious transaction reports in recent years, and have become a focus of attention to improve reporting, as a result.

The open nature of Hong Kong's financial system has long made it the primary conduit for funds being transferred out of China, which maintains a closed capital account. Hong Kong's role has been evolving as China's financial system gradually opens. On February 25, 2004, Hong Kong banks began to offer Chinese currency- (renminbi or RMB-) based, deposit, exchange, and remittance services. Later in the year, Hong Kong banks began to issue RMB-based credit cards, which could be used both in mainland China and in Hong Kong shops that had signed up to the Chinese payments system, China UnionPay. This change brought many financial transactions related to China out of the money-transfer industry and into the more highly regulated banking industry, which is better equipped to guard against money laundering.

Under the Drug Trafficking (Recovery of Proceeds) Ordinance (DTRoP) and the Organized and Serious Crimes Ordinance (OSCO), a court may issue a restraining order against a defendant's property at or near the time criminal proceedings are instituted. Both ordinances were strengthened in January 2003, through a legislative amendment lowering the evidentiary threshold for initiating confiscation and restraint orders against persons or properties suspected of drug trafficking. Property includes money, goods, real property, and instruments of crime. A court may issue confiscation orders at the value of a defendant's proceeds from illicit activities. Cash imported into or exported from Hong Kong that is connected to narcotics trafficking may be seized, and a court may order its forfeiture.

As of November 1, 2004, the value of assets under restraint was \$171 million, and the value of assets under confiscation order, but not yet paid to the government, was \$14.36 million, according to figures from the JFIU. It also reported that as of November 1, 2004, the amount confiscated and paid to the government since the enactment of DTRoP and OSCO was \$49.5 million, and a total of 119 persons had been convicted of money laundering over that period. Hong Kong has shared confiscated assets with the United States.

In July 2002, the legislature passed several amendments to the DTRoP and OSCO to strengthen restraint and confiscation provisions. These changes, which became effective on January 1, 2003, include the following: there is no longer a requirement of actual notice to an absconded offender; there is no longer a requirement that the court fix a period of time in which a defendant is required to pay a confiscation judgment; the court is allowed to issue a restraining order against assets upon the arrest (rather than charging) of a person; the holder of property is required to produce documents and otherwise assist the government in assessing the value of the property; and an assumption is created under the DTRoP, to be consistent with OSCO, that property held within six years of the period of the violation by a person convicted of drug money laundering is proceeds from that money laundering.

Since legislation was adopted in 1994 mandating the filing of suspicious transaction reports (STRs), the number of STRs received by JFIU has continually increased. In the first ten months of 2004, a total of 12,006 STRs were filed, compared to a total of 11,671 for the twelve months of 2003.

A new Financial Investigations Division, established in the Narcotics Bureau, is supporting the investigations of STRs. The new division contains a section dedicated to money laundering investigations related to drug trafficking and terrorist financing. The division provides the main link with overseas and local law enforcement agencies on investigations and intelligence exchange concerning money laundering and terrorist finance. It also contains the JFIU, including a new intelligence analysis team.

The new division will analyze STRs to develop information that could aid in prosecuting money laundering cases, the number of which has also increased since 1996, soon after the passage of OSCO (1994). In terms of actual prosecutions for money laundering, there were 40 during the first 10 months of 2004, compared to 29 for the entire year of 2003.

In July 2002, Hong Kong's legislature passed the United Nations (Anti-Terrorism Measures) Ordinance that criminalizes the supply of funds to terrorists. On July 3, 2004, the Legislative Council passed the United Nations (Anti-Terrorism Measures)(Amendment) Ordinance. This law is intended to implement UNSCR 1373 and the FATF Special Nine Recommendations on Terrorist Financing that were in place in July, 2004. It extends the Hong Kong Government's freezing power beyond funds to the non-fund property of terrorists and terrorist organizations. Furthermore, it prohibits the provision or collection of funds by a person intending or knowing that the funds will be used in whole or in part to commit terrorist acts. Hong Kong's financial regulatory authorities have directed the institutions they supervise to conduct record searches for terrorist assets, using U.S. Executive Order 13224 and the UNSCR 1267 Sanctions Committee's consolidated list.

The People's Republic of China represents Hong Kong on defense and foreign policy matters, including UN affairs. After the PRC becomes a party to a UN terrorism treaty, the Hong Kong Government submits implementing legislation to Hong Kong's Legislative Council. After passage, the HKG executes the relevant UN treaty. The PRC has yet to ratify the UN International Convention for the Suppression of the Financing of Terrorism.

In 2004, Hong Kong financial authorities arranged outreach activities to raise awareness of terrorism financing in the financial community. For instance, Hong Kong's bank regulatory agency, the Hong Kong Monetary Authority (HKMA) issued a new supplementary guideline in June 2004 on the latest "know your customer" principles, taking into account the October 2001 Basel Committee on Banking Supervision. The guideline also incorporates the FATF Special Nine Recommendations on Terrorist Financing and Hong Kong's new United Nations (Anti-Terrorism) Ordinance. The instruction also requires banks to verify fund sources, before accepting money from any of: offshore companies established with the intention of disguising beneficial ownership, correspondent banks from FATF-designated non-cooperative countries or territories, and prominent politicians and heads of state.

The new rule also requires banks to maintain a database of terrorist names, and requires management information systems that detect unusual patterns of activity in customer accounts. The Securities and Futures Commission (SFC) and the Office of the Commissioner of Insurance (OCI) are revising their guidance notes on the prevention of money laundering and terrorist financing, to reflect the new requirements in the revised FATF Forty Recommendations and international securities and insurance guidance. The Hong Kong government has modified its regulations in order to make its regulations consistent with the revised FATF recommendations.

Other bodies governing segments of the financial sector are also active in anti-money laundering efforts. The Hong Kong Estates Agents Authority, for instance, has drawn up specific guidelines for real estate agents on filing suspicious transaction reports, and the Law Society of Hong Kong and the Hong Kong Institute of Certified Public Accountants are in the process of drafting such guidance.

In a major 2004 money laundering case, a High Court jury charged two of six defendants in a case involving \$2.6 billion-\$3.8 billion laundered annually for five years. The Hong Kong Independent

Commission against Corruption (ICAC) alleged that the Guardecade Money Changing firm had collected funds from mainland Chinese commercial tax evaders and had transferred the proceeds to accounts in Hong Kong and overseas. One of the defendants, who worked in a bank, was acquitted of money laundering, but was found guilty of bribery by the High Court. The High Court will retry two other of the acquitted defendants. The trial will begin February 17, 2005.

The Hong Kong police also assisted the United States in terrorism investigations in 2004. In 2003, Hong Kong took part in the International Monetary Fund's Financial Sector Assessment Program (FSAP), which aims to strengthen the financial stability of a jurisdiction by identifying the strengths and weaknesses of its financial system and assessing compliance with key international standards. As part of the FSAP, a team of IMF and World Bank-sponsored legal and financial experts assessed the effectiveness of Hong Kong's anti-money laundering regime against the FATF Forty Recommendations and the FATF Special Nine Recommendations on Terrorist Financing. The team described Hong Kong's anti-money laundering measures as "resilient, sound, and overseen by a comprehensive supervisory framework."

Through the PRC, Hong Kong is subject to the 1988 UN Drug Convention. It is an active member of the FATF and Offshore Group of Banking Supervisors and also a founding member of the APG. Hong Kong's banking supervisory framework is in line with the requirements of the Basel Committee on Banking Supervision's "Core Principles for Effective Banking Supervision." Hong Kong's JFIU is a member of the Egmont Group and is able to share information with its international counterparts. Hong Kong cooperates closely with foreign jurisdictions in combating money laundering.

Hong Kong's mutual legal assistance agreements provide for the exchange of information for all serious crimes, including money laundering, and for asset tracing, seizure, and sharing. Hong Kong signed and ratified a mutual legal assistance agreement with the United States that came into force in January 2000.

As of December 2004, Hong Kong had mutual legal assistance agreements with a total of 16 other jurisdictions: Australia, Canada, the United States, Italy, the Philippines, the Netherlands, Ukraine, Singapore, Portugal, Ireland, France, the United Kingdom, New Zealand, the Republic of Korea, Belgium, and Switzerland. Hong Kong has also signed surrender-of-fugitive-offenders agreements with 13 countries, and has signed transfer-of-sentenced-persons agreements with seven countries, including the United States.

Hong Kong authorities exchange information on an informal basis with overseas counterparts, with Interpol, and with Hong Kong-based liaison officers of overseas law enforcement agencies. An amendment to the Banking Ordinance in 1999 allows the HKMA to disclose information to an overseas supervisory authority about individual customers, subject to conditions regarding data protection. The HKMA has entered into memoranda of understanding with overseas supervisory authorities of banks for the exchange of supervisory information and cooperation, including on-site examinations of banks operating in the host country.

The Government of Hong Kong should further strengthen its anti-money laundering regime by establishing threshold reporting requirements for currency transactions and putting into place "structuring" provisions to counter evasion efforts. Hong Kong should also establish mandatory cross-border currency reporting requirements and continue to encourage more suspicious transaction reporting by lawyers and accountants, as well as by business establishments such as auto dealerships, real estate companies, and jewelry stores. Hong Kong should also take steps to thwart the use of "shell" companies, IBCs, and other mechanisms that conceal the beneficial ownership of accounts by more closely regulating corporate formation agents.

Hungary

Hungary has a pivotal location in Central Europe, with a well-developed financial services industry. Criminal organizations from Russia and other countries such as Ukraine, which shares part of its border with Hungary, are entrenched in Hungary. The economy is largely cash-based. Money laundering is related to a variety of criminal activities, including narcotics, prostitution, and organized crime. Financial crime has not increased in recent years, though there have been isolated, albeit well-publicized cases, some of which are still ongoing. Combating cross-border criminal activities is a priority for Hungary's law enforcement community.

Hungary became a full member of the European Union (EU) on May 1, 2004. Upon EU accession, all EU regulations became effective immediately in Hungary. As a full EU member, Hungary also is working to implement EU Directives, including those relating to money laundering. Hungary had been placed on the Financial Action Task Force (FATF) list of non-cooperative countries and territories (NCCT) in the fight against money laundering in June 2001, but was removed completely from this list in the summer of 2003 due to significant improvements in its money laundering regime. Since then, it has strived to implement the FATF Forty Recommendations and Special Recommendations on Terrorist Financing.

Hungary banned offshore financial centers by Act CXII of 1996 on Credit Institutions. Offshore casinos are also prohibited from operating by the 1996 Act. There are offshore companies registered in Hungary that enjoy a preferential tax rate and are exempt from the local corporate turnover tax of two percent. Due to EU accession, however, the preferential tax treatment is being phased out and will cease at the end of 2005. Beginning in 2006, these companies will be converted automatically into Hungarian companies, subject to all Hungarian corporate taxes. The only special status they will thereafter retain is the ability to keep books in foreign currencies.

Act CXX of 2001 eliminated bearer shares and required that all such shares be transferred to identifiable shares by the end of 2003. In Hungary, all shares are dematerialized, and both owners and any beneficiaries must be registered.

By mid-2003, Hungary had successfully transferred 90 percent of anonymous savings accounts into identifiable accounts. As of December 31, 2004, such accounts can be converted only by written permission from the police.

Hungary no longer permits the operation of free trade zones. Law CXXVI of 2003 stipulates that permits for companies operating in free trade zones would expire, but allowed companies to request new permits that would convert them into normal companies in the early part of 2004. The companies affected could transfer their assets until the end of April 2004 without a value-added tax (VAT) or customs duty. Upon Hungary's EU accession on May 1, these companies' operations immediately came under EU Council Regulation 2913/1992 and the European Commission Regulation 2454/1992. Currently, there are no companies operating in free trade zones. The Finance Ministry, however, is planning to propose new free trade zones.

Anti-money laundering legislation in Hungary dates back to Act XXIV of 1994. Money laundering related to all serious crimes punishable by imprisonment is a criminal offense. In 2003, the Government of Hungary (GOH) re-codified this legislation in Act XV of 2003, "On the Prevention and Impeding of Money Laundering," which became effective on June 16, 2003. The 2003 Act extends the anti-money laundering legislation to encompass the following additional professions and business sectors: financial services, investment services, insurance, stock brokers, postal money transfers, real estate agents, auditors, accountants, tax advisors, gambling casinos, traders of gems or other precious metals, private voluntary pension funds, lawyers, and public notaries. Act XV also criminalizes tipping off and forces self-regulating professions to submit internal rules to identify asset holders, track transactions, and report suspicious transactions. In April 2002, Section 303 of the Penal

Code on Money Laundering was amended to criminalize as punishable offenses the laundering of one's own proceeds, laundering through negligence, and conspiracy to commit money laundering.

Hungary's financial regulatory body, the Hungarian Financial Supervisory Authority (HFSA), is charged with supervising all types of financial services providers. The one exception to this is cash processing, which is supervised by Hungary's Central Bank, the National Bank of Hungary. Auditors, casinos, lawyers, and notaries are supervised by their own trade associations. The Hungarian National Police (HNP) supervises all other professions covered under the 2003 Act, because they have neither self-regulatory professional bodies nor state supervision.

The 2003 Act also states that if an individual carries currency exceeding 1 million HUF (approximately \$5,300) across a border, the amount must be declared in writing to the customs authority. Customs authorities are also obligated to establish the identity of an individual crossing the border if any suspicion of money laundering arises.

As of 2001, only banks or their authorized agents can operate currency exchange booths. These exchange booths are subject to "double supervision", as they are subject to the banks' internal control mechanisms, which are in turn subject to supervision by the HFSA. The exchange booths are required to file suspicious transaction reports (STRs) for amounts exceeding 300,000 HUF (approximately \$1,600). These amounts can come either from a single transaction or consecutive separate transactions exceeding this threshold. There are currently about 300 exchange booths in Hungary.

The 2003 Act also states that covered service providers are required to identify their customers or any authorized individual representing their customers, when entering into a business relationship. In transactions exceeding 2 million HUF (approximately \$10,600) or transactions of any amount where suspicion of money laundering arises, the customer must be identified. Under the anti-money laundering legislation, banks, financial institutions, and other service providers are required to maintain records for at least ten years. All of the service providers are required to report suspicious transactions directly, or through their representation bodies, to the police authority as soon as they occur. Lawyers and notaries are exempt from their reporting obligations only when they are representing their clients in a criminal court case. Under all other circumstances, they are obligated to file reports. Both lawyers and notaries submit their reports to their respective bar and notary associations, who then forward the reports on to the police. All other service providers submit their reports directly to the police. The police may perform on-site random checks of service providers. Hungary has no bank secrecy laws that would prevent disclosure of client or ownership information to law enforcement authorities.

When these professions were included in the anti-money laundering legislation of 2003, there were some initial concerns and protests as to how the legislation would be put into practice. As the police briefed representatives of these professions and rules were adopted, the concerns have diminished. Currently, only antique shops are known still to have concerns, although they are believed to be meeting their reporting obligations.

Reporting individuals are protected in their anti-money laundering reporting obligations. If the report involves suspicious activity related to terrorist financing, the law allows for the possibility of protection. But, currently, actual extension of protection is granted at the discretion of the prosecutor.

Hungary's Financial Intelligence Unit (FIU) is part of the HNP. It investigates money laundering cases and has considerable authority to request and release information, nationally and internationally. In the summer of 2004, the HNP completed a major organizational restructuring, which included the establishment of the National Bureau of Investigation (NBI). Among its mandates, the NBI is charged with the detection and investigation of major corruption and money laundering cases. One of the main objectives of this restructuring was to eliminate the parallel jurisdictions that existed between the Financial Crime Investigation and Economic Crime Investigation areas and to implement a more

coordinated investigative effort for money laundering investigations. The combined Economic and Financial Crimes Department of the NBI has a staff of 134 at the headquarters level. The FIU within this department has a staff of 42. In 2004, it received 14,120 STRs. An increase in the number of investigators has helped the FIU investigate cases.

In 2003, a money laundering scandal broke involving a Hungarian subsidiary, K&H Equities, of a Dutch-owned bank. A broker apparently skimmed funds from some clients in order to pad the returns of other more favored clients. Money was laundered through several banks as well as some foreign nationals. The police are still investigating the case. After it was discovered that bank tellers had failed to file STRs in the K&H case, “banker negligence” laws were enacted that made individual bankers responsible if their institutions launder money. This has resulted in over-reporting, according to the FIU.

The Hungarian Criminal Code, Act XIX of 1998, and amended by Act II of 2003, contains a provision on the forfeiture of assets. Under this provision, assets that were used to commit crimes, would endanger public safety, or were created as a result of criminal activity, are subject to forfeiture. All property related to criminal activity during the period of time when the owner was a party to a criminal organization can be seized, unless proven to have been obtained in good faith as due compensation. Act II of 2003 states that persons or members of criminal organizations sponsoring activities of a terrorist group by providing material assets or any other support face five to fifteen years of imprisonment.

The Hungarian Criminal Code treats terrorist financing-related crimes differently than all other crimes. For all other crimes, the police freeze the assets and must then inform the bank within 24 hours as to whether there will be an investigation. Police investigations must be completed within two years of filing charges. Forfeiture and seizure for all crimes, including terrorist financing, is determined by a court ruling. The banking community has cooperated fully with enforcement efforts to trace funds and seize/freeze bank accounts. In all cases, some of the frozen assets may be released, for example, to cover health-related expenses or basic sustenance, if the FIU approves a written request from the owner of the assets. After subtracting any related civil damages, proceeds from asset seizures and forfeitures go to the government.

Act IV of 1978, Article 261, criminalizes terrorist acts. Hungary criminalizes terrorism and all forms of the financing of terrorism by Act II of 2003, which modifies Criminal Code Article 261. This includes providing funds or collecting funds for terrorist actions or facilitating or supporting such actions by any means. The penalty for such crimes is imprisonment of five to fifteen years.

Hungary can also freeze terrorist finance-related assets. Act XIX of 1998 on Criminal Procedures, Articles 151, 159, and 160, provide for the immediate seizure of terrorist assets. In cases where terrorist financing is suspected, banks freeze the assets and then promptly notify HFSA and the FIU. There is no time limit as to when the FIU must then inform the bank of whether it is conducting a police investigation. The GOH circulates to its financial institutions the names of individuals and entities that have been included on the UNSCR 1267 Sanctions Committee’s consolidated list as well as those that the U.S. Government and the EU have designated under relevant authorities. In 2003, there was one arrest for terrorist financing, when a foreigner attempted to donate to a charitable organization listed on the UN’s consolidated list of terrorists. The bank immediately froze the assets, but the individual was deported from the country without the case going to trial. In 2004, there was one suspected case of terrorist financing. Assets were frozen in a bank account that received a transfer from a bank in Saudi Arabia. However, the court ruled that the recipient of the funds could not be judged guilty solely on the basis of receiving funds from an entity on the UN’s consolidated list of suspected terrorists.

Act CXII of 1996 on Credit Institutions bans the use of any indigenous alternative remittance systems that bypass, in whole or in part, financial institutions. In cases where money is transferred to a

charitable or non-profit entity, the GOH has proven it will freeze the assets regardless of the amount, as was true in the one notable case in 2003.

Hungary is party to a Mutual Legal Assistance Treaty with the United States, and signed, in January 2000, a non-binding information-sharing arrangement with the United States, which is intended to enable U.S. and Hungarian law enforcement to work more closely to fight organized crime and illicit transnational activities. In furtherance of this goal, in May 2000, Hungary and the U.S. Federal Bureau of Investigation established a joint task force to combat Russian organized crime groups. Hungary has signed bilateral agreements with 41 other countries to cooperate in combating terrorism, drug-trafficking, and organized crime.

Hungary is a member of the Council of Europe's Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL) and underwent a second round mutual evaluation in 2001. Hungary's FIU has been a member of the Egmont Group since 1998.

In 2000, Hungary signed and ratified the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime. Hungary is a party to the UN International Convention for the Suppression of the Financing of Terrorism and the 1988 UN Drug Convention. The GOH signed the UN Convention against Corruption on December 10, 2003.

The Government of Hungary has made progress in developing its anti-money laundering regime, however, Hungary should continue its efforts with respect to financial supervision and prosecution. Hungary should improve the effectiveness of its prosecutions by further training prosecutors, judges, and police so that it may successfully prosecute money laundering cases.

Iceland

Money laundering is not considered a major problem in Iceland. A 1997 amendment to the criminal code criminalizes money laundering regardless of the predicate offense, although the maximum penalty for money laundering is greater when it involves drug trafficking. The Icelandic Penal Code specifies that sentences be determined based on the worst crime. Therefore, if a case involves both drug offenses and money laundering, the sentence will be based on the laws that concern the drug case. In cases that concern money laundering activities only, the maximum sentence is ten years' imprisonment.

Iceland based its money laundering law on the Financial Action Task Force's (FATF's) Forty Recommendations. In 1999, Iceland amended its 1993 Act on Measures to Counteract Money Laundering (MCML). The amendments increase the number and types of occupations and individuals that fall under the anti-money laundering law. The amendment also applies due diligence laws to all banks, non-banking financial institutions, and intermediaries (such as lawyers and accountants). There are provisions in the law that allow for a fine or imprisonment for up to two years for failure to comply.

In 2003, two additional amendments were made to counteract money laundering. The first amendment is based on the European Union Directive and requires the National Commissioner of Police to provide the public with general information and advice on how to detect money laundering and suspicious transactions. Additionally, the first amendment requires banks and financial institutions to pay special attention to non-cooperative countries and territories (NCCTs) that do not follow international recommendations on money laundering. The Financial Supervisory Authority (FME), the main supervisor of the Icelandic financial sector, is to publish announcements and instructions if special caution is needed in dealing with any such country or territory.

The second amendment to the MCML moves the responsibility of the National Registry of Firms from the Icelandic Statistical Office to the Internal Revenue Directorate. This amendment imposes new

obligations on legal entities to provide greater information about their activities when registering, and increases the measures that Icelandic authorities can take to enforce the MCML. The FME has indicated that the MCML may be revised during 2005 as a result of the new European Union (EU) directive on money laundering and revised FATF recommendations.

The MCML requires banks and other financial institutions, upon opening an account or depositing assets of a new customer, to have the customer prove his or her identity by presenting personal identification documents. Additionally, if the individual is not a regular customer, the financial institution is required to obtain proof of identification for transactions in excess of 15,000 euros (approximately \$20,000). The financial institutions may also request identification for transactions under the reporting requirement if the transaction is of a suspicious nature.

Financial institutions record the name of every customer who seeks to buy or sell foreign currency. All records necessary to reconstruct significant transactions are maintained for at least seven years. Employees of financial institutions are protected from civil or criminal liability for reporting suspicious transactions. The MCML requires that banks and other financial institutions report all suspicious transactions to the Economic Crime Division of the National Commissioner of Police, Iceland's Financial Intelligence Unit (FIU).

Suspicious transaction reporting (STRs) is on the rise in Iceland, but the authorities believe this increase is due to increased training of bank employees, better cooperation between authorities and financial institutions, and an increased awareness of the importance of the issue. Although there were no money laundering regulatory or legislative changes during 2004, the enforcement capability has increased with the addition of an officer assigned to the FIU. The FIU is expanding the training provided to financial institutions to include those working at financial intermediaries such as lawyers and accountants. The FIU received 163 STRs in the first 11 months of 2002, 213 STRs in 2003, and 276 STRs in 2004. One company in the currency exchange business was responsible for 17 percent of all STRs filed in 2003. This operation was taken over by one of the commercial banks so stricter oversight will apply. The majority of the STRs filed in 2004 originated from commercial banks and financial institutions. In addition, one STR was filed by a lawyer and another was filed by the Customs authority. Eighty percent of the STRs filed were narcotics-related and 20 percent were filed for suspicious financial transactions.

The first successful prosecution under the money laundering law occurred in 2000. Five additional cases were tried in 2001, all of which resulted in convictions; three were appealed to the Supreme Court where the convictions were upheld. There were no prosecutions in 2002. In 2003 two cases were tried and resulted in convictions, one of which was appealed to the Supreme Court where the decision has not yet been rendered. There were no prosecutions in 2004.

Iceland's FIU is the primary government agency responsible for asset seizures. According to Iceland's Code on Criminal Procedure, if there is suspicion of criminal activity the FIU can take measures such as freezing or seizing funds. There are no significant obstacles to asset seizure, as long as the FIU, when requesting such measures, can demonstrate a reasonable suspicion of illegal activity to the court. The FME and the FIU make every effort to enforce existing drug-related asset seizure and forfeiture laws. In recent years, asset seizure has become quite common in embezzlement crimes, while only a small fraction of total asset seizures has related to money laundering. Under the Icelandic Penal Code, any assets confiscated on the basis of money laundering investigations must be delivered to the Icelandic State Treasury. There have been no instances of the U.S. or any other government's requesting seized assets from Iceland. If such a situation arose, the sharing of seized assets with another government would only become possible if new legislation were drafted for this specific purpose.

The Parliament of Iceland passed comprehensive domestic legislation that specifically criminalizes terrorism and terrorist acts, and requires the reporting of suspected terrorist-linked assets and

transactions involving possible terrorist operations or organizations. In March 2003, an amendment to the Law on Official Surveillance on Financial Operations was passed. It strengthens Iceland's ability to adhere to international money laundering and asset freezing initiatives and agreements. In accordance with international obligations or resolutions to which Iceland is a party, the FME shall publish announcements on individuals or legal entities (companies) whose names appear on the UNSCR 1267 Sanction Committee's consolidated list or on European Union clearinghouse list and whose assets or transactions Icelandic financial institutions are specifically obliged to report to authorities and freeze. Prior to the amendment the government had to publish the names of terrorist individuals and organizations in the National Gazette in order to make them subject to asset freezing. The government formally enacted financial freeze orders against individuals and entities on the UNSCR 1267 Sanction Committee's consolidated list. Government of Iceland (GOI) officials have said they will consider applying their terrorist asset freeze strictures against U.S.-only designated entities (i.e., names not on UN or EU lists) on a case-by-case basis. To date, Iceland has discovered no terrorist-related assets or financial transactions.

When dealing with other European Economic Areas (EEA) member countries, the FME can disclose confidential information to their supervisory authorities, provided that this sharing constitutes an act of law enforcement cooperation and is beneficial for conducting investigations of suspicious money laundering activities, and information provided is kept confidential by the receiving countries' authorities as prescribed by law. Concerning requests for information from countries outside of the EEA, the FME may, on a case-by-case basis, disclose to supervisory authorities information under the same conditions of confidentiality. To date there have been no requests from either EEA or non-EEA countries for an exchange of information concerning suspected acts of money laundering.

There is currently no agreement (or discussions toward one) between Iceland and the United States to exchange information concerning financial investigation, and no Mutual Legal Assistance Treaty (MLAT). The National Commissioner of Police has acted on tips from foreign law enforcement agencies in the investigation of money laundering activities, and the process of international cooperation with the law enforcement authorities of other countries appears to work smoothly.

Iceland is a party to the 1988 UN Drug Convention; the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime; and the UN International Convention for the Suppression of the Financing of Terrorism. Iceland has signed, but not yet ratified, the UN Convention against Transnational Organized Crime. Iceland is party to several multilateral conventions on terrorism and rules of territorial jurisdiction, including the 1977 European Convention on the Suppression of Terrorism. Iceland is a member of the FATF, and its financial intelligence unit is a member of the Egmont Group.

The Government of Iceland should continue to enhance its anti-money laundering/counterterrorist financing regime. If it has not already done so in its 2003 legislation, Iceland should specifically criminalize the financing of terrorism and terrorists.

India

India's status as a growing regional financial center, the existence of a large system of informal cross-border money flows (hawala), and widely perceived tax avoidance make India vulnerable to money laundering activities. India is a major drug-transit country. Some common sources of illegal proceeds in India are narcotics-trafficking, trade in illegal gems (particularly diamonds), smuggling, trafficking in persons, corruption, and income tax evasion.

India's historically strict foreign-exchange laws, transaction reporting requirements, and the banking industry's know-your-customer policy make it difficult for criminals to use banks or other financial institutions to launder money. Large portions of illegal proceeds are accordingly laundered through the

alternative remittance system called “hawala” or “hundi.” The hawala market is estimated at anywhere between 20 and 50 percent of the formal market. Remittances to India reported through legal, formal channels in 2003-2004 amounted to \$18 billion.

Under the hawala system, individuals transfer funds or other items of value from one country to another, often without the actual movement of currency. Among its advantages, the system: provides anonymity and security; permits individuals to convert one currency into another; and lets them convert narcotics, gold, or trade items into currency. Anecdotal evidence suggests that many Indians do not trust banks and prefer to avoid the lengthy paperwork required to complete a money transfer through a financial institution. Hawala dealers can provide the same service with little or no documentation and at rates less than those charged by banks. The Government of India (GOI) neither regulates hawala dealers nor requires them to register with the government; the Reserve Bank of India (RBI), the country’s Central Bank, argues that hawala dealers cannot be registered or regulated because the system (though widespread) is illegal. The RBI does intend to increase its regulation of non-bank money transfer operations such as currency exchange kiosks and wire transfer services.

Historically, gold has been one of the most important commodities involved in Indian hawala transactions. There is a widespread cultural demand for gold in the region (India liberalized its gold trade restrictions in the mid-1990s). In recent years, it is believed that the growing Indian diamond trade has also been increasingly important in providing countervaluation or a method of “balancing the books” in external hawala transactions. Invoice manipulation (for example, inaccurately reflecting the value of a good sold on the invoice) is pervasive and is used extensively to both avoid customs duties and taxes and to launder illicit proceeds through trade-based money laundering.

Tax evasion is also widespread. Changes in the tax system are gradually being implemented, as the GOI now requires individuals to use a personal identification number to pay taxes, purchase foreign exchange, and apply for passports. The GOI plans to introduce a nation-wide value added tax in 2005. Such a tax would replace a basket of complicated state sales taxes and excise taxes, thus reducing the incentive and opportunities for businesses to conceal their sales or income levels.

The Criminal Law Amendment Ordinance allows for the attachment and forfeiture of money or property obtained through bribery, criminal breach of trust, corruption, or theft, and of assets that are disproportionately large in comparison to an individual’s known sources of income. The 1973 Code of Criminal Procedure, Chapter XXXIV (Sections 451-459), establishes India’s basic framework for confiscating illegal proceeds. The Narcotic Drugs and Psychotropic Substances Act (NDPS) of 1985, as amended in 2000, calls for the tracing and forfeiture of assets that have been acquired through narcotics-trafficking, and prohibits attempts to transfer and conceal those assets. The Smugglers and Foreign Exchange Manipulators Act (SAFEMA) also allows the seizure and forfeiture of assets linked to Customs Act violations. The competent authority (CA), located in the Ministry of Finance (MOF), administers both the NDPSA and SAFEMA.

The 2001 amendments to the NDPSA allow the CA to immediately seize any asset owned or used by a narcotics trafficker upon arrest; previously, assets could be seized only after conviction. However, Indian law enforcement officers lack training in the procedures for identifying individuals who might be subject to asset seizure/forfeiture, and in tracing assets to be seized. They also need training in drafting and expeditiously implementing asset freezing orders. The Foreign Exchange Management Act (FEMA), which was enacted in 2000, is one of the GOI’s primary tools for fighting money laundering. The FEMA’s objectives include the establishment of controls over foreign exchange, the prevention of capital flight, and the maintenance of external solvency. FEMA also imposes fines on unlicensed foreign exchange dealers. A closely related piece of legislation is the Conservation of Foreign Exchange and Prevention of Smuggling Act (COFEPOSA), which provides for preventive detention in smuggling and other matters relating to foreign exchange violations. The Ministry of

Finance's Enforcement Directorate enforces FEMA and COFRPOSA. The RBI also plays an active role in the regulation and supervision of foreign exchange transactions.

On November 27, 2002, the lower house of Parliament finally passed the Prevention of Money Laundering Act (PMLA), which had first been introduced in 1998. The bill was amended in August 2002 by the upper house to include terrorist financing provisions. India's President signed the law in January 2003. This legislation criminalizes money laundering, establishes fines and sentences for money laundering offenses, imposes reporting and record keeping requirements on financial institutions, provides for the seizure and confiscation of criminal proceeds, and provides for the creation of a Financial Intelligence Unit (FIU). However, the implementing rules and regulations for the PMLA had not been promulgated as of the end of December 2004.

In November 2004, the Indian Cabinet gave its approval for setting up the FIU, which will be an independent unit within the MOF's Central Economic Intelligence Bureau (CEIB). The FIU is expected to become operational in early 2005 and will reportedly have both intelligence and investigative wings. India's new FIU will seek to join the Egmont Group. Until the new FIU becomes fully operational, the CEIB will continue to serve as the GOI's leading organization for fighting financial crime. In this capacity, it receives suspicious transactions reports, of which there is a backlog, according to GOI officials in late 2003. The Central Bureau of Investigation, the Directorate of Revenue Intelligence, Customs, and Excise, the RBI, the Competent Authority, and the MOF are also active in anti-money laundering efforts. In 2004, the Directorate of Revenue Intelligence (DRI) referred four hawala-based money laundering cases with a U.S. nexus to the U.S. Department of Homeland Security/Immigration and Customs Enforcement.

Many banking institutions, prompted by the RBI, have taken steps on their own to combat money laundering. Many banks have compliance officers to ensure that existing anti-money laundering regulations are observed. The RBI issued a notice in 2002 to commercial banks instructing them to adopt the know-your-customer rule. The Indian Bankers Association established a working group to develop self-regulatory anti-money laundering procedures. Foreign customers applying for accounts in India must show positive proof of identity when opening a bank account. Banks also require that the source of funds must be declared if the deposit is more than the equivalent of \$10,000. Finally, banks must report suspicious transactions. The GOI has the power to order banks to freeze assets. In November 2004, the RBI issued a circular updating its know-your-customer guidelines to ensure that they comply with all Financial Action Task Force (FATF) recommendations. The RBI has asked all commercial banks to become FATF-compliant for existing as well as new accounts by December 2005. The guidelines include the requirement that banks identify politically connected account holders residing outside India and identify the source of funds before accepting deposits from these individuals. The RBI has placed politically exposed persons (those entrusted with prominent public functions in other countries) in the highest risk category for the commission of financial crimes.

India does not have an offshore financial center but does license offshore banking units (OBUs). These OBUs are required to be predominantly owned by individuals of Indian nationality or origin resident outside India and include overseas companies, partnership firms, societies and other corporate bodies. OBUs must also be audited to affirm that ownership by a nonresident Indian is not less than 60 percent. These entities are susceptible to money laundering activities, in part because of a lack of stringent monitoring of transactions in which they are involved. Finally, OBUs must be audited financially, but the firm that does the auditing does not have to have government approval.

India is a party to the 1988 UN Drug Convention, and is a member of the Asia/Pacific Group on Money Laundering. It is a signatory to, but has not yet ratified, the UN Convention against Transnational Organized Crime. India became a party to the UN International Convention for the Suppression of the Financing of Terrorism in April 2003. In October 2001, India and the United States signed a mutual legal assistance treaty, which the U.S. Senate ratified in November 2002. India took

steps in 2003 to move towards ratification of the treaty; ratification was expected in early 2004 but has been delayed. India has also signed a police and security cooperation protocol with Turkey, which among other things provides for joint efforts to combat money laundering.

The GOI maintains tight controls over charities, which are required to register with the RBI. In April 2002, the Indian Parliament passed the Prevention of Terrorism Act (POTA), which criminalizes terrorist financing. In March 2003, the GOI announced that it had charged 32 terrorist groups under the POTA and had notified three others that they were involved in what were considered illegal activities. In July 2003, the GOI announced that it had arrested 702 persons under the POTA. In November 2004, the Parliament repealed the POTA and amended the 1967 Unlawful Activities (Prevention) Act to include the POTA's salient elements, including the criminalization of terrorist financing and the legal definitions for terrorism and terrorist acts. A GOI/POTA review committee will have one year to review all 333 pending POTA cases, after which time any case that is not resolved will be dismissed.

Terrorist financing in India, as well as in much of the subcontinent, is linked to the hawala system. The Government of India should cooperate fully with international initiatives to provide increased transparency in hawala, and, if necessary, should increase law enforcement actions in this area. Indian citizens' involvement in the underworld of the international diamond trade should be examined. India should pursue efforts to join the FATF. It also needs to quickly finalize the implementing regulations to the anti-money laundering law and establish the new FIU in order to enhance information sharing with its counterparts around the world. Meaningful tax reform will also assist in negating the popularity of hawala and lessen money laundering. Increased enforcement action should also be taken to combat invoice manipulation and trade-based money laundering. India should ratify the UN Convention against Transnational Organized Crime.

Indonesia

Although neither a regional financial center nor an offshore financial haven, Indonesia is vulnerable to money laundering and terrorist financing due to a poorly regulated financial system, the lack of effective law enforcement and widespread corruption.

Most money laundering in the country is connected to non-drug criminal activity such as gambling, prostitution, bank fraud or corruption. Indonesia also has a long history of smuggling, facilitated by thousands of miles of un-patrolled coastline and a law enforcement system riddled with corruption. The proceeds of these illicit activities are easily parked offshore and only repatriated as required for commercial and personal needs.

The Financial Action Task Force (FATF) included Indonesia on the list of non-cooperating countries and territories (NCCT) at its June 2001 plenary. The designation was based on the following: Indonesia had no basic set of anti-money laundering provisions, money laundering was not a criminal offense, there was no reporting of suspicious transactions to a Financial Intelligence Unit (FIU), and recently introduced customer identification requirements only applied to banks. The U.S. Treasury Department issued an advisory to all U.S. financial institutions instructing them to "give enhanced scrutiny" to all transactions involving Indonesia; the advisory is still in effect. Based on the Government of Indonesia's (GOI) progress in addressing its concerns, the FATF plans to conduct an on-site visit to Indonesia in early 2005.

In April 2002, Indonesia passed Law No. 15 on Criminal Acts of Money Laundering, Indonesia's anti-money laundering (AML) law, which made money laundering a criminal offense. The law identifies 15 predicate offenses related to money laundering, including narcotics trafficking and most major crimes. The law provides for the establishment of a Financial Intelligence Unit (FIU), the Center for Reporting and Analysis of Financial Transactions (PPATK), to develop policy and regulations to

combat money laundering. The PPATK was established in December 2002 and has been operational since October 2003.

The PPATK is an independent agency that receives, maintains, analyzes, and evaluates currency and suspicious financial transactions, provides advice and assistance to relevant authorities, and issues publications. As of December 2004, the PPATK has received over 1,200 suspicious transaction reports (STRs) from banks and non-bank financial institutions and referred 237 STRs to the police. The police have investigated a number of cases and referred 36 to the Attorney General. Indonesia has successfully prosecuted one money laundering case and two criminal cases predicated on money laundering offences. In September 2003, Parliament passed an Amending Law to the 2002 Anti-Money Laundering Law that addressed many FATF concerns. Based on this substantial progress, the FATF invited Indonesia to submit an Anti-Money Laundering Regime Implementation Plan in February 2004. The Amending Law provides a new definition of the crime of money laundering making it an offense for anyone to deal intentionally with assets known or reasonably suspected to constitute proceeds of crime with the purpose of disguising or concealing the origins of the assets, as seen in Articles 1(1) and 3. The Amending Law removes the threshold requirement for proceeds of crime and expands the definition of proceeds of crime to cover assets employed in terrorist activities. Article 1(7)(c) expands the scope of regulations requiring STRs to include attempted or unfinished transactions. Article 12A introduces a scheme of administrative sanctions (in addition to criminal sanctions) for failure to file STRs. Article 13(2) shortens the time to file an STR to three days or less after the discovery of an indication of a suspicious transaction. Article 17A makes it an offense to disclose information about the reported transactions to third parties, which carries a maximum of five years' imprisonment and a maximum of one billion rupiah (approximately \$111,000). Articles 44 and 44A provide for mutual legal assistance, with the ability to provide assistance using the compulsory powers of the court. Article 44B imposes a mandatory obligation on the PPATK to implement provisions of international conventions or international recommendations on the prevention and eradication of money laundering.

Bank Indonesia (BI), the Indonesian Central Bank, issued Regulation No. 3/10/PBI/2001, "The Application of Know Your Customer Principles," on June 18, 2001. This regulation requires banks to obtain information on prospective customers, including third party beneficial owners, and to verify the identity of all owners, with personal interviews if necessary. The regulation also requires banks to establish special monitoring units and appoint compliance officers responsible for implementation of the new rules and to maintain adequate information systems to comply with the law. Finally, the regulation requires banks to analyze and monitor customer transactions and report to the BI within seven days any "suspicious transactions" in excess of Rp 100 million (approximately \$11,100). The regulation defines suspicious transactions according to a 39-point matrix that includes key indicators such as unusual cash transactions, unusual ownership patterns, or unexplained changes in transactional behavior. The BI specifically requires banks to treat as suspicious any transactions to or from countries "connected with the production, processing and/or market for drugs or terrorism."

Until recently, banks and other financial institutions did not routinely question the sources of funds or require identification of depositors or beneficial owners. Financial reporting requirements were put in place only in the wake of the financial crisis when the GOI became interested in controlling capital flight and recovering foreign assets of large-scale corporate debtors or alleged corrupt officials. The BI has issued an Internal Circular Letter No. 6/50/INTERN, dated September 10, 2004 concerning Guidelines for the Supervision and Examination of the Implementation of KYC and AML by Commercial Banks. In addition, BI also issued a Circular Letter to Commercial Banks No. 6/37/DPNP dated September 10, 2004 concerning the Assessment and Imposition of Sanction on the Implementation of KYC and other Obligation Related to Law on Money Laundering Crime. The BI is also preparing Guidelines for Money Changers on Record Keeping and Reporting Procedures and Money Changer Examinations given by BI examiners.

Money Laundering and Financial Crimes

Currently, banks must report all foreign exchange transactions and foreign obligations to the BI. Individuals who import or export more than Rp 50 million in cash (approximately \$5,550) must report such transactions to Customs. The PPATK is currently drafting presidential decrees that would protect individuals and witnesses who cooperate with law enforcement entities on money laundering cases. Indonesia's bank secrecy law covers information on bank depositors and their accounts. Such information is generally kept confidential and can only be accessed by the authorities in limited circumstances. However, Article 27(4) of the AML Law now expressly exempts the PPATK from "the provisions of other laws related to bank secrecy and the secrecy of other financial transactions" in relation to its functions in receiving and requesting reports and conducting audits of providers of financial services. In addition, Article 14 of the AML law exempts providers of financial services from bank secrecy provisions when carrying out their reporting obligations, and Article 15 of the AML law gives providers of financial services, their official and employees protection from civil or criminal action in making such disclosures.

Indonesia's laws provide only limited authority to block or seize assets. Under BI regulations 2/19/PBI/2000, police, prosecutors, or judges may order the seizure of assets of individuals or entities that have been either declared suspects, or indicted for a crime. This does not require the permission of BI, but, in practice, for law enforcement agencies to identify such assets held in Indonesian banks, BI's permission would be required. In the case of money laundering as the suspected crime, however, bank secrecy laws would not apply, according to the anti-money laundering law. The PPATK has also signed seven memoranda of understanding (MOUs) to assist in financial intelligence information exchange with the following entities: Bank Indonesia, the Capital Market Supervisory Agency (Bapepam), the Directorate General of Financial Institutions, Directorate General of Tax, the Center for International Forestry Research, and the Anti-Corruption Agency.

The GOI does have the authority to trace and freeze assets of individuals or entities on the UNSCR 1267 Sanctions Committee's consolidated list, and through the BI, has circulated the consolidated list to all banks operating in Indonesia, with instructions to freeze any such accounts. The interagency process to issue freeze orders, which includes the Foreign Ministry, Attorney General, and BI, takes several weeks from UN designation to bank notification. The GOI, to date, reports that it has not found any assets of entities or individuals on the consolidated list.

The October 18, 2002, emergency counterterrorism regulation, the Government Regulation in Lieu of Law of the Republic of Indonesia (Perpu), No. 1 of 2002 on Eradication of Terrorism criminalizes terrorism and provides the legal basis for the GOI to act against terrorists, including the tracking and freezing of assets. The Perpu provides a minimum of three years and a maximum of 15 years imprisonment for anyone who is convicted of intentionally providing or collecting funds that are knowingly used in part or in whole for acts of terrorism. This regulation is necessary because Indonesia's anti-money laundering law criminalizes the laundering of "proceeds" of crimes, but it is often unclear to what extent terrorism generates proceeds. In October 2004, an Indonesian court convicted and sentenced one Indonesian to four years in prison on terrorism charges connected to his role in the financing of the August 2003 bombing of the Jakarta Marriott Hotel.

The GOI has just begun to take into account alternative remittance systems or charitable or nonprofit entities in its strategy to combat terrorist finance and money laundering. The PPATK has issued guidelines for non-bank financial service providers and money remittance agents on the prevention and eradication of money laundering and the identification and reporting of suspicious and other cash transactions.

Indonesia is a member of the Asia/Pacific Group on Money Laundering (APG) and the Bank for International Settlements. The BI claims that it voluntarily follows the Basel Committee's "Core Principles for Effective Banking Supervision." The GOI is a party to the 1988 UN Drug Convention, and has signed, but not yet ratified, the UN Convention against Transnational Organized Crime.

Indonesia has signed, but not yet become a party to, the UN International Convention for the Suppression of the Financing of Terrorism.

In June 2004, Indonesia became a member of the Egmont Group and, as such, is bound to share financial intelligence with other members in accordance with the organization's charter. The AML law contains specific provisions (Article 44 and 44 A) that provide for mutual legal assistance with respect to money laundering cases. The Ministry of Justice and Human Rights has produced a draft Mutual Legal Assistance (MLA) Law that now awaits the President and Parliament's approval. Until this legislation is formally passed, the GOI uses informal procedures to facilitate MLA from other states. The PPATK has memorandums of understanding with Thailand, Malaysia, Republic of Korea, Philippines, Romania, and Australia. The PPATK has also entered into an Exchange of Letters enabling international exchange with Hong Kong. As the Chair of the ninth ASEAN Summit, Indonesia has launched a plan of action, which includes establishing a Mutual Legal Assistance Treaty among ASEAN countries. The Indonesian Regional Law Enforcement Cooperation Centre was created to develop the operational law enforcement capacity needed to fight transnational crimes.

The Government of Indonesia should continue its steady progress in developing a credible and effective anti-money laundering regime. In particular, it must improve interagency cooperation in investigating and prosecuting cases. In this regard, Indonesia should review the adequacy of its Code for Criminal Procedure and Rules of Evidence and enact legislation to allow the use of modern techniques to enter evidence in court proceedings. Indonesia should also enact mutual legal assistance legislation as soon as possible and cooperate closely with other countries in providing and receiving this assistance. Indonesia should review and streamline its process for reviewing UN designations and identifying, freezing and seizing terrorist assets. Indonesia should become a party to the UN International Convention for the Suppression of the Financing of Terrorism. It should ratify the UN Convention against Transnational Organized Crime.

Iran

The U.S. Department of State has designated Iran as a State Sponsor of Terrorism. Iran is not a regional financial center. Iran has a robust underground economy and the use of alternative remittance systems to launder money is widespread. The underground economy is spurred—in part—by attempts to avoid restrictive taxation. In 2003, a prominent Iranian banking official was quoted as estimating that money laundering encompasses 20 percent of Iran's economy and that the under-development of financial institutions leads to an imbalance in financial markets causing underground financial activities to flourish. Further, Iran's real estate market is used to launder money. Real estate transactions take place in Iran, but often no funds change hands there; rather, payment is made overseas. This is typically done because of the difficulty in transferring funds out of Iran and the weakness of Iran's currency, the rial.

Hawala is also used to transfer value to and from Iran. Factors contributing to the widespread use of hawala are currency exchange restrictions and the large number of Iranian expatriates. The smuggling of goods into Afghanistan from Iran leads to a significant amount of trade-based money laundering. Goods purchased in Dubai are sent to one of many ports in southern Iran and then via land routes to other markets in Afghanistan and Pakistan. The goods imported into Iran and sent into Afghanistan are often part of the Afghan Transit Trade. Many of these goods are eventually found on the regional black markets. Iran is also a major transit route for opiates smuggled from Afghanistan.

In 2003, the Majlis (Parliament) passed an anti-money laundering act. The law includes customer identification requirements, mandatory record keeping for five years after the opening of accounts, and the reporting of suspicious activities. Iran is a party to the 1988 UN Drug Convention and has signed, but not yet ratified, the UN Convention against Transnational Organized Crime.

It does not have a law on terrorist financing. The Government of Iran should construct a viable anti-money laundering and terrorist financing regime that adheres to international standards. It should ratify the UN Convention against Transnational Organized Crime. It should also become a party to the UN International Convention for the Suppression of the Financing of Terrorism. It should not support terrorism or the funding of terrorism.

Iraq

Iraq's economy is cash-based. The two state-owned banks control 87 percent of the banking sector. However, the sector is growing and at least 10 new banks, both domestic and international, have been licensed to operate in Iraq.

The Coalition Provisional Authority (CPA), the international body that governed Iraq beginning in April 2003, issued Regulations and Orders that carried the weight of law in Iraq. The CPA ceased to exist in June 2004, at which time the Iraqi Interim Government assumed authority for governing Iraq. Drafted and agreed by Iraqi leaders, the Transitional Administrative Law (TAL) describes the powers of the Iraqi government during the transition period. The TAL will remain in effect until a duly elected government, operating under a permanent and legitimate constitution, comes into being. Under TAL Article 26, Regulations and Orders issued by the CPA pursuant to its authority under international law remain in force until rescinded or amended by legislation duly enacted and having the force of law.

CPA Order No. 93, "Anti-Money Laundering Act of 2004" (AML Act), criminalizes money laundering and terrorist financing and calls for penalties of imprisonment and/or fines. The AML Act covers banks; asset, investment fund and securities dealers/managers; insurance entities; money transmitters and foreign currency exchanges as well as persons who deal in financial instruments, precious metals or gems. Covered entities are required to verify the identity of any customer opening an account or conducting a transaction of more than five million Iraqi dinars. Beneficial owners must be identified upon account opening or for transactions exceeding ten million Iraqi dinars. Records must be maintained for at least five years. Covered entities must report suspicious transactions and wait for guidance before proceeding with the transaction; the relevant funds are frozen until guidance is received. Suspicious transaction reports (STRs) are to be completed for all transactions over four million Iraqi dinars that are believed to have a nexus to financial crime or terrorist financing. Tipping off is prohibited, and bank employees are protected from liability for cooperating with the government. Willful violations of the reporting requirement may result in imprisonment or fines.

CPA Order No. 94, "Banking Law of 2004," gives the Central Bank of Iraq (CBI) the authority to license banks and to conduct due diligence on proposed bank management. Order No. 94 establishes requirements for bank capital, confidentiality of records, audit and reporting requirements for banks, and prudential standards. CBI is responsible for the supervision of financial institutions. The CBI is mandated by the AML Act to issue regulations and require financial institutions to provide employee training, appoint compliance officers, develop internal procedures and controls to deter money laundering and establish an independent audit function. The AML Act provides that the CBI will issue guidelines on suspicious financial activities and conduct on-site examinations to determine institutions' compliance. The CBI also may issue regulations to require large currency transaction reports. The cross-border transport of currency of more than 15 million Iraqi dinars must be reported to the CBI. The CBI is also mandated by the AML Act to distribute the UNSCR 1267 Sanction Committee's consolidated list of individuals/entities associated with Usama bin Ladin or members of the Taliban or al-Qaida. Order No. 94 provides administrative enforcement authority to the CBI, up to and including the removal of institution management and revocation of bank licenses.

The AML Act calls for the establishment of the Money Laundering Reporting Office (MLRO) within the CBI. The MLRO is to be separately funded and operate independently to collect, analyze and disseminate information on financial transactions subject to financial monitoring and reporting,

including suspicious activity reports. The MLRO is also empowered to exchange information with other Iraqi or foreign government agencies.

The AML Act includes provisions for the forfeiture of criminal proceeds and instruments of crime. It also blocks any funds or assets, other than real property (which is covered by a separate regulation), belonging to members of the former Iraqi regime and authorizes the Minister of Finance to confiscate such assets following a judicial or administrative order. Confiscated property is transferred to the Development Fund for Iraq.

The Government of Iraq should ensure that any new legislation that either replaces or enhances the AML Act or the Banking Law meets current international standards. The new government should implement its laws as rapidly as possible and seek to become a full member of a FATF style regional body as the opportunity presents itself.

Ireland

The primary sources of funds laundered in Ireland are narcotics-trafficking, fraud, and tax offenses. Money laundering mostly occurs in financial institutions and bureaux de change. Additionally, investigations in Ireland indicate that some business professionals have specialized in the creation of legal entities, such as shell corporations, as a means of laundering money. Trusts are also established as a means of transferring funds from the country of origin to offshore locations. The use of shell corporations and trusts makes it more difficult to establish the true beneficiary of the funds, which makes it difficult to follow the money trail and establish a link between the funds and the criminal.

The use of solicitors, accountants, and company formation agencies in Ireland to create shell companies has been cited in a number of suspicious transaction reports (STRs), and in requests for assistance from Financial Action Task Force (FATF) members. Investigations have disclosed that these companies are used to provide a series of transactions connected to money laundering, fraudulent activity, and tax offenses. The difficulties in establishing the beneficial owner have been complicated by the fact that the directors are usually nominees and are often principals of a solicitors' firm or a company formation agency.

Money laundering relating to narcotics-trafficking and other offenses was criminalized in 1994. Financial institutions (banks, building societies, the Post Office, stockbrokers, credit unions, bureaux de change, life insurance companies, and insurance brokers) are required to report suspicious transactions and currency transactions exceeding approximately \$15,000. The financial institutions are also required to implement customer identification procedures, and retain records of financial transactions. In 2003, Ireland amended its Anti-Money Laundering law to extend the requirements of customer identification and suspicious transaction reporting to lawyers, accountants, auditors, real estate agents, auctioneers, and dealers in high-value goods, thus aligning its laws with the European Union's Second Money Laundering Directive of 2001. The Irish Financial Services Regulatory Authority (IFSRA) supervises the financial institutions for compliance with money laundering procedures. The Central Bank reports to the Irish Police regarding institutions under its supervision. The reports cover failure to establish identity of customers, failure to retain evidence of identification, and failure to adopt measures to prevent and detect the commission of a money laundering offense. In addition to STRs, there are customs reporting requirements for anyone transporting more than 12,700 euros.

Ireland's international banking and financial services sector is concentrated in Dublin's International Financial Services Centre (IFSC). In 2004, approximately 430 international financial institutions and companies operated in the IFSC. Services offered include banking, fiscal management, re-insurance, fund administration, and foreign exchange dealing. The IFSRA regulates the IFSC companies that

conduct banking, insurance, and fund transactions. Tax privileges for IFSC companies have been phased out over recent years and will totally expire in 2005.

In 1999, the Corporate Law was amended to address problems arising from the abuse of Irish-registered nonresident companies (companies which are incorporated in Ireland, but do not carry out any activity in the country). The legislation requires that every company applying for registration must demonstrate that it intends to carry on an activity in the country. Companies must maintain at all times an Irish resident director or post a bond as a surety for failure to comply with the appropriate company law. In addition, the number of directorships that any one person can hold, subject to certain exemptions, is limited to 25. This is aimed at curbing the use of nominee directors as a means of disguising beneficial ownership or control.

In August 2001, the Government of Ireland (GOI) enacted the Company Law Enforcement Act 2001 (Company Act), to deal with problems associated with shell companies. The legislation establishes the Office of the Director of Corporate Enforcement (ODCE), whose responsibility it is to investigate and enforce the Company Act. The ODCE also has a general supervisory role in respect of liquidators and receivers. Under the law, the beneficial directors of a company have to be named. The Company Act also creates a mandatory reporting obligation for auditors to report suspicions of breaches of company law to the ODCE. In 2004, the ODCE had 20 prosecutions resulting in fines of varying amounts, two more than in 2003.

The Bureau of Fraud Investigation (BFI), Ireland's financial intelligence unit (FIU), analyzes financial disclosures. In 2003, a new Irish legal requirement went into effect, mandating obligated reporting institutions to file STRs with the Revenue (Tax) Department in addition to the BFI. Ireland estimates that up to 95 percent of STRs may involve tax violations. The Value Added Tax (VAT) fraud scams are the most prolific and have increased significantly in recent years. In 2004, the Criminal Assets Bureau took action in a number of such cases, the details of which are not yet available. The number of STRs filed decreased from 4,398 in 2002 to 4,254 in 2003. Convictions for money laundering offenses under the Criminal Justice Act totaled four in 2001 and two in 2002. In 2003, there were three prosecutions resulting in two convictions, currently awaiting sentencing. A conviction on charges of money laundering carries a maximum penalty of 14 years' imprisonment and an unlimited fine.

Under certain circumstances, the High Court can freeze, and, where appropriate, seize the proceeds of crimes. When criminal activity is suspected, the exchange of information between police and the Revenue Commissioner is authorized. The Criminal Assets Bureau (CAB) was established in 1996 to confiscate the proceeds of crime in cases where there is no criminal conviction. The CAB includes experts from Police, Tax, Customs, and Social Security Agencies. Under the Proceeds of Crime Act 1996, specified property may be frozen for a period of seven years, unless the court is satisfied that all or part of the property is not the proceeds of crime. Since 1996, the CAB has frozen over 50 million euros of assets. In 2003, the CAB collected 10 million euros in taxes against the proceeds of criminal activity. In 2003, the CAB also initiated criminal prosecutions against a number of suspects for breaches of criminal law, and proceeded with successful investigations/prosecutions for revenue and social welfare offenses previously not presented before the criminal courts.

In 2002, the GOI introduced the Criminal Justice (Terrorist Offenses) Bill targeting fundraisers for both international and domestic terrorist organizations. In December 2004, the Lower House of the Irish Parliament approved this bill, which is now awaiting Senate approval. The bill is expected to pass into law in February 2005. The Central Bank participates with the Irish Parliament subcommittee in drafting guidance notes for regulated institutions on combating and preventing terrorist financing. These notes will be finalized and issued to institutions upon the passing of the pending bill.

Enactment of the bill will pave the way for later ratification of the UN International Convention for the Suppression of the Financing of Terrorism, which will extend the existing powers of the GOI to seize property and/or other financial assets belonging to groups suspected of involvement with the financing

of terrorism. The bill will allow the Irish National Police to apply to the courts to freeze assets where certain evidentiary requirements are met. Ireland has reported to the European Commission the names of seven individuals, including one in 2004, who maintained a total of nine accounts that were frozen in accordance with the provisions of the European Union's (EU) Anti-Terrorist Legislation. The aggregate value of the funds frozen is approximately 90,000 euros.

In 2003, a money laundering investigation concerning a bureau de change operation uncovered evidence of the laundering of terrorist funds derived from international smuggling. Substantial cash payments into the bureau de change were not reflected in the principal books, records, and bank account. The bureau de change held a large cash reserve that was drawn upon when necessary by members of the terrorist organization. The bureau de change remitted payments from its legitimate bank account to entities in other jurisdictions, on behalf of the terrorist organization.

In January of 2001, Ireland and the United States signed a Mutual Legal Assistance in Criminal Matters Treaty (MLAT); however, it is not yet in force. An extradition treaty between Ireland and the United States is in force. Ireland is a member of the EU, the Council of Europe and the FATF. The FIU is a member of the Egmont Group. Ireland has signed, but not yet ratified, the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime. Ireland is a party to the 1988 UN Drug Convention and the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime.

Expedient enactment of the pending counterterrorist funding bill, full implementation of its anti-money laundering law amendments, plus stringent enforcement of all such initiatives, will ensure that Ireland maintains an effective anti-money laundering program. Ireland should become a party to the UN International Convention for the Suppression of the Financing of Terrorism. The Government of Ireland also should ensure that its offshore sector is adequately supervised and should require the beneficial owners and nominee directors of shell companies and trusts to be properly identified.

Isle of Man

The Isle of Man (IOM) is a Crown Dependency of the United Kingdom located between England and Ireland in the Irish Sea. Its large and sophisticated financial center is potentially vulnerable to money laundering at the layering and integration stages.

As of September 30, 2004, the IOM's financial industry consists of approximately 19 life insurance companies, 25 insurance managers, more than 177 captive insurance companies, more than 17.2 billion pounds (approximately \$32.7 billion) in life insurance funds and 5.6 billion pounds (approximately \$10.6 billion) in non-life insurance funds under management, 53 licensed banks and two licensed building societies, 82 investment business license holders, 30.1 billion pounds (approximately \$57.2 billion) in bank deposits, and 164 collective investment schemes with 6.5 billion pounds (approximately \$12.4 billion) of funds under management. There are also 171 licensed corporate service providers, with approximately another seven seeking licenses.

Money laundering related to narcotics-trafficking was criminalized in 1987. The Prevention of Terrorism Act 1990 made it an offense to contribute to terrorist organizations, or to assist a terrorist organization in the retention or control of terrorist funds. In 1998, money laundering arising from all serious crimes was criminalized. Financial institutions and professionals such as banks, fund managers, stockbrokers, insurance companies, investment businesses, credit unions, bureaux de change, check cashing facilities, money transmission services, real estate agents, auditors, casinos, accountants, lawyers, and trustees are required to report suspicious transactions and comply with the requirements of the anti-money laundering (AML) code, such as customer identification.

The Financial Supervision Commission (FSC) and the Insurance and Pension Authority (IPA) regulate the IOM financial sector. The FSC is responsible for the licensing, authorization, and supervision of

banks, building societies, investment businesses, collective investment schemes, corporate service providers, and companies. In 2005, the FSC is expected to become the regulatory body for trust service providers. The IPA regulates insurance companies, insurance management companies, general insurance intermediaries, and retirement benefit schemes and their administrators. In addition, the FSC also maintains the Company Registry Database for the IOM, which contains company records dating back to the first company incorporated in 1865. Statutory documents filed by IOM companies can now be searched and purchased online through the FSC's website.

Instances of failure to disclose suspicious activity would result in both a report's being made to the Financial Crimes Unit (FCU), the IOM's financial intelligence unit (FIU), and possible punitive action by the regulator, which could include revoking the business license. To assist license holders in the effective implementation of anti-money laundering techniques, the regulators hold regular seminars and additional workshop training sessions in partnership with the FCU and the Isle of Man Customs and Excise.

In December 2000, the FSC issued a consultation paper, jointly with the Crown Dependencies of Guernsey and Jersey, called "Overriding Principles for a Revised Know Your Customer Framework," to develop a more coordinated approach on anti-money laundering. Further work between the Crown Dependencies is being undertaken to develop a coordinated strategy on money laundering, to ensure compliance as far as possible with the revised Financial Action Task Force (FATF) Forty Recommendations. The IOM is also assisting the FATF Working Groups considering matters relating to customer identification and companies' issues.

New regulations were introduced in August 2002, that require money service businesses (MSBs) that are not already regulated by the FSC or IPA to register with Customs and Excise. This has the effect of implementing, in relation to MSBs, the 1991 EU Directive on Money Laundering, revised by the Second Directive 2001/97/EC, and provides for their supervision by Customs and Excise to ensure compliance with the AML Codes.

The IPA, as regulator of the IOM's insurance and pensions business, issues Anti-Money Laundering Standards for Insurance Businesses (the "Standards"). The Standards are binding upon the industry and include the Overriding Principles. These include a requirement that all insurance businesses check their whole book of businesses to determine that they have sufficient information available to prove customer identity. The current set of Standards became effective March 31, 2003. In addition, the IPA conducts on-site visits to examine procedures and policies of companies under its supervision.

The IOM introduced the Online Gambling Regulation Act 2001 and an accompanying AML (Online Gambling) Code 2002. The Act, Regulations, and dedicated AML Code are supplemented by AML guidance notes issued by the Gambling Control Commission, a regulatory body which provides more detailed guidance on the prevention of money laundering through the use of online gambling. The Online Gambling legislation brought regulation to what was technically an unregulated gaming environment. The dedicated Online Gambling AML Code was at the time unique within this segment of the gambling industry.

The Companies, Etc. (Amendment) Act 2003 received Royal Assent on December 9, 2003. A provision that took effect in December 2003 calls for additional supervision for all licensable businesses, e.g., banking, investment, insurance and corporate service providers. The act further provides that no future bearer shares will be issued after April 1, 2004, and all existing bearer shares must be registered before any rights relating to such shares can be exercised.

The FCU, formed on April 1, 2000, evolved from the police Fraud Squad and now includes both police and customs staff. It is the central point for the collection, analysis, investigation, and dissemination of suspicious transaction reports (STRs) from obligated entities. The entities required to report suspicious transactions include banks/financial institutions; bureaux de change; casinos; post

offices; lawyers, accountants, advocates, and businesses involved with investments; insurance; real estate; gaming/lotteries; and money changers. The FIU received 1,727 STRs in 2002, 1,920 in 2003 and 2,250 in 2004. The FCU maintains close relationships with the financial sector and regularly provides training presentations to it.

The Criminal Justice Acts of 1990 and 1991, as amended, extend the power to freeze and confiscate assets to a wider range of crimes, increase the penalties for a breach of money laundering codes, and repeal the requirement for the Attorney General's consent prior to disclosure of certain information. Assistance by way of restraint and confiscation of assets of a defendant is available under the 1990 Act to all countries and territories designated by Order under the Act, and the availability of such assistance is not convention-based nor does it require reciprocity. Assistance is also available under the 1991 Act to all countries and territories in the form of the provision of evidence for the purposes of criminal investigations and proceedings. Under the 1990 Act the provision of documents and information is available to all countries and territories for the purposes of investigations into serious or complex fraud. Similar assistance is also available to all countries and territories in relation to drug trafficking and terrorist investigations. All decisions for assistance are made by the Attorney General of the IOM on a case-by-case basis, depending on the circumstances of the inquiry. The law also addresses the disclosure of a suspicion of money laundering. Since June 2001, it has been an offense to fail to make a disclosure of suspicion of money laundering for all predicate crimes, whereas previously this just applied to drug- and terrorism-related crimes. The law also lowers the standard for seizing cash from "reasonable grounds" to believe that it was related to drug or terrorism crimes to a "suspicion" of any criminal conduct. The law also provides powers to constables, including customs officers, to investigate whether a person has benefited from any criminal conduct. These powers allow information to be obtained about that person's financial affairs. These powers can be used to assist in criminal investigations abroad as well as in the IOM.

The United Kingdom implemented the amendments to its Proceeds of Crime Act in 2004. The IOM is currently reviewing new legislation that will redo its Criminal Justice Act along similar lines. The new amendments are under consideration and are expected to come into force in late 2005 or early 2006.

The Customs and Excise (Amendment) Act 2001 gives various law enforcement and statutory bodies within the IOM the ability to exchange information, where such information would assist them in discharging their functions. The Act also permits Customs and Excise to release information it holds to any agency within or outside the IOM for the purposes of any criminal investigation and proceeding. Such exchanges can be either spontaneous or by request.

The Government of the IOM enacted the Anti-Terrorism and Crime Act, 2003. The purpose of the Act is to enhance reporting, by making it an offense not to report suspicious transactions relating to money intended to finance terrorism. The Act is expected to come into force on January 4, 2005. The IOM Terrorism (United Nations Measure) Order 2001 implements UNSCR 1373 by providing for the freezing of terrorist funds, as well as by creating a criminal offense with respect to facilitators of terrorism or its financing. All other UN and EU financial sanctions have been adopted or applied in the IOM, and are administered by Customs and Excise. Institutions are obliged to freeze affected funds and report the facts to Customs and Excise. The FSC's anti-money laundering guidance notes have been revised to include information relevant to terrorist events. The Guidance Notes were issued in December 2001. A further revision is scheduled to take place in 2005 to reflect changes in the appropriate international standards.

The IOM has developed a legal and constitutional framework for combating money laundering and the financing of terrorism. There appears to be a high level of awareness of anti-money laundering and counterterrorist financing issues within the financial sector, and considerable effort has been made to put appropriate practices into place. In November 2003, the Government of the IOM published the full report made by the International Monetary Fund (IMF) following its examination of the regulation and

supervision of the IOM's financial sector. In this report the IMF commends the IOM for its robust regulatory regime. The IMF found that "the financial regulatory and supervisory system of the Isle of Man complies well with the assessed international standards." The report concludes the Isle of Man fully meets international standards in areas such as banking, insurance, securities, anti-money laundering, and combating the financing of terrorism.

The IOM is a member of the Offshore Group of Banking Supervisors. The IOM is also a member of the International Association of Insurance Supervisors and the Offshore Group of Insurance Supervisors. The FCU belongs to the Egmont Group. The IOM cooperates with international anti-money laundering authorities on regulatory and criminal matters. Application of the 1988 UN Drug Convention was extended to the IOM in 1993.

Isle of Man officials should continue to support and educate the local financial sector to help it combat current trends in money laundering. The authorities also should continue to work with international anti-money laundering authorities to deter financial crime and the financing of terrorism and terrorists.

Israel

Israel is not a regional financial center. It primarily conducts financial activity with the financial markets of the United States and Europe, and to a lesser extent with Asia. A quarter of all Israeli money laundering or terrorist financing seizures are related to narcotics proceeds. The majority of the seizures are related to illegal gambling, fraud, and extortion. Israel does not have free trade zones and is not considered an offshore financial center.

Israel enacted the "Prohibition on Money Laundering Law" (PMLL) on August 8, 2000 (Law No. 5760-2000). The PMLL established a framework for an anti-money laundering system, but required the passage of several implementing regulations before the law could fully take effect. Among other things, the PMLL criminalized money laundering and included more than 18 serious crimes, in addition to offenses described in the prevention of terrorism ordinance, as predicate offenses for money laundering. The PMLL also authorized the issuance of regulations requiring financial service providers to identify, report, and keep records for specified transactions for seven years. In November 2000, Israel enacted the "Prohibition on Money Laundering (Reporting to Police)" regulation establishing mechanisms for reporting to the police transactions involving property that was used to commit a crime or that represented the proceeds of crime.

In addition, Israel adopted in 2001 the "Prohibition on Money Laundering (The Banking Corporations Requirement Regarding Identification, Reporting, and Record Keeping) Order". The Order establishes specific procedures for banks with respect to customer identification, record keeping, and the reporting of irregular and suspicious transactions. The PMLL requires the declaration of currency transferred (including cash, travelers' checks, and banker checks) into or out of Israel for sums above 80,000 new Israeli shekels (nis) (about \$18,000). This applies to any person entering or leaving Israel and to any person bringing or taking money into or out of Israel by mail or by any other methods, including cash couriers. This offense is punishable by up to six months' imprisonment or a fine of nis 202,000 (\$46,000), or ten times the amount that was not declared, whichever is higher. Alternatively, an administrative sanction of nis 101,000 (\$23,000), or five times the amount that was not declared, may be imposed.

The PMLL also provided for the establishment of the Israeli Money Laundering Prohibition Authority (IMPA) as the country's Financial Intelligence unit (FIU). The IMPA became operational in February 2002. The PMLL requires financial institutions to report "unusual transactions" to IMPA as soon as possible under the circumstances—"unusual transactions" are loosely defined. The term is used so that the IMPA will receive reports even when the financial institution is unable to link the unusual transaction with money laundering.

In addition, suspicious transaction reporting is required of members of the stock exchange, portfolio managers, insurers or insurance agents, provident funds and companies managing a provident fund, providers of currency services, and the Postal Bank. The PMLL does not apply to intermediaries like lawyers and accountants.

In 2002, Israel enacted several new amendments to the PMLL that resulted in the addition of the money services businesses (MSB) to the list of entities required to file cash transaction reports (CTRs) and suspicious transaction reports (STRs), the establishment of a mechanism for customs officials to input into the IMPA database, the creation of regulations stipulating the time and method of bank reporting, and the creation of rules on safeguarding the IMPA database and rules for requesting and transmitting information between IMPA and Israeli National Police (INP) and the Israel Security Agency. The PMLL also authorized the issuance of regulations requiring financial service providers to identify, report, and keep records, for specified transactions for seven years.

In August 2003, the GOI passed a comprehensive amendment to the PMLL that lowered the threshold for reporting CTRs from nis 200,000 (\$42,000) to nis 50,000 (\$10,500), lowered the document retention threshold from nis 50,000 to nis 10,000 (\$2,100), and imposed more stringent reporting requirements.

The PMLL mandates the registration of MSBs through the Providers of Currency Services Registrar at the Ministry of Finance. It is assumed that money laundering occurs in all types of financial institutions, especially MSBs. In 2004, Israeli courts convicted several MSBs for failure to register with the Registrar of Currency Services. In addition, several criminal investigations have been conducted against other currency-services providers, some of which have resulted in money laundering indictments, which are still pending. The closure of unregistered MSBs was a priority objective of the INP in 2004, and it raided at least 19 such locations. The INP and the Financial Service Providers Regulatory Authority maintain a high level of coordination, routinely exchange information, and have conducted multiple joint enforcement actions. In April 2004, the Bank of Israel fined five banks for violating the PMLL. The banks were found to be negligent with respect to their procedures for verifying the identities of new customers, because they did not require account holders to sign declarations of identity, share information with the money laundering authority, or report suspicious transactions.

In October 2004, six co-conspirators operating an exchange house were arrested for multiple structuring offenses involving over \$230 million of funds that are believed to be from criminal syndicates. \$2.5 million in criminal proceeds were seized. An indictment and forfeiture request are forthcoming. In December 2004, an indictment was brought against 25 members of a heroin trafficking organization in the Tel Aviv District Court. The indictment charges organized crime, kingpin, and money laundering offenses, and includes a forfeiture request against \$2.5 million in criminal assets.

The Financial Action Task Force (FATF) removed Israel from the Non-Cooperative Countries and Territories (NCCT) list in June 2002, because of its efforts to meet the FATF's recommendations. In June 2002, IMPA was admitted into the Egmont Group of financial intelligence units. A U.S. advisory issued by the Department of Treasury's Financial Crimes Enforcement Network in June 2000 to U.S. financial institutions, emphasizing the need for enhanced scrutiny of certain transactions and banking relationships in Israel to ensure that appropriate measures are taken to minimize risk for money laundering, was withdrawn in 2002.

On December 29, 2004, the Israeli Parliament adopted the Prohibition on Terrorist Financing (Law No. 5765/2004) to enhance Israel's ability to combat terrorist financing and to cooperate with other countries on such matters. Terrorist financing offenses are defined as predicate offenses under the law. Under the International Legal Assistance Law of 1998, Israeli courts are empowered to enforce forfeiture orders executed in foreign courts for crimes committed outside Israel. The new anti-money

laundering law has recently enhanced this ability. In 2002, Israeli and U.S. law enforcement cooperated as part of an “Operation Joint Venture,” a long-term money laundering investigation focusing on an international Israeli network that launders cash proceeds from Colombian drug-trafficking organizations. The Israeli National Police have provided U.S. law enforcement with information on the network that has led to the arrest of six individuals, including two Colombian traffickers. The United States and Israel also have a Mutual Legal Assistance Treaty that entered into force in May of 1999.

Israel has established systems for identifying, tracing, freezing, seizing, and forfeiting narcotics-related assets, as well as assets derived from or intended for other serious crimes, including the funding of terrorism. The identification and tracing of such assets is part of the ongoing function of the Israeli intelligence authorities and IMPA. In 2004, the INP seized approximately \$27 million in suspected criminal assets. Three quarters of these assets were seized for money laundering offenses relating to fraud, illegal gambling, extortion, and prostitution; the rest relate to drug cases. Total seizures for each of the past three years were more or less the same, \$23-26 million per year.

Israel is a party to the 1988 UN Drug Convention and the 1999 UN International Convention for the Suppression of the Financing of Terrorism. Israel signed the UN Convention against Transnational Organized Crime on December 13, 2000, but has not yet ratified it. In June 2003, the Knesset adopted the Combating Criminal Organizations Law, which includes comprehensive measures with regard to organized crime.

The Government of Israel continues to make progress in strengthening its anti-money laundering and terrorist financing regime in 2004. Israel has enacted new laws pertaining to combating terrorist financing, and continues to improve the role of its FIU. Israel should examine the misuse of the international diamond trade to launder funds. Israel should continue to enforce regulations pursuant to the PMLL and continue improving its anti-money laundering and counterterrorist financing regime through ensuring the diligent reporting of suspicious activities by banks and non-financial institutions. Israel should ratify the UN Convention against Transnational Organized Crime.

Italy

Italy is not an important regional or offshore financial center. However, money laundering is a concern both because of the prevalence of homegrown organized crime groups and the recent influx of criminal bands from abroad, especially from Albania, Romania, and Russia. Counternarcotics efforts are complicated by the heavy involvement in international narcotics-trafficking of domestic and Italian-based foreign organized crime groups. Italy is a consumer country and a major transit point for heroin coming from the Near East and Southwest Asia through the Balkans en route to Western/Central Europe and, to a lesser extent, the United States. Italian and ethnic Albanian criminal organizations work together to funnel drugs to and through Italy. Additional priority trafficking groups include other Balkan organized crime entities, as well as Nigerian, Dominican, and Colombian and other South American trafficking groups. In addition to the narcotics trade, laundered funds come from a myriad of criminal activities, such as alien smuggling, contraband cigarette smuggling, pirated goods, extortion, usury, and kidnapping. Financial crimes such as credit card and Internet fraud are increasing.

Money laundering occurs both in the regular banking sector and, more frequently, in the non-bank financial system, i.e., casinos, money transfer houses, and the gold market. Money launderers predominantly use non-bank financial institutions for the illicit export of currency—primarily U.S. dollars and euros—to be laundered in offshore companies. Significant amounts of international narcotics-trafficking proceeds generated in the United States are used for legitimate commercial transactions in Italy, which leads to a cycling of drug-tainted U.S. currency through the Italian

financial system. There is a substantial black market for smuggled goods in the country, but it is not funded significantly by narcotics proceeds.

Money laundering is defined as a criminal offense when it relates to a separate, intentional felony offense. All intentional criminal offenses are predicates to the crime of money laundering, regardless of the applicable sentence for the predicate offense. Italy has strict laws on the control of currency deposits in banks. Banks must identify their customers and record and report to the Italian exchange office (UIC)—Italy's financial intelligence unit (FIU)—any cash transaction that exceeds approximately \$15,000. The Bank of Italy's mandatory guidelines require the reporting all suspicious cash transactions and other activity—such as a third party payment on an international transaction—on a case-by-case basis. These reports are submitted regularly. Italian law prohibits the use of cash or negotiable bearer instruments for transferring money in amounts in excess of approximately \$15,000, except through authorized intermediaries/brokers.

Banks and other financial institutions are required to maintain for ten years records necessary to reconstruct significant transactions, including information about the point of origin of funds transfers and related messages sent to or from Italy. Banks operating in Italy must remit account data to a central archive controlled by the Bank of Italy. This archive was established for record keeping and financial oversight purposes, but has proved useful for tracking money laundering. A “banker negligence” law makes individual bankers responsible if their institutions launder money. The law protects bankers and others with respect to their cooperation with law enforcement and regulatory entities.

Italy has addressed the problem of international transportation of illegal-source currency and monetary instruments by applying the \$15,000-equivalent reporting requirement to cross-border transport of domestic and foreign currencies and negotiable bearer instruments. Reporting is mandatory for cross-border transactions involving negotiable bearer monetary instruments (e.g., checks), but not for wire transfers; nevertheless, financial institutions are required to maintain a uniform anti-money laundering database for wire transfers and to submit this data on a monthly basis to the UIC. The UIC analyzes the data and can request specific transaction details if warranted. The Anti-Mafia Directorate is conducting a retrospective analysis of irregular and suspect money flows from organized crime groups and 19 countries of concern. In particular, the directorate is looking at the transfer of funds, incoming and outgoing, and their origins and destinations.

Because of these banking controls, narcotics-traffickers are using different ways of laundering drug proceeds. To deter nontraditional money laundering, the Government of Italy (GOI) has enacted a decree to broaden the category of institutions and professionals required to abide by anti-money laundering regulations. The list now includes debt collectors, exchange houses, insurance companies, casinos, real estate agents, brokerage firms, gold and valuables dealers and importers, antiques dealers, lawyers, and notaries. Although Italy now has comprehensive internal auditing and training requirements for its (broadly-defined) financial sector, implementation of these measures by non-bank financial institutions lags behind that of banks, as evidenced by the relatively low number of suspicious transaction reports (STRs) filed by non-bank financial institutions. According to UIC data, banking institutions submit 88 per cent of all STRs. Other financial intermediaries such as exchange houses submit 5.5 per cent, insurance companies 3.1 per cent, the postal sector 2.6 per cent, and all other sectors less than one per cent.

The UIC, which is an arm of the Bank of Italy, receives and analyzes STRs filed by covered institutions, and then forwards them to either the Anti-Mafia Directorate (including local public prosecutors) or the Guardia di Finanza (GdF) (financial police) for further investigation. The UIC compiles a register of financial and non-financial intermediaries that carry on activities that could be exposed to money laundering. The UIC also performs supervisory and regulatory functions such as

Money Laundering and Financial Crimes

issuing decrees, regulations, and circulars. It does not require a court order to compel supervised institutions to provide details on regulated transactions.

A special currency unit of the GdF is the Italian law enforcement agency with primary jurisdiction for conducting financial investigations in Italy. STRs led the GdF to identify \$14,400,000 in laundered money in 2003. Both the UIC and the special currency unit have access to the Bank of Italy's central archive. Investigators from other divisions in the GdF and other Italian law enforcement agencies must obtain a court order prior to being granted access to the archive.

Italy has established reliable systems for identifying, tracing, freezing, seizing, and forfeiting assets from narcotics-trafficking and other serious crimes, including terrorism. These assets include currency accounts, real estate, vehicles, vessels, drugs, legitimate businesses used to launder drug money, and other instruments of crime. Under anti-Mafia legislation, seized financial and non-financial assets of organized crime groups can be forfeited. The law allows for forfeiture in both civil and criminal cases. Italy does not have any significant legal loopholes that allow traffickers and other criminals to shield assets. However, the burden of proof is on the Italian government to make a case in court that assets are related to narcotics-trafficking or other serious crimes. Law enforcement officials have adequate powers and resources to trace and seize assets; however, their efforts can be affected by which local magistrate is working a particular case. Funds from asset forfeitures are entered into the general State accounts. Italy shares assets with member states of the Council of Europe.

In October 2001, Italy passed a decree (subsequently converted into legislation) that created the Inter-Ministerial Financial Security Committee (FSC), which is charged with coordinating GOI efforts to track and interdict terrorist financing. The committee includes representatives from the Economics, Justice, and Foreign Affairs Ministries; law enforcement agencies; and the intelligence services. The Committee has far-reaching powers that include waiving provisions of the Official Secrecy Act to obtain information from all government ministries and the as-yet-unused authority to order a freeze of terrorist-related assets.

A second October 2001 decree (also converted into legislation) made financing of terrorist activity a criminal offense, with prison terms of between seven and 15 years. The legislation also requires financial institutions to report suspicious activity related to terrorist financing. Both measures facilitate the freezing of terrorist assets. In 2003, FSC data indicates that 43 accounts belonging to 42 individuals were frozen in relation to terrorism financing, totaling \$570,000. The GOI cooperates fully with efforts by the United States to trace and seize assets. Italy is second only to the United States in the number of individual terrorists and terrorist organizations it has submitted to the UNSCR 1267 Sanctions Committee for designation. The UIC is responsible for transmitting to financial institutions the EU, UN, and U.S. Government (USG) lists of terrorist groups and individuals. The UIC may provisionally suspend for 48 hours transactions deemed suspect. The courts must then act to freeze or seize the assets. Under Italian law, financial and economic assets linked to terrorists can only be seized through a criminal sequestration order. Courts may issue such orders as part of criminal investigation of crimes linked to international terrorism. The sequestration order may be issued with respect to any asset, resource, or item of property, provided that these are goods or resources linked to the criminal activities under investigation. The Ministry of Finance has drafted legislation that would allow the freezing, seizing, and forfeiture of non-financial assets belonging to terrorist groups and individuals. The legislation still needs approval by the Council of Ministers before being submitted to Parliament.

In Italy, the term "alternative remittance system" refers to non-bank regulated institutions such as money transfer businesses. Informal remittance systems do exist, primarily to serve Italy's significant immigrant communities. Italy does not regulate charities per se. Primarily for tax purposes, Italy in 1997 created a category of "not-for-profit organizations of social utility" (ONLUS). Such an organization can be an association, a foundation or a fundraising committee. To be classified as an ONLUS, the organization must register with the Economics Ministry and prepare an annual report.

The UIC and the Federation of ONLUS Agencies have agreed to cooperate to develop statistical data on and analysis of ONLUS organizations, as well as to provide information and alerts to donors to caution them on how legitimate donations can be siphoned to illegitimate ends.

Italian cooperation with the United States on money laundering matters has been exemplary. The United States and Italy have signed a customs assistance agreement as well as extradition and Mutual Legal Assistance treaties (MLAT). Both in response to requests under the MLAT and on an informal basis, Italy provides the United States records related to narcotics-trafficking, terrorism and terrorist financing investigations and proceedings. Italy also cooperates closely with U.S. law enforcement agencies and other governments investigating illicit financing related to these and other serious crimes. An effort to provide a mechanism under the MLAT for asset forfeiture and the sharing of forfeited assets has not yet come to fruition. Assets can only be shared bilaterally if agreement is reached on a case-specific basis.

Italy is a party to the 1988 UN Drug Convention; the UN International Convention for the Suppression of the Financing of Terrorism; and the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime. Italy has signed, but not yet ratified, the UN Convention against Transnational Organized Crime.

Italy is a member of the Financial Action task Force (FATF) and held the FATF presidency in 1997-98. As a member of the Egmont Group, Italy's UIC shares information with other countries' FIUs. The UIC has been authorized to conclude information-sharing agreements concerning suspicious financial transactions with other countries. To date, Italy has signed memoranda of understanding with France, Spain, the Czech Republic, Croatia, Slovenia, Belgium, Panama, Latvia, the Russian Federation, Canada, and Australia. Italy also is negotiating agreements with Japan, Argentina, Malta, Thailand, Singapore, Hong Kong, Malaysia, and Switzerland, and has a number of bilateral agreements with foreign governments in the areas of investigative cooperation on narcotics-trafficking and organized crime. There is no known instance of refusal to cooperate with foreign governments.

Italy is firmly committed to the fight against money laundering and terrorist financing, both domestically and internationally. However, given the relatively low number of STRs being filed by non-bank financial institutions, the GOI should increase its training efforts and supervision in this sector, to decrease its vulnerability to abuse by criminal or terrorist groups. Italy should also continue its active participation in multilateral fora dedicated to the global fight against money laundering and terrorist financing.

Jamaica

Jamaica, the foremost producer and exporter of marijuana in the Caribbean, is also a major transit country for cocaine flowing from South America to the United States and other international destinations. The profits from these massive illegal drug flows must be legitimated and therefore make Jamaica susceptible to money laundering activities and other financial crimes. Jamaica is not experiencing any increase in incidence of financial crimes such as bank fraud or contraband smuggling that filter funds through the banking system. The Government of Jamaica (GOJ) does not encourage or facilitate money laundering, nor has any senior official been investigated or charged with the laundering of proceeds from illegal activity.

Jamaica is not an offshore financial center and its banking system continues to be under intense scrutiny from regulators in the wake of several major banking scandals in the 1990s. Because of this scrutiny, Jamaican financial instruments are considered an unattractive mechanism for laundering money. As a result, much of the proceeds from drug-trafficking and other criminal activity are used to acquire tangible assets such as real estate or luxury cars, while still more merely passes through Jamaica as cash shipments to South America. Further complicating the picture are the hundreds of

Money Laundering and Financial Crimes

millions of U.S. dollars in remittances sent home to Jamaica by the substantial Jamaican population overseas.

The Money Laundering Act (MLA), implemented on January 5, 1998, governs Jamaica's anti-money laundering regime. The MLA criminalizes narcotics-related money laundering and introduces record keeping and reporting requirements for financial institutions on all currency transactions over \$10,000. Exchange bureaus and cambios have a reporting threshold of \$8,000. The MLA was amended in March 1999 to raise the threshold to \$50,000, after complaints from financial sector institutions that had difficulties with the amount of paperwork resulting from the \$10,000 threshold. At that time, a requirement was also added for banks to report suspicious transactions of any amount to the Director of Public Prosecutions (DPP). In February 2000, the MLA was amended to add fraud, firearms trafficking, and corruption as predicate offenses for money laundering. In February 2002, legislative measures imposed a requirement for money transfer and remittance agencies to report transactions over \$50,000.

During 2004, the Jamaican Parliament passed amendments to the Bank of Jamaica Act, the Banking Act, the Financial Institution Act and the Building Society Act that govern the periodic examination of commercial banks and financial institutions. The Acts provide the legal and policy parameters for the licensing and supervision of financial institutions and lay the foundation for the proposed amendments to the MLA scheduled for debate in Parliament. The proposed amendments have not been agreed upon.

In addition to a new Customs arrival form that requires declaration of currency or monetary instruments over \$10,000 or equivalent introduced in 2003, the GOJ changed its immigration form in conjunction with the implementation of a new border security entry/exit system designed to better control the flow of persons in and out of Jamaica. This measure should assist law enforcement efforts to combat the movement of large amounts of cash—often in shipments totaling hundreds of thousands of U.S. dollars through Jamaica.

Jamaica has an on-going continuing education program to ensure compliance with the suspicious transaction reporting requirements. The Financial Investigations Division of the Ministry of Finance consists of 14 forensic examiners, six police officers who have full arrest powers, a director and 5 administrative staff. However, no major cases of money laundering arrests or prosecutions were reported in 2004. Jamaican law enforcement officials responsible for combating financial crimes are generally cooperative with U.S. law enforcement agencies and frequently request training and other technical assistance.

Further action is still required in the area of asset forfeiture to permit the GOJ to take full advantage of this mechanism in its anti-money laundering efforts. Law enforcement authorities are hampered by the fact that Jamaica has no civil forfeiture law, and under the 1994 Drug Offenses (Forfeiture of Proceeds) Act, a criminal drug-trafficking conviction is required as a prerequisite to forfeiture. This often means that even when police discover illicit funds, the money cannot be seized or frozen and must be returned to the criminals. Asset that are eventually forfeited, are deposited into a fund shared by the Ministries of National Security, Justice and Finance. In 2004, GOJ agencies shared \$85,000 from seizures from drug-trafficking, money laundering, tax and customs evasion and larceny. The new Proceeds of Crime Bill, currently circulating in Parliament, will go a long way to address the shortcomings but the process is moving at a snail's pace.

Terrorism and terrorist financing are covered under the pending Terrorism Prevention Bill. Currently, these crimes are covered as suspicious transactions for money laundering purposes. The Terrorism Prevention Act would remove the need for a court order and allow the GOJ to freeze and seize terrorist assets. As an interim measure, the Bank of Jamaica currently requires all banks and financial institutions (including remittance companies) to abide by the "Guidance Notes for Financial Institutions in Detecting Terrorist Financing" issued by the Financial Action Task Force (FATF) in

April 2002. Additionally, the Ministry of Foreign Affairs and Foreign Trade distributes to all relevant agencies the list of individuals and entities included on the UN 1267 Sanction Committee consolidated list. To date, no accounts owned by those included on the consolidated list have been discovered in Jamaica. The Terrorism Prevention Bill is also far from becoming law.

Jamaica and the United States have a Mutual Legal Assistance Treaty that entered into force in 1995. Jamaica is a party to the 1988 UN Drug Convention, the Inter-American Convention Against Corruption, and the UN Convention against Transnational Organized Crime as well as a signatory to the UN International Convention for the Suppression of the Financing of Terrorism. Jamaica is also a member of the Caribbean Financial Action Task Force and the Organization of American States Inter-American Drug Abuse Control Commission Experts Group to Control Money Laundering.

The progress the Government of Jamaica has made in fighting money laundering is tempered by the lack of action on key legislation. A more aggressive effort is necessary to bring its regime into line with international standards, such as is being considered in the proposed money laundering and proceeds of crime legislation. The scope of predicate offenses for money laundering should be extended to encompass all serious crimes, and asset forfeiture provisions should be approved as soon as possible. Consideration should also be given to returning the reporting threshold to \$10,000, as originally mandated. Jamaica should criminalize terrorist financing and ratify the UN International Convention for the Suppression of the Financing of Terrorism. The Government of Jamaica should also augment its Financial Crimes Division and ensure that the division has sufficient resources to adequately combat financial crimes.

Japan

Japan is an important world financial center, and as such is at major risk for money laundering. The principal sources of laundered funds are narcotics trafficking and financial crimes (illicit gambling, extortion, abuse of legitimate corporate activities, and all types of property-related crimes), often linked to Japan's organized criminal organizations. The National Police Agency of Japan estimates the aggregate annual income from organized criminal organizations is approximately \$10 billion, \$3.38 billion of which is income from the trafficking of methamphetamines.

U.S. law enforcement reports that drug-related money laundering investigations initiated in the United States periodically show a link between drug-related money laundering activities in the United States and bank accounts in Japan. The number of Internet-related money laundering cases is increasing. In some cases, criminal proceeds were concealed in bank accounts obtained through the Internet market. Laws enacted in 2004 now make sales of bank accounts illegal.

Prior to 1999, Japanese law only criminalized narcotics-related money laundering. The Anti-Drug Special Law, which took effect in July 1992, also criminalizes drug-related money laundering, mandates suspicious transaction reports for the illicit proceeds of drug offenses, and authorizes controlled drug deliveries. This legislation also creates a system to confiscate illegal profits gained through drug crimes. The seizure provisions apply to tangible and intangible assets, direct illegal profit, substitute assets, and criminally derived property that has been commingled with legitimate assets.

The limited scope of the law and the burden required of law enforcement to prove a direct link between money and assets to specific drug activity limits the law's effectiveness. As a result, Japanese police and prosecutors have undertaken few investigations and prosecutions of suspected money laundering. Many Japanese officials in the law enforcement community, including Japanese Customs, believe that Japan's organized crime groups have been exploiting Japan's financial institutions.

Pursuant to the 1999 Anti-Organized Crime Law, which came into effect in February 2000, Japan expanded its money laundering law beyond narcotics-trafficking to include money laundering

predicates such as murder, aggravated assault, extortion, theft, fraud, and kidnapping. The law also extends the confiscation laws to include the additional money laundering predicate offenses and value-based forfeitures. It also authorizes electronic surveillance of organized crime members, and enhances the suspicious transaction reporting system.

An amendment to the Anti-Organized Crime Law was submitted on February 20, 2004 to the Diet (Japan's legislature) for approval. The amendment would expand the predicate offenses for money laundering from approximately 200 individual offenses currently, to almost all offenses penalized by imprisonment, with the resulting number of predicate offenses rising to about 350 as a result.

To facilitate the exchange of information related to suspected money laundering activity, Japan's Financial Services Agency established the Japan Financial Intelligence Office (JAFIO) on February 1, 2000, as Japan's financial intelligence unit. Financial institutions in Japan report suspicious transactions to JAFIO, which analyzes them and disseminates them as appropriate. JAFIO also publishes "Examples of Typical Suspicious Transactions" as a guideline for financial institutions. The guideline was revised in March 2002 to add more specific suspicious transaction cases, such as transactions carried out by organized criminal groups and their associates.

JAFIO concluded international cooperation agreements during 2004 with Singapore's Financial Intelligence Unit (FIU) and with FinCEN, establishing cooperative frameworks for the exchange of financial intelligence related to money laundering and terrorist financing. JAFIO already had similar agreements in place with the FIUs of the United Kingdom, Belgium, and South Korea. JAFIO received 95,315 suspicious transaction reports in 2004, more than double the number in 2003. Of these, 64,675 were disseminated to law enforcement authorities. Some 86 percent of the reports came from banks, 8.5 percent from insurance companies, 3.3 percent from the country's large postal savings system, and 1.2 percent- from non-bank money lenders.

The Financial Services Agency (FSA) and Ministry of Finance are working on measures, expected to be promulgated in 2006, to enable authorities to closely monitor domestic and international money remittances. The Cabinet office published its counterterrorist action plan on December 10, 2004. The plan states that Japan intends to fully implement certain Financial Action Task Force Special Recommendations on Terrorist Financing covering these issues by the end of June 2006. Specific measures will be announced this year.

The Financial Services Agency (FSA) supervises public-sector financial institutions and securities transactions. The FSA classifies and analyzes information on suspicious transactions reported by financial institutions, and provides law enforcement authorities with information relevant to their investigation. Japanese banks and financial institutions are required by law to record and report the identity of customers engaged in large currency transactions. There are no secrecy laws that prevent disclosure of client and ownership information to bank supervisors and law enforcement authorities.

In April 2002, Parliament enacted the Law on Customer Identification and Retention of Records on Transactions with Customers by Financial Institutions (a "know your customer" law). The law reinforced and codified the customer identification and record keeping procedures that banks had practiced on their own for years. The Foreign Exchange and Foreign Trade Law was also revised so that financial institutions are required to make positive customer identification for both domestic transactions and transfers abroad in amounts of more than two million yen (approximately \$19,230). Banks and financial institutions are required to maintain customer identification records for seven years.

Japanese financial institutions have, when requested, cooperated with law enforcement agencies, including U.S. and other foreign government agencies investigating financial crimes related to narcotics. In 2003, the United States and Japan concluded a Mutual Legal Assistance Treaty (MLAT). Although Japan has not adopted "due diligence" or "banker negligence" laws to make individual

bankers responsible if their institutions launder money, there are administrative guidelines in existence that require due diligence. Japanese law protects bankers and other financial institution employees who cooperate with law enforcement entities.

In a major 2004 money laundering case, a Japanese banker who had worked for Credit Suisse in Hong Kong was arrested in Hong Kong in June and accused of laundering 4.6 billion yen (\$42 million) for a leading criminal organization. In September, the Financial Services Agency (FSA) cited Citibank for failure to comply with laws designed to prevent money laundering (such as failing to properly screen clients). In February, the FSA disciplined Standard Chartered Bank for failing to properly check customer identities and for violating the obligation to report suspicious transactions.

The Foreign Exchange and Foreign Trade Law requires travelers entering and departing Japan to report physically transported currency and monetary instruments (including securities and gold weighing over one kilogram) exceeding one million yen (approximately \$9,615), or its equivalent in foreign currency, to customs authorities. Failure to submit a report, or submitting a false or fraudulent one, can result in a fine of up to 200,000 yen (approximately \$1,923) or six months' imprisonment. However, the reporting requirement is enforced only sporadically.

In response to the events of September 11, 2001, the FSA used the anti-money laundering framework provided in the Anti-Organized Crime Law to require financial institutions to report transactions where funds appeared either to stem from criminal proceeds or to be linked to individuals and/or entities suspected to have relations with terrorist activities. The 2002 Act on Punishment of Financing of Offenses of Public Intimidation added terrorist financing to the list of predicate offenses for money laundering, and provided for the freezing of terrorism-related assets. It was enacted in July 2002. Japan signed the UN International Convention for the Suppression of the Financing of Terrorism on October 30, 2001, and became a party on June 11, 2002. After September 11, 2001, Japan froze accounts related to the Taliban. Since then, Japan has regularly searched for and designated for asset freeze any accounts that might be linked to the entities and individuals on the UNSCR 1267 Sanctions Committee's consolidated list.

Underground banking systems operate widely in Japan, especially in immigrant communities. Such systems violate the Banking Law and the Foreign Exchange Law. The police have investigated 35 underground banking cases in which foreign groups transferred illicit proceeds to foreign countries. The aggregate value of such transfers has amounted to 420 billion yen (approximately \$4 billion) since the beginning of 1992. About 120 billion yen (\$1.1 billion) have been illegally transferred to China and Korea, and about 90 billion yen (\$865 million) to Peru. In November 2004, the Diet approved legislation banning the sale of bank accounts, in a bid to prevent the use of purchased accounts for fraud or money laundering.

Japan has not enacted laws that allow for sharing of seized narcotics assets with other countries. However, the Japanese Government cooperates with efforts by the United States and other countries to trace and seize assets, and makes use of tips on the flow of drug-derived assets from foreign law enforcement efforts, to trace funds and seize bank accounts.

Japan is a party to the 1988 UN Drug Convention and the UN Transnational Organized Crime Convention. Japan is a member of the Financial Action Task Force. JAFIO joined the Egmont Group of FIUs in 2000. Japan has also taken a leadership role as a member in the Asia/Pacific Group on Money Laundering. In 2002, Japan's FSA and the U.S. Securities and Exchange Commission and Commodity Futures Trading Commission signed a nonbinding Statement of Intent (SOI) concerning cooperation and the exchange of information related to securities law violations.

In terms of international information exchange on money laundering, as of December 2003 JAFIO had received 45 requests for information from foreign FIUs, and had replied with information to 38 requests, according to statistics from JAFIO. Japan has actively supported anti-money laundering

efforts in developing countries in Asia. For example, in 2003 and 2004 Japan provided assistance to the Philippines and to Indonesia for the development of their anti-money laundering framework.

The Government of Japan has many legal tools and agencies in place to successfully detect, investigate, and combat money laundering. In order to strengthen its anti-money laundering regime, Japan should stringently enforce the Anti-Organized Crime Law. Japan should also enact penalties for noncompliance with the Foreign Exchange and Foreign Trade Law, adopt measures to share seized assets with foreign governments, and enact banker “due diligence” provisions.

Jersey

The Bailiwick of Jersey (BOJ), one of the Channel Islands, is a Crown Dependency of the United Kingdom. The Islands are known as Crown Dependencies because the United Kingdom is responsible for their defense and international relations. Jersey’s sophisticated array of offshore services is similar to that of international financial services centers worldwide.

The financial services industry consists largely of banks; mutual funds; insurance companies (which are largely captive insurance companies); investment advice, dealing, and management companies; and trust/corporate administration companies. In addition, the companies offer corporate services, such as special purpose vehicles for debt restructuring and employee share ownership schemes. For high net worth individuals, there are many wealth management services.

The International Monetary Fund (IMF) conducted an assessment of the anti-money laundering regime of Jersey in October 2003. The IMF found Jersey’s Financial Services Commission (JFSC), the financial services regulator, to be in compliance with international standards, but it provided recommendations for improvement in three areas.

The Jersey Finance and Economics Committee is the government body responsible for administering the law regulating, supervising, promoting, and developing the Island’s finance industry. The IMF notes that the Finance and Economics Committee’s power to give direction to the JFSC could appear as a conflict of interest between the two agencies, and suggests that a separate body be established to speak for the industry’s consumers. The IMF’s second proposal is the establishment of rules for banks dealing with market risk, along with a code of conduct for collective investment funds. Third, the IMF recommends that a contingency plan be established for the failure of a major institution.

Jersey is currently addressing the issues and has already published the rules for collective investment funds. The JFSC intends to continue strengthening the existing regulatory powers with amendments to the Financial Services Commission Law 1998, to provide legislative support for its inspections, and the introduction of monetary fines for administrative and regulatory breaches. The amendments will also include stricter codification of industry guidelines and tighter enforcement of anti-money laundering and terrorist financing controls. The next IMF inspection is planned for 2006.

Jersey’s main anti-money laundering laws are: the Drug Trafficking Offenses (Jersey) Law of 1988, which criminalizes money laundering related to narcotics trafficking, and the Proceeds of Crime (Jersey) Law, 1999, which extends the predicate offenses for money laundering to all offenses punishable by at least one year in prison. The Prevention of Terrorism (Jersey) Law 1996, which criminalizes money laundering related to terrorist activity, was replaced by the Terrorism (Jersey) Law 2002, that came into force in January 2003. The Terrorism (Jersey) Law 2002 is a response to the events of September 11, 2001, and enhances the powers of the Island authorities to investigate terrorist offenses, to cooperate with law enforcement agencies in other jurisdictions, and to seize assets.

The JFSC has issued anti-money laundering Guidance Notes that the courts take into account when considering whether or not an offense has been committed under the Money Laundering Order. The

reporting of suspicious transactions is mandatory under the narcotics-trafficking, terrorism, and anti-money laundering laws.

After consultation with the financial services industry, the JFSC issued a position paper (jointly issued with Guernsey and the Isle of Man) that sets out a number of proposals for further tightening the essential due diligence requirements that financial institutions should meet regarding their customers. The position paper states the JFSC's intention to insist, inter alia, on affirming the primary responsibility of all financial institutions to verify the identity of their customers, regardless of the action of intermediaries. The paper also states an intention to require a progressive program to obtain verification documentation for customer relationships established before the Proceeds of Crime (Jersey) Law came into force in 1999. Each year working groups review specific portions of these principles and draft Anti-Money Laundering Guidance Notes to incorporate changes.

Approximately 30,000 Jersey companies are registered with the Registrar of Companies, who is the Director General of the JFSC. In addition to public filing requirements relating to shareholders, the JFSC requires details of the ultimate individual beneficial owner of each Jersey-registered company to be filed, in confidence, with the Commission. That information is available, under appropriate circumstances and in accordance with the law, to U.S. and other investigators.

In addition, a number of companies that are registered in other jurisdictions are administered in Jersey. Some companies, known as "exempt companies," do not have to pay Jersey income tax and are only available to nonresidents. Jersey does not provide "offshore" licenses. All regulated individuals are equally entitled to sell their services to residents and nonresidents alike. All financial businesses must have a presence in Jersey, and management must be in Jersey.

Jersey has established a Financial Intelligence Unit (FIU) known as the Joint Financial Crime Unit (JFCU). This unit is responsible for receiving, investigating, and disseminating suspicious transaction reports (STRs). The unit includes Jersey Police and Customs officers, as well as a financial crime analyst. In 2002 the JFCU received 1,612 suspicious activity reports; 1,272 in 2003; and 1,248 in 2004. The JFCU is a member of the Egmont Group.

Jersey has extensive powers to cooperate with other law enforcement and regulatory agencies and regularly does so. The JFSC is also able to cooperate with regulatory authorities, for example, to ensure that financial institutions meet anti-money laundering obligations. The JFSC reached agreements on information exchange with securities regulators in Germany, France, and the United States. The JFSC has a memorandum of understanding for information exchange with Belgium. The 1988 Agreement Concerning the Investigation of Drug Trafficking Offenses and the Seizure and Forfeiture of Proceeds and Instrumentalities of Drug Trafficking, as amended in 1994, was extended to Jersey in 1996. Application of the 1988 UN Drug Convention was extended to Jersey on July 7, 1997. Jersey authorities have also put in place sanction orders freezing accounts of individuals connected with terrorist activity.

The Government of Jersey has established an anti-money laundering program that in some instances, such as the regulation of trust company businesses and the requirement for companies to file beneficial ownership with Jersey's Financial Services Commission (JFSC), go beyond what international standards require, in order to directly address Jersey's particular vulnerabilities to money laundering. Jersey should establish reporting requirements for the cross-border transportation of currency and monetary instruments. Jersey should continue to demonstrate its commitment to fighting financial crime by enhancing its anti-money laundering/counterterrorist financing regime in areas of vulnerability.

Money Laundering and Financial Crimes

[*This text has been revised since its original posting; see version as [released to Congress](#).]

Jordan

Jordan is not a regional or offshore financial center and is not considered a major venue for international criminal activity. The banking and financial sectors, including moneychangers, are supervised by competent authorities according to international standards. The Central Bank of Jordan, which regulates foreign exchange transactions, issued anti-money laundering regulations designed to meet the Financial Action Task Force (FATF) Forty Recommendations on Money Laundering in August 2001. Under Jordanian law, money laundering is considered an “unlawful activity” subject to criminal prosecution.

An October 8, 2001 revision to the Penal Code criminalized terrorist activities, specifically including financing of terrorist organizations. Jordan has checked for assets of individuals and entities identified by the UNSCR 1267 Sanctions Committee, although no such assets have been identified to date. In December 2004, the United States and Jordan signed an Agreement regarding Mutual Assistance between their Customs Administrations that provides for mutual assistance with respect to customs offenses and the sharing and disposition of forfeited assets.

Jordan has neither enacted a comprehensive anti-money laundering law, nor established an independent Financial Intelligence Unit (FIU). However, a draft anti-money laundering law is nearing completion for approval by the cabinet and presentation to Jordan’s parliament. Anti-money laundering efforts are handled by an anticorruption agency within the Jordanian Intelligence Services. However, Jordanian officials report that financial institutions file suspicious transactions reports and cooperate with prosecutors’ requests for information related to narcotics-trafficking and terrorism cases. Jordan’s Central Bank has instructed financial institutions to be particularly careful when handling foreign currency transactions, especially if the amounts involved are large or if the source of funds is in question. The Banking Law of 2000 (as amended in 2003) waives banking secrecy provisions in any number of criminal cases, including suspected money laundering and terrorism financing.

Jordan is a party to the 1988 UN Drug Convention and the UN International Convention for the Suppression of the Financing of Terrorism. Jordan has signed, but not ratified, the UN Convention against Transnational Organized Crime. Jordan is a charter member of the Middle East and North Africa Financial Action Task Force (MENAFATF) that was inaugurated in Bahrain in November 2004. The MENAFATF is a FATF-style regional body. The creation of the MENAFATF is critical for pushing the region to improve the transparency and regulatory frameworks of its financial sectors.

The Government of Jordan has taken steps in constructing an anti-money laundering and terrorist financing program, but much remains to be done. Specific anti-money laundering legislation should be passed recognizing all types of predicate offenses. Jordan should establish a Financial Intelligence Unit (FIU) that receives, analyzes and disseminates suspicious transaction reports to law enforcement agencies. Jordan should ratify the UN Convention against Transnational Organized Crime. Jordanian law enforcement and customs should examine forms of trade-based money laundering.

Kazakhstan

Kazakhstan, with its developed, modern banking system has become the financial center for Central Asia. Unfortunately, the lack of adequate banking regulations, widespread corruption, regular incidents of money laundering and cash smuggling, mostly related to economic crimes, and Kazakhstan’s status as a major transit hub for narcotics-trafficking from Afghanistan, also make this country a potential regional money laundering center. The Government of Kazakhstan (GOK) is a willing partner in the fight against terrorism, but weak laws, corruption, ill-trained financial police and a lack of modern equipment hamper its efforts. It is, however, taking steps to remedy these problems.

Money laundering was first criminalized in Kazakhstan by Article 30 of the 1998 counternarcotics law, which makes it illegal to launder money in connection with the sale of illegal drugs. The definition of money laundering used in the act, however, is narrow and the sanctions against it relatively light (a maximum of three years imprisonment, rising to five for multiple offences). A further limit to the effectiveness of the law is that bank records may not be examined until after a criminal case has been initiated.

The GOK has been aware for several years of problems with its policing of financial crimes and is proactively taking corrective measures. In January 2004, the State Agency for Economic Crimes and Corruption was established. The agency is an amalgam of the former Financial Police Agency and the Ministry of Internal Affairs' 9th Department on Economic Embezzlement. The newly created Agency for the Regulation and Inspection of the Financial Market and Financial Organizations is authorized to supervise all aspects of financial markets. In the past, supervision of financial markets was carried out by various state bodies and coordinated by the National Bank. The establishment of a new body, separate from the National Bank, demonstrates the government's intentions to ensure that the country's financial system is consistent with the best international practices. While the head of the new agency reports directly to the president of Kazakhstan, the agency itself continues to operate under the auspices of the National Bank with which it shares regulatory functions. The overall effectiveness of the agency is also limited by a lack of training and the absence of any legal mechanisms to ensure law enforcement's access to the information related to illegal financial operations, such as money laundering, corruption, terrorism financing and other crimes.

The Prosecutor General's Office is the lead agency in drafting new anti-money laundering and counterterrorist financing legislation and in the formation of the proposed Financial Investigative Unit (FIU). The Office of the Prosecutor General expects the legislation to be passed by the end of the first quarter (April 1, 2005), and that the FIU should be fully operational by the end of 2005. The latter is contingent on requisite funding of the FIU being provided by the Parliament during the annual GOK budget process. The Office of the Prosecutor General has the responsibility within the GOK to ensure that the provisions of the law and the function of the FIU will meet international standards and become an effective means of combating money laundering and related financial crimes.

Only one-half of 242,000 registered business entities in the country are in fact operational. In addition, it is estimated that over 93,000 businesses do not report their tax incomes. Since the beginning of 2004, the State Agency for Combating Economic Crimes and Corruption reported 421 registered money laundering cases in Kazakhstan totaling \$107 million. In early January 2004, the Almaty Prosecutor's Office charged two companies with bank fraud. The two companies were charged with illegal operations resulting in the laundering of \$7 million over a period of five months. According to the Prosecutor's Office, these crimes were conducted with the help of bank employees, making them especially difficult to detect. According to the Prosecutor General of Kazakhstan the detection of crimes involving money laundering companies is fairly low, and the above figures probably do not reflect the true scope of these crimes in Kazakhstan. Moreover, even when such crimes are detected, they often are not prosecuted. According to the Prosecutor's Office, approximately only one out of ten criminal proceedings is actually brought to court.

Kazakhstan is not an offshore financial center. There are no offshore companies or banks. Existing legislation does not favor offshore banks and financial centers. Foreign banks, including American, Dutch, Turkish, and Russian-based financial institutions have offices in Kazakhstan.

The GOK cooperated in circulating the E.O. 13224 list among Kazakhstani banks.

Kazakhstan acceded to the 1988 UN Drug Convention in 1997, and in December 2000 the country signed the UN Convention against Transnational Crime. On February 24, 2003, Kazakhstan ratified the UN International Convention for the Suppression of the Financing of Terrorism. In 2000, the GOK signed, but has not yet ratified, the UN Convention against Transnational Organized Crime.

Kazakhstan is considering acceding to the Council of Europe's Convention on Laundering, Search, Seizure and Confiscation of the Proceeds of Crime. Kazakhstan is a signatory of the Central Asian Agreement on Joint Fight Against Terrorism, Political and Religious Extremism, Transnational Organized Crime and Illicit Drug Trafficking, signed in April 2000 by Kazakhstan, the Kyrgyz Republic, Tajikistan and Uzbekistan. Kazakhstan is a charter member of the newly organized Eurasian Group on Combating Money Laundering and Financing of Terrorism.

The Government of Kazakhstan is still in the process of developing some of the key legal and institutional frameworks necessary to establish a viable anti-money laundering/counterterrorist financing regime. The Kazakhstan should enact comprehensive legislation, to include criminalizing terrorist financing, and implement due diligence and reporting requirements that meets international standards. Kazakhstan should continue its efforts to provide training and adequate resources to the bodies tasked with enforcing its laws and regulations.

Kenya

As a regional financial and trade center for East, Central, and Southern Africa, Kenya's economy has a large informal sector and a thriving network of cash-based, unrecorded transfers, primarily used by expatriates to send and receive remittances internationally. As such, Kenya is vulnerable to money laundering. Recently Kenya has taken steps to trace millions of dollars of public funds that were laundered abroad; corruption facilitated the removal of such funds.

Section 49 of the Narcotic Drugs and Psychotropic Substance Control Act of 1994 criminalizes money laundering related to narcotics-trafficking. Narcotics-related money laundering is punishable by a maximum prison sentence of 14 years, though up to now no clear instances of laundering of funds from narcotics-trafficking appear to have come to light. The Central Bank is the regulatory and supervisory authority for Kenya's deposit-taking institutions and has responsibility for over 51 entities. The Kenyan Parliament enacted legislation at the end of 2004 that strengthens the Central Bank's supervisory authority, but it makes no specific reference to money laundering.

In October 2000, the Central Bank issued regulations that require deposit institutions to verify the identity of customers wishing to open an account or conduct a transaction. The regulations also require that these institutions report suspicious transactions. Under the regulations, banks must maintain records of large transactions and report them to the Central Bank. These regulations do not cover non-bank financial institutions such as money remitters, casinos, or investment companies, and there is no enforcement mechanism behind the regulations. Some banks do file suspicious transaction reports voluntarily, but they run the risk of civil litigation, as there are no adequate "safe harbor" provisions for reporting such transactions to the Central Bank. The trigger amount is also very high: on a daily basis, all commercial banks are required to submit reports detailing all transactions greater than \$100,000. Controls on money laundering as such are rarely, if ever, applied to financial institutions or intermediaries outside the banking sector.

Kenya has little in the way of cross-boundary currency controls. Kenyan regulations require that any amount of cash above \$5,000 be disclosed at the point of entry or departure. In reality this provision is rarely enforced. Central Bank guidelines call for currency exchange firms to furnish reports on a daily basis on any single foreign exchange transaction above about \$10,000, and on cumulative daily foreign exchange inflows and outflows of about \$100,000. Under September 2002 guidelines, foreign exchange dealers are required to ensure that cross-border payments are not connected with illegal financial transactions.

The Banking Act amendment of December 2001 authorizes disclosure of financial information by the Central Bank of Kenya to any monetary authority or financial regulatory authority within or outside Kenya. In 2002, the Kenya Bankers Association issued guidelines requiring banks to report suspicious

transactions to the Central Bank. These guidelines do not have the force of law, and only a handful of suspicious transactions have been reported so far.

Kenya is a party to the UN International Convention for the Suppression of the Financing of Terrorism. It has cooperated with the United States and the United Kingdom, but lacks the institutional capacity, investigative skills, and equipment to conduct complex investigations independently. In April 2003, the Government of Kenya (GOK) introduced the Suppression of Terrorism Bill into Parliament. The bill contains provisions that will strengthen the GOK's ability to combat terrorism, but the legislation is opposed by many for fear of human rights violations, though not because of the bill's counterterrorism aspects as such. A GOK official stated in October 2004 that the bill was in the process of being re-drafted. The public does support the government's attempts to increase transparency and to combat corruption, which include its efforts related to money laundering.

There is no legislation permitting the seizure of the financial assets of terrorists. All charitable and nonprofit organizations are registered with the Government and have to submit annual reports. Noncompliance with the annual reporting could lead to de-registration; however, this is rarely enforced. The government did de-register some non-governmental organizations with Islamic links in 1998 in the wake of the bombing of the U.S. Embassy in Nairobi, although they were later re-registered.

Kenya is a party to the 1988 UN Drug Convention. Kenya is an active member of the Eastern and Southern African Anti-Money Laundering Group (ESAAMLG), a FATF-style regional body. Kenya has an informal arrangement with the United States for the exchange of information regarding narcotics, terrorism financing, and other serious crime investigations.

At present the government entities responsible for tracing and seizing assets include the Central Bank of Kenya Banking Fraud Investigation Unit, the Kenya Police through the Anti-Narcotics Unit and the Anti-Terrorism Police Unit, and the Kenya Revenue Authority.

The passage of anti-money laundering legislation and the creation of a financial intelligence unit (FIU) by Kenya would help to formalize its relationship with the United States and with other countries. In 2001, the Government of Kenya formed the Anti-Money Laundering Task Force with the mandate of drafting a comprehensive anti-money laundering law, sensitizing the public and government to money laundering issues, and addressing terrorist financing. After the inception of the task force, a bill on money laundering was drafted, but not introduced. Relevant authorities claim that the bill, entitled the Anti-Money Laundering and Proceeds Bill, will be introduced to Parliament in 2005.

The key points of the legislation include tracing, seizing, and freezing suspect accounts, including those involved in the financing of terrorism; confiscation of the proceeds of crime; declaration of the source of funds; outlawing of anonymous bank accounts; and introduction of mandatory reporting of suspicious transactions above a certain amount. The proposed legislation is not explicit on seizing legitimate business used to launder money. The draft legislation provides for criminal forfeiture only. Actual seizure of assets and forfeiture under current law is rare.

Kenya should expedite the passage of the Anti-Money Laundering and Proceeds Bill and the Suppression of Terrorism Bill as first steps in building a comprehensive anti-money laundering regime. It should also establish a financial intelligence unit (FIU) to serve as a vital part of this regime.

Korea, Democratic Peoples Republic of

The Department of State has designated North Korea as a State Sponsor of Terrorism. Information about the money laundering situation in North Korea is generally unavailable. North Korea's self-imposed isolationism and secrecy as well as its refusal to participate in international organizations

make knowledge of the role of North Korea's financial system and drug trafficking situation supposition at best.

What little is known and documented, however, includes North Korea's continued use of Macau as a base of operations for money laundering and other illicit activities. Macau is a useful intermediary, for it provides North Koreans with access to global financial systems. There are reports that Pyongyang also has used Macau to launder counterfeit \$100 bills and Macau's banks as a repository for the proceeds of North Korea's growing trade in illegal drugs.

The Government of North Korea should enact a comprehensive anti-money laundering regime and take steps to stop financial crimes originating in North Korea and the funding of terrorism.

Korea, Republic of

South Korea is not considered an attractive location for international financial crimes or terrorist financing, partly because of existing foreign exchange controls. However, such activities do exist. As law enforcement authorities have gained more expertise investigating money laundering and financial crimes, they have also become more cognizant of the problem. In general, however, the still fairly strict foreign exchange controls in place make it difficult for drug-related or terrorism-related money laundering to flourish.

Most money laundering appears to be associated with domestic criminal activity or corruption and official bribery. Still, criminal groups based in South Korea maintain international associations with others involved in human and contraband smuggling and related organized crime. On the whole, the South Korean government has been a willing partner in the fight against financial crime, and has pursued international agreements toward that end. The Financial Transactions Reports Act (FTRA), passed in September 2001, requires financial institutions to report suspicious transactions to the Korea Financial Intelligence Unit (KoFIU), which operates within the Ministry of Finance and Economy. The KoFIU was officially launched in November 2001, and is composed of 60 experts from various agencies, including the Ministry of Finance and Economy, the Justice Ministry, the Financial Supervisory Commission, the Bank of Korea, the National Tax Service, the National Police Agency, and the Korea Customs Service. KoFIU analyzes suspicious transaction reports (STRs) and forwards information deemed to require further investigation to domestic law enforcement and the Public Prosecutor's office.

In January 2004, the government tightened its requirements for STRs by lowering the monetary threshold under which they are required to file reports to 20 million won (approximately \$19,000) from the previous 50 million won. Improper disclosure of financial reports is punishable by up to five years imprisonment and a fine of up to 30 million won (about \$25,000). In December 2004, the government also adopted, through a revision of the FTRA, a currency transaction reporting (CTR) system requiring financial institutions to report all currency transactions exceeding a monetary threshold to be set by Presidential Decree. The threshold must be under 50 million won (approximately \$47,250). The FTRA revision also set customer due diligence requirements stipulating that financial institutions must identify and verify customer identification data such as address and income status. The revision will take effect in 2005, on the one year anniversary of the law's promulgation.

Between November 2001 and August 2004, KoFIU has received a total of 4,661 STRs from financial institutions, with a marked increase coming in the past year. It has completed analysis of 4,038 of them, and provided 959 reports to law enforcement agencies as of August 2004. Results were disseminated to law enforcement agencies such as the Public Prosecutor's Office (PPO), National Police Agency (NPA), National Tax Service (NTS), Korea Customs Service (KCS), and the Financial Supervisory Commission (FSC). Another 639 STRs were still under the FIU's analysis. The Korean

Customs Service reported on October 4, 2004, that it had found 23 cases of illegal financial transfers overseas (including money laundering) worth 734.8 billion won (\$639 million) as the result of a special investigation conducted between June 14 and September 30. In December 2004, local police arrested several brokers who arranged for undocumented foreign workers to send illegal remittances abroad via the illegal underground “hawala” system. Additionally, the managing directors of the SK Group, a major conglomerate, were prosecuted for laundering 10 billion won (\$8.4 million), in checks and securities, in November 2003.

KoFIU supervises and inspects the implementation of internal reporting systems established by financial institutions. KoFIU is also charged with coordinating the efforts of other government bodies, and the Policy Coordination Committee held meetings in November 2003 and March 2004 to discuss policies and revisions of the FTRA. Officials charged with investigating money laundering and financial crimes are beginning to widen their scope to include crimes related to commodities trading and industrial smuggling, and continue to search for possible links of such illegal activities to international terrorist activity. On December 1, 2004, KoFIU introduced a new online electronic reporting system, through which financial institutions can report suspicious transactions more quickly.

Money laundering controls are applied to non-banking financial institutions, such as exchange houses, stock brokerages, casinos, insurance companies, merchant banks, mutual savings, finance companies, credit unions, credit cooperatives, trust companies, securities companies, insurance companies, credit insurance corporations, and exchange houses. Intermediaries such as lawyers, accountants, or broker/dealers are not covered. Any traveler carrying more than \$10,000 or the equivalent in other foreign currency is required to report the currency to the Korea Customs Service.

Money laundering related to narcotics-trafficking has been criminalized since 1995, and financial institutions have been required to report transactions known to be connected to narcotics-trafficking to the Public Prosecutor’s Office since 1997. All financial transactions using anonymous, fictitious, and nominee names have been banned since the 1997 enactment of the Real Name Financial Transaction and Guarantee of Secrecy Act. The Act also requires that, apart from judicial requests for information, persons engaged in financial institutions not provide or reveal to others any information or data on the contents of financial transactions without receiving a written request or consent from the parties involved. However, secrecy laws do not apply when such information must be provided for submission to a court or as a result of a warrant issued by the judiciary.

In a move designed to broaden its anti-money laundering regime, the Republic of Korea (ROK) also criminalized the laundering of the proceeds from 38 additional offenses, including economic crimes, bribery, organized crime, and illegal capital flight, through the Proceeds of Crime Act (POCA), enacted in September 2001. The POCA provides for imprisonment and/or a fine for anyone receiving, disguising, or disposing of criminal funds. The legislation also provides for confiscation and forfeiture of illegal proceeds.

South Korea still lacks specific legislation on terrorism financing. Two versions of a new counterterrorism bill are working their way through the legislative process, though previous attempts to pass similar bills have not succeeded. Many politicians and nongovernmental organizations (NGOs), recalling past civil rights abuses in Korea by the government, oppose the pending counterterrorism legislation because of fears about possible misuse by the National Intelligence Service. The proposed legislation is crafted to allow the Republic of Korea Government (ROKG) additional latitude in fighting terrorism, though general financial crimes and money laundering have already been criminalized in previously enacted laws.

The pending counterterrorism bill, if passed, would permit the ROKG to seize legitimate businesses that support terrorist activity. Currently, under the special act against illicit drug trafficking and other related laws, legitimate businesses can be seized if they are used to launder drug money, but businesses supporting terrorist activity cannot be seized unless other crimes are committed. At this

time, there are no known charitable or nonprofit entities operating in Korea that are used as conduits for the financing of terrorism.

Through KoFIU, the ROK circulated to its financial institutions the list of individuals and entities that have been included in the UNSCR 1267 Sanctions Committee's consolidated list as being linked to Osama bin Laden or members of the al-Qaida organization or the Taliban, or which the U.S. Government (USG) or the European Union have designated under relevant authorities. The ROK implemented regulations on October 9, 2001, to freeze financial assets of Taliban-related authorities designated by the UN Security Council. The government then revised the regulations, agreeing to list immediately all U.S. Government-requested terrorist designations under U.S. Executive Order 13224 of December 12, 2002. Due in part to Korea's remaining restrictive foreign exchange laws, which persist despite some recent liberalization, and which render the country unattractive as an offshore financing center, no listed terrorists are known to be maintaining financial accounts in Korea at this time. Korean banks have not identified any terrorist assets. There have been no cases of terrorism financing identified since January 1, 2002.

ROK authorities are just beginning to assess whether the hawala system is an area of concern. Currently, gamblers who bet abroad often use alternative remittance and payment systems; however, government authorities have already criminalized those activities through the Foreign Exchange Regulation Act and other laws. Hawala-type vendors do exist in South Korea and operate primarily among the country's small population of approximately 30,000 foreigners from the Middle East.

The ROK actively cooperates with the United States and other countries to trace and seize assets. The Anti-Public Corruption Forfeiture Act of 1994 provides for the forfeiture of the proceeds of assets derived from corruption. In November 2001, the ROK established a system for identifying, tracing, freezing, seizing, and forfeiting narcotics-related and/or other assets of serious crimes. Under the system, KoFIU is responsible for analyzing and providing information on STRs that require further investigation. The Bank Account Tracing Team under the Narcotics Investigation Department of the Seoul District Prosecutor's Office (established in April 2002) is responsible for tracing and seizing drug-related assets. The Seoul District Prosecutor's Office seized \$9.5 million worth of drug-related assets in the first 10 months of 2004, compared to a similar amount over the same period in 2003. The ROKG established six additional new bank account tracking teams in 2004 to serve out of the District Prosecutor's offices in the metropolitan cities of Busan, Daegu, Kwangju, Incheon, Daejeon, and Ulsan, to expand its reach. Its legal framework does not allow civil forfeiture.

The ROK continues to address the problem of the transportation of counterfeit international currency. The National Intelligence Service's (NIS) International Crime Center indicated on November 24, 2004, that there were 141 reported cases of counterfeit dollars worth \$66,525 in the first nine months of 2004. This represented the same number of cases noted in the same period of 2003, but the dollar amount increased by some 47 percent compared with a year earlier. Based on the amount of counterfeit currency actually uncovered, the NIS estimated that \$500,000 to one million dollars of fake currency may be in circulation in South Korea.

South Korea has a number of thriving free trade zones (FTZs) that enjoy certain special privileges. However, companies operating within them are subject to the same general laws on financial transactions as companies operating elsewhere, and there is no indication these FTZs are being used in trade-based money laundering schemes or for terrorist financing. The ROK mandates extensive entrance screening to determine companies' eligibility to participate in FTZ areas, and firms are subject to standard disclosure rules and criminal laws. As of November, 2004, the ROK had seven FTZs, as a result of the June, 2004 recategorization of the three port cities of Busan, Incheon, and Kwangyang as FTZs. They were recategorized from their previous designation of "customs-free areas" in order to avoid confusion from the earlier dual system of production-focused FTZs, and logistics-oriented "customs-free zones." Incheon International Airport is slated to become the eighth FTZ. In

2004, the Ministry of Commerce, Industry, and Energy expects the addition of the three new FTZs to boost 2004 exports through the FTZs to over \$12 billion, and expects imports into the FTZs to reach \$10 billion by 2008.

The ROK is a party to the 1988 UN Drug Convention and, in December 2000, signed, but has not yet ratified, the UN Convention against Transnational Organized Crime. In October 2001, the ROK signed the UN International Convention for Suppression of the Financing of Terrorism, and it ratified the convention on February 17, 2004. The ROK also signed in December 2003, but has not ratified, the UN Convention against Corruption. The ROK is an active member of the Asia/Pacific Group on Money Laundering (APG), and in 2004 hosted the APG annual meeting.. The ROK also became a member of the Egmont Group in 2002 and applied for membership in the Financial Action Task Force. An extradition treaty between the United States and the ROK entered into force in December 1999.]The United States and the ROK cooperate in judicial matters under a Mutual Legal Assistance Treaty, which entered into force in 1997. In addition, the FIU continues to actively pursue information-sharing agreements with a number of countries. KoFIU signed memoranda of understanding with Belgium (March 2002), Poland (October 2002), the United Kingdom (October 2002), Brazil (February 2003), Australia (May 2003), Indonesia (October 2003), Colombia and Venezuela (November 2003), Japan (December 2003), Finland (January 2004), Canada (June 2004) and the United States (November 2004) to facilitate the exchange of information on money laundering. These agreements are expected to enhance the government's asset tracing and seizure abilities.

The Government of the Republic of Korea should criminalize the financing and support of terrorism and should continue to move forward to adopt and implement its pending legislation. The Republic of Korea should extend its anti-money laundering regime to financial intermediaries. The Republic of Korea should continue its policy of active participation in international anti-money laundering efforts, both bilaterally and in multilateral fora. Spurred by enhanced local and international concern, the Republic of Korea law enforcement officials have begun to fully grasp the negative potential impact such activity has on their country, and to take steps to combat its growth. The Republic of Korea should also accede to the UN International Convention for the Suppression of Terrorism.

Kuwait

Kuwait is not a major regional financial sector. It has nine commercial banks, including two Islamic banks, all of which provide traditional banking services comparable to Western-style commercial banks. Kuwait also has two specialized banks, the Kuwait Real Estate Bank, which is in the process of converting to an Islamic bank, and the government-owned Industrial Bank of Kuwait. Both of these banks provide medium and long-term financing. Regulators do not believe that money laundering is a significant problem, and most money laundering operations are generated as a byproduct of local drug and alcohol smuggling into the country.

On March 10, 2002, the Emir (Head of State) of Kuwait signed Law No. 35, which criminalizes money laundering. The law stipulates that banks and financial institutions may not keep or open any anonymous accounts or accounts in fictitious or symbolic names, and that banks must require proper identification of regular and occasional clients. The law also requires banks to keep all records of transactions and customer identification information for a minimum of five years, conduct training and establish internal control systems, and report any suspicious transactions.

Law No. 35/2002 designates the Office of Public Prosecution (OPP) as the sole authority to receive reports and take appropriate action on money laundering operations. Reports of suspicious transactions are then referred from the OPP to the Central Bank of Kuwait (CBK) for analysis. The law provides for a penalty of up to seven years' imprisonment in addition to fines and asset confiscation. The penalty is doubled if an organized group commits the crime, or if the offender took advantage of his influence or his professional position. Moreover, banks and financial institutions may face a steep fine

(approximately \$3.3 million) if found in violation of the law. Law 35/2002 does not cite terrorist financing as a crime; however, the definition of criminal activity is broad.

The law includes articles on international cooperation, and on monitoring cash and precious metals transactions. Currency smuggling into Kuwait is also outlawed under Law No. 35/2002, although reporting requirements are not enforced at ports of entry. Provisions of Article 4 of Law No. 35/2002 state that every person shall, upon entering the country, inform the customs authorities of any national or foreign currency, gold bullion, or any other precious materials in his/her possession, valued in excess of Kuwait dinars 3,000 (about \$10,000). However, the law does not require individuals to file customs declarations when carrying cash or precious metals out of Kuwait. The law authorizes the Minister of Finance to set forth the resolutions necessary to ensure its implementation. The Minister of Finance, as stipulated by Law No. 35/2002, can issue resolutions to enhance combating money laundering operations, without actually amending the legislation. Several cases have been opened under Law No. 35/2002, but the majority of them were closed after investigations did not disclose prosecutable offenses. Only two cases have gone to courts. The cases reportedly involve money smuggling and failure to report currency transactions, and do not involve banks.

In addition to Law No. 35/2002, anti-money laundering reporting requirements and other rules are contained in the CBK's instructions No. (2/sb/92/2002), which took effect on December 1, 2002, superseding instructions No. (2/sb/50/97). The revised instructions provide for, inter alia, customer identification and the prohibition of anonymous or fictitious accounts (Articles 1-5); the requirement to keep records of all banking transactions for five years (Article 7); electronic transactions (Article 8); the requirement to investigate transactions that are unusually large or have no apparent economic or lawful purpose (Article 10); the requirement to establish internal controls and policies to combat money laundering and terrorism finance, including the establishment of internal units to oversee compliance with relevant regulations (Article 14 and 15); and, the requirement to report to the CBK all cash transactions in excess of \$10,000 (Article 20). In addition, the CBK distributed detailed instructions and guidelines to help bank employees identify suspicious transactions. The CBK is currently working on updating its anti-money laundering instructions to accommodate new international standards.

Kuwait has two Islamic banks, Kuwait Finance House (KFH) and Bubiyan Islamic Bank, which are both licensed and supervised by the CBK. As of May 31, 2004, KFH came fully under the supervision of CBK, and has been cooperative with its offices, as have all other Islamic investment companies. The Bubiyan Islamic Bank was established by the Kuwaiti Investment authority (KIA) and is in the process of being formed, after its May 2004 initial public offering. The Kuwait Real Estate Bank, which has been one of Kuwait's two "specialized banks," is in the process of converting to an Islamic bank. The CBK has been working on bringing Islamic financial institutions under its supervision since before the terrorist attacks of September 11, 2001.

In addition, CBK issued circular No. (2/sb/95/2003) in 2003, which is directed toward money changing companies, and which contains similar instructions with respect to combating money laundering and suspicious activities reporting guidelines. A similar order (31/2003) was issued by the Kuwait Stock Market to all companies under its jurisdiction. There are about 130 money exchange businesses (MEBs) operating in Kuwait, none of which are companies, and therefore, are not under the supervision of the CBK but rather under the Ministry of Commerce and Industry. The CBK has reached an agreement with the Ministry of Commerce and Industry to enforce all anti-money laundering (AML) laws and regulations in supervising such businesses. Furthermore, the Ministry will work diligently to encourage the MEBs to apply for and obtain company licenses and register with the CBK.

The Ministry of Commerce and Industry supervises insurance companies, exchange bureaus, gold and precious metals shops, brokers in the Kuwait Stock Exchange, and all other financial brokers. Since

September 2002, these firms must abide by all regulations concerning customer identification, record keeping of all transactions for five years, establishment of internal control systems, and the reporting of suspicious transactions.

In April 2004, the Ministry of Finance issued Ministerial Decision No. 11 (MD No. 11/224), which transferred the chairmanship of the National Committee for Anti-Money Laundering and the Combating of the Financing of Terrorism, formerly headed by the Minister of Finance, to the Governor of the CBK. The Committee is comprised of representatives of the Ministries of Interior, Foreign Affairs, Commerce and Industry, and Finance; Office of Public Prosecution; Kuwait Stock Exchange; General Customs Authority; and the Union of Kuwaiti Banks. The decree expanded the membership of the Committee to include the Ministry of Labor and Social Affairs in an apparent move to oversee charities and non-governmental organizations.

According to the MD 11/2004, the Committee shall be entrusted, *inter alia*, with drawing up the country's strategy and policy with regard to anti-money laundering and terrorist financing; drafting the necessary legislation, along with pertinent regulations; coordinating between the concerned ministries and agencies in matters related to combating money laundering and terrorist financing; following up on domestic, regional, and international developments, and making needed recommendations in this regard; setting up appropriate channels of communication with regional and international institutions and organizations; and representing Kuwait in domestic, regional, and international meetings and conferences. In addition, Article Seven entrusts the Chairman of the Committee with issuing regulations and procedures that he deems appropriate for the Committee duties and responsibilities and the organization of its activities.

Following the September 11, 2001, attacks against the United States, certain Islamic charity organizations such as the Revival of Islamic Heritage Society (RIHS) and its subsidiary, the Afghan Support Committee (ASC), which operate from Kuwait and have branches in Pakistan and Afghanistan, were suspected of providing funds to al-Qaida. However, there is no indication that such activities occurred with the knowledge of the Kuwaiti head office, which remains undesignated; U.S. authorities have only designated the branches in Pakistan and Afghanistan as having been used to funnel funds to terrorist organizations. The RIHS is under the supervision of the Ministry of Labor and Social Affairs, which has become the newest member of the National Committee for Anti-Money Laundering and the Combating of the Financing of Terrorism.

In August 2002, the Kuwaiti Ministry of Social Affairs and Labor issued a ministerial decree creating the Department of Charitable Organizations. The primary responsibilities of the new department are to receive applications of registration from charitable organizations, monitor their operations, and establish a new accounting system to insure that such organizations comply with the law both at home and abroad. The Department has established guidelines to charities explaining donation collection procedures and regulating financial activities. The new Department is also charged with conducting periodic inspections to insure that they maintain administrative, accounting, and organizational standards according to Kuwaiti law. Further, the Department mandates the certification of charities' financial activities by external auditors. Banks may not transfer any money outside of Kuwait without prior permission from the Ministry. In addition, such wire transactions must be reported to the CBK.

On June 23, 2003, the CBK issued Resolution No. 1/191/2003, establishing the Kuwaiti Financial Inquiries Unit (KFIU) as an independent entity within the Central Bank. The goals of KFIU, which acts as a Financial Intelligence Unit (FIU), are to receive and analyze reports of suspected money laundering from the Office of Public Prosecution (OPP), to establish a database of suspicious transactions, to conduct anti-money laundering training, and to carry out domestic and international exchanges of information in cooperation with the OPP. Law No. 35/2002 did not establish the FIU as the central unit for the receipt, analysis, and dissemination of the suspicious transaction reports (STR) information; instead, these critical functions were divided. Now, STRs are received in the CBK, while

the Public Prosecutor has the authority to disseminate STRs and assess international requests for information. Kuwaiti officials agree that the current limits on information sharing by the FIU are a problem that requires amending of the law.

Kuwait is a member of the Gulf Cooperation Council (GCC), which is itself a member of the Financial Action Task Force (FATF). In November 2004, Kuwait signed the memorandum of understanding governing the establishment of the Middle East and North Africa Financial Action Task Force (MENAFATF). Kuwait is one of the fourteen charter members of this FATF-style regional body that was inaugurated in Bahrain to promote best practices to combat money laundering and terrorist financing in the region.

Kuwait has signed the 1988 UN Drug Convention. It has signed, but not yet ratified, the UN Convention against Transnational Organized Crime. It has not yet signed the UN International Convention for the Suppression of the Financing of Terrorism.

Kuwait is making progress in enforcing its anti-money laundering program. The issuance of the Ministry of Finance Decree 11/2004 concerning the new duties of the National Committee for Anti-Money Laundering and the Combating of the Financing of Terrorism represents a significant improvement. Kuwaiti officials acknowledge the need for extensive training for all involved sectors.

The Government of Kuwait should take steps to strengthen its anti-money laundering law, improve the sharing of financial information, and criminalize terrorist financing. Kuwait should also make outbound currency and precious metals declarations mandatory. More interagency cooperation and coordination between the Kuwaiti Financial Inquiries Unit and other concerned parties could yield significant improvements in proactive investigations and international information exchange. The Kuwaiti Financial Inquiries Unit should be able to independently share financial information with its foreign counterparts, and receive, analyze, and disseminate suspicious transaction reports without obtaining prior authorization from the Office of the Public Prosecutor. Kuwait should become a party to both the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime.

Kyrgyz Republic

The Kyrgyz Republic is not a regional financial center. Money laundering is still not classified as a crime under present Kyrgyz legislation. The Kyrgyz banking system remains comparatively underdeveloped. Like other countries in this region, the Kyrgyz Republic's alternative remittance systems are susceptible to money laundering activity or trade-based fraud. The smuggling of consumer goods, tax and tariff evasion, official corruption and narcotics-trafficking continue as the major sources of illegal proceeds within the Kyrgyz Republic.

In 2004 the Kyrgyz legislature drafted a fairly comprehensive law on "Combating Terrorism and Illicit Money Laundering". On December 9, 2004, the bill passed its first reading in the Parliament. It will need to pass an additional reading before being sent to the President for signature. The proposed law defines predicate offenses and criminalizes income obtained as a result of a criminal action. It also includes the mandatory reporting of suspicious transactions by all Kyrgyz financial institutions. Because of Parliamentary elections scheduled for late February, it is expected that the second reading will not take place until the second quarter of 2005. At present, the Kyrgyz Republic has no other laws or draft laws on money laundering.

The National Bank has provisions that require customer identification procedures and make an exception to bank privacy rules for suspicious transaction reporting, but these provisions are reported to be mostly ignored by the commercial banks. Currently, several National Bank restrictions prohibiting banking operations with certain offshore financial institutions and a number of identified suspicious organizations serve to regulate the anti-money laundering process. Oversight of the banking

sector, however, remains generally weak, and Kyrgyz law enforcement agencies lack the expertise and resources necessary to effectively monitor and investigate financial irregularities.

On October 6, 2004 the Kyrgyz Republic, along with Russia, China, Belarus, Tajikistan, and Kazakhstan, formed the Eurasian Group for Counteraction to the Legalization of Illegal Incomes and Terrorism Financing. The Kyrgyz Republic is a party to the 1988 UN Drug Convention, the UN Convention against Transnational Organized Crime and the UN International Convention for the Suppression of the Financing of Terrorism. The Kyrgyz Republic has signed, but not yet ratified, the UN Convention against Corruption.

The Kyrgyz Government has agreed to participate in a United States-sponsored “Needs Assessment” on money laundering and financial investigations scheduled for February 2005. This review is designed to identify the vulnerabilities or deficiencies in legislation to combat money laundering and financial crimes. It will also identify training needs for all Kyrgyz law enforcement agencies responsible for investigations of these crimes.

The Government of the Kyrgyz Republic should adopt the legislation necessary to implement a comprehensive anti-money laundering regime capable of thwarting terrorist financing and should provide the necessary resources to implement such a program. The Kyrgyz Government should also remain vigilant in its efforts to combat money laundering activities that circumvent the financial institutions.

Laos

Laos, a major drug-producing and transit country, is on the fringe of the region’s banking network. Its banking sector is dominated by state-owned commercial banks in need of extensive reform. The small scale and poor financial condition of Lao banks may make them more likely to be venues for certain kinds of illicit transactions. However, Lao banks are not optimal for moving large amounts of money in any single transaction, due to the visibility of such movements in a small, low-tech environment. What money laundering does take place through Lao banks is likely to have been from illegal timber sales or domestic criminal activity, including drug trafficking. In a recent high-profile case involving a foreign-owned company accused of securities fraud, Lao customs authorities seized \$300,000 in cash a businessman was transporting to Thailand, in contravention of Lao law. Subsequent investigation indicated that this business had transferred several million dollars from abroad through the Lao banking system in the past year, much of which was reportedly withdrawn in cash. The case revealed the weakness of the Lao banking system in monitoring suspicious transactions.

Laos has drafted a money laundering law with counterterrorism finance components, based upon a model law provided by the Asian Development Bank. The legislation was proposed during the second half of 2004 and has passed through the Ministry of Justice. It awaits prime ministerial approval and is expected to be passed by the National Assembly in April 2005, perhaps with changes. The law will criminalize money laundering and terrorist financing. A Financial Intelligence Unit (FIU) will also be established, to supplant the small and informal one currently in place. Reportedly, a provision will be made for the freezing of suspect transactions and forfeiture of laundering proceeds. The Bank of Laos currently has a very small Banking Supervision Department, and it is thought that the Department will be augmented and used to help implement the new legislation. Provision will be made for mutual assistance in criminal matters between Laos and other countries.

Lao law prohibits the export of the national currency, the Kip. It is likely that the currency restrictions and undeveloped banking sector encourage the use of alternative remittance systems.

The GOL is a party to the 1971 UN Convention on Psychotropic Substances and the 1988 UN Drug Convention. GOL sends its officials to relevant Association of Southeast Asian Nations (ASEAN)

regional conferences on money laundering. Laos also has observer status in the Asia Pacific Anti-Money Laundering Group, and plans to join fully once its anti-money laundering law is enacted.

The Government of Laos should pass anti-money laundering and counterterrorism financing legislation. Laos should also become a party to the UN International Convention for the Suppression of Financing of Terrorism and the UN Convention against Transnational Organized Crime.

Latvia

Latvia's role as a regional financial center, its large number of commercial banks, and those banks' sizeable non-resident deposit base continue to pose significant money laundering risks in Latvia, even as Latvian financial institutions, regulators, and law enforcement and judicial authorities seek tighter adherence to legislative norms, regulations, and "best practices" designed to fight financial crime. Sources of laundered money include counterfeiting, corruption, white-collar crime, extortion, financial/banking crimes, stolen cars, contraband smuggling, and prostitution. Organized crime is thought to account for a significant portion of laundered proceeds. Latvian consumers are increasingly comfortable with the use of electronic, credit, and other non-cash payments. At the same time, there are no restrictions in Latvia on cross-border currency movement (cash or non-cash, domestic or foreign) or the physical movement of other financial instruments. However, in November 2004, a package of drafted acts was finalized, in anticipation of a forthcoming European Union (EU) Directive, to enact cash declaration requirements (over 15,000 euros) on the external borders of the EU. This will affect Latvia's border crossings with Russia and Belarus, and passengers traveling to Latvia by air from non-EU countries. The proposal will be sent to the Latvian Parliament for review in 2005. Latvia's accession to the European Union occurred on May 1, 2004.

The Government of Latvia (GOL) criminalized money laundering for all serious crimes in 1998. There are requirements for customer identification, the maintenance of records on all transactions, and the reporting of large cash transactions and suspicious transactions to the Office for the Prevention of the Laundering of Proceeds Derived from Criminal Activity (Control Service), which is Latvia's Financial Intelligence Unit (FIU).

The Law on the Prevention of Laundering of Proceeds Derived from Criminal Activity (the anti-money laundering law (AML)) requires all institutions engaging in transactions to report suspicious activity. On February 1, 2004, the amendments to meet the requirements of the Second EU Directive of 2001 became effective. Amendments to the AML law expand the scope of reporting institutions, and include auditors, lawyers, and high-value dealers, as well as credit institutions.

The law lists four categories of entities obligated to report suspicious activities: participants in financial and capital markets (credit institutions, insurance companies, private pension funds, stock exchanges, brokerage companies, investment companies, credit unions, and investment consultants); organizers and holders of lotteries and gambling enterprises; companies engaged in foreign currency exchange; and individuals and companies who perform professional activities and services associated with financial transactions (money transfer services, tax consultants, auditors, auditing companies, notaries, attorneys, real estate companies, art dealers, and commodities traders).

Another amendment to the AML law recognizes all offenses listed in the criminal law, including terrorism, as predicate offenses for money laundering. The amendments also provide the FIU with authority to stop transactions for up to 45 days. The supervisory and control authorities have begun to amend their guidelines for the additional institutions the amendments have brought under their supervision.

The AML law requires all institutions engaging in transactions to report suspicious activity. Individual banks and other financial institutions have discretion in establishing internal protocols for identifying suspicious transactions. The law also mandates institutions to report unusual transactions, based on a

list of indicators that the GOL established in 2001 as part of its AML regime. According to the list of unusual indicators, Latvian banks are mandated to report cash transactions in excess of 40,000 lats (approximately \$80,000). Additionally, banks are required to record the identity of any customer engaging in a transaction exceeding 15,000 euros. There are no bank secrecy laws that prevent law enforcement agencies from identifying account holders during criminal investigations. Financial and credit institutions submit suspicious transaction reports (STRs) and unusual activity reports to the Control Service.

The Control Service operates under the oversight of the Prosecutor General's Office. Approximately 40 percent of all reports filed with the Control Service are STRs; the other 60 percent consist of unusual currency transaction reports. The Control Service received 7,902 reports in 2002, 15,371 reports in 2003, and 16,128 in 2004. The growth in the number of reports for the year 2003 is due to the more pro-active efforts on the part of most banks to report unusual activity above the mandatory threshold requirements, and the additional research conducted by the financial institutions to trace the funds. In 2003, nine new criminal cases were opened and nine additional cases were updated with information provided by the FIU. In 2004, ten new criminal cases were opened and six additional cases were updated with information provided by the FIU.

Prior to Latvia's accession into the European Union, the EU's 2001 Report on Latvia's Progress characterized the perceived level of corruption in Latvia as relatively high. Latvia continues to take steps to combat both real and perceived corruption. In 2002, the Parliament adopted the Law on Prevention of Conflict of Interest of Public Officials.

In January 2002, the government formally established the Anti-Corruption Bureau (ACB), an independent agency whose specific charter is to prevent and combat corruption. The ACB started operating in February 2003. In 2004 the ACB reviewed 734 Latvian officials' asset declarations and sanctioned 63 officials for violations. In addition, in 2004, the number of cases the ACB forwarded to the prosecutor's office for criminal prosecution nearly doubled to 35. The ACB and the Control Service, cooperate on cases of suspected public corruption. In 2004, the Ministry of Justice prepared draft amendments on corruption concerning the coercive measures and criminal liability of legal entities, to be presented to Parliament in 2005.

Since July 2001, the Finance and Capital Market Commission (FCMC) has served as the GOL's unified public financial services regulator, overseeing commercial banks and non-bank financial institutions, the Latvian Stock Exchange, and insurance companies. The Bank of Latvia supervises the currency exchange sector. The FCMC conducts regular audits of credit institutions and will apply sanctions to companies that fail to file mandatory reports of unusual transactions. The Control Service also checks to insure that it receives matching STRs on transactions that occur between Latvian banks. The FCMC has approved guidelines for identifying customers and unusual and suspicious transactions, as well as guidance on the internal control mechanisms that financial institutions should have in place. While the FCMC has pressed financial institutions to pay closer attention to suspicious transactions, particularly those involving jurisdictions on the Financial Action Task Force (FATF)-designated list of Non-Cooperative Countries and Territories (NCCTs), the FCMC is limited in its regulatory powers to take strong public action against offending banks.

In 2004, the FCMC conducted 35 on-site inspections of 19 banks where it assessed the banks' internal controls for preventing money laundering. In one instance, the FCMC fined the bank for non-compliance with AML guidelines. The FCMC placed five additional banks under an enhanced supervisory regime. These banks must address, within a prescribed time period, any non-compliance with legal and FCMC guidelines on preventing money laundering, or face sanctions. By December 2004, 13 Latvian banks were still under enhanced FCMC supervision. The FCMC notified two of these banks that board members responsible for preventing money laundering faced removal. An additional two banks face the removal of all of their board members. The FCMC warned one bank

during 2004 that it would revoke the bank's license if it failed to comply with FCMC recommendations by the imposed deadline.

The FCMC conducted 13 inspections of seven insurance companies during 2004. It fined two companies for failure to comply with requirements stemming from the "Law on the Prevention of Laundering of Proceeds Derived from Criminal Activity." The FCMC removed the managements of four insurance companies in 2003 and 2004 due to reinsurance operations that likely involved tax evasion and/or money laundering.

Financial institutions have the ability to freeze accounts for an unlimited amount of time. If a financial institution finds the activity of an account questionable, it may close the account on its own initiative. If the institution considers the activity unusual but not suspicious, there is no obligation to file a suspicious transaction report with the Control Service. Latvia still lacks clear legal authority for asset seizures and forfeitures associated with financial crimes. The law enforcement authorities under the Ministry of Interior have proposed a program for combating organized crime, which is under consideration by the government. The program recommends creating a unit under the State Police that would be in charge of addressing issues and legislation concerning the confiscation of proceeds derived from criminal activity issues.

Latvia continues to address the issue of offshore investments. Information on offshore company owners had been confidential, but a law enacted in January 2002 requires more information on the branches of offshore companies in Latvia. The law requires that at least half the board members of such companies be permanent residents of Latvia, parent companies must submit their annual reports to a new commercial register, and changes in the parent companies' authorized personnel in Latvia must likewise be reported, in order to facilitate checking suspicious transactions.

In 2004, the FCMC notified all Latvian banks that they were to cease and desist from advertising their services on websites that publicize offshore financial services. Non-residents represent approximately half of Latvian banks' account holders. Latvian law mandates that banks must collect information on the identity of all account holders, and FCMC regulations require that AML officers must approve new accounts. However, ongoing law enforcement investigations suggest that beneficial account holders sometimes use false identities to open accounts at Latvian banks.

Interagency cooperation between Latvian law enforcement agencies tends to be best at the highest governmental levels, but weaker at the working level due to lack of financial, material, and human resources. The investigative and evidence-gathering processes need streamlining. There are three specialized units, one at the Financial Police (Latvian Finance Ministry), one at the Economic Police (Latvian Interior Ministry), and one at the Office to Combat Organized Crime, which are responsible for money laundering investigations, and one unit at the Prosecutor's Office which specializes in bringing charges against suspected individuals. To date, there have been no forfeitures of illicit proceeds based on money laundering. In 2004, the Prosecutor's Office tried two money laundering cases that resulted in acquittals; one of those cases is on appeal by the prosecution.

The GOL has initiated a number of measures aimed at combating the financing of terrorism, and became a party to the UN International Convention for the Suppression of the Financing of Terrorism on November 14, 2002. Latvia is also a party to 11 other international conventions designed to prevent arms trafficking, terrorism on public transportation, and hostage taking. The GOL has implemented regulations to apply sanctions imposed by UNSCR 1267 and 1333 under Cabinet of Ministers' Regulation No. 437 "On the Sanction Regime of the United Nations Security Council against the Afghan Islam Emirates in the Republic of Latvia." On October 14, 2004, Regulation No. 840 "On the Countries and International Organizations Whose Lists Include Persons Suspected of Committing Acts of Terrorism or Complicity Therein" entered into force, replacing Regulation 387 of July 2003. In accordance with Regulation No. 840, the FIU electronically provides credit and financial institutions and their supervisory and control authorities with consolidated terrorist lists. The Regulation allows

the FIU to order a credit or financial institution to freeze suspected terrorist funds. Latvia also has a mechanism for freezing financial resources or other property not involving terrorism.

The Law on Credit Institutions enables police to obtain information from credit institutions in cases of suspected terrorism during the operative stage, prior to the initiation of a criminal case. In October 2004, the FCMC updated its guidelines for financial and credit institutions' internal controls to prevent money laundering and terrorist financing. These updated guidelines incorporate all of the FATF recommendations.

In November 2004, the Prime Minister's Crime Prevention Council approved a new national action plan outlining a strategy to target money laundering, based on the Council of Europe's Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL) recommendations. The Cabinet has not yet formally adopted the new measures, but individual ministries affected by the plan have begun to implement the new procedures.

Amendments to the AML law have been in force since February 2002, which, among other things, provide for: 1) recognizing terrorism as a predicate offense for money laundering, 2) classifying financial resources or other property as proceeds derived from crime if they are directly or indirectly controlled or owned by a physical or juridical person included in the terrorist watch list, 3) making the Latvian FIU the authority that disseminates information on the watch list to credit and financial institutions, 4) giving the FIU authority to demand that credit and financial institutions suspend debit operations in the accounts of such persons or suspend movement of other property of such persons for up to six months, and 5) giving the FIU the authority to cooperate with foreign or international counterterrorism agencies concerning issues of control over the movement of financial resources or other property linked to terrorism.

Since September 11, 2001, Latvian authorities have taken concrete steps to implement the above regulations, and have invested considerable effort in tracing transactions executed by terrorists or their accomplices. Other practical measures include organizing relevant training courses for personnel in financial institutions, creating a special counterterrorism information network within the financial system, nominating a person to deal with counterterrorism issues at the FIU, and establishing an FIU reporting system and procedures concerning terrorist finances.

Latvia has a growing legal gambling industry. Through September 2004, the gaming industry accounted for 51,000,000 lats (approximately \$100,000,000) of revenue, compared to 36,500,000 lats (approximately \$71,568,000) during the first nine months of 2003. In 2004, Latvia enacted a new law that restricts slot machines to defined gaming halls (places that have greater than ten gaming machines). Bars and cafes with slot machines that have been in operation prior to June 2002 are permitted to maintain their gaming operations provided they have no more than five slot machines. This rule change caused the number of gambling places to drop from 1,487 to 688 during 2004. The number of gaming halls increased from 508 in 2003 to 638 in 2004. As of December 2004, there were 12,125 gaming machines in Latvia, compared to 10,597 in 2003. The number of casinos dropped from 20 in 2003 to 15 in 2004.

The Ministry of Finance's Department of Lotteries and Gambling Supervisory Inspection regulates the gaming industry in Latvia. There are ten casino inspectors who preside over daily cash-out operations at each of the country's casinos. There are seven slot machine inspectors. All casino customers must register and show proof of identification prior to entering the casino premises. Casinos and gaming halls must provide information about winnings of greater than 5,000 lats (approximately \$10,000) to the Ministry of Finance and the FIU. In January 2004, the GOL mandated new bookkeeping procedures for casinos that allow for easier supervision and regulation. The Ministry of Finance has statutory authority to inquire about all casino owners and officers, and works with the FIU to review licensing applications.

There are four special economic zones in Latvia that provide a variety of significant tax incentives for manufacturing outsourcing, logistics centers, and trans-shipment of goods to other free trade zones. These zones are located at the free ports of Ventspils, Riga, and Liepaja, and in the inland city of Rezekne near the Russian and Belarusian Borders. There have been instances of smuggling involving cigarettes and meat products related to warehouses located in the free trade zone.

Latvia participates in MONEYVAL, and, as a member, underwent a mutual evaluation in March 2000 that resulted in many of the changes to its AML law and procedures. Latvia's second round of evaluations was completed in 2002, and the results were discussed during the MONEYVAL committee in May 2004. Latvia is now working to implement these measures as part of a National AML Action Plan.

Latvia ratified the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of Proceeds from Crime in 1998, and the Council of Europe Criminal Law Convention on Corruption in December 2001. A Mutual Legal Assistance Treaty has been in force between the United States and Latvia since 1999. Latvia is a party to the 1988 UN Drug Convention, and in December 2001, ratified the UN Convention against Transnational Organized Crime.

The Control Service, Latvia's FIU, has been a member of the Egmont Group since 1999 and has cooperation agreements on information exchange with FIUs in Belgium, Bulgaria, Canada, the Czech Republic, Estonia, Finland, Guernsey, Italy, Lithuania, Malta, Russia, Slovenia, and Poland. In addition, Latvia has signed multilateral agreements with 10 accession countries for automatically exchanging information between the EU financial intelligence units using FIU.NET.

The GOL should continue to explore ways to improve cooperation between Latvian law enforcement agencies at the working level, and to strengthen its capacity and record in aggressively prosecuting and convicting those involved in financial crimes. The Financial and Capital Markets Commission must take tough, public action against those banks that have consistently shown themselves unable or unwilling to apply proper AML procedures. Latvia's success in combating money laundering will depend on its perseverance and political will to combat corruption and organized crime. The GOL should adopt and implement cross-border currency controls, pass asset seizure and forfeiture legislation, and more aggressively regulate its bureaux de change and its gaming industry. Although the GOL believes its existing laws are adequate to prosecute terrorist financing cases, this belief has not been tested. The GOL should therefore specifically criminalize terrorist financing to ensure that adequate legal tools are in place to successfully prosecute such offenses.

Lebanon

Lebanon is a financial hub for banking activities in the Middle East. It has one of the more sophisticated banking sectors in the region. The banking sector continues to record an increase in deposits. As of September 2004, 63 banks (53 commercial banks and ten investment banks) operated in Lebanon, with total deposits of \$53.5 billion. Three U.S. banks' also have representative offices operating in Lebanon: American Express Bank, the Bank of New York, and JP Morgan Chase Bank. The Central Bank (Banque du Liban) (CBL) regulates all financial institutions and money exchange houses. Banking sources emphasize that Lebanon is not a significant financial center for money laundering; however, Lebanon's free market economy, combined with the tradition of bank secrecy and the extensive use of foreign currency (particularly dollars), allows for an environment conducive to laundering money from illicit sources due to a general lack of accountability and enforcement. The narcotics trade is not a principal source of proceeds in money laundering. Lebanon imposes no controls on the movement of capital. It has a substantial influx of remittances from expatriate workers and family members.

Lebanon has continued to make progress toward developing an effective money laundering and terrorism finance regime incorporating the Financial Action Task Force (FATF) Forty Recommendations, which culminated in the FATF's removal of Lebanon from the list of Non-Cooperative Countries or Territories (NCCTs) in June 2002. With Lebanon's removal from the NCCT list, the U.S. Treasury's Financial Crimes Enforcement Network (FinCEN) lifted its advisory, which had instructed all U.S. financial institutions to "give enhanced scrutiny" to all transactions involving Lebanon. In October 2003, the FATF ended the monitoring period to which Lebanon had been subjected since June 2002.

In 2004, Lebanon passed a law requiring diamond traders to seek proper certification of origin for imported diamonds; the Ministry of Economy and Trade would be in charge of issuing certification for re-exported diamonds. This law, designed to prevent the traffic in conflict diamonds, will allow Lebanon to join the Kimberly Process, a voluntary joint government, international diamond industry, and civil society initiative to stem the flow of rough diamonds—that are used by rebel and terrorist movements to finance their operations—through imposing extensive requirements on participants to certify the legitimate origin of rough diamonds. In August 2003, Lebanon passed a decree prohibiting imports of rough diamonds from countries that are not members of the Kimberly Process.

In April 2001, Lebanon adopted Law No. 318, which created a framework for lifting bank secrecy, broadening the criminalization of money laundering beyond drugs, mandating suspicious transaction reporting, requiring financial institutions to obtain customer identification information, and facilitating access to banking information and records by judicial authorities. Under this law, money laundering is a criminal offense and punishable by imprisonment for a period of three to seven years and by a fine of no less than twenty million Lebanese pounds (\$13,267). The provisions of Law No. 318 expand the type of financial institutions subject to the provisions of the Banking Secrecy Law of 1956, to include institutions such as exchange offices, financial intermediation companies, leasing companies, mutual funds, insurance companies, companies promoting and selling real estate and construction, and dealers in high-value commodities. In addition, Law No. 318 requires companies engaged in transactions for high-value items (precious metals, antiquities) and real estate to report suspicious transactions.

These companies are also required to ascertain, through official documents, the identity and address of each client, and must keep photocopies of these documents as well as photocopies of the operation-related documents for a period of no less than five years. The CBL regulates private couriers who transport currency. Western Union and Money Gram are licensed by the CBL and subject to the provisions of this law. Charitable and nonprofit organizations must be registered with the Ministry of Interior, are required to have proper "corporate governance," including audited financial statements, and are subject to the same suspicious reporting requirements.

All financial institutions and money exchange houses are regulated by the CBL. Law 318 (2001) clarified the CBL's powers to require financial institutions to identify all clients, including transient clients, maintain records of customer identification information, request information about the beneficial owners of accounts, conduct internal audits, and exercise due diligence in conducting transactions for clients.

Law No. 318 also established a Financial Intelligence Unit (FIU), called the Special Investigation Commission (SIC), which is an independent entity with judicial status that can investigate money laundering operations and monitor compliance of banks and other financial institutions with the provisions of Law No. 318. The SIC serves as the key element of Lebanon's anti-money laundering regime and has been the critical driving force behind the implementation process. The SIC is responsible for receiving and investigating reports of suspicious transactions. The SIC is the only entity with the authority to lift bank secrecy for administrative and judicial agencies, and it is the administrative body through which foreign requests for assistance are processed. The SIC circulates to all financial institutions the list of individuals and entities that have been included on the UNSCR

1267 Sanctions Committee's consolidated list. The SIC also circulates the list of individuals and entities that the U.S. Government and the European Union have designated under their relevant authorities. The SIC has signed a number of memoranda of understanding with other FIUs concerning international cooperation in anti-money laundering and combating terrorist financing. The SIC cooperates with competent U.S. authorities on exchanging records and information within the framework of Law 318.

During 2003, Lebanon adopted additional measures to strengthen efforts to combat money laundering and terrorism financing, such as establishing anti-money laundering units in customs and the police. In July 2003, Lebanon joined the Egmont Group of financial intelligence units. SIC reported increased inter-agency cooperation with other Lebanese law enforcement units such as Customs and the police. The cooperation led to an increase in the number of reported suspicious transactions reports (STRs), and as a result SIC initiated several investigations in 2004. Article 12 of Law 318 provides for immunity from prosecution for the chairman, staff, and delegates of the SIC, as well as for the financial institutions' money laundering reporting officers.

Since its inception, the SIC has been active in providing support to international case referrals. From January through November 2004, the SIC investigated over 176 cases involving allegations of money laundering and terrorist financing activities. Out of these cases, 13 were originated from U.S. Government (USG) requests. Seventeen of these cases were related to terrorist financing. Bank secrecy regulations were lifted in 68 instances, and three cases relating to money laundering were transmitted by the SIC to the State Prosecutor General to determine if these cases would be referred to the criminal court for trial. The Prosecutor General reported four cases to the SIC to freeze the suspects' assets. These cases involve 24 persons, 19 convicted in drug cases, four in currency counterfeiting, and one in theft. The Prosecutor General has also referred to the criminal court three cases involving four persons, two on drug-related charges and two on embezzlement charges, as well as a family of four persons facing terrorism charges based on a USG list of designated individuals. Total dollar amounts frozen by the SIC in all these cases is about U.S. \$3.2 million.

In October 2003, in order to more effectively combat money laundering and terrorist financing, Lebanon adopted two laws, Numbers 547 and 553. Law 547 expanded Article One of Law 318 (2001), criminalizing any funds resulting from the financing or contribution to the financing of terrorism or terrorist acts or organizations, based on the definition of terrorism as it appears in the Lebanese penal code (which distinguishes between "terrorism" and "resistance"). Law 547 also criminalized acts of theft or embezzlement of public or private funds, or their appropriation by fraudulent means, counterfeiting, or breach of trust, for banks and financial institutions, or falling within the scope of their activities. It also criminalized counterfeiting of money, credit cards, debit cards, and charge cards, or any official document or commercial paper, including checks. Law 553 added an article to the penal code (Article 316) on terrorist financing, which stipulates that any person who voluntarily, either directly or indirectly, finances or contributes to terrorist organizations or terrorists acts is punishable by imprisonment with hard labor for a period not less than three years and not more than seven years, as well as a fine not less than the amount contributed but not exceeding three times that amount.

Offshore banking is not permitted. Lebanon has no offshore trusts or offshore insurance companies. Legislative Decree No. 46, dated June 1983, governs offshore companies. It restricts offshore companies' activity to negotiating and signing agreements concerning business carried outside Lebanon or in the Lebanese Customs Free Zone; thus, offshore companies are barred from engaging in activities such as industry, banking, and insurance. All offshore companies must register with the Beirut Commercial Registry, and the owners of an offshore company must submit a copy of their identification. Moreover, the Registrar of the Beirut Court keeps a special register, in which all documents and information issued by the offshore company are to be retained.

There are currently two free trade zones operating in Lebanon, at the Port of Beirut and at the Port of Tripoli. The free trade zones fall under the supervision of Customs. Exporters moving goods into and out of the free zones submit a detailed manifest to Customs. If Customs suspects a transaction to be related to money laundering or terrorism finance, it will report it to the SIC. Lebanon has no cross-border currency reporting requirements. However, since January 2003, Customs checks travelers randomly and notifies SIC when large amounts of cash are found.

Lebanese law allows for property forfeiture in civil as well as criminal proceedings. The Government of Lebanon enforces existing drug-related asset seizure and forfeiture laws. Current Lebanese legislation provides for the confiscation of assets the court determines to be related to or proceeding from money laundering or terrorist financing. In addition, vehicles used to transport narcotics will be seized. Legitimate businesses established from illegal proceeds after passage of Law 318 are also subject to seizure.

Lebanon was one of the founding members of the Middle East and North Africa Financial Action Task Force (MENAFATF), a FATF-styled regional body that promotes best practices to combat money laundering and terrorist financing in the region. It was inaugurated on November 30, 2004, in Bahrain, by 14 Arab countries. Lebanon will host the first MENAFATF plenary in the first quarter of 2005. Lebanon's SIC Secretary was elected to a one-year term as the first President of MENAFATF.

Lebanon has endorsed the Basel Committee's "Core Principles for Effective Banking Supervision" and is compliant on 24 out of the 25 "Core Principles." Compliance with the pending "Core Principle" is being addressed, and a draft law providing legal protection to bank supervisors awaits the cabinet's approval. Banks are compliant with the Basel I capital accord and are preparing to comply with Basel II recommendations concerning capital adequacy.

Lebanon is a party to the 1988 UN Drug Convention, although it has expressed reservations to several sections relating to bank secrecy. It has signed, but not yet ratified, the UN Convention against Transnational Organized Crime. It has not yet signed the UN International Convention for the Suppression of the Financing of Terrorism. Lebanon has expressed reservations on Article 11 of the UN International Convention for the Suppression of Terrorist Acts by Bombs, concerning the "extradition for political crime," claiming that it conflicts with Lebanon's penal code.

The Government of Lebanon continues to improve its efforts to develop an effective anti-money laundering and terrorism finance regime. It should encourage more efficient cooperation between financial investigators and other concerned parties, such as police and customs, which could yield significant improvements in initiating and conducting investigations. It should ratify both the UN Convention against Transnational Organized Crime and the UN International Convention for the Suppression of Terrorist Financing.

Lesotho

Lesotho is not a financial center and does not have a significant money laundering problem. There is currently no legislation criminalizing money laundering or terrorist financing. In 2003, the Government of Lesotho (GOL) drafted a comprehensive "Money Laundering and Proceeds of Crime" bill; the bill was revised in 2004. As of early 2005, the revised draft bill was being reviewed before presentation to the Cabinet.

Lesotho requires banks to know the identity of their customers and to report suspicious transactions to the Central Bank. The GOL also requires banks to report all transactions exceeding 100,000 maloti (approximately \$16,000) to the Central Bank. Financial institutions are also required to maintain, for a period of ten years, all necessary records to enable them to comply with information requests from competent authorities.

No cases of money laundering were reported within the past year.

The GOL created a multi-agency committee to assist in its implementation of UNSCR 1373. The Commonwealth Secretariat is assisting members of the committee to formulate national policy and draft legislation on terrorism, and intends to sponsor related training for countries of the region.

Lesotho is a party to the 1988 UN Drug Convention, the UN International Convention for the Suppression of the Financing of Terrorism, and the UN Convention against Transnational Organized Crime. Lesotho is a member of the Eastern and Southern Africa Anti-Money Laundering Group (ESAAMLG), a FATF-style regional body. However, it has not yet signed the ESAAMLG Memorandum of Understanding (MOU).

The Government of Lesotho should criminalize money laundering and terrorist financing and should develop a viable anti-money laundering regime. It should sign the MOU for ESAAMLG.

Liberia

Liberia is not a regional financial center. However, Liberia is vulnerable to money laundering because it has been a major transshipment point for illegal diamond smuggling and illegal arms trading. Liberia is also a growing transit country for narcotics on their way to Europe from Nigeria. Liberia is also a fertile haven for drug cultivation, but it appears that most of the locally grown drug crop is used for domestic consumption. Liberian National Police (LNP) routinely stop shipment of marijuana moving from the interior to the Atlantic coast in order to extract bribes from the drivers, but then the shipments are allowed passage. During the Liberian civil war, which was declared officially over on August 11, 2003, Liberia was also a major transshipment point for illegal diamond smuggling, exploitative timber, and illegal arms trading. There were numerous allegations that the profits from these industries were being used to fund local militias and international terrorist activities. The connection to local militias has been documented. The international terrorist nexus may have existed to some degree, but its extent and sustainability is not well known.

There was a major shift in this activity after the end of the Liberian civil war. In September 2003, the UN adopted sanctions on arms, travel, diamonds and timber. With the arrival of UN peacekeepers in 2003, the illicit arms trade has virtually disappeared. UN timber sanctions have limited legal exports, but an illegal timber industry still existed in 2004. UN sanctions on diamonds have limited the ability of smugglers to use Liberia for operations. The National Transitional Government of Liberia (NTGL) has now met the conditions for becoming a participant in the Kimberley Process Certification Scheme, which requires that certain minimum standards be met in order to assure that diamonds being traded are not conflict diamonds and their origin is known. As of the end of 2004, however, the NTGL had yet to begin implementation of the certification scheme. Until that is done, diamond traders, including Eastern Europeans and Lebanese, can travel to Monrovia to purchase rough diamonds on the black market and then smuggle and export them out of Liberia, documenting them as coming from some other source, in violation of a UN Security Council Resolution prohibiting all trade in Liberian rough diamonds. The under valuation of diamond exports and use of double invoicing are common tactics employed to transfer value out of the country, often in conjunction with other illicit activities. There continue to be press allegations that al-Qaida has exploited the West African diamond trade, but such a connection has not been conclusively established. Cash in excess of \$10,000 must be declared to customs officers upon entering the country, and amounts over \$7,500 must be declared on departure. However, these regulations are not regularly enforced, and there is widespread corruption in Liberia's customs administration.

Money laundering is a criminal offense in Liberia, but there are no strong laws to prosecute persons who might be engaged in financing traffickers or terrorist organizations. Businesses may be seized for laundering money, and the government receives the proceeds of such seizures. The banking sector is

thought to be complicit in money laundering, given the unregulated financial environment. There were no arrests and/or prosecutions for money laundering or terrorist financing during 2003 or 2004. Liberia suffers from institutional damage from 14 years of civil war and a weak UN civil police (UNMIL) mandate, which provides no arrest authority for the force. A weak transitional authority comprised of ex-combatant leaders, the NTGL is confronted by a host of problems and lacks the political will and the policing structure to deal with the issue of money laundering. The police force is ineffective, although UNMIL is attempting to restructure and reform the force. Border security is effectively non-existent. The judiciary is notoriously corrupt, and allegations of verdict buying are rampant. This can be considered a primary form of economic crime, as businesses operating in Liberia face the constant threat of state-enabled financial pressure and/or extortion. This corruption does not operate on any organized level and enriches only the officer, judge or minister who manages to extract payment. Given the poorly supervised financial environment, private economic crime is considered to be widespread.

In November 2004, the Central Bank of Liberia (CBL) learned through Interpol of the circulation in Monrovia of counterfeit Liberian \$100 notes. At about the same time, there was an unverified report of counterfeit U.S. dollar notes in small denominations sighted in rural Liberia. The CBL contacted the Interpol West African Representative at Interpol Headquarters in Lyon, France, seeking further details, but no response has been received. One possible solution to this threat would be movement toward dollarization of the Liberian economy, an option promoted by many senior Liberian officials. The Governor of CBL is also considering the printing of newly designed notes as one of the ways to address the counterfeit bills problem.

Liberia's offshore activity is concentrated in the ship registry business, which is managed by the Liberian International Ship and Corporate Registry (LISCR), based in Virginia. The LISCR also manages Liberia's corporate registry. Offshore companies are permitted to issue bearer shares. In 2004, Liberia signed an accord with the U.S. Government giving the U.S. Navy and Coast Guard the right to search Liberian-flag vessels on the high seas.

In 2000, the Economic Community of West African States (ECOWAS) established the Intergovernmental Group for Action Against Money Laundering (GIABA), based in Dakar. Liberia is a member of GIABA. Liberia is not a party to the 1988 UN Drug Convention. In March 2003, Liberia became a party to the UN International Convention for the Suppression of the Financing of Terrorism. In September 2004, Liberia became a party to the UN Convention against Transnational Organized Crime.

The Government of Liberia should enact a comprehensive anti-money laundering regime that criminalizes money laundering and terrorist financing. Liberia should also enforce its cross-border reporting requirements, take steps to properly regulate its diamond industry, and implement and carry out its responsibilities as part of the Kimberly Process.

Liechtenstein

The Principality of Liechtenstein's well-developed offshore financial services sector, relatively low tax rates, loose incorporation and corporate governance rules, and tradition of strict bank secrecy have contributed significantly to the ability of financial intermediaries in Liechtenstein to attract funds from abroad. These same factors have historically made the country attractive to money launderers. Rumors and accusations of misuse of Liechtenstein's banking system persist in spite of the progress the principality has made in its efforts against money laundering.

Liechtenstein's financial services sector includes 16 banks, three non-bank financial companies, and 16 public investment companies, as well as insurance and reinsurance companies. The three largest banks cover ninety percent of the market. Liechtenstein's 230 licensed fiduciary companies and 60

lawyers serve as nominees for, or manage, more than 75,000 entities (mostly corporations, Anstalts, or trusts) available primarily to nonresidents of Liechtenstein. Approximately one third of these entities hold controlling interests in other entities, chartered in countries other than Liechtenstein. Laws permit corporations to issue bearer shares.

Like many of its neighbors, Liechtenstein has bearer passbook accounts as well. Although the owners were identified at the opening of the account, and due diligence practices should force any bearer to identify him/herself at the counter, there is still the possibility of transferability. The Government of Liechtenstein (GOL) has decided that bearer accounts will no longer be opened. Total assets under management in Liechtenstein banks increased by Swiss francs (CHF) 7.32 billion to CHF 103.415 billion (an increase of 7.6 percent). Due to outsourcing of business units, the number of banking staff decreased from 1,718 to 1,527 (a decrease of 11.1 percent)

Narcotics-related money laundering has been a criminal offense in Liechtenstein since 1993, but the first general anti-money laundering legislation was added to Liechtenstein's laws in 1996. Although the 1996 law applies some money laundering controls to financial institutions and intermediaries operating in Liechtenstein, the anti-money laundering regime at that time suffered from serious systemic problems and deficiencies.

In response to international pressure, beginning in 2000, the GOL took legislative and administrative steps to improve its anti-money laundering regime. Specifically, the GOL amended its Due Diligence Act to incorporate "know your customer" principles that require banks and all other financial intermediaries to identify their clients and the beneficial owners of accounts. In addition, financial intermediaries must set up profiles of their clients, which go beyond identification to include their assets and how the clients obtained them. These laws also address the independence of accountants reporting on anti-money laundering compliance.

The GOL continues to make progress in strengthening its anti-money laundering regime and implementing recent reforms. Liechtenstein has increased the resources, both human and financial, devoted to fighting money laundering. Domestically, an inter-ministerial body called the Money Laundering Coordination Group meets quarterly to work on coordination between agencies. Attorneys have become covered entities, as have dealers in high-value goods; and the practice of "tipping off" is prohibited. The GOL has committed all financial institutions (banks and non-bank intermediaries) to obtain full identification of accounts' beneficial owners. The list of predicate offenses for money laundering has been expanded through Article 165 of the Criminal Code. Article 165 also criminalizes laundering one's own funds, and imposes higher penalties for money laundering. However, negligent money laundering is not addressed.

On August 18, 2004, the GOL announced its intention to intensify its fight against money laundering by undertaking a full revision of its Due Diligence legislation. The scope of the revision goes beyond the mirroring of European Union (EU) money laundering guidelines. The proposed revisions address issues such as implementing stronger know your customer regulations and procedures for risk-based monitoring. The revisions also call for the termination of existing relationships with shell banks, as well as the expansion of covered institutions to include casinos, auctioneers, dealers in precious goods, and auditors. The GOL believes the amended Due Diligence Law will increase the attractiveness and stability of the financial center of Liechtenstein. The revisions are expected to become effective on February 1, 2005.

Originally, the Financial Supervision Authority (FSA) was responsible for supervising all banks and fiduciaries licensed to operate in Liechtenstein. The FSA had the authority to conduct on-site spot checks and to request information as required. To remedy problems that arose with the implementation of the laws, a Due Diligence Unit (SSP) was also established to supervise compliance with anti-money laundering regulations. In 2002 the GOL assigned the SSP to handle all supervisory responsibilities, removing it entirely from the FSA. Currently, supervisory responsibility is split between SSP and the

Financial Intelligence Unit (FIU). The SSP has completed over 80 audits covering over 25,000 banking relationships, and works effectively and closely with the FIU, the Office of the Prosecutor, and the police. The GOL is currently working on reorganizing this system via the establishment of an integrated regulatory unit, combining all sectors under one roof.

Liechtenstein's FIU, the Einheit fuer Finanzinformationen (EFFI), became operational in March 2001, and a member of the Egmont Group in June 2001. The FIU began operations on the basis of an executive order, but Liechtenstein formally adopted a law in May 2002 providing a statutory basis for the EFFI's authority. The EFFI has developed a system for suspicious transaction reporting (STR) analysis that involves internal examination, consultation with police, and a ten-day period to decide whether to forward the report to prosecutors for further action. EFFI has set up a database to analyze the STRs and has access to various governmental databases, although it cannot seek additional financial/bank information unrelated to a filed STR. Currently, banks, insurers, financial advisers, postal services, bureaux de change, attorneys, financial regulators, and casinos are required to file STRs. The GOL also reformed its STR system to permit reporting for a much broader range of offenses and based on a suspicion rather than the previous standard of "a strong suspicion." Nonetheless, the new law continues to require that financial institutions undertake some "clarification" of transactions before making a report, and there is some concern that this may be inhibiting the level of reporting or involve some risk of "tipping off." Another problem is that if a transaction is not completed, it is at the institution's discretion whether to report it. EFFI also has responsibility for analysis and transactions in the countering of terrorism financing.

In 2003, STR notifications dropped by 14.9 percent from the year before to 172. Of these 172 cases, 82 reports each were submitted by bank and professional trustees. During 2003, fraud, money laundering, and embezzlement were the most prevalent types of offense. The number of STRs involving fraud remained stable at 38 percent, while the STRs involving money laundering and embezzlement increased from 27.7 to 36.6 percent and from 9.9 to 15 percent respectively.

Although the number of STRs filed by financial institutions in Liechtenstein is relatively small, they have generated several money laundering investigations. The EFFI works closely with the prosecutor's office and law enforcement authorities, as well as with a special unit of the National Police, known as the EWOK, that deals with economic and organized crime. The EWOK is a special unit of eight to ten police officers established specifically to address money laundering crimes. When authorized to do so by a Special Investigative Judge, the police can use special investigative measures.

Well over 100 STRs made it to the Public Prosecutor's Office, which has doubled its staff to better handle the caseload. Three indictments have resulted from those 100 STR referrals. Liechtenstein has not adopted the EU-driven policy of reversing the burden of proof, i.e., making it necessary for the defendant to prove that he had acquired assets legally instead of the state's having to prove he had acquired them illegally. Most of the customers involved in money laundering activities were from Switzerland, Germany, and Austria. Customers from the United States (along with those from Britain) ranked fourth in STR filings. The EFFI reports that about \$260 million worth of suspicious money originated from the United States.

In 2003, the GOL received 129 inquiries from 18 foreign FIUs. This figure is almost twice the number received the previous year. In the same period, the EFFI submitted 145 inquiries to 18 different countries. This represents an increase of nearly 65 percent over the preceding year. The most frequent judicial cooperation requests originated from or were directed to Germany, Switzerland, and Austria.

In late 2002, the International Monetary Fund (IMF) assessed Liechtenstein's financial sector. The IMF's assessment was overall a positive one, noting that staffing deficiencies that existed throughout Liechtenstein's agencies (particularly the FSA and the Insurance Supervisory Authority) were due to lack of personnel and not the competence and professionalism of the existing staff. The IMF also

found that while the then current legislation addressed terrorism financing to an extent, it was not completely covered.

Liechtenstein has in place legislation to seize, freeze, and share forfeited assets with cooperating countries. The Special Law on Mutual Assistance in International Criminal Matters gives priority to international agreements. Money laundering is an extraditable offense, and legal assistance is granted on the basis of dual criminality (i.e., the offense must be a criminal offense in both jurisdictions). Article 235A provides for the sharing of confiscated assets, and this has been used in practice.

A series of amendments to Liechtenstein law, adopted by Parliament on May 15, 2003, include a new catchall criminal offense for terrorist financing along with amendments to the Criminal Code, the Code of Criminal Procedure and the Due Diligence Act. Liechtenstein also has issued ordinances to implement UNSCRs 1267 and 1333. Amendments to the ordinances in October and November 2001 allow the GOL to freeze the accounts of individuals and entities that were designated pursuant to these UNSCRs. The GOL updates these ordinances regularly. On November 7, 2001, law enforcement entities in Switzerland, Liechtenstein, and Italy conducted raids and seized documents relating to Al Taqwa and Nada Management. Liechtenstein froze five Al Taqwa accounts and investigated five companies. In connection with these actions, the GOL responded to a mutual legal assistance request from Switzerland and opened a domestic investigation based on money laundering and organized crime. The total value reported frozen as of December 2003 by the Liechtenstein authorities based on UNSCR 1267 is \$145,300. According to the 2003 Liechtenstein report to the UN, six Taliban-related entities have been located in Liechtenstein. Their assets have been frozen and overlap with the \$145,300 reported above.

The GOL has also improved its international cooperation provisions in both administrative and judicial matters. A Mutual Legal Assistance Treaty (MLAT) between Liechtenstein and the United States entered into force on August 1, 2003. The U. S. Department of Justice has acknowledged Liechtenstein's cooperation in the Al-Taqwa case and in other fraud and narcotics cases. The EFFI has in place a memorandum of understanding (MOU) with the Belgian FIU. Further MOUs are being prepared with Switzerland, France, Italy, Croatia, Poland, San Marino, and Lithuania. In addition, preliminary talks are being held with Russia and Germany.

Liechtenstein is a member of the Council of Europe Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL). The GOL is a party to the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime and the UN International Convention for the Suppression of the Financing of Terrorism. Liechtenstein has now ratified all twelve relevant international conventions and protocols. Liechtenstein has also signed, but not yet ratified, the UN Convention against Transnational Organized Crime. Liechtenstein has endorsed the Basel Committee's "Core Principles for Effective Banking Supervision" and has adopted the EU Convention on Combating Terrorism.

The Government of Liechtenstein has made consistent progress in addressing previously noted shortcomings in its anti-money laundering regime. It should continue to build upon the foundation of its evolving anti-money laundering/counterterrorist financing regime. Liechtenstein should accede to the 1988 UN Drug Convention. Liechtenstein should eliminate all bearer passbook accounts, require reporting of cross-border currency movements, and insist that trustees and other fiduciaries comply fully with all aspects of the new anti-money laundering legislation and attendant regulations, including the obligation to report suspicious transactions. The Einheit fuer Finanzinformationen, the Financial Intelligence Unit, should be given access to additional financial information. While Liechtenstein recognizes the rights of third parties and protects uninvolved parties in matters of confiscation, the government should distinguish between bona fide third parties and others.

Lithuania

With ten commercial banks, two foreign bank branches and 58 credit unions, Lithuania is not a regional financial center. Lithuania has established laws that have created adequate legal safeguards against money laundering; however, its geographic location still makes it a target for smuggled goods and tax evasion. The sale of narcotics does not generate a significant portion of financial crime and money laundering activity in Lithuania; and in 2004, there were no reported cases of money laundering related to narcotics. Most financial crimes are tied to tax evasion, smuggling, illegal production and sale of alcohol, capital flight, and profit concealment. The shadow economy is estimated to account for approximately 18 percent of the total gross domestic product of Lithuania.

The flow of smuggled goods, principally cigarettes and alcohol, from Russia and Belarus, is driven by price differentials between regional non-European Union (EU) countries, Lithuania, and the West. A pack of cigarettes in Lithuania can cost one-fourth the price of a pack in the rest of the EU. Experts anticipate that smuggling will increase when Lithuania adopts the minimum EU excise rate in 2009. Smuggled goods from China are also a source of illicit income through underreporting of the goods' value to Customs and the Lithuanian Tax Administration in order to avoid the value added tax (VAT). With the removal of border checkpoints after Lithuania's accession to the EU on May 1, 2004, Customs officials are only able to inspect Chinese goods if they receive information that allows them to track the goods to Lithuanian warehouses.

Lithuania is not an offshore financial center; however, the State Tax Administration states that it has encountered cases of Lithuanian companies purchasing goods in Russia at lower prices, and then attributing higher prices to offshore companies outside Lithuania, in order to conceal their illicit profits.

Lithuania has Free Economic Zones (FEZ) in the cities of Klaipeda, Kaunas, and Siauliai. Klaipeda is the country's largest seaport, Kaunas is an air, road, and rail hub and Siauliai has the largest airport in the Baltic region. There are currently four businesses operating in the Klaipeda FEZ, the largest of Lithuania's zones, with 130 million euros (\$174 million) in total foreign investment. Klaipeda has signed contracts with four more enterprises to begin operations in 2005. Companies operating the FEZs receive the same legal guarantees as those operating elsewhere. Parliament approved a law on the fundamentals of FEZs in June 1995 that regulates conditions for the establishment of companies in these zones. Businesses in the FEZs receive corporate tax reductions for the first 10 years of existence, customs tax exemptions, VAT exemptions and discounted land leases. Lithuania's EU accession agreement permits the indefinite operation of existing free trade zones, but precludes the establishment of new ones. The Government of Lithuania (GOL) has no indication that any of the FEZs are being used in trade-based money laundering schemes or by the financiers of terrorism.

The GOL criminalized the act of money laundering in 1997 with the Law on the Prevention of Money Laundering (LPML), which entered into force in 1998. Lithuania does not have an "all serious crimes" anti-money laundering law. On January 29, 2004, the Lithuanian Parliament amended the definition of money laundering in Article 216 of the Criminal Code. The law now says that a money launderer, i.e., any person or enterprise, "who carries out financial operations with his own or another person's money or property, or with part of them, knowing that such money or property was acquired in a criminal way, concludes the agreements, uses them in economic or commercial activity, or makes a fraudulent declaration that they are derived from legal activity, for the purposes of concealing or legitimizing these proceeds shall be punished by imprisonment for a term of up to seven years."

Individuals must declare to Customs cash they transport into or out of the country in excess of LTL 10,000 (approximately \$3,800). Since Lithuania's EU accession, this requirement applies only to non-EU citizens. Customs authorities must report to the Financial Crimes Investigative Service (FCIS), Lithuania's financial intelligence unit, within seven working days, any violations for failure to declare currency in excess of 50,000 litas (approximately \$19,200).

Money Laundering and Financial Crimes

On November 25, 2003, the Lithuanian Parliament adopted the Amendment to the Law on the Prevention of Money Laundering (the LPML Amendment), which came into force on January 1, 2004, in order to comply with the obligations specified in the EU's Second Money Laundering Directive and terrorism convention, as well those in the FATF's Forty Recommendations.

Four new regulations were published in 2004 to implement the new requirements of the LPML. In July, the cabinet expanded the criteria to identify suspicious money operations. The new list includes 25 detailed criteria, such as an unusual increase in cash payments, cashing 100,000 litas (approximately \$40,000) or more within seven days, structuring funds under the reporting requirements, and cashing more than 100,000 litas (approximately \$40,000) in seven days using a foreign credit card.

The LPML Amendment expands the types of financial and non-financial entities subject to the requirement to report suspicious or unusual activity of any amount, and the identity of the clients involved, to the FCIS. In addition to financial institutions, the reporting requirements now extend to post offices, lawyers associations, investment companies, and insurance companies. It also expands the list of professions that have to implement preventive measures against money laundering to include auditors, accountants, notaries, tax advisors, enterprises providing bookkeeping or tax consultation services, lawyers and their assistants, casinos, and people who are engaged in commercial or economic activity related to real estate, precious stones, metals, works of art, antiquarian cultural valuables, or other high value goods. The Cabinet also adopted new rules to provide the FCIS information on the identity of subjects involved in suspicious transactions. The regulation establishes a list of data and documents that a bank or other financial institution must request from a person whose transaction requires customer identification. The Cabinet also adopted detailed rules governing the management of suspicious transactions registers. Banks are aware of their reporting requirements and although not very happy about the burden imposed on them, have been very cooperative and report and exchange information of their own accord, not only upon request of the FCIS.

For large transactions exceeding 50,000 litas (approximately \$19,200), the LPML requires all financial institutions to collect information on the identity of the customer, maintain the documents for a minimum of ten years, and report the activity to the FCIS within seven days of the transaction. The LPML Amendment also mandates a stricter customer identification policy for insurance companies and casinos. Insurance companies must identify customers whose annual insurance payment exceeds 8,500 litas (approximately \$3,270). Casinos must register patrons who wager, win, or exchange currency for chips for amounts larger than 3,500 litas (approximately \$1,345). Although the insurance companies and casinos are not obligated to report customer identification, they usually file this information with the FCIS. Starting in January 2004, all taxpayers were required to submit an annual income and property declaration to the Tax Inspectorate. Prior to this, only politicians, business managers, and those purchasing property with a value in excess of 46,000 litas (approximately \$17,700), were obliged to submit declarations. The change to the regulation closes the loophole that allowed funds that were undeclared or from unknown sources to be used to purchase real estate.

Credit institutions (banks) are all privately owned and also function as bureaux de change. They must be licensed by the Central Bank of Lithuania (BOL) and follow special record keeping requirements. The BOL has the authority to examine the books, records, and other documents of all financial institutions and casinos. The BOL then informs law enforcement authorities of any violations recorded during its examination. The LPML protects bankers who report required information to the FCIS. There were no investigations started in 2004 against bank officials for complicity in money laundering. Insurance and brokerage companies are under supervision by the Insurance and Brokerage Commission, which can execute administrative measures or revoke a company's license.

The FCIS, located in the Ministry of the Interior (formerly the Tax Police Department), is Lithuania's Financial Intelligence Unit (FIU). There were 156 suspicious transaction reports (STRs) filed with the

FCIS in 2002, 115 in 2003, and only 65 in 2004. In addition to STRs, the FCIS receives currency transaction reports (CTRs) for currency exchanges over 50,000 litas (approximately \$19,200). There were 43,164 CTRs filed with the FCIS in 2002, 1,020,668 in 2003, and 747,748 in 2004. In total, there have been approximately 423 STRs and 3,921,000 CTRs filed with the FCIS since 1998.

The FCIS reported that there were no convictions for money laundering in 2004; however the Prosecutor's Office initiated criminal proceedings for nine suspected cases of money laundering, and seven additional cases of suspected tax evasion, document forgery, and smuggling. The nine suspected money laundering cases were uncovered due to an investigation by the FCIS into 119 suspicious bank transactions. The lack of adequate information sharing among the FCIS, Customs, and Border Guards, limited training, and corruption of officers at the regional level can sometimes hinder investigations and cooperation among the Lithuanian law enforcement agencies; although in recent years, the GOL has made an effort to provide several training seminars to various law enforcement entities.

On May 1, 2003, the new Criminal Code of the Republic of Lithuania came into force, replacing the 1961 Criminal Procedures Code. Article 216 of the Code increases the role of prosecutors and closes loopholes with regard to corruption. Previously, the police could freeze/seize assets on their own authority, but now they must go to the prosecutors with the named property and receive authority to freeze/seize the assets of a suspected crime. The suspect may appeal to a higher court, and the decision of the Supreme Court is final.

Prosecutors may prohibit individuals suspected of involvement in money laundering or other financial crimes from disposing of property for a period of up to six months. Freezing assets for a longer period requires a court order. The court can seize only property which the criminal or accomplice used as an instrument of a crime or a means to commit a crime or which was acquired as the direct result of a criminal act. The court may seize assets in order either to ensure the possibility of forfeiture in a criminal case or to secure a judgment in a civil action. Upon conviction of money laundering or terrorism financing, individuals may be subject to fines, restrictions on operating any companies owned by them, or liquidation of property.

In November 2004, the Cabinet approved the new "rules on stopping suspicious money operations and providing information to the FCIS." These rules entitle the FCIS to request any legal or natural entities (except notaries) to freeze suspicious money transactions for 48 hours. The FCIS may extend the freeze if an investigation is started. The FCIS froze over 25 million litas (approximately \$9.6 million) in assets from January through October 2004. In 2003, the FCIS froze over 52 million litas (approximately \$20 million). There are no figures available for the total value of forfeited crime-related assets. Proceeds from seizures and forfeitures go into the national budget. Lithuania does not share crime-related assets with other governments.

Article 250 of the Lithuanian Criminal Code, which came into effect in April 2003, establishes the financing of terrorism as a crime and prescribes imprisonment of four to twenty years. The GOL has independent national authority to freeze assets linked to terrorism. The amended LPML includes the direct or indirect funding of terrorism within the definition of terrorist financing. The LPML obligates the reporting institutions to notify the FCIS immediately about money transactions (both cash and non-cash) that might be related to terrorist financing, irrespective of the amount of the transaction. The LPML Amendment also includes terrorist financing as a predicate offense for money laundering.

In April 2004, the Parliament passed a law on the Implementation of Economic and other International Sanctions, which makes international financial sanctions, including terrorist sanctions, valid in Lithuania. Provisions of the law apply to the actions of Lithuanian legal and natural persons in foreign countries, irrespective of whether foreign countries implement international sanctions as applied by Lithuania. The State Security Department, the lead GOL agency coordinating efforts against terrorism, and the FCIS circulate to financial institutions the names of all terrorist individuals and entities on the UNSCR 1267 Sanctions Committee's consolidated list and the list of Specially Designated Global

Terrorists designated by the United States pursuant to E.O. 13224. On May 15, 2003, the Governmental Decree “On the Approval of the Criteria in Observance Whereof a Monetary Operation is Considered Suspicious” was supplemented. One of the new criteria states that if data identifying a bank customer, a representative of the customer conducting a transaction, or the subject on behalf of whom the monetary operation is being conducted, correspond to the data about persons related to terrorist activity, and included on the circulated lists, such person is to be considered suspicious, and his transactions treated accordingly. To date, the government has provided no indication that searches have yielded evidence of terrorist assets. Charitable and nonprofit entities do not play a role as conduits to finance terrorism. Alternative remittance systems reportedly do not exist in Lithuania.

Lithuania has signed memoranda on exchange of money laundering-related financial and intelligence information with the FIUs of Belgium, Croatia, the Czech Republic, Estonia, Finland, Latvia, Bulgaria, Slovenia, and Poland. Lithuania and Germany signed an agreement in 2001 to cooperate in the fight against organized crime and terrorism. The FCIS signed four agreements in 2004 covering cooperation against economic and financial crimes, money laundering, and the exchange of information with the European Anti-Fraud Office, the Azerbaijan Revenue Service, the Italian Guardia Di Finanza and the Estonian Tax and Customs Board. There is a mutual legal assistance treaty (MLAT) between the United States and Lithuania, which entered into force in 1999. Lithuanian law enforcement cooperates with the United States in investigations and the exchange of information related to money laundering, financial crimes, terrorist financing and customs issues. In 2004, FCIS responded to five FBI and FinCEN requests in 2004 for cooperation on money laundering and fraud cases. The police and FCIS continue to cooperate with U.S. law enforcement bodies on a significant Russian Organized Crime/Money Laundering investigation. Through the MLAT and other requests, the GOL provided bank records and other evidence to the United States to be used at trial; and Lithuania allowed bank officials to travel to the United States to testify at trial.

Lithuania is a party to the 1988 UN Drug Convention, the UN Convention against Transnational Organized Crime, and the UN International Convention for the Suppression of the Financing of Terrorism. Lithuania is also a party to the Council of Europe Convention on Laundering, Search, Seizure and Confiscation of the Proceeds from Crime. Lithuania is a member of the Council of Europe’s Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL), and the FCIS is a member of the Egmont Group.

The Government of Lithuania should continue its efforts to enhance its anti-money laundering/counterterrorist financing regime. In particular, Lithuania should ensure that its asset forfeiture regime is adequate and should consider enactment of measures to allow asset sharing with third party jurisdictions that participate in the investigation of international money laundering cases. Lithuania also should ensure that non-governmental organizations, including charities, are adequately supervised and regulated to prevent their abuse by criminal or terrorist groups. Lithuania should provide adequate resources and training to its law enforcement entities to ensure the successful investigation and prosecution of money laundering and terrorist financing.

Luxembourg

Despite its standing as the smallest member of the European Union (EU), Luxembourg is one of the largest financial centers in the world. Its strict bank secrecy laws allow international financial institutions to benefit from and operate a wide range of services and activities. With over a trillion euros in assets managed by the global investment fund industry, Luxembourg joins the United States and France as one of the top three domiciles for investment fund activity. Luxembourg is considered an offshore financial center, with foreign-owned banks accounting for a majority of the nation’s total bank assets. Although there are a handful of domestic banks operating in the country, the majority of banks registered in Luxembourg are foreign subsidiaries of banks in Germany, France, and Belgium.

For this reason (and also due to the proximity of these three nations to Luxembourg), a significant share of Luxembourg's suspicious transaction reports (STR) are generated from transactions involving clients in these three countries.

While Luxembourg is not a major hub for illicit drug distribution, the size and sophistication of its financial center create opportunities for drug-related money laundering and terrorist financing. According to a December 2004 International Monetary Fund (IMF) report, Luxembourg has "a solid criminal legal framework and supervisory system" to counter money laundering and terrorist financing, and is "broadly compliant with almost all of the Financial Action Task Force (FATF) Recommendations." The report also notes that Luxembourg's high level of cross-border business, obligatory banking secrecy, private banking, and "certain investment vehicles" create a challenging environment for countering money laundering and terrorist financing. Further complicating the scenario is the fact that Luxembourg currently has no cross-border reporting requirements.

As of November 2004, 165 banks, with a balance sheet total reaching 689 billion euros, were registered within Luxembourg. In addition, as of December 2004, a total of 1,951 "undertakings for collective investment" (UCIs), or mutual fund companies, whose net assets had reached over a trillion euros by the end of October 2004, were operating out of Luxembourg. Luxembourg has about 15,000 holding companies, 95 insurance companies, and 270 reinsurance companies. As of November 2004, the Luxembourg Stock Exchange listed over 30,000 securities issued by nearly 4,300 entities from about 100 different countries. Legislation passed in June 2004 permits the registration of venture capital funds (*Societe d'investissement en capital a risqué*, or "SICAR").

Luxembourg's financial sector laws are modeled to a large extent on EU directives. The Law of July 7, 1989, updated in 1998, serves as Luxembourg's primary anti-money laundering (AML) law, criminalizing the laundering of proceeds for an extensive list of predicate offenses, including narcotics-trafficking. The Law of April 5, 1993 implements the EU's 1991 First Anti-Money Laundering Directive (Directive on the Prevention of the Use of the Financial System for the Purpose of Money Laundering) and includes among its provisions customer identification, record keeping, and suspicious transaction reporting requirements. The Act of August 1, 1998 expands the list of covered entities and adds corruption, weapons offenses, and organized crime to the list of predicate offenses for money laundering. The Act of June 10, 1999 further expands anti-money laundering provisions. Fraud committed against the European Union has also been added to the list of offenses. Although only natural persons are currently subject to the law, a bill is under consideration for 2005 that would add legal persons to its jurisdiction.

In an effort to bring Luxembourg into full compliance with the requirements of the EU's Second Anti-Money Laundering Directive, on November 12, 2004, Parliament approved legislation updating the nation's anti-money laundering laws. These legislative amendments formally transferred the requirements of the EU's Second Money Laundering Directive into domestic law. The 2004 amendments also broaden the scope of institutions subject to money laundering regulations. Under the current law, banks, pension funds, insurance brokers, UCIs, management companies, external auditors, accountants, notaries, lawyers, casinos and gaming establishments, real estate agents, tax and economic advisors, domiciliary agents, insurance providers, and dealers in high-value goods, such as jewelry and cars, are now considered covered institutions. AML law does not cover SICAR entities. All covered entities are required to file STRs with the Financial Intelligence Unit (FIU) and, though not legally required, are expected to send a copy of the report to their respective oversight authorities. Financial institutions are required to retain pertinent records for a minimum of five years; additional commercial rules require that certain bank records be kept for up to ten years. The AML law also contains "safe harbor" provisions that protect obliged individuals and entities from legal liability when filing STRs or assisting government officials during the course of a money laundering investigation. The 2004 amendments also contain new requirements regarding financial institutions' internal AML programs. It imposes stricter "know your customer" requirements, mandating their application to all

new and existing customers, including beneficial owners, trading in goods worth at least 15,000 euro. If the transaction or business relationship is remotely based, the law details measures required for customer identification. Financial institutions must ensure adequate internal organization and employee training, and must also cooperate with authorities, proactively monitoring their customers for potential risk. “Tipping off” has also been prohibited.

Although Luxembourg’s bank secrecy rules may appear vulnerable to abuse by those transferring illegally obtained assets, under Luxembourg law the secrecy rules are waived in the prosecution of money laundering and other criminal cases. No court order is required to investigate otherwise secret account information in suspected money laundering cases, or when a STR is filed. Financial professionals are obliged to cooperate with the public prosecutor in investigating such cases.

The Commission de Surveillance du Secteur Financier (CSSF) is an independent government body under the jurisdiction of the Ministry of Finance, that serves as the prudential oversight authority for banks, credit institutions, the securities market, some pension funds, and other financial sector entities covered by the country’s anti-money laundering and terrorist financing laws. The Luxembourg Central Bank oversees the payment and securities settlement system, and the Commissariat aux Assurances (CAA), also under the Ministry of Finance, is the regulatory authority for the insurance sector. The identities of the beneficial owners of accounts are available to all entities involved in oversight functions, including registered independent auditors, in-house bank auditors, and the CSSF.

Under the direction of the Ministry of the Treasury, the CSSF has established a committee, the Comité de Pilotage Anti-Blanchiment (COPILAB), composed of supervisory and law enforcement authorities, the FIU and financial industry representatives. The committee meets monthly to develop a common public-private approach to strengthen Luxembourg’s AML regime.

No distinctions are made in Luxembourg’s laws and regulations between onshore and offshore activities. Foreign institutions seeking establishment in Luxembourg must demonstrate prior establishment in a foreign country and meet stringent minimum capital requirements. Companies must maintain a registered office in Luxembourg, and background checks are performed on all applicants. A ministerial decree published in July 2004 modified the Luxembourg Stock Exchange’s internal regulations to make it easier to list offshore funds, provided the fund complies with CSSF requirements (as detailed in Circular 04/151). Also, a government registry publicly lists company directors. Although nominee (anonymous) directors are not permitted, bearer shares are permitted. Banks must undergo annual audits under the supervision of the CSSF (CSSF reg. No. 27). Independent auditors have established a peer review procedure in compliance with an EU recommendation on quality control for external audit work to assure the adherence to international standards on auditing.

Established within Luxembourg’s Ministry of Justice, the Cellule de Renseignement Financier FIU-LUX serves as Luxembourg’s FIU, receiving and analyzing STRs from the financial sector, and seizing and freezing assets when necessary. As part of modifications made in 2004 to Luxembourg’s money laundering law, the FIU’s official status as a division of the Ministry of Justice Public Prosecutor’s office was formalized. While the FIU’s superiors can require the FIU to take action against a suspect, they cannot prevent the FIU from prosecuting. Some members of the financial community continue to call for the creation of an administrative FIU body separate from the office of the public prosecutor. The FIU is responsible for providing members of the financial community with access to updated information on money laundering and terrorist financing practices. It also works closely with various regulatory bodies such as the CSSF and the CAA. The FIU and CSSF work together in investigations involving significant money laundering cases.

In order to obtain a conviction for money laundering, prosecutors must now prove criminal intent rather than negligence. Negligence, however, is still scrutinized by the appropriate sector oversight authority, with sanctions for noncompliance varying from 1,250 to 1,250,000 euros.

As of mid-December 2004, covered institutions had filed a total of 914 STRs. This figure represents a steady increase from previous years (832 STRs were filed in 2003, 631 in 2002, and 431 in 2001). At the end of 2004, three individuals were jailed pending charges of laundering approximately 50 million euros in cash of drug-related money. These cases have involved consistent, close coordination between Luxembourg and foreign law enforcement agencies. An ongoing investigation from 2002 concluded in mid-2004 with a conviction and a sentence of seven years in prison; the case remains under appeal by the defendant. Fourteen additional money laundering cases are still open and under investigation by law enforcement officials. There is a consistently high level of cooperation between U.S. and Luxembourg law enforcement authorities on money laundering investigations.

The law only allows for criminal forfeitures and public takings. Drug-related proceeds are pooled in a special fund to invest in anti-drug abuse programs. Funds found to be the result of money laundering can be confiscated even if they are not the proceeds of a crime. The GOL can, on a case-by-case basis, freeze and seize assets, including assets belonging to legitimate businesses used for money laundering. The government has adequate police powers and resources to trace, seize, and freeze assets without undue delay. Luxembourg has a comprehensive system not only for the seizure and forfeiture of criminal assets, but also for the sharing of those assets with other governments.

Luxembourg authorities have been actively involved in bilateral and international fora and training in order to become more effective at fighting the financing of terrorism. In July 2003, Luxembourg's parliament passed a multifaceted counterterrorism financing law known as *Projet de Loi 4954*, designed to strengthen Luxembourg's ability to fight terrorism and terrorist financing. The law defines terrorist acts, terrorist organizations, and terrorism financing in the Luxembourg Criminal Code. In addition, the specific crimes, as defined, will carry penalties of 15 years to life. The law also extends the definition of money laundering to incorporate new terrorism-related crimes, and, with regard to Special Investigative Measures, provides an exception to notification requirements in selected wiretapping cases. The November 2004 amendments bring Luxembourg into compliance with the FATF's Special Recommendation Number Four, by extending the reporting obligations of the financial sector to terrorist financing, independently from any context of money laundering. Covered institutions now are required to report any transaction believed to be related to terrorist financing, regardless of the source of the funds.

The Ministry of Justice studies and reports on potential abuses of charitable and non-profit entities to protect their integrity. Luxembourg authorities have not found evidence of the widespread use in Luxembourg of alternative remittance systems such as hawala, black market exchanges, or trade-based money laundering. Officials comment that existing AML rules would apply to such systems, and no separate legislative initiatives are currently being considered to address them.

In an effort to identify and freeze the assets of suspected terrorists, the GOL actively disseminates to its financial institutions information concerning suspected individuals and entities on the UNSCR 1267 Sanctions Committee's consolidated list and the list of Specially Designated Global Terrorists designated by the United States pursuant to E.O. 13224. Luxembourg does not yet have legal authority to designate terrorist groups. The government is currently working on draft legislation with regard to this issue. Luxembourg strives to cooperate with and provide assistance to foreign governments in their efforts to trace, freeze, seize and forfeit assets. Dialogue and other bilateral proceedings between the GOL and the United States have been particularly extensive.

Furthermore, authorities can and do take action against groups targeted through the EU designation process, the UN, or on behalf of bilateral requests from other countries. Under the 2004 amendments to Luxembourg's AML law, bilateral freeze requests are limited to a new maximum of three months; designations under the EU, UN, or international investigation processes continue to be subject to freezes for an indefinite time period. Upon request from the United States, Luxembourg froze the bank accounts of individuals suspected of involvement in terrorism. Luxembourg has also independently

frozen several accounts, resulting in court challenges by the account holders. Since 2001, over \$200 million in suspect accounts have been frozen by Luxembourg authorities pending further investigations (most of the assets were subsequently released).

Luxembourg laws facilitating international cooperation in money laundering include the Act of August 8, 2000, which enhances and simplifies procedures on international judicial cooperation in criminal matters; and the Law of June 14, 2001, which ratifies the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime. During its EU council presidency from January through June 2005, Luxembourg will play a role in shepherding the draft of the Third Money Laundering and Terrorist Financing Directive through the EU's legislative process.

Luxembourg is a party to the 1988 UN Drug Convention, and has signed, but not yet ratified, the UN Convention against Transnational Organized Crime. In November 2003, Luxembourg ratified the UN International Convention for the Suppression of the Financing of Terrorism.

Luxembourg is a member of the European Union and the FATF. The Luxembourg FIU is a member of the Egmont Group and has negotiated memoranda of understanding with several countries, including Belgium, Finland, France, Korea, Monaco, and Russia. Luxembourg and the United States have had a Mutual Legal Assistance Treaty (MLAT) since February 2001. Luxembourg's Agency for the Transfer of Financial Technology (ATTF) has consistently provided training and acted as a consultant in money laundering matters to government and banking officials in countries whose regimes are in the development stage. Since 2001, ATTF has provided assistance to government and banking officials from Bosnia, Bulgaria, Croatia, Cape Verde, China, the Czech Republic, Egypt, Macedonia, Romania, Russia, and Ukraine. The ATTF budget has grown steadily from approximately 700,000 euros in 2000, to over 2 million euros in 2004.

The Government of Luxembourg has enacted laws and adopted practices that help to prevent the abuse of its bank secrecy laws, and has enacted a comprehensive legal and supervisory anti-money laundering regime. However, further action should be taken to address issues such as the lack of a distinct legal framework for the Financial Intelligence Unit and the small number of money laundering investigations and prosecutions. The Financial Intelligence Unit should work with regulatory agencies to formulate and issue substantive guidance to financial institutions on anti-money laundering trends and techniques. Luxembourg should continue to strengthen enforcement to prevent abuse of its financial sector, and should continue its active participation in international fora. Luxembourg should enact legislative amendments to address the continued use of bearer shares and the lack of cross-border currency reporting requirements.

Macau

Under the one country-two systems principle that underlies Macau's 1999 reversion to the People's Republic of China, Macau has substantial autonomy in all areas except defense and foreign affairs. Macau's free port, lack of foreign exchange controls, and significant gambling industry create an environment that can be exploited for money laundering purposes. In addition, Macau is a gateway to China, and can be used as a transit point to remit funds and criminal proceeds to and from China. Macau has a small economy and is not a financial center. Its offshore financial sector is not fully developed. Macau's gambling industry, however, remains particularly vulnerable to money laundering.

In 2001, the IMF assessed Macau's anti-money laundering measures as part of a study of offshore financial centers, published on March 12, 2004. The IMF concluded, "Current anti-money laundering measures as they related to the BCP (Basel Committee's 'Core Principles for Effective Banking Supervision') and ICP (Insurance Core Principles issued by the International Association of Insurance Supervisors) need strengthening." In a prior IMF "Assessment of the Regulation and Supervision of

the Financial Sector of Macao” paper published in August 2002, the IMF concluded that Macau was “materially noncompliant” with the money laundering principles of the Basel Committee’s “Core Principles for Effective Banking Supervision,” and recommended a number of improvements.

Main money laundering methods in the financial system are wire transfers; currency exchange/cash conversion; and the use of nominees, trusts, family members, or third parties to transfer cash. Macau has taken several steps over the past two years to improve its institutional capacity to tackle money laundering. These will be helpful if they lead to greater legal enforcement. In October 2002 the Judiciary Police set up the Fraud Investigation Section. One of its key functions is to receive all suspicious transaction reports (STRs) in Macau and to undertake subsequent investigations.

In 2003, the Macau Special Administrative Region Government (MSARG) also prepared money laundering legislation that would incorporate the revised FATF Forty Recommendations and establish a Financial Intelligence Unit (FIU). In 2004, the MSARG continued interagency consultations on the bill. The FIU will be set up after passage of the legislation. In 2004, an interagency body consisting of representatives from the Monetary Authority of Macau, Macau Customs Service, Unitary Police, International Law Office, Gaming Inspection and Coordination Office, and other economic and law-enforcement agencies, continued to discuss the mechanics of the establishment of the FIU and exchanged information in the FIU’s absence.

The government also drafted a terrorist financing bill that, if passed and enforced, would strengthen its efforts. Macau’s financial system is governed by the 1993 Financial System Act and amendments, which lay out regulations to prevent use of the banking system for money laundering. It imposes requirements for the mandatory identification and registration of financial institution shareholders, customer identification, and external audits that include reviews of compliance with anti-money laundering statutes. The 1997 Law on Organized Crime criminalizes money laundering for the proceeds of all domestic and foreign criminal activities, and contains provisions for the freezing of suspect assets and instrumentalities of crime. Legal entities may be civilly liable for money laundering offenses, and their employees may be criminally liable.

The 1998 Ordinance on Money Laundering sets forth requirements for reporting suspicious transactions to the Judiciary Police and other appropriate supervisory authorities. These reporting requirements apply to all legal entities supervised by the regulatory agencies of the MSARG, including pawnbrokers, antique dealers, art dealers, jewelers, and real estate agents. There is no significant difference between the regulation and supervision of onshore and of offshore financial activities.

Macau law provides for forfeiture of cash and assets that assist in or are intended for the commission of a crime. During 2003 and the first ten months of 2004, the Narcotics Division of the Police seized almost 67,000 patacas (\$8,375), 35 cell phones, five cars, and five motorcycles.

The gaming sector and related tourism are critical parts of Macau’s economy. Taxes from gaming comprised 75 percent of government revenue in 2003, while revenues from gaming increased 45 percent during the first ten months of 2004, compared with a year earlier. The MSARG ended a long-standing gaming monopoly early in 2002 when it awarded concessions to two additional operators, the U.S.-based Venetian and Wynn Corporations. The Venetian opened its first casino, the Sands, on May 18, 2004. In addition, MGM announced its intention to open a casino in conjunction with the previous monopoly operator, Sociedade de Jogos de Macau (SJM), owned by local businessman Stanley Ho. The Venetian, Wynn, and MGM are scheduled to open casinos in 2006.

Under the old monopoly framework, organized crime groups were, and continue to be, associated with the gaming industry through their control of VIP gaming rooms, and activities such as racketeering, loan sharking, and prostitution. The VIP rooms catered to clients seeking anonymity within Macau’s gambling establishments, and were particularly removed from official scrutiny. As a result, the gaming

industry, in particular, provided an avenue for the laundering of illicit funds and served as a conduit for the unmonitored transfer of funds out of China.

The Sands, unlike SJM and new entrant Galaxy, does not cede control of its VIP gaming facilities to outside organizations, and organized crime has therefore is not believed to have penetrated this operation.

The MSARG's draft money laundering legislation includes provisions designed to prevent money laundering in the gambling industry. The legislation aims to make money laundering by casinos more difficult, improve oversight, and tighten reporting requirements. On June 7 2004, Macau's Legislative Assembly passed legislation allowing casinos and junket operators to make loans, in chips, to customers. The law requires both casinos and junket operators to register with the government.

Terrorist financing is criminalized under the Macau criminal code (Decree Law 58/95/M of November 14, 1995, Articles 22, 26, 27, and 286). The MSARG has the authority to freeze terrorist assets, although a judicial order is required. Macau financial authorities directed the institutions they supervise to conduct searches for terrorist assets, using the list, listed on the UN 1267 Sanctions Committee consolidated list and the list of Specially Designated Global Terrorists designated by the United States pursuant to E.O. 13224. No assets have been found to date.

The Macau legislature passed an counterterrorism law in April 2002 that is intended to assist with Macau's compliance with UNSCR 1373. The legislation criminalizes violations of UN Security Council resolutions, including counterterrorist resolutions, and strengthens counterterrorist financing provisions. The UN International Convention for the Suppression of the Financing of Terrorism will apply to Macau when the PRC accedes to it.

In 2003, the MSARG drafted a new counterterrorism bill aimed at strengthening counterterrorist financing measures. As of December 2004, the bill was under consultation within the administration. The law-also drafted to comply with UNSCR 1373-would make it illegal to conceal or handle finances on behalf of terrorist organizations. Individuals would be liable even if they were not members of designated terrorist organizations themselves. The Macau Government drafted additional measures which are still under discussion. These include an administrative regulation giving the Chief Executive of Macau the authority to designate terrorists and freeze assets of terrorists not on the UNSCR 1267 Sanctions Committee's consolidated list, and permitting assets to be frozen without first obtaining a court order. The legislation would also allow prosecution of persons who commit terrorist acts outside of Macau, and would mandate stiffer penalties.

The increased attention paid to financial crimes in Macau after the events of September 11 has led to a general increase in the number of suspicious transaction reports (STRs). Macau's Judiciary Police received 107 STRs in 2003, and 86 from January 1 to October 31, 2004, from individuals, banks, companies, and government agencies. Of these 193 STRs, 21 originated from the gaming sector. Seven STRs resulted in special investigations that were ongoing as of the end of 2004, although none of these investigations has resulted in prosecutions.

In 2003, the MSARG drafted a new money laundering bill that broadened the definition of money laundering to include all serious predicate crimes. The legislation also mandated greater customer identification, a more comprehensive reporting system regarding suspicious transactions, a duty to refuse to undertake suspicious transactions, more specific guidelines for the non-banking sector-such as real estate-and penalties for entities that fail to report suspicious transactions. The bill will extend the obligations of suspicious transaction reporting to lawyers, notaries, accountants, auditors, and offshore companies. In November 2003, the Monetary Authority of Macau issued a circular to banks, requiring that STRs be accompanied by a table specifying the transaction types and money laundering methods, in line with the collection categories identified by the Asia/Pacific Group on Money Laundering (APG).

In May 2002, the Macau Monetary Authority revised its anti-money laundering regulations for banks, to bring them into greater conformity with international practices. Guidance also was issued for banks, money changers, and remittance agents, addressing record keeping and suspicious transaction reporting for cash transactions over \$2,500. For such transactions, banks, insurance companies, and moneychangers must exert customer due diligence. The Monetary Authority of Macau, in coordination with the IMF, updated its bank inspection manuals to strengthen anti-money laundering provisions. The Monetary Authority inspects banks every two years, including their adherence to anti-money laundering regulations.

The United States has no law enforcement cooperation agreements with Macau, though cooperation between the United States and Macau routinely takes place. The Judiciary Police have been cooperating with law enforcement authorities in other jurisdictions through the Macau branch of Interpol, to suppress cross-border money laundering. In addition to Interpol, the Fraud Investigation Section of the Judiciary Police has established direct communication and information sharing with authorities in Hong Kong and mainland China.

The Monetary Authority of Macau also cooperates internationally with other financial authorities. It has signed memoranda of understanding with the People's Bank of China, China's Central Bank, the China Insurance Regulatory Commission, the China Banking Regulatory Commission, the Hong Kong Monetary Authority, the Hong Kong Securities and Futures Commission, the Insurance Authority of Hong Kong, and Portuguese bodies including the Bank of Portugal, the Banco de Cabo Verde and O Instituto de Seguros de Portugal.

Macau participates in a number of regional and international organizations. It is a member of the Asia/Pacific Group on Money Laundering (APG), the Offshore Group of Banking Supervisors, the International Association of Insurance Supervisors, the Offshore Group of Insurance Supervisors, the Asian Association of Insurance Commissioners, and the International Association of Insurance Fraud Agencies.

In 2003, Macau hosted the annual meeting of the APG, which adopted the revised FATF Forty Recommendations and a strategic plan for anti-money laundering efforts in the region from 2003 to 2006. In September 2003, Macau became a party to the UN Convention against Transnational Organized Crime, as a result of China's ratification. Macau also became a party to the 1988 UN Drug Convention through China's ratification.

Macau has taken a number of steps in the past three years to raise industry awareness of money laundering. During a March 2004 IMF technical assistance mission, the IMF and Monetary Authority of Macau organized a seminar for financial sector representatives on the FATF Revised Forty Recommendations. The Macau Monetary Authority trains banks on anti-money laundering measures on a regular basis.

Macau should implement and enforce existing laws and regulations, and pass and implement its pending legislation. Macau should ensure that regulations, structures, and training are put in place to prevent money laundering in the gaming industry, including implementing, as quickly as possible, the regulations it has drafted on the prevention of money laundering in casinos. Macau should pass legislation to establish a financial intelligence unit as soon as possible.

The MSARG should take steps to implement the new FATF Special Recommendation Nine, adopted by the FATF in October, 2004, requiring countries to implement detection and declaration systems for cross-border bulk currency movement. Macau should increase public awareness of the money laundering problem, improve interagency coordination, and boost cooperation between the MSARG and the private sector in combating money laundering.

Macedonia

Macedonia is not a regional financial center. The country's economy is mainly cash-based, and citizens lack trust in the banking system following bank failures and a pyramid scheme in the early 1990s. Money laundering in Macedonia is mostly connected to financial crimes such as tax evasion, smuggling, financial and privatization fraud, bribery, and corruption. Most of the laundered proceeds come from domestic criminal activities. A small portion of money laundering activity may be connected to narcotics-trafficking. There is no evidence that narcotics-trafficking organizations or terrorist groups control money laundering. In addition, there is no evidence that weapons or human traffickers have been involved in money laundering activities using bank or non-bank financial institutions. Nor is there evidence of financial institutions or the Government of Macedonia (GOM) or any of its officials being engaged in currency transactions involving proceeds from narcotics-trafficking, and in particular involving U.S. currency or currency derived from illegal drug sales in the U.S.

Article 273 of Macedonia's criminal code, which came into force in 1996, criminalizes any form of money laundering. The legislation specifically identifies narcotics and arms trafficking as predicate offenses, and contains an additional provision that covers funds acquired from other punishable actions. A new Law on Money Laundering Prevention (LMLP) was enacted in July 2004, replacing the 2001 version, thus harmonizing Macedonia's money laundering regulations with EU standards and Financial Action Task Force (FATF) recommendations. The new law requires financial institutions to record and report all cash transactions in excess of 15,000 euros, as well as any suspicious transactions. Reporting entities are protected by law in their cooperation with law enforcement authorities. Institutions are also required to identify, report and keep track of clients performing those transactions, and to prepare programs to protect themselves against money laundering. Banks and other financial institutions are required to maintain records necessary to trace and/or reconstruct significant transactions for up to 5 years. The LMLP provides penalties for individuals and entities that do not comply with regulations, and the Banking Law includes provisions for "banker negligence" that make bank officials responsible if their institutions launder money. The country has no secrecy laws, and supervisory authorities have full access to financial institutions' records. The banking community cooperates with law enforcement authorities in tracing or reconstructing cases. The Customs Administration is required to register and report the cross-border transport of currency or monetary instruments in amounts that exceed 10,000 euros.

Non-bank financial institutions such as exchange offices and non-bank money transfer agents are poorly supervised and audited. Although intermediaries such as lawyers, accountants, brokers and notaries are obliged to submit reports to the Directorate for Money Laundering Prevention, to date none have done so. A Law on Money Transfer by entities other than banks was passed in December 2003, and defines the rules for licensing, operating and supervising money transfer agents.

Macedonia is in the process of implementing complex legislative reforms, including amendments to the Constitution that will allow for the use of specialized investigative methods. It is also changing the Law on Criminal Procedure, the Criminal Code, the Law on Misdemeanors and the Law on Enforcement of Sanctions. These reforms should strengthen the fight against organized crime, corruption, terrorism, trafficking in human beings, money laundering, and narcotics by increasing penalties, refining and tightening definitions, and defining authority.

Macedonia is not an offshore financial center. There are no offshore banks or other financial institutions in Macedonia. There is no separate regulation for offshore businesses, as current laws govern foreign and domestic businesses. There is no evidence that alternative remittance systems exist in Macedonia.

The Directorate for Money Laundering Prevention (DMPLP) is part of the Ministry of Finance. The Directorate collects, processes, analyzes, and stores data received from financial institutions and other

government agencies. It has no authority to undertake any further action, except submitting collected information to the police and the judiciary. From its establishment on March 1, 2002 until the end of 2004, the Directorate received 60,717 reports from various entities, mostly banks. Twelve of these were sent on to relevant authorities for detailed investigation, out of which five led to tax evasion cases and other criminal charges.

In June 2002, Parliament passed a Law establishing a Financial Police Unit. The unit, in the Ministry of Finance, investigates financial crimes, bank fraud, tax evasion, terrorism financing and money laundering cases reported by the DMLP. A Director was finally appointed in June 2004. Although not completely staffed, the unit has received training on money laundering and more advanced training is planned for the future. So far, there have been no arrests or prosecutions related to money laundering or terrorist financing.

Macedonia has yet to criminalize terrorist financing. The National Bank and Ministry of Finance circulate the lists of terrorist financing entities they receive. The authorities are allowed to identify named accounts, but require court orders before they can freeze and/or seize assets in those accounts. According to the LMLP, financial institutions could temporarily freeze assets of suspected money launderers and terrorist financiers until a court issues a freeze order. So far, the authorities have not identified, and therefore have not seized or frozen, assets related to terrorist financing. While Macedonia's two top banks have computer systems that allow them to easily identify both account holders and transactions with individuals named in the lists, the other 18 banks have no such systems and must search their customer lists manually.

Macedonia has concluded a number of Police Cooperation Agreements with almost all of the countries in the region (Albania, Bulgaria, Croatia, Romania, Slovenia, Austria, Turkey, Greece, Russian Federation, Ukraine, and Egypt) and has mutual legal assistance agreements with many countries. The exchange of police information is regularly provided through Interpol channels. Macedonia also provides law enforcement information in connection with requests from other countries with which it lacks a formal information exchange mechanism, including the United States. Macedonia has concluded bilateral agreements for exchanging information on money laundering with Bulgaria, Croatia, Slovenia, Ukraine, Romania, Serbia, Montenegro and Albania.

Macedonia is a member of the Council of Europe Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL), and underwent a second evaluation for effectiveness in preventing money laundering in October 2002. At its June 2004 meeting in the UK, the Egmont group accepted Macedonia as a fully-fledged member, thus recognizing the latest efforts by the DMLP under its new Director. Macedonia is a party to the 1988 UN Drug Convention. In May 2004, the Macedonian Parliament ratified the UN International Convention for the Suppression of the Financing of Terrorism, but has yet to ratify the UN Convention against Transnational Organized Crime.

The Government of Macedonia should work to pass its pending legislation and should continue its implementation of the new legislation, including the amendments to the Constitution that will allow for the use of specialized investigative methods. Macedonia also should provide the necessary resources and training to ensure full implementation of its laws, including the adequate supervision of non-bank financial institutions. Macedonia should criminalize terrorist financing.

Madagascar

Madagascar is not a regional financial center. Criminal activity in Madagascar reportedly includes smuggling of animal products such as tortoise shells and reptile skins for sale in international markets. These schemes have in the past been related to money laundering activities within the country.

In 1997, Madagascar criminalized money laundering related to narcotics-trafficking. In June and July 2004, the Senate and National Assembly enacted broader legislation to address money laundering, seizures, confiscation, and international cooperation in dealing with the proceeds of all types of crime. The banking regulatory framework and the internal policies of the banks provide for retention of significant documents, generally for at least five years. Current banking regulations and individual bank policies require financial institutions to know their customers and to document and retain proof of their efforts to carry out that function.

The 2004 legislation defines prohibited activities and covered actors. There are broad definitions of “money laundering”, “proceeds of crime”, and “assets.” The provisions apply to physical persons and legal entities involved in operations concerning the movement of capital. They apply to banking and credit establishments, intermediate financial institutions, insurance companies, mutual savings institutions, stock brokerages, moneychangers, casinos, gaming establishments, and entities involved in real estate operations.

The first part of the 2004 law addresses prevention. It prohibits all cash payments over 10 million Ariary (\$5000). All international transfers over 6 million Ariary (\$3000) must be managed by a recognized credit or financial institution. Banks must ensure they know the identity of all clients and are obligated to investigate the source of any transactions exceeding 50 million Ariary (\$25,000). The law also requires financial institutions to establish internal programs against money laundering, including centralization of information, training, internal controls and designation of a responsible official at each branch or office.

The second part of the 2004 law addresses detection. The law authorizes the establishment of a financial intelligence service, which will serve as a clearinghouse for customer information and liaison with judicial authorities. This financial intelligence service was not yet operational by the end of 2004. Judicial authorities are authorized to use electronic, audio and video surveillance, monitor bank accounts, and access bank systems during the course of an investigation.

The law permits the freezing and seizure of assets that are the object of investigation, fines and imprisonment for money laundering and other infractions. The Government of Madagascar, through the Central Bank, currently distributes lists of individuals and organizations linked to terrorism finance throughout the banking system.

Sentences for individuals convicted of money laundering include imprisonment and fines ranging from 100,000 Ariary up to five times the laundered sum. The government can confiscate the individual’s assets and properties—as well as those of a spouse or children. Proceeds from the sale of these items can be used to fund efforts to combat organized crime and drug trafficking. No arrests or prosecutions for money laundering or terrorist financing were presented during calendar year 2004.

Madagascar is a party to the 1988 United Nations Drug Convention, the United Nations Convention against Transnational Organized Crime, and the United Nations International Convention for the Suppression of the Financing of Terrorism.

The Government of Madagascar should join the Eastern and Southern African Anti-Money Laundering Group and implement the financial intelligence service authorized in the 2004 money laundering legislation.

Malawi

Malawi is not a regional financial center. The Reserve Bank of Malawi (RBM), Malawi’s Central Bank, supervises the country’s six commercial banks. Some money laundering is tied to smuggling and converting remittance savings systems abroad. Under Malawi’s existing exchange control regime,

foreign exchange remittances not backed by a “genuine transaction” are illegal; traders, therefore, launder funds in their efforts to remit savings abroad.

Financial institutions are required to record and report the identity of customers making large transactions, and banks must maintain those records for seven years. Banks are allowed, but not required, to submit suspicious transaction reports to the RBM. The RBM inspects banks’ records every quarter and has access to those records on an “as needed” basis for specific investigations.

Malawi’s current laws do not specifically criminalize money laundering, but can be used to prosecute money laundering cases. The Government of Malawi (GOM) drafted a “Money Laundering and Proceeds of Serious Crime” bill, which was considered in Parliament’s Commerce and Industry Committee in 2003. The committee requested revisions in the proposed legislation before it is considered in the full Parliament. The draft law would criminalize money laundering related to all serious crimes. The draft law would also establish a legal framework for identifying, freezing, and seizing assets related to money laundering. The bill stipulates that the seized assets become the property of the GOM and should be used in the fight against money laundering. Reportedly, there has been no further action by the Parliament regarding the draft legislation in 2004.

While the GOM has not specifically criminalized terrorist financing, the RBM has the legal authority to identify and freeze assets suspected of involvement in terrorist financing. The RBM has circulated to the financial community all names included on the UN 1267 Sanctions Committee consolidated list and all other names designated under E.O. 13224 by the United States Government. The RBM continues to monitor the financial system for money laundering activity.

Malawi has signed the Eastern and Southern African Anti-Money Laundering Group (ESAAMLG) Memorandum of Understanding. Malawi is a party to the 1988 UN Drug Convention and the UN International Convention for the Suppression of the Financing of Terrorism, and has signed, but not yet ratified, the UN Convention against Transnational Organized Crime.

The Government of Malawi should enact comprehensive anti-money laundering legislation and counterterrorist finance legislation in order to develop viable regimes to thwart both money laundering and terrorist financing regimes as it has agreed to do as a member of the Eastern and Southern African Anti-Money Laundering Group (ESAAMLG). Malawi should become a party to the UN Convention against Transnational Organized Crime.

Malaysia

Malaysia is not a regional center for money laundering. However, its formal and informal financial sectors are vulnerable to abuse by narcotic traffickers, financiers of terrorism and criminal elements. Malaysia’s relatively lax customs inspection at ports of entry and free trade zones, its uneven enforcement of intellectual property rights, and its offshore financial services center serve to increase its vulnerability.

Since 2000, Malaysia has made significant progress in constructing a comprehensive anti-money laundering regime. Malaysia’s National Coordination Committee to Counter Money Laundering (NCC), comprised of members from thirteen government agencies, oversaw the drafting of Malaysia’s Anti-Money Laundering Act 2001 (AMLA) and coordinates government-wide anti-money laundering efforts.

The AMLA, enacted in January 2002, criminalized money laundering and lifted bank secrecy provisions for criminal investigations involving more than 150 predicate offenses. The law also created a Financial Intelligence Unit (FIU) located in the Central Bank, Bank Negara Malaysia (BNM). The FIU is tasked with receiving and analyzing information, and sharing financial intelligence

with the appropriate enforcement agencies for further investigations. The Malaysian FIU works with more than twelve other agencies to identify and investigate suspicious transactions.

The Government of Malaysia (GOM) has a well-developed regulatory framework, including licensing and background checks, to oversee onshore financial institutions. BNM stringent guidelines require customer identification and verification, financial record keeping, and suspicious activity reporting. These guidelines are intended to require banking institutions to determine the true identities of customers opening accounts and to develop a “transaction profile” of each customer with the intent of identifying unusual or suspicious transactions. A comprehensive supervisory framework has been implemented to audit financial institutions’ compliance with AMLA. Currently, there are 300 examiners who are responsible for money laundering inspections for both onshore and offshore banks

Malaysia has strict “know your customer” rules under the AMLA. Every transaction, regardless of its size, is recorded. Reporting institutions must maintain records for at least six years and report any suspicious transactions to the Central Bank’s Financial Intelligence Unit (FIU). Regardless of the transaction size, if the reporting institution deems a transaction suspicious, it must report that transaction to the FIU. Officials indicate that they receive regular reports from institutions, but cannot divulge the volume or frequency of such reports. Reporting individuals and their institutions are protected by statute with respect to their cooperation with law enforcement. While Malaysia’s bank secrecy laws prevent general access to financial information, those secrecy provisions are waived in the case of money laundering investigation under the AMLA.

Malaysia has adopted “due diligence” or “banker negligence” laws that make individual bankers responsible if their institutions launder money. Both reporting institutions and individuals are required to adopt internal compliance programs to guard against any offense under the AMLA. Under the AMLA, any person or group who engages in, attempts to engage in or abets the commission of, money laundering would be subject to criminal sanction. Reporting institutions are required to file suspicious transaction reports under the AMLA. All reporting institutions are subject to the same review by the FIU and other law enforcement agencies. Reporting institutions include: commercial banks, money changers, discount houses, insurers, insurance brokers, Islamic insurance and reinsurance (takaful and retakaful) operators, offshore banks, offshore insurers, offshore trusts, the Pilgrim’s Fund (to pay for Hajj trips to Mecca), Malaysia’s postal service, development banks such as Malaysia’s National Savings Bank (Bank Simpanan Nasional), The People’s Cooperation Bank (Bank Kerjasama Rakyat Malaysia Berhad), and licensed casinos.

The detailed regulations for examining money laundering are still in development for all segments of the financial industry. By using a consultative approach, the Central Bank’s FIU continues to expand the scope of institutions which must report suspicious transactions. This approach encouraged Malaysia’s professional societies for lawyers and accountants to add suspicious transaction reporting requirements to their bylaws. Likewise, in consultation with the Security Commission, stockbrokers and brokerage houses are now required to submit suspicious transaction reports. The Government’s consultative approach has minimized potential political fallout from the statute’s expansion.

Malaysia’s fledgling Islamic finance sector, accounting for approximately 10 percent of total deposits, is subject to the same strict supervision to combat financial crime as the commercial banks. A combination of legacy exchange controls imposed after the 1997-98 Asian financial crisis and robust regulation and supervision by the Central Bank makes the Islamic financial sector as unattractive to financial criminals as is the conventional financial sector.

In 1998 Malaysia imposed foreign exchange controls that restrict the flow of the local currency, the ringgit, from Malaysia. Onshore banks must record cross-border transfers over RM5, 000 (approximately \$1,300). Since April 2003, an individual form is completed for each transfer above RM50, 000 (approximately \$13,170). Recording is done in a bulk register for transactions between

RM5, 001 and RM50, 000. Banks are obligated to record the amount and purpose of these transactions.

Malaysia's offshore banking center in the island of Labuan, located off the eastern coast of Malaysia, is vulnerable to money laundering and the financing of terrorism. The Labuan Offshore Financial Services Authority (LOFSA) is under the authority of the Central Bank, Bank Negara. The offshore sector has different regulations for the establishment and operation of offshore businesses, than for onshore businesses. However, the same anti-money laundering laws as those governing domestic financial service providers govern the offshore sector. Offshore banks, insurance companies, and trust companies are required to file suspicious transaction reports under the country's anti-money laundering law.

LOFSA licenses offshore banks, banking companies, trusts and insurance companies, and performs stringent background checks before granting an offshore license. The financial institutions operating in Labuan are generally among the largest international banks and insurers. Nominee (anonymous) directors are not permitted for offshore banks, trusts or insurance companies. Labuan has 4,065 registered offshore companies, money banking companies, trusts, and insurance companies. Offshore companies must be established through a trust company. Trust companies are required by law to establish true beneficial owners and submit suspicious transaction reports as necessary. Bearer instruments likewise are prohibited in Labuan, but there is no requirement to reveal the true identity of the beneficial owner of international corporations. LOFSA officials may require any organization operating in Labuan to disclose information on its beneficial owner or owners.

As of December 2004, Labuan has 53 offshore banks in operation, along with 101 insurance and insurance-related companies, 59 leasing operations, 15 fund management groups, 30 trust companies, three money banking companies, and 2,348 offshore companies (both trading and non-trading). Many of the companies established in Labuan are Japanese firms established primarily to service Japanese companies in Malaysia. Malaysia bans offshore casinos and Internet gaming sites.

The Free Zone Act of 1990 is the enabling legislation for free trade zones in Malaysia. The zones are divided into Free Industrial Zones (FIZ), where manufacturing and assembly takes place, and Free Commercial Zones (FCZ), generally for warehousing commercial stock. The Minister of Finance may designate any suitable area as an FIZ or FCZ. Currently there are 13 FIZs and 14 FCZs in Malaysia. The Minister of Finance may appoint any federal, state or local government agency or entity as an authority to administer, maintain and operate any free trade zone. Legal treatment for such zones is also different. The time needed to obtain such licenses from the administrative authority for the given free trade zone depends on the type of approval. Clearance time ranges from 2-8 weeks. There is no information available suggesting that Malaysia's free industrial and free commercial zones are being used for trade-based money laundering schemes or by the financiers of terrorism. However, the GOM considers these zones as areas outside the country and receive with more lenient tax and customs treatment relative to the rest of the country. As such, the free trade zones are vulnerable to money laundering.

In April 2002, the GOM passed the Mutual Assistance in Criminal Matters Bill and, in 2004, Malaysia made its first arrest for money laundering. The GOM is currently prosecuting this case as well as investigating several others. Malaysia cooperates with regional, multilateral, and international partners to combat financial crimes and permits foreign countries to check the operations of their banks' branches. The FIU has signed Memoranda of Understanding (MOUs) with the FIUs of Australia, Indonesia, and the Philippines. MOUs with the United States, the United Kingdom, Japan, South Korea, the Netherlands, Finland, Albania, Thailand, and Argentina are pending.

Parliament passed amendments to the Anti-Money Laundering Act, the Subordinate Courts Act, and the Courts of Judicature act in November 2003. The Criminal Procedure code is the last major piece of domestic legislation that needs an amendment before the can be incorporated into domestic law. The

amendments to the AMLA, once enacted, will make the financing of terrorism one of the 168 predicate offenses for which money laundering can be charged as a crime but additional review mandated by Parliament has delayed the amendment's entry into force. A Select Committee is currently reviewing changes to The Criminal Procedure Code—the last major piece of domestic legislation that needs amending before being enacted in domestic law. When implemented, the 2003 amendments will increase penalties for terrorist acts, allow for the forfeiture of terrorist-related assets, allow for the prosecution of individuals who provide material support for terrorists, expand the use of wiretaps and other surveillance of terrorist suspects, and permit video testimony in terrorist cases. GOM officials expect the committee to conclude its review by July 2005 and Royal assent to follow shortly thereafter. Enactment of the amendment will enable the GOM to accede to the 1999 UN Convention for the Suppression of the Financing of Terrorism. Additionally, the Cabinet has approved, as policy, the ratification of all remaining counterterrorist conventions. Malaysia is a party to the 1988 UN Drug Convention.

Despite of the absence of legislation criminalizing terrorist financing, the GOM has cooperated closely with U.S. law enforcement in investigating terrorist-related cases since the signing of a joint declaration to combat international terrorism with the United States in May 2002. The GOM currently has the authority to identify, freeze terrorist or terrorist-related assets and has issued orders to all licensed financial institutions, both onshore and offshore, to freeze the assets of individuals and entities listed by the UN Security Council Resolution (UNSCR) 1267. As evidence of its willingness to cooperate internationally in the global effort to thwart terrorism, the Ministry of Foreign Affairs, in conjunction with Malaysia's anti-money laundering unit within the Central Bank, opened the Southeast Asian Region Centre for Counter-Terrorism (SEARCCT) in August 2003.

The GOM has rules regulating charities and other non-profit entities. The Registrar of Societies is the principal government official who supervises and controls charitable organizations, with input from the Inland Revenue Board and occasionally the Companies Commission. The Registrar mandates that every registered society of a charitable nature submits its annual returns, which include financial statements. Should the Registrar find activities he deems suspicious, he will inform the FIU of such activities. Negotiations are currently underway to expand the scope of AMLA reporting institutions to include charitable organization governed by the Registrar of Societies. Malaysia's tax law allows contributions to charitable organizations (Zakat, as required by Islam) to be deducted from one's total tax liability, encouraging the reporting of such contributions. Such contributions can be taken as payroll deductions, another tool to prevent the abuse of charitable giving.

Malaysia has endorsed the Basel Committee's "Core Principles for Effective Banking Supervision" and is a member of the Offshore Group of Banking Supervisors and the Asia/Pacific Group on Money Laundering. Malaysia's FIU gained membership to the Egmont Group of Financial Intelligence Units in July 2003.

The Government of Malaysia continues to make a broad, sustained effort to combat money laundering and terrorist financing flows within its borders. For all entities such as trust companies and International Business Companies (IBCs), Malaysia should insist on "fit and proper tests" for all management, and identification of all beneficial owners. Malaysia should also insist on the registration of trusts and of the beneficial owners of the 4,000 International Business Companies, and stringent auditing and examination requirements in its offshore financial center, to prevent the misuse of the offshore financial center by organized crime and terrorist organizations and their supporters. Customs regulations and inspections should be strengthened, particularly in the free trade zones. Malaysia is a signatory to the UN Convention against Transnational Organized Crime, which came into force in September 2003. Malaysia should ratify that Convention. The Malaysian Parliament should enact terrorist financing legislation in 2005 and the GOM should accede to the UN International Convention for the Suppression of the Financing of Terrorism and to all other terrorist-related UN Conventions.

The Maldives

The Maldives is not an important regional financial center. The financial sector of the Maldives is very small, with five commercial banks (one international bank, three branches of public banks from neighboring countries and the state owned bank), two insurance companies, and a government provident fund. There are no offshore banks.

The Maldives Monetary Authority (MMA) is the regulatory agency for the financial sector. The MMA has authority to supervise the banking system through the Maldives Monetary Authority Act. These laws and regulations provide the MMA with access to records of financial institutions and allow it to take actions against suspected criminal activities. Banks are required to report any unusual movement of funds through the banking system on a daily basis. Separate laws address the narcotics trade, terrorism, and corruption: Law No. 17/77 on Narcotic Drugs and Psychotropic Substances prohibits consumption and trafficking of illegal narcotics. The law also prohibits laundering of proceeds from the illicit narcotics trade. Law No 2/2000 on Prevention and Prohibition of Corruption prohibits corrupt activities by both public and private sector officials. It also provides for the forfeiture of proceeds and empowers judicial authorities to freeze accounts pending a court decision.

The Government of the Maldives is in the process of drafting anti-money laundering legislation, with IMF assistance. The government has recently set up a Financial Intelligence Unit (FIU) within the MMA. Currently, there are no laws or regulations governing the FIU. Regulations to cover the FIU are expected to be included in the new money laundering legislation.

Law No. 10/90 on Prevention of Terrorism in the Maldives deals with some aspects of money laundering and terrorist financing. Provision of funds or any form of assistance towards the commissioning or planning of any such terrorist activity is unlawful. The MMA has issued “know your customer” directives and other instructions to banks, including freezing order requests, which are binding on banks and other financial institutions. The MMA monitors unusual financial transactions through banks, financial institutions, and money transfer companies through its bank supervision activities. The four foreign banks operating in the country also follow directives issued with regard to terrorist financing by their parent organizations. To date, there have been no known cases of terrorist financing activities through banks in the Maldives.

The Maldives is a party to the 1988 UN Drug Convention and to the 1999 UN International Convention for the Suppression of the Financing of Terrorism. The Maldives has not signed the UN Convention against Transnational Organized Crime.

The Government of the Maldives should enact comprehensive anti-money laundering and counterterrorist financing legislation that conforms to international standards. The legislation should include all regulations necessary to successfully establish the new Financial Intelligence Unit (FIU). The Maldives should also sign and ratify the UN Convention against Transnational Organized Crime.

Mali

Mali's per capita gross domestic product (GDP) of \$250 (2002) places it among the world's 10 poorest nations. Mali is not considered an important regional financial center nor is it experiencing an increase in financial crimes. Mali has no banks with offshore facilities. Drug trafficking is also not a significant problem in Mali. There is no evidence of Mali's financial institutions engaging in currency transactions involving narcotics-trafficking. Contraband cigarette smuggling originating in West Africa and transiting Mali is significant and includes arms smuggling as well. The smuggling operators are controlled by the Salafist Group for Preaching and Combat (GSPC)—a terrorist organization. Mali has an internal market for smuggled cigarettes and textiles, but these activities are primarily a way to avoid Malian customs duties and are not related to the narcotics trade. Other than the smuggling of contraband in Mali's north, no significant organized crime is known to exist in Mali.

Money Laundering and Financial Crimes

Drug smuggling, smuggling, and money laundering are all criminal offenses in Mali. Mali has introduced a new comprehensive banking law with international and European standards that will protect bankers and others with respect to their cooperation with law enforcement entities. The new banking law will, when enacted, also regulate the transfer of currency. The Malian National Assembly has not, as yet, ratified the new comprehensive law. Further, it is not among the list of laws to be discussed during the current session.

The National Assembly approved, during its Fall 2004 session, a new law on the growing role of banks in the economy and the spread of the use of bank notes among the population. The law's intention is not only to reduce the amount of currency used in financial transactions, urging the use of checks in its place, but also to encourage the use of the banking system. Bank secrecy is very limited in Mali. Mali routinely provides law enforcement authorities with client and ownership information in investigative cases. At present, Malian customs checks passengers at airports for certificates of exchange to ascertain if money exchange within the country was through a legal source.

Mali is part of the West African Economic and Monetary Union (WAEMU). All WAEMU countries have a monetary committee that reviews, records and reports significant currency transactions. In addition, all WAEMU country banks are required to maintain records necessary to reconstruct significant transactions for ten years and are required to report suspicious transactions on a regular basis.

Money laundering controls are also applied to non-banking financial institutions, such as exchange houses, stock brokerages, casinos, insurance companies, etc., as well as intermediaries such as lawyers, accountants, and broker/dealers. There have been no ramifications, to date, related to any changes in Mali's policies and laws related to money laundering and terrorist financing nor have banking or political groups objected. There have been no arrests or prosecutions for money laundering or terrorist financing in Mali to date.

Mali is not considered an offshore financial center. No offshore banks, international business companies, or other forms of exempt or shell companies or trusts exist in Mali. There are no free trade zones in Mali.

Smuggled property involved in international drug trade, money laundering, or terrorist financing in Mali can be seized and sold with the proceeds going to the government. Assets are frozen until the investigation is complete. The Malian public and political response to government efforts to seize and/or forfeit assets has been very supportive. The Malian banking community has been very cooperative with enforcement efforts to trace funds and seize bank accounts. Under a new Banking law, the Ministry of Economy and Finance would receive the proceeds from asset seizures and forfeitures. Mali has not enacted laws for the sharing of seized assets with other governments.

The Government of Mali strictly enforces existing drug-related asset seizure and forfeiture laws. The Ministry of Finance and the Ministry of Security are responsible for tracing and seizing assets. The GOM is severely under-manned, under-trained, and under-financed to trace and seize assets adequately. Mali's law enforcement organizations operate independently of each other with little to no coordination. The police narcotics department, Gendarmerie, Customs and border police seized drugs during 2003 and 2004. The GOM did not keep records of previous years' seizures; however, GOM officials feel that the problem continues to be small. When asked, Mali has been cooperative and supportive of efforts by the USG and other countries to trace and seize assets; however, there is little coordination relating to drug interdiction between Mali and its neighbors.

Mali is a key regional partner in the global war on terrorism. Terrorism and terrorist financing are considered serious crimes in Mali. The GOM has the authority to identify, freeze, and seize terrorist finance related assets. The Ministry of Finance has circulated the names of suspected terrorists and terrorist organizations to Malian financial institutions. To date, no assets have been identified in Mali.

While the hawala system exists in Mali, it is primarily used for salary transfers of Malians working abroad. A Committee of Malians finances salaries to Malian families; in exchange, the foreign salaries earned are used to buy French commercial goods. Not all Malians use the banking system because some work abroad without legal work permits and are forced to repatriate funds through non-traceable means. The financial sector is making efforts to explain the safety of banks to thwart the misuse of charitable and/or non-profit entities that might be used as conduits for the financing of terrorism.

Mali has entered into bilateral agreements between BCEAO (Central Bank of West African States) countries for the exchange of information on money laundering. The countries include: Cote d'Ivoire, Senegal, Togo, Burkina Faso, Guinea Bissau, Niger, and Benin. The GOM has no specific agreement with U.S. authorities on a mechanism for exchanging records in connection with investigations and proceedings relating to narcotics, terrorism, terrorist financing and other serious crime investigations; however, international agreements pledge Mali to share information in such cases. Mali has not entered into any relevant bilateral treaties, agreements, or other mechanisms for information exchange with the United States.

Mali is a party to the UN International Convention for the Suppression of the Financing of Terrorism and the 1988 UN Drug Convention. In November 2000, Mali was one of 14 West African countries to attend a meeting to establish the Intergovernmental Action Group against Money Laundering (GIABA).

The Government of Mali should enact and fully implement comprehensive anti-money laundering legislation that comports with international standards. Additionally, it should ensure appropriate law enforcement personnel are trained and able to perform their duties.

Malta

Malta joined the European Union (EU) on May 1, 2004. As part of its preparation for this event, Malta strengthened its regulatory regime and introduced measures to attract European investors and to shed its image as an offshore tax haven. Malta has made significant headway, introducing EU-compliant legislation for the prevention of money laundering and strong financial services legislation. Malta does not appear to have a serious money laundering problem.

Since 1997, Malta has been closing the loopholes on all offshore financial activities. All licenses for offshore registered businesses expired on September 30, 2004, completing Malta's transition from an economy with over 400 international business corporations in 2001 to a country where offshore banking and business is no longer legal. Companies and trusts are now fairly well regulated, and international entities are subject to 35 percent tax. Bearer shares or anonymous accounts are no longer permitted in Malta.

The Government of Malta (GOM) criminalized money laundering in 1994. Maltese law imposes a maximum punishment of approximately \$2.5 million and/or 14 years in prison for those convicted of money laundering crimes. Also in 1994, the GOM issued the Regulations for the Prevention of Money Laundering, applicable to financial and credit institutions, life insurance companies, and investment and stock brokerage firms. These regulations impose requirements for customer identification, record keeping, the reporting of suspicious transactions, and the training of employees in anti-money laundering topics. In August 2003, a new set of regulations combined the 1994 money laundering law and the Second EU Directive on the Prevention of Money Laundering, and became the national law, which expands anti-money laundering requirements to designated non-bank financial businesses and professions.

The Maltese Financial Services Authority (MFSA) is the regulatory agency responsible for licensing new banks and financial institutions; additionally the MFSA has been responsible for monitoring financial transactions going through Malta since the supervisory function of the Central Bank of Malta

was passed to the MFSA in 2002. Recently the MFSA widened its regulatory scope to encompass banking, insurance, investment services, company compliance, and the stock exchange. The MFSA has a rigorous process of analyzing companies prior to granting a license. This entails detailed analyses of all the applications it receives, including information about the directors and other persons involved in the management of the company.

In December 2001, Malta's parliament established the Financial Intelligence Analysis Unit (FIAU) through an amendment to the Prevention of Money Laundering Act, 1994, to serve as Malta's Financial Intelligence Unit (FIU). The unit became fully functional in October 2002. The FIAU is independent and has a board that consists of members nominated by the Central Bank of Malta, the MFSA, the Police, and the Attorney General. Board members are not subject to the direction or control of their parent agency or any other authority.

The FIAU co-ordinates the fight against money laundering, collects information from financial institutions, and liaises with parallel international institutions as well as the MFSA and the GOM Police. The GOM requires banks, bureaux de change, stockbrokers, insurance companies, money remittance/transfer services, and other designated non-bank financial businesses and professions to file suspicious transaction reports (STRs) with the FIAU, which investigates them. The FIAU also conducts organized training sessions for Maltese financial practitioners to make them aware of their responsibilities.

The FIAU is leading an initiative to consolidate all guidance notes for all of the covered financial services and other businesses. In 2003, the FIAU, together with the Banking Unit at the MFSA, updated the Guidance Notes for Credit and Financial Institutions issued by the Central Bank of Malta in 1996.

STRs are not required to be filed for subjects suspected of negligence; only intentional and willful blindness offenses are penalized in Malta. The FIAU received 76 STRs in 2003 and 46 STRs in 2004. Stronger enforcement should continue as the FIAU continues analyzing STRs for referral for police investigation. Malta has also moved to bolster the prosecutorial opportunities for financial crime. The GOM has recently designated one of the country's five prosecutors to deal solely with money laundering cases. Bank secrecy laws are completely lifted by law in cases of money laundering (or other criminal) investigations.

In January 2002, the Council of Europe Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL) conducted a second round mutual evaluation of the overall effectiveness of the Maltese anti-money laundering system and practices, including compliance with the FATF Special Recommendations on Terrorist Financing. The review found that Malta was in partial compliance with Special Recommendation No. 1 (ratification and implementation of UN instruments), because it had signed and ratified the pertinent UN Conventions, but had not yet fully implemented UNSCRs 1269, 1373, and 1390.

Malta has criminalized terrorist financing. In 2002, the criminal code was amended in such a way that terrorist financing would meet the standard for categorization as a "serious crime" under Malta's Prevention of Money Laundering Act. To date, the Act itself does not specifically mention or define terrorist financing.

The MFSA circulates to its financial institutions the names of individuals and entities included on the UNSCR 1267 Sanctions Committee's consolidated list. To ensure compliance, the list is posted on the MFSA website and the MFSA contacts every financial institution directly to confirm whether or not the institution has done business with any person or entity appearing on the consolidated list. To date, no assets have been identified, frozen, and/or seized as a result of this process.

Alternative remittance systems such as hawala, black market exchanges, and trade-based money laundering reportedly are not a problem in Malta. Such activities are against the law in Malta, and if

discovered, those participating would be prosecuted. Anyone wishing to raise money for charitable reasons must receive a government license.

Malta is a founding member of the MONEYVAL and chaired the committee until December 2003. The FIAU became a member of the Egmont Group in July 2003. Malta is no longer a member of the Offshore Group of Banking Supervisors, but has joined the International Organization of Securities Commissions (IOSCO). Malta is a party to the 1988 UN Drug Convention, the UN Convention against Transnational Organized Crime and the UN International Convention for the Suppression of the Financing of Terrorism. Malta has ratified the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime and the Council of Europe European Convention on the Suppression of Terrorism, and has amended its criminal code to be in alignment with these conventions.

The Government of Malta should continue to enhance its anti-money laundering regime; in particular, Malta should adopt reporting requirements for cross-border currency transportation, including the reporting of international wire transfer activity, and should enact a safe harbor provision to protect those who report suspicious activity in accordance with GOM requirements.

Marshall Islands

The Republic of the Marshall Islands (RMI), a group of atolls located in the North Pacific Ocean, is a sovereign state in free association with the United States. The population of RMI is approximately 60,000. The financial system in RMI has total banking system assets of \$90 million and total deposits of \$76 million, with domestic deposits exceeding 50 percent of the gross domestic product. The RMI financial sector consists of two commercial banks, one of which is insured by the Federal Deposit Insurance Corporation (FDIC), and a government-owned development bank whose primary function is to perform development lending in government-prioritized sectors; there are also several low-volume insurance agencies that primarily sell policies on behalf of foreign insurance companies. In realization of the country's vulnerability to systemic shock in the financial sector, the government introduced a reform program geared toward enhancing transparency, accountability, and good governance. Among other initiatives, the reform program called for the establishment of the requisite infrastructure for detecting, preventing, and combating money laundering and terrorist financing.

The Marshall Islands has not seen an increase in financial crime in recent years. There have not been any prosecutions for money laundering. However, an evolving trend that poses a challenge to RMI's anti-money laundering/counterterrorist financing effort is the significant outflow of cash, generally attributed to expatriate businesses sending proceeds out of the country. There is currently no requirement to report cross-border currency transfers. The government is proposing an amendment to the Banking Act, that would address the problem.

Money laundering has been criminalized and customer identification and suspicious transaction reporting mandated. The Marshall Islands also issued guidance to its financial institutions for the reporting of suspicious transactions. In addition, the RMI drafted anti-money laundering regulations. The substantial and comprehensive effort to align the Marshall Islands' anti-money laundering regime with international standards, including the adoption of new laws, a new regulatory scheme, and the establishment of a Financial Intelligence Unit (FIU), resulted in its removal from the Financial Action Task Force's (FATF's) Non-Cooperating Countries and Territories list in 2002.

In November 2000, the Government of the Marshall Islands (GRMI) approved the establishment of a financial intelligence unit that may exchange information with international law enforcement and regulatory agencies. The Domestic Financial Intelligence Unit (DFIU) is located within the Banking Commission. The DFIU has the power to receive, analyze, and disseminate financial intelligence. In

2003, its processes were streamlined and automated to the fullest extent possible, given the limited resources available to the DFIU.

In May 2002, the GRMI passed and enacted its Anti-Money Laundering Regulations, 2002. The 2002 regulations provide the standards for reporting and compliance within the financial sector. Components of this legislation include reporting of beneficial ownership, internal training requirements regarding the detection and prevention of money laundering by financial institutions, record keeping, and suspicious and currency transaction reporting. Additionally, the Banking Commission and the Attorney General's office worked with the U. S. Government to develop a set of examination policies and an examination procedures manual. Both sets of documents are being used by examiners from the Banking Commission as guides in the on-site reviews of banks' and financial institutions' compliance with the anti-money laundering regulations. Since the establishment of the statutory and regulatory framework, the Banking Commission has conducted on-site examinations of financial institutions and cash dealers. Money laundering controls extend to all financial institutions, but do not cover professionals, i.e., lawyers and accountants. However, individuals can be held liable for money laundering violations by their institutions.

Under the Banking Amendment, the Proceeds of Crime Act, and the Count-Terrorism Act, the RMI can freeze, seize, and upon conviction transfer to the general fund, the proceeds of any crime that results in a one-year or greater sentence. Provisions allow for a broad range of forfeiture: any real or personal property owned by the person, any property used in the crime, and any proceeds of the crime. The Mutual Assistance Act allows the transfer to a requesting government of proceeds of such a crime committed in a foreign country. The Counter-Terrorism Act provides for the closing of any businesses involved in exporting or importing terrorist funds or supplies. These laws allow for both civil and criminal forfeiture. Although the laws are designed to meet the GRMI's international obligations, their effectiveness has not been tested, as there has been no terrorist activity in the RMI and therefore no seizures.

Depending on the nature of the offense, the Attorney General or the Banking Commission would be responsible for enforcement and for seizures of assets. Police powers are adequate, but resources are limited. However, the GRMI retains a close relationship to U.S. institutions and could call on them for assistance in cases of concern to the United States. Assets can be frozen "without undue delay."

Since the passage of its anti-money laundering law, and a suite of counterterrorism laws, as well as the subsequent promulgation of implementing regulations, the GRMI has undertaken a number of initiatives to further strengthen its anti-money laundering/counterterrorist financing (AML/CFT) regime. The government and local institutions have received positive reports from FATF.

However, a very significant problem has resulted from efforts to comply with AML/CFT requirements. This issue is causing a system-wide disturbance in banking and more specifically in transaction settlement and clearance. The Bank of the Marshall Islands (BOMI), in an effort to assure full compliance, commissioned an internal audit of its procedures and controls in 2003. The results of that audit identified several weaknesses which BOMI has taken steps to correct. However, the existence of the audit, and fears of sanctions under the Bank Secrecy Act and the USA PATRIOT Act, have led Citizens Security Bank of Guam to discontinue its "payable through" relationship with BOMI, effective February 15th, 2004. Suspension of "payable through" will mean BOMI checks cannot be used outside the country. This situation has the potential to disrupt that status quo in the business community. It will also mean that the second largest population center, Ebeye, will have no banking services available for international transactions, as there is no Bank of Guam branch on Ebeye.

The RMI offshore financial sector is vulnerable to money laundering. Nonresident corporations (NRCs), the equivalent of international business companies, can be formed. Currently, there are 5,500 registered NRCs, half of which are companies formed for registering ships. NRCs are allowed to offer

bearer shares. Corporate officers, directors, and shareholders may be of any nationality and live anywhere. NRCs are not required to disclose the names of officers, directors, and shareholders or beneficial owners, and corporate entities may be listed as officers and shareholders. The corporate registry program, however, does not allow the registering of offshore banks, offshore insurance firms, and other companies which are financial in nature.

Although NRCs must maintain registered offices in the Marshall Islands, corporations can transfer domicile into and out of the Marshall Islands with relative ease. Marketers of offshore services via the Internet promote the Marshall Islands as a favored jurisdiction for establishing NRCs. In addition to NRCs, the Marshall Islands offer nonresident trusts, partnerships, unincorporated associations, and domestic and foreign limited liability companies. Offshore banks and insurance companies are not permitted in the Marshall Islands.

Having established the requisite supervisory processes to ensure compliance with legislative mandates for detection and suppression of money laundering and terrorist financing, the GRMI's main emphasis in 2003 was on fine-tuning these processes. After undertaking nine on-site examinations of financial institutions, following procedures developed in cooperation with the FDIC, the Banking Commission has now gained a better understanding of the risk profile of these institutions with respect to their exposure to money laundering and terrorist financing. This has proven especially useful in amalgamating some supervisory processes with the routine FIU processes, thereby maximizing benefit for the limited resources available to the GRMI. The Banking Commission had planned that some of the supervisory processes would be incorporated into the required annual audits of banks, but this initiative was not completed in 2003; it was to be continued in 2004. In 2003, the Banking Commission recruited an Assistant Commissioner who will spearhead this task along with other examination tasks relating to anti-money laundering compliance and prudential banking practices.

The GRMI has enacted a Proceeds of Crime Act, Counter-Terrorism Act, and Foreign Evidence Act. Although the GRMI is not a signatory to the UN Vienna Convention on Drug Trafficking, RMI has acceded to all 12 major multilateral conventions and protocols related to states' responsibilities for combating terrorism under the International Convention for the Suppression of the Financing of Terrorism.

The Marshall Islands is a member of the Asia/Pacific Group on Money Laundering. The DFIU became a member of the Egmont Group in June 2002. RMI is also a founding member of the recently established Pacific Islands Financial Supervisors, a group of regulators from the Pacific Islands Forum countries that will be representing the region in the Basel group.

The Government of the Republic of the Marshall Islands (GRMI) continues to strengthen its key defenses against money laundering and terrorist financing, and has commenced work aimed at aligning its anti-money laundering system with the revised 40 recommendations of the Financial Action Task Force on Money Laundering. These tasks are highlighted in the draft Fourth Anti-Money Laundering Implementation Plan, covering the period from 2004 onward. The Republic of the Marshall Islands should accede to the 1988 UN Drug Convention. Additionally, the Marshall Islands should require the identification of the beneficial owners of Non-resident Corporations.

Mauritania

Mauritania is not a regional financial center. Its economic system suffers from a combination of weak Central Bank oversight, lax financial auditing standards, porous borders, and corruption in government and the private sector. Mauritania is a transit country for a variety of smuggled goods, including cigarettes, diverted food aid, small arms, clandestine immigrants. Government officials acknowledge that money laundering occurs in Mauritania, but most involves profits from graft and small-scale illicit

activity. Terrorism financing and narcotics proceeds are believed to constitute a small portion of the sums laundered in Mauritania.

Money laundering occurs on a small scale within local banks. Money laundering is a criminal offense in Mauritania. The main law governing money laundering, enacted in 1992, focuses specifically on laundering from narcotics-trafficking. The Government of Mauritania (GOM) is drafting a new body of laws that, when enacted, will strengthen Government control over money laundering related to terrorist groups and activities. Banks are currently required to record and report to the Central Bank the identity of customers engaging in large-scale financial transactions. The GOM did not arrest or prosecute anyone for money laundering or terrorist financing activities in 2004.

Mauritania is a party to the 1988 UN Drug Convention, acceded to the International Convention for the Suppression of the Financing of Terrorism, and has also ratified the Organization of African Unity Convention on the Prevention and Combating of Terrorism of July 1999.

Mauritania is not an offshore financial center; nor are there free trade zones in Mauritania, although the GOM does grant tax relief to certain small-scale export sectors of the economy.

The Government has demonstrated a willingness to cooperate with the United States on combating terrorist financing and related issues, but local efforts are hampered by a serious lack of resources, knowledge, and expertise in this area. Law enforcement and judicial procedures and systems for identifying and freezing assets related to illegal activity are, at best, still in their initial phases. Although no significant legal loopholes exist to allow traffickers or terrorist financiers to shield assets, such loopholes are not really necessary given the very weak enforcement of current money laundering laws.

The GOM recently created an economic-crimes investigation unit that is specifically designed to investigate financial crimes such as corruption and money laundering, but this unit is in its very early developmental stages and does not appear to be receiving the resources needed to be effective over the long term.

The Government of Mauritania should enact anti-money laundering that includes all serious crimes and should enact counterterrorist financing legislation that comport with international standards.

Mauritius

Mauritius is a developing financial hub and a major route for foreign investments into the Asian sub-continent. Officials of the Government of Mauritius (GOM) indicate that the majority of money laundering in Mauritius takes the form of schemes aimed at channeling illicit proceeds through both domestic and offshore banks.

Money laundering is a criminal offense in Mauritius. In February 2002, Mauritius approved the Financial Intelligence and Anti-Money Laundering Act, which replaced the Economic Crime and Anti-Money Laundering Act of 2000. The Financial Intelligence and Anti-Money Laundering Act provides for the establishment of a Financial Intelligence Unit (FIU) located within the Ministry of Economic Development, Financial Services, and Corporate Affairs. The FIU became operational on August 9, 2002. The Financial Intelligence and Anti-Money Laundering Act also imposes penalties on persons committing money laundering offenses; establishes suspicious activity reporting obligations for banks, financial institutions, cash dealers, and relevant professions; and provides for cooperation with the FIUs of other countries. Mauritius plans to expand the reporting obligation to real estate agents, dealers in precious gems, and horse racing bookmakers. In 2004, most of the suspicious activity reports being filed came from the offshore sector.

The FIU has the responsibility of collecting and analyzing suspicious activity reports (SARs), and forwards those reports to the Independent Commission Against Corruption (ICAC). The ICAC, set up

in June 2002, has the power to investigate money laundering offenses. The ICAC also has the authority to freeze and seize the assets related to money laundering. Since its inception, the FIU has developed into a fully functioning organization. The FIU was admitted to the Egmont Group in 2003. Its major challenge continues to be the development of an information technology structure to store SARs, perform complex analyses on them, and provide accessibility to the SARs to other law enforcement entities. As of November 2004, the FIU had received a total of 300 SARs, of which 100 had been referred to the ICAC. The FIU would like to put in place a system that will allow for the on-line submission of SARs. It would also like to develop partnerships with local and regional institutions involved in anti-money laundering and the prevention of terrorist financing activities.

Mauritius has an active offshore financial sector. In 2001, the Financial Services Development Act was passed. This Act established the Financial Service Commission (FSC), which performs the functions that were formerly carried out by the Mauritius Offshore Business Activities Authority (MOBAA). The FSC is responsible for the regulation, which includes the licensing, of the non-bank financial sector. All applications to form offshore companies (now called global business companies or GBCs) must be reviewed by the FSC. Information on companies can also be requested from the FSC. Along with reviewing of applications, the FSC supervises activities of GBCs.

The Prevention of Terrorism Act of 2002 was promulgated in Mauritius on February 19, 2002. This legislation criminalizes terrorist financing. The legislation gives the GOM powers to track and investigate terrorist-related funds, property, and assets, and cooperate with international bodies.

Mauritius is a party to the 1988 UN Drug Convention and to both the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime. Mauritius is a member of the Eastern and Southern African Anti-Money Laundering Group (ESAAMLG), a FATF-style regional body. In August 2003, representatives from Mauritius attended the ESAAMLG sixth meeting of the Task Force in Uganda. Mauritius also completed the first round of ESAAMLG mutual evaluations in 2003. In August 2004, Mauritius hosted the Fourth Meeting of the Council of Ministers of the ESAAMLG, and Minister Sushil Khushiram of the GOM Ministry of Industry, Financial Services and Corporate Affairs, was appointed Chairman of the ESAAMLG. Mauritius is a member of the Offshore Group of Banking Supervisors.

The Government of Mauritius should continue to take a leadership role in regional outreach through the Eastern and Southern African Anti-Money Laundering Group (ESAAMLG). It should also continue to take an active role within the Egmont Group.

Mexico

The illicit drug trade continues to be the principal source of funds laundered through the Mexican financial system. Mexico is a major drug producing and drug-transit country. Mexico also serves as one of the major conduits for proceeds from illegal drug sales leaving the United States. Other crimes, including corruption, kidnapping, firearms trafficking, and immigrant trafficking are also major sources of illegal proceeds. The smuggling of bulk shipments of U.S. currency into Mexico and the movement of the cash back into the United States via couriers, armored vehicles, and wire transfers, remain favored methods for laundering drug proceeds. Mexico's financial institutions are vulnerable to currency transactions involving international narcotics-trafficking proceeds that include significant amounts of U.S. currency or currency derived from illegal drug sales in the United States.

Currently, there are 32 commercial banks and 80 foreign financial representative offices operating in Mexico, with seven commercial banks representing 88 percent of total assets in the banking sector. Commercial banks, foreign exchange companies, and general commercial establishments are allowed to offer money exchange services. Mexico has 81 insurance companies, one mutual insurance company, 13 bonding institutions, 211 credit unions, and 28 money exchange houses. The size of the

underground economy is unknown, although it is estimated to account for anywhere between 20 and 40 percent of the gross domestic product in Mexico. While casinos are not permitted in Mexico, gambling is legally allowed through national lotteries, horse races, and sport pools.

Remittances from the United States to Mexico are at an all-time high, and exceeded \$14 billion in 2004. Although non-bank companies continue to dominate the market for remittances, many U.S. banks have teamed up with their Mexican counterparts to develop systems to simplify and expedite the transfer of money. These measures include wider acceptance by U.S. banks of the *matricula consular*, an identification card issued by Mexican consular offices to Mexican citizens residing in the United States that has been criticized, based on security issues. In some cases, neither the sender nor the recipient of a remittance is required to open a bank account in the United States or Mexico, but must simply provide the *matricula consular* as identification and pay a flat fee. Although these systems have been designed to make the transfer of money faster and less expensive for the customers, the rapid movement of such vast sums of money by persons of questionable identity leaves the new money transfer systems open to potential money laundering and exploitation by organized crime groups.

According to U.S. law enforcement officials, Mexico remains one of the most challenging money laundering jurisdictions for the United States, especially with regard to the investigation of money laundering activities involving the cross-border smuggling of bulk currency from drug transactions. While Mexico has taken a number of steps to improve its anti-money laundering system, significant amounts of narcotics-related proceeds are still smuggled across the border. In addition, such proceeds can still be introduced into the financial system through Mexican banks or *casas de cambio*, or repatriated across the border without record of the true owner of the funds. Furthermore, despite advances in international cooperation and information sharing, it still remains difficult for U.S. law enforcement to obtain key financial records from Mexico. Nevertheless, U.S. authorities have seen a significant increase in complex money laundering investigations by the financial crimes unit of the Office of the Deputy Attorney General for Organized Crime (SIEDO/PGR), some of which are being coordinated with U.S. law enforcement. In deliberations concluded in 2004, the Office of Foreign Assets Control (OFAC) announced in early January 2005, the designation of 39 Tier II targets—the majority of which were Centros Cambiarios, falling under the purview of the Ministerio de Hacienda as of May, 2004. These companies are associated with the Arellano Felix Organization, named a Kingpin under the Foreign Narcotics Kingpin Designation Act (Kingpin Act). These designations were the result of cooperation among OFAC, other elements of the USG, and SIEDO, and allowed law enforcement in Mexico and the United States to freeze Mexican drug cartels' assets and make it more difficult to take advantage of the U.S. financial system—a success already achieved in Colombia.

The Government of Mexico (GOM) continues efforts to implement an anti-money laundering program according to international standards such as those of the Financial Action Task Force (FATF), which Mexico joined in June 2000. Money laundering related to all serious crimes was criminalized in 1996 under Article 400 bis of the Federal Penal Code, and is punishable by imprisonment of five to fifteen years and a fine. Penalties are increased when a government official in charge of the prevention, investigation, or prosecution of money laundering commits the offense.

Regulations have been implemented for banks and other financial institutions (mutual savings companies, insurance companies, financial advisers, stock markets, and credit institutions) to know and identify customers and maintain records of transactions. These entities must report suspicious transactions, transactions over \$10,000, and transactions involving employees of financial institutions who engage in unusual activity.

Financial institutions with a reporting obligation now require occasional customers performing transactions equivalent to or exceeding \$3,000 in value to be identified, so the transactions can be aggregated daily to prevent circumvention of the requirements to file cash transaction reports (CTR)

and suspicious transaction reports (STR). Financial institutions also have implemented programs for screening new employees and verifying the character and qualifications of their board members and high-ranking officers.

In 2001, Mexico established STR requirements for the smaller foreign exchange houses that process most of the remittances from Mexican workers in the United States, and in May 2004 reporting requirements for all exchange houses and money remittance businesses entered into effect. Legislation enacted in 2004 also expanded reporting requirements to many peripheral financial entities, such as factoring entities, wire transfer services, credit unions, investment clubs, and leasing facilitators. Current provisions do not include reporting requirements for offshore banks or casinos.

In December 2000, Mexico amended its Customs Law to reduce the threshold for reporting inbound cross-border transportation of currency or monetary instruments from \$20,000 to \$10,000; at the same time, it established a requirement for the reporting of outbound cross-border transportation of currency or monetary instruments of \$10,000 or more. Mexico's reporting requirements included a wider range of monetary instruments (e.g. bank drafts) than those of the United States. In 2004, in an aggressive collaborative effort entailing the exchange of information between U.S. and Mexican authorities, Mexican Customs seized over \$9.5 million of unreported currency being smuggled into or out of Mexico.

In 1997, the GOM established a financial intelligence unit, the *Dirección General Adjunta de Investigación de Operaciones* (DGAIO), under the Secretariat of Finance and Public Credit (Hacienda). The Hacienda expanded the authority of the DGAIO in 2004 by consolidating all of the Hacienda offices responsible for investigating financial crimes into the DGAIO, which has since been renamed the *Unidad de Inteligencia Financiera* (Financial Intelligence Unit, or UIF). In addition to its previous responsibilities as the DGAIO, the UIF also reviews all crimes linked to Mexico's financial system and examines the financial activities of public officials. The UIF's personnel now number 70 – most of whom are forensic accountants, lawyers, and analysts. The director reports to the Minister of Finance. The UIF received an average of 500 STRs and 2,500 CTRs per month in 2004.

Following the analysis of CTRs and STRs, the UIF sends reports that are deemed to require further investigation, and have been approved by Hacienda's legal counsel, to the Office of the Attorney General (PGR). As of November, the UIF had sent 63 cases to the PGR in 2004, and 476 since its inception in 1997. As part of a more comprehensive approach to fighting organized crime, the PGR incorporated its special financial crimes unit—which has the authority to initiate, coordinate, and determine the course of preliminary financial crimes inquiries—into the Office of the Deputy Attorney General for Organized Crime (SIEDO). The UIF works closely with SIEDO in carrying out money laundering investigations. In addition to working with SIEDO, UIF personnel have initiated working-level relationships with other federal law enforcement entities, including the Federal Investigative Agency (AFI), in order to support the investigations of criminal activities with ties to money laundering.

In September 2003, Mexico underwent its second Mutual Evaluation by the FATF, and the findings of the evaluation team were accepted at the FATF plenary meetings in June 2004. The evaluation team found that the GOM had made progress since the first mutual evaluation by removing specific exemptions to customer identification obligations, implementing on-line reporting forms and a new automated transmission process for reporting transactions to the UIF, and slightly reducing the delay in reporting transactions overall. The GOM also developed an overall anti-money laundering strategy and plan.

However, the FATF evaluation team also identified a number of deficiencies in the system. Mexico does not have a separate offense of terrorist financing. Bank and trust secrecy continue to impede many aspects of Mexico's anti-money laundering/counter-terrorist financing system, particularly for law enforcement and prosecutorial and judicial authorities during investigations and prosecutions.

Money Laundering and Financial Crimes

With regard to lifting bank secrecy, although customers are notified, the National Banking and Securities Commission (CNBV) must approve any requests for bank secrecy to be lifted during an investigation. The approval of such a request by the CNBV cannot be challenged, and financial institutions must respond with the required information within three days. If the CNBV does not approve the request, prosecutors must request a judicial order to lift bank secrecy, and the account holder may challenge the judge's decision. Limited co-ordination among key government institutions and procedural barriers impede effective money laundering prosecution.

In November 2003, the Senate passed proposed amendments to the Federal Penal Code that would link terrorist financing to money laundering. This legislation, once passed by the lower house of Congress, will bring Mexico into compliance with international standards. The proposed amendments also create two new crimes: conspiracy to launder assets, and international terrorism (when committed in Mexico to inflict damage on a foreign state). The legislation has not yet been passed, and it is unlikely that this will occur prior to the second half of 2005.

The lack of significant legislation criminalizing the financing of terrorism places Mexico in a position of noncompliance with the FATF Special Recommendations on Terrorist Financing and the UNSCR 1373 requirements. However, because terrorism is declared to be a serious crime, money laundering associated with terrorism is punishable under the existing Penal Code. The GOM has responded to U.S. Government (USG) efforts to identify and block terrorist-related funds, and, although no assets were frozen, it continues to monitor suspicious financial transactions.

Although the United States and Mexico both have forfeiture laws and provisions for seizing assets abroad derived from criminal activity, USG requests to Mexico for the seizure, forfeiture, and repatriation of criminal assets have not met with success, as Mexican authorities have difficulties with assets seized for forfeiture in Mexico if these assets are not clearly linked to narcotics. Most assets seized during law enforcement operations go to the Service for the Management and Transfer of Assets (SAE), a semi-autonomous branch of the Hacienda established in late 2002. Although Mexican officials have made significant progress in modernizing their approach to asset seizure, actual asset forfeiture remains a challenge. In two significant U.S. cases involving fraud, authorities seized real property and money generated from the crime. Although authorities gained forfeiture of the property in the United States, counterparts in Mexico did not carry out such orders in Mexico, nor have they returned related assets to the United States for forfeiture.

Mexico has developed a broad network of bilateral agreements with the United States, and regularly meets in bilateral law enforcement working groups with the United States. The GOM and the USG continue to implement other bilateral treaties and agreements for cooperation in law enforcement issues, including the Financial Information Exchange Agreement (FIEA) and the memorandum of understanding (MOU) for the exchange of information on the Cross-border Movement of Currency and Monetary Instruments.

The United States temporarily suspended information exchange with Mexico in April 2004. Financial intelligence provided to the UIF by the U.S. financial intelligence unit (the Financial Crimes Enforcement Network, or FinCEN) was disseminated by the GOM without prior USG authorization. The unauthorized disclosure of sensitive financial information was done in breach of the well established and clearly defined protocols of FinCEN, as well as the principles of the Egmont Group – of which both the United States and Mexico are members – for information exchange. Information exchange resumed in June 2004 after Mexico substantially implemented a number of measures to ensure that information is disseminated to appropriate government agencies in a manner that protects its confidentiality and warns of the consequences of unauthorized disclosure.

In addition to its membership in the FATF, Mexico participates in the Caribbean Financial Action Task Force as a cooperating and supporting nation and in the South American Financial Action Task Force as an observer member. Mexico is a member of the Egmont Group and the OAS/CICAD

Experts Group to Control Money Laundering. The GOM is a party to the 1988 UN Drug Convention. In 2003, the GOM ratified several other international treaties, including the UN Convention against Transnational Organized Crime, the UN International Convention for the Suppression of the Financing of Terrorism, and the Inter-American Convention Against Terrorism. The GOM ratified the UN Convention Against Corruption in July 2004.

The Government of Mexico should fully implement and improve the mechanisms for asset forfeiture and money laundering cooperation with the United States, and should increase efforts to control the bulk smuggling of currency across its borders. Mexico should also closely monitor remittance systems for possible exploitation by criminal or terrorist groups. Mexico should enact its proposed legislation to criminalize the financing and support of terrorists and terrorism. Furthermore, despite the preventive mechanisms that have been put in place, improved cooperation among law enforcement authorities and a strong public campaign against corruption, Mexico continues to face challenges in prosecuting and convicting money launderers, and should continue to focus its efforts on improving its ability to do so.

Micronesia

The Federated States of Micronesia (FSM) is a sovereign state in free association with the United States. The FSM is not a regional financial center. It is not known to be a significant money laundering location and there has been no known money laundering related to narcotics proceeds or terrorist financing. Misuse of public funds has generated illicit proceeds and led to a number of indictments and convictions of politicians and their associates, including on money laundering charges. There may be limited financial crimes outside the formal banking sector by cash dealers involved in sending remittances to the home countries of some foreign workers. Financial crimes are rare in the commercial sector. The FSM's distance from other countries and sparse transportation links to the outside world seem to have limited the amount of contraband brought into the FSM. The market for smuggled goods is not developed.

There are three financial institutions in the nation: the Bank of Guam, the Bank of the FSM, and the FSM Development Bank. The FSM Development Bank is a non-depository institution owned and financed by the FSM National Government. The Bank of Guam is chartered in the U.S. and falls under U.S. regulations and the Federal Deposit Insurance Corporation (FDIC). The locally chartered Bank of the FSM is the only non-U.S. bank insured by the FDIC. As a result, these two commercial institutions are subject to supervision by the FSM Banking Board as well as to inspection and regulation by the FDIC. The Banking Board has made the development and monitoring of anti-money laundering and anti-financing of terrorism activities one of its top priorities. There are no off-shore financial centers, banks, trusts, shell banks, casinos, or free trade zones in the FSM.

Money laundering is a criminal offense under the Money Laundering and Proceeds of Crime Act, in effect since 2001 and favorably reviewed by the IMF Legal Department. The Act criminalizes money laundering and provides for the freezing and seizure of assets, including substitute assets. It incorporates due diligence provisions. Predicate crimes include all serious offenses punishable by imprisonment of more than one year. The law also provides for collection of financial information and intelligence and international cooperation in money laundering matters. Officials and private individuals from Chuuk State were arrested on money laundering charges, related to misuse of government assets in 2004. The FSM Attorney General's office is developing revisions to the legislation to tighten requirements for record keeping, establish cross-country currency reporting requirements, address non-bank establishments, and allow civil as well as criminal actions for forfeiture to bring the statutes into better compliance with international standards. These changes are scheduled to be submitted to Congress in May 2005.

The FSM Department of Justice has established procedures for regular notification to the Banking Board of the names of suspected terrorist individuals and organizations. No assets of individuals or entities have been seized or frozen. The government recognizes the existing of alternative remittance systems for expatriate workers from the Philippines, but does not have resources to monitor this activity. The FSM is a party to the UN International Convention for the Suppression of the Financing of Terrorism. New counterterrorism legislation is under development; the draft is expected to be sent to Congress in May 2005; in lieu of these statutes, the FSM would apply the current money laundering law against terrorist financing.

Legislation to enhance law enforcement cooperation with the United States and other countries in investigating serious crimes was enacted as the Mutual Assistance in Criminal Matters Act of 2000. The FSM has cooperated with U.S. law enforcement agencies. The FSM is a party to the 1988 UN Drug Convention.

The Government of the Federated States of Micronesia should continue to enhance its anti-money laundering regime by criminalizing terrorist financing and adopting and implementing pending laws and regulations.

Moldova

Moldova is not considered an important regional financial center. It is a transit country, but the extent of related money laundering is unknown. As Moldova continues to suffer from severe economic conditions, proceeds from narcotics transactions remain small and incomes are generally low. Criminal proceeds laundered in Moldova are derived substantially from foreign criminal activity and, to a lesser extent, domestic criminal activity and corruption. A rise in Internet-related fraud schemes is evident. Although a significant black market exists in Moldova for a number of goods, narcotics proceeds are not a significant funding source. Instances of money laundering have occurred in the banking system. Domestic and foreign organized crime syndicates are believed to control most money laundering proceeds, and Government of Moldova (GOM) authorities are not known to encourage or facilitate laundering of proceeds from criminal or terrorist activity. While currency transactions involving laundered proceeds may include U.S. currency (counterfeit or genuine), regional organized crime activities likely account for the majority of profits.

Money laundering became a criminal offense in November 2001, and the law was amended in June 2002. It remained unchanged when the new criminal code was adopted in June 2003. The legislation applies to proceeds of "all crimes," not just narcotics activity, with banks and non-bank financial institutions (NBFIs) required to report transactions over a certain amount to the Center for Combating Economic Crimes and Corruption (CCECC). On July 1, 2004, the Law on Money Laundering was amended to raise the reporting threshold from 100,000 lei to 300,000 lei for individuals, and from 200,000 lei to 500,000 for legal entities. However, the amendments still require reporting transactions under the threshold if, when combined with other transactions during a one-month period, they reach a total which crosses that threshold. This amendment may actually increase the amount of reporting required. Current anti-money laundering legislation also covers gold, gems, and precious metals, and any person involved in laundering money.

Banks must maintain transfer records for a period of five years after an account opens or after any financial transaction takes place and seven years after foreign currency contract transactions, whichever is later. Suspicious transactions have been reported, as required, since the law was enacted. Both banks and NBFIs are protected from criminal, civil, and administrative liability asserted as a result of their compliance with the reporting requirements, and no secrecy laws exist that would prevent law enforcement or banking authorities from accessing financial records. A May 2003 amendment states that forwarding such information to law enforcement entities or the courts is not a breach of confidentiality, as long as it is done in accordance with the regulations. Current legislation

contains provisions authorizing sanctions of commercial banks for negligence. GOM efforts against the international transportation of illegal-source currency and monetary instruments largely focus on cross-border currency reporting forms, completed at ports of entry (POE) by travelers entering Moldova.

The CCECC serves as Moldova's Financial Intelligence Unit (FIU). In 2004, the CCECC created a money laundering section of ten investigators to pursue suspicious financial transactions. According to Moldovan authorities, there are currently 11 full-fledged criminal investigations underway for money laundering, and 36 preliminary investigations that have been completed and recommended for opening full-fledged investigations. (Under Moldovan criminal procedure, cases first undergo a preliminary investigation by operative investigators before being sent to criminal investigators and prosecutors who decide whether a full investigation will be launched.) The CCECC identified a list of non-resident companies suspected of involvement in money laundering and asked all banks to report any transactions done by these entities in order to prevent illegal transactions. While banks were initially resistant toward money laundering legislation, they have since adopted compliance programs as required by the law. However, Moldova remains predominantly a cash society as people have little trust in banks. This makes money laundering investigations difficult.

Moldova is not considered an offshore financial center, and only two foreign banks exist in Moldova: "Banca Comerciala Romana," a Romanian bank; and "Unibank," in which the Russian bank "Petrocomert" holds 100 percent of the shares. These banks are regulated in the same manner as Moldovan commercial banks. Offshore banks are permitted, so long as they are licensed by the NBM and background checks are conducted on shareholders and bank officials. Nominee (anonymous) directors are not allowed, and banks do not permit bearer shares. The Ministry of Finance (MOF) currently licenses five casinos, although they are reportedly not well regulated or controlled.

Article 106 of the Moldovan criminal code, enacted June 12, 2003, relates specifically to asset seizure and confiscation. The article, titled "Special Seizures," describes a special seizure as the forced transfer of ownership of goods used during, or resulting from a crime to the state. The article may be applied to goods belonging to persons who knowingly accepted things acquired illegally, even when prosecution is declined. However, it remains unclear whether asset forfeiture may be invoked against those unwittingly involved in or tied to an illegal activity. Money laundering crimes are the purview of the CCECC, while narcotics-related seizures are within the jurisdiction of the Ministry of Interior (MOI). The GOM currently lacks adequate resources, training, and experience to trace and seize assets effectively.

Moldova codified the criminalization of terrorist financing in the Law on Combating Terrorism, enacted November 12, 2001. Article 2 defines terrorist financing, and Article 8/1 authorizes suspension of terrorist and related financial operations. Current GOM capabilities to identify, freeze, and seize terrorist assets are rudimentary, with investigators lacking advanced training and resources. While the National Bank of Moldova (NBM) receives updated lists of suspected terrorists, no al-Qaida or Taliban related assets have been identified, frozen, or seized in Moldova. No hawala system exists in Moldova. Investigation into misuse of charitable or non-profit entities is non-existent, as the GOM has neither the resources nor ability to perform these tasks. In December 2004, the Parliament amended the law on money laundering to include provisions on terrorist financing. Moldova has made no arrests for terrorist financing.

No agreements, bilateral or otherwise, exist between the USG and the GOM regarding the exchange of records in connection with narcotics, terrorism, terrorist financing, or other serious criminal investigation. No negotiations are underway to establish such a mechanism. Current legislation does not prohibit cooperation on a case-by-case basis. GOM authorities continue to solicit USG assistance on individual cases and cooperate with U.S. law enforcement personnel when presented with requests for information/assistance. There are no known cases of GOM refusal to cooperate with foreign

governments or of sanctions or penalties being imposed upon the GOM for a failure to cooperate. Moldova is a party to the 1988 UN Drug Convention, the Council of Europe Convention on Laundering, Search, Seizure and Confiscation of the Proceeds of Crime, and the UN International Convention for the Suppression of the Financing of Terrorism, and cooperates in accordance with these agreements where resources and abilities permit. In addition to these, Moldova has signed an agreement with CIS member states for the exchange of information on criminal matters, including money laundering. In 2004, the CCECC was accepted as an observer at the Eurasian Group on Combating Money Laundering and as a candidate in the Egmont Group.

The Government of Moldova should continue to enhance and implement its anti-money laundering/counterterrorist financing regime. Moldova should ensure full implementation of its laws and improve the mechanisms for sharing information and forfeiting assets. Additionally, the Moldova should provide appropriate training for its law enforcement personnel and officials involved in the asset forfeiture program.

Monaco

The Principality of Monaco is considered vulnerable to money laundering due to its strict bank secrecy laws, network of casinos, and unregulated offshore sector. The principality does not face the ordinary forms of organized crime, and the crime that does exist does not seem to generate significant illegal proceeds (save for fraud and offenses under the Law on Checks); rather, money laundering offenses relate mainly to offenses committed abroad. Russian organized crime and the Italian Mafia reportedly have laundered money in Monaco. Monaco remains on an OECD list of so-called “non-cooperative” countries in terms of provision of tax information.

Monaco is the smallest country in Europe, after the Vatican. There are approximately 70 banks and financial institutions in Monaco, with more than 300,000 accounts (with a population of about 7,000 Monegasque nationals and another 25,000 foreign residents). Approximately 85 percent of the banking customers are nonresident. In 2002, the financial sector represented over 17 percent of Monaco’s economic activity. The non-banking financial institutions include insurance companies, portfolio management companies, and trusts created through notaries, of which there are three, all nominated by the Prince. Accountants and the 25 legal professionals in the country are also included in the non-banking category. The real estate sector is another important area because of the high prices for land throughout the principality. There are also four casinos run by the Société des Bains de Mer (with a state-owned majority interest).

Monaco’s banking sector is linked to the French banking sector through the Franco-Monegasque Exchange Control Convention signed in 1945 and supplemented periodically, most recently in 2001. Through this convention, Monaco uses the banking legislation and regulations issued by the French Banking and Financial Regulations Committee, including Article 57 of France’s 1984 law regarding banking secrecy. Most of Monaco’s banking sector is concentrated in portfolio management and private banking. The subsidiaries of foreign banks operating in Monaco can withhold customer information from the parent bank.

Monaco also has an offshore sector, and permits the formation of both trusts and five types of international business companies (IBCs): limited liability companies, branches of foreign parent companies, partnerships with limited liability, partnerships with unlimited liability, and sole proprietorships. However, ready-made “shelf companies” are not permitted. The incorporation process generally takes four to nine months. Monaco does not maintain a central registry of IBCs, and authorities have no legal basis for seeking information on the activities of offshore companies.

Although the French Banking Commission is the supervisor for Monegasque institutions, Monaco shoulders its own responsibility for legislating and enforcing measures to counter money laundering

and terrorism financing. Thus, though the rules are the same for both countries, the degree of enforcement may vary. The Finance Councilor (within the Government Council) is responsible for anti-money laundering implementation and policy. Money laundering in Monaco is a criminal offense. It is criminalized by Act 1.162 of 7 July 1993, “On the Participation of Financial Institutions in the Fight against Money Laundering,” and Section 218-3 of the Criminal Code, and amended by Act 1.253 of 12 July 2002, “Relating to the Participation of Financial Undertakings in Countering Money Laundering and the Financing of Terrorism.”

Banks, insurance companies, and stockbrokers are required to report suspicious transactions and to disclose the identities of those involved. Casino operators must alert the government of suspicious gambling payments possibly derived from drug-trafficking or organized crime. Another law imposes a five-to-ten-year jail sentence for anyone convicted of using illicit funds to purchase property (which is itself subject to confiscation).

The 2002 amendments to the 1993 money laundering legislation include bringing corporate service providers, portfolio managers, and Monaco Law 214 trustees, as well as institutions within the offshore sector, into line with the obligations of banks. New procedures have also been put into place, which include internal compliance, identification of the client, and records maintenance. Government authorities held briefings to explain the new procedures to companies requiring compliance officers. Meetings are also held with compliance officers so that implementation issues and concerns may be aired and addressed.

Offshore companies are subject to the same due diligence and suspicious reporting obligations as banking institutions, and Monegasque authorities conduct on-site audits. The 2002 legislation also strengthens the “know your client” obligations for casinos and obliges companies responsible for the management and administration of foreign entities not only to report suspicions to Monaco’s Financial Intelligence Unit (FIU), but also to set up internal anti-laundering and counterterrorist financing procedures, the enforcement of which is monitored by the FIU.

Banking laws do not allow anonymous accounts, but Monaco does permit the existence of alias accounts, where the owner uses a pseudonym in lieu of the real name. Cashiers do not know the client, but the bank knows the identity of the customer and retains client identification information.

Prior approval is required to engage in any economic activity in Monaco, regardless of its nature. The Monegasque authorities issue approvals of the type of business to be engaged in, and the location for a given length of time. Of particular importance is the fact that this government approval is personal and may not be assigned. Changes in any of the above terms require the issuance of a new approval.

Monaco established its FIU, the Service d’Information et de Contrôle sur les Circuits Financiers (SICCFIN), to collect information on suspected money launderers. SICCFIN receives suspicious transaction reports, analyzes them, and forwards them to the Prosecutor when they relate to drug-trafficking, organized crime, terrorism, terrorist organizations, or the funding thereof. SICCFIN also is responsible for supervising the implementation of anti-money laundering legislation. SICCFIN also has provided training to intermediaries, most recently to lawyers and notaries. Under Law 1.162, Article 4, SICCFIN may suspend a transaction for up to twelve hours and advise the judicial authorities to investigate.

In November 2001, Monaco and France reached an agreement on initiatives to counter money laundering in the principality. The French Finance Ministry stated that SICCFIN had doubled the number of its staff, and that there had been a “noteworthy” increase in the number of suspicious activity reports being filed. The 2002 amendments to the money laundering legislation increase SICCFIN’s investigatory powers. In 2002, SICCFIN received 275 disclosures, 33 of which were passed to the Public Prosecutor for further investigation. In 2003, SICCFIN received 250 disclosures, 19 of which were referred to the public prosecutors. By mid-December 2004, SICCFIN had received

an additional 326 disclosures, of which 18 were passed to the Public Prosecutor for further investigation. In 2004 SICCFIN received and answered 126 requests for financial information

Investigation and prosecution are handled by the two-officer *Unité de lutte au blanchiment* (Unit Against Money Laundering) within the police. The *Groupe de repression du banditisme* (Group Against Organized Crime) may also handle cases. Depending on the number and types of cases, there are seven police officers equipped to deal with money laundering. Monaco has had three convictions for money laundering, and one acquittal. Monaco encounters obstacles because predicate offenses for money laundering are committed abroad; despite the existence of money laundering, often the crime that receives the conviction is the predicate crime and not the money laundering offense.

Monaco's legislation allows for confiscation of property of illegal origin as well as a percentage of illegally acquired and legitimate property that has been co-mingled. A court order is required for confiscation. In the case of money laundering, confiscation of property is restricted to the offenses listed in the Criminal Code. On the basis of letters rogatory, over 11.7 million euros have been seized. Monaco has extradited criminals, mainly to Russia.

In July and August 2002, Monaco passed Act 1.253 and promulgated two Sovereign Orders, intended to implement UNSCR 1373, which outlaw terrorism and its financing. Monaco is a party to the UN International Convention for the Suppression of the Financing of Terrorism; in April and August 2002, Monaco promulgated Sovereign Orders to import into domestic law the international obligations it accepted when it ratified that Convention.

The Securities Regulatory Commissions of Monaco and France signed a memorandum of understanding on March 8, 2002, on the sharing of information between the two bodies. The agreement was a step in Monaco's efforts to conform to standards proscribed by the International Organization of Securities Commissions, whose mission is to establish international standards to promote the integrity of securities markets. The Government of Monaco sees the MOU as an important tool in combating financial crimes, particularly money laundering.

In 2004 SICCFIN signed information exchange agreements with counterparts in Malta, Poland, Andorra, Mauritius, Slovakia, Canada, and Peru. In previous years it had signed such agreements with Slovenia, Italy, Ireland, Lebanon, Switzerland, Liechtenstein, Panama, Luxembourg, France, Spain, Belgium, Portugal, and the United Kingdom. SICCFIN is a member of the Egmont Group. It is a priority for Monaco to satisfy mutual legal assistance requests, which are enforced swiftly, and there is no obstacle to international judicial cooperation.

Monaco was admitted to the Council of Europe on October 4, 2004. Well before that date, in 2002, SICCFIN approached the Council of Europe's MONEYVAL Committee and requested full participation in that Committee, including having an evaluation conducted on its anti-money laundering regime. In October 2002, the evaluation was performed; the evaluators acknowledged the extensive and thorough regime that has been developed.

Monaco is a party to the 1988 UN Drug Convention and the UN Convention against Transnational Organized Crime. In May 2002, Monaco acceded to the Council of Europe Convention on the Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime.

The Government of Monaco should amend the Criminal Code to include an "all-crimes" approach, rather than the current list of predicate offenses. Monaco should also amend its legislation to implement full corporate criminal liability and establish a central registry for IBCs. Monaco should continue to enhance its anti-money laundering and confiscation regimes.

Mongolia

Mongolia is not a financial center. Crimes related to banking activities are relatively few, and an upward trend has not been observed. Markets in Mongolia are licensed and monitored by the government authorities. Mongolia's vulnerability to transnational crimes such as money laundering has grown with the country's increased levels of international trade, tourism, and banking. Mongolia's long, unprotected borders with Russia and China make it particularly vulnerable to smuggling and narcotics-trafficking. The growing North Korean presence in Mongolia also makes the country vulnerable to counterfeit U.S. currency. Illegal money transfers and public corruption are other sources of illicit funds. Although the Government of Mongolia (GOM) is drafting anti-money laundering legislation, it has been slow in establishing interagency coordination mechanisms to help monitor international financial transactions. Moreover, growing corruption, a weak legal system, an inability to effectively patrol its borders to detect smuggling, and lack of capacity to conduct transnational criminal investigations all hamper Mongolia's ability to fight all forms of transnational crime.

The prepared draft law "On Combating Against Money Laundering and Funding Terrorism" (draft AML law), which is projected to pass within the next two legislative sessions, and the draft law on amending the criminal code will have provisions that define money laundering as a criminal offense. In addition, actions involving use of illegally obtained assets and money are considered to be crimes.

The Central Bank, tax authorities and law enforcement agencies have the power to investigate, within their respective jurisdictions, transactions and books of banks and other financial institutions. According to Article 39 of the Criminal Code, officers of financial institutions are obligated to provide to law enforcement agencies information on crimes that have become known to them. The draft AML Law will introduce suspicious transaction reporting (STR) requirements. The draft AML law provides that legal entities conducting the activities of banks, non bank financial institutions, commercial insurance companies, activities described by Article 15.3.1 of the Law on Special Licensing of Commercial Activities, savings and loan cooperatives, and their subsidiaries or branches have an obligation to inform relevant agencies about applicable transactions. The draft AML Law also has a provision on monitoring the management of reporting entities.

Article 7 of the Law on Banking, which provides for the confidentiality of bank records, also states that a bank or its officers shall not be liable for cooperating with a law enforcement agency. The draft AML law has a similar provision. It also states that management and officers of a bank who are involved in crimes can be charged for criminal, civil and/or administrative violations.

The Law on Foreign Currency Regulation (Article 17 and others) has provisions that regulate the flow of foreign currency through the Mongolian border. Police pay attention to international trafficking of foreign currency or other payment documents that have illegal origins, but there have been no investigations to date. Since January 1, 2004, there have been no reported incidents of money laundering or terrorism funding, and likewise no arrests or prosecutions.

A draft law "On Amending the Criminal Code" has been developed together with the draft AML law to implement the requirements of UNSCR 1373. The Foreign Currency Department of the Central Bank regularly distributes the lists of members of al-Qaida, the Taliban and other associated persons, supplied by the USG, to banks and financial institutions along with recommended measures.

The President of Mongolia directed the introduction of legal regulations combating terrorism by issuing Decree #60 in 2001, entitled "Supporting Establishment of an International Coalition Against Terrorism". Accordingly, the GOM adopted Resolution #226 in 2001, entitled "Supporting Activities of the International Coalition Against Terrorism". The resolution requires relevant agencies to exchange information and cooperate with their counterparts in coalition countries regarding terrorists, drug-trafficking and money laundering actions. Both the directive and resolution are currently enforced with no objections by any political parties.

There is a system to track, identify, investigate, seize, confiscate or impose fines regarding assets created through grave crimes such as international trafficking, narcotics-related crimes or funding of terrorism. These proceedings shall be carried out according to rules provided by the Criminal Code and the Criminal Procedure Code. Assets confiscated or fines collected are transferred to the GOM budget.

Mongolia is a party to the 1988 UN Drug Convention. Mongolia became a party to the UN International Convention for the Suppression of the Financing of Terrorism on February 25, 2004. In recent years Mongolia has increased its participation in fora that focus on transnational criminal activities and, in 2004, became a member of the Asia/Pacific Group on Money Laundering.

The Government of Mongolia should pass and implement comprehensive anti-money laundering and counterterrorist financing legislation. It should subsequently take steps to fully implement those laws and build a comprehensive anti-money laundering regime capable of thwarting terrorist financing that comports with international standards.

Montserrat

Montserrat has one of the smallest financial sectors of the Caribbean overseas territories of the United Kingdom. Volcanic activity between 1995 and 1998 reduced the population and business activity on the island, although an offshore financial services sector remains that may attract money launderers because of a lack of regulatory resources. There are no exchange controls for transactions below EC\$250,000.

As of 2003, Montserrat's offshore sector consists of 11 offshore banks, all owned and controlled by Latin American interests, approximately 22 international business companies (IBCs) and 30 Companies Act companies, the majority of which engage only in conducting local business. Insurance and trust services are negligible. IBCs may be registered using bearer shares, providing for anonymity of corporate ownership. The Financial Services Centre (FSC) regulates offshore banks, while the Eastern Caribbean Central Bank (ECCB) supervises Montserrat's two domestic banks. In 2002, the government entered into a memorandum of understanding (MOU) with the ECCB to provide assistance in the supervision of Montserrat's offshore banking sector, as the FSC does not have sufficient staff to undertake an ongoing supervision program for offshore banks. MOUs also have been entered into with four overseas regulators to provide a mechanism for collaboration in the supervision of most of the offshore banks. No examinations have been done of the offshore banks to evaluate their compliance with anti-money laundering programs.

The Proceeds of Crime Act (POCA), 1999, criminalizes the laundering of proceeds from any indictable offense except domestic drug-trafficking. Likewise, tipping off is prohibited except in money laundering cases tied to drug-trafficking. Both individuals and legal entities are subject to the law, and self-laundering is covered for all offenses. The legislation also imposes broad requirements on financial institutions regarding customer identification and record keeping and mandates the reporting of suspicious transactions to a designated authority. Under the POCA, the Governor has issued a non-mandatory Practice Code establishing further comprehensive guidance for financial institutions. There are no reporting requirements for cross-border currency movements.

The Offshore Banking Act (OB Act) and the Financial Services Commission Act, 2001 (FSC Act) are the governing pieces of legislation for the offshore sector. The OB Act addresses licensing of offshore banks, prudential and supervision requirements, and liquidation issues. The FSC Act establishes the FSC and sets out its authorities and administration.

The Money Laundering Regulations 2000 apply to banks, securities dealers, money transmission services, company management services, and financial leasing companies. The Regulations do not explicitly address offshore banks, and it remains unclear whether they are subject to the Regulations'

requirements. The Regulations call for covered entities to maintain internal reporting procedures. Anonymous accounts are prohibited. Any suspicious activity must be reported to the police. Customer identification provisions contain exemptions that allow banks to open accounts and transact business without verifying customer identity. For example, no identification is required for one-off transactions under EC \$40,000, nor is it required when a customer is introduced to the bank—the introducer may provide written assurance the customer has been subject to identification. Banks are required to keep records for five years; however, inspections of domestic banks have shown widespread deficiencies in implementation. The Practice Code contains more explicit instructions for banks, but because it is not mandatory, deficiencies are apparent in the implementation of many requirements.

The Reporting Authority (RA) was established in 2002, under the POCA, to serve as Montserrat's Financial Intelligence Unit (FIU). The RA consists of the Commissioner of Financial Services, the Attorney General and the Commissioner of Police. The Order establishing the RA sets forth only a single power, to disclose information it receives to law enforcement agencies; however, subsequent amendments have provided for the receipt of suspicious transaction reports (STRs). It does not authorize the receipt or analysis of information, although this occurs in practice. As of October 2002, 20 STRs had been received by the RA, all from one offshore bank. As of 2003, there have been no prosecutions for money laundering.

Montserrat has criminalized terrorist financing. The UN International Convention for the Suppression of the Financing of Terrorism has not been extended to Montserrat; however, Montserrat has implemented provisions in local legislation to put into practice applicable provisions of the Convention. The UNSCR 1267 Sanction Committee's consolidated list is circulated to financial institutions.

The POCA provides for freezing and confiscation of the proceeds of crime and international cooperation. Except in terrorist financing cases where a restraint order may be obtained once a criminal investigation has commenced, criminal proceedings must be instituted before assets can be frozen. As of 2003, no property related to money laundering or terrorist financing had been frozen, seized or confiscated. Montserrat has not considered a mechanism to share seized assets.

In October 2002, the Caribbean Financial Action Task Force (CFATF) conducted a second round mutual evaluation of Montserrat, in conjunction with the IMF and World Bank.

U.S. law enforcement cooperation with Montserrat is facilitated by a treaty with the United Kingdom concerning the Cayman Islands, relating to mutual legal assistance in criminal matters, that was extended to Montserrat in 1991. Montserrat's current legislation, however, makes information exchange difficult between regulators and foreign authorities. Montserrat is a member of the CFATF and is subject to the 1988 UN Drug Convention.

The Government of Montserrat should criminalize self-laundering related to domestic drug-trafficking. Montserrat should make the full operation of the Reporting Authority a priority, including assuring it has the necessary authority to receive and analyze suspicious transaction reports. It should enact measures to identify and record the beneficial owners of IBCs and immobilize bearer shares. Montserrat also should enact cross-border currency reporting requirements and close the loopholes in its customer identification procedures. Montserrat must ensure adequate oversight and supervision of its offshore sector to deter criminal and terrorist organizations from abusing its financial services sector.

Morocco

Morocco is not a regional financial center and the extent of the money laundering problem in Morocco is not known. Morocco remains an important producer and exporter of cannabis, with estimated revenues of \$12 billion annually, according to a joint study released in late 2003 by the United Nations

Office on Drugs and Crime (UNODC) and Morocco's Agency for the Promotion and the Economic and Social Development of the Northern Prefectures and Provinces of the Kingdom. Some of these proceeds may be laundered in Morocco and abroad. There is no indication that international or domestic terrorist networks have engaged in widespread use of the narcotics trade to finance terrorist organizations and operations in Morocco. Press reports indicate, however, that the Spanish investigation into the March 11, 2004 terrorist bombings in Madrid found that the alleged Moroccan national perpetrators of the attacks financed the purchase of the explosives used in the blasts through modest sales of cannabis resin in Spain.

Morocco has a significant informal economic sector, including remittances from abroad and cash-based transactions. There are unverified reports of trade-based money laundering, including bulk cash smuggling, under-and over-invoicing, and the purchase of smuggled goods. Banking officials have indicated that the country's system of unregulated money exchanges provides opportunities for potential launderers. Morocco has a free trade zone in Tangier, with customs exemptions for goods manufactured in the zone for export abroad. There have been no reports of trade-based money laundering schemes or terrorist financing activities using the Tangier free zone or the zone's offshore banks, which are regulated by an interagency commission chaired by the Ministry of Finance.

There have been no reported arrests or prosecutions for money laundering or terrorist financing in Morocco since January 1, 2004. Morocco has a relatively effective system for disseminating U.S. Government (USG) and United Nations Security Council Resolution (UNSCR) freeze lists to the financial sector and law enforcement. Morocco has provided detailed and timely reports requested by the UNSC 1267 Committee. A handful of small value accounts have been administratively frozen based on U.S. Executive Order 13224 freeze lists.

The Moroccan financial sector is modeled after the French system and consists of 16 banks, five government-owned specialized financial institutions, approximately 30 credit agencies, and 12 leasing companies. The monetary authorities in Morocco are the Ministry of Finance and the Central Bank, Bank Al Maghrib (CBM), which monitors and regulates the banking system. A separate Foreign Exchange Office regulates international transactions. Morocco has used administrative instruments and procedures to freeze suspect accounts.

However, CBM issued Memorandum No. 36 in December 2003, in advance of passage of still pending anti-money laundering legislation, instructing banks and other financial institutions to conduct their own internal analysis/investigations. It also mandates "know your customer" procedures, reporting of suspicious transactions and the retention of suspicious activity reports. Morocco also has in effect: legislation prohibiting anonymous bank accounts; foreign currency controls that require declarations to be filed when transporting currency across the border, although not strictly enforced; and internal bank controls designed to counter money laundering and other illegal/suspicious activities.

In June 2003, Morocco implemented a comprehensive counterterrorism bill that provided the legal basis for the lifting of bank secrecy to obtain information on suspected terrorists, freeze suspect accounts and prosecute terrorist finance-related crimes. The law also provides for the seizing and confiscation of terrorist assets and for international cooperation with regard to foreign requests for freezing assets of a suspected terrorist entity. This law brought Morocco into compliance with UNSCR 1373 requirements for the criminalization of the financing of terrorism.

As of December 2004, Morocco was moving towards the enactment of two laws that will further strengthen Morocco's anti-money laundering system: a banking/financial sector reform bill and an anti-money laundering bill. The anti-money laundering bill reportedly includes, among other provisions, a suspicious transaction reporting scheme and the creation of a Financial Intelligence Unit (FIU). The bills are based on the Financial Action Task Force (FATF) Forty Recommendations and Egmont Group guidelines and will help bring Morocco's financial sector in line with international standards.

Together, the three bills will enhance the supervisory and enforcement authority of the Central Bank and outline investigative and prosecutorial procedures. In the interim, the Central Bank has already mandated “know your customer” requirements and the reporting of suspicious transactions by financial institutions. All money transfer activities that take place outside the realm of the official Moroccan banking system—as set by the CBM guidelines—are deemed illegal. The pending bills will also expand the CBM’s regulatory authority over non-banking financial transactions. Other significant provisions include: the lifting of bank secrecy during investigations, as well as legal liability protection of bankers and investigators for cooperation during investigations.

Morocco is a party to the UN International Convention for the Suppression of Financing of Terrorism, and the UN Convention against Transnational Organized Crime. Morocco is also a party to the UN International Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances (the Vienna Convention); in fact, Morocco has ratified or acceded to all UN and international conventions and treaties related to counterterrorism.

The Government of Morocco should move expeditiously to pass the banking sector reform bill and the anti-money laundering bill. As part of its anti-money laundering program, Morocco should establish a centralized Financial Intelligence Unit (FIU) that will receive and analyze suspicious transaction reports and disseminate them to appropriate law enforcement agencies for investigation.

Mozambique

Mozambique is not a regional financial center. Money laundering is fairly common, however, and local authorities believe that narcotics proceeds have helped finance the recent proliferation of new restaurants, shopping centers, hotels, and mosques in the country, especially in the capital. These businesses reputedly conceal profits made by those importing hashish and heroin from South Asia via Tanzania and, to a lesser extent, cocaine from South America via Brazil. Most narcotics are destined for South African and European markets; Mozambique is not a significant consumption destination and is rarely a transshipment point to the United States. Local organized crime controls narcotics-trafficking operations in the country, with certain recent immigrants from Pakistan and India also playing a prominent role. Money laundering in the banking sector is also considered to be a serious problem; and in recent years, prominent public figures in the Central Bank, the law enforcement community and the media have been murdered for investigating fraud and money laundering in these institutions. For example, in 2001, the Chief of Banking Supervision at the Central Bank was murdered in the stairwell of a bank that had been under investigation. Despite these problems, or perhaps because of them, there are no known links between Mozambique-based drug traffickers, money launderers and the financing of terrorists.

The financial sector in general is not believed to be experiencing any reported increase in crimes such as money laundering, but it is hard to be certain because very few instances of laundering are formally reported or investigated. Black markets for smuggled goods and financial services are widespread, dwarfing the formal retail and banking sectors in most parts of the country and making it difficult to determine when and where laundering of narcotics money takes place. Local officials are often directly involved with drug trafficking and the laundering of profits, including the ex-chief of the Criminal Investigative Police and several of his top officers, who are now awaiting trial on narcotics-trafficking charges. Evidence of money laundering was cited by the government as a reason for arresting these officials in 2003, but they are being prosecuted for narcotics-trafficking, not money laundering.

Money laundering has long been a criminal offense in Mozambique, but criminal charges and prosecutions for money laundering have been rare because the law had not been narrowly defined until enactment of the 2002 Anti-Money Laundering Act. Implementing regulations for most components of this law were only issued in September 2004, with more regulations reportedly forthcoming in

2005. The law contains specific provisions related to narcotics-trafficking, but also includes a wider range of offenses as predicates for money laundering. There were no money laundering arrests in 2004, nor any prosecutions.

According to the 2002 law, banks and exchange houses must immediately record and report to the Attorney General's office any cash transaction valued at 441 times the national minimum wage, which amounts to about \$18,000. In addition, exchange houses are required to turn in records of all transactions on a daily basis. All credit card transaction attempts over \$5,000 must also be reported and can only be processed with approval from the Central Bank. Banks and exchange houses are required to keep transaction records for 15 years (Article 15 of 2002 law). Financial institutions are required to report any suspicious transactions immediately to the Attorney General's office (Article 16). The Attorney General, in turn, is required to determine within 48 hours whether to permit the transaction (Article 19). Individuals who report suspicious transactions in good faith receive protection under the 2002 law (Article 21). Bank secrecy laws exist in Mozambique but do not apply in the case of suspected money laundering (Article 17).

The 1996 Money Exchange Act requires any individual carrying more than \$5,000 over the border to file a report with Customs. Taking more than \$5,000 in local currency out of the country is prohibited. The 2002 Anti-Money Laundering Act includes due diligence provisions that make both respective bankers and banks responsible if financial institutions launder money (Article 27). Money laundering controls apply to all formal non-banking financial institutions, including exchange houses, brokerages houses, casinos and insurance companies. Cash couriers must meet cross-border currency requirements, but usually fall outside the scope of anti-money laundering law because they generally work in the informal sector.

Mozambique has not explicitly criminalized the financing of terrorism. Its 1991 Crimes against the Security of State Act criminalizes terrorism, but financing is not addressed. The 2002 anti-money laundering law does list terrorism finance as a serious crime subject to the scope of the law, but elaborates no further (Article 4). The same law codifies Mozambique's long-authority to identify, freeze, seize and/or forfeit the assets of those charged with financial crimes, including terrorist financing (Articles 5 and 6). Financial institutions do not have direct access to the names of persons or entities included on the UN 1267 Sanctions Committee consolidated list or the list of Specially Designated Global Terrorists designated by the United States pursuant to E.O. 13224; these lists are distributed only to the Central Bank, the Attorney General, and the Ministry of Foreign Affairs. Authorities in these institutions have not positively identified any of the persons or entities on these lists operating in Mozambique, and therefore no assets have been identified, frozen, or seized.

Mozambique is not considered an offshore financial center. Many local businessmen use offshore banking in nearby countries, such as Mauritius. There are no free trade zones in Mozambique. Authorities acknowledge that alternative remittance systems are common in Mozambique, many of which operate in exchange houses that, on paper, are heavily regulated but in fact can easily avoid reporting requirements. There are no serious legislative, judicial, or regulatory measures being considered to address this problem. Charitable institutions must receive approval by the Ministry of Justice (MOJ) before receiving a charter, and are subject to investigation by the MOJ thereafter. However, there is no evidence of the MOJ seriously investigating any charities at this time.

Mozambique is a party to the 1988 UN Drug Convention and the International Convention for the Suppression of the Financing of Terrorism. It has signed, but not yet ratified, the UN Convention against Transnational Organized Crime. It is also a member of a FATF-style regional body, the Eastern and Southern Africa Anti-Money Laundering Group (ESAAMLG). Mozambique has entered a series of formal agreements with neighboring countries to share financial information required by law enforcement bodies. Cooperation with the United States on these matters has taken place on an informal basis.

The 2002 Anti-Money Laundering Act contains provisions authorizing the seizure and forfeiture of assets, including those of legitimate businesses used to launder money. In such a case, the Central Bank would be responsible for the initial tracing of assets and the Attorney General would be responsible for freezing and confiscating assets. The Attorney General also has authority to auction off confiscated assets and to distribute proceeds to a range of parties. Despite this legal framework, the institutions authorized to implement the law do not have an established system for identifying and freezing narcotics-related assets, and no assets have been seized to date under the 2002 Anti-Money Laundering Act.

The law allows for both civil and criminal forfeiture. An example of civil forfeiture would be the seizure of cash in excess of the \$5,000 limit from an individual who tried, secretly, to carry this amount across the border. The seized funds would be sent by Customs to the Central Bank. Appeals then could be made directly to the Bank. Private financial institutions are more closely regulated by criminal forfeiture acts, but are also subject to civil suits. Financial institutions also have the right to file a civil suit against the government for loss of business in cases of unreasonable suspension, a provision that will likely discourage enforcement of the law.

The Government of Mozambique should clarify that the financing of terrorism is specifically criminalized, either by its 1991 or 2002 legislation, or else it should do so in a new instrument. It should proceed as soon as possible with the issuance of the additional implementing regulations to the 2002 Anti-Money Laundering Act. It should establish a financial intelligence unit in accordance with international standards. It should ratify the UN Convention against Transnational Organized Crime. It must also address some additional and serious obstacles to enforcement of its laws, such as resource constraints affecting the Attorney General's office and the Criminal Investigative Police, significant corruption of the latter, and intimidating tactics on the part of organized crime against investigating prosecutors at the Attorney General's Anti-Corruption Unit. These practical measures will be necessary to enforce any laws.

Namibia

Namibia is not a regional financial center. In addition to its Central Bank, Namibia has four commercial banks. Of particular concern in Namibia is the smuggling of precious minerals and gems, the proceeds of which Namibian authorities think may be laundered through Namibian financial institutions.

In November of 2004, Namibia criminalized money laundering with passage of the Prevention of Organized Crime Bill. The new law requires both bank and non-bank financial institutions to report suspicious transactions to the Central Bank and provide relevant documents and other information to government authorities for use in criminal investigations. Non-bank financial institutions, such as private pension funds, the stock exchange, and investment companies, were previously exempted from such reporting requirements.

Parliament will consider a separate anti-money laundering bill—the Financial Intelligence Act (FIA)—in early 2005. The FIA is expected to add additional reporting requirements and strengthen the Government's ability to investigate and prosecute money laundering crimes. It will also establish a financial intelligence unit. The FIA is also expected to address cross-border currency reporting requirements and information sharing with foreign law enforcement authorities. Namibia currently does not have laws that criminalize the financing of terrorism. The Government intends to table its Combating of Terrorist Activities Bill in Parliament in 2005. Under the proposed counterterrorism law, the Government would be empowered to proscribe an organization if it commits or participates in terrorism; prepares for acts of terrorism; promotes or encourages terrorism; or is otherwise involved with terrorism. The proposed law would also prohibit individuals from providing money or other property with the intention or knowledge (or suspicion) that such money or other property would be

used for the purposes of terrorism (regardless whether or not a terrorism act was committed). Individuals who do so would be subject to prosecution and imprisonment not to exceed 20 years. There have been no known arrests or prosecutions for money laundering or terrorist financing since January 1, 2004.

Namibia is a member of the Eastern and Southern African Anti-Money Laundering Group (ESAAMLG). Namibia served as the Chair of ESAAMLG from August 2001 until August 2002. Namibia is a party to the UN Convention against Transnational Organized Crime and the 1988 UN Drug Convention. In November 2001, the GRN signed the UN International Convention for the Suppression of the Financing of Terrorism, and is making progress toward becoming a party.

The Government of Namibia should pass counterterrorism and related legislation that criminalizes terrorism financing and further strengthens the country's nascent anti-money laundering regime, as it has committed to doing through its membership in ESAAMLG. Namibia should continue its efforts toward becoming a party to the UN International Convention for the Suppression of the Financing of Terrorism.

Nauru

Nauru is a small Central Pacific island nation with a population of approximately 13,000. It is an independent republic and an associate member of the British Commonwealth. The Republic of Nauru is an established "zero" tax haven, as it does not levy any income, corporate, capital gains, real estate, inheritance, estate, gift, sales, or stamp taxes. The currently insolvent government-owned Bank of Nauru acts as the Central Bank for monetary policy. Nauru's legal, supervisory, and regulatory framework has provided significant opportunities in the past decade for the laundering of the proceeds of crime.

In June 2000, the Financial Action Task Force (FATF) placed Nauru on its initial list of fifteen Non-Cooperative Countries and Territories. In response to mounting international pressure, the Government of Nauru, in August 2001, passed the Money Laundering and Proceeds of Crime Act of 2001 (AMLA 2001). The AMLA 2001 requires financial institutions to verify and record the identity of account holders and to maintain accounts in the name of the account holder, thereby prohibiting anonymous accounts and accounts held in fictitious names. The AMLA 2001 also requires financial institutions to report suspicious transactions, and to develop internal anti-money laundering policies and procedures. The new legislation allowed for the establishment of a Financial Intelligence Unit (FIU) called the Financial Institutions Supervisory Authority (FISA). FISA has not yet been formed and no suspicious transaction reports have been filed to it. The AMLA 2001 provided for mutual assistance with respect to money laundering investigations. However, there are limitations regarding compliance with foreign requests for assistance. Nauru may refuse to comply with a foreign request if the action sought by the foreign authority is contrary to any provision of the Republic of Nauru Constitution, or would prejudice the national interest. However, the Government of Nauru (GON) has since cooperated with officials from the United States and other countries in certain criminal investigations involving Nauru's institutions.

On September 7, 2001, the FATF issued a press release recognizing the passage of the Nauru's AMLA 2001. The FATF, however, found the legislation to have several deficiencies. It urged Nauru to enact appropriate amendments by November 30, 2001, in order to avoid the application of countermeasures. On December 5, 2001, the FATF called upon its members to impose countermeasures against Nauru because of Nauru's failure to remedy deficiencies in its anti-money laundering regime.

On December 6, 2001, Nauru amended the AMLA 2001 to address certain deficiencies in the original act. The amendment clarified that the law applies to all financial institutions incorporated under the laws of Nauru (as opposed to just financial institutions conducting business within Nauru). It also

broadened the definition of money laundering. Despite the passage of its anti-money laundering legislation with amendments, Nauru continued to lack a legal framework and an effective regime for the regulation and supervision of the nearly 400 registered offshore banks.

In January 2002, the U.S. Treasury Department supplemented its previously issued advisory by reminding U.S. banks and other financial institutions of their obligations under the newly enacted Section 313 of the USA PATRIOT Act of 2001 concerning correspondent accounts with foreign shell banks. Under this new law, U.S. financial institutions, as well as other financial institutions operating in the United States, are required to terminate any U.S. correspondent accounts provided to foreign shell banks, and they must take reasonable steps to ensure that correspondent accounts held by foreign banks are not being used to provide U.S. banking services indirectly to foreign shell banks.

In December 2002, the Secretary of Treasury, after consultation with the Departments of Justice and State as well as other concerned U.S. government agencies, designated Nauru as a jurisdiction of “primary money laundering concern” under Section 311 of the USA PATRIOT Act. In the announcement, the U.S. Treasury published a list of 161 banks licensed by the Republic of Nauru, the majority of which were thought to be shell banks. In April 2003, U.S. Treasury and FinCEN issued a proposed rule pursuant to section 311 to invoke Special Measure Five, prohibiting U.S. financial institutions from opening or maintaining any payable-through or correspondent accounts involving a Nauru financial institution.

The Anti-Money Laundering Act 2003 AMLA consolidates the Anti-Money Laundering Act of 2001 and the Anti-Money Laundering (Amendment) Act of 2001. The amended legislation gives the Nauru FIU, the Financial Institutions Supervisory Authority, if and when it is established, authority to cooperate with foreign states, including the power to obtain search warrants, track property, and issue monitoring orders. The amended legislation also gives the Director of Public Prosecutions the power to freeze and seize assets relating to money laundering. Legislative amendments to the Corporation Act 1972 were also enacted in 2003 to abolish offshore banking and eliminate all bank secrecy provisions. Nauru took further steps to publish the list of corporations that recently held Nauruan offshore banking licenses.

Following the election of a reformist government in 2004, Nauru enacted a series of legislative acts to reform its anti-money laundering laws and respond to deficiencies identified by the FATF. In 2004, the GON passed the Anti-Money Laundering Act of 2004, the Banking (Amendment) Act of 2004, the Corporation (Amended) Act of 2004, the Financial Transactions Reporting Act of 2004, the Counter-Terrorism and Transnational Organized Crime Act of 2004, the Mutual Assistance in Criminal Matters Act of 2004, and the Proceeds of Crime Act 2004.

The Anti-Money Laundering Act 2004 enacted on September 6, 2004 expands the coverage and scope of anti-money laundering requirements to banks, money remitters, securities and investment businesses, insurance, real estate agents, dealers in precious metals and stones, trust or company service providers, and legal entities. The new legislation provides the powers of search and seizure to law enforcement, and enables freezing and forfeiture of tainted property and terrorist property. The Act also allows mutual assistance in relation to anti-money laundering investigations with foreign states.

At the October 2004 Plenary, the FATF recommended that its member states withdraw all countermeasures against Nauru in view of Nauru’s having taken several significant steps to ensure that offshore banks previously licensed in Nauru no longer existed and no longer conducted banking activity. As of January 1, 2005, The United States had not conformed to the FATF recommendation to withdraw its countermeasure. The FATF also invited Nauru to submit an implementation plan with benchmarks and timetables regarding the steps it would take to cure the remaining deficiencies of its anti-money laundering regime.

A technical team from the Pacific Island Forum Secretariat (PIF) will travel to Nauru in early 2005 to assist Nauru in developing and implementing its anti-money laundering regime. The PIF technical team will assist in establishing Nauru's FIU- the Financial Institutions Supervisory Authority- and will provide training for prosecutors and investigators of financial crimes.

Nauru has observer status within the Asia/Pacific Group on Money Laundering and recently joined the United Nations. Nauru has signed, but not yet ratified, the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime.

The Government of Nauru should continue to work with the Financial Action Task Force (FATF) to ensure that its anti-money laundering regime comports with the FATF's revised Forty Recommendations and its nine Special Recommendations on Terrorist Financing, and that whatever remnant of its offshore financial sector remains is regulated consonant with those standards. Nauru should become a party to the UN International Convention for the Suppression of the Financing of Terrorism, and to all UN Conventions pertaining to terrorism. Nauru should also ratify the UN Convention against Transnational Crime and accede to the UN Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances.

Nepal

Nepal is not a regional financial center and there are no indications that Nepal is used as an international money laundering center. The Government of Nepal (GON) has not criminalized money laundering, and legislation on money laundering, mutual legal assistance and witness protection, developed as part of the GON's Master Plan for Drug Abuse Control, remained stalled in 2004. Since the dissolution of Parliament in May 2002, any new laws must be passed by royal ordinance, which must be renewed after six months. Draft anti-money laundering legislation has been prepared but has not yet passed into law or ordinance. There were no prosecutions or even arrests for money laundering during 2004.

Banks are required to record the identity of customers engaging in significant transactions. In particular, all transactions which involve payments in foreign currency require prior approval by the NRB (Nepal's Central Bank). Any Nepali citizen who wishes to open a foreign currency account must obtain a license to do so from the NRB, and Nepali citizens wishing to take currency overseas must obtain approval from the NRB by clearly outlining the purpose for transferring funds overseas. The NRB normally approves small amounts (in USD thousands) for travel, education and medical treatment. For business transactions, however, a letter of credit from a bank recognized by the NRB must be opened by documenting the transaction details. Banks have provided records regarding bank accounts of individuals and institutions to assist in GON investigations into corruption by senior officials. Nepal has enacted bank secrecy laws that prevent the disclosure of client and ownership information to individuals and law enforcement authorities; however, the present law does not prevent the disclosure of client and ownership information to the NRB, courts, auditors or the Commission for Investigation of Abuse of Authority (CIAA). Nepal has explored the development of an offshore financial sector, but one does not exist at present.

The NRB has the authority to freeze and seize assets related to criminal investigations. However, the GON's ability to identify and trace assets is hindered by a lack of a computerized information sharing system. For example, many bank branch offices do not have computers. The Nepal Police also have the authority to seize any goods or property related to criminal investigations.

A hawala system of informal remittances (called the hundi system in Nepal) is widespread. Expatriate Nepali workers—the primary source of hundi transactions—are often employed in the Gulf, Malaysia, and other countries that have introduced new, more stringent regulations on informal remittance

systems. Nepali workers in India still utilize hawala-hundi transactions. There have been no significant initiatives to regulate the system in Nepal. However, GON officials claim that changes in the laws of other countries have forced some Nepalese hundi users to conduct their transactions through formal banking institutions. In Nepal, the hundi system is linked to issues of capital flight, tax avoidance, and corruption.

Nepal has not passed any laws criminalizing terrorist financing. However, the Terrorist and Destructive Activities Act and the Bank and Financial Institutions Ordinance 2004, working in tandem, reportedly criminalize terrorist financing. Under the Bank and Financial Institutions Ordinance 2004, the NRB has the authority to seize any assets deemed to have been used in terrorist activities. No assets belonging to individuals or entities on the UNSCR 1267 Sanctions Committee's consolidated list have been identified in Nepal. Additionally, the State Offense Act of 1989 authorizes security forces to arrest and prosecute any Nepalese or foreign citizen involved in any criminal activities against the state or associated with foreign terrorist activity. The GON made one arrest for terrorist financing in 2004.

The Government of Nepal is a party to the 1988 UN Drug Convention. It has also signed, but not yet ratified, the UN Convention against Transnational Organized Crime. Nepal should proceed with ratification of this Convention. Nepal should also sign and ratify the UN International Convention for the Suppression of the Financing of Terrorism. Legislative action in Nepal has clearly been handicapped by the lack of a sitting Parliament. As soon as practicable, Nepal should enact the provisions of its 2002 Master Plan for Drug Control, including anti-money laundering and terrorist finance legislation, and develop a comprehensive anti-money laundering regime that would require the mandatory filing of suspicious transaction reports (and clarify that this may be done without violating current bank secrecy provisions), foster international cooperation in the area of anti-money laundering initiatives, and establish a financial intelligence unit. It also should initiate efforts to regulate its domestic hundi dealers.

The Netherlands

The Netherlands is a major financial center and as such is an attractive target for the laundering of funds generated from a variety of illicit activities. Activities involving money laundering are often related to the sale of heroin, cocaine, cannabis, or synthetic and designer drugs (such as ecstasy). Activities involving financial fraud are believed to generate a considerable portion of domestic money laundering. Much of the money laundered in the Netherlands is likely owned by major drug cartels and other international criminal organizations and much of it flows through the formal financial sector. There are no indications of syndicate-type structures in organized crime or money laundering, and there is virtually no black market for smuggled goods in the Netherlands. Although under the Schengen Accord there are no formal controls on the borders with Germany and Belgium, the Dutch authorities run special operations in the border areas designed to keep smuggling to a minimum. The Netherlands is not an offshore financial center nor are there any free trade zones in the Netherlands.

In 1994, the Government of the Netherlands (GON) criminalized money laundering related to all crimes, although prosecutors first had to prove the predicate offense before prosecuting for money laundering. In December 2001, legislation was enacted making facilitating, encouraging, or engaging in money laundering a separate criminal offense, regardless of the source of the funds, easing somewhat the government's burden of proof regarding the criminal origins of proceeds. Under the law, the GON needs only to prove that the proceeds "apparently" originated from a crime; self-laundering is also covered. The penalty for deliberate acts of money laundering is a maximum of four years' imprisonment and a maximum fine of 45,000 euros, while liable acts of money laundering (of people who do not know first-hand of the criminal nature of the origin of the money, but should have reason to suspect it) are subject to a maximum imprisonment of one year and a fine no greater than

45,000 euros. Repeated convictions for money laundering offenses may be punished with a maximum imprisonment of six years and a maximum fine of 45,000 euros, and those convicted may also have their professional licenses revoked. In addition to criminal prosecution for money laundering offenses, money laundering suspects can also be charged with participation in a criminal organization (Article 140 of the Penal Code), violations of the financial regulatory acts, violations of the Sanctions Act, or noncompliance with the obligation to declare unusual transactions according to the Economic Offenses Act.

The Netherlands has comprehensive money laundering legislation. The Services Identification Act (WID) and the Disclosure Act set forth identification and reporting requirements. All financial institutions in the Netherlands, including banks, bureaux de change, casinos, life insurance companies, securities firms, stock brokers, and credit card companies, are required to report cash transactions over 15,000 euros, as well as any less substantial transaction that appears unusual, a broader standard than “suspicious” transactions, to the Office for Disclosure of Unusual Transactions (MOT), the Netherlands’ Financial Intelligence Unit (FIU). In December 2001, the reporting requirements were expanded to include trust companies, financing companies, and commercial dealers of high-value goods. In June 2003, notaries, lawyers, real estate agents/intermediaries, accountants, business economic consultants, independent legal advisers, trust companies and other providers of trust related services, and tax advisors were added. Reporting entities that fail to file reports with the MOT may be fined 11,250 euros or be imprisoned up to two years. Under the Identification of Services Act (WID), all those that are subject to reporting obligations must identify their clients, including the identity of ultimate beneficial owners, either at the time of the transaction or at some point prior to the transaction, before providing financial services.

Financial institutions are also required by law to maintain records necessary to reconstruct financial transactions for at least seven years. The requirements also have been applicable to the Central Bank of the Netherlands (to the extent that it provides covered services) since 1998. There are no secrecy laws or fiscal regulations that prohibit Dutch banks from disclosing client and owner information to bank supervisors, law enforcement officials, or tax authorities. Financial institutions and all other institutions under the reporting and identification acts, and their employees, are specifically protected by law from criminal or civil liability related to cooperation with law enforcement or bank supervisory authorities. Furthermore, current legislation requires Customs authorities to report unusual transactions to the MOT; however, the Dutch do not currently have a currency declaration requirement for incoming travelers.

The Money Transfer and Exchange Offices Act, which was passed in June 2001, requires money transfer offices, as well as exchange offices, to obtain a permit to operate, and subjects them to supervision by the Central Bank. Every money transfer client has to be identified.

The Central Bank of the Netherlands, which merged with the Pension and Insurance Chamber in April 2004, and the Financial Markets Authority, as the supervisors of the Dutch financial sector, regularly exchange information nationally and internationally. Sharing of information by Dutch supervisors does not require formal agreements or memoranda of understanding (MOUs).

The MOT, which was established in 1994, reviews and analyzes the unusual transactions and cash transactions filed by banks and financial institutions. The MOT receives over 85 percent of unusual transaction reports electronically through its secure website. It forwards suspicious transaction reports with preliminary investigative information to the Police Investigation Service and to the office for operational support of the National Public Prosecutor for MOT cases (BLOM). In 2002, the MOT received 137,339 reports and forwarded 24,741 to the BLOM as suspicious transactions. In 2003, the MOT received 177,157 unusual reports (totaling over 1.5 billion euros), of which 37,748 were flagged by the MOT as suspicious transactions for further investigation by the BLOM. The 30 percent increase in reports is attributed to the new reporting requirements for money transfer businesses and high value

goods dealers as well as an increase in the total amount of money transfers. The average amount reported was 41,000 euros in 2003, an increase from the 34,800 euros reported (on average) in 2002.

In order to facilitate the forwarding of suspicious transactions, the MOT and BLOM created an electronic network called Intranet Suspicious Transactions (IST). Also, a secure website for the actual reporting of unusual transactions by financial institutions was developed, thus completing the electronic infrastructure. Furthermore, fully automatic matches of data with the police databases are included with the unusual transaction reports forwarded to the BLOM. Since the money laundering detection system also covers areas outside the financial sector, the system is used for detecting and tracing terrorist financing activity.

On January 1, 2003, the MOT and BLOM formed a special unit (the MBA-unit) to work together to analyze data generated from the IST. Once the data is analyzed by the MBA-unit, it forwards reports to the police. In 2003, the MBA-unit sent 275 reports to the police for further investigations. Future plans are for the MBA-unit to focus on more project-based strategic type work by analyzing transaction reports that fit profiles provided by the police.

In 2003, BLOM opened 559 investigations, which involved 13,171 transactions. Of these 559 investigations, 75 were related to actions by the Public Prosecutor Hit-And-Run Money Laundering (HARM) team, established in 2001, resulting in the confiscation of approximately 8.1 million euros and the arrest of 78 suspects. Both the MOT and BLOM are internationally recognized institutions that play a major role in the Egmont Group. BLOM provides the anti-money laundering division of Europol with suspicious transaction reports, and Europol applies the same analysis tools as BLOM.

In 2004, an evaluation of the anti-money laundering reporting system, commissioned by the Minister of Justice, was published. In response to the report, the GON announced a number of measures to enhance the effectiveness of the anti-money laundering system. These measures include: an instruction on money laundering for the Public Prosecution Service, new indicators for reporting requirements, amendments to anti-money laundering legislation (Disclosure Act and the Identification of Services Act), and an agreement of cooperation between the National Police and the Dutch Internal Revenue Service Investigation Office. These measures are currently being implemented or will take effect during the course of 2005.

The Netherlands has enacted legislation governing asset forfeitures. The 1992 Asset Seizure and Confiscation Act enables the authorities to confiscate assets that are illicitly obtained or otherwise connected to criminal acts. The legislation was amended in 2003 to improve and strengthen the options for identifying, freezing, and seizing criminal assets. The police and several special investigation services are responsible for enforcement in this area. These entities have adequate powers and resources to trace and seize assets. Asset seizure has been fully integrated into all law enforcement investigations into serious crime. Statistics provided by the Office of the Public Prosecutor show that the amount of assets seized in 2003 amounted to 10.1 million euros (\$11 million), compared to 7.9 million euros (\$10.5 million) in 2002. The United States and the Netherlands have an agreement on asset sharing dating back to 1994. The Netherlands also has a treaty on asset sharing with the UK, as well as an agreement with Luxembourg.

In June 2004, the Minister of Justice sent an evaluation study to the Parliament on specific problems encountered with asset forfeiture in large, complex cases. In response to this report, the GON announced several measures to improve the effectiveness of asset seizure enforcement, including steps to increase expertise in the financial and economic field, assign extra public prosecutors to improve the coordination and handling of large, complex cases, and establish a specific asset forfeiture fund.

Terrorist financing is a crime in the Netherlands. The “Sanction Provision for the Duty to Report on Terrorism” was passed in 1977 and amended in June 2002, to implement European Union (EU) Regulation 2580/2001 and UNSCR 1373. This ministerial decree provides authority to the

Netherlands to identify, freeze, and seize terrorist finance assets. The decree also requires financial institutions to report to the MOT all transactions (actually carried out or intended) that involve persons, groups, and entities that have been linked, either domestically or internationally, with terrorism. Any terrorist crime will automatically qualify as a predicate offense under the Netherlands “all offenses” regime for predicate offenses of money laundering. Involvement in financial transactions with individuals and/or organizations designated nationally, by the EU, or by the UN has been made a criminal offense. The Dutch Finance Ministry, in close coordination with the Foreign Affairs Ministry, distributes lists of designated entities to financial institutions and relevant government bodies (including local tax authorities). Freezing of assets is an administrative procedure. The Netherlands has frozen more terrorist related assets than any other EU member state.

The Act on Terrorist Offenses took effect on August 10, 2004. The new Act introduces Article 140A of the Criminal Code, which criminalizes participation in an organization when the intent is to commit acts of terrorism, and defines participation as membership or providing provision of monetary or other material support. Article 140A carries a maximum penalty of fifteen years’ imprisonment for participation in and life imprisonment for leadership of a terrorist organization. The Netherlands Security Service investigates terrorist financing, and is cooperating with law enforcement entities that are experienced in this area.

Dutch civil law requires registration of all active foundations in the registers of the Chambers of Commerce. Each foundation’s formal statutes (creation of the foundation must be certified by a notary of law) must be submitted to the Chambers. Charitable institutions also register with, and report to, the tax authorities in order to qualify for favorable tax treatment. Approximately 15,000 organizations (and their managements) are registered in this way. The organizations have to file their statutes, showing their purpose and mode of operations, and submit annual reports. Samples are taken for auditing. Data about informal hawala banking as a potential money laundering/terrorist financing source is still scarce. The Ministry of Justice has ordered a study in this field, to be published shortly.

The Netherlands is in full compliance with all Financial Action Task Force (FATF) Recommendations, with respect to both legislation and enforcement. The Netherlands also complies with the EU Second Money Laundering Directive, and in some areas, is ahead of the EU legislation (such as full money laundering controls on money remitters, including licensing and identification of customers). In December 2003, the International Monetary Fund (IMF) conducted an assessment of the Netherlands’ anti-money laundering and counterterrorist financing system. The Report on the Observance of Standards and Codes (ROSC), released in September 2004, indicates that the Netherlands has a sound anti-money laundering and counterterrorist financing framework.

In December 2004, the Dutch EU Presidency reached a political agreement within the EU on the Third Money Laundering Directive. The Dutch have already implemented some obligations resulting from this directive, such as effective supervision of currency exchange offices and trust companies. In November 2004, the Dutch EU Presidency also reached political agreement within the EU on a regulation controlling cross-border cash movements.

The MOT supervised the PHARE Project for the European Union (March 2002-December 2003). The PHARE Project was the European Commission’s Anti-Money Laundering Project for Economic Reconstruction Assistance to Estonia, Latvia, Lithuania, Poland, the Czech Republic, Slovakia, Hungary, Slovenia, Romania, Bulgaria, Cyprus, and Malta. The purpose of the project was to provide support to Central and Eastern European countries in the development and/or improvement of anti-money laundering regulations. For this purpose, the MOT established a project team and a consortium of international experts. Although the PHARE project concluded in December 2003, the MOT will still move forward with the enhancement of the FIU.NET Project, (an electronic exchange of current information between European FIUs by means of a secure web). Currently, there are eight countries

connected to the FIU.NET in Central and Eastern Europe. A representative of the Dutch MOT is assisting the Surinamese government in establishing a FIU.

The United States enjoys good cooperation with the Netherlands in fighting international crime, including money laundering. In September 2004, the United States and the Netherlands signed two agreements in the area of mutual legal assistance and extradition, stemming from the agreements that were concluded in 2003 between the EU and the United States. One of the amendments to the existing bilateral agreement is the exchange of information on bank accounts. The MOT has established close links with the U.S Treasury's FinCEN and is also involved in efforts to expand international cooperation between disclosure offices.

The Netherlands is a member of the FATF and participates in the Caribbean Financial Action Task Force as a Cooperating and Supporting Nation. The MOT is a member of the Egmont Group. MOT has concluded formal information sharing MOUs with Belgium, Aruba and the Netherlands Antilles. The Netherlands is a party to the 1988 UN Drug Convention and the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime. The Dutch participate in the Basel Committee, and have endorsed the Committee's "Core Principles for Effective Banking Supervision." The Netherlands is a party to the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime.

The Netherlands should continue the strong enforcement of its anti-money laundering program and its leadership in the international arena.

Netherlands Antilles

The Netherlands Antilles, which has autonomous control over its internal affairs, is a part of the Kingdom of the Netherlands. The Netherlands Antilles is comprised of Curacao, Bonaire, the Dutch part of Sint Maarten/St. Martin, Saba, and Sint Eustatius. The Government of the Netherlands Antilles (GONA) is located in Willemstad, the capital of Curacao, which is also the financial center of the five islands. Narcotics-trafficking and a lack of border control between Sint Maarten and St. Martin create opportunities for money launderers in the Netherlands Antilles. The Netherlands is reported to be the most significant source of suspicious transactions. Of note is the surge over the past few years of remittance transfers from the Netherlands.

The Netherlands Antilles has a significant offshore financial sector with 39 international banks and approximately 50 trust companies providing financial and administrative services to their international clientele, including approximately 18,750 international companies, mutual funds, and international finance companies. The laws and regulations on bank supervision state that international banks must have a physical presence on the island and hold records there. The Central Bank supervises the international banks. Authorities in other countries supervise some mutual funds. In early 2003, legislation was introduced to transfer supervision of the trust sector to the Central Bank. International corporations may be registered using bearer shares. The practice of the financial sector in the Netherlands Antilles is for either the bank or the company service providers to maintain copies of bearer share certificates for international corporations, which include information on the beneficial owner(s). There is a proposal to require that the name of the ultimate beneficial owner of the bearer share be recorded in a registry and made accessible to law enforcement officials upon a treaty-based request for the information.

The free trade zones are minimally regulated; however, administrators and businesses in the zones have indicated an interest in receiving guidance on detecting unusual transactions.

Money laundering is a crime. Legislation in 1993 and subsequent interpretations regarding the "underlying crime" establish that prosecutors do not need to prove that a suspected money launderer also committed an underlying crime in order to obtain a money laundering conviction. Thus, it is

sufficient to establish that the money launderer knew, or should have known, of the money's illegal origin.

In recent years, the GONA has taken steps to strengthen its anti-money laundering regime by expanding suspicious activity reporting requirements to gem and real estate dealers; introducing indicators for the reporting of unusual transactions for the gaming industry; issuing guidelines to the banking sector on detecting and deterring money laundering; and modifying existing money laundering legislation that penalizes currency and securities transactions, by including the use of valuable goods. The 2002 "National Ordinance on the Supervision of Fiduciary Business," institutes a Supervisory Board that oversees the international financial sector. At the same time, GONA subjected the members of this sector to know-your-customer rules. A GONA interagency anti-money laundering working group cooperates with its Kingdom counterparts.

Onshore banks are increasingly using their discretionary authority to protect themselves against money laundering. The largest commercial bank lowered its limits on moneygrams to \$2,000. Banks are reluctant to do business with the Internet gaming providers, provoking complaints from that sector. In 2003 Curacao was reported to have six sports booking sites and 100 Internet casinos. The MOT NA has issued a manual for casinos on how to file reports and has started to install software in casinos that will allow reports to be submitted electronically.

In May 2002 cross-border currency reporting legislation came into force. The law specifies reporting procedures for an individual bringing in or taking out more than NAF 20,000 (approximately \$11,000) in cash or bearer instruments, and also applies to courier services. Declaration of currency exceeding the limit must include origin and destination. There is a fine of up to NAF 500,000 (approximately \$280,900) or one year in prison. In July 2003, Sint Maarten Customs seized \$11,500 from a traveler, and in August 2003, \$20,000 in undeclared currency was seized from a Curacao passenger.

Unusual transactions are by law reported to the Financial Intelligence Unit (FIU), the Netherlands Antilles Reporting Center, Meldpunt Ongebruikelijke Transacties (MOT NA). On June 1, 2003, the Central Bank issued new consolidated reporting guidelines, replacing those of 1996. These guidelines are more closely focused on banks, insurance companies, pensions funds, money transfer services, and financial administrators now specifically include counterterrorism detectors. The Central Bank also established a Financial Integrity Unit to monitor corporate governance and market behavior. Entities under supervision must submit an annual statement of compliance.

The current staff of seven at the MOT NA continues to work diligently to enhance the effectiveness and efficiency of its reporting system. Significant progress has been made in automating suspicious activity reporting; in 2002 reporting institutions sent 99.2 percent of their reports to the MOT NA electronically. All are now done on-line, and most of the matches with external databases will be done electronically. The MOT NA transmits information electronically to the police. On October 18, 2002, the GONA published new indicators for the reporting of unusual transactions with regard to terrorism financing. The new indicators require that unusual transactions reported to the police or judicial authorities in connection with money laundering or the financing of terrorism must also be reported to the MOT NA. This requirement also extends to unusual transactions relating to credit cards, money transfers and game of chance transactions.

In 2000, the National Ordinance on Freezing, Seizing, and Forfeiture of Assets Derived from Crime went into effect. The law allows the prosecutor to seize the proceeds of any crime once the crime is proven in court.

In January 2002, the GONA enacted legislation allowing a judge or prosecutor to freeze assets related to the Taliban cum suis and Usama Bin Ladin cum suis (cum suis means that all companies and persons connected with the Taliban or Usama Bin Ladin are included). The legislation contains a list of individuals and organizations suspected of terrorism. The Central Bank instructed financial

institutions to query their databases for information on the suspects and to immediately freeze any assets that were found. In October 2002, the Central Bank instructed the financial institutions under its supervision to continue these efforts and to consult the UN website for updates to the list.

Netherlands Antilles law allows the exchange of information between the MOT NA and foreign FIUs by means of memoranda of understanding and by treaty. The MOT NA's policy is to answer requests within 48 hours after receipt, although this timeframe is not always met. An agreement was signed in April 2002 between the Netherlands and the United States, which is also applicable to the Netherlands Antilles, for the exchange of information with respect to taxes. This agreement was scheduled to come into force in January 2004. The Mutual Legal Assistance Treaty between the Netherlands and the United States also applies to the Netherlands Antilles. In September 2003, the U.S. Attorney in St. Thomas indicted five defendants, including one from Sint Maarten, for charges including laundering funds totaling \$68 million. Cooperation with Sint Maarten under the MLAT was an important element in the investigation.

The MOT NA is an active member of the Egmont Group. The Netherlands Antilles is a member of the Caribbean Financial Action Task Force (CFATF), and as part of the Kingdom of the Netherlands, the Netherlands Antilles participates in the FATF. In 1999, the Netherlands extended application of the 1988 UN Drug Convention to the Netherlands Antilles. The Kingdom of the Netherlands became a party to the UN International Convention for the Suppression of the Financing of Terrorism in 2002. In accordance with Netherlands Antilles law, which stipulates that all the legislation must be in place prior to ratification, the GONA is preparing legislation that will enable the Netherlands Antilles to ratify the Convention.

The Government of the Netherlands Antilles has shown a commitment to combating money laundering by establishing a solid anti-money laundering regime. An increase to the MOT NA staff is particularly notable. The Netherlands Antilles should continue its focus on increasing regulation and supervision of the offshore sector and free trade zones and pursuing money laundering investigations and prosecutions. The Netherlands Antilles should criminalize the financing of terrorists and terrorism, and should enact the necessary legislation to implement the UN International Convention for the Suppression of the Financing of Terrorism.

New Zealand

New Zealand is not a major regional or offshore financial center. It has a small number of banks and financial institutions whose operations can be effectively monitored by government authorities. There is evidence that some money laundering does take place, although not to a significant extent. Narcotics proceeds and commercial crime are the primary sources of illicit funds. International organized criminal elements do operate in New Zealand.

A 1995 amendment to New Zealand's Crimes Act 1961 criminalizes laundering the proceeds of a serious offense, if the launderer knew or believed that the proceeds were derived from a serious offense. In 2003, the law was extended to apply to those who are reckless as to whether the laundered property is the proceeds of a serious offense. The Financial Transaction Reporting Act 1996 contains obligations for a wide range of financial institutions, including banks, credit unions, casinos, real estate agents, lawyers, and accountants. These entities must identify clients, maintain records, and report suspicious transactions. The Act also contains a "safe harbor" provision and requires the reporting of large cross-border currency movements.

The Terrorism Suppression Act, enacted in October 2002, criminalizes terrorist financing. This Act also made the necessary changes to the existing law to enable New Zealand to ratify the UN International Convention for the Suppression of the Financing of Terrorism. The Act gives the government wider authority to designate entities as terrorist organizations and freeze their assets. The

Prime Minister is responsible for making the designation upon a recommendation prepared by the New Zealand Police. Once the designation is made, the New Zealand Police informs banks and other appropriate parties. A public notice is also published. The Police are developing additional procedures to implement the provisions of the Terrorism Suppression Act.

New Zealand has consistently implemented financial controls against entities included on the UN 1267 Sanctions Committee consolidated list. It has not yet identified in New Zealand any assets from these entities.

New Zealand and the United States do not have a Mutual Legal Assistance Treaty. However, New Zealand legislation applies certain provisions of the Mutual Assistance in Criminal Matters Act 1992 unilaterally to the United States. In practice, New Zealand and U.S. authorities have had a good record of cooperation and information sharing in this area.

New Zealand is a party to the 1988 UN Drug Convention, and in July 2002, ratified the UN Convention against Transnational Organized Crime. New Zealand is a member of the Financial Action Task Force, the Asia/Pacific Group on Money Laundering, and the Pacific Islands Forum. Its Financial Intelligence Unit is a member of the Egmont Group. The New Zealand government has played a leadership role in promoting efforts to combat money laundering in the South Pacific region, providing substantial amounts of technical assistance and training.

The Government of New Zealand has established a comprehensive anti-money laundering regime. It should build upon this base by continuing its implementation of its Terrorism Suppression Act. Additionally, New Zealand should continue its recognized leadership in the international arena.

Nicaragua

Nicaragua is not a regional financial center, but continues to be a major drug transit zone. This situation makes Nicaragua's financial system an attractive target for narcotics-related money laundering. Nicaraguan officials have expressed concern that, as neighbors have tightened their money laundering laws, established Financial Intelligence Units (FIUs) and taken other actions, more illicit money has moved into the vulnerable Nicaraguan financial system. However, this concern has not resulted in much action on the part of the government. While Nicaragua has pledged to fight terrorist financing, money laundering and other financial crimes, few resources have been allocated to this effort. Nicaragua continues to exercise weak oversight and regulatory control over its financial system. Money laundering unrelated to drug-trafficking is legally undefined, and all attempts to correct this deficiency have been stalled in the National Assembly for years.

Nicaragua does not permit offshore banks to operate as such, but it does permit them to operate through nationally chartered entities (such as a Panamanian bank currently working to establish a savings and loan company under a Nicaraguan charter). Bank and company bearer shares are permitted. Nicaragua has a well-developed indigenous gaming industry, which it is only now moving to control. There are no known offshore or Internet gaming sites in Nicaragua. Nicaragua does not have any "due diligence" or "banker negligence" laws to hold bank officials responsible for their institutions' money laundering.

In 1999, Nicaragua passed Law 285 that requires banks to report cash deposits over \$10,000 to the Superintendence of Banks, which then forwards the reports for analysis to the Commission of Financial Analysis (CAF). The CAF is not a financial intelligence unit. On paper, the CAF is composed of representatives from various elements of law enforcement and banking regulators, and is responsible for detecting money laundering trends, coordinating with other agencies and reporting its findings to Nicaragua's National Anti-Drug Council. In fact, the Commission is a non-functioning entity grossly under-funded and understaffed. Even if the CAF were operational, it is unlikely that it would be effective. In Nicaragua, banks tend to close the suspicious accounts, even as they are

notifying the Bank Superintendence, thereby allowing the money launderers to escape with their capital intact.

Legislation that would improve Nicaragua's anti-money laundering regime has been stalled in the National Assembly for years. Reportedly, this legislation, an amended drug law, would establish money laundering as an autonomous crime, require more stringent reporting of large and/or suspicious bank deposits, and reform and improve the CAF. It is unlikely that this reform legislation or any other major initiative in this area will make it out of the Assembly in the near or medium term.

Draft counterterrorism legislation, which would criminalize terrorist financing, is under consideration by the National Assembly, but remains far from passage. It is possible that many elements of terrorist financing can be prosecuted under existing laws. Nicaragua has the authority—through five Bank Superintendence administrative decrees—to identify, freeze, and seize terrorist-related assets, but has not, as yet, identified any such cases. Reportedly, there are no hawala or other similar alternative remittance systems operating in Nicaragua, and the Nicaraguans have not detected any use of gold, precious metals, or charitable organizations to disguise such transactions.

Nicaragua is currently negotiating a financial information sharing agreement with Costa Rica, largely based on model legislation produced by the Central American Parliament. It does not have such an agreement with the United States, but it cooperated, on an ad hoc basis, in a number of cases in 2004. This cooperation has enabled Nicaragua to benefit from several U.S. asset seizure cases and to recover \$2.7 million stolen by the former Nicaraguan tax director, and used to purchase properties in Florida. Under Law 285, 20 percent of the proceeds from drug-related asset seizures go to each of the following institutions: the Ministry of Health, the National Drug Directorate, the National Police narcotics section, the penitentiary system, and non-governmental organization drug prevention programs.

Nicaragua is a party to the 1988 UN Drug Convention. The country has also ratified the UN Convention on the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime. Nicaragua is a member of the Organization of American States and the Caribbean Financial Action Task Force.

The Government of Nicaragua should expand the predicate crimes for money laundering beyond narcotics-trafficking and should criminalize terrorist financing. It should also make it a priority to allocate the resources needed to develop a fully functioning financial intelligence unit and to fully implement its anti-money laundering regime. Nicaragua should take steps to immobilize its bearer shares and adequately regulate its gambling industry. These steps would significantly strengthen the country's financial system against money laundering and terrorist financing, and would ensure compliance with relevant international standards regarding anti-money laundering controls.

Niger

Niger is not a regional financial center. While there are criminal activities that take place within the region, there is no evidence to suggest that money laundering activities take place on a large scale within Niger. Seven small commercial banks and one modest-sized local bank operate in Niger. Black market currency exchanges operate freely, and currency easily flows unregulated through Niger's porous borders. Most economic activity takes place in the informal sector.

The Central Bank of West African States (BCEAO), based in Dakar, Senegal, is the Central Bank for the countries in the West African Economic and Monetary Union (WAEMU): Benin, Burkina Faso, Guinea-Bissau, Cote d'Ivoire, Mali, Niger, Senegal, and Togo, all of which use the French-backed CFA franc currency. All bank deposits over approximately \$7,700 made in BCEAO member countries must be reported to the BCEAO, along with customer identification information. In addition, all

foreign currency exchanges over 1 million CFA (approximately \$1,900) require written authorization from the Niger Ministry of Finance.

In September 2002, the WAEMU Council of Ministers, which oversees the BCEAO, issued a directive requesting that each member country set up a national committee under their Minister of Finance to deal with financial information as it relates to money laundering. The BCEAO would be in charge of coordinating such committees. Each member country is now responsible for putting legislation in place to implement this directive, and the legislation is expected to be harmonized regionally. On November 27, 2003, the Niger Council of Ministers adopted a bill that formally prohibits money laundering and puts into place structures and regulations to deter such activity. The

bill became law in June 2004 after passage by the National Assembly. When in force, this law will bring Niger into conformity with the rest of the WAEMU nations. The bill called for the creation of a central office at the BCEAO for the coordination of money laundering issues and formally obliges all financial institutions in Niger to report suspicious activity. The office was established in 2004. Currently, banks in Niger report suspicious activity to the BCEAO and to local law enforcement, although there are no legal requirements to do so. In 2002, one bank account in Niger was frozen due to its relationship to illegal financial activity.

The WAEMU Council of Ministers also issued a directive in September 2002 on the topic of terrorist financing, requesting member countries to pass legislation requiring banks to freeze the accounts of any persons or organizations on the UN 1267 Sanctions Committee's consolidated list. In addition, the Government of Niger (GON) and the BCEAO actively comply with U.S efforts to combat terrorist financing. When notified of persons or entities designated by the UN 1267 Sanctions Committee's consolidated list or the list of Specially Designated Global Terrorists designated by the U.S. pursuant to E.O 13224, the BCEAO promptly disseminates information to all financial institutions in Niger. Since January 1, 2004, there have been no reported cases of money laundering or terrorist financing in Niger.

In 2000, the Economic Community of West African States (ECOWAS) established the Intergovernmental Group for Action Against Money Laundering (GIABA), based in Dakar, Senegal. In November 2002, GIABA hosted an anti-money laundering seminar for representatives of 14 ECOWAS members, including Niger. In July 2002, Niger participated in the 2002 West African Joint Operation Conference (WAJO) that promotes regional law enforcement cooperation against drug trafficking, terrorism, and money laundering. In April 2004, The National Assembly adopted a domestic law on money laundering to implement GIABA. In September 2004, Niger ratified the UN Convention against Transnational Organized Crime and acceded to the UN International Convention for the Suppression of the Financing of Terrorism.

The Government of Niger should continue to implement all the provisions of the 2004 anti-money laundering laws.

Nigeria

The Federal Republic of Nigeria is the most populous country in Africa and is West Africa's largest democracy. Nigeria's large economy is also a hub of trafficking of persons and narcotics. Nigeria is a major drug-transit county. Nigeria is a center of criminal financial activity for the entire continent. Individuals and criminal organizations have taken advantage of the country's location, weak laws, systemic corruption, lack of enforcement, and poor economic conditions to strengthen their ability to perpetrate all manner of financial crimes at home and abroad. Nigerian criminal organizations have proven adept at devising new ways of subverting international and domestic law enforcement efforts and evading detection. Their success in avoiding detection and prosecution has led to an increase in many types of financial crimes, including bank fraud, real estate fraud, identity theft, and advance fee

fraud. Despite years of government effort to counter rampant crime and corruption, Nigerians continue to be plagued by crime. The Government of Nigeria (GON) has made efforts to counteract these crimes but, despite some successes in 2004, socio-economic conditions have impeded its efforts.

In addition to narcotics-related money laundering, advance fee fraud is a lucrative financial crime that generates hundreds of millions of illicit dollars annually for criminals. Initially, Nigerian criminals made advance fee fraud infamous; more recently, nationals of many African countries and from a variety of countries around the world have begun to perpetrate advance fee fraud. This type of fraud is referred to internationally as “Four-One-Nine” fraud (419 is a reference to the fraud section in Nigeria’s criminal code). While there are many variations, the main goal of 419 fraud is to deceive victims into payment of an advance fee by persuading them that they will receive a very large benefit in return. These “get rich quick” schemes have ended for some victims in monetary losses, kidnapping, or murder. Through the Internet, businesses and individuals around the world have been and continue to be targeted by perpetrators of 419 scams.

In June 2001, the Financial Action Task Force (FATF) placed Nigeria on its list of noncooperative countries and territories (NCCT) in combating money laundering. Among the deficiencies cited by the FATF were the failure to criminalize money laundering for offenses other than those related to narcotics, the lack of customer identification requirements for over-the-counter transactions under a threshold of \$100,000, inadequate suspicious transaction reporting requirements, the absence of anti-money laundering measures applied to stock brokerage firms and other financial institutions, and a high level of government corruption. In April 2002, FinCEN, the U.S. financial intelligence unit, issued an advisory to inform banks and other financial institutions operating in the United States of serious deficiencies in the anti-money laundering regime of Nigeria.

In June 2002, the FATF stated that it would consider recommending countermeasures against Nigeria at its October 2002 plenary if Nigeria did not engage with the FATF Africa Middle East Review Group and move quickly to enact legislative reforms that addressed FATF concerns. In October 2002, the FATF recommended countermeasures against Nigeria if the Government of Nigeria (GON) did not enact sufficient legislative reforms by December 15, 2002. That same month, Nigeria submitted an anti-money laundering implementation plan to the FATF, but it was deemed insufficient to justify delisting Nigeria.

On December 14, 2002, the National Assembly of Nigeria passed three pieces of anti-money laundering legislation, and President Olusegun Obasanjo signed the legislation into law the same day: an amendment to the 1995 Money Laundering Act that extends the scope of the law to cover the proceeds of all crimes; an amendment to the 1991 Banking and Other Financial Institutions (BOFI) Act that expands coverage of the law to stock brokerage firms and foreign currency exchange facilities, gives the Central Bank of Nigeria (CBN) greater power to deny bank licenses and allows the CBN to freeze suspicious accounts; and the Economic and Financial Crimes Commission (Establishment) Act that establishes the Economic and Financial Crimes Commission (EFCC), that coordinates anti-money laundering investigations and information sharing. The Economic and Financial Crimes Commission Act (2002) also criminalizes the financing of terrorism and participation in terrorism. Violation of the Act carries a penalty of up to life imprisonment. Based on this legislation, FATF decided not to recommend countermeasures against Nigeria; however, Nigeria remains on the NCCT list.

In April 2003, the EFCC was formally constituted, with the primary mandate to investigate and prosecute financial crimes. It has recovered or seized assets from various people guilty of fraud inside and outside of Nigeria, including a syndicate that included highly placed government officials who were defrauding the Federal Inland Revenue Service (FIRS). Several influential individuals have been arrested and are currently awaiting trial. In an effort to expedite the trial process, the Commission has been assigned two high court judges in Lagos and two in Abuja to hear all cases involving financial

crimes. This signals intent by the government to more aggressively investigate “419” and other economic crimes in Nigeria.

In 2004, the National Assembly passed the Money Laundering (Prohibition) Act (2004), which applies to the proceeds of all financial crimes. It also covers stock brokerage firms and foreign currency exchange facilities, in addition to banks and financial institutions. The legislation gives the CBN greater power to deny banks licenses and freeze suspicious accounts. This legislation strengthens the financial institutions by also requiring more stringent identification of accounts, removing a threshold for suspicious transactions, and lengthening the period for retention of records.

However, in November 2004, the Chairman of the EFCC stated publicly that over 90 percent of Nigeria’s banks were not in compliance with the new law. He said that banks were not adhering to the know-your-customer and know-your-customer’s-business provisions of the law, and that 95 percent of banks had not yet filed any suspicious transactions reports (STRs), something he deemed “suspicious by itself.” However, he vowed to promulgate a new initiative to educate bank personnel and the general public about the provisions of the law before he began imposing sanctions for non-compliance.

The EFCC recorded some successes in 2004 in the area of combating money laundering, including the arrest of several notorious advance fee fraud kingpins, who are currently being prosecuted. These include a group involved in the Brazilian bank scam that totaled \$242 million. The EFCC seized assets worth about \$300 million in 2004. The EFCC was involved in the prosecution of more than 100 high-profile financial crime cases in the Nigerian High Court, including bank fraud, tax evasion, and money laundering. For the first time in the history of the country, a sitting provincial governor is being tried for corruption and money laundering, and several other money laundering cases are being tried. There was one money laundering conviction in 2004. The EFCC established a Financial Intelligence Unit (FIU) in 2004 that is now receiving and analyzing STRs. However, as noted above, very few such reports have yet been filed.

Nigeria is a party to the 1988 UN Drug Convention, the UN Convention against Transnational Organized Crime, and the UN International Convention for the Suppression of the Financing of Terrorism. On December 9, 2003, Nigeria signed the UN Convention against Corruption. The United States and Nigeria have a Mutual Legal Assistance Treaty, which entered into force in January 2003. Nigeria has signed memoranda of understanding with Russia, Iran, India, Pakistan, and Uganda to facilitate cooperation in the fight against narcotics-trafficking and money laundering. Nigeria has also signed bilateral agreements for exchange of information on money laundering with South Africa, the United Kingdom, and all Commonwealth and Economic Community of West African States countries. Nigeria has been instrumental in the establishment of a permanent secretariat for the Intergovernmental Task Force Against Money Laundering in West Africa (GIABA).

The Government of Nigeria should continue to engage with the FATF to ensure that Nigeria’s remaining anti-money laundering deficiencies are corrected. It should also bolster the Economic and Financial Crimes Commission by ensuring that it is adequately funded. Nigeria should construct a comprehensive anti-money laundering regime that willingly shares information with foreign regulatory and law enforcement agencies, is capable of thwarting money laundering and terrorist financing, and comports with all relevant international standards. Nigeria should criminalize the financing of terrorism consistent with the UN International Convention for the Suppression of the Financing of Terrorism.

Niue

Niue is a self-governing parliamentary democracy in the South Pacific that maintains a free association with New Zealand. Niueans are citizens of New Zealand and are part of the British Commonwealth.

Concerns were raised in the past about Niue's vulnerability to money laundering. Legislation from the mid-1990s created an offshore financial center heavily dependent upon international business companies (IBCs). In addition, a small number of offshore banks were licensed. Niue also offers trusts, partnerships, financial management, and insurance services. Niue allows the creation of asset protection trusts that are impervious to many types of legal claims arising in other jurisdictions. In addition, trusts in Niue are exempt from taxation if the parties to the trust are not residents of Niue.

The International Business Companies Act of 1994 is the legislative basis for establishing international business companies. Marketers of offshore services promote Niue as a favored jurisdiction for establishing IBCs, for a variety of reasons. The presence of a significant number of international business companies operating offshore makes Niue particularly vulnerable to money laundering. With a population of roughly 2,100, Niue reported that it had registered 9,229 IBCs as of December 2003. Allowed under Niue's International Business Companies Act 1994, the IBCs are not required to disclose their beneficial ownership or to keep a register of directors. Moreover, Niue allows bearer shares and the marketing of shelf companies, which are offered by Internet marketers complete with associated offshore bank accounts and mail-drop forwarding services. The IBCs are legally formed and registered by a Panamanian law firm on Niue's behalf. The government reported in December 2003 that it had not registered any offshore financial service businesses, such as insurance companies, mutual fund companies, trust companies, and agents.

The Proceeds of Crime Act 1998 criminalizes the laundering of proceeds from any offense punishable by at least one year in prison. Under the Proceeds of Crime Act, financial institutions may report suspicious transactions either to the police or to the Attorney General. However, there have been no such reports, and there are no relevant procedures in place to deal with their possible collection and analysis. Currently, the Proceeds of Crime Act allows the court to order the confiscation or forfeiture of property derived from a serious offense, once the offender has been convicted. The Act does not specifically address assets derived from narcotics-trafficking, terrorism financing, or organized crime. The government is working to amend the Act to allow it to freeze transactions in which money laundering or terrorism financing is suspected.

Niue enacted the Financial Transactions Reporting Act (FTRA) in November 2000. The FTRA imposes reporting and record keeping obligations upon banks, insurance companies, securities dealers and futures brokers, money services businesses, and persons administering or managing funds on behalf of IBCs. Specifically, the FTRA requires financial institutions to report suspicious transactions, verify the identity of their customers, and keep records of financial transactions for six years. However, the act contains a number of loopholes that result in inadequate customer identification requirements, among other deficiencies. For example, Section 11 of the FTRA requires that financial institutions verify the identity of customers who wish to conduct a transaction. Subsection 11(2) provides a loophole in that a financial institution dealing with an intermediary need establish the identity of the underlying customer only if the transaction exceeds \$10,000.

The FTRA also calls for the establishment of a Financial Intelligence Unit (FIU) within the office of the Attorney General. The FIU has still not been established. Niuean officials have said that the establishment of the FIU will depend upon the outcome of ongoing discussions among the Pacific Islands Forum of a proposed regional FIU for Forum member countries. To date, no movement has been made towards the establishment of any operational FIU, domestic or regional.

Should a Niuean FIU become operational, financial institutions will be required to prepare a written statement of their internal procedures to make their officers and employees aware of the laws in Niue about money laundering; the procedures, policies, and audit systems adopted by the institution to deal with money laundering; and procedures to train the institution's officers and employees to recognize and deal with money laundering. The institutions then will have to submit the statement of those procedures to the FIU. The FIU will also have powers to conduct investigations to ensure compliance by financial institutions with the Financial Transactions Reporting Act 2000. Currently, casinos and notaries are not covered within the definition of "financial institution" under the Act, but the government is considering promoting an amendment that would substitute the definition of "financial institution" from the IMF model Financial Transactions Reporting Act.

The Financial Transactions Reporting Act 2000 provides that one of the functions of the financial intelligence unit is to issue guidelines to financial institutions in relation to transaction record keeping and reporting obligations and to provide training programs for financial institutions about transaction record keeping and reporting obligations.

In June 2002, Niue brought into force the International Banking Repeal Act. This Act eliminated Niue's offshore banks. As a result, all offshore banking licenses have been terminated. In addition, Niue now maintains in-country a mirror of the IBC registry kept in Panama. All company registration information is kept on the island by a registered agent and is accessible to appropriate officials.

Due to these reforms, the Financial Action Task Force (FATF) decided in October 2002 that Niue had in place an anti-money laundering system that generally meets international standards. Niue was therefore removed from the list of Non-Cooperative Countries or Territories (NCCT), on which it had been placed in June 2000. With Niue's removal from the NCCT list, the U.S. Treasury's Financial Crimes Enforcement Network (FinCEN) lifted its advisory that had instructed all U.S. financial institutions to "give enhanced scrutiny" to all transactions involving Niue.

Niue is not a member of the United Nations. In November 2001, the government amended the United Nations Act 1946 to enable the Cabinet to promulgate regulations giving effect to UN Security Council resolutions. And, in September 2003, the Cabinet passed the United Nations Sanctions (Terrorism Suppression and Afghanistan Measures) Regulations 2003. Those regulations implement UN Security Council Resolution 1373, as well as Resolutions 1267 and 1333.

Niue is a member of the Asia/Pacific Group on Money Laundering.

In 1998, Niue passed the Mutual Assistance in Criminal Matters Act, which authorizes the Attorney General of Niue to provide certain types of legal assistance to other countries involved with criminal investigations. Niue has no bilateral cooperation agreements with other countries for the exchange of information on money laundering, though the government has expressed a willingness to cooperate with international efforts to combat money laundering.

The Government of Niue's recent reforms address some of the deficiencies in Niue's anti-money laundering regime; however, the government must finalize and promulgate the necessary regulations to bring the legislation into full force, including the establishment of a Financial Intelligence Unit (FIU). Niue must ensure that the recently enacted reforms are fully and effectively implemented. Additionally, Niue should criminalize terrorist financing.

Norway

Norway is not considered an important regional financial center. However, criminal activity, particularly connected with narcotics and economic crime, is increasing in Norway. According to Oekokrim, the economic crime unit of the Ministry of Justice, which serves as Norway's Financial Intelligence Unit (FIU), the rise in crime has been marked by increases in specialization, cooperation

between criminal networks, links between criminal and legal business activities, and the use of advanced technologies. Violent and professional armed robberies, often by foreigners, have also become more frequent. Authorities suspect that the proceeds of the robberies are laundered through registered companies formally or informally controlled by the criminals. Most money laundering occurs outside the banking and financial services system of Norway, due to the reporting requirements of the financial institutions; however, structuring of deposits still appears to be a problem within the financial system. Norway does not have a significant market for smuggled goods. Norway has neither free trade zones nor an offshore banking system.

In accordance with the Norwegian Penal Code, all forms of money laundering are criminal offenses. Norway's anti-money laundering legislation has been strengthened in recent years to conform to the Financial Action Task Force (FATF) Forty Recommendations. In 2004, a new Money Laundering Law took effect, replacing the provisions of the 1988 Financial Institutions Act. The new act strengthens registration requirements, broadens the obligation to report suspicious transactions, and makes negligent contravention of the act a criminal offense.

The Banking, Insurance, and Securities Commission of Norway monitors the financial markets and financial institutions, issues warnings, forwards the consolidated UNSCR 1267/1390 list of terrorist entities and individuals to financial institutions, and issues orders to freeze assets and funds. The Commission conducts on-site inspections to monitor the finance sector and to ensure that the regulations are complied with correctly. The Commission has also taken steps to strengthen reporting requirements of charitable entities.

All financial institutions are required to report large and suspicious transactions to Oekokrim, verify the identity of their customers, and keep records of transactions for at least five years. Money laundering controls are also applied to all non-bank financial institutions, such as insurance companies. Financial institutions are required to report large cash transactions, including cross-border transactions, to the Norwegian Central Bank, specifying sender and recipient information. Norway has not enacted secrecy laws that prevent disclosure of client and ownership information to bank supervisors and law-enforcement authorities. Individual bankers may be held responsible if their institutions launder money; however, the law protects reporting individuals. The number of money laundering infractions reported by traditional financial institutions decreased during the first half of 2004. Oekokrim's money laundering unit attributes the decline to the financial institutions' initial uncertainty regarding procedures under the new Money Laundering Act and to their decision to focus on the most serious and complex cases.

Through June 30, 2004, Norwegian authorities initiated 292 money laundering investigations. A total of 245 cases resulted in indictments or fines, and there were 100 court convictions for money laundering. Most money laundering cases in Norway are related to domestic criminal activity, and no terrorist groups are known to have laundered funds in the country.

According to Norwegian laws, assets derived from criminal acts (narcotics-trafficking, money laundering, and support for terrorism), are to be seized and confiscated by the State. Oekokrim continues to establish systems for identifying, tracing, freezing, seizing, and forfeiting narcotics-related assets and remains the principal entity responsible for tracing and seizing assets, although any police unit may do so in Norway. Section 34 of the Penal Code establishes that confiscation is mandatory unless a court finds that the confiscation is unreasonable. In serious cases, the law allows for extended confiscation. The offender must be found guilty of a criminal act from which considerable proceeds are accrued. Considerable proceeds are defined as at least NOK 75,000 (\$12,000). Legitimate businesses may be seized if they are used to launder drug money or support terrorist activity, or are linked to other criminal proceeds. Substitute assets may be seized. Norway destroys seized drugs, alcohol, and cigarettes, but auctions off other items, including automobiles, private property, and buildings. The State receives the proceeds from the asset seizures and forfeitures.

The law allows civil as well as criminal forfeiture. In 2003 authorities issued 929 confiscation orders totaling over \$24 million. To date, Norway has not enacted laws for sharing narcotics assets with other countries.

On June 28, 2002, Norway enacted Section 147 (A-B) of the Penal Code, criminalizing the financing of terrorism. The new bill establishes legislative measures against acts of terrorism and the financing of terrorism, which fulfill the requirements of the UN International Convention for the Suppression of the Financing of Terrorism. The law applies to anyone who supplies funds to, or collects funds for, individuals or groups that plan acts of terrorism, and makes the support of terrorists with equipment or services a criminal offense. Norway has the authority to identify, freeze, and seize terrorist financial assets. There were no arrests or prosecutions for terrorist financing, and Oekokrim did not receive any suspicious transaction reports related to terrorism in 2004. Authorities have investigated one suspected instance of terrorist financing, but the case was dropped in 2004.

On October 11, 2002, Norway adopted the European Union's (EU's) Common Position on the application of specific measures to combat terrorism. The Common Position details the names of major terrorists groups. Norway has also distributed to financial institutions the UNSCR 1267 Sanctions Committee's consolidated list. In accordance with UNSCR 1267, the bank account of one individual has been frozen since February 2003. The amount frozen was approximately \$1,000.

Alternative remittance systems are prohibited in Norway. In November 2004, a Norwegian appellate court upheld the convictions of three Somalis accused of violating banking regulations by sending unauthorized remittances overseas. The prosecutor in the case reported that the men illegally remitted approximately \$6 million annually between 1998 and 2001. The ringleader of the scheme was sentenced to a one-year jail sentence and his two accomplices were fined approximately \$1,500 each.

Norway works with Europol and is a member of the FATF, Interpol, and Schengen. Oekokrim is a member of the Egmont Group. Norway is a party to the 1988 UN Drug Convention and has signed, but not yet ratified, the UN Convention against Corruption. Norway is also a party to the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime; the UN International Convention for the Suppression of the Financing of Terrorism; and the UN Convention against Transnational Organized Crime. Norway has now ratified all 12 of the International Conventions and Protocols relating to terrorism. Norway consults frequently with United States authorities in connection with investigations and proceedings related to narcotics, terrorism, terrorist financing, and other crimes. Norway's Money Laundering Act and Terrorist Financing Law ensure the availability of adequate records in connection with investigations of interest to the United States and other governments.

The Government of Norway should continue to enhance its anti-money laundering/counterterrorist financing regime. Norway should consider the adoption of laws that would allow the sharing of seized assets with third party jurisdictions that assisted in the conduct of the underlying investigation.

Oman

Oman is not a regional or offshore financial center and does not have a significant money laundering problem. Its small banking sector is supervised by the Central Bank of Oman (CBO), which has the authority to suspend or reorganize a bank's operations. In 2004, Oman had a total of 17 banks with 353 branches. The banking system consisted of five local commercial banks with 304 Omani and 11 foreign branches, three local specialized banks with 26 local branches, and nine foreign incorporated banks with 23 branches in the country. Smuggling trade goods across Oman's long borders and coastline is becoming an increasing concern. Oman may also be vulnerable to instances of trade-based money laundering and customs fraud as well as unregulated lending schemes that fall outside government purview.

In March 2002, Royal Decree No. 34/2002 was issued promulgating “The Law of Money Laundering.” This new law strengthened the existing money laundering regulations by detailing bank responsibilities, widening the definition of money laundering to include funds obtained through any criminal means, and providing for the seizure of assets and other penalties. The new law applies to other types of non-bank financial institutions, as well. In a 2003 report to the UN Counter-Terrorism Committee, Omani officials stated that “the legal freezing measures designated by the Money laundering Act are applied to both residents and non-residents holding funds, financial assets, or other economic resources in the Sultanate of Oman if they are linked to terrorist-related activities.” In addition to an interagency committee for Anti-Money Laundering, the Sultanate has established a senior-level National Committee for Combating Terrorist Finance.

Royal Decree 72/2004 of July 7, 2004 promulgated the implementing regulations for the Law of Money Laundering. These regulations include, inter alia, the following provisions: a requirement that financial institutions “take steps to obtain information on customers who open accounts in an indirect way” and “keep electronic data on e-transactions”; guidelines in the area of profiling, requiring institutions to “check and double-check” certain classes of transactions (e.g., “customers getting loans from foreign institutions” and the “keeping of accounts that do not match the business nature”); requirements for government authorities to investigate all “suspicious dealings” using internal and external reporting mechanisms; authorization for the attorney general to freeze disputed assets upon the request of investigators; protection of “secret” information; an extensive training program, with introductory courses supplemented by instruction in international best practices and effective investigation techniques; definition of the organizational structure of the National Committee for Combating Money Laundering; and, cooperation with international organizations and information exchange with other countries, including collaboration on extradition issues.

The Royal Oman Police (ROP), in coordination with the CBO, is responsible for investigating money laundering activities. Banks are required to know their customers and report all suspicious transactions. Compliance personnel are now present in all banks. Oman plans to establish a Financial Intelligence Unit (FIU) that will review suspicious transactions and help coordinate resulting investigations. As of the end of 2004, there had been no arrests under the new law. No formal mechanism currently exists for information sharing among the Central Banks or FIUs of the Gulf Cooperation Council (GCC) members, although a banking supervision committee within the GCC does issue broad guidelines for financial institution oversight.

Oman regulates charitable organizations under the Non-Governmental Organizations Act promulgated pursuant to Royal Decree 14/2000. Under this act, the Minister of Social Development is responsible for approving and monitoring all charitable contributions and fundraising activities. There is a government-registered charity (the Oman Charitable Organization, or OCO), and all citizens and entities are encouraged to use this official channel for donations. The Ministry of Social Development recently registered a charity fund run by a prominent local businessman. At various times, charitable donations have been collected through individual accounts in local banks and sent abroad by individuals to support different causes, such as the Palestinian Intifada and the building of schools or mosques in Africa and South Asia. The local Shia minority is believed to transfer money to support their religious imams, mainly in Iraq and Iran. Apart from monthly remittances by expatriate laborers, local Indian businessmen have also been reported to channel funds in support of Hindu religious groups. In all of these cases, the CBO possesses the authority and ability to check on these accounts, as all banks and moneychangers have the obligation to report on transactions.

Informal lending societies reportedly have emerged in recent years as a popular alternative to formal banking in Oman. These societies provide interest free loans as a means for young Omanis to purchase homes and cars or service bank debts. The societies became the target of three separate warnings from the Ministry of Social Development calling on Omanis to avoid these unregulated and unregistered financial entities. Nevertheless, many Omanis flocked to these societies in solidarity with members of

their tribes and in protest against double-digit interest rates being charged by commercial banks. Later, as membership numbered in the thousands, serious problems emerged as several founding members absconded with funds from their societies. Suspicious members withdrew from the schemes, causing the collapse of many societies. Transactions in these societies are made in cash, and the societies are not registered with any government agency or institution. While such practices constitute only a fraction of overall financial transactions in Oman, they merit greater scrutiny on the part of ROP and CBO authorities. Reports of excess liquidity in the Omani financial system and the demonstrated popularity of informal societies lend credence to the view that a significant amount of wealth, amounting to hundreds of thousands if not millions of dollars, is circulating outside the formal financial system and its strict regulations, auditing requirements, and accountability to the CBO.

Oman has responded to terrorist asset freeze lists from the UN 1267 Sanctions Committee by distributing the lists to all banks and other financial institutions in the country for checking against their accounts. Thus far, the Government has reported negative results. Oman is a party to the 1988 UN Drug Convention. Although not yet a party to the UN International Convention for the Suppression of the Financing of Terrorism, Omani officials insist that Oman will soon accede. Oman has yet to sign the UN Convention against Transnational Organized Crime. Oman is a member of the Gulf Cooperation Council (GCC), which itself is a member of the Financial Action Task Force (FATF). Oman is also a charter member of the Middle East and North Africa Financial Action Task Force (MENAFATF) that was inaugurated in Bahrain in November 2004. The MENAFATF is a FATF-style regional body. The creation of the MENAFATF is critical for pushing the region to improve the transparency and regulatory frameworks of its financial sectors.

Overall, the Government of Oman maintains a strong and effective regulatory regime with respect to its formal financial institutions. Oman should continue to implement its anti-money laundering program, specifically by establishing and dedicating adequate resources to its Financial Intelligence Unit (FIU) and training criminal investigators to initiate money laundering investigations from the field. Oman also should address the risks of alternative remittance systems and unregulated lending societies to launder money and sidestep formal government oversight of financial transactions. Applying the careful lessons learned in its tight regulation of the formal sector, Oman must now recognize that informal money transfer and cash-based lending societies represent vulnerabilities that must be addressed. Oman should sign and ratify both the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime.

Pakistan

Financial crimes related to narcotics-trafficking, terrorism, smuggling, tax evasion, and corruption remain a significant problem in Pakistan. Pakistani criminal networks play a central role in the transshipment of narcotics and smuggled goods from Afghanistan to international markets. Pakistan is a major drug-transit country. The proceeds of narcotics-trafficking and funding for terrorist activities are often laundered by means of the alternative remittance system called hawala. This system is also widely used by the Pakistani people for legitimate purposes. A network of private unregulated charities has also emerged as a major source of illicit funds for international terrorist networks.

Pakistan's current anti-money laundering regime is weak, outdated and based on a loose patchwork of laws and regulations. The major laws include: The Anti-Terrorism Act of 1997 (amended in October 2004 to increase maximum punishments), which defines the crimes of terrorist finance and money laundering and establishes jurisdictions and punishments; The National Accountability Ordinance of 1999, which requires financial institutions to report suspicious transactions to the National Accountability Bureau (NAB) and establishes accountability courts; and The Control of Narcotic Substances Act of 1997, which also requires the reporting of suspicious transactions, contains

provisions for the freezing and seizing of assets associated with narcotics-trafficking, and establishes special courts for offenses (including financing) involving illegal narcotics. The State Bank of Pakistan (SBP) and the Securities and Exchange Commission of Pakistan (SECP) regulate financial flows.

Since 2002, Pakistan's Ministry of Finance has been coordinating an interministerial effort to draft anti-money laundering and counterterrorist financing legislation, with the goal of bringing Pakistan into compliance with international norms. As of December 2004, this legislation had not received final cabinet approval, and therefore, had not been submitted to the National Assembly for enactment. The latest version of that legislation was reviewed by a delegation from a FATF-style regional body, the Asia/Pacific Group on Money Laundering (APG), in December 2004. The draft law, among other things, provides for a Financial Intelligence Unit (FIU), which does not currently exist in Pakistan.

Notwithstanding the absence of such legislation, the SBP, which serves as Pakistan's Central Bank, has created an anti-money laundering unit. It has also introduced FATF-compliant regulations in the areas of know-your-customer policy, record retention, due diligence of correspondent banks, and the reporting of suspicious transactions. The SECP, which has regulatory oversight for non-bank financial institutions, has applied know your customer regulations to stock exchanges, trusts, and other non-bank financial institutions. All transactions exceeding RS 50,000 (approximately \$847) must be carried out via check or bank draft, as opposed to cash. The NAB, the Anti-Narcotics Force, the Federal Investigative Agency, and the Customs authority oversee Pakistan's anti-money laundering efforts. The National Accountability Bureau has been effective in investigating and prosecuting corruption, but has been accused of political bias in selecting its targets.

Pakistan's cooperation in Operation Enduring Freedom has brought renewed focus on the role of informal financial networks in financing terrorist activity. In June 2004, the SBP required all hawalas to register as authorized foreign exchange dealers and to meet minimum capital requirements. Failure to comply was punished by forced closures. However, despite increased enforcement efforts, unregistered hawalas continue to operate illegally. A large percentage of hawala transfers to Pakistan consists of the repatriation of wages from the roughly five million Pakistani expatriates residing abroad. Nevertheless, the U.S. Government has observed a migration of an increasing number of transactions from the informal to the formal financial institutions sector, due to the GOP's regulation of the domestic hawala business, post-September 11 changes in the patterns of behavior of overseas Pakistanis, and a substantial increase in credit available in the formal financial sector.

There have been reports of money laundering in Pakistan using gold and gems, as well as cash transfers by couriers. Pakistani criminal networks play a central role in the transshipment of narcotics and smuggled goods from Afghanistan to international markets. Trade-based money laundering is also prevalent. Goods such as foodstuffs, electronics, vegetable oils, and other products that are primarily exported from Dubai to Karachi are then forwarded, at least on paper, to Afghanistan via the Afghan transit trade. Through smuggling, corruption, avoidance of customs duties and taxes, and barter deals for narcotics, many of the goods destined for Afghanistan find their way into the burgeoning Pakistani black market. The trading in these goods and commodities is also believed to be used to provide counter valuation in hawala transactions. A nexus of private, unregulated charities has also emerged as a major source of illicit funds for international terrorist networks. As of December 28, 2004, Pakistan's Central Bank had frozen roughly \$10.5 million belonging to 12 entities and individuals, in compliance with UNSCR 1267.

Pakistan is a party to the 1988 UN Drug Convention and has signed, but not yet ratified, the UN Convention against Transnational Organized Crime. As of December 2004, Pakistan had not signed the UN International Convention for the Suppression of the Financing of Terrorism. Pakistan became a member of the APG in 2000.

The Government of Pakistan should move quickly to enact anti-money laundering and counterterrorist financing legislation that conforms to international standards. It also should issue financial regulations that mandate the reporting of all suspicious transactions, and establish a Financial Intelligence Unit. In addition, in light of the role that private charities have played in terrorist financing, Pakistan should develop a system to regulate the finances of charitable organizations and to shut down those that finance violence and terrorism. Pakistan should ratify both the UN Convention against Transnational Organized Crime and the UN International Convention for the Suppression of Terrorist Financing. Greater efforts are also needed to track and suppress trade-facilitated money laundering.

Palau

Palau is an archipelago of more than 300 islands in the Western Pacific with a population of nearly 20,000 and per capita GDP of about \$6,000. Upon its independence in 1994, the Republic of Palau entered the Compact of Free Association with the United States. The U.S. dollar is legal tender. Palau is not a major financial center. Nor does it offer offshore financial services. There are no offshore banks, trust companies, securities brokers/dealers or casinos in Palau. Palauan authorities believe that drug trafficking and prostitution are the primary sources of illegal proceeds that are laundered. Palau recently prosecuted its first ever case under the Money Laundering and Proceeds of Crimes Act (MLPCA) of 2001 (MLPCA) against a foreign national engaged in a large prostitution operation. The defendant was convicted on all three counts as well as a variety of other counts.

Amid reports in late 1999 and early 2000 that offshore banks in Palau had carried out large-scale money laundering activities, a few international banks banned financial transactions with Palau. In response, Palau established a Banking Law Review Task Force that recommended financial control legislation to the Olbill Era Kelulau (OEK), the national bicameral legislature, in 2001. Following that, Palau took several steps toward addressing financial security through banking regulation and supervision and putting in place a legal framework for an anti-money laundering regime. Several pieces of legislation were enacted in June 2001.

The Money Laundering and Proceeds of Crimes Act (MLPCA) of 2001 criminalized money laundering and created a financial intelligence unit. This legislation imposes threshold and suspicious transactions reporting and record keeping requirements for five years from the date of the transaction. Credit and financial institutions are required to keep regular reports of all transactions made in cash or bearer securities in excess of \$10,000 or its equivalent in foreign cash or bearer securities. This threshold reporting also covers domestic or international transfers of funds of currency or securities involving a sum greater than \$10,000. All such transactions (domestic and/or international) are required to go through a credit or financial institution licensed under the laws of the Republic of Palau.

The Financial Institutions Act of 2001 established the Financial Institutions Commission, an independent regulatory agency, which is responsible for licensing, supervising and regulating financial institutions, defined as banks and security brokers and dealers in Palau. Currently, there are seven fully licensed banks in Palau and one with a conditional license. Six of the banks are majority foreign owned, and one is wholly Palauan owned. Three other banks had their licenses invalidated in 2002 and a license of another bank was revoked in 2003. One bank had its license revoked in early 2005 and one bank that is operating on a conditional license has met the conditions for reopening and is now functioning under the supervision of the FIC. Other entities subject to the provisions of the MLPCA, such as the seven money services businesses, two finance companies and five insurance companies, are essentially unsupervised. Once the amendments to the MLPCA are passed, all alternative money remittance systems will be licensed and regulated by the FIC. Credit and financial institutions are required to verify customers' identity and address. In addition, these institutions are required to check for information by "any legal and reasonable means" to obtain the true identity of the principal/party

upon whose behalf the customer is acting. If identification cannot, in fact, be obtained, all transactions must cease immediately.

The lack of both human and fiscal resources has hampered the development of a viable anti-money laundering regime in Palau. The Republic has only recently established a functioning Financial Intelligence Unit (FIU), though its operations are severely restricted by a lack of dedicated human and fiscal resources. The implementing regulations to ensure compliance with the MLPCA have yet to be written but the authorities have stated that they will be drafted once the revisions to the MLPCA have been passed. The will of the Executive branch to comply with international standards, however, was clearly demonstrated by President Remengesau in 2003, when he vetoed a bill that would have extended the deadline for bank compliance and would have reduced the minimum capital for a bank from \$500,000 to \$250,000. Additionally, the President established the Anti-Money Laundering Working Group that is comprised of the Office of the President, the FIC, the Office of the Attorney General, Customs, the FIU, Immigration and the Bureau of Public Safety. The Senate has recently refused to approve the re-nomination of the Chairman of the FIC, Daiziro Nakamura..

Palau has enacted several legislative mechanisms to foster international cooperation. The Mutual Assistance in Criminal Matters Act (MACA), passed in June 2001, enables authorities to cooperate with other jurisdictions in criminal enforcement actions related to money laundering and to share in seized assets. The Foreign Evidence Act of 2001 provides for the admissibility in civil and criminal proceedings of certain types of evidence obtained from a foreign State pursuant to a request by the Attorney General under the MACA. Under the Compact of Free Association with the United States, a full range of law enforcement cooperation is authorized and in 2004 Palau was able to assist the Department of Justice in a money laundering investigation by securing evidence critical to the case and freezing the suspected funds.

Pursuant to the adoption of the Asia/Pacific Group's (APG) mutual evaluation of Palau at its September 2003 Plenary, the Government of Palau (GOP) has proposed amendments to the MLPCA that, if enacted, would strengthen Palau's anti-money laundering regime. Among the more significant proposals are the following: the promulgation of reporting regulations for all covered financial institutions as well as alternative remittance providers; the requirement to obtain the identification of the beneficial owner of any type of account; mandatory reporting of suspicious transaction reports to the FIU regardless of the amount of the transaction; the requirement that any currency transaction over \$5000 be done by wire transfer; the requirement that alternative remittance systems providers report any cash remittance over \$500; and, a burden shifting regime for the seizure and forfeiture of assets upon a conviction for money laundering.

The President has also recently proposed the Cash Courier Act of 2004 that was drafted by the Palau Anti-Money Laundering Working Group.

The Omnibus Terrorism Act is currently pending in the OEK. If enacted with changes proposed by the President of the Republic, the Act would comport with current international standards, including provisions for the freezing of assets of entities and persons designated by the United Nations as terrorists or terrorist organizations, provisions for the regulation of non-profit entities to prevent abuses by criminal organizations and terrorists and provisions for criminalizing the financing of terrorism. The OEK has issued resolutions ratifying Palau's accession to all the United Nation's Conventions and Protocols relating to terrorism.

The Government of Palau has taken several steps toward enacting a legal framework by which to combat money laundering. It has signed Pacific Island Forum anti-money laundering initiatives and as a member of the Asia/Pacific Group on Money Laundering, Palau is committed to implement the Financial Action Task Force Revised Forty Recommendations and its Nine Special Recommendations on Terrorist Financing. As a party to the UN Convention for the Suppression of the Financing of Terrorism, Palau should criminalize the financing of terrorism. In continuing its efforts to comport with

international standards, Palau should enact legislation and promulgate implementing regulations to the MLPCA, as recommended by the APG, including but not limited to establishing funding for the FIU, eliminating the threshold for reporting suspicious transactions and beginning a broad-based implementation of the legal reforms already put in place.

Panama

The economy of Panama is service-based and heavily weighted toward maritime transportation, commerce, tourism, banking, and financial services. Panama is a major drug-transit country. Panama's proximity to major drug-producing countries, its sophisticated international banking sector, its U.S. dollar-based economy, and the Colon Free Zone's (CFZ's) role as an originating or transshipment point for goods purchased with narcotics dollars through the Colombian Black Market Peso Exchange make the country particularly vulnerable to money laundering. Despite significant progress to strengthen Panama's anti-money laundering regime since October 2000, money laundering remains a serious threat to the stability of the country's legitimate financial institutions. Panama is a destination for international narcotics-trafficking proceeds that include significant amounts of U.S. currency or currency derived from illegal drug sales in the United States.

Panama's large offshore financial sector includes international business companies (over 370,000 currently registered in Panama), offshore banks (approximately 31), captive insurance companies (corporate entities created and controlled by a parent company, professional association, or group of businesses), and trust companies. Transfer of negotiable (bearer) bonds is another potential vulnerability that could be exploited by money launderers. The high volume of trade occurring through the CFZ (there are approximately 2,600 businesses established in the Zone) presents opportunities for trade-based money laundering to occur.

Law No. 41 (Article 389) of October 2, 2000 amended the Penal Code by expanding the predicate offenses for money laundering beyond narcotics-trafficking, to include criminal fraud, arms trafficking, trafficking in humans, kidnapping, extortion, embezzlement, corruption of public officials, terrorism, and international theft or trafficking of motor vehicles. Law No. 41 establishes a punishment of five to 12 years imprisonment and a fine.

In December 2002, the Panamanian Legislative Assembly approved the Financial Crimes Bill (Law No. 6 of December 6, 2002), which establishes criminal penalties of up to ten years in prison and fines of up to one million dollars for financial crimes that undermine public trust in the banking system, the financial services sector, or the stock market. The penalties criminalize a wide range of activities related to financial intermediation, including the following: illicit transfers of monies, accounting fraud, insider trading, and the submission of fraudulent data to supervisory authorities. Law No. 1 of January 5, 2004, adds crimes against intellectual property as a predicate offense for money laundering.

Law No. 42 of October 2, 2000 requires financial institutions (banks, trust companies, money exchangers, credit unions, savings and loans associations, stock exchanges and brokerage firms, and investment administrators) to report to the Unidad de Analisis Financiero (UAF), Panama's Financial Intelligence Unit (FIU), currency transactions in excess of \$10,000 and suspicious financial transactions. Law 42 also mandates that casinos, CFZ businesses, the national lottery, real estate agencies and developers, and insurance/reinsurance companies report to the UAF currency or quasi-currency transactions that exceed \$10,000. Furthermore, Law 42 requires Panamanian trust companies to identify to the Superintendencia of Banks the real and ultimate beneficial owners of trusts.

Executive Order 213 of October 3, 2000, amending Executive Order 16 of 1984 relating to trust operations, provides for the dissemination of information related to trusts to appropriate administrative and judicial authorities. Furthermore, in October 2000, Panama's Superintendencia of Banks issued

Agreement No. 9-2000 that defines requirements that banks must follow for identification of customers, exercise of due diligence and retention of transaction records.

In 2002, the Ministry of Commerce and Industry issued a circular to all finance companies reminding them of the transaction-reporting requirement of Law 42, and also began drafting a law to regulate the operations of pawnshops and exchange houses. It also increased the number of inspections of finance companies it conducted. The Autonomous Panamanian Cooperative Institute established a specialized unit for the supervision of loans and credit cooperatives regarding compliance with the requirements of Law 42. The National Securities Commission carried out numerous training sessions and workshops for its personnel and regulated entities. The Colon Free Zone Administration prepared and issued a procedures manual for the users of the CFZ, outlining their responsibilities regarding prevention of money laundering and requirements under Law 42. The UAF continues efforts to raise the level of compliance for reporting suspicious financial transactions, particularly by non-bank financial institutions and businesses in the CFZ. In 2004, the Stock Commission announced that it would begin investigating suspicious activity.

With support from the Inter-American Development Bank, the GOP is implementing a Program for the Improvement of the Transparency and Integrity of the Financial System. This Transparency Program is targeted, through enhanced communication and information flow, training programs, and technology, at strengthening the capabilities of those government institutions responsible for preventing and combating financial crimes and terrorist financed activities.

In 2002, the Institute of Autonomous Panamanian Cooperatives, UAF, and the U.S. Embassy Narcotics Assistance Section cosponsored a roundtable on money laundering that offered practical training to financial institutions to assist them in meeting the reporting requirements under Law No. 42. In 2003, Panama launched an education program related to prevention of money laundering and terrorist financing. Panama's Banking Association, the Inter-American Development Bank, the Panamanian Government, and the United States Government financed this campaign. Initiatives under this campaign include a crime analysis seminar, a regional seminar on money laundering for banking regulators, and the detection and reporting of suspicious activities for the banking sector. During 2004, the programs included training for the Gaming Control Commission and a seminar for the Hemispheric Congress on the prevention of money laundering. In 2004, more than 5,000 officials from public and private sector institutions received training through this campaign. Participants included representatives from banks, credit unions, real estate agencies, stockbrokers, insurance companies, Colon Free Trade Zone companies, financial institutions, and money order companies.

To increase GOP interagency coordination, the UAF and Panamanian Customs are developing an office at the Tocumen International Airport to expedite the entry of customs currency declaration information into the UAF's database. This will enable the UAF to begin more timely investigations. In 2004, Panamanian Customs continued a program at Tocumen International Airport, begun in 2001, to deter currency smuggling by seizing and forfeiting all undeclared funds in excess of \$10,000 from arriving passengers. Bulk cash shipments, including through Tocumen Airport, continue to be of great concern, with smugglers often under-declaring the amount of cash being brought into the country.

Executive Order No. 163 of October 3, 2000, which amended the June 1995 decree that created the UAF, also allows the UAF to provide information related to possible money laundering directly to the Office of the Attorney General for investigation. Panama has brought cases for domestic prosecution, and the UAF routinely transfers cases to the Unidad de Inteligencia Financiera (UIF) for investigation. During 2004 the Financial Fraud Prosecutor's office investigated 2,459 cases related to financial crimes, 86 of which led to a conviction. These included credit card fraud and fraud involving banking institutions.

GOP cooperation in the investigation of the Western Hemisphere's largest Black Market Peso Exchange money laundering scheme was instrumental in the U.S. conviction in 2002 of Yardená

Hebroni, owner of Speed Joyeros, a CFZ enterprise. The GOP also revoked the Panamanian residency of Hebroni, an Israeli national, after she was ordered deported from the United States. In 2004, Panamanian officials charged former Nicaraguan President Arnoldo Aleman with money laundering crimes. The GOP received cooperation in the investigation from the Government of Nicaragua. Also during 2004, there were investigations into possible money laundering crimes of high-level Costa Rican government officials. Finally, GOP investigators are looking into corruption allegations made against former government officials.

The GOP identified the combating of money laundering as one of five goals in its five-year National Drug Control Strategy issued in 2002. The Strategy commits the GOP to devote \$2.3 million to anti-money laundering projects, the largest being institutional development of the UAF.

Decree No. 22 of June 2003 gave the Presidential High Level Commission against Narcotics Related Money Laundering responsibility for combating terrorist financing. Law No. 50 of July 2003 criminalizes terrorist financing and gives the UAF responsibility for prevention of this crime. There are no legal impediments to the GOP's ability to prosecute or extradite suspected terrorists. Panama Public Force (PPF) and the judicial system have limited resources to deter terrorists due to insufficient personnel and lack of expertise in handling complex international investigations. On January 18, 2003, the GOP entered into a border security cooperation agreement with Colombia and also increased funds to the PPF to help secure the frontier. In response to United States efforts to identify and block terrorist-related funds, the GOP continues to monitor suspicious financial transactions.

Also, the GOP created the Department of Analysis and Study of Terrorist Activities. This department is tasked with working with the United Nations and the Organization of American States to investigate transnational issues, including money laundering. Panama has an implementation plan for compliance with the Financial Action Task Force (FATF) Forty Recommendations on Money Laundering and its Special Recommendations on Terrorist Financing.

Panama and the United States have a Mutual Legal Assistance Treaty that entered into force in 1995. The GOP has also assisted numerous countries needing help in strengthening their anti-money laundering programs, including Guatemala, Costa Rica, Russia, Honduras, and Nicaragua. Panama also hosted the Seventh Hemispheric Congress on the Prevention of Money Laundering in August 2003. Executive Decree No. 163 authorizes the UAF to share information with FIUs of other countries, subject to entering into a memorandum of understanding or other information exchange agreement. The UAF has signed more than 27 memoranda of understanding with FIUs, including the U.S. FIU, FinCEN.

Panama is active in the multilateral Black Market Peso Exchange Group Directive. In March 2002, the GOP signed the cooperation agreement issued by the working group as part of a regional effort against the black market system. Panama is a member of the Organization of American States Inter-American Drug Abuse Control Commission (OAS/CICAD), and is the current Chair of the Caribbean Financial Action Task Force. Panama is also a member of the Offshore Group of Banking Supervisors, and the UAF is a member of the Egmont Group. Panama is a party to the 1988 UN Drug Convention. Panama is a signatory to 11 of the UN terrorism conventions and protocols. During 2002, the GOP became a party to the UN International Convention for the Suppression of the Financing of Terrorism and, in 2004, of the UN Convention against Transnational Organized Crime.

The Government of Panama should continue its regional assistance efforts. It should also continue implementing the significant reforms it has undertaken to its anti-money laundering regime, in order to reduce the vulnerability of Panama's financial sector and to enhance Panama's ability to investigate and prosecute financial crime, money laundering, and potential terrorist financing. In particular, Panama should institute controls over the transfer of bearer bonds.

Papua New Guinea

Papua New Guinea is not a regional financial center. Its banking sector is relatively small. There are currently no laws against money laundering or terrorist financing. However, according to the Government of Papua New Guinea's (GPNG's) September 2003 report to the UN Counter-Terrorism Committee that monitors implementation of UN Security Council Resolution 1373 (CTC) money laundering in Papua New Guinea will be criminalized pursuant to the proposed "Proceeds of Crime Bill." The bill would obligate financial institutions to retain essential financial documents for a specific period of time. Covered transactions will include transmission of funds between Papua New Guinea and a foreign country. The proposed legislation also calls for the communication of suspicious information by financial institutions to the police.

The GPNG continues to consider amending the Criminal Code Act that will cover the collection, recruiting, or soliciting of funds from other countries for terrorists/terrorist purposes. In addition, the National Intelligence Organization (NIO) is in the process of submitting a Plan of Action on counterterrorism and other transnational crimes. The Plan of Action will focus on coordination and sharing of intelligence. Currently interagency coordination does exist to some extent with regard to narcotics, and task force "Centre-points" have also been established to monitor and share intelligence information on drug trafficking, arms smuggling, human trafficking, and other border concerns. However, "financial tracking" is not yet fully developed.

Papua New Guinea is not a party to any bilateral or multilateral treaties on mutual assistance in criminal matters. Reportedly, the GPNG plans legislation in this area. Papua New Guinea is an observer to the Asia/Pacific Group on Money Laundering. The GPNG is not a party to the 1988 UN Drug Convention but is a party to the UN International Convention for the Suppression of the Financing of Terrorism.

The Government of Papua New Guinea should enact a comprehensive anti-money laundering regime that criminalizes money laundering related to all serious crimes. Specific counterterrorism legislation implementing UNSCR 1373 and the UN International Convention for the Suppression of the Financing of Terrorism should also be adopted, including criminalizing terrorism and the funding of terrorism. Papua New Guinea should also become a party to the 1988 UN Drug Convention. Papua New Guinea should become a member of the Asia/Pacific Group on Money Laundering.

Paraguay

Paraguay is a principal money laundering center, involving both the banking and non-banking financial sectors. The multi-billion dollar contraband re-export trade that occurs largely on the border shared with Argentina and Brazil facilitates much of the money laundering in Paraguay. Paraguay is a major drug-transit country. The Government of Paraguay (GOP) suspects that proceeds from narcotics-trafficking are often laundered, but is it difficult to determine what percentage of laundered funds is directly generated from narcotics sales. Weak controls in the financial sector, an open border, and minimal enforcement activity for financial crimes allow money launderers and terrorist financiers to take advantage of Paraguay's financial system. Although the Government of Paraguay (GOP) has made some progress in 2004, it will need to pursue more aggressive policies in 2005 in order to increase its effectiveness in combating money laundering and terrorist financing.

Paraguay is particularly vulnerable to money laundering, as little personal background information is required to open a bank account or to make financial transactions in Paraguay. Paraguay is an attractive financial center for neighboring countries, particularly Brazil. Foreign banks are registered in Paraguay and nonresidents are allowed to hold bank accounts, but current regulations forbid banks from advertising or seeking deposits from outside the country. Paraguay is not considered to be an offshore financial center, but the GOP does allow representative offices of offshore banks to maintain

a presence in the country. Shell companies are not permitted; trusts, however, are permitted and are regulated by the Central Bank. The Superintendent of Banks audits financial institutions and supervises all banks under the same rules and regulations. However, there are few effective controls over businesses, and a large informal economy exists outside the regulatory scope of the GOP.

Money laundering in Paraguay is facilitated by the multi-billion dollar contraband re-export trade that occurs largely in the Triborder Area shared by Paraguay, Argentina, and Brazil. Ciudad del Este (CDE), on the border between Brazil and Paraguay, represents the heart of Paraguay's informal economy. The area is well known for arms and narcotics-trafficking, as well as crimes against intellectual property rights. A wide variety of counterfeit goods, including cigarettes, CDs, DVDs, and computer software, are imported from Asia and transported primarily across the border into Brazil, with a significantly smaller amount remaining in Paraguay for sale in the local economy. Some senior government officials, including members of Congress, have been accused of involvement in the smuggling of contraband or pirated goods. To date there have been few criminal investigations, much less prosecutions of senior GOP officials involvement in smuggling contraband or pirated goods) Government officials, in both Paraguay and the United States, also suspect the area to be a source of terrorist financing. Raids in CDE have led to the seizure of extremist Islamic materials and receipts of wire transfers from Paraguay to the Middle East and the United States. Paraguay has taken some measures to tackle this "gray" economy and to develop strategies to implement a formal, diversified economy.

In 2003, the GOP noted that it was trying to introduce "maquilas" (assembly line industries) but had not done so in 2004. The GOP is trying to strengthen its tourism industry by proposing advances to its tourism infrastructure such as the international airport in Asuncion, making it a regional transportation hub for cargo and possibly passenger airlines.) Although currently no formal free trade zones are located within the country, the new customs code implemented in early 2004 provides for the creation of these zones. One is currently being planned in the town of Villeta, near Asunción. These free trade zones will not help reduce money laundering in Paraguay-in fact, the addition of free trade zones may provide additional venues for money laundering.

There are no effective controls on the amount of currency that can be brought into or out of Paraguay. Cross-border reporting requirements are limited to those issued by airlines at the time of entry into Paraguay. Persons transporting \$10,000 into or out of Paraguay are required to file a customs report, but these reports are often not actually collected or checked. Customs operations at the airports or land ports of entry provide no control of the cross-border movement of cash. The non-bank financial sector, particularly exchange houses, are used to move illegal proceeds both from within and outside of Paraguay into the formal banking system of the United States. Most of these funds move from Brazil through Ciudad del Este to the banking sector. Paraguay exercises a dual monetary system in which most high-priced goods are paid for in U.S. dollars. Large sums of dollars generated from normal commercial activity and suspected illicit commercial activity are transported physically from Paraguay through Uruguay to the banking centers in the United States. Within the past year, the GOP has begun to recognize and address the problem of the international transportation of currency and monetary instruments derived from illegal sources.

Bank fraud, which has led to several bank failures, and other financial crimes related to corruption are serious problems in Paraguay. Following bank failures in 2002 and 2003, Paraguay continues to experience problems in the banking industry. In 2004, Citibank decided to end its participation in small-consumer banking in Paraguay, and subsequently closed almost all of its branches nationwide. The GOP continues to work with the U.S. Treasury and Justice Departments to trace, account for, and return the missing \$16 million diverted from the Central Bank in 2002 to private accounts allegedly linked to the family of former President Luis Gonzalez Macchi.

Money laundering is a criminal offense under Paraguay's two anti-money laundering statutes, Law 1015 of 1996 and Article 196 of Paraguay's Criminal Code, adopted in 1997. The existence of the two laws has led to substantial confusion due to overlapping provisions. Under Article 196, the scope of predicate offenses includes only offenses that carry a maximum penalty of five years or more; Law 1015 includes additional offenses. Article 196 also establishes a maximum penalty of five years for money laundering offenses, while Law 1015 carries a prison term of two to ten years. This is particularly significant because, under the new Criminal Code and Criminal Procedure Code, defendants who accept charges that carry a maximum penalty of five years or less are automatically entitled to a suspended sentence and a fine instead of jail time, at least for the first offense. Since a defendant cannot be charged with money laundering unless he or she has first been convicted of the predicate offense, many judges are apparently reluctant to prosecute any defendant on money laundering charges because a sentence has already been issued for a predicate offense.

Law 1015 of 1996 also contains "due diligence" and "banker negligence" provisions and applies money laundering controls to non-banking financial institutions, such as exchange houses. Bank secrecy laws do not prevent banks and financial institutions from disclosing information to bank supervisors and law enforcement entities. Additionally, bankers and others are protected under the anti-money laundering law with respect to their cooperation with law enforcement agencies.

Additional provisions of Law 1015 require banks and financial institutions to know and record the identity of customers engaging in significant currency transactions and to report those, as well as suspicious activities, to Paraguay's Financial Intelligence Unit (FIU), the Unidad de Análisis Financiera (UAF). The UAF began operating in 1997 within the Secretary for the Prevention of Money Laundering (SEPRELAD), under the auspices of the Ministry of Industry and Commerce (MIC). However, for many years the UAF had been regarded as ineffective, and was hampered by a burdensome bureaucratic structure, lack of financial support, and the inability to keep trained personnel.

The UAF's weaknesses were reflected in the small number of cases presented to the Public Ministry (Attorney General's office) for prosecution. Before 2001, only one case went to trial, and it was dismissed on procedural grounds. The majority of the cases prepared by the UAF were incomplete and were returned to the UAF by prosecutors for more information or investigation. Serious concerns also exist with regard to UAF's personnel, its handling of confidential information, cumbersome record keeping, and concerns about possible corruption within the FIU. Efforts were made to by the GOP to improve its anti-money laundering capabilities, and in 2003, existing personnel began to be vetted and replaced as appropriate. However, there remains limited exchange of information between U.S. law enforcement agencies and GOP entities on money laundering cases, as a result of a leak of information in 2002. Information is now exchanged on a case-by-case basis.

The banking "Risk Control Division," created in 2003 to replace the Superintendent of Banks' FIU, and eliminate its duplicative function with the UAF, has the primary responsibility of reviewing the records of national financial institutions for suspected terrorist activity. The Risk Control Division is empowered to coordinate information exchange with the Central Banks of other MERCOSUR countries, but has no authority to conduct investigative work associated with financial suspicious activity reports. That remains the purview of the UAF. According to SEPRELAD officials, there has been little coordination or cooperation between the UAF and the Risk Control Division. The two groups are collaborating on a memorandum of understanding (MOU), which will lay out the provisions for increased cooperation. The MOU is scheduled to come into effect early this year. In 2004, the RCD suffered some growing pains, since its inception last year, and is off to a slow start. The division is working on several *casas de cambio* cases among its current caseload.

In 2004 SEPRELAD made significant efforts to improve the UAF's personnel, analytical capabilities, infrastructure, and technical capabilities. All UAF personnel are now vetted and receive significant

analytical training. The UAF is seeking to strengthen its relationship with other financial intelligence units; for example, the UAF is working with the U.S. financial intelligence unit, FinCEN, to re-establish information sharing procedures, which were suspended following an unauthorized disclosure by the GOP of U.S. financial information in 2001. In 2004, SEPRELAD helped to create and coordinate an interagency money laundering working group, whose members include the director of the UAF, the director of the National Anti-Drug Secretariat (SENAD), the assistant attorney general for economic crimes, the director of the customs agency and a criminal appellate judge.

The UAF also increased its role in regional and international anti-money laundering groups, including the Egmont Group and the Financial Action Task Force for South America (GAFISUD). The UAF's director now participates in the GAFISUD FIU Working Group and a committee within the Egmont Group, further expanding Paraguay's role in these organizations. Paraguay will undergo its second mutual evaluation by GAFISUD in 2005.

The new law to improve the effectiveness of Paraguay's anti-money laundering regime, drafted in late 2003, was formally introduced to Congress in May 2004, where it now remains under consideration by legislative committees. The draft law should come before the full Congress for consideration in 2005. The GOP is also in the process of drafting an counterterrorism bill to address terrorist financing issues.

The new money laundering legislation, if approved, will institute important national reforms. In addition to confirming the UAF's role as the sole FIU, it establishes SEPRELAD an independent secretariat or agency reporting directly to the Office of the President. The draft law also establishes money laundering as an autonomous crime punishable by a prison term of five to 20 years. It establishes predicate offenses as any crimes that are punishable by a prison term exceeding six months, and specifically criminalizes money laundering tied to the financing of terrorist groups or acts. The full range of covered institutions will be required to report suspicious transactions to the UAF and to maintain registries of large currency transactions that equal or exceed \$10,000. Under the draft legislation, those institutions have been expanded to include, inter alia, banks; financial institutions; insurance agencies; currency exchange houses; securities companies and brokers (stock exchange); investment companies; money transmitters; administrators of mutual investment and pension funds; credit unions; operators of gambling facilities; real estate agencies; nongovernmental organizations; pawnshops; and dealers in jewels, precious stones and metals, automobiles, art, and antiques. Other provisions of the draft law include penalties for failure to file or falsify reports, "know-your-client provisions," and standardized record keeping for a minimum of seven years. The UAF will continue to refer cases as appropriate for further police (SENAD) investigation and to the Attorney General's Office for prosecution. It will also serve as the central entity for related information exchanges with other concerned foreign entities. The law further specifies that the investigative unit of SENAD is the principal authority for carrying out all counternarcotics and other financial investigations, and will also have the authority to initiate investigation of cases on its own.

There are other challenges, however, that the new money laundering legislation, when passed, will not address. With only eight prosecutors dedicated to financial crimes, Paraguay currently has limited resources to investigate and prosecute money laundering and financial crimes. Moreover, prosecutors have little experience working with the UAF, and unless the new law is enacted, most judges have little incentive to investigate money laundering cases because many believe that sentencing on predicate offenses is sufficient punishment. Thus, there have not been any successful money laundering prosecutions in Paraguay so far, and improvement is unlikely until the new law becomes a reality. As it is, those individuals implicated in money laundering are prosecuted on tax evasion charges. In May 2004, Assad Barakat—widely alleged to be involved in money laundering—was convicted of tax evasion and sentenced to six and one-half years in prison. In late 2004, prosecutors were investigating several tax evasion cases involving suspected money laundering by both legal and illegal money exchange offices in Ciudad del Este.

Another serious problem for money laundering investigations that will not be corrected by the new law is the obligation of federal prosecutors to notify a suspect in writing that he/she is the subject of an investigation. Suspects must be notified within six months of the start of an investigation, and may have access to all information gathered through the investigation. This is mandated by Paraguay's penal code.

Under current laws, the GOP has limited authority to freeze, seize, and/or forfeit assets of suspected money launderers. In most cases, assets that the GOP is permitted to freeze, seize, and/or forfeit are limited to transport vehicles, such as planes and cars, and normally do not include bank accounts. However, authorities may not auction off these assets until a conviction is announced by the judicial system. At best, the GOP can establish a "preventative embargo" against assets of persons under investigation for a crime in which the state risks loss of revenue from furtherance of a criminal act, such as tax evasion. However, in those cases the limit of the embargo is set as the amount of liability of the suspect to the government. As the government entity primarily responsible for the tracing and seizing of assets, SENAD is required to split the proceeds of the forfeiture with the Public Ministry. SENAD currently has no figure for the amount of assets seized and/or forfeited in 2004, as it does not place a value on these assets before auction. Under current provisions of the law, significant legal loopholes exist, allowing criminals to hide their assets under another person's name.

The new anti-money laundering legislation will, when passed, allow prosecutors to recommend that judges freeze or confiscate assets connected to money laundering and its predicate offenses. The draft law also provides for the creation of a special asset forfeiture fund to be administered by a consortium of national governmental agencies, which will support programs for crime prevention and suppression, including combating money laundering, and related training.

The GOP currently has no authority to freeze, seize, and/or forfeit assets related to the financing of terrorism. A recent attempt to freeze the assets of a suspected terrorist financier for tax evasion failed because prosecutors perceived that the Paraguayan constitution prohibits the confiscation of personal property. The financing of terrorism is not criminalized under current Paraguayan law. However, the Ministry of Foreign Affairs often provides the Central Bank and other government entities with a list of groups or individuals included on the UNSCR 1267 Sanctions Committee consolidated list; to date, the GOP has not identified, seized, or forfeited any such assets linked to these groups or individuals. The current law also does not provide any measures for thwarting the misuse of charitable or non-profit entities that can be used as conduits for the financing of terrorism. Following the submission of the draft anti-money laundering law to Congress in May 2004, a working group of GOP and U.S. officials began drafting legislation to address terrorism and terrorist financing. The draft legislation will allow the GOP to conform to international standards on the suppression of terrorist financing. The draft anti-money laundering legislation will also specifically criminalize money laundering tied to the financing of terrorist groups or acts.

The GOP ratified the UN International Convention for the Suppression of the Financing of Terrorism in November 2004 and the Organization of American States Inter-American Convention on Terrorism in January 2005. Paraguay has also signed, but not ratified, the UN Convention against Corruption. In September 2004, the GOP ratified the UN Convention against Transnational Organized Crime. Paraguay is party to the 1988 UN Drug Convention, and participates in Summit of the Americas and Inter-American Drug Abuse Control Commission (CICAD)-related meetings on money laundering. Paraguay is a member of the South American Financial Action Task Force (GAFISUD), the Egmont Group, and the "3 Plus 1" Counter-Terrorism Dialogue between the United States and the Triborder Area countries.

While the Government of Paraguay took a number of positive steps in 2004, there are other initiatives that should be pursued in 2005 to increase the effectiveness of Paraguay's efforts to combat money laundering and terrorist financing. Most important is enactment of the new money laundering law that

meets international standards. Paraguay should also continue efforts to combat corruption, and increase information sharing among concerned agencies when and if the corruption issues are resolved. Paraguay does not have an counterterrorism law or a law criminalizing terrorist financing. While the new money laundering law would increase the Government of Paraguay's abilities to combat terrorist financing, it should also take steps as quickly as possible to ensure that comprehensive counterterrorism legislation is passed. Reforms to the criminal procedure code that would allow prosecutors to carry out long-term criminal investigations should be considered. Reforms to the customs agency are also necessary in order to allow for increased inspections and interdictions at ports of entry and to develop strategies targeting the physical movement of bulk cash. It is essential that the Unidad de Análisis Financiera continue to receive the financial and human resources necessary to operate as an effective, fully functioning Financial Intelligence Unit capable of effectively combating money laundering, terrorist financing, and other financial crimes.

Peru

Peru is not a major regional financial center, nor is it an offshore money laundering haven. Peru is a major drug producing and drug-transit country. Narcotics-related and other money laundering does occur, and the Government of Peru (GOP) has taken several steps to improve its money laundering legislation and enforcement abilities. Nevertheless, more effort is necessary to better assess the scale and methodology of money laundering in Peru. Peru is the world's second largest producer of cocaine, and, although no reliable figures exist regarding the exact size of the narcotics market in Peru, conservative estimates indicate that the cocaine trade generates between 1.5 to two billion dollars per year. As a result, money laundering occurs on a significant scale to integrate the illegal proceeds generated from the cocaine trade into the Peruvian economy.

Money laundering has historically been facilitated by a number of factors. Peru's economy is heavily dependent upon the U.S. dollar and approximately 65 percent of the economy is dollarized, allowing traffickers to handle large bulk shipments of U.S. currency with minimal complications. Currently no restrictions exist on the amount of foreign currency an individual can exchange or hold in a personal account, and until recently, there were no controls on bulk cash shipments coming into Peru.

A number of former government officials, most from the Fujimori administration, are under investigation for corruption-related crimes, including money laundering. These officials have been accused of transferring tens of millions of dollars in proceeds from illicit activities (e.g., bribes, kickbacks, or protection money) into offshore accounts in the Cayman Islands, the United States, and/or Switzerland. The Peruvian Attorney General, a Special Prosecutor, the office of the Superintendent of Banks (SBS) and the Peruvian Congress have conducted numerous investigations, some of which are ongoing, involving dozens of former GOP officials. In 2004, the GOP continued to make strong efforts at uncovering and recovering the millions of U.S. dollars believed to be the proceeds of money laundering activities carried out by Vladimiro Montesinos, former director of the Peruvian National Intelligence Service. However, there have been no convictions for money laundering offenses to date in Peru.

On June 1, 2004, the United States Department of the Treasury's Office for Foreign Assets Control (OFAC) initiated an investigation of Fernando Zevallos Gonzales, founder and de facto owner of Peru's largest airline, Aero Continente. Because of Zevallos's suspected links to narcotics-trafficking and money laundering, all of his assets in the United States were frozen by OFAC. OFAC formally added Aero Continente, now known as Nuevo Continente, to its Specially Designated Nationals (SDN) list pursuant to the Foreign Narcotics Kingpin Designation Act.

Prior to 2002, Peru had a relatively weak anti-money laundering legislative and regulatory framework. The previous system criminalized only the laundering of proceeds directly associated with narcotics trafficking and "narcoterrorism," and mandated that all unusual or suspicious financial transactions be

reported directly to the Public Ministry. Only banks and other financial institutions were required to report suspicious transactions or large cash transactions, and the requirement to report cash transactions was suspended in August 1998, one month after it went into effect.

In 2002, the GOP strengthened its anti-money laundering regime by creating a Financial Intelligence Unit (FIU), expanding the type of institutions required to file suspicious transaction reports, increasing the number of predicate crimes, criminalizing willful blindness, and reinstating reporting requirements for large cash transactions. In April and June of that year, Laws 27.693 and 27.765 were adopted. Law 27.765 expands the predicate offenses for money laundering to include the laundering of assets related to all serious crimes, such as narcotics-trafficking, terrorism, corruption, trafficking of persons, and kidnapping.

The penalties for money laundering were also revised. Instead of a life sentence for the crime of laundering money, Law 27.765 sets prison terms of up to 15 years for convicted launderers, with a minimum sentence of 25 years for cases linked to narcotics-trafficking, terrorism, and laundering through banks or financial institutions. In addition, revisions to the Penal Code criminalize “willful blindness,” the failure to report money laundering conducted through one’s financial institution when one has knowledge of the money’s illegal source, and imposes a three to six year sentence for failure to file suspicious transaction reports.

Law 27.693 provided for the creation of Peru’s financial intelligence unit, the Unidad de Inteligencia Financiera (UIF), an autonomous body reporting to the Office of the Prime Minister. The law also expanded the entities obligated to report suspicious transactions beyond just banks and financial institutions. Stock funds or brokers, credit and debit card companies, exchange houses, mail and courier services, travel and tourism agencies, hotels and restaurants, notaries, the customs agency, casinos, auto dealers, construction or real estate firms, and other sectors, in addition to banks and financial institutions, are all required to report suspicious transactions to the UIF within 30 days.

These entities are required to maintain registries of suspicious transaction reports (STRs) sent to the UIF. Law 27.693 also reinstated reporting requirements for large cash transactions, and requires the reporting of individual cash transactions exceeding \$10,000 or transactions totaling \$50,000 in one month. Nonfinancial institutions, such as exchange houses, casinos, lotteries or others, must report individual transactions over \$2,500 or monthly transactions over \$10,000. These cash transaction reports (CTRs) must be maintained in internal databases for a minimum of five years and be made available to the UIF upon request. Major institutions are required to appoint supervisory-level compliance officials to ensure that all reporting requirements for STRs and CTRs are met.

Law 27.693 also enables the UIF to request information from the following entities: the National Superintendence for Tax Administration, Customs, the Securities and Exchange Commission, the Public Records Office, the Public or Private Risk Information Centers, and the National Identification Registry and Vital Statistics Office. However, the UIF can only share information with other agencies—including foreign entities—if there is a joint investigation underway.

In July 2004, the GOP demonstrated further efforts to strengthen its anti-money laundering and terrorist financing system with the passage of Law 28.306. Law 28.306, which entered into effect on July 30, 2004, mandated that covered entities report suspicious transactions related to terrorist financing, and expanded the UIF’s functions to include the ability to analyze reports related to terrorist financing. Terrorist financing is criminalized under Executive Order 25.475, but Law 27.693 did not require covered entities to report suspicious transactions related to the financing of terrorism, nor did it enable the UIF to analyze such reports.

Law 28.306 also increased the number of individuals and entities required to file CTRs or STRs and expanded the number of government agencies from which the UIF may request information. A new reporting requirement was added as well: individuals or entities transporting more than \$10,000 in

currency or monetary instruments into or out of Peru must file reports with the customs agency, and the UIF may have access to those reports upon request. The law also gives the UIF the power to sanction entities for failure to report suspicious transactions, large cash transactions, or the transportation of currency or monetary instruments. Under Law 28.306, the UIF now has regulatory responsibilities for all covered entities that do not fall under the supervision of another regulatory body (such as the Superintendence of Banks).

The UIF began operations in June 2003 and today has 41 personnel. Reporting requirements entered into effect in September 2003, and as of October 2004 the UIF has received approximately 190 STRs. The FIU cannot receive STRs electronically; covered entities must hand-deliver STRs to the UIF.

The UIF has requested additional information from the covered entities on roughly 30 percent of the STRs. The UIF currently does not receive cash transactions reports or reports on the international transportation of currency or monetary instruments. CTRs are maintained in internal registries within the obligated entities, and reports on the international transportation of currency or monetary instruments are maintained by the customs agency. If the UIF receives an STR and determines that the STR warrants further analysis, it contacts the covered entity that filed the report for additional background information—including any CTRs that may have been filed—and/or the customs agency to determine if the subject of the STR had reported the transportation of currency or monetary instruments.

The UIF cannot receive CTRs without specifically requesting them from the covered entities, and there is no regular CTR reporting. Some requests for reports of transactions over \$10,000—such as those that are deposits into savings accounts—are protected under the constitution by bank secrecy provisions and require an order from the Public Ministry or SUNAT, the tax authority. A period of 15-30 days is required to lift the bank secrecy restrictions. All other types of cash transaction reports, however, may be requested directly from the reporting institution.

Once the UIF has completed the analysis process and determined that a case warrants further investigation or prosecution, the case is sent to the Public Ministry. Within the counternarcotics section of the Public Ministry, two specialized prosecutors are responsible for dealing with money laundering cases. As of December 2004, 19 cases had been sent to the Public Ministry for further investigation and all have been investigated by the two prosecutors. However, only three are ready for trial, and there have been no money laundering prosecutions in Peru to date.

In addition to being able to request any additional information from the UIF in their investigations, the Public Ministry may also request the assistance of the Directorate of Counternarcotics (DINANDRO) of the Peruvian National Police. With the passage of Law 28.306 in July 2004, DINANDRO and the UIF are now able to collaborate on investigations, although each agency must go through the Public Ministry in order to do so. DINANDRO may provide the UIF with intelligence for the cases the UIF is analyzing, while it provides the Public Ministry with assistance on cases that have been sent to the Public Ministry by the UIF.

The UIF was given regulatory responsibilities in July 2004 under Law 28.306. Most covered entities fall under the supervision of the Superintendence of Banks and Insurance (banks, the insurance sector, financial institutions), the Peruvian Securities and Exchange Commission (securities, bonds), and the Ministry of Tourism (casinos). All entities that are not supervised by these three regulatory bodies, such as auto dealers, construction and real estate firms, etc., fall under the supervision of the UIF.

However, some covered entities remain unsupervised. For instance, although money remittance businesses are regulated by the Superintendence of Banks, the Superintendence is not required to supervise any money remittance business that does less than 1,240,000 soles (about \$400,000) in transfers per year. There is also difficulty in regulating casinos, as roughly 60 percent of that sector is informal. An assessment of the gaming industry conducted by GOP and U.S. officials in 2004

identified alarming deficiencies in oversight, and described an industry that is vulnerable to being used to launder large volumes of cash. Approximately 580 slot houses operate in Peru, with less than 65 percent or so paying taxes. Estimates indicate that under 42 percent of the actual income earned is being reported, while official gaming revenues totaled \$650 million in 2003. This billion-dollar cash industry continues to operate with little supervision.

Peru currently lacks comprehensive and effective asset forfeiture legislation. The Financial Investigative Office of DINANDRO has seized numerous properties over the last several years, but few were turned over to the police to support counternarcotics efforts. While Peruvian law does provide for asset forfeiture in money laundering cases, and these funds can be used in part to finance the UIF, no clear mechanism exists to distribute seized assets among government agencies. The government's "Fedadoi" fund currently holds around \$75 million in monies recovered after having been stolen or diverted during the Fujimori administration.

As one of four countries participating in the G-8 Anti-Corruption and Transparency initiative, the GOP has committed itself to create a specialized office within the Public Ministry to provide advice on locating and recovering stolen public assets. Also as part of the initiative, the UIF will pursue activities to raise public awareness of money laundering, research money laundering trends in specific sectors of the economy, further improve the legal framework addressing money laundering, and promote better GOP interagency cooperation in pursuing cases.

Terrorism is considered a problem in Peru, which is home to the terrorist organization Shining Path. Although the Shining Path has been designated by the United States as a foreign terrorist organization pursuant to Section 219 of the Immigration and Nationality Act and under Executive Order (E.O.) 13224, and the United States and 100 other countries have issued freezing orders against its assets, the GOP has no legal authority to quickly and administratively seize or freeze terrorist assets. In the event that such assets are identified, the Superintendent for Banks must petition a judge to seize or freeze them. A final judicial decision is then needed to dispose of or use such assets.

Foreign Ministry Officials are working with other GOP agencies to complete the necessary legal revisions that will permit asset-freezing actions. The Office of the Superintendent of Banks routinely circulates to all financial institutions in Peru updated lists of individuals and entities that have been included on the UNSCR 1267 Sanctions Committee's consolidated list as being linked to Usama Bin Ladin, the Taliban, and al-Qaida, as well as those on the list of Specially Designated Global Terrorist Entities designated by the United States pursuant to E.O. 13224 (on terrorist financing). To date, no assets connected to designated individuals or entities have been identified, frozen, or seized.

Peru also has not yet taken any actions to thwart the misuse of charitable or non-profit entities that can be used as conduits for the financing of terrorism. However, with the passage of Law 28.306, the GOP did make some improvements with regard to terrorist financing legislation in 2004. Law 28.306 mandates that covered entities report suspicious transactions related to terrorist financing, and enables the UIF to analyze those reports. The financing of terrorism is criminalized under Executive Order 25.475.

Peru ratified the UN International Convention for the Suppression of the Financing of Terrorism on November 10, 2001, and the Organization of American States Inter-American Convention on Terrorism in 2003. Peru is a party to the 1988 UN Drug Convention and the UN Convention against Transnational Organized Crime, and ratified the UN Convention against Corruption in November 2004. Peru is a member of the Organization of American States Drug Abuse Control Commission (OAS/CICAD) Experts Group to Control Money Laundering. Peru is also a member of the South American Financial Action Task Force (GAFISUD), and was elected in July 2004 to hold the GAFISUD presidency in 2005. Peru is expected to become a member of the Egmont group of international FIUs in mid-2005. An extradition treaty between the U.S. Government and the GOP entered into force in 2003.

The Government of Peru has made serious advances in strengthening its anti-money laundering regime in 2004. However, some progress is still required. Anticorruption efforts in Peru should be a priority, and the need for strong confidentiality protocols for the Unidad de Inteligencia Financiera should be stressed. However, there are still a number of weaknesses in Peru's anti-money laundering system: bank secrecy must be lifted in order for the Unidad de Inteligencia Financiera to have access to certain cash transaction reports, smaller financial institutions are not regulated, and the Unidad de Inteligencia Financiera is not able to work directly with law enforcement agencies; rather, the Public Ministry must coordinate any collaboration between the Unidad de Inteligencia Financiera and the other agency. Peru should also enact legislation that allows for administrative as well as judicial blocking of terrorist assets. These issues should be addressed in order to strengthen Peru's ability to combat money laundering and terrorist financing.

Philippines

The Philippines is a regional financial center. In the past few years, the illegal drug trade in the Philippines reportedly has evolved into a billion-dollar industry. The Philippines continues to experience an increase in foreign organized criminal activity from China, Hong Kong, and Taiwan. Insurgency groups operating in the Philippines fund their activities, in part, through the trafficking of narcotics and arms and engage in money laundering through alleged ties to organized crime. The proceeds of corrupt activities by government officials are also a source of laundered funds.

In June 2000, the Financial Action Task Force (FATF) placed the Philippines on its list of Non-Cooperative Countries and Territories (NCCT) for lacking basic anti-money laundering regulations, including customer identification and record keeping requirements, and excessive bank secrecy provisions. Following its placement on the NCCT list, the U.S. Government issued an advisory to all U.S. financial institutions instructing them to give "enhanced scrutiny" to transactions involving the Philippines.

The Government of the Republic of the Philippines (GRP) initially established an anti-money laundering and counterterrorist financing regime by passing the Anti-Money Laundering Act of 2001 (AMLA). The GRP enacted Implementing Rules and Regulations (IRR) for the AMLA in April 2002. The AMLA criminalized money laundering, an offense defined to include the conduct of activity involving the proceeds from unlawful activity in any one of 14 major categories of crimes, and imposes penalties that include a term of imprisonment of up to 14 years and a fine no less than 3,000,000 pesos (\$54,000) but no more than twice the value or property involved in the offense. The Act also imposed identification, record keeping and reporting requirements on banks, trusts and other institutions regulated by the Central Bank, insurance companies, securities dealers, foreign exchange dealers and money remitters, as well as any other entity dealing in valuable objects or cash substitutes regulated by the Securities and Exchange Commission.

The AMLA also established the Anti-Money Laundering Council (AMLC) as the country's Financial Intelligence Unit (FIU). The Council is composed of the Governor of the Central Bank, the Commissioner of the Insurance Commission, and the Chairman of the Securities and Exchange Commission. By law, the AMLC Secretariat is an independent agency responsible for receiving, maintaining, analyzing, and evaluating covered and suspicious transactions. It provides advice and assistance to relevant authorities and issues relevant publications. The AMLC's responsibilities include the investigation and prosecution of money laundering. AMLC has the ability to seize terrorist assets involved in money laundering on behalf of the Republic of the Philippines after a money laundering offense has been proven beyond a reasonable doubt. In order to freeze assets allegedly connected to money laundering, the AMLC must establish probable cause that the funds relate to an offense enumerated in the Act, such as terrorism. The Court of Appeals then may freeze the bank account for 20 days. The AMLC may apply to extend a freeze order prior to its expiration. The AMLC

is required to obtain a court order to examine bank records for activities not listed in the Act, except for certain serious offenses such as kidnapping for ransom, drugs, and terrorism-related crimes. The AMLC and the courts are working to shorten the time needed so funds are not withdrawn before the freeze order is obtained. The AMLC has finalized, and will soon issue, implementing regulations on the forfeiture of assets related to money laundering, including provisions for third party claims.

However, the Financial Action Task Force (FATF) deemed the original legislation inadequate and pressured the Philippines to amend the legislation to be more in line with international standards. The Government of the Republic of the Philippines (GRP) subsequently made important progress in developing its anti-money laundering and terrorist financing regime, with the enactment of amendments to the Anti-Money Laundering Act of 2001 (AMLA) in March 2003. The FATF deemed those amendments to have sufficiently addressed the main legal deficiencies in the original Philippines anti-money laundering regime, and decided not to apply any formal countermeasures.

The major purposes of the amendments to the AMLA are the following: to lower the threshold amount for covered transactions (cash or other equivalent monetary instrument) from 4,000,000 pesos to 500,000 pesos (\$80,000 to \$10,000) within one banking day; to expand financial institution reporting requirements to include the reporting of suspicious transactions, regardless of amount; to authorize the Central Bank (Bangko Sentral ng Pilipinas or BSP) to examine any particular deposit or investment with any bank or non-bank institution in the course of a periodic or special examination (in accordance with the rules of examination of the BSP), to ensure institutional compliance with the Anti-Money Laundering Act; and, to delete the prohibitions against the Anti-Money Laundering Council's examining particular deposits or investments opened or created before the Act. The AMLC is now able to respond to a request from foreign authorities regarding deposits and investments made prior to the coming into effect of the AMLA.

Over the last year, the Philippines also made progress in tracking, seizing, and blocking terrorist assets. The AMLC completed the first phase of its information technology upgrades in 2004. This is a significant milestone that allowed AMLC to electronically receive, store, and search CTRs filed by regulated institutions. Through 2004, the AMLC had received well over six hundred suspicious transaction reports (STRs) involving 5,451 suspicious transactions, and had received covered transaction reports (CTRs) involving over 22 million covered transactions. In October 2004, the FATF met with the Philippines during the Asia/Pacific Review Group on Money Laundering to discuss progress addressing the remaining vulnerabilities. A FATF team conducted an on-site visit to the Philippines in January 2005 in order to determine if effective implementation of the AML reforms has taken place.

The Philippines is a member of the Asia/Pacific Group on Money Laundering. It is a party to the 1988 UN Drug Convention. The GRP has signed and ratified all 12 international conventions and protocols related to terrorism, including the UN Convention against Transnational Organized Crime (2002) and the UN International Convention for the Suppression of the Financing of Terrorism (2004). The Anti-Money Laundering Council is able to freeze funds and transactions identified with or traced to designated terrorist organizations or individuals upon request of the United Nations Security Council, the United States, and other foreign governments. The AMLC has responded to numerous requests for assistance from the U.S. and other countries. In a recent joint corruption investigation, conducted by U.S. and Philippine law enforcement, Philippine authorities expeditiously identified and froze over 40 accounts containing in excess of \$1 million total. Its follow-up investigations identified more accounts in the United States that were subsequently pursued by U.S. authorities (the Philippines and the U.S. have a Mutual Legal Assistance Treaty that entered into force in 1996). The United Kingdom recently praised the AMLC for assisting in the identification and repatriation of proceeds from money laundering. A number of money laundering related investigations are underway, most of which involve a failure to report covered transactions. In addition, a number of money laundering related cases are currently being heard a different regional trial courts throughout the Philippines.

In 2004, for the third straight year, the Philippines failed to enact new counterterrorism legislation. Lawmakers introduced several counterterrorism bills in the new Congress in July 2004; however, the executive branch has yet to develop a strategy to identify the most effective legislation or complete the draft of its version and mobilize resources to lobby for its passage. In lieu of specific counterterrorist legislation, the government has broadly criminalized terrorist financing through Republic Law legislation, which defines “hijacking and other violations under Republic Act No. 6235; destructive arson and murder, as defined under the Revised Penal Code, as amended, included those perpetrated by terrorists against non-combatant persons and similar targets” as one of the violations under the definition of unlawful acts. The Revised Implementing Rules and Regulations R.A. No. 9160, as amended by R.A. No.9194 further state that any proceeds, derived or realized from an unlawful activity includes all material and monetary effects will be deemed a violation against the law.

The Government of the Republic of the Philippines has made impressive progress enhancing and implementing its amended anti-money laundering legislation. It should continue to focus on effective implementation of the laws and procedures already enacted, in part by expanding its financial and human resources to properly equip and train law enforcement and regulatory personnel. Finally, Philippines should enact and implement new legislation that criminalizes terrorism and terrorist financing.

Poland

Poland’s geographic location places it directly along one of the main routes between the former Soviet Union republics and Western Europe used by narcotics-traffickers and organized crime groups. According to Polish government estimates, narcotics-trafficking, organized crime activity, auto theft, smuggling, extortion, counterfeiting, burglary, and other crimes generate criminal proceeds in the range of \$2-3 billion yearly. The Government of Poland (GOP) estimates the unregistered or gray economy, used primarily for tax evasion, may be as high as 15 percent of Poland’s \$230 billion GDP; it believes the black economy is only one percent of GDP. Poland’s entry into the European Union (EU) in May 2004 increased its ability to control its eastern borders, thereby allowing Poland to become more effective in its efforts to combat all types of crime, including narcotics-trafficking and organized crime.

Poland’s banks serve as transit points for the transfer of criminal proceeds. As of December 2004, 60 commercial banks were licensed for operation in Poland, as were slightly less than 600 “cooperative banks” that serve the rural and agricultural community. The GOP considers the nation’s banks, insurance companies, and brokerage houses to be important venues of money laundering. Polish casinos may likewise be sites for money laundering activity. According to the GOP, fuel smuggling, during which local companies and organized crime groups seek to avoid excise taxes by forging gasoline delivery documents, is a major source of proceeds to be laundered. It is also believed that some money laundering in Poland derives from Russia and/or other countries of the former Soviet Union.

The Criminal Code criminalizes money laundering. Article 299 of the Criminal Code addresses self-laundering and criminalizes tipping off. In June 2001, the parliament passed amendments that broadened the definition of money laundering to encompass all serious crimes (“Act on Counteracting Introduction into Financial Circulation of Property Values Derived from Illegal or Undisclosed Sources,” known as the “Act of 16 November”). In March 2003, Parliament further amended the law to broaden the definition of money laundering to include assets originating from illegal or undisclosed sources.

The National Security Strategy of Poland has labeled the anti-money laundering effort as a top priority. The GOP has worked diligently to bring its laws into full conformity with EU obligations. On November 16, 2000, a law went into effect that improves Poland’s ability to combat money laundering

(entitled “the November 2000 Act on Counteracting Introduction into Financial Circulation of Property Values Derived from Illegal or Undisclosed Sources”). The GOP has updated this law several times to bring it into conformity with EU standards and to improve its operational effectiveness. This law increases penalties for money laundering and contains safe harbor provisions that exempt financial institution employees from normal restrictions on the disclosure of confidential banking information. The law also provides for the creation of a Financial Intelligence Unit (FIU), the General Inspectorate of Financial Information (GIIF), housed within the Ministry of Finance, to collect and analyze large and suspicious transactions.

A major weakness of Poland’s initial money laundering regime was that it did not cover many non-bank financial institutions that had traditionally been used for money laundering. To remedy this situation, between 2002 and 2004, the Parliament passed several amendments to the 2000 money laundering law. The amendments expand the scope of institutions subject to identity verification, record keeping, and suspicious transaction reporting requirements. Financial institutions subject to the reporting requirements prior to March 2004 amendments included banks, the National Depository for Securities, post offices, auction houses, antique shops, brokerages, casinos, insurance companies, investment and pension funds, leasing firms, private currency exchange offices, real estate agencies, and notaries public. The March 2004 amendments to the money laundering law widen the scope of covered institutions to include lawyers, legal counselors, auditors, and charities, as well as the National Bank of Poland in its functions of selling numismatic items, purchasing gold, and exchanging damaged banknotes. It also requires casinos to report the purchase of chips worth 1,000 euros or more. The law’s extension to the legal profession was not without controversy. Lawyers strongly opposed the new amendments, claiming that the law violates client/attorney confidentiality privileges.

In 2002, Parliament adopted measures to bring the nation’s anti-money laundering legislation into compliance with EU standards regarding the reporting threshold, and also amended Poland’s customs law to require the reporting of any cross-border movement of more than 10,000 euros in currency or financial instruments. In addition to requiring that the GIIF be notified of all financial deals exceeding 15,000 euros, covered institutions are also required to file reports of suspicious transactions, regardless of the size of the transaction. Polish law also requires financial institutions to put internal anti-money laundering procedures into effect—a process that is overseen by the GIIF.

The GIIF began operations on January 1, 2001. In its first year of existence, the GIIF received over 350 suspicious transaction reports (STRs). In 2002, the GIIF received 670 STRs, from which prosecutors prepared 70 cases. In 2003, the GIIF received 965 STRs, resulting in the development of 152 cases by the Prosecutor’s Office. Between January and November 2004, the GIIF received 1,240 STRs, resulting in the creation of 136 cases. Banks filed eighty percent of the STRs submitted in 2004. At a minimum, all reports submitted by the GIIF to the Prosecutor’s Office have resulted in the instigation of initial investigative proceedings. Although there were only four convictions under the money laundering law in 2004 (this figure is twice the number from 2003), many of the investigations begun by the GIIF have resulted in convictions for other non-financial offenses. As of December 2004, the GIIF received 7.5 million reports on transactions exceeding the threshold level. The GIIF receives approximately 1.5 million reports per month.

The vast majority of required notifications to the GIIF are sent through a newly developed electronic reporting system, which is Europe’s most technically sophisticated and collects more complete information than the previously required report regarding the transaction in question (e.g., how payment was made—cash or credit, where and when). Only a small percentage of notifications are now submitted by paper, mainly from small institutions, which lack the IT capacity to use the electronic system. Although the new system is an important advance for Poland’s anti-money laundering program, the processing and analyzing of the large number of reports that are sent to the GIIF will prove to be a challenge for the understaffed FIU. To help improve the FIU’s efficiency in

handling the large volume of reports filed by obliged institutions, the GIIF plans to install new analytical software that will permit advanced and detailed analysis of financial information.

The GIIF also does on-site training and compliance monitoring investigations. In 2004, the GIIF carried out 15 compliance investigations and received several hundred follow-up reports from institutions responsible for routinely supervising covered institutions. In January 2004, the GIIF introduced a new electronic learning course designed to familiarize obliged institutions with Poland's anti-money laundering regulations.

The Polish Code of Criminal Procedure, Article 237, allows for certain Special Investigative Measures. However, money laundering investigations are not specifically covered, although the organized crime provisions might apply in some cases. Two main police units deal with the detection and prevention of money laundering: the General Investigative Bureau and the Unit for Combating Financial Crime. Overall, both police units cooperate well with the GIIF. The Internal Security Agency (ABW) may also investigate the most serious money laundering cases.

A recognized need exists for an improved level of coordination and information exchange between the GIIF and law enforcement entities, especially with regard to the suspicious transaction information that the GIIF forwards to the National Prosecutor's Office. To alleviate this problem the GIIF and the National Prosecutor's Office signed a "cooperation agreement" in 2004. The agreement calls for the creation of a computer-based system that would facilitate information exchange between the two institutions. Work on the development of this new system is currently underway.

The GIIF is authorized to put a suspicious transaction on hold for 48 hours. The Public Prosecutor then has the right to suspend the transaction for an additional three months, pending a court decision. In 2004, Article 45 of the criminal code was amended to further improve the government's ability to seize assets. On the basis of the amended article, an alleged perpetrator must prove that his assets have a legal source; otherwise, the assets are presumed to be related to the crime and as such can be seized. Both the Ministry of Justice and the GIIF desire to see more aggressive asset forfeiture regulations. However, because the former communist regime employed harsh asset forfeiture techniques against political opponents, lingering political sensitivities make it difficult to approve stringent asset seizure laws. In 2003, the GIIF suspended 20 transactions worth 9 million euros and blocked 9 accounts worth 5.2 million euros. During the first eleven months of 2004, the GIIF suspended 5 transactions worth 650,000 euros and blocked 12 accounts worth 2.1 million euros.

The GOP recently created an office of counterterrorist operations within the National Police. The office coordinates and supervises regional counterterrorism units and trains local police in counterterrorism measures. Poland has also created a terrorist "watch list" of entities suspected of involvement in terrorist financing. The list contains data based on information derived from similar lists published by the UN, the EU, and the United States Treasury Department. All covered institutions are required to verify that their customers are not included on the watch list. In the event that a covered institution discovers a possible terrorist link, the GIIF has the right to suspend suspicious transactions and accounts. Despite these efforts, Poland has not yet criminalized terrorist financing, arguing that all possible terrorist activities are already illegal and serve as predicate offenses for money laundering and terrorist financing investigations. The Ministry of Justice has completed draft amendments to the criminal code that would criminalize terrorist financing as well as elements of all terrorism-related activity. The amendments have been presented to the Minister of Justice, but have not yet been approved by Parliament.

Poland is a party to the 1988 UN Drug Convention, the UN International Convention for the Suppression of the Financing of Terrorism, the European Convention on Extradition and its Protocols, the European Convention on Mutual Legal Assistance in Criminal Matters, and the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime. In

November 2001, Poland ratified the UN Convention against Transnational Organized Crime, which was in fact a Polish initiative.

As a member of the Council of Europe, Poland participates in the Council of Europe's Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL) and has undergone first and second round mutual evaluations by that group. The GIIF is an active participant in the Egmont Group and in FIU.NET, the EU-sponsored information exchange network for FIUs. Poland has expressed an interest in joining the Financial Action Task Force (FATF).

A Mutual Legal Assistance Treaty between the United States and Poland came into force in 1999. In addition, Poland has signed bilateral mutual legal assistance treaties with Sweden, Finland, Ukraine, Lithuania, Latvia, Estonia, Germany, Greece, and Hungary. Polish law requires the GIIF to have memoranda of understanding (MOUs) with other international competent authorities before it can participate in information exchanges. The GIIF has been diligent in executing MOUs with its counterparts in other countries, signing a total of 20 MOUs between 2002 and 2003. The GIIF-FinCEN MOU was signed in fall 2003. An additional seven memoranda on exchange of financial information with Andorra, Cyprus, Monaco, Germany, Portugal, Thailand, and Ukraine were signed in 2004. Because Poland is an EU member state, the exchange of information between the GIIF and the FIUs of other member states is regulated by the EU Council Decision of October 17, 2000. All information exchanged between the GIIF and its counterparts in other EU states takes place via FIU.NET. For the first eleven months of 2004, 40 requests regarding 124 entities were received by the GIIF from foreign authorities. During the same time period, the GIIF made 104 requests regarding 227 entities to foreign authorities.

Over the past several years, the Government of Poland has worked diligently to implement a comprehensive anti-money laundering regime that meets international standards. Further improvements could be made by promoting additional training at the private sector level and by working to improve communication and coordination between the General Inspectorate of Financial Information and relevant law enforcement agencies. The Code of Criminal Procedure should also be amended to allow the use of Special Investigative Measures in money laundering investigations. This would help to attain a better record of prosecutions and convictions. Poland should also pass specific counterterrorist financing legislation.

Portugal

Portugal is an entry point for narcotics transiting into Europe, and officials of the Government of Portugal (GOP) indicate that most of the money laundered in Portugal is narcotics-related. GOP officials also report that currency exchanges, wire transfers, and real estate purchases are used for laundering criminal proceeds.

Portugal has a comprehensive anti-money laundering regime that criminalizes money laundering and other serious offenses, including terrorism, arms trafficking, kidnapping, and corruption. Act 5/2002 describes specific measures for combating organized and economic crime, particularly with regard to the gathering of evidence in relation to several crimes. All cross-border movements of currency that exceed 12,500 euros must be declared. All financial institutions, including insurance companies, must identify their customers, maintain records for a minimum of ten years, and demand written proof from customers regarding the origin and beneficiary of transactions that exceed 12,500 euros. Non-bank financial institutions, such as casinos, property dealers, lotteries, and dealers in high-value assets, must also identify customers engaging in large transactions, maintain records, and report suspicious transactions to the Office of the Public Prosecutor.

In February 2002, the law governing money laundering (Act 10/2002) was brought into force. This law expands money laundering to include as predicate crimes arms trafficking, extortion, prostitution,

trafficking in nuclear materials, trafficking in persons, trafficking in human organs or tissues, child pornography, trafficking in listed species, and tax fraud. Act 10/2002 also extends the list of entities obliged to report large transactions, to include account officers, external auditors, tax consultants, lawyers, solicitors, notaries, registrars, and money carriers. It also includes any other independent entities involved with the purchase and sale of real estate or commercial entities; operations connected with funds, securities, or other assets belonging to clients; opening or management of savings bank accounts or securities accounts; creation, exploitation, or management of companies, trust funds, or similar structures; transfer and buy rights with regard to professional sportsmen and women; and the execution of any financial operation. In addition, the obligated entities have the duty to report any suspicious operation, independent of the transaction amount.

In November 2003, the GOP passed a law revising and tightening the legal framework for foreign currency exchange transactions, including gold, subjecting them to the reporting requirement for transactions exceeding 12,500 euros. Beyond the requirements to report large transactions, foreign exchange bureaus are not subject to any special requirements to report suspicious transactions. The law does, however, give the GOP the authority to investigate suspicious transactions without notifying targets of the investigation.

On March 27, 2004, Portugal implemented the European Union's (EU) Second Money Laundering Directive through a new law, Act No. 11/2004 Establishing the Regime for Prevention and Repression of the Laundering of Benefits of Illicit Origin. The new law expands police access to information about bank accounts and financial transactions of individuals or companies under investigation. These rules also apply to bank branches outside of Portugal. Under the new rules, which supersede previous legislation, if a bank suspects or knows about a suspicious or illegal transaction, or has concerns about the amount, means, or payment used in the transaction, or any other suspicious fact, the bank must inform the Attorney General's Office. The Attorney General may order the bank not to complete the transaction. If stopping the transaction is impossible or likely to frustrate efforts to pursue the beneficiaries of a suspected money laundering operation, the Attorney General also may allow the bank to proceed with the transaction but require it to provide complete details to the government. Another provision requires banks to provide full access to investigators with a judicial warrant. Until March 2004, banking secrecy laws made it extremely difficult for investigators to obtain information about bank accounts and financial transactions of individuals or companies without their permission.

In addition, new rules, which take effect January 2005, permit tax authorities to lift secrecy rules without authorization from the target of an investigation. The rules require companies to have at least one bank account and, for companies with more than 20 employees, to conduct their business through bank transfers, checks, and direct debits rather than cash. These rules are mainly designed to help the GOP investigate possible cases of tax evasion but may ease enforcement of other financial crimes as well.

Portugal has established regulatory agencies, including the Central Bank of Portugal, the Portuguese Insurance Institution, the Gambling Inspectorate General, the Economic Activities Inspectorate General, the Securities Market Commission, the Registries and Notaries General Directorate, the National Association for Certified Public Accountants and the Association for Assistant Accountants, the Bar Association, and the Chamber of Solicitors, to monitor and enforce the reporting requirements of the obliged entities.

Suspicious transaction reports (STRs) are forwarded for analysis to the Unidade de Informação Financeira (UIF), formerly the Central Unit for Money Laundering Investigation, which began operating as the Financial Intelligence Unit (FIU) for Portugal in June 2003. If money laundering is indicated, the Portuguese Judicial Police will conduct an investigation. The UIF received 251 STRs in 2001, 256 STRs in 2002, and 488 STRs in 2003 from banks and other financial entities.

The Portuguese Madeira Islands International Business Center (MIBC) has a free trade zone, an international shipping register, offshore banking, trusts, holding companies, stock corporations, and private limited companies. The latter two business groups, of which there are approximately 6,500 companies registered in Madeira, are similar to international business corporations. All entities established in the MIBC will remain tax exempt until 2011. Twenty-seven offshore banks are currently licensed to operate within the MIBC. The Madeira Development Company supervises offshore banks.

Companies can also take advantage of Portugal's double taxation agreements. Decree-Law 10/94 permits existing banks and insurance companies to establish offshore branches. Applications are submitted to the Central Bank of Portugal for notification, in the case of EU institutions, or authorization, in the case of non-EU or new entities. The law allows establishment of "external branches" that conduct operations exclusively with nonresidents or other Madeiran offshore entities, and "international branches" that conduct both offshore and domestic business. Although Madeira has some local autonomy, Portuguese and EU legislative rules regulate its offshore sector, and the competent oversight authorities supervise it. Exchange of information agreements contained in double taxation treaties allow for the disclosure of information relating to narcotics or weapons trafficking. Bearer shares are not permitted.

Portuguese laws provide for the confiscation of property and assets connected to money laundering, and authorize the Judicial Police to trace illicitly obtained assets (including those passing through casinos and lotteries), even if the predicate crime is committed outside of Portugal. Police may request files of individuals under investigation and, with a court order, can obtain and use audio and videotape as evidence in court. The law allows the Public Prosecutor to request that a lien be placed on the assets of individuals being prosecuted, in order to facilitate asset seizures related to narcotics- and weapons-trafficking, terrorism, and money laundering. Act 10/2002 shifted the burden of proof in cases of criminal asset forfeiture from the government to the defendant; an individual must prove that his assets were not obtained as a result of his illegal activities. The law defines criminal assets as those owned by an individual at the time of indictment and thereafter. The law also presumes that assets transferred by an individual to a third party within the previous five years still belong to the individual in question, unless proven otherwise. GOP law enforcement agencies seized a total of 2.4 million euros in cash and accounts in 2003 and 5.1 million euros in 2004 in association with drug and money laundering investigations. Portugal has comprehensive legal procedures that enable it to cooperate with foreign jurisdictions and share seized assets.

In August 2003, Portugal passed Act 52/2003, which specifically defines money laundering and criminalizes the transfer of funds related to the commission of terrorist acts. Portugal has created a Terrorist Financing Task Force that includes the Ministries of Finance and Justice, the Judicial Police, the Security and Intelligence Service, the Bank of Portugal, and the Portuguese Insurance Institution. Portugal has applied all of the Financial Action Task Force (FATF) Special Recommendations on Terrorist Financing. Names of individuals and entities included on the UNSCR 1267 Committee's consolidated list, or that the United States and EU have linked to terrorism, are passed to private sector organizations through the Bank of Portugal, the Stock Exchange Commission, and the Portuguese Insurance Institution. In practice, the actual seizure of assets would only occur once the EU's clearinghouse process agrees to the EU-wide seizure of assets of terrorists and terrorist-linked groups. Portugal is actively cooperating in the search and identification of assets used for terrorist financing. To date, no significant assets have been identified or seized.

Portugal is a member of the Council of Europe, the European Union, and the FATF. Portugal is a party to the 1988 UN Drug Convention and the UN Convention against Transnational Organized Crime. Portugal is a party to the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime, and became a party to the UN International Convention for

the Suppression of the Financing of Terrorism on October 18, 2002. The Money Laundering Investigation Unit of Portugal's Judicial Police is a member of the Egmont Group.

The Government of Portugal has put into place a comprehensive and effective regime to combat money laundering. Laws passed in 2002 strengthen its ability to investigate and prosecute, and the steps taken in 2003 extend the regime's reach to terrorist financing. Portugal should continue to exercise due diligence over its offshore sector and closely monitor domestic non-bank financial institutions.

Qatar

Qatar has a relatively small population (approximately 600,000 residents), with an extremely low rate of general and financial crime. The financial sector, though modern, is limited in size, and subject to strict regulation by the Qatar Central Bank (QCB). There are 15 licensed financial banks, including two Islamic banks and a Qatar Industrial Development Bank. Qatar has 19 exchange houses, three investment companies and one commercial finance company. Although Qatar is a cash-intensive economy, cash placement by money launderers is believed by authorities to be a negligible risk due to the close-knit nature of the society in Qatar and the rigorous "know your customer" procedures required by Qatari law.

On September 11, 2002, the Emir of the State of Qatar signed the Anti-Money Laundering Law. According to Article 28 of the law, money laundering offenses involve the acquisition, holding, disposing of, managing, keeping, exchanging, depositing, investing, transferring, or converting of funds from illegal proceeds. The law imposes penalties of imprisonment of five to seven years, in addition to fines. The law expanded the powers of confiscation of proceeds gained from the commission of a crime, and instrumentalities used to commit a crime, to include the identification and freezing of assets as well as the ultimate confiscation of the illegal proceeds upon conviction of the defendant for money laundering.

The law requires all financial institutions to report suspicious transactions to the QCB and retain records for up to 15 years. The law also gives the QCB greater powers to inspect suspicious bank accounts, and grants the authorities the right to confiscate money in illegal transactions. Article 17 permits Qatar to extradite convicted criminals in accordance with international or bilateral treaties.

The Anti-Money Laundering Law established the National Anti-Money Laundering Committee (NAMLC) to oversee and coordinate money laundering combating efforts. It is chaired by the Deputy Governor of the Qatar Central Bank, in addition to ten other members from the Ministries of Interior, Civil Service Affairs and Housing, Economy and Commerce, Finance, Justice, QCB, Customs and Ports Authority and the State Security Bureau.

In February 2004, passed the Combating Terrorism Law. According to Article Four of the new law, any individual or entity that provides financial or logistical support, as well as raises money for activities considered terrorist crimes according to this statute are to be punished. The punishments are listed in Article Two of the law, which include the death penalty, life imprisonment, and 10 or 15 year jail sentences depending on the crime.

On October 17, 2004 the Government of Qatar appointed a member of the ruling Al-Thani family as director of the Financial Intelligence Unit (FIU). The FIU is responsible for reviewing all financial transaction reports, identifying suspicious transactions and financial activities of concern, ensuring that all government ministries and agencies have procedures and standards to ensure proper oversight of financial transactions, and recommending actions to be taken by the NAMLC if suspicious transactions or financial activities of concern are identified. Qatar's FIU has been active during the new director's appointment. The FIU is coordinating closely with the Doha Securities Market (DSM) to establish procedures and standards to monitor all financial activities that occur in Qatar's stock

market. In November 2004, the FIU established monitoring standards in coordination with the National Post Office to ensure that post offices throughout the country monitor carefully all cash transfers. The FIU is also taking steps to monitor financial activities that take place in the Ministry of Justice's Registration Department and Qatar's camel market.

In addition to reporting suspicious transactions, all financial institutions (including businesses conducting hawala transactions) must report transactions Qatari Riyals (QR) 100,000 (approximately \$33,000) or above to the QCB. Any repeated cash transactions of QR 30,000 (approximately \$10,000) or higher made by an individual or entity must be reported. Any transaction of QR 100,000 or higher and repeated transactions of QR 30,000 or higher will be investigated by the FIU in coordination with the Ministries of Justice and Interior. Exchange houses must report any transaction of QR 40,000 or higher. All financial institutions also must identify the person entering into a business relationship or conducting a transaction. In December 2004, QCB installed a central reporting system to assist the FIU in monitoring all financial transactions made by banks.

All accounts must be opened in person. (Only Qatari citizens, legal foreign residents, and citizens of other Gulf Cooperation Council (GCC) states are permitted to open bank accounts.) In January 2002, QCB issued Circular Number 9 regarding the Combat of Money Laundering and Financing of Terrorism. This circular was designed to increase the awareness of all banks operating in Qatar with respect to anti-money laundering efforts, by explaining money laundering schemes and monitoring suspicious activities.

Qatar has taken steps to combat the financing of terrorism, including requiring banks to freeze the assets of the individuals and entities listed on the UN 1267 Sanctions Committee's consolidated list. In 2002, the GOQ established a national committee, to review the consolidated designation lists and to recommend any necessary actions against individuals or entities found in Qatar. On August 24, 2003, the Anti-Money Laundering law was amended (amendment 21/2003) and published in the official gazette. Amendment 21 revised three articles in the anti-money laundering law. Article 2 was amended to broaden the definition for money laundering to include any activities related to terrorist financing. Article 8 added the customs and ports authority to the NAMLC. Article 12 authorized the Central Bank governor to freeze suspicious accounts up to ten days and to inform the attorney general within three days of any action taken. The Attorney General may renew or nullify the freeze order for a period of up to three months. After this process, a freeze order may not be renewed unless authorized by court order.

In March 2004, The Government of Qatar passed a law to establish the Qatar Authority for Charitable Works, which monitors all charitable activity in and outside of Qatar. This law incorporates the Charitable Societies Law (Law No. 8/1998), which outlines the monitoring and supervision of Qatar's charities. The Secretary General of the Authority will approve all international fund transfers by the charities. The Authority will have primary responsibility for monitoring overseas charitable, development, and humanitarian projects that were previously under the oversight of several government agencies such as the Ministry of Foreign Affairs, the Ministry of Finance and the Ministry of Economy and Commerce. Overseas activities must be undertaken in collaboration with a non-governmental organization (NGO) that is legally registered in the receiving country. The Authority will prepare an annual report on the status of all projects and submit the report to relevant ministries. The Authority is in the process of developing concrete measures to exert more control over domestic charity collection.

Article 37 of Law Number 8 of 1998, concerning the establishment and governance of private associations and institutions, stipulates that the Ministry of Awqaf (Endowments) and Islamic Affairs shall oversee and monitor all the activities of private institutions within the boundaries that are regulated by executive provisions. The Ministry may examine the institution's books, records, and documents that are related to its activities, and it may amend its bylaws. The institution shall provide

the Ministry with any information, documents, or other data it requests. According to Article 1 of Law 15 of 1993, banks practicing in offshore business shall be formed either as joint stock companies having their head offices in the State of Qatar or as branches of Qatari or foreign banks.

The QCB, Public Prosecutor and the Criminal Investigation Division (CID) of the Ministry of Interior are the principal entities that have the responsibility for investigating and prosecuting money laundering cases. The FIU receives all suspicious transaction reports and conducts an initial analysis. The FIU also obtains additional information from the banks and other government ministries before determining whether to forward the suspicious report to the Ministry of Interior. The Public Prosecutor and CID work closely on all criminal cases, although in financial cases they often seek the assistance of the QCB. There are no specialized units within the Public Prosecutor or CID's offices that initiate or investigate financial crimes.

Qatar does not yet have any cross-border reporting requirements for financial transactions. Immigration and customs authorities are reviewing this policy and are increasingly interested in expanding their ability to detect trade-based money laundering. The Government of Qatar has established a subcommittee under the NAMLC to implement cross-border reporting requirements. The subcommittee is composed of the QCB, Customs Authority, FIU, and members of the NAMLC. In 2003, the Government of Qatar (GOQ) concluded the investigation of a seizure that occurred in November 2002, involving approximately \$400,000 worth of gold that had been smuggled into the country. The GOQ confiscated all the gold.

Qatar is a party to the 1988 UN Drug Convention but not the UN Convention for the Suppression of the Financing of Terrorism or the UN Convention against Transnational Organized Crime. Qatar is one of the original signatories of the memorandum of understanding governing the establishment of the Middle East and North Africa Financial Action Task Force (MENAFATF), a FATF-style regional body that promotes best practices to combat money laundering and terrorist financing in the region. MENAFATF was inaugurated on November 30 in Bahrain by 14 Arab countries. Qatar also participates in the activities of the FATF through its membership in the Gulf Cooperation Council (GCC).

The passage of the Combating Terrorism Law and the establishment of a Financial Intelligence Unit (FIU) demonstrate the Government of Qatar's commitment to fight terrorist financing. Implementation and enforcement of the new law and regulations are essential to the success of Qatar's efforts. Qatar has demonstrated a willingness to work with other countries in the fight against terrorist financing and other financial crimes. Qatar should continue to work to ensure that law enforcement, prosecutors, and customs authorities receive the necessary training and technical assistance to improve their capabilities in recognizing and pursuing various forms of terrorist financing, money laundering and other financial crimes. Qatar should become a party to the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime.

Romania

Romania's geographic location makes it a natural transit country for trafficking in narcotics, arms, stolen vehicles, and persons. As such, the nation is vulnerable to financial crimes. Romania's National Bank estimates the dollar amount of financial crimes to range from \$1 billion to \$1.5 billion per year. Tax evasion and value-added tax (VAT) fraud constitute approximately 45 percent (\$500-\$600 million per year) of this total. Financial sector fraud, fraudulent bankruptcy claims, and smuggling of illicit goods are additional types of financial crimes prevalent in Romania. Romania also has one of the highest occurrences of online credit card fraud in the world.

Laundered money comes primarily from domestic criminal activity carried out by international crime syndicates, which often launder money through limited liability companies set up for this purpose. The

U.S. dollar is the preferred currency. Endemic corruption in Romania and its neighboring countries abets money laundering. The proceeds from the smuggling of cigarettes, alcohol, coffee, and other dutiable commodities are also laundered in Romania. From Romania, most of the laundered funds go to offshore financial shelters in locations such as the U.S. Virgin Islands, Cayman Islands, and Cyprus.

Romania criminalized money laundering with the adoption in January 1999 of Law No. 21/99, On the Prevention and Punishment of Money Laundering. The law became effective in April 1999 and requires customer identification, record keeping, reporting transactions of a suspicious or unusual nature, and currency transaction reporting for transactions over 10,000 euros.

The law also establishes a Financial Intelligence Unit (FIU), known as the National Office for the Prevention and Control of Money Laundering (NOPCML), and mandates that the NOPCML oversee the implementation of internal anti-money laundering procedures and training for all domestic financial institutions covered by the law. The list of entities subject to money laundering controls includes banks, non-bank financial institutions, attorneys, accountants, and notaries. However, in practice, the controls on non-bank financial institutions have not been as rigorous as those imposed on banks.

In December 2002, the Law on the Prevention and Sanctioning of Money Laundering went into effect, changing the list of predicate offenses to the “all-crimes” approach. Every cash operation and every external wire transfer involving a sum exceeding 10,000 euros must be reported to the NOPCML and be monitored. NOPCML is authorized to participate in inspections and controls in conjunction with supervisory authorities.

In addition, the new law expands the number and types of entities required to report to the NOPCML. Some of these new entities include art dealers, travel agents, privatization agents, postal officials, money transferors, and real estate agents. Training for these entities is necessary to ensure compliance with reporting, record keeping, recognition of suspicious transactions, and development of internal controls. The new law also provides for both suspicious transaction reports (STRs) and currency transaction reports (CTR) to be forwarded to the NOPCML, with the CTR amounts conforming to European Union (EU) standards.

In keeping with new international standards, The National Bank of Romania (BNR) introduced Norm No. 3, “Know Your Customer,” in December 2003 to strengthen information disclosure for external wire transfers and correspondent banking. When sending out wire transfers, banks must include information about the originator’s name, address, and account. The same information is required for incoming wires as well. Banks are further required to undertake proper due diligence before entering into international correspondent relations, and are prohibited from opening correspondent accounts with shell banks. The BNR is currently working on a project to strengthen its anti-money laundering (AML) and counterterrorist financing (CTF) regulations through the introduction of improved bank examination procedures. Plans are also underway to replicate the project in the insurance industry.

The know your customer identification requirements have also been honed, so that identification of the client becomes necessary upon account opening and when single or multiple transactions meet or approach 10,000 euros. In accordance with a new national strategy on money laundering, lawyers are now obligated to report to the NOPCML. In addition, and in line with the Second EU Directive, tipping off has been prohibited. Romanian law permits the disclosure of client and ownership information to bank supervisors and law enforcement authorities, and protects banking officials with respect to their cooperation with law enforcement.

In June 2004, the Government of Romania (GOR) appointed a new director to head the NOPCML. As a result of this new appointment, there has been a concerted effort to increase the NOPCML’s operational efficiency and to bring greater visibility to the importance of AML and CTF efforts in Romania. To date, some of the most significant improvements made include the approval of a new

organizational structure for the FIU (as mandated by Governmental Decision No. 1078/2004), as well as the passage of legislation that is designed to improve the procedures for analyzing STR information and the suspension of suspicious accounts and transactions.

Thus far, it appears that these efforts have achieved a degree of success. In the four months following the appointment of the new FIU director, 10 transactions amounting to approximately \$1.5 million were suspended (during the last five years, only five transactions had been suspended). Also, from January 1, 2004 to October 2004, 400 cases have been forwarded to the General Prosecutor's Office, 201 of which were forwarded after June 2004. Despite these improvements, the NOPCML is still hampered by a lack of sufficient resources (outdated IT systems) and personnel who are in need of comprehensive training regarding AML/CTF issues, as well as training in advanced analytical research methodologies. The Law on the Prevention and Sanctioning of Money Laundering increased the powers of NOPCML, but it did not provide for an increase in administrative capacity. NOPCML has begun a process of international cooperation to exchange information with other FIUs, and has also been working closely with Italy to improve its efficiency and effectiveness through an EU PHARE Project.

In 2003, the number of STRs increased to 882, and during the first three quarters of 2004, 1,241 reports were filed. Out of the 1,241 STRs received by the NOPCML, 1,134 were filed by reporting entities and 107 by the supervisory institutions. The law also provides for feedback to be given, upon request, to NOPCML from the General Prosecutor's Office.

However, efforts to prosecute these cases have been hampered by delays in reporting suspicious transactions, by a lack of resources in some regions, and by insufficient training in conducting complex historical financial investigations. The Directorate of Economic and Financial Crimes of the national police also has a mandate to pursue money laundering. However, despite hundreds of money laundering cases investigated since 2001, the interface with the justice system remains deficient.

Romanian law has some, but limited, provisions for asset forfeiture in the Law on Combating Corruption, No. 78/2000, and the Law on Combating Tax Evasion, No. 87/1994.

On November 24, 2004, the GOR approved a draft amendment to the anti-money laundering law, which is expected to be passed in 2005. The new law provides for a uniform approach to combating and preventing money laundering and terrorist financing. The purpose of the law is to achieve the standard contained in EU Directive 2001/97/EC. The draft law provides that money laundering and terrorist financing will be regulated under the same law to ensure consistent and effective measures against these crimes. The draft recommends the expansion of the types of individuals and institutions which are subject to reporting requirements. These obligations include not only reports on specific suspicious transactions, but also generalized intelligence involving financial patterns and typologies. The new law will also provide for better seizure proceedings, the employment of undercover investigators, and the surveillance of financial accounts and communications.

The GOR announced a national anticorruption plan in early 2003 and passed a law against organized crime in April 2003. A new Criminal Procedure Code was passed and became effective on July 1, 2003. The new Code contains provisions for authorizing wiretapping, intercepting, and recording telephone calls for up to 30 days, in certain circumstances. These circumstances, as provided for within the new Code, include terrorist acts and money laundering.

Romania's political leadership has consistently and unequivocally condemned acts of terrorism. After the events of September 11, 2001, Romania passed a number of legislative measures designed to sanction acts contributing to terrorism. Emergency Ordinance 141, passed in October 2001, legislates that the taking of measures, or the production or acquisition of means or instruments with an intention to commit terrorist acts, are offenses of exactly the same level as terrorist acts themselves. These offenses are punishable with imprisonment ranging from five to 20 years.

In April 2002, the GOR's Supreme Defense Council of the Country (CSAT) adopted a National Security Strategy, which includes a General Protocol on the Organization and Functioning of the National System on Preventing and Combating of Terrorist Acts. This system, effective July 2002 and coordinated through the Intelligence Service, brings together and coordinates a multitude of agencies, including 14 ministries, the General Prosecutor Office, the National Bank, and the NOPCML. The GOR has also set up an inter-ministerial committee to investigate the potential use of the Romanian financial system by terrorist organizations.

The Romanian Government and the BNR in particular have been fully cooperative in seeking to identify and freeze terrorist assets. Emergency Ordinance 159, also passed in 2001, includes provisions for preventing the use of the financial and banking system to finance terrorist attacks, and sets forth the parameters for the government to combat such use. The BNR, which oversees all banking operations in the country, also issued Norm No. 5 in support of Emergency Ordinance 159. Emergency Ordinance 153 was passed to strengthen the government's ability to carry out the obligations under UNSCR 1373, including the identification, freezing, and seizure of terrorist funds or assets.

In November 2004, the Parliament adopted law 535/2004 on preventing and combating terrorism, which abrogates some of the previous government ordinances and takes over most of their provisions. The law includes a chapter on combating the financing of terrorism by prohibiting financial and banking transactions with persons included on international terrorist lists, and requiring authorization for transactions conducted with entities suspected of terrorist activities in Romania.

The BNR receives lists of individuals and terrorist organizations from the United States, the UNSCR 1267 Sanctions Committee, and the EU, and circulates these to banks and financial institutions. The new law on terrorism provides that the assets used or provided to terrorist entities will be forfeited, together with finances resulting from terrorist activity. To date, in regard to terrorist financing, no arrests, seizures, or prosecutions have been carried out.

The EU's Europe Agreement with Romania provides for cooperation in the fight against drug abuse and money laundering. Romania is a member of the Council of Europe (COE) and participates in the Council of Europe's Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL). A mutual evaluation in April 1999 by that Committee uncovered a number of areas of concern, including the high evidence standard required for reporting suspicious transactions, a potential conflict with the bank secrecy legislation, and the lack of provisions for cases in which the reporting provisions are intentionally ignored. Romania has been working to address these concerns, bringing in legal experts from the EU to consult. In late 2003, Romania also underwent a Financial Sector Assessment Program (FSAP) by the World Bank as part of that organization's pilot program.

The GOR recognizes the link between organized crime and terrorism. Bucharest is the site of the Southeast European Cooperative Initiative's Center for Combating Transborder Crime, a regional center that focuses on intelligence sharing related to criminal activities, including terrorism. Romania also participates in a number of regional initiatives to combat terrorism. Romania has worked within SEEGROUP (a working body of the NATO initiative for Southeast Europe) to coordinate counterterrorist measures undertaken by the states of Southeastern Europe. The Romanian and Bulgarian interior ministers signed an inter-governmental agreement in July 2002 to cooperate in the fight against organized crime, drug smuggling, and terrorism.

The NOPCML is a member of the Egmont Group. The Mutual Legal Assistance Treaty signed in 2001 between the United States and Romania entered into force in October 2001. The GOR has demonstrated its commitment to international anticrime initiatives by participating in regional and global anticrime efforts. Romania is a party to the 1988 UN Drug Convention, the Agreement on Cooperation to Prevent and Combat Transborder Crime, and the UN Convention against Transnational

Organized Crime. Romania also is a party to the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime; the Council of Europe's Criminal Law Convention on Corruption; and the UN International Convention for the Suppression of the Financing of Terrorism. On November 2, 2004, Romania became a party to the UN Convention against Corruption.

Although legislation and regulations designed to combat financial crime are fairly new developments, they are quite comprehensive in scope. Nevertheless, implementation lags, while reporting and investigations are not as timely or as effective as desired. The Government of Romania should continue addressing the concerns of the Council of Europe evaluators by making further improvements in its anti-money laundering regime. Romania should ensure non-bank entities are fully aware of their reporting and record keeping responsibilities and are adequately supervised. Romania should adopt procedures for the timely freezing, seizure, and forfeiture of criminal- or terrorist-related assets. Romania should adopt reporting requirements for the cross-border movement of currency and monetary instruments.

Russia

Russia has enjoyed rapid economic growth in recent years, mainly driven by high world oil prices and the pursuit of sound fiscal policies. Yet, Russia has been slow to complete structural reforms of the banking sector, and overall public confidence in Russian banks remains low. Consequently, Russia's financial system is unattractive to both legal and illegal depositors, and therefore Russia is not considered an important regional financial center. Over the past three years, however, Russia has committed significant resources to improve its ability to combat the laundering of criminal financial proceeds domestically and internationally. Through aggressive enactment and implementation of comprehensive money laundering and counterterrorism financing legislation, Russia now has well-established legal and enforcement frameworks to deal with money laundering and terrorism financing.

Despite notable progress and demonstrated political will to combat these phenomena aggressively, Russia remains vulnerable to criminal financial activity because of a number of contributing factors, namely: vast natural resource wealth, pervasiveness of organized crime, and a high level of corruption. Other factors include porous borders, Russia's role as a geographic gateway to Europe and Asia, a weak banking system, and under-funding of regulatory and law enforcement agencies. Criminal elements from Russia and neighboring countries continue to use Russia's financial system to launder money, because of familiarity with the language, culture, and economic system. The majority of the funds do not appear to be from activities related to narcotics production or trafficking, although these activities likely occur. Experts believe that most of the dirty money flowing through Russia derives from domestic criminal or quasi-criminal activity, including evasion of tax and customs duties and smuggling operations.

Net flows of money out of the country have slowed noticeably since the 1998 financial crisis. Although net capital outflows for the first three quarters of 2004 totaled \$10.9 billion, compared with \$3.8 billion in 2003, the long-term trend in outflows continues to drift downward. This year's anomalous increase was largely attributed to instability in the banking sector and uncertainties in the investment climate. The majority of these outflows involve legitimate movement of money to more secure and profitable destinations abroad, but at least a portion of this money undoubtedly involves the proceeds of criminal activity.

Russia has the legislative and regulatory framework in place to pursue and prosecute financial crimes, including money laundering and terrorism finance. The Russian Federation's (RF's) Federal Law No. 115-FZ "On Combating Legalization (Laundering) of Criminally Gained Income and Financing of Terrorism" became effective on February 1, 2002, with subsequent amendments to the laws on banking, the securities markets, and the criminal code taking effect in October 2002, January 2003,

and December 2003. RF 115-FZ obligates banking and non-banking financial institutions to monitor and report certain types of transactions, keep records, and identify their customers. Article 8 of Law 115-FZ provides for the establishment of Russia's financial intelligence unit as an independent executive agency administratively subordinated to the Ministry of Finance. In March 2004, President Putin issued a decree to upgrade the unit, formerly called the Financial Monitoring Committee, to a service, now called the Federal Service for Financial Monitoring (FSFM). All financial institutions with an obligation to report certain transactions must send this information to the FSFM. The FSFM is also responsible for coordinating all of Russia's anti-money laundering and counterterrorism financing efforts, but has no law enforcement investigative powers.

Consistent with Financial Action Task Force (FATF) recommendations, the criminal code was amended in December 2003 to remove a specific monetary threshold for crimes connected with money laundering, thus paving the way for prosecution of criminal offenses regardless of the sum involved.

According to the original language of RF 115-FZ, those institutions legally required to report included: banks, credit organizations, securities market professionals, insurance and leasing companies, federal postal service, jewelry and precious metals merchants, betting shops, and companies managing investment and non-state pension funds. Amendments to the law that came into force on August 31, 2004, extend the reporting duty to real estate agents, lawyers and notaries, and persons rendering legal/accountancy services that involve certain transactions (e.g., preparing/executing transactions with immovables; managing money, securities, or other property; managing bank accounts or securities accounts; attracting or managing money for organizations; or incorporating, managing, and buying/selling organizations).

Various regulatory bodies ensure compliance with Russia's anti-money laundering and counterterrorism finance laws. The FSFM is specifically responsible for regulating leasing companies, pawnshops, and gambling services. The CBR supervises credit institutions; the Ministry of Finance oversees insurance companies, entities managing non-government pension and investment funds, and entities buying and selling precious metals or stones; the Federal Service for Financial Markets supervises professional participants in the securities sector.

The CBR has issued guidelines regarding anti-money laundering practices within credit institutions, including "know your customer" (KYC) and bank due diligence programs. Banks are required to obtain and retain for five years information regarding individuals and legal entities and beneficial owners of corporate entities. Further, banks must adopt internal compliance rules and procedures and appoint compliance officers. In July 2004, Russia amended Law 115-FZ to require banks to identify the original source of funds and to report to the FSFM all suspicious transactions, as opposed to only transactions containing certain features, as previously mandated. Institutions that fail to meet mandatory reporting requirements face revocation of their licenses to carry out relevant activity, limits on certain banking operations, and possible criminal or administrative penalties. An administrative fine of up to \$16,700 can be levied against an institution, with a fine of up to \$700 on an officer of an institution. The maximum criminal penalty is 10 years in prison with applicable fines.

The CBR instituted a number of regulatory measures in 1999 to scrutinize offshore financial transactions. In the six months following the implementation of these regulations, wire transfers from Russian banks to offshore financial centers dropped significantly. At the same time the CBR curtailed establishing correspondent relations with offshore banks by raising the standards for "eligible" offshore financial institutions, thereby reducing their number. In August 2003 the CBR issued Order 1317-U, which regulates the relations of Russian financial institutions with their counterparts in offshore zones. In addition to requiring Russian financial institutions to report all related transactions, offshore banks are in some cases subject to enhanced due diligence and maintenance of additional mandatory reserves to offset potential risks undertaken by the Russian institution for specific transactions.

Foreign financial entities, including those from known offshore havens, are not permitted to operate directly in Russia: they must do so solely through subsidiaries incorporated in Russia, which are subject to domestic supervisory authorities. During the process of incorporating and licensing these subsidiaries, Russian authorities must identify and investigate each director of the Russian unit; therefore nominee or anonymous directors are, as a practical matter, not permitted under Russian law and regulation. As the CBR completes its review of banks' applications for admission into the newly created Deposit Insurance System, the CBR will verify that banks are carrying out these identification procedures before approving the application.

Russian businesses must obtain government permission before opening operations abroad, including in offshore zones. A department within the Ministry of Economic Development and Trade (MEDT) reviews such requests from Russian firms, and once MEDT approves, the CBR must then approve the overseas currency transfer. In either case, the regulatory body responsible for the offshore activity is the same as for domestic activity, i.e., the Federal Service for Financial Markets regulates brokerage and securities firms, while the CBR regulates banking activity.

All obligated financial institutions must monitor and report to the government: 1) any transaction that equals or exceeds 600,000 rubles (approximately \$20,000) and involves or relates to: cash payments, individuals or legal entities domiciled in states that do not participate in the international fight against money laundering, bank deposits, precious stones and metals, payments under life insurance policies, and/or gambling; 2) all transactions of extremist organizations or individuals included on Russia's domestic list; and 3) suspicious transactions.

Each of the FSFM's seven territorial offices corresponds with one of the federal districts that comprise the Russian Federation. The Central Federal District office is headquartered in Moscow; the remaining six are located in the major financial/industrial regions throughout Russia. The primary functions of the territorial offices are to establish cooperation with regional law enforcement and other authorities to enhance information that comes into the FSFM, and to supervise anti-money laundering and counterterrorism financing legislation compliance by institutions under FSFM supervision. Additionally, the satellite offices must identify and register at the regional level all of the pawnshops, leasing, and gaming entities under their jurisdiction. They also are charged with coordinating efforts between the Central Bank of Russia (CBR) and other supervisory agencies with respect to implementation of anti-money laundering and counterterrorist financing regimes.

Russia's anti-money laundering law, as amended, provides the FSFM with the appropriate authority to gather information regarding the activities of investment foundations, non-state pension funds, gambling businesses, real estate agents, lawyers and notaries, persons rendering legal/accountancy services, and sales of precious metals and jewelry. Virtually all financial institutions submit reports to the FSFM via encrypted software provided by the FSFM. To date, Russia's national database contains approximately three million reports. The FSFM receives six to seven thousand transaction reports daily. Of these daily reports, approximately 75 percent result from mandatory (currency) transaction reports, and the remaining 25 percent relate to suspicious transactions. Among these, 130 to 150 typically merit further investigation, with 20 to 30 of these cases potentially involving terrorism financing. The FSFM has received approximately 400 reports potentially related to terrorism financing since its inception. Depending on the nature of the activity, the FSFM provides information to the appropriate law enforcement authorities for further investigation, i.e., the Ministry of Internal Affairs (MVD) for criminal matters, the Federal Drug Control Service (FSKN) for narcotics-related activity, or the Federal State Security Service (FSB) for terrorism-related cases.

As part of President Putin's recent administrative reforms, the FSKN now has a full division committed to money laundering, staffed by agents with experience in counternarcotics and economic crimes. This division cooperates closely with the FSFM in pursuing narcotics-related money laundering cases. Over the past year, the FSKN has initiated over 50 such investigations.

With its legislative and enforcement mechanisms in place, Russia has begun to prosecute a number of high-level money laundering cases. As of mid-December 2004, the CBR had revoked the licenses of 28 banks for failure to observe banking regulations. Of these 28, two banks were specifically charged with money laundering—Sodbiznesbank and Novocherkassk City Bank. When the CBR announced on May 13, 2004, that it was revoking the license of Sodbiznesbank because of money laundering charges—the first public announcement of such allegations—it touched off a minor crisis of confidence in the banking system and triggered a depositor run. In October 2004 a series of unconfirmed press articles reported that a Moscow bank was under investigation for financing terrorist acts, including the seizure of the Moscow Theater in 2002. Based on these examples and statistics, Russia has demonstrated a broad-based commitment to enforcing its anti-money laundering and counterterrorism financing legislation and is beginning to see an improvement in compliance levels as a result of its actions.

Russia has a legislative and financial monitoring scheme that facilitates the tracking and seizure of all criminal proceeds. None of this legislation, however, is specifically tied to narcotics proceeds. Russia's laws criminalizing money laundering and terrorist financing also provide for the forfeiture of criminal proceeds. Russian legislation provides for a variety of investigative techniques such as search, seizure, and compelling the production of documents, as well as the identification, freezing, seizing, and confiscation of funds/assets. Where sufficient grounds exist to suppose that property was obtained as the result of a crime, investigators and prosecutors can apply to the court to have the property frozen or seized. Law enforcement agencies have the power to identify and trace property that is, or may become, subject to confiscation or is suspected of being the proceeds of crime or terrorist financing. Moreover, the law allows the FSFM, in concert with banks, to freeze possible terrorist-related financial transactions up to one week. Banks may freeze transactions for two days and the FSFM may follow up with an additional five days.

In accordance with its international agreements, Russia recognizes rulings of foreign courts relating to the confiscation of proceeds from crime within its territory and can fully or partially transfer confiscated proceeds of crime to the foreign state whose court issued the confiscation order. However, Russian law still does not provide for the seizure of instruments of crime. Businesses can be seized only if it can be shown that they were acquired with criminal proceeds. Legitimate businesses cannot be seized solely on the basis that they were used as "instruments" to facilitate the commission of a crime. While Russian law enforcement has adequate police powers to trace and seize assets, most Russian law enforcement personnel lack experience and expertise in these areas.

The Russian Federation has enacted new legislation and executive orders to strengthen its ability to fight terrorism. On January 11, 2002, President Putin signed a decree entitled "On Measures to Implement the UN Security Council Resolution (UNSCR) No. 1373 of September 28, 2001." Noteworthy among this decree's provisions are the introduction of criminal liability for intentionally providing or collecting assets for terrorist use, and the instructions to relevant agencies to seize assets of terrorist groups. This latter clause, however, conflicted with existing domestic legislation. Accordingly, on September 24, 2002, the Duma approved an amendment to the anti-money laundering law, resolving the conflict, and allowing banks to freeze assets immediately, pursuant to UNSCR 1373. This law came into force on January 2, 2003. Further, Article 205.1 of the criminal code, which was enacted in October 2002, criminalizes terrorist financing. On October 31, 2002, the Federation Council, Russia's upper house, approved a supplemental article to the 2003 federal budget, allocating from surplus government revenues an additional 3 billion rubles (\$100 million) in support of federal counterterrorism programs and improvement of national security.

In February 2003, at the request of the General Procuracy, the Russian Supreme Court issued an official list of 15 terrorist organizations. According to press reports, the financial assets of these organizations were immediately frozen. In addition, Russia has assisted the United States in investigation of terrorist financing, providing vital financial documentation and other evidence

establishing the criminal activities of the Benevolence International Foundation (BIF). Russian authorities have also provided U.S. federal law enforcement authorities with valuable evidence relating to terrorist fundraising activities of an individual currently being prosecuted in the U.S. for possession of counterfeit currency.

Following an aggressive campaign to reform Russia's anti-money laundering regime, Russia became a full FATF member in June 2003. During its first plenary as a full-fledged FATF member, Russia announced its intention to create a Central Asian FATF-style Regional Body (FSRB). In October 2004, Russia successfully kicked off the FSRB, the Eurasian Group on Combating Legalization of Proceeds from Crime and Terrorist Financing (EAG), which includes Belarus, China, Kazakhstan, Kyrgyzstan, Tajikistan and Russia as members, and several other nations and multilateral organizations as observers to the group, including the United States. Concurrent with the first plenary meeting of the EAG, Russia also hosted the annual FATF Typologies meeting in Moscow in early December 2004.

The United States and Russia signed a Mutual Legal Assistance Treaty in 1999, which entered into force on January 31, 2002. To date, the FSFM has signed cooperation agreements with the Financial Intelligence Units (FIUs) of the United States, Poland, Britain, the Czech Republic, Belgium, Italy, Panama, France, Estonia, Ukraine, Colombia, Cyprus, Finland, Latvia, Luxembourg, Switzerland, and the United Kingdom. Additionally, the FSFM is an active member of the Egmont Group, having taken on sponsorship of several candidate countries for 2004. U.S. law enforcement agencies exchange operational information with their Russian counterparts on a regular basis.

In addition to membership in the FATF, Russia holds membership in the Council of Europe's Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL). Russia ratified the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime in January 2001. Russia is a party to the 1988 UN Drug Convention and on May 26, 2004, became a party to the UN Convention against Transnational Organized Crime. In November 2002, Russia ratified the UN International Convention for the Suppression of the Financing of Terrorism. Russia also became a signatory to the UN Convention against Corruption.

Russia has developed a solid legislative and regulatory foundation for combating money laundering and terrorism financing. Given its role in spearheading the creation of the EAG, Russia has demonstrated both the political will and a capability to play a more proactive role in improving the region's capacity for countering money laundering and terrorism financing. Nevertheless, vulnerabilities continue. Russia has committed to improving CBR oversight of shell companies as well as closer scrutiny of banks that do not carry out traditional banking activities. Further, the Government of Russia has drafted a national money laundering strategy, which is currently under review and will likely be enacted in 2005. Finally, endemic and high-level corruption continues to undermine Russia's best efforts. Persistent and significant deficiencies in Russia's overall business operating environment pose formidable challenges to Russia's efforts to establish a well functioning and comprehensive anti-money laundering/counterterrorism financing regime.

The Government of Russia should strive to contain official corruption and increase transparency in the corporate environment. Russia should commit adequate resources to its regulatory and law enforcement entities to enable them to fulfill their responsibilities. Russia should also enact legislation that would provide for the seizure of instruments, as opposed to merely the proceeds, of criminal activity. Finally, Russia should continue to play a leadership role in the region with regard to anti-money laundering and counterterrorist finance regime implementation.

[*This text has been revised since its original posting; see version as [released to Congress.](#)]

Rwanda

Rwanda is not a major financial center. Since recovering from the 1994 genocide and war, Rwanda's banking system has been largely controlled by the government and is now in the process of privatization. Two of eight banks were privatized in 2004. The Rwandan financial system lacks the efficiencies of more modern banking systems, such as electronic funds transfers or credit card transactions. As that system develops and the country becomes more stable, and as neighboring countries like Kenya and Tanzania increase their enforcement efforts, there is a risk of increased illegal financial activity in Rwanda.

There are no documented reports of money laundering in Rwanda, primarily due to the government's close monitoring through the Central Bank of monetary transfers totaling more than \$50,000, whether domestic or international. The authority for such monitoring is granted in the Rwandan Banking Act of 2000. We do not know if Rwandan financial institutions engage in international narcotics-trafficking transactions or whether Rwanda has entered into bilateral agreements for the exchange of information on money laundering with other countries. Since Rwanda has been the recipient of large amounts of foreign assistance, the IMF and the World Bank continue to monitor the banking sector, particularly with regard to government spending. In addition, most of the country's charitable and nonprofit entities are recipients of international aid and are largely monitored by their donors, the IMF and/or the World Bank.

There is evidence that the Government of Rwanda (GOR) indirectly engaged in mineral transfers from the Congo during the Rwandan occupation of the eastern Congo that ended in the fall of 2002. The National Bank of Rwanda (BNR) and the Rwandan Private Sector Federation (the Rwandan equivalent of the chamber of commerce) both confirmed the large amounts of Rwandan profits obtained from the processing of coltan from 1999 through 2001. According to the BNR, the profits reportedly peaked at \$3 million in customs fees and banking profits in a two-month period in 2000. These profits helped fuel the Rwandan GDP growth rate of 9 percent for 2002. Neither organization could confirm significant transactions in Congolese diamonds.

For the past three years, Rwanda has been completely overhauling its legal system, and the Rwandan Parliament is enacting new legislation affecting Rwandan financial law. There remains no provision for the prosecution of potential money laundering cases, however, and, no regulation of imports and exports, except for post-checks on transferred goods. According to legal experts with the Rwandan Finance Ministry and the Prosecutor General's office, no laws under consideration would curb secrecy in respect to client and ownership information in either domestic or offshore financial transactions. Additionally, there are no laws in place concerning banker negligence or the forfeiture and seizure of assets in cases involving narcotics-trafficking, serious crimes or terrorists. No arrests for money laundering or terrorist financing have occurred in Rwanda since January 1, 2003.

Rwanda has officially committed itself to locating and freezing terrorist assets identified by the international community. However, Rwanda has yet to develop fully its laws and its ability to enforce regulations against terrorist financing in accordance with the relevant UN resolutions. The GOR does, however, retain the power to identify, freeze, and seize terrorist-related financial assets. The Ministry of Finance circulates lists of identified individuals and organizations included on the UNSCR 1267 Sanctions Committee's consolidated list. Rwanda is a party to the 1988 UN Drug Convention, the UN Convention against Transnational Organized Crime, and the UN International Convention for the Suppression of the Financing of Terrorism.

The GOR cooperates with the U.S. when requested in connection with investigations and proceedings related to narcotics, terrorism, terrorist financing, and other serious crimes. For example, the Rwandan National Police's (RNP) Economic Crimes Division has cooperated with the USG in check embezzlement investigations that led to arrests in Uganda. However, the RNP lacks the experience, training, and resources to be effective in investigating and enforcing laws concerning modern money

laundering and terrorist financing. Furthermore, no formal body of laws or regulations concerning this cooperation currently exists in Rwanda.

The Government of Rwanda should enact comprehensive anti-money laundering legislation covering all serious crimes, including terrorist financing, and take steps to develop a viable anti-money laundering regime. Rwanda should also consider becoming an observer to the Eastern and Southern Africa Anti-Money Laundering Group.

Samoa

Samoa does not have major organized crime, fraud, or drug problems. The most common crimes that generate revenue within the jurisdiction are primarily the result of low-level fraud and theft. The domestic banking system is very small, and there is relatively little risk of significant money laundering derived from domestic sources. Samoa's offshore banking sector is relatively small. The Government of Samoa (GOS) enacted the Money Laundering Prevention Act (the Act) in 2000. This law criminalizes money laundering associated with numerous crimes, sets measures for the prevention of money laundering and related financial supervision. Newly adopted regulations and guidelines fully implementing this legislation came into force in 2002. Under the Act, a conviction for a money laundering offense is punishable by a fine not to exceed Western Samoa Tala (WST) one million (approximately \$354,000), a term of imprisonment not to exceed seven years, or both.

The Act requires financial institutions to report transactions considered suspicious to the Money Laundering Prevention Authority (MLPA), the Samoa Financial Intelligence Unit (FIU) currently working under the auspices of the Governor of the Central Bank. The MLPA receives and analyzes disclosures, and if it establishes reasonable grounds to suspect that a transaction involves the proceeds of crime, it refers the information to the Attorney General and the Commissioner of Police. In 2003, Samoa established under the authority of the Ministry of the Prime Minister, an independent and permanent Transnational Crime Unit (TCU). The TCU is staffed by personnel from the Samoa Police Service, Immigration Division of the Ministry of the Prime Minister and Division of Customs. The TCU is responsible for intelligence gathering and analysis and investigating transnational crimes, including money laundering, terrorist financing and the smuggling of narcotics and people.

The Act requires financial institutions to record new business transactions exceeding WST 30,000 (approximately \$10,000), to retain records for a minimum of seven years, and to identify all parties to the transactions. This threshold reporting system could expose the financial institutions to potential abuse. Nevertheless, Section 43(a) of the Money Laundering Prevention Regulations 2002 requires financial institutions to identify their customers when "there are reasonable grounds for believing that the one-off transaction is linked to one or more other one-off transactions and the total amount to be paid by or to the applicant for business in respect to all of the linked transactions is WST 30,000, or the equivalent in another currency." Moreover, proposed amendments to the Act would delete the threshold reporting system, leaving it open for all financial institutions to report any amount or transaction that purports to involve money laundering.

Section 12 of the Act establishes that all financial institutions have an obligation under this law to "develop and establish internal policies, procedures and controls to combat money laundering, and develop audit functions in order to evaluate such policies, procedures and controls." The Regulations and Guidelines that have been developed remedy the lack of specificity in the Act about the obligation of financial institutions to establish the identity of the beneficial owner of an account managed by an intermediary. Specifically, Section 12.06 of the Money Laundering Prevention Guidelines for the Financial Sector provides that "...If funds to be deposited or invested are being supplied by or on behalf of a third party, the identity of the third party (i.e., the underlying beneficiary) should also be established and verified." The law requires individuals to report to the MLPA if they are carrying with

them WST 10,000 (approximately \$3,300) or more, in cash or negotiable instruments, upon entering or leaving Samoa.

The Act removes secrecy protections and prohibitions on the disclosure of relevant information. Moreover, it provides protection from both civil and criminal liability for disclosures related to potential money laundering offenses to the competent authority.

The Central Bank of Samoa, the Office of the Registrar of International and Foreign Companies, and the MLPA regulate the financial system. There are four locally incorporated commercial banks, supervised by the Central Bank. The Office of the Registrar of International and Foreign Companies has responsibility for regulation and administration of the offshore sector. There are no casinos, but two local lotteries are in operation.

Samoa is an offshore financial center, with eight offshore banks licensed. For entities registered or licensed under the various Offshore Finance Centre Acts, there are no currency or exchange controls or regulations, and no foreign exchange levies payable on foreign currency transactions. No income tax or other duties, nor any other direct or indirect tax or stamp duty is payable by registered/licensed entities. In addition to the eight offshore banks, Samoa currently has 13,465 international business corporations (IBCs), three international insurance companies, six trustee companies, and 175 international trusts. Section 16 of the Offshore Banking Act stipulates prohibition for any person from applying to be a director, manager, or officer of an offshore bank who has been sentenced for an offense involving dishonesty. The prohibition is also reflected in the application forms and Personal Questionnaire that are completed by prospective applicants that detail the licensing requirements for offshore banks. The application forms list the required supporting documentation for proposed directors of a bank. These include references from a lawyer, accountant, and a bank, police clearances, curriculum vitae, certified copies of passports and personal statements of assets and liabilities (if also a beneficial owner). The Inspector of Offshore Banks must be satisfied with all supporting documentation that a proposed director is fit and proper in terms of his integrity, competence and solvency.

International cooperation can occur only if Samoa has entered into a mutual cooperation agreement with the requesting nation. Under the Act, the MLPA has no powers to exchange information with overseas counterparts. All cooperation under the MLPA is through the Attorney General's Office, which is the Competent Authority under the Act for receiving and implementing. However, according to a 2003 Samoa Report to the UN Counter-Terrorism Committee, Samoa is reviewing the legal framework for the effective operation of the MLPA in order to further strengthen domestic and international information exchange. In addition, the Office of the Attorney General, in conjunction with the Central Bank, the Ministry of Police and the Division of Customs of the Ministry for Revenue, is currently preparing amendments to the Money Laundering Prevention Act of 2000 for purposes of strengthening and complementing legislation that is being drafted or developed, including the Proceeds of Crime Bill, the Mutual Assistance in Criminal Matters Bill, and the Extradition Amendment Bill. Samoa is a party to the UN International Convention for the Suppression of the Financing of Terrorism. In 2002, Samoa enacted the Prevention and Suppression of Terrorism Act. The Act defines and criminalizes terrorist offenses, including offenses dealing specifically with the financing of terrorist activities. The combined effect of the Money Laundering Prevention Act of 2000 and the Prevention and Suppression of Terrorism Act of 2002 is to make it an offense for any person to provide assistance to a criminal to obtain, conceal, retain or invest funds or to finance or facilitate the financing of terrorism.

Samoa is a member of the Asia/Pacific Group on Money Laundering and the Pacific Island Forum. Samoa hosted the annual plenary of the Pacific Island Forum in August 2004. Samoa has not signed the 1988 UN Drug Convention. Nor has it signed the UN Convention against Transnational Organized Crime.

Since the passage of the Money Laundering Prevention Act in June 2000, Samoa has continued to strengthen its anti-money laundering regime and has issued regulations and guidelines to financial institutions so that they have a clear understanding of their obligations under the Act. Particular emphasis is directed toward regulation of the offshore financial sector, principally the establishment of due diligence procedures for owners and directors of banks and the elimination of anonymous accounts for onshore and offshore banks. The GOS is strengthening relevant legislation to identify the beneficial owners of IBCs to help ensure that criminals do not use them for money laundering or other financial crimes. Samoa is in the process of adopting amended and additional legislation to allow for international cooperation and information sharing.

The inability of the Money Laundering Prevention Authority simply to exchange information on an administrative level is a material weakness of the current system and is an impediment to international cooperation. To rectify that situation, the Government of Samoa should enact legislation to provide the Money Laundering Prevention Authority with the legal authority to share information with foreign analogs. Samoa should also accede to the 1988 UN Drug Convention and become a party to the UN Convention against Transnational Organized Crime.

San Marino

San Marino is a small, landlocked, independent republic located on the eastern side of the Italian peninsula. It is the third smallest country in Europe after the Holy See and Monaco. San Marino was founded in 301 and claims to be the oldest republic in the world. Its policies and social trends closely track those of Italy. The financial sector is a large component of the republic's small economy. The Government of San Marino (GOSM) passed anti-money laundering legislation in 1998. In June 2003 the GOSM approved a law that provides functional integration between the Office of Banking Supervision and the Central Bank, thus strengthening the supervisory system and its efforts to counter money laundering and terrorist financing.

Also in 2003, the Office of Banking Supervision issued Circular No. 33 addressed to banks and financial companies that obligates the collection of customers' personal data and their business/professional activity. The GOSM has also approved a law on the "Provisions of Anti-Terrorism, Anti-Money Laundering and Anti-Insider Trading," which became effective on February 26, 2004. The legislation criminalizes terrorism; introduces rules supplementing the Anti-Money Laundering Law of 1998 by incorporating modifications recommended by the Financial Action Task Force (FATF) and the Council of Europe; provides for the freezing of financial assets or property; allows special investigative techniques; and contains rules on insider trading. In April 2003, San Marino had its second round of mutual evaluations by MONEYVAL.

The GOSM is a party to the 1988 UN Drug Convention and the UN International Convention for the Suppression of the Financing of Terrorism. It signed, but has not yet become a party to, the UN Convention against Transnational Organized Crime. The San Marino Financial Intelligence Unit (the Department of Treasury inspection office) will adhere to the Egmont Group at its next meeting in April 2005.

The Government of San Marino should continue its efforts to thwart money laundering and terrorist financing and should ratify the UN Convention against Transnational Organized Crime.

Sao Tome and Principe

Sao Tome, which has a small economy and several commercial banks, is not a regional financial center.

Sao Tome is a party to the 1988 UN Drug Convention but not to the UN International Convention for the Suppression of the Financing of Terrorism or the UN Convention against Transnational Crime. It has not criminalized either money laundering or terrorist financing and has no laws allowing the government to freeze assets related to those activities. The need for it to enact and implement such legislation has been heightened by the successful conclusion of an agreement with Nigeria that will bring substantial oil revenues to the country. Sao Tome should consider devoting a portion of that revenue to develop a comprehensive anti-money laundering/counterterrorist regime that comports with international standards.

The Government of Sao Tome should criminalize money laundering and terrorist financing. Sao Tome should also enact legislation allowing the government to freeze assets related to money laundering and terrorist financing. Sao Tome should become a party to both the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime.

Saudi Arabia

Saudi Arabia is a growing financial center in the Gulf Region of the Middle East. There is little known money laundering in Saudi Arabia related to traditional predicate offenses. All ten commercial banks in Saudi Arabia operate as standard “western-style” financial institutions and all banks operate under the supervision of the Saudi Arabian Monetary Authority (SAMA). Saudi Arabia is not an offshore financial center. There are no free zones for manufacturing, although there are bonded transit areas for the transshipment of goods not entering the country. The money laundering and terrorist financing that does occur are not primarily related to narcotics proceeds in Saudi Arabia. There was no significant increase in financial crimes during 2004, and any market in smuggled goods does not appear to be related to the narcotics trade.

Saudi donors and unregulated charities have been a major source of financing to extremist and terrorist groups over the past 25 years. However, The Final Report of the National Commission on Terrorist Attacks Upon the United States (“The 9/11 Commission”) found no evidence that either the Saudi Government, as an institution, or senior Saudi officials individually, funded al-Qaida. Following the al-Qaida bombings in Riyadh on May 12, 2003, the Government of Saudi Arabia has taken significant steps to help counteract terrorist financing.

In 2003, Saudi Arabia approved a new anti-money laundering law that for the first time contains criminal penalties for money laundering and terrorist financing. The law bans conducting commercial or financial transactions with persons or entities using pseudonyms or acting anonymously; requires financial institutions to maintain records of transactions for a minimum of ten years and adopt precautionary measures to uncover and prevent money laundering operations; requires banks and financial institutions to report suspicious transactions; authorizes government prosecutors to investigate money laundering and terrorist financing; and allows for the exchange of information and judicial actions against money laundering operations with countries with which Saudi Arabia has official agreements.

SAMA guidelines correspond to the FATF’s Forty Recommendations. On May 27, 2003 SAMA issued updated anti-money laundering and counterterrorist finance guidelines for the Saudi banking system. The guidelines require that banks have mechanisms to monitor all types of “Specially Designated Nationals” as listed by SAMA; that fund transfer systems be capable of detecting specially designated nationals; that SAMA circulars on opening accounts and dealing with charity and donation collection be strictly adhered to; and that the banks be able to provide the remitter’s identifying information for all outgoing transfers. The new guidelines also require banks to use software to profile customers to detect unusual transaction patterns; establish a monitoring threshold of SR 100,000; and develop internal control systems and compliance systems. SAMA also issued new “know your

customer” guidelines, requiring banks to freeze accounts of customers who do not provide updated account information. Saudi law prohibits non-resident individuals or corporations from opening bank accounts in Saudi Arabia without the specific authorization of the SAMA. There are no bank secrecy laws that prevent financial institutions from reporting client and ownership information to bank supervisors and law enforcement authorities. The Saudi media reported that during 2004, Saudi banks froze more than 250,000 accounts for non-compliance with anti-money laundering and terrorist finance laws. Funds are frozen on the basis of a request submitted from the Minister of Interior or the Minister of Foreign Affairs to the Minister of Finance and National Economy.

The Saudi Arabian Government (SAG) has established an anti-money laundering unit in SAMA and has required Saudi banks to have their own anti-money laundering units with specialized staff to work with SAMA and law enforcement authorities. The SAG has begun to staff a Financial Intelligence Unit (FIU) in the Security and Drug Control Department of the Ministry of the Interior. All banks are also required to report any suspicious transactions to the FIU. When fully operational, the Saudi FIU will collect and analyze suspicious transaction reports and other available information and decide to make referrals the Mabath or other entities for action. It will also coordinate its activities with SAMA’s anti-money laundering unit. The FIU will be staffed by officers from the Mabath, SAMA, the Ministry of Commerce, and the Ministry of Interior’s Bureau of Investigation and Prosecution. The SAG provides anti-money laundering training for bank employees, prosecutors, judges, customs officers and other government officials.

Hawala transactions outside banks and licensed moneychangers are illegal in Saudi Arabia. Reportedly, some money laundering cases that SAMA has investigated in the past decade involved the hawala system. In order to help counteract the appeal of hawala, particularly to many of the approximately six million expatriates living in Saudi Arabia, Saudi banks have taken the initiative and created fast, efficient, high quality, and cost-effective fund transfer systems that have proven capable of attracting customers accustomed to using hawalas. An important advantage for the authorities in combating potential money laundering and terrorist financing in this system is that the senders and recipients of fund transfers through this formal financial sector are clearly identified.

Contributions to charities in Saudi Arabia are usually Zakat, which is an Islamic religious duty with specified humanitarian purposes. However, over the past decade, according to a 2002 report to the United Nations Security Council, al-Qaida and other jihadist organizations collected between \$300 and \$500 million and the majority of those funds originated from Saudi charities and private donors. The 9/11 Commission Report noted that the SAG failed to supervise adequately Islamic charities in the country. To help address this problem, in 2002 Saudi Arabia announced its intention to establish a commission to oversee Saudi charities with foreign operations. In 2004, the SAG issued guidelines for the Commission for Relief and Charitable Work Abroad. As required by regulations in effect for over 20 years, domestic charities in Saudi Arabia are licensed, registered, audited, and supervised by the Ministry of Social Affairs. The Ministry has engaged outside accounting firms to perform annual audits of charities’ books and has established an electronic database for tracking the operations of the charities they oversee. New banking rules implemented in 2003 that apply to charities include stipulations that accounts can only be opened in Saudi Riyals; there are enhanced customer identification requirements; there is one main consolidated account for each charity; there are no cash disbursements—payments may be made only by checks payable to the first beneficiary and deposited in a Saudi bank; the use of ATM and credit cards for charitable purposes will not be permitted; there will be no transfers outside of Saudi Arabia. It is unclear, however, whether such regulations apply to international charities.

Saudi Arabia participates in the activities of the Financial Action Task Force (FATF) through its membership in the Gulf Cooperation Council (GCC). In July 2004, reporting on the results of a mutual evaluation conducted in September 2003, the FATF concluded that the framework of Saudi Arabia’s anti-money laundering regime met the general obligations of the FATF recommendations for

combating money laundering and financing of terrorism, but noted the need to implement these new laws and regulations.

Saudi Arabia also supported the creation of the Middle East and North Africa Financial Action Task Force (MENAFATF) that was inaugurated in Bahrain in November 2004; the SAG was one of the original charter signatories. The MENAFATF is a FATF-style regional body. The creation of the MENAFATF will be a critical element in the region's efforts to expedite the adoption and implementation of international anti-money laundering and counterterrorist financing standards.

Saudi Arabia is working to implement the UN Security Council Resolutions on terrorist financing. SAMA circulates to all financial institutions under its supervision the UNSCR 1267 Sanctions Committee's consolidated list. In January 2004, Saudi Arabia and the United States made a joint request to the UNSCR 1267 Sanctions Committee to designate the Kenya, Pakistan, Tanzania and Indonesia branches of the al Haramain Islamic Foundation as a supporter of terrorism. In June 2004, Saudi Arabia announced that it had completely dissolved the al Haramain Islamic Foundation. The SAG and U.S. worked bilaterally to investigate terrorist financing. Among other activities, in response to specific requests from the U.S., the SAG investigated financial activities for 41 individuals and found that none had financial activities in the Kingdom.

Saudi Arabia has signed but is not yet a party to the UN International Convention for the Suppression of the Financing of Terrorism. It ratified the UN Convention against Transnational Organized Crime on January 18, 2005.

The Government of Saudi Arabia should move rapidly to monitor and enforce the new anti-money laundering and terrorist finance laws, regulations and guidelines. Saudi Arabia can demonstrate its commitment to effective implementation by providing adequate budgets, equipment, and staffing for the FIU and the High Commission for Charities. As in many countries in the region, there is still an over-reliance on suspicious transaction reporting to generate money laundering investigations. Saudi Arabia's unwillingness to publicly disseminate statistics regarding money laundering prosecutions impedes the evaluation and design of enhancements to the judicial aspects of its AML system. Law enforcement agencies should take the initiative and proactively generate leads and investigations, and be able to follow the financial trails wherever they lead. Saudi Arabia should demonstrate its willingness to hold elites accountable. Charities identified with the elites must also be examined and rules enforced. Regarding the misuse of charities, loopholes remain including the ability of a group or individual previously affiliated with suspect charitable organizations to simply cease referring to itself as a charity, as well as with the status of international charities. Donations in the form of gold and other gifts need to be scrutinized. Saudi Arabia should take affirmative steps to close loopholes. It should become a party to the UN International Convention for the Suppression of the Financing of Terrorism.

Senegal

Senegal's banking system and formal and informal money-exchange systems are vulnerable to the laundering of proceeds from corruption, narcotics-trafficking, illegal gems and arms-trafficking, and trafficking in persons, all of which are prevalent in West Africa. A building boom in Dakar despite the relative scarcity of credit suggests that an increasing amount of funds with an uncertain provenance is available for property speculation. Approximately 15 foreign banks, including several French and African banks, have branches in Senegal. Senegal's larger financial institutions function alongside a thriving micro-credit sector and numerous non-traditional financial businesses handling remittances from overseas Senegalese in France, Italy, Spain and the United States. Senegal is not obviously linked to any offshore financial centers. Given the small customer pool, the number of casinos in Senegal (reportedly over 15) is striking.

Article 102 of Senegal's 1997 Drug Code criminalizes narcotics-related money laundering as a misdemeanor punishable by up to 10 years in prison. The Drug Code requires banks to report suspicious transactions believed to be linked to narcotics-trafficking and to keep records between one and ten years, depending on the type of record. The law authorizes the seizure of assets related to narcotics-trafficking. The last money laundering prosecution under this law was in 1999.

In 2000, the Economic Community of West African States (ECOWAS) established the Intergovernmental Action Group against Money Laundering (GIABA), based in Dakar, Senegal. GIABA recently hosted a self-evaluation exercise on anti-money laundering capabilities in conjunction with the International Monetary Fund and ECOWAS member states. A Senegalese magistrate is the acting head of GIABA. The Central Bank of West African States (BCEAO), based in Dakar, is the Central Bank for the countries in the West African Economic and Monetary Union (WAEMU): Benin, Burkina Faso, Guinea-Bissau, Cote d'Ivoire, Mali, Niger, Senegal, and Togo, all of which use the French-backed CFA franc currency, which is also linked to the euro. All bank deposits over approximately \$7,700 made in BCEAO member countries must be reported to the BCEAO, along with customer identification information.

Senegal was the first WAEMU country to pass WAEMU-harmonized legislation establishing a Uniform Law on Money Laundering (the Uniform Law), approved by the National Assembly in October 2003. Previously, criminal prosecution of money laundering had been tied to Senegal's Drug Code. The new legislation makes money laundering/terrorist financing a crime in itself, separate from the criminal origins of the money. Banks and other financial institutions, including charitable and nonprofit entities, are required to know, record and report the identity of customers engaging in significant transactions, meaning those involving at least CFA 5,000,000 (approximately \$10,000). The Uniform Law requires financial institutions to preserve records for at least ten years. Under the provisions of banking regulations, banks and financial institutions must provide, upon request from the BCEAO or Senegal's Banking Commission, any information relating to the list of accounts opened on behalf of suspected launderers, suspected terrorists, and/or suspected terrorist organizations and must notify the BCEAO of any request or the opening of an account relating to such person or organization. Banking secrecy cannot be invoked to protect suspicious clients.

The Uniform Law also mandates the establishment of a National Office for Financial Information Process (CENTIF), a Financial Intelligence Unit (FIU), that will work with banks and other financial institutions to establish a suspicious transaction reporting system and capacity for evaluating questionable transactions. All financial institutions, businesses, and professionals under the scope of the Uniform Law will be required to report suspicious transactions. Presently, foreign-owned banks in Senegal normally report questionable transactions to their home offices (usually Paris) for vetting. Senegal's FIU will have the legal authority to conduct criminal investigations. The CENTIF will have the authority to share information with other FIUs within the WAEMU as well as with the FIUs of non-WAEMU countries. The Government of Senegal (GOS) has yet to issue a decree directing ministries to second appropriate staff to the CENTIF.

Special units from police forces and "gendarmierie" can be created to investigate and prosecute cases against money laundering. Official statistics regarding the prosecution of financial crimes are unavailable. There have been no arrests and/or prosecutions for money laundering or terrorist financing since January 1, 2004.

The Dakar Industrial Free Trade Zone (ZFID) was established in 1974 to encourage foreign investors to set up intensive export-oriented companies. Its enabling statute has been extended until 2016, but only for companies already established within the zone. The ZFID is largely inactive with few companies present, although a U.S. pharmaceutical company has a manufacturing plant in the ZFID. Police forces and customs officials monitor activities in the free zone. Companies and individuals using the zone are identified and registered.

Terrorism financing is covered in the long-existing “Code Against Acts of Terrorism” which criminalizes the financing of terrorism as required by UNSCR 1373. This provision was incorporated in the Uniform Law. Modifications to the “Code Against Acts of Terrorism” are included in legislation on counterterrorism financing currently under consideration by the National Assembly. The UN 1267 Sanctions Committee consolidated list is circulated both by the GOS and by the BCEAO to commercial financial institutions. To date, no assets relating to terrorist entities have been identified. The WAEMU Council of Ministers issued a directive in September 2002 requesting member countries to pass legislation requiring banks to freeze the accounts of any persons or organizations designated by the UN 1267 Sanctions Committee. A pending law on financing terrorism would meet the stipulations of this directive

Senegalese authorities acknowledge the existence and use of indigenous alternative remittance systems that bypass, in whole or part, financial institutions. The authorities have established private foreign exchange bureaus to regulate the informal financial sector. No regulation currently governs remittances from the sale of gold and precious stones. There is no requirement to report cross-border currency transactions.

Senegal’s Drug Code and Uniform Law include a system to freeze, seize and forfeit narcotics-related assets as well as assets derived from other serious crimes, such as money laundering. It also includes the seizure of instruments of crime such as conveyances used to transport narcotics, or property such as bank accounts, legitimate businesses or real estate. Substitute assets can be seized if relationship to the crime is proven. The Uniform Law allows for both civil and criminal forfeiture, and gives full power and resources to police to trace and seize assets. Financial institutions can freeze assets upon requests from officials from the Ministries of Interior and/or Justice, or from the BCEAO. The Ministry of Justice is responsible for the confiscation of frozen assets. Assets can be frozen for up to 20 years. The sharing of seized narcotics assets with other governments would be the result of case-by-case negotiations.

Senegal has entered into agreements with Tunisia, Morocco and France regarding mutual assistance in criminal matters. With the Uniform Law now in force in most WAEMU countries and with the establishment of GIABA, FIUs in WAEMU and ECOWAS countries will cooperate, exchange and share information. In general, the GOS has demonstrated its commitment and willingness to cooperate with the United States law enforcement agencies, although no formal mechanism exists. In the past the GOS has worked with INTERPOL and Spanish and Italian authorities on international anticrime operations.

Senegal is a party to the 1988 UN Drug Convention and the UN Convention against Transnational Organized Crime. Senegal also is a signatory to the African Union Convention on Terrorism Finance.

The Government of Senegal should continue to work with its counterparts in the Intergovernmental Action Group against Money Laundering (GIABA) and its partners in WAEMU to establish a comprehensive anti-money laundering regime in the region. Senegal should act timely to make its new Financial Intelligence Unit (FIU) a fully functioning organization, with adequate staffing and resources. Senegal should become a party to the UN International Convention for the Suppression of the Financing of Terrorism.

Serbia and Montenegro

At the crossroads of Europe and on the highway known as the “Balkan route,” narcotics-trafficking; smuggling of persons, drugs, weapons and pirated goods; money laundering; and other criminal activities continue in Serbia and Montenegro (SAM, formerly the Federal Republic of Yugoslavia (FRY)). Serbia and Montenegro is located in Southeastern Europe (the Balkans), bordering the Adriatic Sea, between Albania and Bosnia and Herzegovina. SAM is a state union consisting of two

republics, the Republic of Serbia and the Republic of Montenegro. In the Republic of Serbia are two nominally autonomous provinces, Kosovo and Vojvodina; a United Nations Administration Mission (UNMIK) has administered Kosovo since 1999. The state union has a population of approximately 10.7 million, of which about 8 million live in Serbia, about 600,000 in Montenegro and slightly over two million in Kosovo. Each republic has a separate government and parliament. However, there is also a parliament on the federal level.

The country has a significant black market for smuggled goods. However, income from narcotics-trafficking is typically not used to support this black market. Rather, it is more typical for drug money to be laundered in the real estate market, which is one of the most popular ways to legalize criminal proceeds in SAM. Tax evasion and trade-based money laundering, in the form of over-and under-invoicing, are also another of the common methods used to launder money. According to government officials, the majority of criminal proceeds from narcotics-trafficking laundered in SAM are derived from illegal activities of the Kosovar "Narco-Mafia." Serbian officials also estimate that up to half of all financial transactions in SAM may be connected in some way to money laundering. Although SAM has made important progress in its fight against corruption and financial crimes by criminalizing money laundering and establishing financial intelligence units, substantial work remains to be done.

Neither republic has identified any activities relating to the financing of terrorism. Montenegro has criminalized the financing of terrorism and Serbia is in the process of amending its criminal code to address this issue.

State Union. In March 2002, the leadership of the FRY, Serbia, and Montenegro signed the Belgrade Agreement on restructuring the relationship between the two republics. On February 4, 2003, the FRY parliament voted to adopt a new Constitutional Charter that established the state union of "Serbia and Montenegro." Under this state union structure, most governmental authority previously addressed by federal Yugoslav authorities devolved to the individual republics. As a result, responsibility for the laws and institutions determining policies and legislation has shifted. Consequently, both the Republic of Serbia (Serbia) and the smaller Republic of Montenegro (Montenegro) have addressed money laundering and terrorism financing. However, each republic has done so separately in its own way. Banks in both republics have demonstrated remarkable tolerance for and compliance with the laws in their respective jurisdictions.

In 2001, the federal Yugoslav authorities prepared a national strategy to fight terrorism and established a national coordinating body. However, this body fell into abeyance when the FRY transformed into the state union in February 2003. Ratification of international Conventions and treaties currently lies at the State Union level. All relevant anti-money laundering/counterterrorist financing (AML/CTF) conventions have been ratified.

Serbia. The Yugoslav Federal Assembly adopted an Anti-Money Laundering Law (AML Law) in September 2001; it came into effect in July 2002. The AML Law defines money laundering to mean depositing, or introducing into the financial system in any other manner, money which has been acquired through illegal activity. This includes money derived from the gray market economy and from arms and narcotics-trafficking. Criminal penalties for money laundering violations range from six months' to eight years' imprisonment, while civil penalties range from 45,000 to 450,000 dinars (\$650 to \$6,500) per offense.

On July 18, 2003, Serbia passed a new law codifying the powers of the National Bank, decreasing its independence and establishing parliamentary control over its operations. The Bank has adopted AML supervision guidelines and is examining banks for compliance with the existing AML reporting requirements. One area of concern is the large number of currency exchanges located throughout Serbia that are reportedly structuring transactions for clients who want to avoid the reporting requirements. These currency exchanges are regulated by the National Bank, but an effective supervisory scheme to address this problem has not yet been put into place.

Entities subject to reporting requirements include commercial and savings banks and other financial credit institutions, the postal savings bank, the post office, commercial enterprises, all government entities, the National Bank of Yugoslavia and its clearing and payments department, foreign exchange bureaus, casinos, pawnshops, stock exchanges, and national lottery organizers. Covered entities are required to identify persons opening an account or if they are “establishing any other kind of lasting business cooperation with the client,” and to report on every cash transaction exceeding 10,000 euros or 600,000 dinars, as well as any suspicious transaction. Similar reporting thresholds apply to insurance policies and cross-border currency transactions. The AML Law also provides for record keeping.

In March 2002, a Financial Intelligence Unit (FIU), the Administration for the Prevention of Money Laundering (FCPML), was established as an independent federal body by governmental decree; it became operational on July 1, 2002. At its founding, both the money laundering law and the FIU were operational at the federal level, with all laws applicable to both Serbia and Montenegro. On February 4, 2003, pursuant to the dissolution of the centralized federal state into the two republic entities, and pursuant to Article 13 of the Constitutional Charter and Implementation Law, the FCPML, up until then a federal FIU, became the FIU for the Serbian Republic. In July 2003, FCPML became a member of the Egmont Group, and has since begun active participation in information exchange with counterpart FIUs.

Despite some positive first steps, the Serbian FIU remains largely ineffective in addressing Serbia’s money laundering problems, because of both inadequate funding and a lack of sufficient compliance mechanisms. Other than the memorandum of understanding the FIU signed with the National Bank of Serbia in 2004, the FIU has not formalized relationships with enforcement officials and other government or private institutions for cooperation and exchange of information. For 2003, the FIU reported the receipt of over 60,000 reports and the referral of 162 suspicious cases to law enforcement. However, the FIU has not issued indicators of suspicious activity for all sectors encompassed by the existing law. In addition, the FIU has no inspection authority and has not provided or sponsored adequate training programs for non-bank financial institutions. As a result, the accurate reporting of suspicious transactions is questionable. To cite one example, one of the largest banks in Serbia reported conducting over 15,000 cash transactions in one year. But this same bank had filed less than 10 suspicious transaction reports (STRs) during that same year. Serbia also has not yet obtained a conviction for money laundering.

A new draft money laundering law conforming with international standards, extending the list of covered entities to include attorneys and accountants, and harmonizing legislation with all European Union (EU) Directives, was under review and submitted to Parliament in the beginning of October 2003. The new law was approved by all of the relevant authorities, but then a parliamentary crisis broke out, and the procedure was suspended. On December 28, 2003, Serbia held a parliamentary election that brought to power Prime Minister Kostunica’s government. In the last year, however, Kostunica’s administration has failed to approve this draft law. To date, the draft law is still in Parliament. Although the draft law is fairly comprehensive, it still has some shortcomings. It does not require suspicious transaction reporting by attorneys (a FATF and EU recommendation), and it does not establish the FIU as a repository for information relating to the suspicions of terrorist financing, which is now a requirement for all Egmont members.

Serbia has no terrorist financing law consistent with the standards contained in international conventions, and its legislative and institutional framework for combating terrorist financing remains weak. Draft legislation is pending. According to the Serbian Criminal Code, business licenses of legal or natural persons may be revoked and business activities banned if the subject is found guilty of criminal activities, including narcotics-trafficking or terrorist financing. But, despite this fact, Serbia is constrained with regard to international assistance in investigating terrorist financing. This is because Serbia’s police may not make use of the Mutual Legal Assistance Treaty (MLAT) process in terrorist

financing cases, due to the fact that under Serbian law, use of the MLAT process is restricted to crimes with penal sentences equal to or exceeding ten years (although the draft law reduces the requirement to four years). Under the current law, the maximum term for money laundering or terrorist financing is eight years. As a result, Serbia forfeits any available international assistance. Also presenting another obstacle is Serbia's Criminal Procedure Code, under which an MLAT request for assistance in investigating terrorist activities requires the approval of an investigative judge. However, investigative judges, for a number of reasons, often do not grant these requests. Serbia is currently in the process of amending its Criminal Procedure Code to bring it into conformity with Council of Europe standards.

The AML Law establishes special procedures for tracking funds related to terrorist financing. The Serbian FCPML is the authority charged with enforcing the UN terrorism sanction lists. Although it routinely checks for suspect accounts, it has found no evidence of terrorism financing within the banking system and no evidence of the usage of alternative remittance systems. The Department for Combating Organized Crime (UBPOK), in the Ministry of Interior, is the law enforcement body responsible for countering terrorism. UBPOK cooperates and shares information with its counterpart agencies in all of the countries bordering SAM.

Serbia has no asset seizure or forfeiture law. Actual asset seizures can only be carried out by court order.

The government has no encompassing AML/CFT strategy, and has failed to enact anti-money laundering legislation that is in full compliance with international standards. It also has not created a bureaucratic and legal framework that empowers the FIU to carry out its core mission. Terrorist financing laws have not been enacted and the ability to seize or freeze assets relating to terrorist financing, except after a criminal conviction using other statutes, does not exist under current law. As a result of the absence of a comprehensive anti-money laundering regime, no accurate statistical information or feedback regarding cases forwarded to local authorities or prosecutors is available to assess results or ensure transparency. Finally, the Finance Ministry has yet to grant the FIU a line item budget, so that it can effectively plan activities and operations.

Montenegro. It is important to note that considering its past record on AML issues, Montenegro has positively and significantly changed its stance on money laundering. In 1996, in an effort to lure needed funds, Montenegro proclaimed itself an offshore area and allowed financial intermediaries to do business-without controls-for a percentage of the profit. Hundreds of millions of dollars worth of money passed through Montenegrin offshore accounts annually. It is speculated that much of the money came from criminal activity.

In August 2002, the Central Bank of Montenegro (CBCG) issued a decree that requires banks and other financial institutions to report suspicious transactions, establish anti-money laundering control programs, and train their employees on money laundering matters. Also, in response to the overwhelming growth of its offshore sector during the past decade, the Montenegrin government mandated that all offshore banks must re-register, post a one million Eurobond or fee, and reestablish themselves as regular banks. To date, since none of the offshore entities has complied with this mandate, the Central Bank has deemed all offshore banks to be dissolved. The Finance Ministry has not released complete information about the actual disposition of the 400 offshore entities whose names they turned over to CBCG.

Money laundering is criminalized in a new Criminal Code, which was amended in June 2003 in order to enable the government to confiscate money and property involved in criminal activity. Additionally, according to the Code, business licenses of legal or natural persons may be revoked and business activities banned if the subject is found guilty of criminal activities, including narcotics-trafficking or terrorist financing. In April 2004, Montenegro further amended its Criminal Procedure Code to bring it into conformity with the standards of the Council of Europe.

Montenegro passed anti-money laundering legislation on September 24, 2003. The new law obliges banks, post offices, state entities, casinos, lotteries and betting houses, insurance companies, jewelers, travel agencies, auto and boat dealers, and stock exchange entities to file reports on all transactions exceeding 15,000 euros, as well as on any related transactions that aggregate 15,000 euros or more, even if each particular transaction does not exceed the threshold. Financial institutions are also obliged to report suspicious transactions, even if only a small amount of money is involved. Failure to report, according to the law, could result in fines up to 20,000 euros as well as sentences of up to 12 years. The new law establishes mandates for the collection and analysis of these reports by Montenegro's FIU, which also has the responsibility to disseminate these reports to the competent authorities for further action. The FIU is adequately staffed, but compliance mechanisms are as yet untested. The FIU, which has been fully operational since November 2003, is currently a candidate for Egmont membership in 2005.

Montenegro can seize and forfeit assets, but only in connection with a violation of another provision of the Criminal Code, generally money laundering, terrorism or terrorist finance. In September 2004, the Government of Montenegro seized over a million dollars in undeclared currency in connection with the arrest of two Chinese nationals attempting to enter Montenegro.

Amendments to Montenegro's laws on terrorism and terrorist financing were initiated in November 2004 and are expected to be adopted in January 2005. These amendments are designed to bring Montenegrin law into conformance with international standards. Responsibility for the detection and prevention of terrorist financing was transferred in 2004 from the CBCG to the FIU. The FIU promptly informs banks and other financial institutions of additions and changes to the lists of individuals and entities included on the consolidated list of the UNSCR 1267 Sanctions Committee. No terrorist financing has been detected within Montenegro.

Kosovo. Since 1999, the United Nations Interim Administration in Kosovo (UNMIK) has governed Kosovo. Therefore, it no longer falls within the jurisdiction of either Serbia or Montenegro. Recognizing that Kosovo could become a haven for money laundering as its neighbors tighten their anti-money laundering regimes, UNMIK determined that Kosovo must also adopt a strict approach to the fight against money laundering. Thus, on February 5, 2004, UNMIK issued Regulation 2004/2, "On the Deterrence of Money Laundering and Related Offenses." The Regulation became effective on March 1, 2004, with delayed effective dates for certain provisions within the regulation.

The Regulation defines the crime of money laundering as the knowing possession, acquisition, use, transfer or conversion of the proceeds of crime. Proceeds of crime is defined as any property derived from any criminal offense punishable by a year or more of imprisonment under the applicable law in Kosovo or under the law of the jurisdiction in which the criminal offense was committed. The crime of money laundering is punishable by up to 10 ten years confinement and a fine up to three times the value of the property laundered. The Regulation provides for both civil and criminal forfeiture of the proceeds of the money laundering or any property which facilitated the money laundering or predicate offense.

The Regulation also obliges banks, non-bank financial institutions (money remitters, securities dealers/brokers, insurance companies, foreign exchange businesses, issuers and sellers of traveler's checks, credit cards, money orders, bank checks, and electronic money), and covered professionals (attorneys, accountants, and licensed auditors) to identify their clients and conduct ongoing due diligence, report suspicious transactions and currency transactions greater than 10,000 euros to the KFIC, maintain records for five years, and maintain an anti-money laundering compliance program which includes the appointment of a compliance officer and mandates training of employees. The Regulation criminalizes tipping off and failure to file either the suspicious transaction report or the currency transaction report. The Regulation also mandates the reporting of the cross-border transportation of monetary instruments exceeding 10,000 euros.

The Regulation creates the Financial Intelligence Centre (KFIC) within the Police and Justice Pillar. The KFIC will receive and analyze the reports received from the various entities, create and maintain a database of all information collected, issue administrative directives, and exchange information upon requests with like foreign entities. The KFIC is functional but in its infancy.

The Regulation limits the receipt by non-governmental organizations (NGOs) of currency contributions to 1000 euros per day from a single source. NGOs cannot distribute greater than 5,000 euros to any single recipient in a single day. NGOs must maintain accounts that document all income and disbursements. The accounts shall identify income by source, amount, and manner of payment, such as currency or payment order, and identify disbursements by recipient, intended use of funds, and manner of payment. NGOs must maintain records for five years, report suspicious transactions to the KFIC and file annual reports.

The Regulation also provides for the widest possible cooperation with foreign jurisdictions with respect to information exchange, investigations and court proceedings in relation to temporary measures for securing property and orders for confiscation relating to instrumentalities of money laundering and proceeds of crime, and for purposes of prosecution of the perpetrators of money laundering and terrorist activity.

SAM has no laws governing its cooperation with other governments, related to narcotics, terrorism, or terrorist financing. Cooperation is instead based on participation in Interpol, bilateral cooperation agreements, and agreements concerning international legal assistance. There are no laws at all governing the sharing of confiscated assets with other countries, nor is any legislation under consideration; SAM may at this time enter into bilateral agreements for this purpose.

Serbia and Montenegro has a legal assistance arrangement with the United States, governed by the 1901 Convention on Extradition of Offenders. SAM has signed 34 bilateral agreements on mutual legal assistance with 26 countries: Albania, Algeria, Austria, Belgium, Bulgaria, the Czech Republic, Denmark, France, Greece, The Netherlands, Croatia, Iraq, Italy, Cyprus, Germany, Poland, Romania, Hungary, Mongolia, Russian Federation, Slovakia, Spain, Switzerland, Turkey, the United Kingdom, and the United States. These agreements authorize extradition of suspected terrorists. Both SAM and its constituent republics cooperate with their counterparts and neighbors. In April 2003, SAM joined eight other participants in the South Eastern Europe Cooperation Process, in adopting a joint "Belgrade Declaration" to call for the continuation of regional cooperation and the intensification of the fight against terrorism and organized crime. SAM worked with Interpol to set up an office for that organization in Belgrade as part of its efforts to contribute to the fight against terrorism and other transnational crimes.

Serbia and Montenegro is a party to the 1988 UN Drug Convention and the UN Convention against Transnational Organized Crime. On October 9, 2003, SAM ratified the Council of Europe's Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime. SAM has ratified eight of the 12 UN Conventions or Protocols dealing with terrorism, including the UN International Convention for the Suppression of the Financing of Terrorism, although the domestic implementation procedures do not provide the framework for full application in either republic. In December 2003, SAM signed, but has not yet ratified, the UN Convention against Corruption. As a new member of the Council of Europe, SAM is a full and active member of the Council of Europe's Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL), and underwent a first-round evaluation by a team from that Committee in October 2003.

Serbia should expand its anti-money laundering legislation to include all serious crimes and to provide for suspicious transaction reporting requirements for intermediaries. Montenegro should enact legislation expanding its anti-money laundering regime, including suspicious transaction reporting requirements, to non-bank financial institutions and intermediaries. Both republics should enact legislation to establish robust asset seizure and forfeiture regimes. Both Serbia and Montenegro should

ensure that sufficient resources are available for their FIUs and law enforcement agencies to work effectively and efficiently. Both should also continue to participate in international fora that offer training and technical assistance for police, customs, and judiciary officials involved with combating money laundering and terrorist financing. Serbia should criminalize all aspects of terrorist financing specifically and they should both implement a comprehensive framework to support an counterterrorism regime that comports with international standards. Kosovo should criminalize terrorist financing and implement its new anti-money laundering law.

Seychelles

Seychelles is not a major financial center, but it does have a developed offshore financial sector, which makes the country vulnerable to money laundering.

The Government of Seychelles (GOS), in efforts to diversify its economy beyond tourism, has taken steps to develop an offshore financial sector to increase foreign exchange earnings. The GOS actively markets Seychelles as an offshore financial and business center that allows the registration of nonresident companies. There are currently over 4,800 registered international business companies (IBCs) in Seychelles that pay no taxes in Seychelles, and are not subject to foreign exchange controls. The Seychelles International Business Authority (SIBA), which acts as the central agency for the registration for IBCs, promotes the fact that IBCs need not file annual reports. The SIBA is part of the Ministry of International Trade, and also manages the Seychelles International Trade Zone.

In addition to IBCs, Seychelles permits offshore trusts (registered through a licensed trustee), offshore insurance companies, and offshore banking. Three offshore insurance companies have been licensed, but no mutual fund companies. The International Corporate Service Providers Act 2003, which is designed to regulate all the activities of the corporate service providers as well as the trustee service providers, entered into force in 2004. A major weakness of the Seychelles' offshore program is that it still permits the issuance of bearer shares, a feature that can facilitate money laundering by making it extremely difficult to identify the beneficial owners of an IBC. Seychelles officials stated in 2000 that they were reviewing the question of bearer shares and intended to outlaw them. In the interim, the GOS has indicated that it will not approve the issuance of any more bearer shares.

No offshore casinos or Internet gaming sites have yet been licensed; if they are, they will be subject to stringent legislation modeled on the Australian Internet Gaming Act. There are no cross-border currency reporting requirements, but the point of entry at Seychelles' international airport is under constant supervision by Customs and the Police, who search suspicious incoming or outgoing passengers.

In 1996, the GOS enacted the Anti-Money Laundering Act (AMLA), which criminalizes the laundering of funds from all serious crimes, requires financial institutions and individuals to report to the Central Bank transactions involving suspected cases of money laundering, and establishes safe harbor protection for individuals and institutions filing such reports. There are no bank secrecy laws in Seychelles. The AMLA imposes record keeping and customer identification requirements for financial institutions, and also provides for the forfeiture of the proceeds of crime.

Under the AMLA, money laundering controls are applied to non-banking financial institutions, including exchange houses, stock brokerages, and insurance agencies, but not to lawyers and accountants. No arrests and/or prosecutions have been made for money laundering and terrorist financing since January 1, 2003.

Under the AMLA, anyone who engages directly or indirectly in a transaction involving money or other property (or who receives, possesses, conceals, disposes of, or brings into Seychelles any money or property) associated with a crime, knowing or having reasonable grounds to know that the money or property is derived from an illegal activity, is guilty of money laundering. In addition, anyone who

aids, abets, procures, or conspires with another person to commit the crime, while knowing, or having reasonable grounds for knowing that the money was derived from an illegal activity, is likewise guilty of money laundering.

In 1998, the Central Bank of Seychelles issued a comprehensive set of guidance notes that further elucidated and strengthened the provisions of the AMLA. The Central Bank of the Seychelles receives and analyzes suspicious activity reports and disseminates them to the competent authorities. In November 2002 the Central Bank circulated to all local commercial banks a document on due diligence issued by the Basel Committee.

In December 2004, the Seychelles National Assembly enacted the Financial Institutions Bill 2004, which imposes more stringent rules on banking operations. The Bill, which was drafted in consultation with the International Monetary Fund, aims at ensuring greater transparency in financial transactions and regulating the financial activities of both domestic and offshore banks in line with international standards. One provisions of the new law requires that banks change their auditors every five years. Auditors must notify the Central Bank if they uncover criminal activity such as money laundering in the course of an audit.

In 2004, the GOS enacted the Prevention of Terrorism Bill 2004. The legislation recognizes the government's authority to identify, freeze, and seize terrorist finance-related assets. Currently the Mutual Assistance in Criminal Matters Act of 1995 empowers the Seychelles Central Authority to search and seize anything relevant to a proceeding or investigation relating to a criminal matter involving a serious offense under a written law of a requesting state.

The Prevention of Terrorism Bill strengthens the government's hand in this area. It specifically provides for the forfeiture of assets. Previously, the Seychelles authorities could work only with states that were members of the Commonwealth, or had a treaty for bilateral mutual legal assistance with the Seychelles regarding criminal matters. Under current legislation, assets used in the commission of a terrorist act can be seized, and legitimate businesses can be seized if used to launder drug money, support terrorist activity, or are otherwise related to criminal activities. Both civil and criminal forfeiture are allowed under current legislation. To date, no assets have been identified, frozen, or seized pertaining to terrorist financing, upon request of such a foreign state.

The transactions of charitable and non-profit entities are scrutinized by the authorities to prevent their misuse, and such systems as hawala are regulated.

The Government of Seychelles is a member of the Eastern and Southern African Anti-Money Laundering Group (ESAAMLG), a FATF-style regional body. The Seychelles is a party to the 1988 UN Drug Convention and the UN Convention against Transnational Organized Crime. The Seychelles has signed but not ratified the UN International Convention for the Suppression of the Financing of Terrorism. The Seychelles circulates to relevant authorities the updated lists of designations under Executive Order 13224. Seychelles should expand its anti-money laundering efforts by moving to immobilize bearer shares and requiring complete identification of beneficial owners of international business companies (IBCs). Seychelles should establish a financial intelligence unit to collect, analyze, and share financial data with foreign counterparts, in order to effectively combat money laundering and other financial crimes. Seychelles should also become a party to the UN International Convention for the Suppression of the Financing of Terrorism. Seychelles should criminalize the financing of terrorism and actively participate in ESAAMLG.

Sierra Leone

Sierra Leone, which has a small commercial banking sector, is not a regional financial center. Loose oversight of financial institutions, weak regulations, rampant corruption, and a prevalent informal money-exchange system create an atmosphere conducive to money laundering. Given the importance

of the large diamond sector to the economy, the prevalence of money laundering in the diamond sectors of neighboring countries and the loose oversight of the financial sector, Sierra Leone's diamond sector is particularly vulnerable to money laundering. There is no available information for 2004. What follows is a repeat of the 2003.

There is no specific legislation concerning money laundering. However, the Ministry of Justice is in the process of developing such laws. Banks are required to record the identity of customers engaging in large currency transactions and to maintain adequate records necessary to reconstruct significant transactions in order to respond to government information requests. Banks are also required to report suspicious transactions, although they do not usually adhere to this requirement. Bank secrecy laws prevent the disclosure of client and ownership information except under court order.

In 2000, the Economic Community of West African States (ECOWAS) established the Intergovernmental Group for Action Against Money Laundering (GIABA), based in Dakar, Senegal. In November 2002, GIABA hosted an anti-money laundering seminar for representatives of 14 ECOWAS members, including Sierra Leone.

Sierra Leone is a party to the 1988 UN Drug Convention and has signed, but not yet ratified, the UN Convention against Transnational Organized Crime, which is not yet in force internationally. Sierra Leone has signed, but has not yet become a party to, the UN International Convention for the Suppression of the Financing of Terrorism.

The Government of Sierra Leone should criminalize money laundering and terrorist financing, enforce existing financial laws and regulations, and provide legal authority for the seizure of criminal and terrorist assets.

Singapore

As a significant international financial and investment center, and in particular as a major offshore financial center, Singapore is attractive to potential launderers. Bank secrecy laws and the lack of routine currency reporting requirements make Singapore an attractive destination to foreign drug traffickers, other foreign criminals, and terrorist organizations and their supporters seeking to launder their money, and for flight capital. Money laundering occurs mainly in the offshore sector, but may also occur in the non-bank financial system, which includes large numbers of moneychangers and remittance agencies.

As a leading financial center in Southeast Asia, Singapore has been a key player in the regional effort to stop terrorist financing. Singapore has a sizeable offshore financial sector. In 2004, there were 111 commercial banks in Singapore, of which 47 were offshore banks, down slightly from 50 in December 2003. There are also 23 full banks and 36 wholesale banks in Singapore. All offshore banks are branches of foreign banks. Singapore does not permit shell banks, either in the domestic or offshore sectors. The Monetary Authority of Singapore (MAS), a semi-autonomous entity under the Ministry of Finance, serves as Singapore's Central Bank and financial sector regulator. There are no offshore trusts, although banks may open trust, nominee, and fiduciary accounts. All banks in Singapore, whether domestic or offshore, are subject to the same regulation, record keeping, and reporting requirements, including regarding money laundering and suspicious transactions.

In January 2005, as part of a draft revision of its overall anti-money laundering/counterfinancing of terrorism (AML/CFT) regulations for banks, the MAS proposed, subject to final approval, an amendment to its regulations proscribing banks from entering into, or continuing, correspondent banking relationships with shell banks—in line with the Revised Financial Action Task Force (FATF) Forty Recommendations adopted in June 2003. The new draft regulation also mandates originator information on cross-border wire transfers, in line with the FATF's Special Recommendation Seven on wire transfers. It also clarifies procedures for customer due diligence and includes a risk-based

approach to customer due diligence, as well as mandating enhanced customer due diligence for foreign politically exposed persons. It furthermore extends coverage of the regulations to include terrorist financing activities.

Any person who wishes to engage in business, whether local or foreign, must register under the Companies Act. Every Singapore-incorporated company must have at least two directors, one of whom must be a resident in Singapore, and one or more company secretaries, who must be resident in Singapore. There is no nationality requirement. A company incorporated in Singapore has the same status and powers as a natural person. Bearer shares are not permitted. Casinos and Internet gaming sites are currently illegal in Singapore. However, the government is considering lifting the ban on casinos for a specific development project. In December 2004, the Government of Singapore (GOS) invited international investors to submit proposals by February 28, 2005, to build an integrated resort with gambling facilities.

As a matter of policy, Singapore strongly opposes money laundering and terrorist financing. The Corruption, Drug Trafficking, and Other Serious Crimes (Confiscation of Benefits) Act of 1999 (CDSA) criminalizes the laundering of proceeds from narcotics and 183 other serious offenses, including foreign offenses which would be serious offenses if they had been committed in Singapore. Singapore is in the process of reviewing its list of these offenses for consistency with Recommendation 1 of the FATF's Revised 40 Recommendations, and expects to have a final list by June 2005. Financial institutions must report suspicious transactions and positively identify customers engaging in large currency transactions. Financial institutions are required to maintain adequate records, to be able to respond quickly to GOS inquiries in money laundering cases. However, there are no reporting requirements on amounts of currency brought into or taken out of Singapore. Singapore is considering implementation of FATF Special Recommendation IX, which requires the detection of cross-border movement of currency and bearer negotiable instruments

Banking regulation is the responsibility of the Monetary Authority of Singapore. The MAS performs extensive prudential and regulatory checks on all applicants for banking licenses, including a check to see if the bank is under adequate home country banking supervision. Banks must have clearly identified directors. It is illegal to perform banking transactions without a license.

In 2000, MAS first issued a series of regulatory guidelines ("Notices") requiring banks to apply "know your customer" standards, adopt internal policies for staff compliance, and cooperate with Singapore enforcement agencies on money laundering cases. These Notices are regulatory in nature and are enforceable by prosecution. Similar guidelines exist for securities dealers and other financial service providers. Banks must obtain documentation, such as passports or identity cards, from all personal customers, so that the bank can verify their names, permanent contact addresses, dates of birth, and nationalities, and conduct inquiries into the bona fides of company customers. The regulations specifically require that financial institutions obtain evidence of the identity of the beneficial owners of offshore companies or trusts. The guidelines also mandate specific record keeping and reporting requirements, outline examples of suspicious transactions that should prompt reporting, and establish mandatory intra-company point-of-contact and staff training requirements. Similar guidelines and notices exist for finance companies, merchant banks, life insurers, brokers, securities dealers, investment advisors, and futures brokers and advisors. The MAS announced that it will also revise these Notices in line with the final form of the revised notice for banks.

The Suspicious Transaction Reporting Office (STRO) is Singapore's Financial Intelligence Unit (FIU). Part of the Singapore Police Force's Commercial Affairs Department, it began operating on January 10, 2000. To improve its suspicious transaction reporting, STRO has begun work on a computer system to allow electronic online submission of STRs, as well as the dissemination of AML/CFT material. It plans to encourage all financial institutions and relevant professions to eventually participate in this system.

Singapore is an important participant in the regional effort to stop terrorist financing in Southeast Asia. The Terrorism (Suppression of Financing) Act, passed in 2002, criminalizes terrorist financing, although the provisions of the Act are actually much broader. In addition to making it a criminal offense to deal with terrorist property (including financial assets), the Act criminalizes the provision or collection of any property (including financial assets) with the intention that the property be used, or having reasonable grounds to believe that the property will be used, to commit any terrorist act or for various terrorist purposes.

The Act also provides that any person in Singapore, and every citizen of Singapore outside Singapore, who has information about any transaction or proposed transaction in respect of terrorist property, or who has information that he/she believes might be of material assistance in preventing a terrorism financing offense, must immediately inform the police. The Act gives the authorities the power to freeze and seize terrorist assets. The Act, which supplements and extends interim legislation enacted in November 2001, took effect January 29, 2003.

In January 2003, the Singapore Government released a white paper describing its investigations into the Jemaah Islamiyah (JI) terrorist network. The government is known to have detained 39 persons since 2001 as suspected terrorists. Three persons have been released since then, two in September 2004 and one in January 2005, with restrictions placed on their associations and movements.

In April 2004, the International Monetary Fund and the World Bank Financial Sector Assessment Program (FSAP) team published an assessment of Singapore's financial sector, which included an evaluation of the AML/CFT regime. The IMF found that Singapore's ability to freeze terrorist related funds is comprehensive. The IMF also concluded that, while Singapore has not adopted the FATF approach of designating terrorist financing offenses as predicate crimes for money laundering, Singapore appears to meet the underlying obligations of the relevant FATF Special Recommendation Two on terrorist financing.

There are few restrictions on intergovernmental terrorist financing-related mutual legal assistance even in the absence of a Mutual Legal Assistance Treaty, because Singapore is a party to the UN International Convention for the Suppression of the Financing of Terrorism, the IMF concluded. But the IMF urged Singapore to improve its mutual legal assistance, noting serious limitations on assistance with the provision of bank records, with search and seizure of evidence, on restraining proceeds of crime, and on the enforcement of foreign confiscation orders.

On the terrorist financing front, the MAS has broad powers to direct financial institutions to comply with international obligations. These include UN Security Council Resolutions 1267, 1333, 1373, 1390, and other similar resolutions. In 2002, the MAS issued regulations to implement this authority. The regulations bar banks and financial institutions from providing resources and services of any kind which will benefit terrorists, and from doing "anything that . . . assists or promotes" terrorist financing. Financial institutions must notify the MAS immediately if they have in their possession, custody, or control any property belonging to terrorists or any information on transactions involving terrorists' funds. The regulations apply to all branches and offices of any financial institutions incorporated in Singapore, or incorporated outside of Singapore but which are located in Singapore. The regulations include a list of the entities and individuals on the UNSCR 1267 Sanctions Committee's consolidated list. Singapore updates the regulations periodically to include additional names as they are added by the UNSCR 1267 Sanctions Committee.

Alternative remittance systems exist, and are used mainly by the approximately 500,000 foreign workers in Singapore. All remittance agents, formal or informal, must be licensed and are subject to the same laws and regulations, including requirements for record keeping and the filing of suspicious transaction reports. In 2002, the regulations were strengthened. The firms now have to submit a financial statement every three months, and report the largest amount transmitted on a single day.

Money Laundering and Financial Crimes

Firms must also answer questions about the way they conduct business and about their overseas partners. Informal networks, such as hawala, that are not licensed are considered illegal.

Charities in Singapore are subject to extensive government regulation, including close oversight and reporting requirements, and restrictions that limit the amount of funding which can be transferred out of Singapore. A total of 1,669 charities were registered as of December 31, 2003. All charities must register with the Commissioner of Charities, and must, as part of the registration process, submit governing documents outlining the charity's objectives, and particulars on all trustees. The Commissioner of Charities has the power to investigate charities, including authority to search and seize records, and to restrict the transactions into which the charity can enter, suspend charity staff or trustees, and/or establish a scheme for the administration of the charity. Charities must keep detailed accounting records, and retain them for at least seven years.

Under the Charities (Fund-raising Appeals for Foreign Charitable Purposes) Regulations 1994, any charity or person who wishes to conduct or participate in any fund raising for any foreign charitable purpose must apply for a permit. The applicant has to show that at least 80 percent of the funds raised will be used in Singapore, although the Commissioner of Charities has discretion to allow a lower percentage to be applied within Singapore. Permit holders are subject to additional record keeping and reporting requirements, including details on every item of expenditure disbursed, amounts transmitted to persons outside Singapore, and to whom the money was transmitted.

A total of 33 permits were issued in 2003 for fund raising for foreign charitable purposes. There are not restrictions or direct reporting requirements on foreign donations to charities in Singapore.

Singapore is party to the 1988 UN Drug Convention and the UN International Convention for the Suppression of the Financing of Terrorism and has signed, but has not yet ratified, the UN Convention against Transnational Organized Crime. Singapore is a member of the FATF, the Asia/Pacific Group on Money Laundering, the Egmont Group, and the Offshore Group of Banking Supervisors. Singapore will host the June 2005 Plenary meeting of the FATF, marking the first time an FATF Plenary will take place in Southeast Asia.

To bolster law enforcement cooperation and facilitate information exchange, Singapore enacted the Mutual Assistance in Criminal Matters Act (MACMA) in March 2000. The MACMA provides for international cooperation on any of the 183 predicate "serious offenses" listed under the CDSA of 1999. The provisions of the MACMA apply to countries that have concluded treaties, memoranda of understanding, or other agreements with Singapore.

In November 2000 Singapore and the United States signed the Agreement Concerning the Investigation of Drug Trafficking Offenses and Seizure and Forfeiture of Proceeds and Instrumentalities of Drug Trafficking. This was the first agreement concluded pursuant to the MACMA. This agreement, which entered into force in early 2001, facilitates the exchange of banking and corporate information on drug money laundering suspects and targets, including access to bank records. It also entails reciprocal honoring of seizure/forfeiture warrants. This agreement applies only to narcotics cases, and does not cover non-narcotics-related money laundering, terrorist financing, or financial fraud.

The Terrorism (Suppression of Financing) Act provides for mutual legal assistance in cases where there is no treaty, memorandum (MOU), or other agreement in force between Singapore and another country that is a party to the UN International Convention for the Suppression of the Financing of Terrorism. Singapore's FIU has concluded MOUs concerning cooperation in the exchange of financial intelligence with counterparts in Australia, Belgium, Japan, and the United States, and continues to actively seek MOUs with additional FIUs.

In May 2003 the Singapore Government issued a regulation pursuant to the Terrorism Act and the MACMA that enables the government to provide legal assistance to the United States and the United

Kingdom in matters related to terrorism financing offenses. Singapore concluded a mutual legal assistance agreement with Hong Kong in 2003. In 2004, Singapore signed a treaty on mutual legal assistance in criminal matters with seven other members of ASEAN: Brunei, Cambodia, Indonesia, Laos, Malaysia, the Philippines and Vietnam. The treaty will come into effect after ratification by the respective governments.

The Government of Singapore should continue close monitoring of its domestic and offshore financial sectors. As a major financial center, it should also take measures to regulate and monitor large currency and bearer negotiable instrument movements into and out of the country, in line with the FATF's Ninth Special Recommendation, adopted in October 2004, that countries implement measures such as declaration systems, in order to detect cross-border currency smuggling. The conclusion of broad mutual legal assistance agreements is also important to further Singapore's ability to work internationally to counter money laundering and terrorist financing.

Slovak Republic

Slovakia is not considered an important regional financial center. The geographic, economic, and legal conditions that shape the money laundering environment in Slovakia are typical of those in other Central European transition economies. Slovakia's location along the major lines of communication connecting Western, Eastern, and Southeastern Europe makes it a transit country for smuggling and trafficking in narcotics, arms, stolen vehicles, and humans. Organized crime activity and the opportunities to use gray market channels also lead to a favorable money laundering environment. Financial crimes such as fraud, tax evasion, embezzlement, and illegal business activity have been quite problematic for Slovak authorities.

Slovakia's original anti-money laundering legislation, Act No. 249/1994 (later amended by Act No. 58/1996) came into effect in 1994. Article 252 of the Slovak Criminal Code, "Legalization of Proceeds from Criminal Activity," came into force at the same time. These measures criminalize money laundering for all serious crimes, and impose customer identification, record keeping, and suspicious transaction reporting requirements on banks. A money laundering conviction does not require a conviction for the predicate offense, and a predicate offense does not have to occur in Slovakia to be considered as such. The failure of a covered entity to report, as well as tipping off, are criminal offenses.

As a result of amendments made to the Slovak Civil Code in 2001, new anonymous passbook savings accounts are banned. All banks in Slovakia were ordered to stop offering new anonymous accounts. All owners of anonymous accounts were required to disclose their identity to the bank and to close the anonymous account by December 31, 2003. Owners of accounts that were not closed may withdraw money for an additional three-year non-interest-bearing grace period. However, funds remaining after January 1, 2007 will be confiscated and deposited in a fund for the administration of the Ministry of Finance, where they will be available for collection by the accountholder for another five years. As of January 1, 2007, bearer passbook accounts will cease to exist.

In 2000 the legislature approved modifications to existing anti-money laundering regulations, with the passage of Act No. 367/2000, "On Protection against the Legalization of Proceeds from Criminal Activities." The Act came into force on January 1, 2001. One of the most significant changes that Act No. 367/2000 introduces is in relation to the types of transactions subject to the reporting requirements. The law replaces the standard of "suspicious transactions" with an expanded definition of "unusual business activity." According to this modified definition, an unusual business activity is any transaction that could result in the legalization of income, the source of which is suspected to be criminal. Such transactions include the attempted disposal of income or property with the knowledge or suspicion that it was acquired through criminal activity in Slovakia or a third country. Designated transactions include the acquisition, possession, or use of real estate, moveable property, securities,

money, or any other property with monetary value, for the purpose of concealing or disguising its ownership.

As recommended in 2001 by the Council of Europe's Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL) in its second-round evaluation of Slovakia, the Government of Slovakia (GOS) amended Act No. 367/2000 in order to address shortcomings of the original legislation, and in order to comply with European Directive 2001/97/EC. As a result, Slovakian legislation is now in full harmony with the Second European Union (EU) Directive. The FATF's 2002-3 Annual Report stated that the amended legislation provided a "basically sound preventive legal structure." Act No. 367/2000 expands the list of entities subject to reporting requirements to include foreign bank subsidiaries, the Slovak Export-Import Bank, non-bank financial institutions such as casinos, post offices, brokers, stock exchanges, commodity exchanges, securities markets, asset management companies, insurance companies, real estate companies, tax advisors, auditors, credit unions, leasing firms, auctioneers, foreign exchange houses, and pawnshops, all of which have been particularly susceptible to money laundering.

Amendments to Act No. 367/2000 in 2002 further extend reporting requirements to antique, art, and collectible brokers; dealers in precious metals or stones, or other high-value goods; legal advisors; consultants; securities dealers; foundations; financial managers and consultants; and accounting services. Covered persons are required to identify all customers, including legal entities, if they find that the customers prepared or conducted transactions deemed to be suspicious, or if a sum or related sums exceeding 15,000 euros within a 12-month period is involved. (Previous law had set the reporting threshold at 2,600 euros.) Insurance sellers must identify all clients whose premium exceeds 1,000 euros in a year or whose one-time premium exceeds 2,500 euros. Casinos are obligated to identify all customers. Transactions may be delayed by the covered entities up to 48 hours, with another 24-hour extension allowed if authorized by the Financial Police. If the suspicion turns out to be unfounded, the state assumes the burden of compensation for losses stemming from the delay.

Originally, Slovakia's Financial Intelligence Unit (FIU), the Financial Intelligence Unit of the Bureau of Organized Crime, was established under the Ministry of the Interior and was a part of the Bureau of Financial Police (BFP). However, as of January 2004, the BFP ceased to exist and its duties were assumed by the newly created Office to Fight Organized Crime (OFOC), which focuses on all forms of organized crime, including narcotics, money laundering, human trafficking, and prostitution. The OFOC has four regional units of financial police, each responsible for a different part of Slovakia (Bratislava, Eastern Slovakia, Western Slovakia, and Central Slovakia). After the abolition of the BFP, the FIU was re-organized and moved to the OFOC.

The FIU has five primary departments: Analytical, Unusual Business Transactions, Supervision of Obligated Entities, International Cooperation, and Property Checks. The FIU increased its administrative capacity by raising its staff level from 25 to 34 personnel and its analysts participate regularly in international and domestic fora related to combating money laundering. The FIU has jurisdictional responsibility over money laundering violations, receives and evaluates suspicious transaction reports (STRs), and collects additional information to establish the suspicion of money laundering. If justified, the unit forwards the case to one of the regional financial police units. Once enough information has been obtained to warrant suspicion that a criminal offense has occurred, the FIU takes appropriate measures, including asking a financial institution or bank to delay business or a financial transaction. The FIU can also submit the case to the state prosecutor's office for investigation and prosecution.

In 2003, the BFP (through the FIU) registered 318 allegations of financial crime worth an estimated value of Slovak koruny (SKK) 54.8 billion (\$1.83 billion). The police formally investigated 251 of these allegations. The cases investigated had an approximate value of SKK 34.3 billion (\$1.14 billion). The police prosecuted 123 of the cases and convicted 72 entities. Also in 2003, the BFP received 489

reports alleging suspicious business operations totaling SKK 9.2 billion (\$307 million). On the basis of these 489 reports, 88 money laundering investigations were initiated by the police, resulting in the referral of 38 cases to the courts and 33 prosecutions. The BFP also conducted 23 on-site inspections of covered entities during 2003. Ten of these inspections resulted in the levying of fines totaling SKK 1,610,000 (\$54,000).

In the first eleven months of 2004, the OFOC (through the FIU) received 738 reports alleging unusual financial transactions worth a total of SKK 19.3 billion (\$643 million). It submitted 20 proposals totaling SKK 46.4 million (\$1.54 million) for criminal prosecution and 55 proposals for tax prosecution. In addition, the regional police units submitted 107 proposals for criminal prosecutions. The OFOC started 69 on-site inspections (24 are completed) of covered persons and levied penalties totaling SKK 2.41 million (\$80,300) in 23 cases.

In 2003, a law amending and supplementing the Criminal Procedure Code and Criminal Code entered into force. It provides law enforcement with the authority to conduct “sting operations” and introduces provisions regarding corporate criminal liability and “crown” witnesses. A “crown witness” (a criminal who voluntarily opts to cooperate with law enforcement bodies) could be granted immunity or receive a shortened sentence. This rule does not apply to those that organized or instigated the crime.

In late 2003, the Slovak cabinet approved a law on measures against entities that acquired property through illegal income (also known as the Law on Proving the Origin of Property). According to the draft law, an undocumented increase in property exceeding the minimum monthly wage multiplied by 200 would be scrutinized and would be considered possibly illegal. Anyone who has suspicions about possibly illegally acquired property may report it to the police, who are then obliged to investigate the allegations, ultimately reporting to the Office of the Attorney General if findings are conclusive. The Attorney General’s Office may then order the property to be confiscated. In January 2004, the Ministry of Justice withdrew the draft law from Parliament when it was evident it would not be approved.

Slovakia has responded to the problem of the financing of terrorism by amending its money laundering law with Act No. 445/2002, which criminalizes terrorist financing and obliges covered entities to report transactions possibly linked to terrorist financing. All competent authorities in the Slovak Republic have full power to freeze or confiscate terrorist assets in accordance with UNSCR 1373. According to act no. 367/2000 and its later amendment, financial institutions are required to report to the regional financial police when they freeze or identify suspected terrorist-linked assets. The GOS agreed to freeze immediately all accounts owned by entities on the UNSCR 1267 Sanctions Committee’s and EU’s (but not the United States’) consolidated lists. No terrorist finance-related accounts have been frozen or seized in Slovakia, but were a terrorism-related account to be identified, the Financial Police would hold any related financial transaction for up to 48 hours, and then gather evidence to freeze the account and seize any assets. The GOS is now a signatory to all 12 of the UN Conventions concerning the fight against terrorism. However, as reported in MONEYVAL 2004 member states’ self-assessment questionnaire, Slovakia is still not fully compliant with the FATF’s Special Recommendations on Terrorist Financing, having received in 2004 from MONEYVAL a rating of “partial compliance” with regard to Special Recommendation I (Implementation of UNSCR 1373) and Special Recommendation VII (enhanced scrutiny of transfers lacking originator information).

The GOS is a party to the UN International Convention for the Suppression of the Financing of Terrorism. The provisions of the Convention have been incorporated into amendments of the Bank Act, Penal Code, and Act No. 367/2000. However, Slovakia elected to pursue several optional terms of the convention that were fully incorporated in March 2003. The FIU has memoranda of understanding (MOUs) with the FIUs of Slovenia, Monaco, Ukraine, Australia, Belgium, Poland, and

the Czech Republic. The GOS also hopes to sign MOUs with Albania and Taiwan in 2005. Slovakia's FIU is the responsible authority for international exchange of information regarding money laundering under the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime.

Slovakia is a party to the European Convention on Mutual Legal Assistance; the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime; the 1988 UN Drug Convention; and the UN Convention against Transnational Organized Crime. It also has signed the UN Convention against Corruption. Slovakia became a member of the Organization for Economic Cooperation and Development (OECD) in December 2000, thereby expanding its opportunities for multilateral engagement. Slovakia is a member of the Council of Europe and participates in MONEYVAL. Slovakia sends experts to conduct mutual evaluations on fellow member countries; it also underwent mutual evaluations by this group in 1998 and 2001. Slovakia is a member of the Egmont Group.

The Government of Slovakia should continue to improve its anti-money laundering regime. Continued implementation of the provisions of Slovakia's anti-money laundering legislation will give the Slovak financial system greater protection, by helping it prevent and detect money laundering in all financial sectors. Slovakia should also improve supervision of some non-bank sectors to ensure reporting requirements are followed. Slovakia should provide adequate resources to assure that its FIU, law enforcement, and prosecutorial agencies are adequately funded and trained to effectively perform their various responsibilities.

Slovenia

While not a major money laundering country, Slovenia's economic stability and location on the Balkan drug route offer attractive opportunities for money laundering. Narcotics-trafficking, especially heroin via the "Balkan route" smuggled by mainly Albanian and Serbian nationals, is a growing problem and the main source of illegal proceeds. Other significant sources of illegal proceeds are fraud, trafficking in weapons and persons, and currency and securities counterfeiting, as well as extraterritorial offenses such as tax evasion, tax and VAT fraud, and corruption. Organized crime is believed to be involved in both predicate crimes and laundering operations. Money laundering often tends to be undertaken by citizens of the neighboring countries and those of the former Soviet Union, and occurs through the banking system, foreign exchange houses, real estate transactions, and cross-border currency transport.

The Penal Code criminalizes money laundering and the financing of terrorism. A change made to Slovenia's Penal Code, in 2004, increases the imprisonment penalty for money laundering from three to five years. Negligent money laundering is also criminalized.

Slovenia's Law on the Prevention of Money Laundering (LPML) was enacted in 1994 and amended in 2001 and 2002. The October 2001 amendments update the original law by, among other provisions, expanding the OMLP's sources of available financial information, and requiring mandatory client identification for transactions exceeding 3 million Slovenian tolar (approximately \$14,400). December 2001 saw the passage of a new law that increased the power of supervisory authorities to prohibit the establishment of new bearer passbook accounts and phased out already existing bearer passbook accounts. Further amendments to the law, which extend reporting obligations to lawyers, law firms, notaries, auditors and tax advisors, auctioneers, art dealers, gaming houses, and lottery concessions, were passed and entered into force in July 2002. Additional identification requirements, most notable of which is the requirement to identify beneficial owners, were also implemented. Due to the nature of their business, certain professions (lawyers, notaries, auditors, accountants, and tax advisors) are required only to file suspicious transaction reports (STRs) and are exempt from currency transaction reporting requirements. Records must be retained for a minimum of ten years. There are

nine understatutory regulations in force providing detailed measures for the implementation of the LPML. Slovenian legislation is now harmonized with the provisions outlined in the Second EU Directive.

Financial supervisory bodies include the Bank of Slovenia, the Securities Market Agency, the Insurance Supervisory Agency, the Office for Gaming Supervision, the Slovene Audit Institute, and the supervisory body responsible for the oversight of tax advisory services. The Bank of Slovenia has supervisory power over bureaux de change, and in February 2003 issued a handbook for those bodies complete with reporting requirements, auditing procedures, and indicators.

Slovenia's Financial Intelligence Unit (FIU), the Office for Money Laundering Prevention (OMLP), an administrative FIU, was established in 1995 within Slovenia's Ministry of Finance. The FIU has a staff of 17. The 2002 amendments to the LPML gave OMLP more power and latitude in opening cases and sharing information. The amount of time during which transactions can be held is increased from 48 to 72 hours. The OMLP used its powers in six instances to temporarily suspend transactions with a total combined value of \$3,704,352. In its nine years of operation, OMLP has opened 764 suspicious cases and closed 655 cases. Foreign nationals were involved in more than half of these cases. In 2004, OMLP opened 112 new cases of suspected money laundering and closed 88 cases. Nine of the 88 cases were forwarded to the Police and/or Public Prosecution. In addition, 25 cases regarding suspicion of other serious criminal offenses (according to Article 22 of the LPML) were sent to the police and other competent bodies for further investigation. Two judgments have been finalized, but in both cases, due to procedural reasons, the defendants were acquitted.

Several additional cases are currently pending in the court system. The existence of a large backlog of cases in the courts continues to be a major factor impeding Slovenia's anti-money laundering regime. Law enforcement authorities, prosecutors, and judges all lack experience with regard to pursuing financial crimes, including money laundering.

The Ministry of Justice has been authorized to form a decision on whether a new law on mutual legal assistance in criminal matters will be drafted, which may include also the assets sharing provisions.

New changes and amendments (primarily focused on refining provisions regarding the financing of terrorism) are expected to be implemented after the Government of Slovenia's (GOS's) adoption of the European Union's (EU's) Third Money Laundering Directive during the second half of 2005.

The 1902 extradition treaty between the United States and the Kingdom of Serbia remains in force between the United States and Slovenia. Slovenia became a member of the EU on May 1, 2004, and is actively involved in regional efforts to combat money laundering and terrorism financing, working throughout the Balkans and Eastern Europe, especially with Serbia, Montenegro, Ukraine, Macedonia, and Russia. With regard to international cooperation, Slovenia (especially the OMLP) has a very positive reputation, having conducted a regional counternarcotics conference with Croatian counterparts, and having hosted a regional anti-money laundering conference for eight of its Balkan neighbors in October 2004.

Slovenia is a member of the Council of Europe's Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL), and has undergone a mutual evaluation by the Committee, as well as lending its own experts to evaluate other member countries. The OMLP is a member of the Egmont Group. Slovenia also actively participates in other multilateral programs combating money laundering and terrorism financing. Slovenia is a party to the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime, and ratified the Civil Law Convention on Corruption in July 2003. Slovenia is also party to the 1988 UN Drug Convention, the UN Convention against Transnational Organized Crime, and the UN International Convention for the Suppression of the Financing of Terrorism. In July 2003 Slovenia signed the European Convention on the Suppression of Terrorism.

The Government of Slovenia should continue to work with its law enforcement and judicial authorities to increase the levels of action and experience in pursuing financial crime. Slovenia should provide specific training to provide law enforcement, prosecutors, and judges with a better understanding of money laundering and other financial crimes so that they will be able to effectively investigate and prosecute cases of money laundering.

Solomon Islands

The Solomon Islands is not a regional financial center. The Islands' banking system is small. The Parliament criminalized money laundering in 2002 with the passage of the Anti-Money Laundering Act and the Proceeds of Crime Act. The Acts provide mechanisms designed to prevent the movement of funds for terrorist purposes and to enhance the exchange of financial intelligence with other countries. Implementation of the Acts has been slow, but Parliament did act to establish a Financial Intelligence Unit (FIU) at the Central Bank in late 2004. The presence of RAMSI-affiliated Australian and New Zealand civil servants in key positions throughout the government has further aided the adoption of better banking practices.

The Solomon Islands is not a party to the 1988 UN Drug Convention, the UN Convention against Transnational Organized Crime, or the UN International Convention for the Suppression of the Financing of Terrorism.

The Government of the Solomon Islands should become a party to the 1988 UN Drug Convention, the UN International Convention for the Suppression of the Financing of Terrorism, and the UN Convention against Transnational Organized Crime. It should provide the recently established FIU with sufficient staff and resources to effectively carry out its mission.

South Africa

South Africa's position as the major financial center in the region, its relatively sophisticated banking and financial sector, and its large cash-based market, all make it a very attractive target for transnational and domestic crime syndicates. Nigerian, Pakistani, and Indian drug traffickers, Chinese Triads and Taiwanese groups, and the Russian Mafia, have all been identified as operating in South Africa, along with native South African criminal groups. Although the links between different types of crime have been observed throughout the region, money laundering is primarily related to the illicit narcotics trade. Other common types of crimes related to money laundering are: fraud, theft, corruption, currency speculation, illicit dealings in precious metals and diamonds, human trafficking, and smuggling. Most criminal organizations are also involved in legitimate business operations. There is a significant black market for smuggled goods. South Africa is not an offshore financial center.

The Government of South Africa (GOSA) estimates that between \$2 and \$8 billion is laundered each year through South African financial institutions. The Proceeds of Crime Act (No. 76 of 1996) criminalized money laundering for all serious crimes. This Act was supplemented by the Prevention of Organized Crime Act (No. 121 of 1998), which confirms the criminal character of money laundering, mandates the reporting of suspicious transactions, and provides a "safe harbor" for good faith compliance. Violation of this Act carries a fine of up to Rand 100 million (approximately \$16,667,330) or imprisonment for up to 30 years. Subsequent regulations direct that the reports be sent to the Commercial Crime Unit of the South African Police Service. Both of these acts contain criminal and civil forfeiture provisions.

On November 11, 2004, the Parliament passed the Protection of Constitutional Democracy Against Terrorist and Related Activities Act (POCDATARA), which specifically criminalizes terrorist activity and terrorist financing. The Act would make it easier to identify, freeze, and seize assets related to money laundering. Significantly, the Act (which, pending Presidential signature, would take effect in

early 2005) will be applicable to charitable and non-profit organizations operating in South Africa, although there is no information that these groups have been linked to terrorist financing.

In November 2001, the President signed the Financial Intelligence Centre Act (FICA) into law. Pursuant to the FICA, South Africa established both the Financial Intelligence Centre (FIC) and the Money Laundering Advisory Council to advise the Minister of Finance on policies and measures to combat money laundering. The mandate of the FIC is to coordinate policy and efforts to counter money laundering activities. The FIC similarly acts as a centralized repository of information and statistics on money laundering. The FIC began operating in February 2003. In July 2003, the FIC was admitted as a member of the Egmont Group of financial intelligence units.

The FICA requires a wide range of financial institutions and businesses to identify customers, maintain records of transactions for at least five years, appoint compliance officers to train employees to comply with the law, and report transactions of a suspicious or unusual nature. Such businesses include companies and firms considered particularly vulnerable to money laundering activities, such as banks, life insurance companies, foreign exchange dealers, casinos, and real estate agents. If the FIC has reasonable grounds to suspect that a transaction involves the proceeds of criminal activities, the FIC will forward this information to the investigative and prosecutorial authorities. If there is suspicion of terrorist financing, that information is to be forwarded to the National Intelligence Service. There are no bank secrecy laws in effect that prevent the disclosure of ownership information to bank supervisors and law enforcement authorities. However, very few actual cases have been prosecuted to date.

From March 2003-March 2004, the FIC received 7,480 suspicious transaction reports (STRs), the vast majority from money remitters (4,079) and banks (2,732). This number was above what had been projected. Ninety percent of the STRs were sent electronically. No information is available on how many of these STRs led to criminal investigations, but the number is believed to be very low. In addition, the quality and consistency of the STRs was uneven, probably due to the fact that not all of South Africa's banks have yet implemented internal anti-money laundering training programs. Many banks believe the reporting requirements hamper their efforts to attract new customers. In particular, retroactive know your customer (KYC) requirements mean that account holders who do not present identifying documents in person risk having their accounts frozen. The National Treasury has extended the staggered timetable for fully implementing KYC (higher-risk clients first) to September 30, 2006.

The FIC made progress in 2004 in building its capabilities and in establishing its credibility with the South African law enforcement community. During its first full year of operation, it received 105 information requests from local law enforcement and 56 from international law enforcement agencies. The FIC plans to obtain further analytical training for its staff, particularly in the area of detecting terrorist financing in the absence of specific intelligence.

Because of the cash-driven nature of the South African economy, alternative remittance systems that bypass the formal financial sector exist, used largely by the strong local Islamic community. Currently, there is no legal obligation requiring alternative remittance systems to report cash transactions.

The Financial Action Task Force (FATF) conducted a mutual evaluation of South Africa in 2003 and made several recommendations regarding controls on cross-border currency movement, thresholds and amendments to the Exchange Control Act. Those recommendations have yet to be adopted.

South Africa has cooperated with the United States in exchanging information related to money laundering and terrorist financing. The two nations have a Mutual Legal Assistance Treaty and a bilateral Extradition Treaty. In June 2003, South Africa became the first African nation to be admitted into the Financial Action Task Force. South Africa is also an active member of the Eastern and

Southern African Anti-Money Laundering Group (ESAAMLG), having signed the memorandum of understanding in 2003.

The GOSA is a party to the 1988 UN Drug Convention, the UN International Convention for the Suppression of the Financing of Terrorism, and the UN Convention against Transnational Organized Crime (ratified in February 2004).

The Government of South Africa should implement the FATF recommendations to establish better control over cross-border currency movement. It should begin to regulate the country's alternative remittance systems. It should monitor and make available the number of criminal investigations resulting from STRs, and it should increase the number of actual money laundering prosecutions. It should enact and fully implement the new law against terrorist activity and terrorist financing.

Spain

Money laundered in Spain is primarily from the proceeds of the Colombian cocaine trade, although money laundered through other Latin American countries also plays a role. Colombian organizations use several methods to move money from European drug sales out of Spain. Airline personnel traveling between Spain and Latin America carry out money. Colombian companies purchase goods in Asia and sell them legally at cartel-run stores in Europe. Credit card balances are paid in Spanish banks for charges made in Latin America, or money deposited in Spanish banks is withdrawn by ATM cards in Colombia. Additionally, wire transfers continue to be a common way of getting funds out of Spain.

Drug proceeds from other regions enter Spain as well. Hashish proceeds come from Morocco and heroin money enters from Turkey. The majority of money that enters Spain to be laundered is smuggled across the border in three ways. Bulk cash is carried in travelers' luggage or hidden on their bodies when arriving at international airports; shipping containers loaded with currency enter through Spanish ports (such as Algeciras); or, money is brought in by small craft along Spain's long coastline. The informal non-bank outlets (such as "Locutorios"), which make small international transfers for the immigrant community, continue to be used to move money in and out of Spain. Regulators also suspect the presence of "hawala"-like networks in the Islamic community.

Tax evasion in internal markets and smuggling of goods along the coastline continue to be sources of illicit funds in Spain. Spanish authorities believe that tax evasion in the cell phone and property industries is the most serious problem. The smuggling of electronics and tobacco from Gibraltar remains an ongoing issue. Although little of the money laundered in Spain is believed to be used for terrorist financing, money from the extortion of businesses in the Basque region is moved through the financial system and used to finance the Basque terrorist group ETA.

The Government of Spain (GOS) remains committed to combating narcotics-trafficking, terrorism, and financial crimes, and continues to work hard to tighten financial controls. The criminalization of money laundering was added to the penal code in 1988 when laundering the proceeds from narcotics-trafficking was made a criminal offense. In 1995 the law was expanded to cover all serious crimes that required a prison sentence greater than three years. Amendments to the code on November 25, 2003, which took effect on October 1, 2004, made all forms of money laundering financial crimes. To date, there have not been any cases of Spanish officials being involved in money laundering in Spain.

The penal code can also apply to individuals in financial firms if their institutions have been used for financial crimes. An amendment to the penal code in 1991 made such persons culpable for both fraudulent acts and negligence connected with money laundering.

Businesses and financial service suppliers operating in Spain or targeting Spanish markets are subject to the law, Ley de Servicios de la Sociedad de Informacion y de Comercio Electronico (LSSICE), that

came into force on October 12, 2002, for Internet marketing and distribution. The new law requires businesses to register their domain names, company registry, physical address, and other company details. Financial sector businesses such as online banks must still send written contracts to new customers for signature and obtain physical proof of their identity, in order to comply with existing banking regulations.

Royal Decree 998/2003 of July 5, 2003, modified the structure of the Ministry of Interior to facilitate more active combating of drug-trafficking. This law creates an Advisory Committee on Observation that will attempt to follow the use of technologies by criminal organizations and money launderers and to take measures to ensure that Spanish law enforcement authorities are able to meet the new challenges.

Specific measures to prevent money laundering were written to regulate the legal entities in the financial sector and individuals moving large sums of cash, in December 1993 (Law No. 19/1993), as an expansion to the criminal code that previously applied only to physical persons. The regulations for enactment were established by Royal Decree 925/1995, which set the standards for regulation of the financial system. The regulations were amended in 2003 and cover money laundering linked to all serious crimes. The financial sector is required to identify customers, keep records of transactions, and report suspicious financial transactions. Spanish banks are required by law to maintain fiscal information for five years and mercantile records for six years.

The money laundering law applies to most entities active in the financial system, including banks, mutual savings associations, credit companies, insurance companies, financial advisers, brokerage and securities firms, postal services, currency exchange outlets, casinos, and individuals and unofficial financial institutions exchanging or transmitting money (alternative remittance systems). The 2003 amendments add lawyers and notaries as covered entities. Previously, notaries and lawyers were required to report suspicious cases, but now they are considered part of the financial system that is under the supervision of appropriate regulators.

Law 19/2003 regulating the movements of capital and foreign transactions implements the European Union (EU) Money Laundering Directive. The law obligates financial institutions to make monthly reports on large transactions. Banks are required to report all international transfers greater than 30,000 euros. The law also requires the declaration and reporting of internal transfers of funds greater than 80,500 euros. Individuals traveling internationally are required to report the importation or exportation of currency greater than 6,000 euros. Law 19/2003 allows the seizure of up to 100 percent of the currency if illegal activity under financial crimes ordinances can be proven. Spanish authorities claim they have seen a drop in cash couriers since the law's enactment in July 2003. For cases where the money cannot be connected to criminal activity, and has not been declared, the authorities may seize the money until the origin of the funds is proven.

The Commission for the Prevention of Money Laundering and Financial Crimes (CPBC) coordinates the fight against money laundering in Spain. The Secretary of State for Economy heads the commission and all of the agencies involved in the prevention of money laundering participate. The representatives include the National Drug Plan Office, the Ministry of Economy, the Federal Prosecutors (Fiscalia), Customs, the Spanish National Police, the Guardia Civil, CNMV (equivalent to the SEC), the Treasury, the Bank of Spain, and the Director General of Insurance and Pension Funds. Any member of the Commission may request an investigation, should suspicious activity be brought to his or her attention.

The CPBC delegates responsibility to two additional organizations. The first is a secretariat in the Treasury, located in the Ministry of Economy. Following investigation and a guilty verdict by a court, this regulating body carries out penalties. Sanctions can include closure, fines, account freezes, or seizures of assets. Law 19/2003 allows seizures of assets of third parties in criminal transactions, and a seizure of real estate in an amount equivalent to the illegal profit.

Money Laundering and Financial Crimes

The second organization is the Executive Service of the Commission for the Prevention of Money Laundering (SEPBLAC), which serves as Spain's financial intelligence unit. SEPBLAC receives and analyzes suspicious transaction reports (STRs) and currency transaction reports (CTRs). SEPBLAC has the primary responsibility for any investigation in money laundering cases and directly supervises the anti-money laundering procedures of banks and financial institutions. Incriminating information is turned over to the federal prosecutors for prosecution. SEPBLAC received 1,351 STRs in 2002, 1,598 STRs in 2003, and 2,414 STRs in 2004. In addition, SEPBLAC received 205,252 CTRs in 2002, 294,508 CTRs in 2003, and 331,856 CTRs in 2004.

The Fund of Seized Goods of Narcotics Traffickers receives seized assets. This agency was established under the National Drug Plan. The proceeds from the funds are divided, with half going to drug treatment programs and half to a foundation that supports the officers fighting narcotics-trafficking. Seizures of assets involving more than one country, and the division of the assets, depend on the relationship with the country in question. EU working groups will determine how to divide the proceeds for member countries. Outside of the EU, bilateral commissions are formed with countries that are members of Financial Action Task Force (FATF), FATF-like bodies, and the Egmont Group, to deal with the division of seized assets. With other countries, negotiations are conducted on an ad hoc basis.

Terrorist financing issues are governed by a separate code of law and commission, the Commission of Vigilance of Terrorist Finance Activities (CVAFT). This commission was created under Law 12/2003 on the Prevention and Blocking of the Financing of Terrorism. The commission is headed by the Ministry of Interior, and includes representatives from the Fiscalia and Ministries of Justice and Economy. SEPBLAC will serve as the Executive Service and as the Secretariat for this Commission. Currently, only the head of CVAFT can request information in terrorist financing cases, so other members must rely on the commission head to begin an investigation.

Crimes of terrorism are defined in Article 571 of the Penal Code, and penalties are set forth in Articles 572 and 574. Sanctions range from ten to thirty years' imprisonment with longer terms if the terrorist actions were directed against government officials. The Spanish authorities' ability to freeze accounts granted in the most recent law is more aggressive than that of most of their European counterparts. Though many laws are transposed from European Union (EU) directives, Law 12/2003 on the prevention and freezing of terrorist financing goes beyond EU requirements. However, the implementing regulations for this law have not been written, and it has not been used. Once in full effect, this law will allow administrative freezing of suspect assets without a judge's order.

All legal charities are placed on a register maintained by the Ministry of Justice. Responsibility for policing registered charities lies with the Ministry of Public Administration. If the charity fails to comply with the requirements, sanctions or other criminal charges may be levied.

Spain is a member of the FATF, and co-chairs the FATF Terrorist Finance Working Group. Spain is a participating and cooperating nation to the South American Financial Action Task Force (GAFISUD), and a cooperating and supporting nation to the Caribbean Financial Action Task Force (CFATF). Spain is a major provider of counterterrorism assistance. The GOS is a party to the UN Convention against Transnational Organized Crime and the UN International Convention for the Suppression of the Financing of Terrorism. Spain is also a party to the 1988 UN Drug Convention. SEPBLAC is a member of the Egmont Group and is currently chairing one of the Egmont Committee working groups.

The GOS has signed criminal mutual legal assistance agreements with Argentina, Australia, Canada, Chile, the Dominican Republic, Mexico, Morocco, Uruguay, and the United States. Spain's Mutual Legal Assistance Treaty with the United States has been in effect since 1993, and provides for sharing of seized assets, provided the request is made to the Spanish court hearing the case, rather than administratively. Spain also has entered into bilateral agreements for cooperation and information exchange on money laundering issues with Bolivia, Chile, El Salvador, France, Israel, Italy, Malta,

Mexico, Panama, Portugal, Russia, Turkey, Venezuela, Uruguay and the United States. SEPBLAC has also entered into bilateral agreements for cooperation and information exchange on money laundering issues with Andorra, Argentina, Australia, Belgium, Brazil, Bulgaria, Colombia, Finland, France, Guatemala, Italy, Korea, Mexico, Monaco, Panama, Peru, Poland, Portugal, Romania, Ukraine, Venezuela and the United States. Spain actively collaborates with Europol, supplying and exchanging information on terrorist groups. U.S. law enforcement agencies reported excellent cooperation with their Spanish counterparts in 2004. U.S. customs works closely with Spanish customs, Spanish prosecutors, the national police corps and the Civil Guard. The Drug Enforcement Administration works closely with SEPBLAC, the national police and the Civil Guard. These organizations regularly share information. Official documents however, will only be transferred if requested by a court.

The scale of the money laundering industry and the sophisticated methods used by criminals create a very large law enforcement problem in Spain. The Government of Spain makes every effort to eliminate financial crime in the country. Spain should continue the strong enforcement of its anti-money laundering program and its leadership in the international arena. It should consider whether additional measures are required to address possible money laundering in the stock market to ensure that the sector is not used for financial crimes and should fully implement Law 12/2003 to allow administrative freezing of suspect assets.

Sri Lanka

Sri Lanka is neither an important regional financial center nor a preferred center for money laundering. Money laundering currently is not a criminal offense. There are strict bank secrecy laws, under which the Government of Sri Lanka is required to obtain a court order to obtain banking information on bank customers. The Central Bank introduced regulations on customer due diligence in a December 2001 bid to tackle money laundering and terrorist financing in the absence of a specific legal framework. These regulations apply to commercial banks and licensed specialized banks coming under the Central Bank. The Government is in the process of finalizing draft legislation to deal with money laundering and terrorist financing. There are three draft laws under discussion: a law to prohibit money laundering and to provide for measures to combat money laundering; a law to give effect to the UN International Convention for the Suppression of the Financing of Terrorism; and a financial transaction reporting law modeled on those in the Commonwealth which will provide, among other things, for the establishment of a financial intelligence unit. There has been a delay in finalizing the legislation as the GSL debates what sort of presumptions to establish with respect to innocence or guilt. Currently, financial transactions relating to terrorism and narcotics are illegal under Central Bank regulations and banking laws.

The definition of money laundering, under the proposed anti-money laundering law covers (as predicate offenses) the offenses under existing and proposed laws on narcotics, terrorism prevention, bribery, firearms, exchange control, transnational organized crime, cyber crimes, child protection and trafficking of persons and any other offense punishable by death or imprisonment of seven years or more. The offense of money laundering involves receiving, possessing, concealing, investing, disposing of, importing, exporting, or dealing in any property or proceeds derived or realized from any unlawful activity covered by the law. Under the sentencing provisions of the proposed anti-money laundering law, persons convicted will be liable for a fine and imprisonment for a period of 5-20 years. Under the sentencing provisions of the proposed counterterrorist financing law, persons convicted will be liable for a fine and imprisonment for a period of 15-20 years. Under the proposed laws, both money laundering and terrorist financing would be extraditable offenses.

Many areas of concern exist with respect to Sri Lanka's current anti-money laundering efforts. The Central Bank continues to allow the operation of bearer certificates of deposits. In July 2003, in order to limit money laundering through bearer certificates, the Central Bank required banks to maintain a

record of purchasers of these certificates. Another area of concern relates to a 2003 tax amnesty, under which Sri Lankan individuals and companies could declare previously undisclosed wealth accrued from any source and receive immunity from a range of taxes. The amnesty was revised recently, so that immunity is now only available with respect to the payment of income tax on relevant funds. Casinos, jewelry shops and dealers in gems are also areas of concern, as there is no law to regulate their operations. Sri Lanka has also become a transit point for illegal migration of Sri Lankans and other Asian nationals to Europe, North America and the Gulf.

Sri Lanka has an indigenous alternative remittance system in the form of informal money transfer operations. Many Sri Lankan migrant workers, mainly in the Middle East, use a hawala-like system to remit their earnings. Various payments out of Sri Lanka are also made using this system. Sri Lankan commercial banks are increasing their presence and services in the Middle East in order to cater to this clientele. Trafficking of drugs generates significant amounts of criminal proceeds, and those proceeds are also readily transported using this system. Drug proceeds are laundered through various methods, including investment in real estate.

Sri Lanka is not considered an offshore financial center. Offshore banking units are allowed to operate as a part of a commercial bank operating in an overseas country in order to facilitate trade finance. They are subject to Central Bank supervision. Bearer shares are not permitted for offshore banks and foreign-owned companies. Sri Lanka has 10 free trade zones, also called export-processing zones, administered by the state-owned Board of Investment (BOI). The free trade zones house export-manufacturing operations. Only companies approved by the BOI are allowed to operate inside the zones. There are no indications that these free trade zones are being used in trade-based money laundering schemes or terrorist financing.

Sri Lanka is a party to the UN International Convention for the Suppression of the Financing of Terrorism and to the 1988 UN Drug Convention. Sri Lanka has signed but not ratified the UN Convention against Transnational Organized Crime. Sri Lanka is a member of the Bay of Bengal Initiative for Multi-Sectoral Technical and Economic Cooperation (BIMSTEC) working group on Counter-Terrorism and Transnational Crime formed in July 2004. The working group had its first meeting in December 2004 and aims to serve as a platform for regional cooperation to prevent and suppress terrorism and transnational crime.

The Mutual Assistance in Criminal Matters Act of 2002 provides for cooperation in criminal matters with Commonwealth countries. According to the law, additional bilateral agreements on mutual assistance in criminal matters are required for extending provisions of the act to non-Commonwealth countries. Under the proposed law to give effect to the UN International Convention for the Suppression of the Financing of Terrorism, the government is required to co-operate and provide assistance to states party to the Convention with regard to investigations and prosecutions under the law. The Central Bank of Sri Lanka has circulated the list of individuals and entities that have been included on the UNSCR 1267 Sanctions Committee's consolidated list with instructions to identify, freeze and seize terrorist assets. To date, no such assets have been identified.

Terrorist financing is an offense punishable by imprisonment for a period of five to ten years. Regulations under the United Nations Act No. 45 of 1968 provide for the freezing and forfeiture of assets of financiers of terrorism. There is no specific provision in law for the freezing and forfeiture of narcotics-related assets. The trafficking, possessing, importing or exporting of narcotics is punishable by death or life imprisonment under the Poisons, Opium and Dangerous Drugs Ordinance (OPDDO). Draft amendments to OPDDO, and new money laundering and terrorist financing legislation include asset forfeiture and seizure provisions for narcotics related crimes, money laundering and terrorist financing.

The Government of Sri Lanka should act on the three draft laws referred to above and initiate a comprehensive anti-money laundering program that has as its foundation anti-money laundering and

counterterrorist financing laws. The property and proceeds arising out of all serious crime should be included as predicate offenses for money laundering. The practice of permitting bearer certificates of deposit should be terminated. There should be a formalized system of reporting suspicious transactions from financial institutions to a Financial Intelligence Unit (FIU). Casinos should also be made subject to financial intelligence reporting to the FIU. Sri Lanka should devote adequate resources to train police and customs officials to recognize and investigate different forms of money laundering, including alternative remittance systems. Sri Lanka should ratify the UN Convention against Transnational Organized Crime.

St. Kitts and Nevis

The Government of St. Kitts and Nevis (GOSKN) is a federation composed of two islands in the Eastern Caribbean, but each island has the authority to organize its own financial structure. The federation is at major risk for corruption and money laundering, due to the high volume of narcotics-trafficking activity through and around the islands and the presence of known traffickers on the islands. An inadequately regulated economic citizenship program adds to the problem.

Most of the offshore financial activity in the federation is concentrated in Nevis, in which there is one offshore bank (a wholly owned subsidiary of a domestic bank), approximately 15,000 international business companies (IBCs), and 950 trusts. The Nevis domestic structure consists of five domestic banks, four domestic insurance companies (all of which are subsidiaries of St. Kitts companies), and two money remitters. There are also 50 trust and company service providers. In 2003 St. Kitts had four domestic banks, 120 credit unions, four domestic insurance companies, two money remitters, and 15 company service providers. There are also four trusts, one casino, and 450 exempt companies. Applicants may apply as an IBC for an Internet gaming license; however, none were issued in 2003. The GOSKN did not release statistics for 2004. St. Kitts claims to have no Internet gaming operations.

The Proceeds of Crime Act No. 16 of 2000 criminalizes money laundering for serious offenses (defined to include more than drug offenses) and imposes penalties ranging from imprisonment to monetary fines. The Act also overrides secrecy provisions that may have constituted obstacles to the access of administrative and judicial authorities to information with respect to account holders or beneficial owners. Other measures designed to remedy shortcomings in St. Kitts and Nevis' anti-money laundering regime include the Financial Services Commission Act No. 17 of 2000, the Nevis Offshore Banking (Amendment) Ordinance No. 3 of 2000, the Anti-Money Laundering Regulations No. 15 of 2001, the Companies (Amendment) Act No. 14 of 2001, the Anti-Money Laundering (Amendment) Regulations No. 36 of 2001, the Nevis Business Corporation (Amendment) Ordinance No. 3 of 2001, and the Nevis Offshore Banking (Amendment) Ordinance No. 4 of 2001.

A regional stock exchange, common to the members of the Organization of Eastern Caribbean States and supervised by a regional regulator, is located in St. Kitts. The Eastern Caribbean Central Bank has direct responsibility for regulating and supervising the offshore bank in Nevis, as it does for the entire domestic sector of St. Kitts and Nevis (SKN), and for making recommendations regarding approval of offshore bank licenses. The St. Kitts and Nevis Financial Services Commission, with regulators on both islands, regulates non-bank financial institutions for anti-money laundering compliance.

The GOSKN also issued regulations requiring financial institutions to identify their customers, to maintain a record of transactions, to report suspicious transactions, and to establish anti-money laundering training programs. The Financial Services Commission has issued guidance notes on the prevention of money laundering, pursuant to the Anti-Money Laundering Regulations. The Commission's Regulator is authorized to carry out anti-money laundering examinations. The GOSKN has separated the offshore marketing and regulatory functions. In particular, an offshore Marketing and Development Department, separate from the Financial Services Commission, was established in April 2001. Legislation requires certain identifying information to be maintained about bearer

certificates, including the name and address of the bearer of the certificate, as well as its beneficial owner. In addition to these measures, Nevis issued regulations aimed at facilitating the identification of beneficial owners of corporations and corporate shareholders.

The Financial Intelligence Unit Act No. 15 of 2000 authorizes the creation of the Financial Intelligence Unit (FIU). The FIU began operations in 2001 and has a new director, deputy director, and four police officers. The FIU receives, collects, and investigates suspicious activity reports (SARs). The FIU is also charged with liaising with foreign jurisdictions. By November 2003, the FIU had received 77 SARs. No figures were released for 2004. During its first two years of operation the FIU received over 100 SARs and froze over \$1.6 million.

Financial Services (Exchange of Information) Regulations were promulgated in 2002. These regulations define the parameters for the exchange of information between domestic regulatory agencies and foreign regulatory agencies. Financial services officials in SKN have been seeking to educate relevant stakeholders as to their responsibilities related to anti-money laundering, using radio, television, newspapers, and seminars. The GOSKN encouraged the founding of an association of compliance officers within relevant financial institutions, and provided training in anti-money laundering to government financial services personnel. In 2003, the Nevis island administration announced plans to strengthen regulatory oversight of service providers.

St. Kitts and Nevis enacted the Anti-Terrorism Act No. 21, effective November 27, 2002. Sections 12 and 15 of the Act criminalize terrorist financing. The Act implements various UN Conventions against terrorism. The GOSKN has some existing controls that apply to alternative remittance systems, but has undertaken no initiatives that apply directly to the potential terrorist misuse of charitable and nonprofit entities. St. Kitts and Nevis circulates lists of terrorists and terrorist entities to all financial institutions. To date, no accounts associated with terrorists or terrorist entities have been found in SKN.

A mutual legal assistance treaty between SVN and the United States entered into force in early 2000. St. Kitts and Nevis is a member of the Caribbean Financial Action Task Force (CFATF) and the Organization of American States Inter-American Drug Abuse Control Commission Experts Group to Control Money Laundering (OAS/CICAD). St. Kitts and Nevis is a party to the 1988 UN Drug Convention and the UN International Convention for the Suppression of the Financing of Terrorism, and on May 21, 2004, ratified the UN Convention against Transnational Organized Crime.

The Government of St. Kitts and Nevis continues to be vulnerable to money laundering and other financial crimes. St. Kitts and Nevis should continue to devote sufficient resources to effectively implement its anti-money laundering regime. Specifically, St. Kitts and Nevis should determine the number of Internet gaming sites present on the islands. Oversight of these entities is crucial, as they are vulnerable to abuse by criminal and terrorist groups. Additionally, St. Kitts and Nevis should curtail its economic citizenship program.

St. Lucia

St. Lucia has developed an offshore financial service center that could potentially make the island more vulnerable to money laundering and other financial crimes.

Currently, St. Lucia has five offshore banks, 1,438 international business companies, 33 international trusts, 17 international insurance companies, two money remitters, three mutual fund administrators, 9 registered agents and 3 registered trustees (service providers) and six domestic banks. St. Lucia has a free trade zone. The Government of St. Lucia (GOSL) also is considering the establishment of gaming enterprises.

The 1993 Proceeds of Crime Act criminalizes money laundering with respect to narcotics. The Proceeds of Crime Act also provides for a voluntary system of reporting account information to the

police or prosecutor when such information may be relevant to an investigation or prosecution. In addition, the Act requires financial institutions to retain information on new accounts and transactions for seven years. In September 2003, legislation was adopted that extends anti-money laundering compliance requirements to credit unions, money remitters and pawnbrokers, as well as strengthens criminal penalties for money laundering.

Many of the 1993 Proceeds of Crime Act provisions are superseded by the 1999 Money Laundering (Prevention) Act (ML Prevention Act), which criminalizes the laundering of proceeds with respect to 15 prescribed offenses, including narcotics-trafficking, corruption, fraud, terrorism, gambling and robbery. The ML Prevention Act mandates suspicious transaction reporting requirements and imposes record keeping requirements. In addition, the ML Prevention Act imposes a duty on financial institutions to take “reasonable measures” to establish the identity of customers, and requires accounts to be maintained in the true name of the holder. It also requires an institution to take reasonable measures to identify the underlying beneficial owner when an agent, trustee or nominee operates an account. These obligations apply to domestic and offshore financial institutions, including credit unions, trust companies, and insurance companies. In April 2000, the Financial Services Supervision Unit issued detailed guidance notes, entitled “Minimum Due Diligence Checks, to be conducted by Registered Agents and Trustees.”

Pursuant to the ML Prevention Act, the Money Laundering (Prevention) Authority (the Authority) was established in early 2000. The Authority consists of five persons “who have sound knowledge of the law, banking or finance.” The Authority’s functions include receipt of suspicious transaction reports, subsequent investigation of the transactions, dissemination of information within (e.g., to the Director of Public Prosecutions) or outside of St. Lucia, and monitoring of compliance with the law. The ML Prevention Act imposes a duty on the Authority to cooperate with competent foreign authorities. Assistance includes the provision of documents, testimony, conduct of examinations, execution of search and seizure orders, and the provision of information and evidentiary items. The Authority has a number of regulatory powers, including the right to enter the premises of a financial institution during normal working hours to inspect transaction records or copy relevant documentation, to issue guidelines to financial institutions, and to instruct a financial institution to facilitate an investigation by the Authority.

In 1999, the GOSL also enacted a comprehensive inventory of offshore legislation, consisting of the International Business Companies (IBC) Act, the Registered Agent and Trustee Licensing Act, the International Trusts Act, the International Insurance Act, the Mutual Funds Act and the International Banks Act. An IBC may be incorporated under the IBC Act. Only a person licensed under the Registered Agent and Trustee Licensing Act as a licensee may apply to the Registrar of IBCs to incorporate and register a company as an IBC. The registration process involves submission of the memorandum and articles of the company by the registered agent, payment of the prescribed fee and the Registrar’s determination of compliance with the requirements of the IBC Act. IBCs can be registered online through the GOSL’s web page. IBCs intending to engage in banking, insurance or mutual funds business may not be registered without the approval of the Minister responsible for international financial services. An IBC may be struck off the register on the grounds of carrying on business against the public interest.

The Financial Intelligence Authority Act No. 17 of 2002 authorizes the establishment of a Financial Intelligence Unit (FIU) for St. Lucia, which became operational in October 2003. Some functions of the Authority have been transferred to the new FIU. The FIU is able to compel the production of information necessary to investigate possible offenses under the 1993 Proceeds of Crime Act and the ML Prevention Act. Failure to provide information to the FIU is a crime, punishable by a fine or up to ten years imprisonment. The Financial Intelligence Authority Act permits the sharing of information obtained by the FIU with foreign FIUs. The Caribbean Anti-Money Laundering Program (CALP) has trained St. Lucia’s FIU personnel. In September 2003, legislation was adopted merging the Authority

with the FIU. In December 2004, the FIU received 25 suspicious transaction reports. There have been no money laundering convictions to date in St. Lucia. However, there is a money laundering case pending.

The GOSL established the Committee on Financial Services in 2001. The Committee, which meets monthly, is designed to safeguard St. Lucia's financial services sector. The Committee is composed of the Minister of Finance, the Attorney General, the Solicitor General, the Director of Public Prosecutions, the Director of Financial Services, the Registrar of Business Companies, the Commissioner of Police, the Deputy Permanent Secretary of the Ministry of Commerce, the police officer in charge of the Special Branch, the Comptroller of Inland Revenue and others. The GOSL announced in 2003 its intention to form an integrated regulatory unit to supervise the onshore and offshore financial institutions the GOSL currently regulates. The Eastern Caribbean Central Bank regulates St. Lucia's domestic banking sector.

Counterterrorism and counterterrorist financing legislation is pending before the St. Lucia Parliament. In 2002, St. Lucia signed the Inter-American Convention Against Terrorism, which includes counterterrorist financing provisions. St. Lucia circulates lists of terrorists and terrorist entities to all financial institutions. To date, no accounts associated with terrorists or terrorist entities have been found in St. Lucia. The GOSL has not taken any specific initiatives focused on the misuse of charitable and nonprofit entities.

As a member of the Caribbean Financial Action Task Force (CFATF), St. Lucia underwent a First Round Mutual Evaluation immediately prior to the establishment of its offshore sector. St. Lucia underwent its Second Round evaluation in September 2003. St. Lucia is a member of the OAS Inter-American Drug Abuse Control Commission (OAS/CICAD) Experts Group to Control Money Laundering. In February 2000, St. Lucia and the United States brought into force a Mutual Legal Assistance Treaty. St. Lucia also has a Tax Information Exchange Agreement with the United States. The GOSL has been cooperative with the USG in financial crime investigations. St. Lucia is a party to the 1988 UN Drug Convention and, on September 26, 2001, signed, but has not yet ratified, the UN Convention against Transnational Organized Crime. The GOSL has not signed the UN International Convention for the Suppression of the Financing of Terrorism.

The Government of St. Lucia should become a party to the UN International Convention for the Suppression of the Financing of Terrorism and adopt counterterrorism financing legislation. St. Lucia should continue to enhance and implement its money laundering legislation and programs.

St. Vincent and the Grenadines

St. Vincent and the Grenadines remains vulnerable to money laundering, other financial crimes, and the facilitation of terrorist financing, as a result of the rapid expansion and inadequate regulation of its offshore sector. The offshore sector includes 11 offshore banks, 6,276 international business corporations, 11 offshore insurance companies and 153 international trusts. The domestic sector comprises two commercial banks, a development bank, two savings and loan banks, a building society, 13 insurance companies, 10 credit unions, and two money remitters. There are no free trade zones in St. Vincent and the Grenadines (SVG) nor have any Internet gaming licenses been issued.

The Eastern Caribbean Central Bank (ECCB) supervises SVG's four domestic banks. Beginning in October 2001 with an administrative agreement, and finalized in the International Banks (Amendment) Act No. 30 of 2002, the Government of St. Vincent and the Grenadines (GOSVG) gave the ECCB increasing authority to review and make recommendations regarding approval of offshore bank license applications, and to directly supervise the offshore banks in cooperation with the GOSVG's Offshore Finance Authority (OFA). The agreement includes provisions for joint on-site inspections to evaluate the financial soundness and anti-money laundering programs of offshore

banks. The OFA alone continues to supervise and regulate the other offshore sector entities; however, its staff exercises only rudimentary controls over these institutions. The GOSVG has strengthened the structure and staffing of the OFA by appointing five new members to the OFA board. This brings the total to 12 staffers to regulate offshore insurance and mutual funds.

In June 2003, the Financial Action Task Force (FATF) recognized that the GOSVG, through enactment and implementation of appropriate legal reforms, had sufficiently addressed deficiencies identified by the FATF in 2000, and removed it from the list of Non-Cooperative Countries or Territories (NCCT). With SVG's removal from the NCCT list, the U.S. Treasury's Financial Crimes Enforcement Network (FinCEN) lifted its advisory, which had instructed all U.S. financial institutions to "give enhanced scrutiny" to all transactions involving St. Vincent and the Grenadines. The FATF encouraged the GOSVG to consider tightening provisions relating to the granting of exemptions from customer identification requirements.

Since July 2000, the GOSVG has passed substantial legislation, primarily the International Banks (Amendment) Act No. 7 of 2000 that deals with the authorization and regulation requirements for offshore banks as well as with the rules regarding the transfer of shares and beneficial interest. The GOSVG also enacted the International Banks (Amendment) Act of October 2000, which enables the Offshore Finance Inspector to have access to the name or title of a customer account and any other confidential information about the customer that is in the possession of a licensee. The GOSVG prepared a further amendment to the International Banks Act with a view to improving licensing procedures and better regulating the offshore banking sector.

The GOSVG enacted the Proceeds of Crime and Money Laundering (Prevention) Act in December 2001 and the Proceeds of Crime (Money Laundering) Regulations in January 2002. Subsequent amendments further strengthen provisions of the Act and the Regulations. Among other measures, the Act criminalizes money laundering and imposes on financial institutions and regulated businesses a requirement to report suspicious transactions likely to be related to money laundering or the proceeds of crime. The related regulations establish mandatory record keeping rules and limited customer identification/verification requirements.

The GOSVG enacted the International Business Companies Amendment Act No. 26 of 2002, which became effective on May 27, 2002, to immobilize and register bearer shares. The GOSVG also revoked the Confidentiality Act and passed the Exchange of Information Act No. 29 of 2002 to authorize and facilitate the exchange of information, particularly among regulatory bodies. In April 2001, the GOSVG revoked its economic citizenship program, which provided the legal basis to sell citizenship and passports, although there were no reports of passports having been issued under the program.

The Financial Intelligence Unit Act No. 38 of 2001 (FIU Act) establishes the Financial Intelligence Unit (FIU) that began operation in May 2002. The FIU Act allows for the exchange of information with foreign FIUs. An amendment to the FIU Act permits the sharing of information even at the investigative or intelligence stage. The FIU has a staff of 14 and became a member of the Egmont Group in June 2003. As of October 2004, the FIU had received 88 suspicious activity reports for the year and almost 400 since its inception. In November 2004, the FIU began an anti-money laundering /counterterrorist finance training initiative at the financial institutions.

There have been no money laundering convictions, but the GOSVG has frozen approximately \$1.5 million and confiscated approximately \$40,000. Officials also cooperated with a U.S. investigation of a major suspected money launderer in 2002. In 2003, the GOSVG reintroduced a customs declaration form to be completed by incoming travelers. Incoming travelers are required to declare currency over approximately \$3,800.

The GOSVG enacted the United Nations Terrorism Measures Act No. 34, effective August 2, 2002. Sections 3 and 4 of the Act criminalize terrorist financing. The GOSVG has not undertaken any specific initiatives focused on the misuse of charitable and nonprofit entities. The GOSVG circulates lists of terrorists and terrorist entities to all financial institutions in SVG. To date, no accounts associated with terrorists have been found.

The GOSVG is a member of the Caribbean Financial Action Task Force, and underwent its Second Round mutual evaluation in November 2002. In addition, the GOSVG is a member of the Organization of American States Inter-American Drug Abuse Control Commission Experts Group to Control Money Laundering (OAS/CICAD). The GOSVG is a party to the 1988 UN Drug Convention and acceded to the Inter-American Convention against Corruption in 2001. The GOSVG signed, but has not yet ratified, the UN Convention against Transnational Organized Crime. The GOSVG is a party to the UN International Convention for the Suppression of the Financing of Terrorism and is deemed to be partially compliant with its requirements. An updated extradition treaty and a Mutual Legal Assistance Treaty between the United States and the GOSVG entered into force in September 1999. The FIU executes the Mutual Legal Assistance Treaty requests.

The Government of St. Vincent and the Grenadines should address all remaining concerns raised by the international community in regard to its anti-money laundering regime. These include the areas of customer identification, money remitters, outstanding bearer shares, and money laundering prosecutions. St. Vincent and the Grenadines should continue to provide training to its regulatory, law enforcement, and Financial Intelligence Unit personnel in money laundering operations and investigations. St. Vincent and the Grenadines also should ensure that it properly supervises the offshore sector. St. Vincent and the Grenadines should pass counterterrorist financing legislation that will provide the authority to identify, freeze and seize terrorist assets.

Suriname

Suriname is not a regional financial center. Narcotics-related money laundering occurs primarily through unregulated private sector activities, specifically casinos, gold mining and car dealerships. Narcotics-related money laundering is closely linked to transnational criminal activity related to the transshipment of Colombian cocaine and is believed to occur through both the non-banking financial system (i.e., money exchange businesses or cambios) and through a variety of other means including, but not limited to, the sale of gold purchased with illicit money and the manipulation of commercial and state-controlled bank accounts. Both local drug-trafficking organizations and organized crime are believed to control the money laundering proceeds. Suriname does not have an offshore sector nor free trade zones.

Although Suriname's overall anti-money laundering regime still remains weak, it made significant progress in 2004. A package of anti-money laundering legislation passed in 2002 by the Government of Suriname (GOS) is based on recommendations made by the Caribbean Financial Action Task Force (CFATF). This legislation addresses multiple issues including (a) criminalizing money laundering, (b) establishing a Financial Intelligence Unit (FIU) to track and report on unusual and suspicious financial transactions, and (c) requiring financial service providers to store information on clients for seven years and to confirm the identities of clients, individual or corporate, before completing requested financial services. The legislation includes a due diligence section making individual bankers responsible if their institution is laundering money, and ensures the protection of bankers and others with respect to their cooperation with law enforcement officials. The law, "Reporting of Unusual Transactions," enacted in September 2002, entered into force in March 2003. This law requires financial institutions, other intermediaries and natural legal persons who conduct financial services to report suspicious financial transactions to the FIU.

In addition, there is an amendment to the criminal code allowing authorities to confiscate illegally obtained proceeds and assets obtained partly or completely through criminal offenses. There are no provisions for civil forfeiture, and there is no legal mechanism that designates the proceeds gained by the sale of forfeited goods to be used directly for law enforcement efforts.

The Central Bank issued guidelines for the prevention of money laundering in 1996 that contain a definition of a suspicious transaction as any transaction that deviates from the usual account and customer activities and that are not “normal” daily banking business. These guidelines are not mandatory.

The FIU opened an office in early 2003, and personnel received extensive training in 2004. The FIU, which falls under the auspices of the Attorney General’s office, is tasked with identifying, recording and reporting the identity of customers engaging in suspicious financial transactions. After an initial rough start, when the head of the FIU resigned effective January 2004 after less than six months in office, the FIU is making progress under a new director.

Suriname’s financial regime was challenged in early 2004 by a currency change which dropped three zeros from the currency and changed the name from the Surinamese Guilder to the Surinamese Dollar. Anticipating problems, the Central Bank required that suspicious transactions be reported/investigated. The FIU, however, did not detect any suspicious transactions from commercial banks related to the exploitation of the change in currency. The FIU, however, did not receive information from currency exchange cambios.

Suriname’s money laundering regime was further enhanced in 2004 with the establishment of a Financial Investigation Team (FOT) within the Attorney General’s office. The FOT is responsible for investigating suspicious transactions discovered by the FIU. The results of the investigation are then sent to the police and prosecutor’s office to be used as prosecutorial evidence. In November a Surinamese judge convicted a money laundering suspect for the first time in a landmark court case, marking the first successful implementation of Suriname’s 2002 anti-money laundering law. Both the FIU and FOT were instrumental in providing sufficient evidence to ensure a conviction. The suspect, whose country of origin is unknown, received a seven-year prison sentence for intentional money laundering and attempting to export a small amount of cocaine.

Resource constraints and in particular a severe shortage of judges will be a limiting factor in expanding this judicial success. A new class of nine judges, in training, will partially redress the problem, but they will not complete training for another four to five years.

The GOS has not criminalized terrorist financing. However, GOS officials are working with the Caribbean Anti-Money Laundering Program to draft legislation requiring transparency in the financial sector that would contain specific provisions for terrorist financing.

The GOS has an agreement with the Netherlands on extradition and legal assistance with regard to criminal matters, but extradition of Surinamese nationals is prohibited. Suriname also has bilateral treaties and cooperation agreements with the United States, on narcotics-trafficking, and with Colombia, France and Netherlands Antilles on transnational organized crime. Suriname is a member of the CFATF and the Organization of American States Inter-American Drug Abuse Control Commission Experts Group to Control Money Laundering (OAS/CICAD). Suriname is party to the 1988 UN Drug Convention and signed the Inter American Convention against Terrorism in June 2002, but has not yet ratified it.

The Government of Suriname should continue its efforts to fully implement its anti-money laundering legislation, particularly through expansion of the Financial Intelligence Unit (FIU) and Financial Investigation Team (FOT) and further training of personnel. Suriname should criminalize terrorist financing and become a party to the UN International Convention for the Suppression of the Financing of Terrorism.

Swaziland

Swaziland is a growing regional financial center. International narcotics-trafficking, primarily in marijuana, continues to grow in Swaziland. The country's proximity to South Africa, lack of effective counternarcotics legislation, limited enforcement resources, relatively open society and developed economic infrastructure make it attractive for trafficking organizations and increase the risk for money laundering.

The Central Bank of Swaziland and the Ministry of Finance are currently drafting an amendment to the Money laundering Act of 2001 (the Act). Although the Act criminalizes money laundering for specified predicate offenses, including narcotics-trafficking, kidnapping, counterfeiting, extortion, fraud, and arms trafficking, it does not adequately address processes and procedures for the police to follow when money laundering is suspected. The penalty for money laundering is six years imprisonment, a fine amounting to roughly \$3,500, or both. The Act establishes a currency reporting requirement, requires banks to report suspicious transactions to the Central Bank, and provides conditions when assets may be frozen and forfeited. The Act also requires banks to retain records for five years, to improve the ability to trace suspicious transactions and patterns.

On November 16, 2004, the Central Bank of Swaziland and the Bankers Association of Swaziland issued a general statement on anti-money laundering regarding the importance of positive identification in banking. The statement says that Swaziland's financial institutions will not conduct transactions with any customers failing to furnish proof of their identity and that service shall not be provided when there is any reason to suspect that money laundering may be involved. By June 30, 2005, all existing customers of Swaziland's financial institutions will need to present current information to establish their actual identity.

To assist the banking community with tracking suspicious transactions, the Central Bank distributed anti-money laundering guidelines to all banks in late 2002. As of December 2004, the Central Bank received fewer than 10 reports of suspicious transactions. The police bear responsibility for investigating such cases, but no investigations have taken place—one reason the Central Bank and the Ministry of Finance are amending the 2001 Act. The police also would be responsible for seizing any assets related to money laundering, but no seizures have taken place under the Act.

Members of the Royal Swaziland Police Service (RSPS) have noted that they lack the ability to understand and monitor small businesses. The RSPS has little liaison or cooperation with those ministries of the Government of the Kingdom of Swaziland (GKOS) involved with regulating businesses and business owners. Their expressed concerns in this arena include a perceived escalation in the number of foreign business owners throughout Swaziland. While the RSPS is becoming aware that businesses, such as used car lots, cellular and electronic shops, and sundries stores, are commonly used throughout the world as fronts and/or laundering mechanisms, the RSPS lacks the inter-departmental infrastructure and agreements to address this growing concern. Simply stated, the small business sector in Swaziland has been traditionally overlooked as a very real potential money laundering and support element for drug traffickers and terrorist groups. More inter-departmental and inter-ministerial cooperation is needed in order to properly assess and address this vulnerability.

The Act allows for providing assistance to foreign countries that have entered into mutual assistance treaties with the GKOS. An amendment to the Act will allow for Swaziland to comply with regional agreements and international conventions.

Swaziland is party to the 1988 UN Drug Convention and the UN International Convention for the Suppression of the Financing of Terrorism. The GKOS has signed, but not yet ratified, the UN Convention against Transnational Organized Crime. Swaziland is a member of the Eastern and Southern African Anti-Money Laundering Group (ESAAMLG), a FATF-style regional body. Swaziland served as President of ESAAMLG from August 2002 to August 2003.

The Government of the Kingdom of the Swaziland (GKOS) should criminalize terrorist financing. Swaziland should also establish an anti-money laundering regime consistent with international standards, including a financial intelligence unit capable of sharing information with foreign law enforcement and regulatory officials. The Kingdom of the Swaziland should provide the appropriate resources and training to its law enforcement personnel to allow them to adequately perform their duties.

Sweden

Sweden does not appear to have a significant money laundering problem. Swedish anti-money laundering legislation includes all serious crimes, and the money laundering controls allow Sweden to fulfill the recommendations of the Hague Forfeiture Convention. The 2004 Transparency International Corruption Perception Index lists Sweden as the sixth (perceived) least corrupt country. Sweden relies on transparency of institutions to keep corruption at bay; however the focus on corruption has been increasing over the past few years. In January of 2004, two Swedish consultants were convicted of bribing foreign public officials at the World Bank. The court's decision has been appealed, but this decision marks the first bribery case of a foreign public official ruled on in a Swedish court.

Among the Nordic countries, Sweden has the highest number of money laundering reports. One reason is that Sweden, in comparison with other Nordic countries, has more currency exchange offices, which appear to be the preferred mechanism for money laundering. Other financial institutions, such as postal giro companies, are also used to launder money. A new trend identified by the Financial Police concerns large cash withdrawals by entrepreneurs on the illegal labor market, especially in the construction and cleaning business sectors. The money primarily emanates from narcotics, tax fraud, economic crimes and robbery.

Swedish law requires banks, credit market companies, securities businesses, exchange offices, remittance dealers, insurance brokers, life insurance companies, and casinos to report suspicious activity to the police Financial Intelligence Unit (FIU). The law also requires financial institutions, insurance companies, securities firms, currency exchange houses, providers of electronic money, and money transfer companies to verify customer identification, inquire into a transaction's background, and verify identities for each transaction, particularly in the case of new customers and involving amounts above SEK 110,000 (approximately \$16,300). Banks and financial institutions are obliged to observe and report to the police transactions that are suspected to include funds that will be used to finance serious crimes. Swedish law does not allow individual officers of covered institutions to be penalized for noncompliance; however, the Swedish Supervisory Authority has the ability to sanction noncompliant institutions.

Sweden implemented new regulations to further comply with the 1991 European Union (EU) Directive on Money Laundering approved in 2001. According to the new regulations the FIU is entitled to demand customer information from accounting firms; law firms; tax counselors; casinos; real estate brokers; dealers in antiques, jewelry, and art; companies buying and selling new and used vehicles; and firms dealing with gambling and the sale of lottery tickets. The new regulation came into effect on January 1, 2005.

Sweden's FIU received 4,155 suspicious transaction reports in 2001, a 60 percent increase from 2000 due to the implementation of the EU's Anti-Money Laundering Directive through Swedish law, which requires bureaux de change to report suspicious activity. The FIU received 8,008 suspicious transaction reports in 2002, 10,000 reports in 2003, and 9,929 reports in 2004. The Financial Police believe that increase in suspicious activity is attributed to Baltic countries' entrance into the EU.

The number of prosecutions in Sweden has been relatively low. In 2003, only four cases were brought to trial and resulted in conviction. During 2004, the number was similar. Suspected money laundering

in Sweden requires a full investigation of the initial crimes to fully establish the origin of the money. This has proven to be a difficult and resource-consuming effort, which results in fewer prosecutions. The law on money laundering stipulates six months to two years in prison. The average time in prison for perpetrators convicted of money laundering is around one year.

Sweden ratified the International Convention for the Suppression of the Financing of Terrorism on June 6, 2002, and on July 1, 2002, a new act on penalties for financing serious crimes entered into force. According to the act, it is a punishable crime to collect, provide, or receive money or other funds with the intention that they be used, or with the knowledge that they are to be used, to commit actions that constitute offenses under the international counterterrorism conventions. Attempts to commit such crimes are also punishable. Sweden has had two cases under this law but neither went to trial. One reason was that the actual amount involved was too low to prosecute. Another reason related to difficulties in prosecuting under the law. The prosecutor has to be able to prove intent to fund not only a particular organization, but also the intent to fund a terrorist activity. Three Swedish citizens were put on the terrorist list by the U.S., and then approved by the UN and later also by the EU, since they had connections to the bank al-Barakhaat. Two have been taken off the list but the third, Ahmed Yusuf, is still on the list.

Swedish law also provides for the seizure of assets derived from drug-related activity, however, it is not possible to stop a transaction based solely on suspicions of unlawful activity. Law enforcement officials may only seize the assets of an organization or individual that is the subject of an ongoing criminal investigation. Freezing of assets based on UN Security Council Resolutions is carried out by implementation of EC law. UN and international sanctions can be imposed through the 1995 Sanctions Act, however, the Swedish government does not have the authority to identify potential sources of terrorist financing and to disrupt them on its own without a decision by the EU or UN.

Sweden has endorsed the Basel Committee's "Core Principles for Effective Banking Supervision." Sweden is a member of the Financial Action Task Force (FATF), serving as the Chair for 2004, and the Council of Europe. Its FIU is a member of the Egmont Group. Sweden is a party to the 1988 UN Drug Convention and on April 30, 2004, ratified the UN Convention against Transnational Organized Crime. It is also a party to the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime. Sweden has signed, but not yet ratified, the UN Convention against Corruption.

The Government of Sweden should continue to expand its anti-money laundering/counterterrorist financing regime. Sweden should adopt reporting requirements for the cross-border transportation of currency or monetary instruments. Sweden should ensure that legislation is enacted to extend suspicious transaction reporting requirements to intermediaries, such as attorneys, accountants, and financial advisors and to ease the difficulties proving and prosecuting the crime of money laundering.

Switzerland

Switzerland is a major international financial center, with some 370 banks maintaining headquarters there. In addition, approximately 12,000 to 15,000 fiduciaries function as non-bank financial institutions. Narcotics-related money laundering proceeds are largely controlled by foreign drug-trafficking organizations. Authorities suspect that Switzerland is vulnerable at the layering and integration stages. Switzerland's central geographic location; relative political, social, and monetary stability; wide range and sophistication of available financial services; and long tradition of bank secrecy are all factors that make Switzerland a major international financial center. These same factors make Switzerland attractive to potential money launderers. However, Swiss authorities are aware of this and are sensitive to the size of the Swiss private banking industry relative to the size of the economy, and waive bank secrecy rules in the prosecution of money laundering and other criminal

cases. Deposits in Swiss institutions represent an estimated \$2.9 trillion, with foreigners accounting for over half of the input into the financial system; this amount is 12 times the GDP of the country.

Reporting indicates that criminals attempt to launder proceeds in Switzerland from a wide range of illegal activities conducted worldwide, particularly narcotics-trafficking and corruption. Switzerland's extensive market in fine arts is also used to launder money. Although both Swiss and foreign individuals or entities conduct money laundering activities in Switzerland, narcotics-related money laundering operations are largely controlled by foreign narcotics-trafficking organizations, often from the Balkans or Eastern Europe. For example, some of the money generated by Albanian narcotics-trafficking rings in Switzerland goes to armed Albanian extremists in the Balkans.

Switzerland ranks fifth in the highly profitable artwork trading market. It exported \$877 million worth of artwork worldwide in 2003, and another \$786 million from January to October 2004. Generating about \$951 billion a year in turnover, the Swiss market offers lucrative opportunities for organized crime to transfer stolen art or to use art to launder criminal funds. The United States is by far Switzerland's most important trading partner, and purchased \$442 million of "Swiss" works of art in 2003, and \$332 million from January to October 2004. Because art works, which may have been smuggled into Switzerland, can legally be re-exported as genuine Swiss artwork after five years, the Swiss art market is especially attractive for unethical transactions.

Switzerland has duty free zones. The Customs authorities supervise the admission into and the removal from customs warehouses. Warehoused goods may only undergo manipulations necessary for their maintenance, or such as repacking, splitting, sorting, mixing, sampling and removal of the external packaging. Any further manipulation is subject to authorization. Goods may not be manufactured in the duty free zones. Swiss law has full force in the duty free zones, for example, export laws on strategic goods, war material, and medicinal products, as well as laws relating to anti-money laundering prohibitions, etc. all apply. In view of the fact that Customs may and frequently does enter any customs warehouse area they choose, they believe they would be aware of the nature of any "value added" activity taking place in duty free zones.

In December 2001, the Swiss Federal Council (Cabinet) agreed to consider expanding the scope of the 1998 federal anti-money laundering (AML) law to include art and jewelry dealers. The revised AML bill will be discussed in January 2005 in the context of the Financial Action Task Force (FATF) Forty Recommendations. In the meantime, AML regulations have been extended to cover art dealers to the extent that they are acting specifically as "financial intermediaries" between a seller and a buyer.

Additionally, on June 17, 2003, the parliament adopted a bill on the transfer of cultural goods, which regulates the return of looted cultural objects. The new legislation, which is expected to come into force by April 2005, extends the timeframe from the current five years to meet the UN International Standards of 30 years, as defined in the 1970 UNESCO Convention. It also will enable police forces to search bonded warehouses and art galleries.

Money laundering is a criminal offense. Switzerland has significant AML legislation in place, making banks and other financial intermediaries subject to strict know your customer and reporting requirements. Switzerland has also implemented legislation for identifying, tracing, freezing, seizing, and forfeiting narcotics-related assets. Legislation that aligns the Swiss supervisory arrangements with the Basel Committee's "Core Principles for Effective Banking Supervision" is contained in the Swiss Money Laundering Act.

The current money laundering laws and regulations have been extended to non-bank financial institutions. Consequently, all non-bank financial intermediaries are required to either join an accredited self-regulatory organization (SRO), or come under the direct supervision of the Money Laundering Control Authority (MLCA) of the Federal Finance Department. The MLCA was formed in 1998 to oversee anti-money laundering laws in the non-banking sector. The SROs must be

independent of the management of the intermediaries they supervise and must enforce compliance with due diligence obligations. Noncompliance can result in a fine or a revoked license. About 7,000 fiduciaries operate in this previously unregulated arena. The MLCA has shown willingness to take action against financial intermediaries: in 2003, the MLCA ordered the official liquidation of five financial intermediaries and the removal from the commercial register of two others, because they failed to comply with AML regulations. Reporting regulations on international money transactions, applicable to money transmitters in particular, have been tightened as well.

In December 2002, the new money laundering ordinances of the Swiss Federal Banking Commission were adopted; these became effective on July 1, 2003. These new regulations, aimed at the banking and securities industries, codify a risk-based approach to suspicious transaction and client identification and install a global know your customer (KYC) risk management program for all banks, including those with branches and subsidiaries abroad. In the case of higher-risk business relationships, additional investigation by the financial intermediary is required. The changes also require increased due diligence in the cases of politically exposed persons by ensuring that decisions to commence relationships with such persons be undertaken by the senior executive body of a firm. Additionally, the ordinance mandates computer-based transaction monitoring systems for all but the smallest financial intermediaries. All cross-border wire transfers must contain details about the funds remitters. The provisions of the ordinance also address Swiss supervision of subsidiaries belonging to a consolidated group of financial intermediaries (for which information channels must be established). All provisions apply to correspondent banking relationships as well. Shell banks—banks with no physical presence at their place of incorporation—may not maintain any correspondent bank accounts.

In October 2003, the Swiss Cabinet mandated an interdepartmental working group led by the Ministry of Finance to review Switzerland's compliance with the revised FATF Forty Recommendations. In December 2003, the MLCA effected a new money laundering ordinance which implements the revised Recommendations. The FATF is expected to review implementation by early 2005.

In July 2003, the government-sponsored Zimmerli Commission, charged by the Finance Ministry with examining reform of finance market regulators, presented 46 recommendations. Most notably, the Committee recommended merging the Federal Banking Commission and the Federal Office for Private Insurance, or the banking and insurance sectors, into a single, integrated financial market supervision body, to be known as FINMA. In November 2004, the Cabinet instructed the Finance Ministry to draft a parliamentary bill providing for the establishment of the FINMA. Under the Cabinet's proposal, the MLCA would also be included within the FINMA. The draft bill is scheduled for submission to Parliament by the end of 2005. The proposed changes are extremely far-reaching

In June 2004, the Cabinet submitted draft legislation to Parliament on auditing reform. The draft revision more tightly delineates the duties of auditing firms of large corporations and strengthens provisions on auditors' independence to prevent conflicts of interest. The draft legislation also provides for a public monitoring body of auditors to ensure that only sufficiently qualified experts perform auditing services.

Switzerland's banking industry offers the same account services for both residents and nonresidents. These can be opened through various intermediaries who advertise their services. As part of Switzerland's international financial services, banks offer certain well-regulated offshore services, including permitting nonresidents to form offshore companies to conduct business, which can be used for tax reduction purposes.

The Swiss Commercial Law does not recognize any offshore mechanism per se and its provisions apply equally to residents and nonresidents. The stock company and the limited liability company are two standard forms of incorporation offered by Swiss Commercial Law. The financial intermediary is required to verify the identity of the beneficial owner of the stock company and must also be informed

of any change regarding the beneficial owner. Bearer shares may be issued by stock companies but not by limited liability companies.

Swiss casino operators have joined counterparts from Greece, Austria, Finland, Spain, Portugal, and the United Kingdom to form a new Casino Operators' Association. Among the stated priorities for the group are addressing anti-money laundering issues and responsible gaming practices.

The Money Laundering Reporting Office Switzerland (MROS) is Switzerland's Financial Intelligence Unit (FIU). All financial intermediaries (banks, insurers, fund managers, currency exchange houses, securities brokers, etc.) are legally obliged to establish customer identity when forming a business relationship. They also must notify the MROS, or a government authorized supervisory body, if a transaction appears suspicious. In March 2004, MROS released figures for the previous year: In 2003, money laundering cases rose 32 percent over 2002 figures, with more than 860 reports of suspicious transactions (STRs) worth approximately \$460 million. As in 2002, the majority of reports came from the non-banking sector, probably due to the stricter reporting regulations directed at non-banking financial intermediaries. However, while the percentage of STRs coming from banks has decreased, the actual number of STRs from the banks has continued to increase.

The Government of Switzerland has made it a key foreign policy goal to correct the country's image as a haven for illicit banking services. The Swiss believe that their system of self-regulation, which incorporates a "culture of cooperation" between regulators and banks, equals or exceeds that of other countries. The primary interest of the Swiss system is to avert bad risks by countering them at the account-opening phase, where due diligence and KYC address the issues, rather than relying on an early-warning system on all filed transactions. The Convention on Due Diligence is very comprehensive, requiring the identification of the client and the beneficial owner, who needs to be a physical person. Because of the due diligence approach the Swiss have taken, there are fewer STRs filed than in other countries, but the ones that are filed lead to the opening of criminal investigations 75 percent of the time. In January 2003, Switzerland won a battle when the European Union backed away from demands that Switzerland scrap banking secrecy. Despite the measures that Switzerland has taken, it is likely to endure more criticism from other countries for its continued banking secrecy laws and its refusal to look upon tax evasion as a crime.

The banking community cooperates with enforcement efforts. The Oversight Commission of the Swiss Bankers Association fined Credit Suisse for inadequate due diligence in connection with a total of \$214 million deposited in the bank by former Nigerian dictator Sani Abacha. Swiss press reports put the fine at \$500,000 (SFr. 750,000 at the time), making it the largest fine ever imposed by the Commission. The recipient of the fine will be the International Red Cross Committee, a Swiss organization.

Under the 2002 Efficiency Bill, the Swiss Attorney General is vested with the power to prosecute crimes addressed by Article 340bis of the Swiss Penal Code, which also covers money laundering offenses. Formerly, the individual cantons were charged with investigating money laundering offenses on their own. Additional legislation, effective January 1, 2002, increased the effectiveness of the prosecution of organized crime, money laundering, corruption, and other white-collar crime, by increasing the personnel and financing of the criminal police section of the federal police office. The law confers on the federal police and Attorney General's office the authority to take over cases that have international dimensions, involve several cantons, or which deal with money laundering, organized crime, corruption, and white collar crime.

If financial institutions determine that assets were derived from criminal activity, the assets must be frozen immediately until a prosecutor decides on further action. Under Swiss law, suspect assets may be frozen for up to five days while a prosecutor investigates the suspicious activity. Switzerland cooperates with the United States to trace and seize assets, and has shared a large amount of funds

Money Laundering and Financial Crimes

seized with the U.S. Government (USG) and other governments. The Government of Switzerland has worked closely with the USG on numerous money laundering cases.

In addition, legislation permits “spontaneous transmittal”—allowing the Swiss investigating magistrate to signal to foreign law enforcement authorities the existence of evidence in Switzerland. The Swiss used this provision in 2001 to signal Peru that they had uncovered accounts linked to former Peruvian presidential advisor Vladimiro Montesinos. On March 31, 2003, the Swiss Federal Court rejected an appeal by Raul Salinas, brother of a former president of Mexico and main suspect in a major money laundering affair, to release millions of dollars blocked on 10 different Swiss bank accounts. In December 2004, Swiss judicial authorities handed over to Argentinean authorities banking information, in the context of criminal investigations, against former Defense Minister Oscar Camilion and former Air Force chief Juan Paulik. Camilion was forced to resign in June 1996.

During 2002, the Swiss Federal Council presented a bill to the Nationalrat, Switzerland’s lower house, that addresses a number of terrorism issues surrounding ratification of the UN terrorism conventions. This bill includes a provision on terrorist financing that introduces criminal liability for legal persons involved in terrorism financing. The Swiss House was scheduled to consider it in the first half of 2003. The amended Swiss penal code makes terrorism financing a predicate offense for money laundering. Changes in the Criminal Code in 2003 also make terrorism financing a predicate offense in money laundering, and expand the scope of application to legal persons.

The ordinances adopted in December 2002 also include new rules against terrorism financing, stating that instruments currently used to prevent money laundering are also applicable to the prevention of terrorism financing; if a financial intermediary investigates the background of an unusual or suspicious transaction, and linkages with a terrorist organization are revealed, the institution must report the matter to the FIU immediately.

Since September 11, 2001, Swiss authorities have been alerting Swiss banks and non-bank financial intermediaries to check their records and accounts against lists of persons and entities with links to terrorism. The accounts of these individuals and entities are to be reported to the Ministry of Justice as suspicious transactions. Based on the “State Security” clause of the Swiss Constitution, the authorities have ordered banks and other financial institutions to freeze assets of organizations and individuals designated by the UNSCR 1267 Sanctions Committee. In the 2003 reporting period, MROS received reports of five cases possibly linked to the funding of terrorism. The total amount of money involved was \$115,000. All the reports involved individuals and institutions appearing on the USG lists. The five reports were transmitted to the Swiss Attorney General in Berne.

Along with USG and UN lists, the Swiss Economic and Finance Ministries have drawn up their own list of approximately 44 individuals and entities connected with international terrorism or its financing. Swiss authorities have thus far blocked about 82 accounts totaling \$25 million from individuals or companies linked to Usama Bin Ladin and al-Qaida under UN resolutions. The Swiss Attorney General also separately froze 41 accounts representing about \$25 million, on the grounds that they were related to terrorism financing, but the extent to which these funds overlap with the UN lists has yet to be determined. In January 2003, the Swiss Ministry of Justice handed over banking information to U.S. authorities, following a legal assistance request issued in April 2002. The request related to a bank transfer of \$1.4 million, addressed to the Benevolence International Foundation, a Chicago-based Islamic foundation designated as a terrorist financier. The transfer originated from a Swiss bank account whose account holder was a company located in the Virgin Islands. The firm had initially lodged a complaint against this decision to the supreme Swiss federal court but was turned down in November 2002.

Switzerland has ratified the Council of Europe (COE) Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime and is a party to the UN International Convention for the Suppression of the Financing of Terrorism. Switzerland has signed, but not yet ratified, the UN

Convention against Transnational Organized Crime and the UN Convention against Corruption. To date, Switzerland has not ratified the 1988 UN Drug Convention.

Swiss authorities cooperate with counterpart bodies from other countries. Requests for cooperation with Liechtenstein, Switzerland's closest neighbor both culturally and geographically, have tripled. Switzerland has a Mutual Legal Assistance Treaty in place with the United States, and Swiss law allows authorities to furnish information to U.S. regulatory agencies, provided it is kept confidential and used for supervisory purposes. The U.S.-Swiss extradition treaty permits extradition for any unlawful act punishable by imprisonment in both countries. Switzerland is a member of the FATF, the Egmont Group and the Basel Committee on Banking Supervision.

The Government of Switzerland should extend its anti-money laundering program to include dealers in high-end goods. Switzerland can also continue to improve on its anti-money laundering regime, as it has been doing, and address deficiencies that it finds, as well as continuing to work toward full implementation of its anti-money laundering/counterterrorist financing regime.

Syria

Due to its relatively undeveloped banking sector, Syria is not a likely center for money laundering via the formal financial sector. From the time that private banks were nationalized in the early 1960s, and prior to last year, Syria's entire financial system was owned and operated by the state. However, in January 2004, private banks began operating in Syria. Currently three private banks are open for business. The existing public banks remain inefficient and highly regulated, and focus almost exclusively on financing public enterprises. Until late 2004, several foreign banks had been operating in Syrian duty-free zones without direct supervision by the Government of Syria (SARG). The SARG, however, recently began applying banking controls and regulatory oversight to these banks.

The U.S. Department of State designated Syria as a State Sponsor of Terrorism in 1979. In May 2004, the U.S. Department of the Treasury designated the Commercial Bank of Syria (CBS), along with its subsidiary, the Syrian Lebanese Commercial Bank, as a financial institution of "primary money laundering concern," pursuant to Section 311 of the USA Patriot Act. This designation remains in place, but the final rulemaking on the implementation of the special measure against CBS has not been issued, pending further discussions between the U.S. Government and the Government of Syria (SARG). In September 2004, U.S. and Syrian officials met to discuss deficiencies in SARG banking regulations. The U.S. Government later suggested remedial actions that Syria could take to conform to international banking standards, particularly those outlined in the recommendations of the Financial Action Task Force (FATF).

The Government of Syria strictly controls foreign currency flows out of the country, contributing to the use of alternative and "informal" systems of moving money or transferring value. Syrian businessmen usually depend on banks in neighboring Lebanon and Jordan to transact a full range of banking services. The private sector routinely uses foreign currency to finance imports, generally by using letters of credit from Lebanon and Europe. Due to foreign exchange controls, the private sector also has restricted access to foreign currency. Illicit proceeds from the narcotics trade may flow through Syria, but they are usually moved to Lebanon for laundering purposes. As a result, the primary money laundering vulnerability in Syria is not necessarily through financial institutions but through alternative remittance systems such as hawala, trade-based money laundering, and currency smuggling. Such money laundering methodologies are often used to finance terrorism throughout the region and elsewhere. The opening of private banks is a positive development in terms of modernization of Syria's financial sector, but at the same time it makes the banking system increasingly vulnerable to money laundering, at least until such time as the SARG completes the implementation of measures to facilitate its oversight of financial transactions.

Due to a distrust of public banks, strict currency restrictions, and displeasure with the official exchange rate, most Syrians prefer to utilize informal banking systems to transfer currency into, around, and out of Syria, sometimes by physically moving cash via Syrian bus and shipping companies with offices in the region. Relatives, friends and colleagues often provide a similar service using foreign bank accounts, particularly in Lebanon. In instances where no relative or friend is available and/or the amount to be transferred is too high, a few money changers, well known to the business community and operating with tacit SARG approval, also provide a means of depositing hard currency in overseas accounts. These mechanisms are a form of hawala.

The government-controlled banking system in Syria consists of the Central Bank of Syria and five public banks, each specializing in one aspect of economic activity: the Commercial Bank of Syria, the Agricultural Cooperative Bank, the Industrial Bank, the Real Estate Bank, and the People's Credit Bank. These banks have in the past employed a rigid interest rate structure that discourages savings deposits, particularly during periods of inflation. Until January 2004, when the first private banks opened, only the Commercial Bank of Syria was been permitted to provide commercial banking services. As the sole legal trader of foreign currencies, the Commercial Bank also effectively controlled all legal foreign trade and all foreign currency transactions.

In addition to monopolizing the exchange of foreign currencies, the SARG maintains one of the last remaining fixed, multiple exchange rate systems in the world, employing different rates depending on the nature of the transaction. There are reports that the SARG may take steps toward eliminating the multiple exchange rate system in 2005. Until it is changed, however, this inefficient system contributes to the use of alternative methods of transferring value outside the state-controlled banking system. There are reports that such transactions occur with the tacit approval, if not involvement, of SARG officials. A large percentage of Lebanon's banking services involve Syrian accounts.

In April 2001, Law No. 28 legalized private banking. That same month, Law No. 29 established rules on bank secrecy. The first private banks opened in January 2004, but the services they provide are limited under current governmental regulations. Much still needs to be done to fundamentally restructure the banking sector, particularly in terms of either suspending or amending existing regulations that prohibit the three established private banks from operating fully. The SARG continues to work on detailed regulations that will govern the operation of private banks. These private banks must have a 51 percent Syrian ownership (individual or consortium), while non-Syrian banks interested in investing in this new financial sector often finance the other 49 percent.

In September 2003, Syria passed Legislative Decree No. 59, criminalizing money laundering and creating an Anti-Money Laundering Commission. While this was an important movement in principle toward addressing vulnerabilities in the banking sector, particularly the new vulnerabilities arising from the opening of private banks, it is not yet clear what relationship the commission will have with financial institutions or whether the commission will hold effective investigative powers. In December 2004, the SARG prohibited private bank representation on the Anti-Money Laundering Commission, in order to ease conflict-of-interest concerns.

Syria is a party to the 1988 UN Drug Convention. It is also in the process of becoming a party to the UN International Convention for the Suppression of the Financing of Terrorism. It signed the UN Convention against Transnational Organized Crime (in 2000), but has not yet ratified it. Syria is a charter member of the Middle East and North Africa Financial Action Task Force (MENAFATF) that was inaugurated in Bahrain in November 2004. The MENAFATF is a FATF-style regional body. The creation of the MENAFATF is critical for pushing the region to improve the transparency and regulatory frameworks of its financial sectors.

The Government of Syria should immediately stop all support of terrorist organizations. It should continue to implement comprehensive anti-money laundering and counterterrorism finance legislation that adheres to international standards, including the creation of an independent Financial Intelligence

Unit (FIU). Syria should then take meaningful steps to enforce the law and follow-up rules and regulations governing the banking sector. Syria should ratify both the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime.

Taiwan

Taiwan's modern financial sector and its role as a hub for international trade make it attractive to money laundering. Its location astride international shipping lanes makes it vulnerable to transnational crimes such as narcotics-trafficking and smuggling. The use of alternative remittance systems or "underground banking" is a money laundering vulnerability. There is a significant volume of informal financial activity through unregulated non-bank channels. According to suspicious activity reports (SARs) filed by financial institutions on Taiwan, the predicate crimes linked to SARs include financial crimes, corruption, narcotics, and other general crimes, in that order.

Taiwan's anti-money laundering legislation is embodied in the Money Laundering Control Act (MLCA) of April 23, 1997. Its major provisions include a list of predicate offenses for money laundering, customer identification and record keeping requirements, disclosure of suspicious transactions, international cooperation, and the creation of a financial intelligence unit, the Money Laundering Prevention Center (MLPC).

The Legislative Yuan amended the MLCA in 2003 to expand the list of predicate crimes for money laundering, widen the range of institutions subject to suspicious transaction reporting, and mandate compulsory reporting of significant currency transactions of over New Taiwan (NT)\$1 million (approximately \$30,000) to the MLPC. Between August 2003, when the amended MLCA came into force, and May 31, 2004, the MLPC received over one million such reports on currency transactions—with 99 percent of them reported electronically. Also as a result of the amendments, the list of institutions subject to reporting requirements was expanded, to include casinos, automobile dealers, jewelers, boat and plane dealers, real estate brokers, credit cooperatives, consulting companies, insurance companies, and securities dealers, as well as traditional financial institutions.

The time limit for reporting cash transactions of over NT\$1 million is within five business days. Banks were also barred from informing customers that a suspicious transaction report had been filed. In addition, two new articles were added to the MLCA, granting prosecutors and judges the power to freeze assets related to suspicious transactions, and giving law enforcement more powers related to asset forfeiture and the sharing of confiscated assets. In terms of reporting requirements, financial institutions are required to identify, record, and report the identities of customers engaging in significant or suspicious transactions. There is no threshold amount specified for filing suspicious transaction reports. Reports of suspicious transactions must be submitted to the MLPC within 10 business days after the transaction took place.

Institutions are also required to maintain records necessary to reconstruct significant transactions, for an adequate amount of time. Bank secrecy laws are overridden by anti-money laundering legislation, allowing the MLPC to access all relevant financial account information. Financial institutions are held responsible if they do not report suspicious transactions. In May 2004, the Ministry of Finance also required banks to demand two types of identification and to keep copies when bank accounts are opened upon request for a third party, in order to prove the true identity of the account holder. Individual bankers can be fined NT\$200,000-1 million (\$6,000-30,000) for not following the MLCA.

All foreign financial institutions and offshore banking units follow the same regulations as domestic financial entities. Offshore banks, international businesses, and shell companies must comply with the disclosure regulations from the Central Bank, Bureau of Monetary Affairs (BOMA), and MLPC.

Money Laundering and Financial Crimes

These supervisory agencies conduct background checks on applicants for banking and business licenses. Offshore casinos and Internet gambling sites are illegal.

From January to September 2004, Taiwan investigated 505 cases of possible money laundering. Among these cases, 442 were economic crimes, seven involved government corruption, and seven were narcotics-related crimes. Total money laundering during this period amounted to NT\$1.244 billion (about \$38 million). Of the 505 cases investigated, 287 involved money laundering via bank transactions, 213 involved postal remittances and savings banks, and one case involved a credit union.

Individuals are required to report currency transported into or out of Taiwan in excess of NT\$60,000 (approximately \$1,765), \$5,000, or \$5,000 worth of foreign currency. Starting in March 2004, over 6,000 Chinese renminbi (\$725) must also be reported. When foreign currency in excess of NT\$500,000 (approximately \$14,700) is brought into or out of Taiwan, the bank customer is required to report the transfer to the Central Bank, though there is no requirement for Central Bank approval prior to the transaction. Prior approval is required, however, for exchanges between New Taiwan dollars and foreign exchange when the amount exceeds \$5 million for an individual resident and \$50 million for a corporate entity.

Starting in September 2003, the Directorate General of Customs was responsible for providing the MLPC on a monthly basis with electronic records of travelers entering and exiting the country carrying any single foreign currency amounting to NT\$1.5 million. Among the 542 cases reported between September 2003 and June 2004, the center said it had found several cases that might involve illegal underground banking activities, and these were under investigation.

The authorities on Taiwan are actively involved in countering the financing of terrorism. In 2003, a new "Counter-Terrorism Action Law" (CTAL) was drafted, although as of January 2005 it is still pending legislative approval. The new law would explicitly designate the financing of terrorism as a major crime. Under the proposed CTAL, the National Police Administration, the MJIB, and the Coast Guard would be able to seize terrorist assets even without a criminal case in Taiwan. Also, in emergency situations, law enforcement agencies would be able to freeze assets for three days without a court order.

Assets and income obtained from terrorist-related crimes could also be permanently confiscated under the CTAL, unless the assets could be identified as belonging to victims of the crimes. Taiwan officials currently have the authority to freeze and/or seize terrorist-related financial assets under the MLCA promulgated in 1996 and amended in February 2003 to cover terrorist finance activities. Under the Act, the prosecutor in a criminal case can initiate freezing assets, or without criminal charges, the freezing/seizure can be done in response to a request made under a treaty or international agreement.

The Bureau of Monetary Affairs (BOMA) has circulated to all domestic and foreign financial institutions in Taiwan the names of individuals and entities included on the UNSCR 1267 Sanctions Committee's consolidated list. Taiwan and the United States have established procedures to exchange records concerning suspicious terrorist financial activities. After receiving financial terrorist lists from the American Institute in Taiwan, BOMA conveys the list to relevant financial institutions.

Banks are required to file a report on cash remittances if the remitter/remittee is on a terrorist list. In accordance with UN Security Council Resolution 1373, the MLCA was amended to allow the freezing of accounts suspected of being linked to terrorism. identified to date. In 2004, there was one suspected terrorist finance case reported. Subsequent investigation determined that the suspect was not a terrorist or a financier of terrorism.

Alternative remittance systems, or underground banks, are considered to be operating in violation of Banking Law Article 29. Authorities on Taiwan consider these entities to be unregulated financial institutions. Foreign labor employment brokers are authorized to use banks to remit income earned by foreign workers to their home countries. These remittances are not regulated or reported. Thus, money

laundering regulations are not imposed on these foreign labor employment brokers. However, if the brokers accept money in Taiwan dollars for delivery overseas in another currency, they are violating Taiwan law.

It is also illegal for small shops to accept money in Taiwan dollars and remit it overseas. Violators are subject to a maximum of three years in prison, and/or forfeiture of the remittance and/or a fine equal to the remittance amount. Authorities on Taiwan do not believe that charitable and nonprofit organizations in Taiwan are being used as conduits for the financing of terrorism, and there are currently no plans to investigate such entities further for terrorist financing. Such organizations are already required to register with the government.

Taiwan's only free trade zone began operation in Keelung on October 1, 2004. Entities wanting to operate in the free trade zones must submit applications to the port authorities. Entities can conduct simple processing of commodities in the zone and re-export them without inspection by customs. There is no indication that the zone is used in money laundering schemes or by financiers of terrorism. Keelung port authority has a panel composed of members from various enforcement agencies to conduct checks of commodities, transportation, and accounting. According to Taiwan's Banking Law and Securities Trading Law, in order for financial institutions to conduct foreign currency operations, Taiwan's Central Bank must first approve the institution to for this function. The financial institutions must then submit an application to port authorities to establish an offshore banking unit in the free-trade zone.

Taiwan has established drug-related asset seizure and forfeiture regulations, which state that according to treaties or agreements, Taiwan's Ministry of Justice shall share seized assets with foreign official agencies, private institutions or international parties which provide Taiwan with assistance in investigations or enforcement. Assets of drug traffickers, including instruments of crime and intangible property, can be seized along with legitimate businesses used to launder money. The injured parties can be compensated with seized assets. The Ministry of Justice distributes other seized assets to the prosecutor's office, police or other anti-money laundering agencies. The law does not allow for civil forfeiture. In January-September 2004, total seized assets reached NT\$20 million (about \$660,000).

A mutual legal assistance agreement between the American Institute in Taiwan (AIT) and the Taipei Economic and Cultural Representative Office in the United States (TECRO) entered into force in March 2002. It provides a basis for the law enforcement agencies of the territories represented by AIT and TECRO to cooperate in investigations and prosecutions for narcotics-trafficking, money laundering (including the financing of terrorism), and other financial crimes.

Although Taiwan is not a UN member and cannot be a party to the 1988 UN Drug Convention, the authorities on Taiwan have passed and implemented laws in compliance with the goals and objectives of the Convention. Similarly, Taiwan cannot be a party to the UN International Convention for the Suppression of the Financing of Terrorism, as a nonmember of the United Nations, but it has agreed unilaterally to abide by its provisions. Taiwan is a founding member of the Asia/Pacific Group on Money Laundering (APG) and actively participates in the Group's meetings. The MLPC is a member of the Egmont Group. In 2003, thirty-six information exchanges took place between Taiwan and international counterparts, including the United States, related to money laundering investigations.

Over the past five years, Taiwan has created and implemented an anti-money laundering regime that comports with international standards. The MLCA amendments of 2003 address a number of vulnerabilities, especially in the area of asset forfeiture. The authorities on Taiwan should continue to strengthen the existing anti-money laundering regime as they implement the new measures. Taiwan should endeavor to pass the proposed Counter-Terrorism Action Law to better address terrorist financing issues. The authorities on Taiwan should also enact legislation that would promulgate regulations regarding alternate remittance systems.

Tajikistan

Tajikistan is not a major financial center in the region and does not have a developed banking system. Prosecutions for financial criminal activity are unusual, although the ringleaders of the Ponzi bead-scheme that defrauded hundreds of people out of tens of thousands of dollars in 2003 were convicted in 2004 and sentenced to terms ranging from eight to twenty years. Tajikistan is not an offshore center, but offshore zones are often used while concluding deals with foreign enterprises. Foreign banks operate in the country, including an Iranian bank.

Domestic goods smuggling is a concern in Tajikistan. Consumer goods, mostly apparel and low-cost household appliances, are smuggled to avoid customs duties and local taxes. In most cases, goods such as tobacco, alcohol, and fuel are not “officially” imported to Tajikistan. For example, a shipment transiting Tajikistan intended for Kazakhstan or Afghanistan never reaches the destination country. While there is certainly a market for smuggled goods, there is little evidence that most items are financed with narcotics money, with the exception of imported cars and other luxury items.

The Tajik Criminal Code of May 21, 1998, Art. 574-Legalization (laundering) of Illegally Obtained Income prohibits money laundering. This prohibition includes not only narcotics money laundering, but also circumvention of other financial currency controls (for example, removal of currency into the offshore zone, unlawful usage of a charity, insurance companies, etc.).

The Law on Banking Activity of May 23, 1998 (No.648 AMOPT NO. 10, 1998)-Art. 32 addresses banking secrecy laws that prevent disclosure of client and ownership information to bank supervisors and law enforcement authorities for domestic and offshore financial services companies. While the Government of Tajikistan (GOT) has not yet addressed the problem of international transportation of illegally sourced currency and monetary instruments, and has a long way to go to meet “due diligence” standards, it has instituted cross-border currency reporting requirements. Travelers may depart with a maximum amount of \$2,000 without any certifying document. When amounts exceed \$2,000, an authorized exchange office issues a certificate of transaction for purchase of currency (USD), a.k.a. “form 377,” and then the head office (bank) issues a “Ruhsatnoma”—permission to take the cash out of the country. Travelers may enter Tajikistan with unlimited quantities.

Banks are not required to know, record, or report the identity of customers engaging in significant transactions unless criminal proceedings have been undertaken against a specific individual or organization. Some civil proceedings can also trigger this scrutiny. For example, in civil or administrative proceedings, a court can request information about accounts or the nature and value of property kept in bank safes, or request information which is considered to be a “bank secret” in cases when the bank’s client represents one of the sides in the proceedings, if asset forfeiture can be applied, or in inheritance cases. Banks and other financial institutions also are not required to maintain records to reconstruct activity. Financial institutions make no regular reports of transactions or other activity, and reporting officers have no special legal protections with respect to cooperating with law enforcement. There is no legal mechanism to insure law enforcement’s access to the information related to illegal financial operations.

Money laundering controls are applied to all financial institutions, including exchange offices, brokerages, etc., that are licensed by the National Bank and subject to the same laws as banks. There have been no arrests or prosecutions for money laundering or terrorist financing since January 1, 2002.

Although negotiations are underway for developing an asset seizure program, the GOT does not currently have any asset-seizure mechanisms. The main barriers to implementing such a program are corruption and the underdeveloped legal system. The GOT passed Criminal Code, Art. 57, stating that asset forfeiture is possible but also specified exceptions. A program is being developed to allow the Drug Control Agency to use this law as one means of achieving self-sustainability.

The Tajiks used asset forfeiture procedures in the case of former Commander of the Presidential Guard General Gaffor Mirzoev, who was arrested in August this year and charged with a number of crimes: illegal storage of weapons, murder, illegal commercial activity, illegal appropriation of state property and its use for personal benefit. In November, the Supreme Economic Court passed a resolution to transfer Dushanbe Meat Processing Plant, Entertainment Complex “Jomi Jamshed,” and the shop “Koopoperator” located in Kulyob from Mirzoev’s Company “Mirzoi Rahmon” to the jurisdiction of the Tajik State Committee for Management of State-owned Property, after the Prosecutor General’s Office established that these entities had been privatized illegally.

The GOT has criminalized terrorist financing, as covered by the above-mentioned general money laundering statute. Terrorist finance is considered to be a “serious crime.” There were no reported cases of suspected terrorist assets being frozen in 2004 because no known terrorist assets were discovered.

Several laws have been adopted, e.g.: Civil Code, Art. 284—Illegal Transactions with Precious Metals, Gems and Gold—to address the misuse of gold, precious metals and gems. The GOT has not addressed alternative remittance systems. Remittances from labor migrants are mainly from Russia and other NIS countries, and are seasonal. The GOT has waived a 30 percent fee on bank transfers, making remittances sent via banks more effective.

Tajikistan and the U.S. Government have not yet reached an agreement for a mechanism for exchanging adequate records in connection with investigations and proceedings relating to narcotics, terrorism, terrorist financing and other serious criminal investigations, and no negotiations are currently underway. However, the U.S. Government regularly sends information regarding designated individuals and organizations subject to asset forfeiture to the Tajik Ministry of Foreign Affairs (MFA). The MFA distributes this information to the Ministries of Security, Finance, and Interior, and other governmental structures, which conduct appropriate checks. The GOT has not adopted laws or regulations that ensure the availability of adequate records in connection with narcotics, terrorism, terrorist financing or other investigations. Two GOT officials participated in the Roundtable Conference on legislative reforms to combat money laundering and terrorist financing, in Tashkent, Uzbekistan, in July 2004.

Despite a primitive banking system and the use of a barter system in many rural areas, Tajikistan signed the CIS Agreement on the Legal Assistance and Cooperation on Civil, Family and Criminal Cases of January 22, 1993, and is a member of the CIS Counterterrorism Center. The GOT signed the UN International Convention for the Suppression of the Financing of Terrorism in November 2001, but has not yet ratified it. Tajikistan is a party to the UN Convention against Transnational Organized Crime and a charter member of the new Eurasian Group on Combating Money Laundering and Financing of Terrorism, a FATF Style Regional Body established in October 2004.

The Government of Tajikistan should enact and implement anti-money laundering and counterterrorist financing legislation that comports with international standards. Additionally, mechanisms to share information among financial institutions, regulatory authorities and law enforcement entities should be developed to promote the successful prosecution of financial crime cases. Tajikistan should ratify the UN International Convention for the Suppression of the Financing of Terrorism.

Tanzania

Tanzania is not considered an important regional financial center, but is vulnerable to money laundering because of the weaknesses of its financial institutions and law enforcement capabilities. A weak financial sector and an under-trained, under-funded law enforcement apparatus make such crimes difficult to track and prosecute. Officials have noted that some real estate and used car businesses are used for money laundering purposes. Government officials have also cited the emerging

casino industry as an area of concern for money laundering. Money laundering is more likely to occur in the informal non-bank financial sector, as the formal sector is still relatively undeveloped. The prevalence of hawala and the threat of terrorist organizations on the unregulated island of Zanzibar make Zanzibar an area of concern. Officials indicate that money laundering schemes in Zanzibar generally take the form of foreign investment in the tourist industry and bulk cash smuggling. The most likely sources of illicit funds include Asia and the Middle East, and to a lesser extent Europe. Such transactions rarely include significant amounts of U.S. currency.

The Proceeds of Crime Act of 1991 criminalizes narcotics-related money laundering. However, the Act does not adequately define money laundering, and it has only been used to prosecute corruption cases. The law obliges financial institutions to maintain records of financial transactions exceeding 100,000 shillings (approximately \$109) for a period of 10 years. If the institution has reasonable grounds to believe that a transaction relates to money laundering, it may communicate this information to the police for investigation, although such reporting is not required. The Central Bank has issued regulations requiring financial institutions to file suspicious transaction reports (STRs), but this requirement is not being enforced, and no mechanism exists for receiving and analyzing the STRs. Financial institution employees are legally protected from liability stemming from reporting suspicious transactions. Current law does not hold financial institutions responsible if they are found to have been used to launder money.

The 2002 Prevention of Terrorism Act criminalizes terrorist financing. It also requires all financial institutions to inform the government each quarter as to whether any of their assets or transactions may be associated with a terrorist group, although the implementing regulations for this provision have not yet been drafted. Under the Act, the government may seize assets associated with terrorist groups. The Bank of Tanzania (the Central Bank) circulates to Tanzanian financial institutions the list of individuals and entities on the UNSCR 1267 Sanction Committee's consolidated list, but to date no assets have been frozen under this provision. The Government of Tanzania (GOT) did take action in 2004 against one charitable organization on the list by closing its offices and deporting its foreign directors. However, it is not clear whether Tanzania has the investigative capacity to identify and seize related assets. Tanzania has cooperated with the United States in investigating and combating terrorism. Tanzanian officials have consistently cooperated in the exchange of counterterrorism information with U.S. authorities.

The GOT became a party to the UN International Convention for the Suppression of the Financing of Terrorism in 2003. Tanzania is a party to the 1988 UN Drug Convention and has signed the UN Convention against Transnational Organized Crime. Tanzania is a member of the Eastern and Southern African Anti-Money Laundering Group (ESAAMLG), which was founded in 1999. The GOT continues to play a leading role in the operation of this FATF-style regional body and has detailed personnel to the ESAAMLG Secretariat, located in donated office space in Dar es Salaam. Tanzania also continues to host the ESAAMLG task force meetings held each March.

In line with Tanzania's commitment to supporting the ESAAMLG, Tanzania has created a multi-disciplinary committee on money laundering and a drafting committee that has prepared new anti-money laundering legislation. A Tanzanian Ministry of Finance official stated in August 2004 that the drafting committee was in the process of receiving comments on the language of its bill from stakeholders, and that the bill would likely be presented to the Parliament in January 2005. The proposed legislation provides for the creation of a Financial Intelligence Unit (FIU) that will collect mandatory suspicious transaction reporting from financial institutions, and will be empowered to share this information with other FIUs and foreign law enforcement agencies.

The Government of Tanzania should maintain the momentum towards enacting its anti-money laundering law. It should continue to work through Southern African Anti-Money Laundering Group

(ESAAMLG) to establish a Financial Intelligence Unit (FIU) and develop a comprehensive anti-money laundering regime that comports with international standards.

Thailand

Thailand is vulnerable to money laundering as a result of a significant underground economy and cross-border crime problems with illicit narcotics, contraband, and smuggling. Thailand continues to remain vulnerable to money launderers. Money laundering occurs in both the banking and non-banking systems. Over the last decade, there has been a considerable decrease in the amount of heroin produced in the Golden Triangle region of Burma, Laos, and Thailand. However, drug traffickers still use Thailand's banking system to hide and move their proceeds. It is a key destination, transit and source country for organized international migrant smuggling and trafficking in persons. Thailand is a major production and distribution center for counterfeit goods of all types, including the production and sale of fraudulent travel documents. The underground banking system is widely used for money laundering. Illegal gambling, prostitution, and underground lotteries are a significant part of Thailand's sizeable underground economy. There is a black market for smuggled goods for the purpose of evading customs duties. With the acceleration in economic growth, tax evasion has reportedly increased, and significant financial and securities fraud has been reported. Public sector corruption, particularly in criminal justice institutions, remains a major problem. Thailand experienced an increase in financial crimes in 2004.

Thailand's anti-money laundering legislation, the Anti-Money Laundering Act (AMLA) B.E. 2542 (1999), criminalizes money laundering for the following predicate offenses: narcotics-trafficking, trafficking in women or children for sexual purposes, fraud, financial institution fraud, public corruption, customs evasion, extortion, and blackmail. It also provided for the establishment of an Anti-Money Laundering Office (AMLO). On August 11, 2003, as permitted by the Thai constitution, the Royal Thai Government (RTG) issued two Emergency Decrees to enact measures related to terrorist financing, that had been under consideration by the Executive Branch and Parliament for over a year and a half. The first of these Decrees amended Section 135 of the Penal Code to establish terrorism as a criminal offense. The second Decree amended Section 3 of the AMLA to add the newly established offense of terrorism as an eighth predicate offense for money laundering. The Decrees took effect when they were published. Parliament endorsed their status as legal acts in April 2004. The current list of predicate offenses in the AMLA does not comport with international best practices, as provided in Recommendations 1 and 2 of the Forty Recommendations of the Financial Action Task Force (June 2003), to apply the crime of money laundering to all serious offenses or with the minimum list of acceptable designated categories of offenses. Additionally, the definition of "property involved in an offense" in the AMLA is limited to proceeds of predicate offenses and does not extend to instrumentalities of a predicate offense or a money laundering offense.

The AMLA requires customer identification, record keeping, the reporting of large and suspicious transactions, and provides for the civil forfeiture of property involved in a money laundering offense. Financial institutions are also required to keep customer identification and specific transaction records for a period of five years from the date the account was closed, or from the date the transaction occurred, whichever is longer. Reporting individuals (banks and others) that cooperate with law enforcement entities are protected. Thailand does not have secrecy laws that prevent disclosure of client and ownership information of bank accounts to supervisors and law enforcement authorities. The AMLA gives the anti-money laundering office the authority to compel a financial institution to disclose such information.

In early 2004, the Thai cabinet approved amendments to the AMLA to create an asset forfeiture fund, authorize asset sharing, and add the following additional predicate offenses: weapons smuggling, illegal gambling, government procurement fraud, crimes affecting natural resources and the

environment, intellectual property rights infringement, and Money Exchange Control Act violations. These amendments have been under consideration by the Council of State and are expected to be submitted to the Parliament in early 2005. Active consideration is being given to adding eight additional predicate offenses to the anti-money laundering statute, to include offenses related to natural resources, currency exchange, stock market manipulation, gambling, firearms, conspiracy in awarding government contracts, labor fraud, and tax evasion. Since October 27, 2000, there have been 68 convictions under the AMLA. Cases are proceeding for civil forfeiture against property involved in drug trafficking, prostitution, public fraud and embezzlement, customs evasion, and corruption offenses.

The Bank of Thailand regulates financial institutions in Thailand, but bank examiners are prohibited, except under limited circumstances, from examining the financial transactions of a private individual. This prohibition acts as an impediment to the BOT's auditing of a financial institution's compliance with the AMLA or BOT regulations. Besides this lack of power to conduct transactional testing, BOT does not currently examine its financial institutions for anti-money laundering compliance. The BOT is working closely with AMLO and had hoped to begin such examinations in 2004. The BOT has now agreed that AMLO should be responsible for on and off site audits for AMLA compliance. The target date for such examinations has now slipped to early 2005.

Financial institutions (such as banks, finance companies, savings cooperatives, etc.), land registration offices, and persons who act as solicitors for investors, are required to report significant cash, property, and suspicious transactions. Reporting requirements for most financial transactions (including purchases of securities and insurance) exceeding two million baht (approximately \$52,000), and property transactions exceeding five million baht (approximately \$130,000), have been in place since October 2000. However, AMLO has been considering a proposal to lower the threshold for reporting cash transactions to 400,000 baht (\$10,500). The proposal is not yet in effect and the likelihood of its adoption is in doubt, since (in early February 2005) the Prime Minister publicly expressed his opposition to it. The AMLO is also drafting amendments requiring gold and jewelry shop owners and used car dealers to report transactions over 400,000 baht (\$10,500), and is consulting with private industry, but those amendments have also been opposed by affected industries as too cumbersome and unnecessary, and are under review by the Prime Minister.

The various land offices are also required to report on any transaction involving property of five million baht or greater, or a cash payment of two million baht or greater, for the purchase of real property. The Stock Exchange of Thailand (SET) requires securities dealers to have know-your-customer procedures; however, the SET does not check anti-money laundering compliance during its reviews. The Department of Insurance (DOI) is responsible for the supervision of insurance companies, which are covered under the AMLA definition of a financial institution, but there are no anti-money laundering regulations for the insurance industry. Similarly, the Cooperative Promotion Department (CPD) is responsible for supervision of credit cooperatives, which are required under the Cooperatives Act to register with the CPD. Currently, around 6,000 cooperatives are registered, with approximately 1,348 thrift and credit cooperatives engaged in financial business. Thrift and credit cooperatives are engaged in deposit taking and providing loans to the members, and are covered under the definition of a financial institution, but as with the securities and insurance sectors, there are no anti-money laundering compliance mechanisms currently in place.

Licenses were first granted to Thai and foreign financial institutions to establish Bangkok International Banking Facilities (BIBFs), in March 1993. BIBFs may perform a number of financial and investment banking services, but can only raise funds offshore (through deposits and borrowing) for lending in Thailand or offshore. The United Nations Drug Control Program and the World Bank listed BIBFs as potentially vulnerable to money laundering activities, because they serve as transit points for funds. Thailand's 44 BIBFs are now subject to the AMLA.

Thailand acknowledges the existence and use of alternative remittance systems (hawala, etc.) that attempt to circumvent financial institutions. There is a general provision in the AMLA that makes it a crime to transfer, or to receive a transfer, that represents the proceeds of a specified criminal offense (including terrorism). Within the Asia Pacific Economic Council (APEC), Thailand is working with several other countries on a study of alternative remittance systems. Moneychangers frequently act as illegal remittance agents. Remittance agents, including informal remittance businesses, require a license from the Ministry of Finance. Operating a money transfer business also requires a license. The Ministry of Finance issued the Notification to Authorized Persons on July 30, 2004, and to Money Transfer Agents August 4, 2004. The Bank of Thailand issued a Notice to the Competent Officer on the Procedures and Guidelines to operate as Authorized Persons dated August 6, 2004, and to Money Transfer Agent dated August 6, 2004. These new guidelines of BOT and MOF became effective on August 11, 2004. Before the grant of a license, both money changers and money transfer agents are subject to onsite examination by the BOT, which also consults with AMLO on the applicants criminal history and AML record. Licensed agents are also subject to monthly transaction reporting and a 3-year record maintenance requirement. At present, there are about 270 authorized moneychangers and five remittance agents. There is no limitation on the amount of foreign currency that a person can take in or out of Thailand. A customer can transfer an unlimited amount of money through a commercial bank, with the required supporting documentation. At present, moneychangers have to report financial transactions to the Anti-Money Laundering Office (AMLO), while remittance agents do not. As part of the August 6, 2004 notice, the Bank of Thailand limited the annual transaction volume for agents to \$60,000 for offices in the Bangkok area and \$30,000 for offices located in other areas.

The BOT does not have any regulations that give it explicit authorization to control charitable donations, but it is working with AMLO to monitor these transactions under the Exchange Control Act of 1942. With respect to charities, The Bank of Thailand (BOT) does not have regulation that gives it explicit authorization to control charitable donations. However, the BOT is working with the Anti-Money Laundering Office to monitor these transactions under the Exchange Control Act of 1942.

The AMLA created the Anti-Money Laundering Office (AMLO), which became fully operational in 2001. AMLO is Thailand's Financial Intelligence Unit (FIU). When first established, AMLO reported directly to the Prime Minister. In October 2002, a reorganization of the executive branch took place, and AMLO was designated as an independent agency under the Ministry of Justice. AMLO receives, analyzes, and processes suspicious and large transaction reports, as required by the AMLA. From January through September 2003, the AMLO received 636,129 currency transaction reports and 84,967 suspicious transaction reports.

In addition, the AMLO is responsible for investigating money laundering cases for civil forfeiture purposes and for the custody, management, and disposal of seized and forfeited property. The AMLO is also tasked with providing training to the public and private sectors concerning the provisions of the AMLA. The law also created the Transaction Committee, which operates within AMLO to review and approve disclosure requests to financial institutions and asset restraint/seizure requests. The AMLA also established the Anti-Money Laundering Board, which is comprised of ministerial-level officials and agency heads and serves as an advisory board that meets periodically to set national policy on money laundering issues and to propose relevant ministerial regulations. From October 2003 to October 2004, AMLO filed 362 cases of civil asset forfeiture involving assets worth 3.771 billion baht. Of these, forfeiture judgments have been entered in 152 cases involving 418 million baht. In pursuing its civil forfeiture investigations, AMLO has received valuable cooperation from financial institutions, particularly the commercial banks.

In 2004, the Prime Minister's "Regulations on Payment of Incentives and Rewards in Proceedings Against Assets Under the Anti-Money Laundering Act" went into effect in Thailand. Under this system, investigators from AMLO and other investigative agencies can receive personal payments from the property they seize in money laundering cases. The system that Thailand has created

undermines the integrity of its AML regime and may impede international cooperation. After domestic and international criticism of this system, the Ministry of Justice is considering alternatives to personal commissions from seizures, including the creation of a forfeiture fund for the forfeited proceeds to be dedicated to various programs, rather than personal purposes.

In criminal cases, the forfeiture and seizure of assets is governed by the 1991 Act on Measures for the Suppression of Offenders in an Offense relating to Narcotics (“Assets Forfeiture Law”). The Property Examination Committee has filed 1,865 cases with assets valued at 1.64 billion baht (\$4 million) and 1,644 cases are on trial. Two hundred million baht (\$5,000,000) have been confiscated and sent to the Narcotics Control Fund.

As part of a general reorganization of the Executive Branch, the Thai Parliament has authorized the establishment in the Ministry of Justice of a new criminal investigative agency, the Department of Special Investigations (DSI), separate from the Royal Thai Police Office. On November 24, 2003, Parliament approved legislation defining DSI’s organization, authorities, and responsibilities. The latter include responsibility for investigating the criminal offense of money laundering (as distinct from civil asset forfeiture actions carried out by AMLO), and for many of the money laundering predicates defined by the AMLA, now including terrorism. The DSI, AMLO, and the Royal Thai police all have the authority to identify, freeze, and/or forfeit terrorist finance-related assets.

Thailand is a party to the 1988 UN Drug Convention. In September 2004, Thailand became a party to the UN International Convention for the Suppression of the Financing of Terrorism. It has signed (December 2000), but not yet ratified, the UN Convention against Transnational Organized Crime. It has also signed (December 2003) the UN Convention against Corruption. In April 2005, Thailand will host the 11th United Nations Crime Congress, which will emphasize counterterrorism as one of its principal themes. The RTG has issued instructions to all authorities to comply with UNSCR 1267, including the freezing of funds or financial resources belonging to the Taliban and the al-Qaida network. To date, Thailand has not identified, frozen, and/or seized any assets linked to individuals or entities included on the UNSCR 1267 Sanctions Committee consolidated list. However, AMLO has identified some suspicious transaction reports derived from financial institutions and has initiated cases that may involve terrorist activities using non-governmental or non-profit organizations as a front. Thailand has a Mutual Legal Assistance Treaty (MLAT) with a number of countries, including the United States. It has a memorandum of understanding on law enforcement issues with an additional number of other countries. Thailand became a member of the Asia/Pacific Group on Money Laundering (APG), a FATF-style regional body, in April 2001. The AMLO joined the FATF’s Egmont Group of financial intelligence units in June 2001.

The Government of Thailand should continue to implement its anti-money laundering program. The BOT and AMLO have agreed that AMLO will be responsible for both offsite and onsite supervision of banks to ensure that Financial Institutions comply with requirements of AMLA and AMLO regulations. Until the RTG provides a viable mechanism for all of its financial institutions to be examined for compliance with the AMLA, Thailand’s anti-money laundering regime will not comport with international standards. It is therefore important that BOT/AMLO compliance examinations begin early in 2005 and that other relevant agencies (SET, DOI, and CPD) be working with AMLO to establish policies and procedures for supervisory oversight of AML/CFT compliance. The RTG should develop and implement anti-money laundering regulations for exchange businesses, and should take additional measures to address the vulnerabilities presented by its alternative remittance systems. The RTG to further strengthen its anti-money laundering regime against crime, particularly by expanding its list of predicate offenses to include a broader base of serious financial crimes, such as arms/weapons trafficking, alien smuggling, and environmental crimes, as well as making the “structuring” of transactions a criminal offense. It should extend the law to cover instrumentalities. Thailand should ratify the UN Convention against Transnational Organized Crime. Thailand should also immediately rescind its new rewards program for AMLO investigators who seize assets under the

anti-money laundering laws, and for agents of other agencies that engage in such practices, as it gives the appearance of impropriety, can imperil successful prosecutions, and will eventually impede international cooperation and undermine public support for Thailand's forfeiture regime and its credibility.

Togo

Togo's poor financial infrastructure makes it an unlikely venue for money laundering through its financial institutions. Its porous borders, however, make it a transshipment point in the regional and sub-regional trade in narcotics. Togo's 1998 drug law criminalizes narcotics-related money laundering and penalizes offenses with up to 20 years in prison. However, there have never been any arrests for money laundering. Financial institutions are required to monitor and report monetary transactions above a threshold appropriate to the local economic situation, and must maintain records of such transactions and supply them to government authorities on request. Financial institutions are legally protected in respect to their cooperation with law enforcement authorities. Due diligence legislation applies to bankers and other professionals, although no arrests have been made for violations of this law.

The Government of Togo (GOT) has the legal authority to seize assets associated with narcotics-trafficking. In 2001, President Eyadema created the national Anti-Corruption Commission to combat corruption and money laundering.

Terrorist financing is not a criminal offense in Togo, although draft legislation is pending. The GOT has circulated to Togolese financial institutions the names of suspected terrorists and terrorist organizations listed on the UN 1267 Sanctions Committee consolidated list and the list of Specially Designated Global Terrorists designated by the United States pursuant to E.O. 13224. The GOT closely regulates charities and other nongovernmental organizations.

In August 2004, the UN Office of Drug and Crimes (UNODC) and the GOT organized a workshop to review the Togolese penal code. UNODC recommended that Togo either amend the penal code or pass separate laws on terrorism to comply with UN terrorism resolutions.

The Central Bank of West African States (BCEAO), based in Dakar, is the Central Bank for the countries in the West African Economic and Monetary Union (WAEMU): Benin, Burkina Faso, Guinea-Bissau, Cote d'Ivoire, Mali, Niger, Senegal, and Togo, all of which use the French-backed CFA franc currency. All bank deposits over approximately \$7,700 made in BCEAO member countries must be reported to the BCEAO, along with customer identification information. In September 2002, the WAEMU Council of Ministers, which oversees the BCEAO, issued a directive requesting that each member country set up a national committee under their Minister of Finance to deal with financial information as it relates to money laundering. The BCEAO is to be in charge of coordinating such committees. Each member country is now responsible for putting legislation into place to implement this directive, and the legislation is expected to be harmonized regionally.

The WAEMU Council of Ministers issued another directive in September 2002 requesting member countries to pass legislation requiring banks to freeze the accounts of any person or organization on the UN 1267 Sanctions Committee's consolidated list.

In 2000, the Economic Community of West African States (ECOWAS) established the Intergovernmental Action Group against Money Laundering (GIABA), based in Dakar, Senegal. In November 2002, GIABA hosted an anti-money laundering seminar for representatives of 14 ECOWAS members, including Togo. In July 2002, Togo participated in the 2002 West African Joint Operation Conference (WAJO) that promotes regional law enforcement cooperation against narcotics-trafficking, terrorism, and money laundering.

Togo is a party to the 1988 UN Drug Convention and the UN International Convention for the Suppression of the Financing of Terrorism. On November 27, 2003 Togo signed, but has not yet ratified, the UN Convention against Transnational Organized Crime.

The Government of Togo should criminalize money laundering for all serious crimes, criminalize terrorist financing, and enforce existing laws and regulations.

Tonga

Tonga is an archipelago, located in the South Pacific, about two-thirds of the way from Hawaii to New Zealand. Tourism is the second largest source of hard currency earnings following remittances. Tonga is neither a financial center nor an offshore jurisdiction. An additional source of revenue is the registry of approximately 65 ships from 25 countries, including the United States. Tonga became a party to the UN International Convention for the Suppression of the Financing of Terrorism in December 2002.

The Reserve Bank of Tonga is the primary authority in charge of coordinating the identification of suspicious financial transactions for further investigation. Tonga has not yet established a Financial Intelligence Unit (FIU), however the Reserve Bank is responsible for conducting on site exams of Commercial banks procedures, and training staff members to spot suspicious transactions. Commercial banks are currently required to report suspicious Financial Transaction Reports (FTRs) to the Reserve Bank of Tonga. Since this requirement was instituted in 2002, there have been 5 suspicious transactions referred to the Reserve Bank for further investigation. There have been no prosecutions to date.

Tonga has proposed, but not yet enacted, new legislation to criminalize money laundering and terrorist financing. Cabinet and Parliament will consider amendments to the Money Laundering and Proceeds Act of 2000 in the middle of 2005.

Representatives from Tonga have participated in the Asia/Pacific Group on Money Laundering (APG) anti-money laundering workshops and attended seminars conducted by the Egmont Group. Tonga plans to submit an application to join the APG in 2005. Representatives from Tonga also attended several seminars in Fiji that were related to combating money laundering.

In a 2003 report to the UN Counter-Terrorism Committee, Tonga reported that its Government Committee on Money Laundering and the Financing of Terrorism was working on proposed new legislation and amendments to bring its legislative framework into line with international best practices. Tonga failed to act on that legislation in 2004.

The Government of Tonga should quickly enact legislation that specifically criminalizes money laundering and the financing of terrorism and establishes a Financial Intelligence Unit (FIU). It should follow through with its plan to join the Asia/Pacific Group on Money Laundering. It should also sign and ratify the UN Convention against Transnational Organized Crime.

Trinidad and Tobago

Trinidad and Tobago has a well-developed and modern banking sector that makes it an increasingly significant regional financial center. Trinidad and Tobago (T&T) is not an offshore financial center. Illegal drug-trafficking proceeds are not known to be an important source of laundered funds in T&T, although they are implicated in some money laundering. Criminal proceeds laundered in T&T are derived primarily from domestic criminal activity and from the activity of nationals involved in crime abroad. While there is no significant black market for smuggled goods in T&T, drug money continues to support the importation of illegal arms into the country.

Financial crimes in general are increasing, particularly those involving the use of fraudulent checks and related instruments in the banking sector. Trinidad and Tobago's financial institutions are not

known to engage in current transactions involving international illegal drug-trafficking proceeds that significantly affect the United States.

The Proceeds of Crime Act of 2000 (POCA) expands money laundering predicate offenses to include all serious crimes. The POCA requires financial institutions to proactively report suspicious transactions, and banks and financial institutions are required to maintain records necessary to reconstruct transactions for a number of years. Secrecy laws are limited to standard client confidentiality provisions. Failure to comply with POCA's record keeping and reporting requirements can result in a fine of TT 250,000 (approximately \$40,000) and imprisonment for two years for summary conviction, and a fine of TT 3,000,000 (approximately \$500,000) and seven years imprisonment for conviction on indictment. Upon summary conviction for money laundering, an offender can be liable for a fine of TT 25,000,000 (approximately \$4,000,000) and 25 years imprisonment. Under the POCA, any officer who aids and abets the money laundering activities of an institution can be convicted of money laundering. In addition, the POCA protects individuals who cooperate in money laundering law enforcement investigations. The POCA also enables the courts to seize the proceeds of all serious crimes, although only one property has been seized under the Act.

The Central Bank has set anti-money laundering guidelines, including due diligence provisions that apply to all financial institutions subject to the 1993 Financial Institutions Act. These include banks, finance companies, leasing corporations, merchant banks, mortgage institutions, unit trusts, credit card businesses, financial services businesses and financial intermediaries. In 2004, the Central Bank updated these guidelines, setting new minimum standards for compliance with existing regulations and informing stakeholders on proposed legislation. The Central Bank will bring large credit unions under its supervision by 2005. Also in 2004, the Government of Trinidad and Tobago (GOTT) established a fledgling Tax Fraud Investigations unit in its Inland Revenue Division to address tax evasion and non/underreported income that may have its source from money laundering activities.

GOTT customs regulations require that any sum above approximately \$3,000 (in currency or monetary instruments) entering or leaving the country be declared. GOTT Customs may restrain cash above approximately \$10,000 for 96 hours, or longer with judicial approval, pending the determination of their legitimate source. The Financial Investigations Unit (FIU) maintains a database of these transactions and analyzes them for evidence of money laundering.

There are six free trade zones in T&T where exporting of services and manufactured products, and re-exportation of manufactured products take place. There is no evidence that these zones are involved in money laundering schemes, and companies operating in these zones are required to submit quarterly tax returns and yearly audited financial statements. These companies must present their bona fides and are subject to background checks prior to being allowed to operate in these zones.

The GOTT has legislation in place that allows it to trace, freeze, and seize assets, including bank accounts. Authorities may also seize legitimate businesses if they are used to launder drug money. However, the GOTT can only restrain assets through due process at the level of the High Court—it cannot freeze assets “without undue delay,” and the law only allows for criminal forfeiture of assets, not civil forfeiture.

Since January 1, 2003, the GOTT has conducted 189 financial investigations, and has issued seven production orders and eight foreign intelligence requests. To date, traffickers, organized crime organizations and terrorist organizations have not taken any retaliatory actions related to money laundering/terrorist financing investigations. In 2004, the GOTT charged one person with laundering the proceeds of fraud and seized TT 131,618 (approximately \$22,000) in related assets. In previous years, the GOTT seized a total of TT 6 million (\$1 million) and restrained TT 1 million (approximately \$167,000).

Some legal loopholes exist that allow traffickers and supporters/financiers of terrorists or terrorist organizations to shield their assets. These include the absence of financial obligations regulations and FIU legislation, the ability of attorneys to operate accounts in their client's names, the absence of suspicious transaction reporting (STR) requirements for attorneys and accountants, and legal rules that prevent courts from confiscating assets received after a defendant's sentencing.

Opposition party intransigence has stalled legislation specifically aimed at criminalizing terrorism financing, but Parliament will debate this bill again in 2005. The GOTT is developing regulations for financial sector supervision that acknowledge and monitor alternative remittance systems. The banking system has also reported the suspicious use of charitable or nonprofit entities. The GOTT has circulated the UN 1267 Sanctions Committee's consolidated lists to its financial institutions. The GOTT has also circulated the United States' list of Specially Designated Global Terrorists and other relevant EU lists. There has not yet been any identified evidence of terrorist financing in T&T.

In 1999, a MLAT with the United States entered into force, and in 2000, the United States and GOTT signed a joint statement on law enforcement cooperation, which pledges in part to expand cooperation on the detection and prosecution of money laundering and related criminal activities. While there is no mechanism in place with the United States Government (USG) for the exchange of crime and terrorism-related information, the GOTT has cooperated regularly with the USG and other governments' law enforcement agencies on issues involving drug-trafficking, terrorism, terrorist financing and other criminal investigations. The GOTT does not have legislation that specifically authorizes the sharing of forfeited assets with other countries, but has done so in the past on a case-by-case basis through bilateral agreements.

Trinidad and Tobago is a party to the 1988 UN Drug Convention and the 1992 Kingston Declaration on Money Laundering. It has signed, but not yet ratified, the UN Convention against Transnational Organized Crime and the UN Convention against Corruption. It has not yet signed the UN International Convention for the Suppression of the Financing of Terrorism. T&T is a member of the Caribbean Financial Action Task Force (CFATF), which is headquartered in Port of Spain. It underwent a second round CFATF mutual evaluation in 2002, and will undergo a third round evaluation in April 2005. Trinidad and Tobago is also a member of the OAS Inter-American Drug Abuse Control Commission Experts Group to Control Money Laundering (OAS/CICAD).

The Government of Trinidad and Tobago should continue to work toward full implementation of its anti-money laundering laws and the improvement of its anti-money laundering/counterterrorist financing regime. Trinidad and Tobago should enact suspicious transaction reporting requirements and expand coverage of the laws to include intermediaries, such as attorneys and accountants, and exchange houses. Trinidad and Tobago also should become a party to the UN International Convention for the Suppression of the Financing of Terrorism and criminalize terrorist financing.

Tunisia

Tunisia is not considered an important regional financial center due in large part to the very strict control exercised by the Central Bank over all aspects of financial transactions and the general non-convertibility of the Tunisian dinar. There is an offshore financial sector. There is no discernible money laundering activity reported to be occurring in Tunisia through formal financial institutions.

In December 2003, the Tunisian Parliament passed Law No. 2003-75, a comprehensive counterterrorism and anti-money laundering law, to support international counterterrorism efforts and to establish more severe sentences for individuals convicted of terrorist acts. This law makes it a crime to provide financial assistance or any other type of support to terrorist activities, and provides for the freezing of assets. Those suspected of violating the law can be exempted from charges, however, if they report a planned terrorist action to authorities.

Money laundering is punishable where false information is proffered relating to the illicit origin of property or income arising directly or indirectly from an offense. Money laundering also includes investing, depositing, transferring or safekeeping of property or income resulting from an offense. The law imposes obligations on financial institutions relating to identity checks, verification of transactions of suspect persons, record keeping and the declaration of transactions above certain monetary limits. The Ministry of Finance oversees operations to combat money laundering and terrorist financing.

Tunisia's 1992 Law (No. 92-52) against narcotics-trafficking also includes provisions that contribute to the combating of money laundering. Under Articles 2 and 30, anyone aiding in narcotic operations or transfers of proceeds in connection with these operations, including financial institutions, can be punished.

The Tunisian penal code also allows for the sequestering, confiscating, or seizure of assets and property in certain situations, including narcotics-trafficking and terrorist activities. The definition of "assets" is quite broad and could cover any number of financial or physical assets. Financial assets are traced by the Central Bank and the Economic Enforcement Agency, each of which has broad powers for investigating and seizing financial assets. Tunisia has no legal provisions for sharing seized criminal assets with other governments.

Financial institutions are required to gather full identifying information for personal and business accounts. In addition, all supporting documentation must be maintained for 10 years. Only certain categories of individuals and businesses are allowed to open foreign currency or convertible dinar accounts and all of these accounts are monitored by the Central Bank. Because there is no law against money laundering in general, there is no obligation for a financial institution to report suspicious activities or provisions for holding bankers responsible if their institution is used for money laundering. However, the prevailing practice is for institutions to verbally report any unusual activity to the Central Bank, which will notify the investigative Economic Enforcement Agency. There are no "secret" or numbered accounts allowed in Tunisia.

Offshore financial institutions are held to the same regulatory standards as onshore institutions. Offshore institutions undergo the same due diligence process as onshore banks and are licensed only after the Central Bank investigates their references and the Ministry of Finance approves their application. Tunisian law also makes provisions for "moral integrity" checks of major shareholders, directors, and officers of financial institutions at any time doubts may arise. Anonymous directors are not allowed. Tunisia currently has 8 offshore banks. There is foreign participation in over 2,600 Tunisian companies (2003 figures). There are several casinos in Tunisia, but Tunisians are not permitted to use them. The export of Tunisian dinars, by either residents or nonresidents, is strictly prohibited. Bearer financial instruments or shares are prohibited (Act No. 35 of 2000).

Although the Tunisian government maintains that there are no alternative fund transfer systems, since all fund transfers must go through the banks or National Post Office, it is precisely due to these restrictions and currency exchange controls that there are underground methods of moving money or transferring value in and out of the country. While a significant black market in consumer goods does exist in the country, there is no evidence that this trade is funded by illicit proceeds. Residents are generally prohibited from holding or exporting foreign currency except in certain cases (travel or business needs, etc.) Nonresidents entering Tunisia with foreign currency or other instruments are required to declare the total amount if they wish to re-export a portion (not exceeding 1,000 dinar or approximately \$840) or deposit any of the money in a Tunisian bank. Nonresidents do not need to declare currency exports under 1,000 dinar. Customs may at any time require declarations for gold or securities.

Tunisia is a founding member of the Middle East North Africa Financial Action Task Force (MENAFATF) based in Bahrain and approved in November 2004 by the governments of Algeria, Bahrain, Egypt, Jordan, Kuwait, Lebanon, Morocco, Oman, Qatar, Saudi Arabia, Syria, Tunisia,

United Arab Emirates, and Yemen. The MENAFATF is a FATF-style regional body that will address money laundering and terrorist financing related issues and work to raise compliance standards throughout the region to meet international standards.

Tunisia is a party to both the 1988 UN Drug Convention and the 1999 UN International Convention for the Suppression of Financing of Terrorism. It has signed and ratified the UN Convention against Transnational Organized Crime. The Central Bank has circulated the UN 1267 Sanctions Committee's consolidated list to all of its financial institutions. To date no terrorist assets have been identified in Tunisia. Tunisia has varying bilateral agreements on "criminal matters" with 29 countries and is party to 12 international agreements on counterterrorism.

The Government of Tunisia should continue its efforts to implement its comprehensive 2003 legislation. It should establish a Financial Intelligence Unit (FIU) and require financial institutions to report suspicious transactions to that unit.

Turkey

Turkey is an important regional financial center, particularly for Central Asia and the Caucasus, as well as for the Middle East and Eastern Europe. Turkey is not an offshore financial center. It continues to be a major transit route for Southwest Asian opiates moving to Europe. However, local narcotics-trafficking organizations are reportedly responsible for only a small portion of the total funds laundered in Turkey.

A substantial percentage of money laundering that takes place in Turkey appears to involve tax evasion, and informed observers estimate that as much as 50 percent of the economy is unregistered. Since tax evasion is such a large problem, the Government of Turkey (GOT) is in the process of reforming its tax administration, with the goal of improving tax collection. There is no significant black market for smuggled goods in Turkey. There are 21 free trade zones operating in Turkey, but there is no evidence that they are being used in trade-based money laundering schemes or terrorist financing operations. The GOT closely controls access to the free trade zones.

Money laundering takes place in both banks and non-bank financial institutions. Money laundering methods in Turkey include: the cross-border smuggling of currency; bank transfers into and out of the country; and the purchase of high value items such as real estate, gold, and luxury automobiles. It is believed that Turkish-based traffickers transfer money to pay narcotics suppliers in Pakistan and Afghanistan, primarily through Istanbul exchange houses. The exchange houses then wire transfer the funds through Turkish banks to accounts in Dubai and other locations in the United Arab Emirates. The money is then paid, often through alternative remittance systems, to the Pakistani and Afghan traffickers.

Turkey criminalized money laundering in 1996 for a wide range of predicate offenses, including narcotics-related crimes, smuggling of arms and antiquities, terrorism, counterfeiting, and trafficking in human organs and in women. Whoever commits a money laundering offense shall be sentenced to imprisonment from two to five years and is subject to a fine of double the amount of the money laundered and asset forfeiture provisions. The Council of Ministers subsequently passed a set of regulations that require the filing of suspicious transaction reports (STRs), customer identification, and the maintenance of records for five years. These regulations apply to banks and a wide range of non-bank financial institutions, including insurance firms and jewelry dealers.

In 2004, the GOT enacted additional anti-money laundering legislation: a new criminal law and a new criminal procedures law. The new Criminal Law, which will take effect in April 2005, broadly defines money laundering to include all predicate offenses punishable by one year's imprisonment. Previously, Turkey's anti-money laundering law comprised a list of specific predicate offenses. A new

Criminal Procedures Law, which will also come into effect in April 2005, will facilitate asset forfeiture.

In July 2001, the Ministry of Finance issued a banking regulation circular requiring all banks, including the Central Bank, securities companies, and post office banks, to record tax identity information for all customers opening new accounts, applying for checkbooks, or cashing checks. The circular also requires exchange offices to sign contracts with their clients. Additionally, non-interest-utilizing entities such as Islamic financial institutions are required to record tax identity information for all transactions. The Ministry of Finance also issued a circular mandating that a tax identity number be used in all financial transactions as of September 1, 2001. The circular applies to all Turkish banks and to branches of foreign banks operating in Turkey, as well as to other financial entities. The new requirements are intended to increase the Government's ability to track suspicious financial transactions. Turkey does not have secrecy laws that prevent disclosure of client and ownership information to bank supervisors and law enforcement officials. According to anti-money laundering law Article 5, public institutions, individuals, and corporate bodies must submit information and documents as well as adequate supporting information upon the request of Turkey's Financial Crimes Investigation Board (MASAK) or other authorities specified in Article 3 of the law. Natural persons and corporate bodies from whom information and documents are requested may not refrain from submitting the requested items by claiming the protection provided by privacy provisions in special laws, provided that the provisions related to the right of defense are reserved.

Generally speaking, Turkey does not have foreign exchange restrictions. However, Turkey does have cross-border currency reporting requirements. Except for payments for imports, invisible transactions and capital exports, banks and special finance institutions must inform authorities, within 30 days, about transfers abroad exceeding \$50,000 or its equivalent in foreign currency notes (including transfers from foreign exchange deposits). Travelers may take up to \$5,000 or its equivalent in foreign currency notes out of the country.

Since the financial crisis of 2000, the GOT has significantly tightened oversight of the banking system through an independent regulatory authority, the Banking Regulatory and Supervisory Agency (BRSA). BRSA conducts anti-money laundering compliance reviews at banks under authority delegated from MASAK. BRSA's reputation was hurt by its failure to detect a major bank fraud in 2003, but it is working to improve its capabilities in this area.

The 1996 anti-money laundering law establishes MASAK, which is part of the Ministry of Finance. MASAK, which became operational in 1997, serves as Turkey's Financial Intelligence Unit (FIU), receiving, analyzing, and referring STRs for investigation. MASAK has a pivotal role between the financial community, on the one hand, and Turkish law enforcement, investigators, and judiciary, on the other. MASAK itself is not yet functioning at the optimal level of efficiency, and is trying to strengthen its role. It would benefit from additional legal authority, continuity of senior management, training, and computers. Training and equipment needs are being addressed by a European Union accession project, which is expected to end in June 2006. Under current law, MASAK has three functions: regulatory, financial intelligence, and investigative. Under long-pending draft legislation currently under review by relevant GOT agencies, MASAK would cede its investigative function to the public prosecutors, while retaining its regulatory and financial intelligence roles. Passage of the law is expected in early 2005.

The number of STRs being filed is quite low, even taking into consideration the fact that the Turkish economy is cash-based. A possible reason for this is the lack of safe harbor protection for bankers and other filers of STRs. Turkish officials indicated in December 2004 that the GOT has drafted legislation that will provide such protection, but it has not yet been enacted. Another reason is that many bankers do not believe that money laundering occurs through Turkish banks.

Turkey's anti-money laundering regime does not have a strong reputation for enforcement. Since its inception, MASAK has pursued more than 500 money laundering cases, but, as of December 2004, only one had resulted in a conviction-which was later overturned. Factors contributing to this low conviction rate include the fact that Turkey's police, prosecutors, judges, and investigators still need substantial training in dealing with financial crimes, a lack of coordination among law enforcement agencies and a lack of coordination between the courts that prosecute the predicate offenses and the courts that prosecute money laundering cases. Most of the cases involve non-narcotics criminal actions or tax evasion; roughly 30 percent are narcotics related. There were no arrests or prosecutions for money laundering in Turkey in 2004.

Turkey has traditionally taken a strong stance against terrorism, but the GOT still has not explicitly criminalized terrorist financing. The GOT believes that the new draft anti-money laundering law described above and the pending Law to Combat Terrorism should ameliorate the situation, in part by the inclusion of a definition of terrorist financing. In the interim, there are various laws with provisions that can be used to punish the financing of terrorism. In particular, Article 169 of the Turkish Penal Code prohibits assistance in any form to a criminal organization or to any organization which acts to influence public services; media; proceedings of bids, concessions, and licenses; or to gain votes, by using or threatening violence. To commit crimes by implicitly or explicitly intimidating and cowering people is illegal under the provisions of the Law No. 4422 on the Prevention of Benefit-Oriented Criminal Organizations. In February 2002, MASAK issued General Communiqué No. 3, which details a new type of STR to be filed by financial institutions in cases of terrorist financing. The GOT distributes to interested GOT agencies (but not financial institutions) the UNSCR 1267 Sanctions Committee's consolidated list. Financial institutions receive the consolidated list through the Turkish Bankers Association.

Another area of vulnerability in the area of terrorist financing is the GOT's loose supervision of non-profit organizations. The General Director of Foundations (GDF) issues licenses for charities and oversees them. The GDF requires charities to verify and prove their funding sources and to have bylaws. Charities are audited by the GDF and are subject to being shut down if they act outside the bylaws. However, the GOT does not have other oversight mechanisms, such as requiring the publication of annual reports or periodic reporting to competent authorities. In addition, there is no central registry of charities. The GOT has taken no steps to regulate or register alternative remittance systems.

The GOT has the authority to identify and freeze only the assets of individuals and entities on the UNSCR 1267 Sanctions Committee's consolidated list. The Council of Ministers promulgated a decree (2001/2483) on December 22, 2001 to freeze all the funds and financial assets of individuals and organizations included on the UN list. If enacted, the Law on the Fight Against Terrorism would authorize the dissolution of associations, foundations, and unions that are found to have lent support to terror movements. Additionally, their assets would be subject to confiscation. However, the tools currently available under Turkish law for locating, freezing, seizing, and confiscating terrorist assets are cumbersome, limited, and not particularly effective. For example, there is no legal mechanism to freeze the assets of terrorists not on the consolidated list. In the past year, the assets of 241 individuals and organizations have been frozen under the Council of Minister's Decrees on the grounds of being connected to terrorist organizations or terrorist activities. One individual and two organizations were found to have assets in Turkey. All of the funds and assets of these parties have been frozen by relevant GOT authorities.

Turkey also has in place a system for identifying, tracing, freezing, and seizing assets that are not related to terrorism, although Turkish law allows for only criminal forfeiture not for the administrative freezing of assets. The anti-money laundering law, Article 7, provides for the confiscation of all property and assets (including derived income or returns) that are the proceeds of a money laundering predicate offense (soon to be expanded to crimes punishable by one year imprisonment), once the

defendant is convicted. The law allows for the confiscation of the equivalent value of direct proceeds that could not be seized. Instrumentalities of money laundering can be confiscated under the law. In addition to the anti-money laundering law, Article 36 of the Criminal Code provides for post-conviction seizure and confiscation of the proceeds of crimes. The defendant, however, must own the property subject to forfeiture. Legitimate businesses can be seized if used to launder drug money, support terrorist activity, or are otherwise related to other criminal proceeds. Property or its value that is confiscated is transferred to the Treasury.

The government enforces existing drug-related asset seizure and forfeiture laws. MASAK, the Turkish National Police, and the Courts are the government entities responsible for tracing, seizing and freezing assets. According to Article 9 of the anti-money laundering law, the Court of Peace—a minor arbitration court for petty offenses—has the authority to issue an order to freeze funds held in banks and non-bank financial institutions as well as other assets, and to hold the assets in custody during the preliminary investigation. During the trial phase, the presiding court has freezing authority. Public Prosecutors may freeze assets in cases where it is necessary to avoid delay. The Public Prosecutors' Office notifies the Court of Peace about the decision within 24 hours. The Court of Peace has 24 hours to decide whether to approve the action. There is no time limit on freezes. There is no provision in Turkish law for the sharing of seized assets with other countries. The GOT is expected to participate in a meeting in Vienna in January 2005 to prepare a UN model bilateral agreement on the disposal of confiscated proceeds of crime.

The GOT cooperates closely with the United States and with its neighbors in the Southeast Europe Cooperation Initiative (SECI). Turkey and the United States have a Mutual Legal Assistance Treaty (MLAT) and cooperate closely on narcotics and money laundering investigations. However, problems remain in terms of timely information sharing by Turkey with other countries, law enforcement and counterterrorist financing agencies.

Turkey is a member of the Financial Action Task Force (FATF). The MASAK is a member of the Egmont Group. Turkey is a party to the 1988 UN Drug Convention, the UN International Convention for Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime. Turkey has signed and ratified the COE Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds of Crime, and it will come into force on February 1, 2005. Turkey has signed, but not yet ratified, the UN Convention against Corruption. However, implementation efforts on UN anti-financial crime conventions are weak, and Turkey is not believed to be in conformity with the FATF's Special Recommendations on Terrorist Financing. The GOT asserts that legislation being prepared in early 2005 will bring Turkey into conformity with all international counterterrorist financing standards.

The Government of Turkey has publicly declared its commitment to fight money laundering and terrorist financing. However, it needs to strengthen its legislative basis for this by swiftly enacting the draft laws to strengthen MASAK's powers and to criminalize terrorist financing. Turkey should also provide training for its prosecutors, judges, and investigators. Turkey should improve the coordination among the various entities charged with responsibility in its anti-money laundering/counterterrorist financing regime and between the courts, in order to increase successful investigations and convictions for money laundering. Turkey should enact its safe harbor bill to protect the filers of STRs, which may result in increased filings. Turkey should also regulate and investigate alternative remittance networks to thwart misuse by terrorist organizations or their supporters. It should also strengthen its oversight of charities.

Turkmenistan

Turkmenistan is not an important regional financial center; there are only four international banks and a small, underdeveloped financial sector. Foreign companies operate six hotels and casinos in

Turkmenistan. These entities could be vulnerable to financial fraud and used for money laundering. Turkmenistan's national currency, the Turkmen Manat, has an unofficial, but generally accepted, exchange rate that is four times the official rate, creating an environment where money laundering is possible. Turkmenistan has no offshore companies or banks.

The Turkmen Criminal Code of June 12, 1997, Article 242 (Legalization of illegally obtained funds or other property) prohibits money laundering.

Turkmenistan's Law on currency regulations of October 8, 1993, defines general principles for conducting currency operations within the domestic and international accounts of Turkmenistan. It also details authorities and functions of state agencies in currency regulations and management of currency resources, rights and responsibilities of residents and non-residents in regard to ownership, use and handling of hard currency, directions of currency control, and responsibility for violating currency legislation. According to Presidential Decree No. 4715 of June 15, 2000, "Measures to Strengthen Currency Regulations in Turkmenistan," Turkmen ministries, departments, state enterprises and organizations are prohibited from opening bank accounts abroad except as specifically permitted by Turkmen legislation.

Presidential Resolution No. 0210/02-2 of October 17, 1995, gives the Central Bank of Turkmenistan (CBT) authority over all international financial transactions. Under this resolution, any entity making an electronic transfer of funds to an account abroad must provide documentation establishing the source of the money. The CBT regulations also permit an individual to transfer funds abroad of no more than \$15,000 every three months. Presidential Decree No. 5976 of November 20, 2002, "Strengthening the Regulations of Turkmen Bank Operations carried out in Foreign Currency," orders Turkmenistan banks to carry out correspondent, deposit, investment and other operations in foreign currency outside Turkmenistan only through open correspondent accounts in the CBT or State Foreign Economic Relations Bank ("Vnesheconombank").

Turkmenistan's tax inspectorate is responsible for uncovering any irregularities. If any irregularities are discovered, the tax inspectorate turns the matter over to Turkmen law enforcement for investigation. To date, no cases have been reported.

The current Law on Free Economic Zones in Turkmenistan adopted in 1993, and amended in 1994, determines the legal regime for conducting business in these zones, guarantees the rights of both foreign and domestic investors, forbids nationalization of enterprises and discrimination against foreign investors, and provides guarantees to foreign investors for exporting production and repatriating after-tax profits. All related enterprises are exempt from taxes on profits for the first three years of profitable operation. All goods and properties must be declared when imported into or exported from free economic zones. There are ten free economic zones in Turkmenistan including: Mary-Bayramali, Okarem-Hazar (Cheleken), Turkmenabat-Seyidi, Baharly-Serdar, Dashoguz Airport, Ashgabat-Anau, Ashgabat-Abadan, Ashgabat International Airport, Serakhs, and Guneshli Turkmenistan near Anau. The first seven zones were created in 1992, and the Serakhs zone was established in 1996. Two more zones, the international airport zone in Ashgabat and the Guneshli Turkmenistan zone near Anau, were created in 1997.

Presidential Decree No. 6097 of January 24, 2003, authorizes the Turkmenistan Supreme Court to open a centralized deposit account at the CBT for receiving payments from illegal enrichment, compensation of material loss or other assets obtained illegally and seized during inspection, investigation, and court trials for all crimes, including: organized crime, drug-trafficking and terrorist financing. The assets will remain in the Supreme Court account until the announcement of the court's final verdict on the case or until another decision is made.

The Turkmenistan Antiterrorism Law of August 15, 2003, authorizes the government to freeze resources and/or other financial assets, deposits, economic resources, and material values of:

individuals who commit or attempt to commit terrorist acts, or contribute to their commitment; organizations directly or indirectly placed under ownership or under control of such individuals; and, individuals and organizations acting on behalf of the above individuals and organizations, including any assets acquired or received through the use of property directly or indirectly belonging to or controlled by such individuals and/or organizations. Turkmen counterterrorism laws require Turkmenistan to cooperate with foreign states and international organizations in terrorism matters and render assistance to other states in criminal investigations and prosecutions of individuals involved in financing or supporting terrorist activities.

The Ministry of Foreign Affairs reports that it distributes information regarding designated individuals and organizations subject to asset forfeiture, provided by the United States, to the Ministry of Finance, the Ministry of National Security, the Ministry of Internal Affairs, and other concerned agencies.

Turkmenistan is a party to the 1988 UN Drug Convention.

The Government of Turkmenistan should enact appropriate legislation and take steps to implement a comprehensive anti-money laundering regime capable of thwarting terrorist financing that conforms to international standards. Turkmenistan should sign and ratify the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime. Turkmenistan should also consider joining or becoming an observer to the new Eurasian Group on Combating Money Laundering and Financing of Terrorism, a Financial Action Task Force (FATF) Style Regional Body established in October 2004.

Turks and Caicos

The Turks and Caicos Islands (TCI) is a Caribbean overseas territory of the United Kingdom (UK). TCI is comprised of two island groups and forms the southeastern end of the Bahamas archipelago. The U.S. dollar is the currency in use. TCI has a significant offshore center, particularly with regard to insurance and international business companies (IBCs). Its location has made it a transshipment point for narcotics-traffickers. The TCI is vulnerable to money laundering because of a large offshore financial services sector as well as because of bank and corporate secrecy laws and Internet gaming activities. There is no updated information to add for 2004.

As of 2003, the TCI's offshore sector has eight banks (five of which also deal with onshore clientele), approximately 2,500 insurance companies, 1,000 trusts, and 13,000 "exempt companies" that are IBCs, including those formed by the Enron Corporation. The Financial Services Commission (FSC) licenses and supervises banks, trusts, insurance companies, and company managers; it also licenses IBCs and acts as the Company Registry for the TCI. The Financial Services Commission employs a staff of 14 and conducts limited on-site inspections. The FSC became a statutory body under the Financial Services Commission Ordinance 2001 and became operational in March 2002, and now reports directly to the Governor.

The offshore sector offers "shelf company" IBCs, and all IBCs are permitted to issue bearer shares; however, the Companies (Amendment) Ordinance 2001 requires that bearer shares be immobilized by depositing them, along with information on the share owners, with a defined custodian. This applies to all shares issued after enactment and allows for a phase-in period for existing bearer shares of two years. Trust legislation allows establishment of asset protection trusts inoculating assets from civil adjudication by foreign governments; however, the Superintendent of Trustees has investigative powers and may assist overseas regulators.

The 1998 Proceeds of Crime Ordinance criminalizes money laundering related to all crimes and establishes extensive asset forfeiture provisions and "safe harbor" protection for good faith compliance with reporting requirements. The Law also establishes a Money Laundering Reporting Authority (MLRA), chaired by the Attorney General, to receive, analyze, and disseminate financial disclosures

such as suspicious activity reports (SARs). Its members also include the following individuals or their designees: Collector of Customs, the Superintendent of the FSC, the Commissioner of Police, and the Superintendent of the Criminal Investigation Department. The MLRA is authorized to disclose information it receives to domestic law enforcement and foreign governments.

The Proceeds of Crime (Money Laundering) Regulations came into force January 14, 2000. The Money Laundering Regulations place additional requirements on the financial sector such as identification of customers, retention of records for a minimum of five years, training staff on money laundering prevention and detection, and development of internal procedures in order to ensure proper reporting of suspicious transactions. The Money Laundering Regulations apply to banking, insurance, trustees, and mutual funds. Although the customer identification requirements only apply to accounts opened after the Regulations came into force, TCI officials have indicated that banks would be required to conduct due diligence on previously existing accounts by December 2005.

In 1999, the FSC, acting as the secretary for the MLRA, issued non-statutory Guidance Notes to the financial sector, in order to help educate the industry regarding money laundering and the TCI's anti-money laundering requirements. Additionally, it provided practical guidance on recognizing suspicious transactions. The Guidance Notes instruct institutions to send SARs to either the Royal Turks & Caicos Police Force or the FSC. Officials forward all SARS to the Financial Crimes Unit (FCU) of the Royal Turks and Caicos Islands Police Force, which analyzes and investigates financial disclosures. The FCU also acts as TCI's Financial Intelligence Unit (FIU).

As with the other United Kingdom Caribbean overseas territories, the Turks and Caicos underwent an evaluation of its financial regulations in 2000, co-sponsored by the local and British governments. The report noted several deficiencies and the government has moved to address most of them. The report noted the need for improved supervision, which the government acknowledged. An Amendment to the Banking Ordinance was introduced in February 2002 to remedy deficiencies outlined in the report relating to notification of the changes of beneficial owners, and increased access of bank records to the FSC, but the Ordinance has not yet been enacted. No legislation has yet been introduced to remedy the deficiencies noted in the report with respect to the Superintendent's lack of access to the client files of Company Service and Trust providers, nor is there legislation that clarifies how the Internet gaming sector is to be supervised with respect to anti-money laundering compliance.

The TCI cooperates with foreign governments-in particular, the United States and Canada-on law enforcement issues including narcotics-trafficking and money laundering. The FCU also shares information with other law enforcement and regulatory authorities inside and outside of the TCI. The Overseas Regulatory Authority (Assistance) Ordinance 2001, allows the TCI to further assist foreign regulatory agencies. This assistance includes search and seizure powers and the power to compel the production of documents.

The TCI is a member of the Caribbean Financial Action Task Force, and is subject to the 1988 UN Drug Convention. The Mutual Legal Assistance Treaty between the United States and the United Kingdom concerning the Cayman Islands was extended to the TCI in November 1990.

The Government of the Turks and Caicos Islands have put in place a comprehensive system to combat money laundering with the relevant legislative framework and an established FIU. The FSC has made steady progress in developing its regulatory capability and has some experienced senior staff. However, the current regulatory structure is not fully in accordance with international standards. The Turks and Caicos Islands should criminalize the financing of terrorists and terrorism, and enhance its on-site supervision program. Turks and Caicos Islands should expand efforts to cooperate with foreign law enforcement and administrative authorities. Turks and Caicos Islands should provide adequate resources and authorities to provide supervisory oversight of its offshore sector in order to further ensure criminal or terrorist organizations do not abuse the Turks and Caicos Island's financial sector.

Uganda

Uganda is not a regional financial center and is not a major hub for narcotics trafficking or terror finance. Some money laundering occurs in Uganda. It appears that a large percentage of the money laundering occurring in Uganda stems from domestic criminal actions, often related to smuggling counterfeit products, and other financial fraud. Reportedly, large drug-trafficking organizations, organized crime groups, and terror groups have historically not played a leading role in money laundering activities in the country. However, there have been reports during the past year that certain significant figures may be involved in organized international money laundering schemes, possibly related to narcotics trafficking. The Government of Uganda (GOU) does not monitor cross-border financial activities. The GOU has finally begun to draft legislation to confront money laundering on a broad scale.

Money laundering also occurs in the informal financial sectors. Many Ugandans working abroad use alternate, cash-based, informal remittance systems to send money back to their families. Many establishments in Kampala accept U.S. dollars for cash transactions. Under legislation passed in 2004, foreign exchange bureaus are not authorized to transfer money abroad. The GOU has no effective means to prevent money launderers from accessing the many charitable and faith-based organizations that operate in Uganda. Moreover, to date, the GOU has not been able to document the level to which money launderers have used these entities.

Uganda does not have an offshore banking sector. The Special Economic Zones Bill of 2002 authorized the creation of export-processing zones (EPZs) and free trade areas within Uganda, and the GOU recently received a World Bank credit to establish EPZs. However, the GOU has not yet developed either EPZs or free trade areas. In 2001, Uganda criminalized narcotics-related money laundering. In 2003, the Bank of Uganda issued know your customer guidelines for Ugandan commercial banks, though it currently is unwilling to enforce compliance. In December 2003, the Ministry of Finance submitted to Parliament a comprehensive anti-money laundering bill based on the Financial Action Task Force's (FATF's) Forty Recommendations on Money Laundering. This legislation would criminalize money laundering for all serious crimes. However, the legislation did not pass during the past year. Until the draft AML legislation passes, the GOU maintains only limited authority and ability to investigate and prosecute money laundering related violations. To date, the GOU has not prosecuted anyone for narcotics-related or any other crime-related money laundering.

Beginning in 2004, the Bank of Uganda has circulated to financial institutions the list of individuals and entities included on the UNSCR 1267 Sanctions Committee's consolidated list. The Uganda Anti-Terrorism Act (ATA) of 2002, which entered into effect in June 2002, criminalized contributing, soliciting, controlling, or managing funds used to support terrorism or terror organizations. Despite the ATA, GOU authorities believe they have limited powers to freeze or seize terrorist finance-related assets. The draft AML would significantly expand this authority allow the GOU to seize all proceeds of crime.

Uganda is a member of the East and Southern African Anti-Money Laundering Group (ESAAMLG) and served as chair from August 2003 to August 2004. Uganda is a party to the 1988 UN Drug Convention and the UN International Convention for the Suppression of the Financing of Terrorism. It has signed, but not yet ratified, the United Nations Convention against Transnational Organized Crime. At this time, Uganda and the United States do not have formal agreements to facilitate the exchange of information and records in connection with investigations relating to narcotics, terrorism, and other crimes. Nevertheless, Ugandan authorities have cooperated with U.S. law enforcement efforts. In May 2004, at the request of the United States, the GOU detained and deported two U.S. citizens to face money laundering and wire fraud charges in the U.S.

The Government of Uganda should act on the draft legislation pending since December 2003 and enact comprehensive anti-money laundering legislation that meets international standards and

construct a viable anti-money laundering regime capable of thwarting terrorist financing. It should ratify the UN Convention against Transnational Organized Crime.

Ukraine

Ukraine has made rapid progress over the past two years in adopting, enacting and implementing comprehensive anti-money laundering legislation. However, high-level and widespread corruption, organized crime, smuggling, tax evasion, and other economic crimes continue to plague Ukraine's economy. Money laundering in Ukraine is not primarily related to proceeds from narcotics-trafficking, although this activity does generate at least a portion of organized crime income. Illicit proceeds also originate in criminal activities such as fraud, manipulation of the privatization process, fictitious entrepreneurship, smuggling of goods, trafficking in weapons and human beings, and large-scale corruption by government officials and others. In June 2004, a federal jury in the United States convicted Ukraine's former Prime Minister, Pavlo Lazarenko, of money laundering, conspiracy to launder money, wire fraud, and transportation of stolen property. Ukraine provided assistance to the United States in connection with this prosecution.

The Ministry of Interior registered 39,300 economic crimes, or 6.2 percent more than over the same period of 2003, including 371 cases of money laundering, 3,500 cases of bank fraud, and 1,700 cases of smuggling. Overall, 37 percent of economic crimes involve real and private property, 38 percent are related to misuse of public office, and 20 percent relate to business and corporate activity. The market for smuggled goods remains significant in Ukraine, especially for textiles, automobiles, alcohol, and tobacco products.

Ukraine has created eleven Free Economic Zones (FEZs), and nine Priority Development Territories (PDTs), reportedly covering some 10 percent of Ukrainian territory. In August 2002, the Cabinet of Ministers introduced a moratorium on the establishment of FEZs and PDTs until January 1, 2005. There is a separate law for each FEZ that defines a set of tax exemptions enjoyed by the FEZ. Creation of FEZs was originally intended to enliven business and attract investment to depressed territories, but effectiveness of their operation is disputable. Legislative loopholes permit companies to misuse FEZ status, and to avoid taxes and import duties. The State Department of Financial Monitoring has uniform policy regarding economic entities operating throughout the country and does not envisage any specific provisions on FEZs.

When the Financial Action Task Force (FATF), in September 2001, placed Ukraine on the list of non-cooperative countries and territories in the fight against money laundering (NCCT), it noted that Ukraine lacked (1) a complete set of anti-money laundering (AML) laws, (2) an efficient mandatory system for reporting suspicious transactions to a Financial Intelligence Unit (FIU), (3) adequate customer identification requirements, and (4) adequate resources at present to combat money laundering. Following the FATF action, the U.S. Treasury Department issued an advisory to all U.S. financial institutions instructing them to "give enhanced scrutiny" to all transactions involving Ukraine. At its September 2002 plenary, FATF extended its original October 2002 deadline, by which Ukraine had to enact comprehensive, effective anti-money laundering legislation, or it would face the possibility of a recommendation for countermeasures from the FATF member countries, until December 15, 2002. On November 28, 2002, President Kuchma signed into law Ukrainian Law No. 249-IV, an anti-money laundering package "On Prevention and Counteraction of the Legalization (Laundering) of the Proceeds from Crime" (the Basic AML Law). On December 20, 2002, the FATF determined that Ukraine's new AML statute did not meet international standards and announced a recommendation that FATF members impose countermeasures on Ukraine. Under Section 311 of the USA PATRIOT Act, on December 20, 2002, the United States designated Ukraine as a jurisdiction of primary money laundering concern. In response to the imminent threat of countermeasures, Ukraine passed further comprehensive legislative amendments in December 2002 and February 2003, in

accordance with FATF recommendations. Immediately upon passage of the February amendments, the FATF withdrew its call for members to invoke countermeasures and the United States followed suit on April 17, 2003, by revoking Ukraine's designation under Section 311 of the USA PATRIOT Act as a jurisdiction of primary money laundering concern.

By passing comprehensive anti-money laundering legislation, Ukraine was not only able to avoid the countermeasures threatened by the FATF, but to initiate the process of NCCT de-listing. At the FATF plenary in September 2003, Ukraine was invited to submit an implementation plan, and upon review by the FATF Europe Review Group (ERG), an on-site visit to assess Ukraine's progress in developing its AML regime was conducted on January 19-23, 2004. The positive results of the on-site visit by the FATF evaluation team were reported to the ERG, and Ukraine was accordingly de-listed at the FATF plenary on February 25, 2004. As a condition for de-listing, Ukraine continues to undergo monitoring by the FATF on implementation of its AML regime.

As a member of the Council of Europe, Ukraine has undergone two mutual evaluations by that group's Select Committee of Experts on the Evaluation of Anti-Money Laundering Measures (MONEYVAL), in May 2000 and September 2003. Although Ukraine criminalized drug money laundering in 1995, the initial 2000 mutual evaluation report was highly critical of Ukraine. The 2003 evaluation presented quite a different finding, as evaluators noted that a number of the previously noted deficiencies had been remedied, especially with regard to passage of the basic AML law in November 2002.

Two subsequent sets of amendments to the Basic AML Law, adopted in December 2002 and February 2003, have further helped bring Ukraine into compliance with internationally-recognized standards, as set forth by the FATF, UN and European Union (EU) conventions and directives on money laundering, and the Basel Committee's "Core Principles for Effective Banking Supervision". Effective September 1, 2001, the Government of Ukraine (GOU) criminalized non-drug money laundering in the Criminal Code of Ukraine. Subsequent amendments adopted in January 2003 include willful blindness provisions and expand the scope of predicate crimes for money laundering to include, with certain exceptions, any action that is punishable under the criminal code by imprisonment of three years. Provisions in the criminal code also address drug-related money laundering offenses and provide for the confiscation of proceeds generated by criminal activities.

The GOU enacted the "Act on Banks and Banking Activities"(Act) of January 2001, which imposes anti-money laundering measures upon banking institutions. The Act prohibits banks from opening accounts for anonymous persons, requires the reporting of large transactions and suspicious transactions to state authorities, and provides for the lifting of bank secrecy pursuant to an order of a court, prosecutor, or specific state body. Further amendments in February 2003 require banks to conduct due diligence to identify beneficial account owners prior to opening an account or conducting certain transactions, and to maintain records on suspicious transactions and the people carrying them out for a period of five years. The AML legislation also mandates the establishment of AML procedures in first-line financial institutions such as banks; stock, securities, and commodity brokers; and insurance companies, among other entities. Subsequent amendments mandate establishment of bank compliance programs and the appointment of bank compliance officers who may be subject to criminal liability for non-compliance. They also require employees of entities that carry out financial transactions to report transactions suspected for money laundering or terrorism finance. The AML legislation includes a "safe harbor" provision that protects reporting institutions from liability for cooperating with law enforcement agencies. In June 2004, the National Bank of Ukraine (NBU) drafted amendments to the Act, strengthening anti-money laundering requirements for banks. In particular, it mandates that the AML compliance officer also be a bank director, forbids banks to have correspondent accounts with shell banks, and authorizes the NBU to obtain information from other state authorities and legal persons in order to determine the business reputation and financial circumstances of prospective bank owners and directors. Travelers must declare cross-border transportation of cash sums exceeding \$1000.

In August 2001, "The Law on Financial Services and State Regulation of the Market of Financial Services" (August 2001 Law) was signed. The August 2001 Law establishes regulatory controls over non-bank financial institutions that manage insurance, pension accounts, financial loans, or "any other financial services involving savings and money from individuals." Specifically, it imposes record keeping requirements on covered entities and identifies the responsibilities of regulatory agencies. The August 2001 Law creates the State Commission on Regulation of Financial Services Markets, which, together with the NBU and the State Commission on Securities and the Stock Exchange, has the primary responsibility for regulating financial services markets. Amendments introduced in February 2003 set forth additional requirements similar to those prescribed for banks for all non-bank financial institutions. Additionally, in August 2003, the State Commission established a State Register of financial institutions; as of December 2004, it contains information on over 1200 non-bank financial institutions.

Significantly, amendments to Article 11 of the August 2001 Law reduce the monetary threshold over which transactions and operations are subject to compulsory financial monitoring, from Ukrainian hryvnias (UAH) 300,000 (approximately \$57,750) for cashless payments and UAH 100,000 (approximately \$19,250) for payments in cash to one single amount for both, UAH 80,000 (approximately \$15,400). The compulsory transaction-reporting threshold applies only if the transaction also meets one or more suspicious activity indicators as set forth in the law. Any transaction that is suspected of being connected to terrorist activity is to be reported to the appropriate authorities immediately.

In November 2004, the GOU approved and sent to Parliament for review a draft law "On Amending Some Legislative Acts of Ukraine on Prevention to Legalization (Laundering) of the Proceeds from Crime and Terrorist Financing." The draft law, which proposes amendments to several pieces of existing legislation, is designed to bring Ukraine into compliance with the revised FATF Forty Recommendations, the Special Recommendations on Terrorist Financing, and the UN International Convention for the Suppression of the Financing of Terrorism. Proposed amendments to the Basic AML Law include expanding the list of covered entities to include financial intermediaries, such as real estate dealers, lawyers, notaries, advocates, public accountants, auditors, dealers in precious metals and stones, and others. These amendments also would widen the list of supervisory and regulatory financial monitoring authorities over such entities; in particular, designating the Ministry of Finance as responsible for gambling institutions, legal persons that organize any lotteries, dealers in precious metals and precious stones, public accountants and auditors; the State Committee on Land Resources for real estate dealers (realtors); the Ministry of Justice for notaries, lawyers, businesses providing incorporation and registration services for enterprises as well as management services of enterprises and property; and the Ministry of Transport and Communications for postal operators.

Additional proposed amendments to the Basic AML law include provisions to allow financial intermediaries to suspend suspected money laundering or terrorist finance related financial transactions for two working days and to require them to notify the Financial Intelligence Unit (FIU)-the entity to be designated as the authority for combating terrorist financing in Ukraine-of the suspension within one day. The FIU is authorized to suspend the transaction for an additional five working days. Customer due diligence (CDD) requirements for financial intermediaries would also be expanded to bring them into conformity with the revised FATF recommendations on customer identification and establishment of beneficial ownership. The Code of Ukraine on Administrative Offenses also would be supplemented to provide new supervisory and regulatory bodies with the authority to impose administrative fines on financial intermediaries for non-compliance with AML requirements. Notably, the draft law also amends the Ukrainian Criminal Code, criminalizing terrorist financing as a separate crime, and lowering the threshold of predicate offenses for money laundering from three to two years. Although the first reading in Parliament did not secure enough votes for

adoption of the draft law, it is currently under review and will most likely undergo a second vote in 2005.

On December 10, 2001, the Ukrainian Presidential Decree "On Measures to Counteract Legalization (Laundering) of Proceeds from Crimes" mandated the creation of the State Department of Financial Monitoring (FMD) by January 1, 2002, to function as Ukraine's FIU. The FMD became operational on June 12, 2003. Under the terms of this decree, the FMD is an independent authority, administratively subordinated to the Ministry of Finance, and is the sole agency authorized to receive and analyze financial information from first line financial institutions. Ukraine's basic AML law establishes a two-tiered system of financial monitoring and combating of criminal proceeds, including terrorist financing: entities of initial financial monitoring, or those legal entities that carry out financial transactions; and entities of state financial monitoring, or those regulating entities charged with regulation and supervision of the activities of the service providers. The overall regulatory authority in the system is vested in the FMD. The FMD is an administrative agency with no investigative or arrest authority. It is authorized to collect and analyze suspicious transactions, including those related to terrorist financing, and to transfer financial intelligence information to competent law enforcement authorities for investigation. By presidential decree on September 28, 2004, the FMD was elevated to a Central Executive agency with special status. The change, which takes effect on January 1, 2005, subordinates the new agency, known as the Financial Monitoring Committee (FMC), directly to the Cabinet of Ministers. Beginning January 2005, the FMD plans to open territorial offices in each of Ukraine's 27 administrative regions. Due to the change in status of the FIU and also to the creation of the territorial offices, the FIU staff size has correspondingly been increased from 100 to 338 persons.

In 2003, the FMD received 220,427 suspicious transaction reports (STRs), the bulk of which have been reported by banks. Approximately ten percent of these were identified by the FMD for "active research" and 3,211 were sent to competent law enforcement agencies as part of 18 case referrals. In 2004, the FMD received 725,959 STRs, 96.6 percent filed by banks. Of the 3.4 percent of STRs filed by non-banking financial intermediaries, the insurance sector comprised over 67 percent of the reporting. The FMD referred 164 cases comprising 20,929 STR filings to law enforcement authorities for the calendar year, seven of which were linked to terrorist financing.

From June 12, 2003, the date the FMD became operational, through December 31, 2004, FMD has referred a total of 182 cases to law enforcement agencies, 44 of which were sent to the General Prosecutor's Office (GPO), 42 to the Ministry of Interior, 50 to the Security Service of Ukraine, and 46 to the State Tax Administration of Ukraine. As a result of subsequent investigation, law enforcement agencies initiated 32 criminal cases based upon 67 original case referrals. Eleven of these cases were initiated based on suspicion of money laundering, with predicate offenses ranging from fraud, fictitious entrepreneurship, unlawful activity with payment cards, forgery, and abuse of power or official position. Three criminal cases have been passed to the courts and others are currently under investigation. Additionally, during the first eight months of 2004, the State Security Service filed 71 criminal cases on money laundering charges. The Ministry of Interior reported that over 10 months of 2004 it detected 398 crimes connected to money laundering. Eighty-three of them were committed by criminal groups involved in laundering proceeds from trafficking in drugs or arms, smuggling and tax evasion.

Ukraine has an asset forfeiture regime. Article 59 of the Ukrainian Criminal Code provides for the forceful seizure of all or a part of the property of a convicted person for grave and special grave offenses as set forth in the Special part of the code. With respect to money laundering, Article 209 allows for the forfeiture of criminally obtained money and other property.

In response to earlier criticisms by the FATF regarding lack of coordination and information-sharing among agencies, the Cabinet of Ministers issued Decree No. 1896 on December 10, 2003, establishing a Single State Informational System (SSIS) of Prevention and Counteraction of Money Laundering

and Terrorism Financing. This is a functioning system that electronically unites databases of 17 ministries and agencies through a central server located at the FIU and sub-servers at each of the participating state agencies, thereby allowing the FIU electronic access to virtually all information housed in the databases of the other agencies. In order to foster better interagency cooperation, on September 22, 2004, the Cabinet of Ministers adopted a resolution establishing a Governmental Coordination Council on Functioning of a Single State Informational System. The Council will be comprised of high-level governmental officials in the Cabinet of Ministers, Ministries of Economy, Finance and Interior, Customs Office, and other agencies, including the FIU, and will address organizational issues of SSIS functioning and expansion.

Amendments to criminalize terrorist financing as a distinct and separate crime and to vest the Security Service of Ukraine with authority to investigate terrorist financing have been proposed as part of the draft law submitted to Parliament in November 2004. The GOU has cooperated with U.S. Government efforts to track and freeze the financial assets of terrorists and terrorist organizations. The NBU, State Tax Administration, Ministry of Finance, and State Security Service are fully aware of U.S. Executive Order (E.O.) 13224 and subsequent updates and addenda to the lists of terrorists and terrorist organizations. All agencies have tracked data that was provided and have exchanged information. The NBU has issued orders to banks to freeze accounts of individuals or organizations listed in the E.O. Ukraine plans to sign a U.S.-Ukraine agreement on mutual admission and actions on a list of persons/entities related to terrorist activities.

The GOU has also taken steps to implement UN Security Council resolutions relevant to fighting terrorism. The Cabinet of Ministers, on December 22, 1999, issued a resolution ordering agencies and banks to freeze assets and funds of the entities and individuals on the UNSCR 1267 Sanctions Committee's consolidated list. A Cabinet of Ministers resolution instructed the NBU to order all banks to comply with UNSCR 1333. In response to these measures, the NBU sent letters to regional departments and commercial banks to execute all applicable provisions of UNSCRs 1267 and 1333. The FMD acknowledges the existence and use of alternative remittance systems such as hawala. FMD personnel have attended seminars and exchanged information about such systems. The FMD and security agencies monitor charitable organizations and other non-profit entities that might be used to finance terrorism.

Ukraine will host the development of a prototype system for enhancing international data exchange and case collaboration (INDECCS). It is expected that the prototype will be completed in the spring of 2005 for presentation and review by international AML/CTF organizations. If successful, the new system promises to dramatically enhance the speed and quality of international information exchange, and will introduce new real time collaboration capabilities among and between participating countries.

FMD also has authority to conclude interagency agreements, and can exchange intelligence on financial transactions with a money laundering or terrorist financing nexus with other FIUs. In June 2004, FMD joined the Egmont Group. As of December 2004, 19 memoranda of understanding were concluded between the FMD and the FIUs of Russia, the Slovak Republic, Estonia, Italy, Spain, Belgium, the Czech Republic, Colombia, Georgia, France, Serbia, Macedonia, Slovenia, Poland, Romania, Portugal, Cyprus, Brazil, and Panama. However, as a member of Egmont, Ukraine may also exchange information with any other FIU whose legislation similarly allows information exchange without a memorandum of understanding in place. Under this framework, the FMD regularly exchanges information with the United States and other Egmont members, and has reported a 50 percent increase in information exchange with foreign FIUs since its accession to the Egmont Group.

The U.S.-Ukraine Treaty on Mutual Legal Assistance in Criminal Matters was signed in 1998, and entered into force in February 2001. A bilateral Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with respect to Taxes on Income and Capital, which provides for the

exchange of information in administrative, civil and criminal matters, is also in force. The GOU has also participated in GUUAM (Georgia, Ukraine, Uzbekistan, Azerbaijan and Moldova) for the development of a joint law enforcement center that would cover asset seizure issues on a regional basis.

Ukraine ratified the UN Convention against Transnational Organized Crime in May 2004. Ukraine is a party to the 1988 UN Drug Convention as well as the Council of Europe Convention on Laundering, Search, Seizure, and Confiscation of the Proceeds from Crime. In March 2002, the European Convention on the Suppression of Terrorism was signed. Ukraine ratified the UN International Convention for the Suppression of the Financing of Terrorism in September 2002. Ukraine also became a signatory to the UN Convention against Corruption.

The Government of Ukraine has demonstrated considerable political will to combat money laundering by strengthening, clarifying, and implementing its newly adopted laws. As evidenced by the positive steps taken by its FIU, the NBU, and other actors in the financial and legal sectors, Ukraine has clearly shown its ability to implement a comprehensive anti-money laundering regime. Ukraine should criminalize terrorist financing as a distinct and separate crime. - Ukraine should continue to enhance and implement its newly adopted anti-money laundering regime, and should enact its pending legislation to expand coverage of its anti-money laundering laws to financial intermediaries. Law enforcement agencies should give higher priority to investigating money laundering cases. Both law enforcement officers and the judiciary lack a fundamental understanding of the nature of money laundering as a criminal offense. Both should be provided training in the theoretical and practical aspects of investigation and prosecution of money laundering.

United Arab Emirates

The United Arab Emirates (UAE) is an important financial center for the Gulf region. The UAE is still a largely cash-based society. However, the financial sector is modern and progressive. Dubai, in particular, is a major international banking center. There is also a growing offshore sector. The UAE's robust economic development, political stability, and liberal business environment have attracted a massive influx of people and capital. Because of the UAE's geographic location and role as the primary transportation and trading hub for the Gulf States, East Africa, and South Asia, and with its expanding trade ties with the countries of the former Soviet Union, the UAE has the potential to be a major center for money laundering. The large number of resident expatriates from the above regions, many of whom are engaged in legitimate trade with their homelands, or send remittances there, exacerbates that potential. Approximately 80 percent of the UAE population is comprised of non-nationals. The laundering of proceeds from the illegal narcotics trade is known to occur in UAE, and given the country's close proximity to Afghanistan, where most of the world's opium is produced, such narcotics-trafficking is a likely source. In addition, the potential exploitation of the UAE financial system by foreign terrorist groups is a serious concern.

Following the September 11 terrorist attacks in the United States, and amid revelations that terrorists had moved funds through the UAE, the Emirates' authorities acted swiftly to address potential vulnerabilities and, in close concert with the United States, to freeze the funds of groups with terrorist links, including the Al-Barakat organization, which was headquartered in Dubai. Both federal and Emirate-level officials have gone on record as recognizing the threat money laundering activities in the UAE pose to the nation's security. They have taken significant steps in 2004 to better monitor cash flows through the UAE financial system and to cooperate with international efforts to combat terrorist financing, including the passage of a law that specifically criminalizes terrorist financing.

Money Laundering and Financial Crimes

Law No. 4 of 2002 criminalizes all forms of money laundering activities. The law calls for stringent reporting requirements for wire transfers exceeding \$545 and currency importation/exportation limits set roughly at \$11,700. The law imposes stiff criminal penalties (up to seven years in prison and a fine of up to 300,000 dirhams (\$81,700), as well as seizure of assets if found guilty) for money laundering. It also provides safe harbor provisions for those who report such crimes. Banks and other financial institutions (exchange houses, investment companies, and brokerage houses) are supervised by the Central Bank (CB) and are required to follow strict “know your customer” guidelines; all financial transactions over \$54,000, regardless of their nature, must be reported to the CB. Financial institutions also are required to maintain records on transactions for five years.

In July 2000, the UAE established the National Anti-Money Laundering Committee (NAMLC), under the Chairmanship of the Central Bank’s Governor, with representatives from the Ministries of Interior, Justice, Finance, and Economy; the National Customs Board; the Secretary General of the Municipalities; the Federation of the Chambers of Commerce; and five major banks and money exchange houses (as observers). It has overall responsibility for coordinating anti-money laundering policy.

The supervision of the UAE banking and financial sector falls under the authority of the CB. The CB issues instructions and recommendations as it deems appropriate and is permitted to take any necessary measure to ensure the integrity of the UAE’s financial system. The CB issues licenses to financial institutions under its supervision and may impose administrative sanctions for compliance violations. The CB has issued a number of circulars requiring customer identification and providing for a basic suspicious transaction-reporting obligation. When suspicious activity is reported from a financial institution, the Central Bank is able to freeze suspect funds, make appropriate inquiries, and coordinate with law enforcement officials.

In an effort to consolidate and expand anti-money laundering requirements for the financial sector, the CB issued Circular 24/2000 in November 2000 to all banks, money exchanges, finance companies, and other financial institutions operating in the UAE. This circular delineates the procedures to be followed for the identification of natural and juridical persons, the types of documents to be presented, and rules on what customer records must be maintained on file at the institution. Other provisions of Circular 24/2000 call for customer records to be maintained for a minimum of five years, and further require that they be periodically updated as long as the account is open.

On July 29, 2004, the UAE strengthened its legal authority to combat terrorism and terrorist financing, by passing Federal Law Number 1 of 2004 on Combating Terror Crimes (Law No. 1/2004). The law sets stiff penalties for the crimes covered, including life imprisonment and the death penalty. It also provides for asset seizure or forfeiture. Under the law, founders of terrorist organizations face up to life imprisonment. The law also penalizes the illegal manufacture, import, or transport of “non-conventional weapons” or their components, with the intent to use them in a terrorist activity.

Law No. 1/2004 specifically criminalizes the funding of terrorist activities or terrorist organizations. Article 12 provides that raising or transferring money with the “aim or with the knowledge” that some or all of this money will be used to fund terrorist acts is punishable by “life or temporary imprisonment,” whether or not these acts occur. Law No. 1/2004 grants the Attorney General (or his deputies) the authority to order the review of information related to the accounts, assets, deposits, transfer, or property movements on which the Attorney General has “sufficient evidence to believe” are related to the funding or committing of a terror activity stated in the law. The law also provides for asset seizure and confiscation. Article 31 gives the Attorney General the authority to seize or freeze assets until the investigation is completed. Article 32 confirms the Central Bank’s authority to freeze accounts for up to seven days if it suspects that the funds will be used to fund or commit any of the crimes listed in the law. The law also allows the right of appeal to “the competent court” of any asset freeze under the law. The court will rule on the complaint within 14 days of receiving the complaint.

Law No. 1/2004 also sets up a “National Anti-Terror Committee” with representatives from the Ministries of Foreign Affairs, Interior, Justice, and Defense, the Central Bank, the State Security Department, and the Federal Customs Authority. The Committee serves as a UAE interagency liaison, implements UN Security Council Resolutions on terrorism, and shares information with its foreign counterparts as well as with the United Nations (UN).

Law 4/2002 provided for the establishment of the Anti-Money Laundering and Suspicious Case Unit (AMLSCU), which acts as the Financial Intelligence Unit (FIU) and is housed within the CB. Financial institutions under the supervision of the CB are required to report suspicious transactions to the AMLSCU, which is charged with examining them and coordinating the release of information with law enforcement and judicial authorities. It has the authority to request information from foreign regulatory authorities in carrying out its preliminary investigation of suspicious transaction reports. The AMLSCU—a member of the Egmont Group since June 2002—exchanges information with foreign FIUs on a reciprocal basis, and has provided information relating to investigations carried out by the United States and other countries. In June 2004, the AMLSCU hosted a joint training session in Abu Dhabi for the nations of South Asia that are taking steps toward setting up their anti-money laundering regimes, including FIUs. The seminar focused on building an effective anti-money laundering regime, information technology issues, bilateral cooperation and mutual assistance, regulatory issues, hawala, international initiatives, and basic intelligence analysis.

From December 2000 to November 30, 2004, the AMLSCU received 2259 reports of suspicious transactions; of that number, 2148 were investigated by either the AMLSCU, the Central Bank, or law enforcement officials. In 27 cases, the Central Bank issued freeze orders and referred the cases to the Public Prosecutor; 12 of those cases are currently in the process of prosecution for money laundering, and 9 are in the process of judgment for money laundering and confiscation of proceeds.

Some money laundering in the UAE occurs in the formal banking system, including the numerous money exchange houses, but it is more prevalent in the informal and largely undocumented hawala remittance system. The fact that hawala is an undocumented and nontransparent system, and is highly resilient in response to enforcement and regulatory efforts, makes it difficult to control and an attractive mechanism for terrorist and criminal exploitation. The UAE has begun to make progress in confronting its vulnerability to the unregulated use of hawala. New regulations to improve oversight of the hawala system were implemented in 2002, when the CB required hawala brokers to register, submit the names and addresses of senders and beneficiaries, and to file suspicious transaction reports. As of January 2005, the number of applicants to obtain a hawala dar (hawala brokers) certificate reached 151, of which 128 were issued and the remaining 23 are in the process of fulfilling the requirements. There is no accurate estimate of the total number of UAE-based hawala brokers.

The UAE hosted its second International Conference on Hawala in April 2004, which was attended by approximately 350 participants. Delegates included government officials, executives of supervisory institutions, banking experts, and law enforcement officials from the United States, Latin America, Asia, and Europe. The conference statement recognized the key role that hawala and other informal funds transfer systems play in facilitating remittances, particularly those of migrant workers, although such systems can be abused for illegal activities. The conference reaffirmed the “The Abu Dhabi Declaration on Hawala,” which calls for the establishment of a sound mechanism to regulate hawala.

The new attention on hawala is encouraging more people in the country to use regulated exchange houses. Representatives of money exchange business noted that their sector could transfer money anywhere, even to a private residence, for a fee competitive with hawala, persuading many to use the formal, and more secure, banking network.

In January 2002, the UAE CB published a declaration requirement for cash imported into the country above \$10,900. The regulations provide customs services with the authority to seize undeclared cash; however, strict enforcement is still lacking. The UAE National Anti-Money Laundering Committee

held its Second Annual Conference in December 2004 under the title “Customs Inspectors and the Implementation of the Cash Declaration Regulation” to look at ongoing implementation efforts.

The UAE Government (UAEG) also has admitted the need to better regulate “near-cash” items such as gold, jewelry, and gemstones, especially in the burgeoning markets in Dubai. The UAE has participated in the Kimberley Process Certification Scheme for Rough Diamonds (KPCS) since November 2002 and began certifying rough diamonds exported from the UAE on January 1, 2003. In 2004, the UAE was the first KPCS participant country to volunteer for a “peer review visit” on internal control mechanisms.

The Dubai Metals and Commodities Center (DMCC) is the quasi-governmental organization charged with issuing KP certificates in the UAE, and employs four individuals full-time to administer the KP program. Prior to January 1, 2003, the DMCC circulated a sample UAE certificate to all KP member states and embarked on a public relations campaign to educate the estimated 50 diamond traders operating in Dubai concerning the new KP requirements. UAE customs officials may delay or even confiscate diamonds entering the UAE from a KP member country without the proper certificate.

The Securities and Commodities Authority (SCA) supervises the country’s two stock markets. In February 2004, it sent out anti-money laundering guidelines to brokers and the markets, instructing them to verify client information when opening accounts and created a reporting requirement for cash transactions above \$10,900. The SCA also instructed the markets and brokers to file suspicious transaction reports for initial analysis before forwarding them to the AMLSCU for further action. The instructions also provide for a five-year record keeping requirement.

Dubai’s booming property market might also be susceptible to money laundering abuse. In 2002, Dubai permitted three companies to sell “freehold” properties to non-citizens. Several other emirates (though not Abu Dhabi) have announced their intention to follow suit. The intense interest in these properties, and rumors of cash purchases, sparked concerns about the potential for money laundering. As a result, developers have stopped accepting cash purchases, alleviating some of the concerns about possible money laundering activities in this sector of the economy.

The UAEG monitors registered charities in the country and requires them to keep records of donations and beneficiaries. The Ministry of Labor and Social Affairs (MLSA) regulates charitable organizations in the UAE. The CB prohibits banks from opening accounts for charities, unless they are registered with the MLSA. The UAEG is much more sensitive since September 11 to the oversight of charities and the accounting of transfers abroad. In 2002, the UAEG mandated that all licensed charities interested in transferring funds overseas must do so via one of three umbrella organizations: the Red Crescent Authority, the Zayed Charitable Foundation, or the Muhammad Bin Rashid Charitable Trust. These three quasi-governmental bodies are in a position to ensure that overseas financial transfers go to legitimate parties. As an additional step, the UAEG has contacted the governments in numerous aid receiving countries to compile a list of recognized acceptable recipients for UAE charitable assistance.

The UAE is noted for its growing number of free trade zones (FTZs). Every emirate except Abu Dhabi has at least one functioning FTZ. There are over a hundred multinational companies located in the FTZs with thousands of individual trading companies. The FTZs permit 100 percent foreign ownership, no import duties, full repatriation of capital and profits, no taxation, and easily obtainable licenses. Companies located in the free trade zones are treated as being offshore or outside the UAE for legal purposes. However, UAE law prohibits the establishments of shell companies and trusts, and does not permit non-residents to open bank accounts in the UAE.

In March 2004, the UAEG passed Federal Law No. 8 Regarding the Financial Free Zones (Law No. 8/2004). The new law exempts FFZs and their activities from UAE federal civil and commercial laws, but subjects them and their operations to federal criminal laws including the Anti-Money Laundering Law No. 4/2002 and the Anti-Terror Law No. 1/2004. The new law and a subsequent federal decree

also allowed for the establishment, in September 2004, of the UAE's first financial free zone (FFZ), known as the Dubai International Financial Center (DIFC). Sheikh Mohammed bin Rashid Al-Maktoum, Crown Prince of Dubai and UAE Defense Minister, is the President of the DIFC, which is currently the only FFZ operating in the UAE.

With regard to banking activities in the FFZs, Law No. 8/2004 limits licenses to branches of companies, joint companies, and wholly owned subsidiaries, provided that they "enjoy a strong financial position and systems and controls, and are managed by persons with expertise and knowledge of such activity." The law prohibits companies licensed in the free zone from dealing in UAE currency (dirham) or taking "deposits from the state's markets." It further stipulates that the licensing standards of companies "shall not be less than those applicable in the state." The Law empowers the Emirates Stocks and Commodities Authority to approve the listing of any company listed on any UAE stock market in the free zone and the licensing of any UAE licensed broker. The law limits any insurance activity in the UAE carried out by a free zone company, to reinsurance. It further gives competent authorities in the Federal Government the power to inspect financial free zones and submit their findings to the UAE cabinet.

DIFC regulations provide for an independent regulatory body, the Dubai Financial Services Authority (DFSA), which reports to the office of Dubai Crown Prince and an independent Commercial Court. Observers called the independence of the DFSA into question in the summer of 2004, even prior to the inauguration of the DIFC, with the high profile firing of the chief regulator and the head of the regulatory council (the supervisory authority). Subsequent to the firing, Dubai passed laws which appear to give the DFSA more regulatory independence from the DIFC, although these laws have not yet been tested. The DFSA, whose regulatory regime is generally modeled after the United Kingdom system, is the only authority responsible for licensing firms providing financial services in the DIFC. There are currently two banks and three other financial firms operating in the DIFC. The DFSA's rules prohibit offshore casinos or Internet gaming sites' operating in the UAE. The DFSA requires firms to send suspicious transaction reports to the AMLSCU (along with a copy to the DFSA). Although firms operating in the DIFC are subject to Law No 4/2002, the DFSA has also issued its own anti-money laundering regulations and supervisory regime, creating some ambiguity as to the authority of the CB and AMLSCU within the DIFC.

The UAE is a party to the 1988 UN Drug Convention. It signed the UN Convention against Transnational Organized Crime in 2002, but has not yet ratified it. It has yet to sign the UN International Convention for the Suppression of the Financing of Terrorism. It has entered into a series of bilateral agreements on mutual legal assistance. The CB has circulated to all financial institutions under its supervision the UNSCR 1267 Sanctions Committee's consolidated list. To date, the CB has frozen a total of \$3.13 million in 18 bank accounts in the UAE since September 11, 2001. The UAEG has also frozen other financial assets under Law 4/2002. Additionally, the AMLSCU has provided international organizations and its counterpart FIUs information on cases related to terrorist financing and anti-money laundering. In April 2004, the CB Governor announced that the CB had frozen all accounts related to a company suspected of trying to smuggle nuclear materials.

The UAE was very active in supporting the creation of the Middle East and North Africa Financial Action Task Force (MENAFATF) that was inaugurated in Bahrain in November 2004; the UAE was one of the original charter signatories. MENAFATF is a FATF-style regional body. The creation of the MENAFATF is critical for pushing the region to improve the transparency and regulatory frameworks of its financial sectors.

The United Arab Emirates Government has begun constructing a far-reaching anti-money laundering program. The United Arab Emirates has sought to crack down on potential vulnerabilities in the financial markets and is cooperating in the international effort to prevent money laundering, particularly by terrorists. There has been a substantial improvement on behalf of the AMLSCU in the

area of information sharing with other countries. However, there remain areas requiring further action. The Central Bank and AMLSCU should clarify and assert their jurisdiction in enforcing federal laws with respect to the DFIC. Law enforcement and customs officials should begin to take the initiative to recognize money laundering activity and proactively develop cases without waiting for referrals from the AMLSCU. United Arab Emirates officials should give greater scrutiny to trade-based money laundering in all of its forms. The Central Bank should be more diligent in its efforts to encourage hawala dealers to participate in the registration program. The AMLSCU should take a more active role in participating in international anti-money laundering gatherings and increasing its ties with other FIUs. The United Arab Emirates should ratify both the UN Convention against Transnational Organized Crime and the UN International Convention for the Suppression of the Financing of Terrorism.

United Kingdom

The United Kingdom (UK) plays a leading role in European and world finance and remains attractive to money launderers because of the size, sophistication, and reputation of its financial markets. Although drugs are still a major source of illegal proceeds for money laundering, the proceeds of other offenses, such as financial fraud and the smuggling of people and goods, have become increasingly important. The past few years have witnessed the movement of cash placement away from High Street banks and mainstream financial institutions. Criminals continue to use bureaux de change, cash smuggling into and out of the UK, gatekeepers (including solicitors and accountants), and the purchase of high-value assets as disguises for illegally obtained money, and credit/debit card fraud has been on the increase since 2002.

The UK has implemented the provisions of the European Union's two Directives on the prevention of the use of the financial system for the purpose of money laundering and the Financial Action Task Force (FATF) Forty Recommendations on Money Laundering. Narcotics-related money laundering has been a criminal offense in the UK since 1986. The laundering of proceeds from other serious crimes is criminalized by subsequent legislation. Banks and non-bank financial institutions in the UK must report suspicious transactions.

In November 2001, money laundering regulations were extended to money service bureaus (e.g., bureaux de change, money transmission companies). As of January 1, 2004, more business sectors are subject to formal suspicious transaction reporting (STR) requirements, including attorneys, solicitors, accountants, real estate agents, and dealers in high-value goods such as cars and jewelry. Sectors of the betting and gaming industry that are not currently regulated are being encouraged to establish their own codes of practice, including a requirement to disclose suspicious transactions.

The Proceeds of Crime Act 2002 was enacted on July 24, 2002, and entered into force on January 1, 2003. The final regulations took effect on March 1, 2004. The Act creates, for the regulated sector, a new criminal offense of failing to disclose suspicious transactions in respect to all crime, not just narcotics- or terrorism-related crimes, as was the case previously. Along with the Act came an expansion of investigative powers relative to large movements of cash in the UK. In light of this, Her Majesty's (HM) Customs has increased its national priorities to include investigating the movement of cash through money exchange houses and identifying unlicensed money remitters. A total of \$159.6 million (£84 million) has been seized under the Act to date.

The UK's banking sector provides accounts to residents and nonresidents, who can open accounts through private banking activities and various intermediaries that often advertise on the Internet and also offer various offshore services. Private banking constitutes a significant portion of the British banking industry. Both resident and nonresident accounts are subject to the same reporting and record keeping requirements. Individuals typically open nonresident accounts for a tax advantage or for investment purposes.

Bank supervision falls under the Financial Services Authority (FSA). The FSA's primary responsibilities relate to the safety and soundness of the institutions under its jurisdiction. The FSA also plays an important role in the fight against money laundering through its continued involvement in the authorization of banks, and investigations of money laundering activities involving banks. The FSA regulated approximately 10,500 institutions and approved of 160,000 individuals in key positions (compliance officers, etc.) during the first half of 2003. From October of 2003, the FSA increased its regulatory role to include mortgage and general insurance agencies, totaling over 30,000 institutions. The FSA administers a civil-fines regime and has prosecutorial powers. The FSA has the power to make regulatory rules with respect to money laundering, and to enforce those rules with a range of disciplinary measures (including fines) if the institutions fail to comply.

In December 2003, the FSA fined Abbey National, the UK's sixth largest bank, \$4.37 million (£2.3 million), for "extremely serious failings" in its anti-money laundering procedures during the period 2001-2003. According to the FSA, Abbey National was cited for failure to report suspicious banking transactions in a timely manner, as well as failure to carry out proper identity checks on new customers.

STRs are filed with the Financial Intelligence Division (FID), formerly the Economic Crime Bureau, of the National Criminal Intelligence Service (NCIS), which serves as the UK's Financial Intelligence Unit (FIU). The FID analyzes reports, develops intelligence, and passes information to police forces and HM Customs and Excise for investigation. The FID received approximately 32,000 STRs in 2001, 65,000 in 2002, and 100,000 in 2003.

The Proceeds of Crime Act 2002 enhances the efficiency of the forfeiture process and increases the recovered amount of illegally obtained assets. The Act consolidates existing laws on forfeiture and money laundering into a single piece of legislation, and, perhaps most importantly, creates a civil asset forfeiture system for the proceeds of unlawful conduct. It also creates the Assets Recovery Agency (ARA), to enhance the financial investigators' power to request information from any bank about whether it holds an account for a particular person. The Act provides for confiscation orders, and for restraint orders to prohibit dealing with property. It also allows for the recovery of property that is, or represents, property obtained through unlawful conduct, or that is intended to be used in unlawful conduct. Furthermore, the Act shifts the burden of proof to the holder of the assets to prove that the assets were acquired through lawful means. In the absence of such proof, assets may be forfeited, even without a criminal conviction. The Act gives standing to overseas requests and orders concerning property believed to be the proceeds of criminal conduct. The Act also provides the ARA with a national standard for training investigators, and gives greater powers of seizure at a lower standard of proof.

The Terrorism (United Nations Measures) Order 2001 makes it an offense for any individual, without a license from the Treasury, to make any funds for financial or related services available, directly or indirectly, to, or for the benefit of, a person who commits, attempts to commit, facilitates, or participates in the commission of acts of terrorism. The Order also makes it an offense for a bank or building society to fail to disclose to the Treasury a suspicion that a customer or entity, with whom the institution has had dealings since October 10, 2001, is attempting to participate in acts of terrorism. The Anti-Terrorism, Crime, and Security Act 2001 provides for the freezing of assets. In 2004, the UK issued 20 terrorist asset freeze orders on 34 individuals and 13 organizations.

As a direct result of the events of September 11, 2001, the FID established a separate Terrorist Finance Team (TFT) to maximize the effect of reports from the regulated sector. The TFT chairs a law enforcement group to provide outreach to the financial industry concerning requirements and typologies. The operational unit that responds to the work and intelligence development of the TFT has seen a threefold increase in staffing levels directly due to the increase in the workload. The Metropolitan Police responded to the growing emphasis on terrorist financing by expanding the focus

and strength of its specialist financial unit dedicated to this area of investigations. This unit is now called the National Terrorist Financing Investigative Unit (NTFIU).

Charitable organizations and foundations are subject to supervision by the UK Charities Commission. Such entities must be licensed and are subject to reporting and record keeping requirements. The Commission has investigative and administrative sanctioning authority, up to and including the authority to remove management, appoint trustees and place organizations into receivership.

The UK cooperates with foreign law enforcement agencies investigating narcotics-related financial crimes. The UK is a party to the 1988 UN Drug Convention and the UN International Convention for the Suppression of the Financing of Terrorism. The UK has signed, but not yet ratified, the UN Convention against Transnational Organized Crime and the UN Convention against Corruption. The UK is a member of the FATF and the European Union. The NCIS is an active member of the Egmont Group and has information sharing arrangements in place with the FIUs of the United States, Belgium, France, and Australia. The Mutual Legal Assistance Treaty (MLAT) between the UK and the United States has been in force since 1996. The United States and UK recently negotiated an asset sharing agreement that is awaiting signature by the appropriate parties. The UK also has an MLAT with the Bahamas. Additionally, there is a memorandum of understanding between the U.S. Customs Service and HM Customs and Excise.

The Government of the United Kingdom should provide adequate oversight of its gaming sector. The United Kingdom should continue the strong enforcement of its comprehensive anti-money laundering/counterterrorist financing program and its active participation in international organizations to combat the domestic and global threat of money laundering and the support and financing of terrorists and their organizations.

Uruguay

In the past, Uruguay's strict bank secrecy laws, liberal currency exchange and capital mobility regulations, and overall economic stability made it a regional financial center vulnerable to money laundering. However, its extent and exact nature have always been relatively unknown. In 2002, banking scandals and mismanagement, along with massive withdrawals of Argentine deposits, led to a near collapse of the Uruguayan banking system, significantly weakening Uruguay's role as a regional financial center. This crisis likely diminished the attractiveness of Uruguayan financial institutions for money launderers in the medium term.

Uruguay has been a member of the Financial Action Task Force for South America (GAFISUD) since the organization was created in December 2000. In 2003, Uruguayan President Batlle's Deputy Chief of Staff served as the Task Force's President, and in December, 2004, Alejandro Montesdeoca Broquetas, Uruguay's delegate to GAFISUD was selected to serve as the organization's new Executive Director Secretariat. GAFISUD's mutual evaluation in 2003 noted that Uruguay's anti-money laundering regime met international standards. GAFISUD also recognized Uruguay's efforts to train public and private sector players in money laundering-related issues.

While Uruguay's past role as a financial center put it at risk of becoming a money laundering center, the 2003 report of the OAS' Inter-American Drug Abuse Control Commission (CICAD) noted that there had been no arrests or prosecutions for money laundering in the previous three years. There were no arrests or prosecutions in 2004.

Over the last five years, the GOU has instituted several legislative and regulatory reforms in its anti-money laundering regime. In May 2001, Law 17,343 extended the predicate offenses for money laundering beyond narcotics- trafficking and corruption to include: terrorism; smuggling (value over \$20,000); illegal trafficking in weapons, explosives and ammunition; trafficking in human organs, tissues and medications; trafficking in human beings; extortion; kidnapping; bribery; trafficking in

nuclear and toxic substances; and illegal trafficking in animals or antiques. The courts have the power to seize and confiscate property, products or financial instruments linked to money laundering activities. Legally, money laundering is considered a crime separate from underlying crimes such as narcotics-trafficking, administrative corruption, terrorism and smuggling, which are formally listed in the statutes.

In December 2003, the Uruguayan Chamber of Deputies approved a bill designed to limit bank secrecy and confidentiality. The bill is intended to increase credit transparency by eliminating bank secrecy for information pertaining to personal loans, financial credits, mortgages, or similar obligations. As of the end of 2004, however, the bill was still pending in commission in the Senate and had not been approved into law.

In its 2003 mutual evaluation report, GAFISUD made several suggestions to expand the scope of Uruguayan money laundering legislation as it relates to gambling, real estate, certain professions (primarily in the legal and financial services sectors), and the smuggling of cash and securities. GAFISUD also suggested that the Government of Uruguay (GOU) improve its investigative and administrative capabilities.

In September 2004, the Uruguayan Congress approved Law 17,835, which significantly strengthened the GOU's money laundering regime. The law incorporated all of GAFISUD's recommendations that had to be legislated, while other recommendations were met over the past two years through administrative regulations. The 2004 law expands the realm of entities subject to the filing of suspicious activities reports (SARs) and makes reporting of such activities a legal obligation. It specifically confers to the Central Bank's Financial Information and Analysis Unit (UIAF) the role of receiving and analyzing SARs, and the authority to request additional related information. The law also includes specific provisions related to the financing of terrorism and to the freezing of assets linked to terrorist organizations, as well as to undercover operations and controlled deliveries.

Central Bank regulations require all banks, currency exchange houses, stockbrokers and insurance companies to implement anti-money laundering policies, such as thoroughly identifying customers, recording transactions over \$10,000 in internal databases, and reporting suspicious transactions to the UIAF. The 2004 law now makes this a legal obligation, extended to all financial intermediaries, as well as casinos, art dealers, real estate and fiduciary companies. Additionally, the law extends the reporting requirement to all persons coming in or out of Uruguay with over \$10,000 in cash or monetary instruments. Regulations for the 2004 law are being issued by the Central Bank for all entities it supervises, and by the Executive for all other reporting entities, such as casinos, real estate companies and art dealers.

Three government bodies are involved in combating money laundering. The President's Deputy Chief of Staff heads the National Drug Council, which is the senior authority directing anti-money laundering policy. The Center for Training on Money Laundering serves as a forum for discussion and policy advice based on public and private sector input. Created in 2000, the UIAF acts as a financial intelligence unit receiving, analyzing, and remitting suspicious transaction reports to judicial authorities. Central Bank Circular 1722, which created the UIAF, provides for responding to requests for international cooperation. In November 2004, Resolution 2002-2072 of the Central Bank Board of Directors raised the UIAF to the level of a directorate reporting directly to the Board.

The Ministry of Finance and Economics, the Ministry of the Interior (via the police force), and the Ministry of Defense (via the Naval Prefecture) also participate in anti-money laundering efforts. The financial private sector, most of which is foreign owned, has developed self-regulatory measures against money laundering such as the Codes of Conduct approved by the Association of Banks and the Chamber of Financial Entities (1997), the Association of Exchange Houses (2001), and the Securities Market (2002).

Despite the power of the courts to confiscate property linked to money laundering, real estate ownership is not publicly registered in the name of the titleholder, which complicates efforts to track money laundering in this sector, especially in the partially foreign-owned tourist industry. The UIAF can have access to the name of titleholders at any time, however, and so can other government agencies through a judicial order. The GOU is planning to establish a computerized system that will facilitate the UIAF's access to titleholders' names.

Offshore banks are subject to the same laws and regulations as local banks, with the GOU requiring them to be licensed through a formal process that includes a background investigation. There are six offshore banks and 21 representatives of foreign banks. There are no records of the number of Uruguayan offshore firms or shell companies. Offshore trusts are not allowed. Bearer shares may not be used in banks and institutions under the authority of the Central Bank, and any share transactions must be authorized by the Central Bank.

Safeguarding the financial sector from money laundering is a priority for the GOU, and Uruguay remains active in international anti-money laundering efforts. It is a party to the 1988 UN Drug Convention, and participates in GAFISUD and the OAS Inter-American Drug Abuse Control Commission (CICAD) Experts Group to Control Money Laundering. The USG and the GOU are parties to extradition and mutual legal assistance treaties that entered into force in 1984 and 1994, respectively. Uruguay has signed, but not yet ratified, the UN Convention against Transnational Organized Crime. In 2003 Uruguay ratified the UN International Convention for the Suppression of the Financing of Terrorism. The GOU is taking steps to comply with the Financial Action Task Force (FATF) Special Recommendations on Terrorist Financing. Some of these recommendations, such as the criminalization of

terrorism financing and provisions for the freezing of terrorist assets, were met by the 2004 money laundering law.

Effective implementation and enforcement of its anti-money laundering legislation should be a priority for the Government of Uruguay and should enact legislation that requires the identification and registration of the titleholders of real estate- a sector that is particularly vulnerable to money laundering. Uruguay should ratify the UN Convention against Transnational Organized Crime.

Uzbekistan

Uzbekistan is not considered an important regional financial center and does not have a well-developed financial system. Reportedly, legitimate business owners, ordinary citizens, and foreign residents generally attempt to avoid using the Uzbek banking system for transactions, except when absolutely required, because of the onerous nature of the Government of Uzbekistan's (GOU) financial control system and the fear of GOU seizure of one's assets. As a result, Uzbek citizens have functioning bank accounts only if they are required to do so by law. They deposit only funds they are required to deposit and often resort to subterfuge to avoid depositing currency. The Central Bank of Uzbekistan (CBU) asserts that deposits from individuals have been increasing over the past two years.

Narcotics proceeds are controlled by local and regional drug-trafficking organizations and organized crime. Foreign and domestic proceeds from criminal activity in Uzbekistan are held either in cash, high-value transferable assets, such as gold or automobiles, or in foreign bank accounts. The GOU could not provide information on whether financial crimes have been increasing. There is a significant black market for smuggled goods in Uzbekistan. Since the GOU imposed a very restrictive trade and import regime in the summer of 2002, smuggling of consumer goods, already a considerable problem, increased dramatically. Many Uzbek citizens continue to make a living by illegally shuttle-trading goods from neighboring countries, Iran, the Middle East, India, Korea, Europe, and the U.S. The black market for smuggled goods does not appear to be significantly funded by narcotics proceeds.

However, drug dealers may be exchanging their drug money in a fashion that allows the black market business people to access drug dollars. It is possible that this unofficial, basically unmonitored cash-based market may create the potential for small-scale terrorist or drug-related laundering activity. The funds generated by the smuggling and corruption are not laundered through the banking system. There appears to be virtually no money laundering through formal financial institutions in Uzbekistan because of the extremely high degree of supervision and control over all bank accounts in the country exercised by the CBU, the Ministry of Finance and the state-owned and controlled banks. Although Uzbek financial institutions do not engage in illegal transactions in U.S. currency, illegal unofficial exchange houses, where the majority of cash-only money laundering takes place, deal in local soum and U.S. dollars. Moreover, drug dealers and others can transport their criminal proceeds in cash across Uzbekistan's borders for deposit in the banking systems of other countries, such as Kazakhstan, Russia or the United Arab Emirates.

Money laundering of the proceeds from drug-trafficking and other criminal activities is a criminal offense. With regard to drugs, Article 41 of the Law on Narcotic Drugs and Psychotropic substances (1999) stipulates that any institution may be closed for performing a financial transaction for the purpose of legalizing (laundering) proceeds derived from illicit narcotics-trafficking. Penalties for money laundering are from ten to fifteen years imprisonment, under Article 243 of the Criminal Code. This article defines the act of money laundering to include as punishable acts the transfer; conversion; exchange; or concealment of origin, true nature, source, location, disposition, movement and rights with respect to the assets derived from criminal activity. There has not yet been a complete assessment of the implementation and use of this legislation.

The CBU and the National Security Service (NSS) closely monitor all banking transactions to ensure that money laundering does not occur in the banking system. Though not legislatively mandated, banks are required to know, record and report the identity of customers engaging in significant transactions, including the recording of large currency transactions at thresholds appropriate to Uzbekistan's economic situation. All transactions involving sums greater than \$1000 in salary expenses for legal entities and \$500 in salaries for individuals must be tracked and reported to the authorities. The CBU unofficially requires commercial banks to report on private transfers to foreign banks exceeding \$10,000. Depending on the type and amount of the transaction, banks are required to maintain records for time deposits for a minimum of three years, possibly not sufficient time to reconstruct significant transactions. The law protects reporting individuals with respect to their cooperation with law enforcement entities. However, reportedly, the GOU has not adopted "banker negligence" laws that make individual bankers responsible if their institutions launder money.

Parliament passed a new law in August 2004 to combat money laundering and terrorist financing. This law, scheduled to take effect in January 2006, requires certain entities to report cash transactions above \$26,000 (approximately) as well as suspicious transactions. In addition, this law also covers some non-banking financial institutions, such as investment foundations, depositaries and other types of investment institutions; stock exchanges; insurers; organizations which render leasing and other financial services; organizations of postal service; pawnshops; lotteries; and notary offices. It does not include intermediaries such as lawyers, accountants, or broker/dealers. Casinos are illegal.

The law on banks and bank activity (1996), article 38, stipulates conditions under which banking information can be released to law enforcement, investigative and tax authorities, prosecutor's office and courts. Different conditions for disclosure apply to different types of clients—individuals and institutions. In September 2003, Uzbekistan enacted a bank secrecy law that prevents the disclosure of client and ownership information for domestic and offshore financial services companies to bank supervisors and law enforcement authorities. In all cases, private bank information can be disclosed to prosecution and investigation authorities, provided there is a criminal investigation underway. The information can be provided to the courts on the basis of a written request in relation to cases currently

Money Laundering and Financial Crimes

under consideration. Protected banking information also can be disclosed to tax authorities in cases involving the taxation of a bank's client.

Existing controls on transportation of currency across borders, would, in theory, facilitate detection of the international transportation of illegal source currency. When entering/exiting the country, foreigners and Uzbek citizens are required to report all currency they are carrying. Residents and non-residents may bring the equivalent of \$10,000 into the country tax-free. Amounts in excess of this limit are assessed a one-percent duty. Non-residents may take out as much currency as they brought in, however, residents are limited to the equivalent of \$2000. Residents wishing to take out higher amounts must obtain authorization to do so; amounts over \$2000 must be approved by an authorized commercial bank and amounts over \$5000 must be approved by the CBU.

International business companies are permitted to have offices in Uzbekistan and are subject to the same, if not stricter, regulations as domestic businesses. Offshore banks are not present in Uzbekistan and other forms of exempt or shell companies are not officially present.

In accordance with Uzbekistan's Code of Criminal Procedure, investigation of money laundering offenses falls under the jurisdiction of the Ministry of Internal Affairs (MVD). The Department of Investigation of Economic Crimes within the Ministry conducts investigations of all types of economic offenses. A specialized structure within the NSS and the Department on Combating Economic Crimes and Corruption in the Office of the Prosecutor General also are authorized to conduct investigations of money laundering offenses. There are no known arrests or prosecutions for money laundering or terrorist financing since January 1, 2002, except for one case following the suicide bombings of Spring 2004. Unofficial information from numerous law enforcement officials indicates that there have been few, if any, prosecutions for money laundering under article 243 of the Criminal Code since its enactment in 2001. The GOU appears to lack a sufficient number of experienced and knowledgeable agents to investigate money laundering.

Article 155 of Uzbekistan's Criminal Code and the law "On Fighting Terrorism" criminalize terrorist financing. The latter law names the NSS, the MVD, the Committee On The Protection Of State Borders, the State Customs Committee, the Ministry of Defense, and the Ministry for Emergency Situations as responsible for implementing the counterterrorist legislation. The law names the NSS as the coordinator for government agencies fighting terrorism.

The GOU has the authority to identify, freeze, and seize terrorist assets. Uzbekistan has circulated to its financial institutions the names of individuals and entities included on the UN 1267 Sanction Committee's consolidated list. In addition, the GOU has circulated the lists of individuals and entities included in the U.S. executive order to the CBU, which has, in turn, forwarded these lists to all banks operating in Uzbekistan. According to the CBU, no assets have been frozen.

Other than a plan to step up enforcement of currency regulations, the GOU has taken no steps to regulate or deter alternative remittance systems such as hawala, black market exchanges, trade-based money laundering, or the misuse of gold, precious metals and gems. We are not aware of any legislative initiatives under consideration. Although currency convertibility has been officially announced, in many regions of the country there is a strong black market for foreign exchange that accounts for a significant amount of informal economic activity.

The GOU closely monitors the activities of charitable and non-profit entities, such as NGOs, that can be used for the financing of terrorism. In February 2004, the Cabinet of Ministers issued Decree # 56 to allow the Government to vet grants to local NGOs from foreign sources, ostensibly to fight money laundering and terrorist financing. Given the degree of supervision of charities and other non-profits, and the level of threat Uzbekistan itself faces from the Islamic Movement of Uzbekistan (IMU), a designated terrorist organization, it is extremely unlikely that the NSS would knowingly allow any funds to be funneled to terrorists through Uzbekistan-based charitable organizations or NGOs.

Uzbekistan has established systems for identifying, tracing, freezing, seizing, and forfeiting proceeds of both narcotics-related and money laundering-related crimes. Major points in current laws include the ability to seize items used in the commission of crimes such as conveyances used to transport narcotics, farm facilities (except land) where illicit crops are grown or which are used to support terrorist activity, legitimate businesses if related to criminal proceeds and bank accounts. The banking community, which is entirely state-controlled and with few exceptions, state-owned, cooperates with efforts to trace funds and seize bank accounts. Uzbek law does not allow for civil asset forfeiture, but the Criminal Procedure Code provides for “civil” proceedings within the criminal case to decide forfeiture issues. As a practical matter, these proceedings are conducted as part of the criminal case. No new legislation or changes in current law are under active consideration by the GOU regarding seizure or forfeiture of assets. The obstacles to enacting such laws are largely rooted in the widespread corruption that exists within the country.

In 2000, Uzbekistan set up a fund to direct confiscated assets to law enforcement activities. In accordance with the regulation the assets derived from the sale of confiscated proceeds and instruments of drug-related offenses were transferred to this fund to support entities of the NSS, the MVD, the State Customs Committee, and the Border Guard Committee, all of which are directly involved in combating illicit drug-trafficking. According to the GOU, a total of 115 million soum (approximately \$115,000) has been deposited into this fund since its inception, which includes about 40 million soum (\$40,000) during 2004. Roughly \$80,000 has been turned over to Uzbek law enforcement agencies. In 2004, however, the Cabinet of Ministers issued an order to close the Special Fund as of November 1, 2004. Under the new procedure, each agency will manage the assets it seizes. There is also a specialized fund within the MVD set up to reward those officers who directly participate in or contribute to law enforcement efforts leading to the confiscation of property. This fund has generated 20 percent of its assets from the sale of property confiscated from persons who have committed offenses such as the organization of criminal associations, bribery and racketeering. The GOU enthusiastically enforces existing drug-related asset seizure and forfeiture laws. The GOU has not been forthcoming with information regarding the total dollar value of assets seized from crimes. Reportedly, existing legislation does not permit sharing of seized narcotics assets with other governments.

Uzbekistan’s government agencies are extremely cooperative and positive to efforts by the U.S. and other countries to trace or seize assets. GOU agencies make use of tips from other countries’ enforcement officials regarding the flow of drug-derived assets or of assets intended to support terrorism.

The GOU has repeatedly emphasized the importance of international cooperation in the fight against drugs and transnational organized crime and has made efforts to integrate the country in the system of international cooperation. Uzbekistan has entered into agreements with Uzbek supervisors to facilitate the exchange of supervisory information including on-site examinations of banks and trust companies operating in the country. Uzbekistan has entered into bilateral agreements for the cooperation or exchange of information on drug related issues with the U.S., Germany, Italy, Latvia, Bulgaria, Poland, China, Iran, Pakistan, the CIS, and all the countries in Central Asia. It has multilateral agreements in the framework of the CIS, under the Shanghai Cooperation Organization and under memoranda of understanding. An “Agreement on Narcotics Control and Law Enforcement Assistance” was signed with the United States on August 14, 2001, with two supplemental agreements that came into force in 2004.

Uzbekistan does not have a Mutual Legal Assistance Treaty with the United States. However, Uzbekistan has reached informal agreement with us on mechanisms for exchanging adequate records in connection with investigations and proceedings relating to narcotics, terrorism, terrorist financing and other serious crime investigations. When requested, Uzbekistan has cooperated with appropriate

law enforcement agencies of the USG and other governments investigating financial crimes and several important terrorist-related cases.

The GOU is an active party to the relevant agreements concluded under the CIS, CAEC, ECO, Shanghai Cooperation Organization and the “Six Plus Two” Group. The GOU has also participated in GUUAM (Georgia, Ukraine, Uzbekistan, Azerbaijan and Moldova) for the development of a joint law enforcement center that would cover asset seizure issues on a regional basis. Uzbekistan is a party to the 1988 UN Drug Convention, the UN International Convention for the Suppression of the Financing of Terrorism and to the UN Convention against Transnational Organized Crime.

A lack of trained personnel, resources, and modern equipment hinder Uzbekistan’s efforts to fight money laundering and terrorist financing. The Government of Uzbekistan should continue to refine its pertinent legislation to bring it up to international standards. Uzbekistan also should establish supervisory oversight of intermediaries, such as accountants and attorneys, and expand the cross-border currency reporting rules to cover the transfer of monetary instruments, gold, gems and precious metals. Access to financial institution records should be given to appropriate regulatory and law enforcement agencies so that they can properly conduct compliance examinations and investigations. Uzbekistan should establish a Financial Intelligence Unit to receive and analyze the suspicious transaction reports it proposed to require.

Vanuatu

Vanuatu’s offshore sector is vulnerable to money laundering, as Vanuatu has historically maintained strict secrecy provisions that have the effect of preventing law enforcement agencies from identifying the beneficial owners of offshore entities registered in the sector. Due to allegations of money laundering, and in response to pressure from the Financial Action Task Force (FATF), a few United States-based banks announced in December 1999 that they would no longer process U.S. dollar transactions to or from Vanuatu. The Government of Vanuatu (GOV) responded to these concerns by introducing reforms designed to strengthen domestic and offshore financial regulation.

Vanuatu’s financial sector includes five licensed banks (that carry on domestic and offshore business) and 60 credit unions, regulated by the Reserve Bank of Vanuatu. The Financial Services Commission (FSC) regulates the offshore sector that includes 9 banks and approximately 2,500 “international companies” (i.e., international business companies or IBCs), as well as offshore trusts and captive insurance companies. IBCs may be registered using bearer shares, shielding the identity and assets of beneficial owners of these entities. Secrecy provisions protect all information regarding IBCs and provide penal sanctions for unauthorized disclosure of information. These secrecy provisions, along with the ease and low cost of incorporation, make IBCs ideal mechanisms for money laundering and other financial crimes.

As of January 1, 2003, according to the Australian High Commission in Port Vila, the Reserve Bank of Vanuatu regulates nine offshore banks registered in Vanuatu that were formerly regulated by the FSC. This requirement was one of many recommendations of the 2002 International Monetary Fund Module II Assessment Report (IMFR) that found Vanuatu’s onshore and offshore sectors to be “noncompliant” with many international standards.

The Financial Transaction Reporting Act (FTRA) of 2000 established Vanuatu’s Financial Intelligence Unit (FIU) within the State Law Office. The one-person FIU receives suspicious transaction reports (STRs) filed by banks and distributes them to the Public Prosecutor’s Office, the Reserve Bank of Vanuatu, the Vanuatu Police Force, the Vanuatu Financial Services Commission, and law enforcement agencies or supervisory bodies outside Vanuatu. The FIU also issues guidelines to, and provides training programs for, financial institutions regarding record keeping for transactions and reporting obligations.

The Act also regulates how such information can be shared with law enforcement agencies investigating financial crimes. Financial institutions within Vanuatu must establish and maintain internal procedures to combat financial crime. Every financial institution is required to keep records of all transactions. Five key pieces of information are required to be kept for every financial transaction: the nature of the transaction, the amount of the transaction, the currency in which it was denominated, the date the transaction was conducted, and the parties to the transaction

The IMFR noted several weaknesses in Vanuatu's anti-money laundering regime. Consequently, the Government of Vanuatu (GOV) has prepared a policy paper currently being considered by the Council of Ministers. FRTA amendments are expected to be passed in parliament some time this year—the next ordinary session is scheduled to sit in March. The amendments to the FTRA, if enacted, would require mandatory customer identification requirements; broaden the range of covered institutions required to file STRs to include auditors, trust companies, and company service providers; and provide safe harbor for both individuals and institutions required to file STRs. The proposed amendments would override any inconsistent banking or other secrecy provisions and clarify the FIU's investigative powers.

Regulatory agencies in Vanuatu have instituted stricter procedures for issuance of offshore banking licenses under the International Banking Act no 4 of 2002 and continue to review the status of previously issued licenses. All financial institutions, both domestic and offshore, are required to report suspicious transactions and to maintain records of all transactions for six years, including the identities of the parties involved.

The Serious Offenses (Confiscation of Proceeds) Act 1989 criminalized the laundering of proceeds from all serious crimes and provided for seizure of criminal assets and confiscation after a conviction. The Proceeds of Crime Act (2002) retains the criminalization of the laundering of proceeds from all serious crimes, criminalizes the financing of terrorism, and includes full forfeiture, and restraining, monitoring, and production powers regarding assets.

Vanuatu passed the Mutual Assistance in Criminal Matters Act in December 2002 for the purpose of facilitating the provision of international assistance in criminal matters for the taking of evidence, search and seizure proceedings, forfeiture or confiscation of property, and restraints on dealings in property that may be subject to forfeiture or seizure. The Attorney General possesses the authority to grant requests for assistance, and may require government agencies to assist in the collection of information pursuant to the request. The Extradition Act of 2002 includes money laundering within the scope of extraditable offenses.

The amended International Banking Act has now placed Vanuatu's international and offshore banks under the supervision of the Reserve Bank of Vanuatu. Section 5(5) of the Act states that if existing licensees wish to carry on international banking business after December 31, 2003, the licensee should have submitted an application to the Reserve Bank of Vanuatu under Section 6 of the Act for a license to carry on international banking business. If an unregistered licensee continues to conduct international banking business after December 31, 2003, it will be in contravention of Section 4 of the Act, and, if found guilty, the licensee will be subject to a fine or imprisonment. Under Section 19 of the Act, the Reserve Bank can conduct investigations where it suspects that an unlicensed person or entity is carrying on international banking business.

One of the most significant requirements of the amended legislation is the banning of "shell" banks. As of January 1, 2004, all offshore banks registered in Vanuatu must have a physical presence in Vanuatu, and management, directors, and employees must be in residence. At the September 2003 plenary session of the Asia/Pacific Group on Money Laundering (APG), Vanuatu noted its intention to draft new legislation regarding trust companies and company service providers. The new legislation will cover disclosure of information with other regulatory authorities, capital and solvency

requirements, and “fit and proper” requirements. Additionally, Vanuatu is drafting legislation to comply with standards set by the International Associations of Insurance Supervisors.

The E-Business Act No. 25 of 2000 and the Interactive Gaming Act No. 16 of 2000 regulate e-commerce. Section 5 of the E-Business legislation permits the establishment of a Vanuatu-based website where business can be conducted without residency, directors, shareholders, or a registered office. Reportedly, the E-Business Act requires online operations to maintain stringent customer identification and record keeping requirements, as well as reporting suspicious transactions. The Financial Transaction Reporting Act of 2000 applies to e-commerce or businesses by defining any company listed under the Vanuatu Interactive Gaming Act 2000 as a financial institution.

In April 2002, the Organization for Economic Cooperation and Development (OECD) launched an initiative to address harmful tax practices worldwide. Vanuatu was one of seven countries listed as an “uncooperative tax haven.” In January 2004, the OECD revealed that it has removed Vanuatu from its list of “uncooperative tax havens,” following Vanuatu’s earlier announcement that it will implement measures under the Harmful Tax Initiative. The OECD stated in a news release that it welcomes the commitment that Vanuatu has made to improve the transparency of its tax and regulatory systems, and to establish, by December 2005, effective exchange of information for tax matters with OECD countries. This move by OECD has made Vanuatu the first country to secure removal from the list of uncooperative tax havens.

In addition to the Asia Pacific Group, Vanuatu is a member of the Offshore Group of Banking Supervisors, the Commonwealth Secretariat, and the Pacific Island Forum. Its Financial Intelligence Unit became a member of the Egmont Group in June 2002. However, Vanuatu has yet to sign either the UN International Convention for the Suppression of the Financing of Terrorism, the UN Convention against Transnational Organized Crime, or the 1988 UN Drug Convention

The Government of Vanuatu should immobilize bearer shares and require complete identification of the beneficial ownership of international business companies (IBCs). It should implement all the provisions of its Proceeds of Crime Act and enact all additional legislation that is necessary to bring both its onshore and offshore financial sectors into compliance with international standards. Vanuatu should also become a party to the UN International Convention for the Suppression of the Financing of Terrorism, the UN Convention against Transnational Organized Crime, and the 1988 UN Drug Convention.

Venezuela

Venezuela is not a regional financial center, nor does it have an offshore financial sector. The relatively small but modern banking sector, which consists of 52 banks, primarily serves the domestic market. Venezuela is a major drug-transit country. Proximity to drug producing countries, weaknesses in its anti-money laundering system, and corruption continue to make Venezuela particularly vulnerable to money laundering. The main source of money laundering in Venezuela stems from proceeds generated by Colombia’s cocaine and heroin trafficking organizations. Trade-based money laundering, such as the Black Market Peso Exchange, through which money launderers furnish narcotics-generated dollars in the United States to commercial smugglers, travel agents, investors, and others in exchange for Colombian pesos, remains a prominent method for laundering narcotics proceeds. It is suspected that many of these black market traders ship their wares through Venezuela’s Margarita Island free trade zone. Reportedly, some money is also laundered through the real estate market in Margarita Island.

The 1993 Organic Drug Law provides the only legal mechanism for the investigation and prosecution of money laundering crimes. Under this law, a direct connection between the illegal drugs and the proceeds must be proven to establish a money laundering offense. The Government of Venezuela

(GOV) freezes assets of individuals charged in international drug trade or money laundering cases directly related to narcotics-trafficking. If a conviction is obtained, the frozen assets are turned over to the Ministry of Finance for use in drug demand reduction programs. After the introduction of a new Code of Criminal Procedure in 1999, responsibility for initiating these actions shifted from judges to prosecutors. Due to prosecutors' unfamiliarity with the accusatory judicial system, as well as their having to assume the burden of tens of thousands of backlogged cases, the number of cases resulting in seizure of trafficker assets has decreased.

To expand the predicate offenses for money laundering beyond activities involving the illicit drug trade, the GOV introduced the Organic Law against Organized Crime bill in 2002. Under this bill, money laundering is made a separate, autonomous offense, with no drug nexus required, and those who cannot establish the legitimacy of possessed or transferred funds, and who have awareness of the illegitimate origins of those funds, would be guilty of money laundering. The bill broadens asset forfeiture and sharing provisions, adds conspiracy as a criminal offense, strengthens due diligence requirements, establishes the Financial Intelligence Unit (FIU) as a fully autonomous unit, and provides law enforcement with stronger investigative powers by authorizing the use of modern investigative techniques such as the use of undercover agents. Although 97 of its 150 articles were approved in 2002, not a single additional article was passed in 2003 or 2004. The bill remains in its final reading at the National Assembly. If the Organized Crime bill is ultimately enacted, the GOV would meet the requirements of the 1998 Vienna Convention, the UN International Convention for the Suppression of the Financing of Terrorism, and the UN Convention against Transnational Organized Crime, all of which have been ratified by the GOV.

Under Resolution 333-97 of 1997, entitled "Standards for the Prevention, Control, and Prosecution of Money Laundering," the Superintendence of Banks and Other Financial Institutions (SUDEBAN) have implemented controls to prevent and investigate money laundering. These include stricter customer identification requirements, and the reporting of both currency transactions over a designated threshold and suspicious transactions. These controls apply to all banks (commercial, investment, mortgage, private), savings and loan institutions, financial rental agencies, currency exchange houses, money remitters, money market funds, capitalization companies, and frontier foreign currency dealers. The institutions are also required to file suspicious and cash transaction reports with Venezuela's FIU, the Unidad Nacional de Inteligencia Financiera (UNIF), which was created under the SUDEBAN in July 1997 and began operations in June 1998. In 2004, the UNIF was expanded to include two new divisions: one for research and development, and another for strategic analysis. Three different officials held the position of director of the UNIF in 2004.

The UNIF receives suspicious transaction reports (STRs) and reports of currency transactions exceeding 4.5 million bolívares (approximately \$2,350) from institutions regulated by SUDEBAN, the Office of the Insurance Examiner, the National Securities and Exchange Commission, the Bureau of Registration and Notaries, the Central Bank of Venezuela, and the Bank Deposits and Protection Guarantee Fund. Some institutions regulated by SUDEBAN, such as tax collection entities and public service payroll agencies, are exempt from the reporting requirement. SUDEBAN also allows certain customers of financial institutions—those who demonstrate "habituality" in the types and amounts of transactions they conduct—to be excluded from currency transaction reports filed with the UNIF. A system has been developed for electronic receipt of currency transaction reports (CTRs), but STRs must be filed in paper format. The UNIF received 965 STRs in 2003, although that amount is expected to decrease in 2004.

In addition to STRs and CTRs, the UNIF also receives reports on the transfer of foreign currency exceeding \$10,000, the sale and purchase of foreign currency exceeding \$10,000, and summaries of cash transactions by states that exceed 4.5 million bolívares. The UNIF does not, however, receive reports on the transportation of currency or monetary instruments into or out of Venezuela. The Venezuelan Association of Currency Exchange Houses (AVCC), which counts all but one of the

country's money exchange companies among its membership, voluntarily complies with the same reporting standards as those required of banks, including the filing of CTRs and STRs and "know your customer" policies. Each currency exchange house in the country has and employs systems to electronically transmit transaction reports to SUDEBAN and the Public Ministry. However, inadequate foreign exchange controls by the GOV's Commission for Administrative Control of Currency Exchange (CADIVI) present new opportunities to circumvent regulations applicable in the banking and financial institution sectors. Procedures to limit the potential for laundering funds through the stock market are also thought to be inadequate.

The UNIF analyzes STRs and other reports, and refers those deemed appropriate for further investigation to the Public Ministry (the Office of the Attorney General). Approximately 30 percent of the STRs received by the UNIF are sent to the Public Ministry for further investigation. The Public Ministry subsequently opens and oversees the criminal investigation. The Venezuelan constitution guarantees the right to bank privacy and confidentiality, but in cases under investigation by the UNIF, SUDEBAN or the Public Ministry, or by order of a Judge of Control, bank secrecy may be waived. Comprehensive financial and law enforcement information is available to the UNIF under existing legislation. When the Organized Crime bill is passed, the UNIF will become a fully autonomous unit, rather than being part of SUDEBAN. There is some concern among GOV officials about moving the UNIF out of SUDEBAN, as approximately 90 percent of the STRs received are filed by banks.

Venezuela is one of the few countries in Latin America that does not have restrictive bank secrecy laws. Although the Venezuelan constitution guarantees the right to privacy and confidentiality, investigations by the UNIF, SUDEBAN or the Public Ministry are not hindered by bank secrecy provisions. However, due to the lack of a legal basis to employ modern investigative techniques, with appropriate legal safeguards, Venezuelan law enforcement authorities find it difficult if not impossible to investigate and prosecute sophisticated criminal organizations and complex crimes such as money laundering. No law enforcement offices have dedicated specific resources to investigating and prosecuting money laundering. There is no special prosecutorial unit for the prosecution of money laundering cases under the Public Ministry, which is the only entity legally capable of initiating money laundering investigations. Currently only the drug prosecutors receive STRs from the UNIF and conduct money laundering investigations, although STRs may then be shared with other prosecutors as deemed necessary. There are only 20 drug prosecutors for all of Venezuela, most of whom lack the technical financial experience to successfully prosecute money laundering investigations, and there are no financial analysts or forensic accountants dedicated to assisting them with the preparation of their cases. Indeed, there have only been three money laundering convictions in Venezuela since 1993, and all of them were narcotics-related. No money laundering cases were tried in 2004. Venezuela has limited mechanisms for freezing assets tied to illicit activities. The assets must be linked to a crime such as narcotics trafficking—or money laundering directly related to narcotic trafficking—and must pass through a lengthy judicial process.

Current Venezuelan law does not specifically criminalize terrorism, although it is addressed as a matter of public order under a 1936 law. The Organized Crime Bill, when passed, would rectify this by defining terrorist activities and establishing punishments of up to 20 years in prison. The bill's expanded definition of money laundering would also make it possible to prosecute those engaged in terrorism financing, and to freeze and seize their assets. However, the bill does not establish terrorist financing as an autonomous crime.

The UNIF has been a member of the Egmont Group since 1999 and has signed bilateral information exchange agreements with counterparts worldwide. Venezuela participates in the Organization of American States Inter-American Commission on Drug Abuse Control (OAS/CICAD) Experts Group to Control Money Laundering and is a member of the Caribbean Financial Action Task Force (CFATF). Although Venezuela is a member of GAFISUD, the South American Financial Task Force, the GOV has not participated in any GAFISUD meetings or other initiatives since it first became a

member in July 2003. Venezuela also participates in a multilateral initiative with the governments of the United States, Colombia, Panama, and Aruba designed to address the problem of trade-based money laundering through the Black Market Peso Exchange. Venezuela is a party to the 1988 UN Drug Convention, the UN Convention against Transnational Organized Crime, and the UN International Convention for the Suppression of the Financing of Terrorism. The GOV has signed, but not yet ratified, the UN Convention against Corruption. In January 2004, the GOV deposited its instrument of ratification for the OAS Inter-American Convention Against Terrorism. The GOV continues to share money laundering information with U.S. law enforcement authorities under the 1990 Agreement Regarding Cooperation in the Prevention and Control of Money Laundering Arising from Illicit Trafficking in Narcotics Drugs and Psychotropic Substances, which entered into force on January 1, 1991. The information shared has supported U.S. domestic operations, resulting in the seizure of significant amounts of money and several arrests in the United States. Venezuela has a Mutual Legal Assistance Treaty (MLAT) with the United States.

The Government of Venezuela should take steps to move forward with the passage of the Organic Law Against Organized Crime, which has been under consideration by Congress for nearly three years. The passage of this bill will provide law enforcement and judicial authorities the much-needed tools for the effective investigation and prosecution of money laundering derived from all serious crimes, broaden asset forfeiture and sharing provisions, strengthen due diligence requirements, and expand the mandate of the Financial Intelligence Unit, the Unidad Nacional de Inteligencia Financiera (UNIF). Venezuela should also expand and strengthen the capabilities of the Public Ministry to successfully investigate and prosecute crimes related to money laundering, and provide further training to financial regulators, investigators, prosecutors and judges. Venezuela should create and enact legislation to criminalize the financing of terrorism, as well as institute measures to expedite the freezing of terrorist assets. The passage of the Organic Law Against Organized Crime and legislation criminalizing the financing of terrorism would bring Venezuela into compliance with international standards for combating financial crimes.

Vietnam

The “drug economy” exists in Vietnam’s informal financial system. Vietnam is a major drug producing and drug-transit country. Vietnam is not an important regional or offshore financial center. The Vietnamese banking sector is underdeveloped and the Government of Vietnam (GVN) controls the flow of all U.S. dollars in official channels. Vietnamese officials assert that their strict banking regulations prevent money laundering and terrorist financing. However, the issue is difficult to monitor since there are no laws in effect at this time to support international money laundering investigations, resulting in a lack of legal and policy-driven authority for Vietnamese law enforcement officials to cooperate bilaterally. Vietnam has a large “shadow economy” in which U.S. dollars and gold are the preferred currency. Due to the limited size of Vietnam’s banking system and currency exchange controls, even legitimate businesses carry on transactions in this “shadow economy.” In addition, Vietnamese regularly transfer money through gold shops and other informal mechanisms to remit or receive funds from overseas. Officially, expatriate remittances account for \$3 billion and unofficially the number may be more than double that amount.

There has been an increase in financial crimes, including but not limited to money laundering, as a result of the developing economy. Some of the transactions in both the formal and alternative remittance systems result from the proceeds of illegal narcotics sales, although the black market for smuggled goods is reportedly not significantly funded by the drug trade.

Vietnam has three free trade zones known as export processing zones (EPZ). Companies operating in EPZs manufacture goods for export and enjoy customs benefits (e.g., duty free for imported

materials). A foreign invested enterprise must have a license to operate in the EPZ. The investment license often stipulates what activities the company can do or what products they can manufacture.

Vietnam does not yet have a separate law on money laundering or terrorist financing. It is working on anti-money laundering legislation, in the form of a Decree that is expected to be issued in the first quarter of 2005. The Decree is expected to cover all serious crimes without specific reference to such offenses covered in the Penal Code. However, a Decree cannot create offenses. In addition, Article 251 of the Amended Penal Code criminalizes money laundering. The Counter-Narcotics Law, which took effect June 1, 2001, makes two narrow references to money laundering in relation to drug offenses: it prohibits the “legalizing” (i.e. laundering) of monies and/or property acquired by committing drug offenses (article 3.5); and it gives the Ministry of Public Security’s specialized counternarcotics agency the authority to require disclosure of financial and banking records when there is a suspected violation of the law. However, the implementing regulations have not yet been promulgated. The State Bank of Vietnam, which has the lead on countering terrorist financing, can also request the disclosure of information when it believes that a transaction might fall within this category. Furthermore, the State Bank requires banks to report suspicious transactions of any kind.

Under existing Vietnamese legislation, there are provisions for seizing of assets linked to drug trafficking. In the course of its drug investigations, MPS has seized vehicles, property and cash; though the seizures typically are directly linked to the drug crime and the final confiscation requires a court finding. Reportedly, MPS can notify a bank that an account is “seized” and that is sufficient to have the account frozen.

The Asian Development Bank is working with the GVN on draft banking legislation. The GVN is also working with international financial institutions to increase its banking supervision capabilities. Currently banks are required to maintain records from seven to up to 20 years. Banks are responsible for client confidentiality but are also required to provide information to law enforcement authorities for investigation purposes. Banks are responsible for checking all identification and relevant papers presented for opening accounts and implementing transactions. Foreign currency (including notes, coins and traveler’s checks) in excess of \$3,000, cash exceeding Vietnamese Dong (VND) 5,000,000 and gold of more than 300 grams must be declared at customs upon arrival and departure. There is no limitation on either the export or import of U.S. dollars or other foreign currency provided that all currency in excess of \$3,000 (or its equivalent in other foreign currencies) or in excess of VND 5,000,000 in cash is declared upon arrival and departure, and supported by appropriate documentation. If excess cash is not declared, it is confiscated at the port of entry/exit and the passenger may be fined.

The GVN is a party to the 1988 UN Drug Convention and the 1999 International Convention for the Suppression of the Financing of Terrorism. It has signed but not yet ratified the UN Convention against Transnational Organized Crime. The GVN and the USG signed a Letter Of Agreement on Counternarcotics Cooperation in December 2003, to establish and to support projects designed to combat the production and trafficking of illicit narcotics and other forms of transnational criminal activities. The GVN has circulated to its financial institutions the lists of individuals and entities that have been included on the UNSCR 1267 sanctions committee’s consolidated list as being linked to Usama Bin Ladin, members of the al-Qaida organization or the Taliban, and has reported that no names or assets have been identified. Vietnamese legal provisions on counterterrorism financing are covered in various legal documents such as the Law on Credit Organizations, the Penal Code (Article 84 and Article 20. paragraph 2) and others.

The Government of Vietnam should promulgate all necessary regulations to fully implement the Counter-Narcotics Law of 2001. While it should proceed with the planned anti-money laundering decree, Vietnam should also amend its Criminal Code to create expanded terrorism offenses, as a Decree cannot create offenses. Vietnam should establish a separate legal document governing the prevention and suppression of terrorism financing. Vietnam should ratify the UN Convention against

Transnational Organized Crime. Vietnam should enforce cross border currency controls and regulate the use of gold as an alternative remittance system. Vietnam should provide implementing regulations for international cooperation regarding both drug crimes and financial crimes and improve its informal cooperation and should become a member of the Asia/Pacific Group on Money Laundering (APG).

Yemen

The Yemeni financial system is not yet well developed. Thus, the extent of money laundering is not known. The prevalence of alternative remittance systems, such as hawala, makes financial institutions vulnerable to money laundering, although they are technically subject to limited monitoring by the Central Bank of Yemen (CBY). The banking sector is relatively small with 17 commercial banks, including four Islamic banks. The CBY supervises the banks. Local banks account for approximately 62 percent of the total banking activities, while foreign banks cover the other 38 percent.

Yemen's parliament passed a comprehensive anti-money laundering legislation (Law 35) in April 2003. The legislation criminalizes money laundering for a wide range of crimes, including narcotics offenses, kidnapping, embezzlement, bribery, fraud, tax evasion, illegal arms trading, and monetary theft, and imposes penalties of three to five years of imprisonment. Yemen has no specific legislation relating to terrorist financing. But terrorism is covered in various pieces of legislation that treat terrorism and its financing as serious crimes.

Law 35 requires banks, financial institutions, and precious commodity dealers to verify the identity of persons and entities that open accounts (or in the case of the dealers for those who execute a commercial transaction), to keep records of transactions for up to ten years, and to report suspicious transactions. In addition, the law requires that reports be submitted to an information-gathering unit within the CBY. The unit acts as the Financial Intelligence Unit (FIU), which in turn reports to the Anti-Money Laundering Committee (AMLC). The AMLC is composed of representatives from the Ministries of Finance, Foreign Affairs, Justice, Interior, and Industry and Trade, the Central Accounting Office, the General Union of Chambers of Commerce and Industry, the CBY, and the Association of Banks. The AMLC is authorized to issue regulations and guidelines and provide training workshops related to combating money laundering efforts.

In addition, Law 35 grants the AMLC the right to exchange information with foreign entities. The head of the AMLC is empowered by law to ask local judicial authorities to enforce foreign court verdicts based on reciprocity. Also, the law permits the extradition of non-Yemeni criminals in accordance with international treaties or bilateral agreements.

Prior to passage of the anti-money laundering law, the CBY issued Circular 22008 in April 2002, instructing banks and financial institutions that they must verify the legality of all proceeds deposited in or passing through the Yemeni banking system. The circular stipulates that financial institutions must positively identify the place of residence of all persons and businesses that establish relationships with them. The circular also requires that banks verify the identity of persons or entities that wish to transfer more than \$10,000, when they have no accounts at the banks in question. The same provision applies to beneficiaries of such transfers. Banks must also take every precaution when transactions appear suspicious, and report such activities to the CBY. The circular was distributed to the banks along with a copy of the Basel Committee's "Customer Due Diligence for Banks," concerning "know your customer" procedures and "Core Principles for Effective Banking Supervision". The CBY issued Circular No. 4 on December 9, 2003, ordering banks to set up intelligence gathering units specializing in investigating and monitoring suspicious funds and transactions in their regulatory structures.

In 2003, U.S. Department of Homeland Security/Immigration and Customs Enforcement (DHS/ICE) agents in New York conducted an investigation of a company suspected of being involved in the smuggling and distribution of pseudoephedrine. The investigation disclosed that employees at the

business were sending a large number of negotiable checks to Yemen's capital city of Sanaa. Analysis of the documents seized as a result of search warrants and bank records revealed that the suspects had also wire transferred money to an individual with suspected ties to the al-Qaida organization. ICE agents also initiated an investigation pursuant to an outbound seizure of suspected hawala-generated funds seized en route to Yemen, concealed in jars of honey. The investigation disclosed that the courier and the reputed owner/broker of the funds were actively involved in a hawala network.

In response to the UNSCR 1267 Sanctions Committee's consolidated list and the list of Specially Designated Global Terrorists designated by the United States pursuant to E.O. 13224, and Yemen's Council of Ministers' directives, CBY issued two circulars (75304 and 75305) to all banks operating in Yemen, directing them to freeze accounts of 144 persons, companies, and organizations, and to report any finding to CBY. As a result, one account was immediately frozen. In September 2003, the CBY issued Circular No. 75304 containing a consolidated list of all persons and entities belonging to al-Qaida (182) and the Taliban (153). The Yemeni Government did not issue the circular again in 2004. Since the February 2004 addition of Sheikh Abdul Majid Zindani to the UNSCR 1267 Sanctions Committee's consolidated list, the Yemeni government has made no known attempt to enforce the sanctions and freeze his assets.

A law was passed in 2001 governing charitable organizations. This law entrusts the Ministry of Labor and Social Affairs with overseeing their activities. The law also imposes penalties of fines and/or imprisonment on any society or its members convicted of carrying out activities or spending funds for other than the stated purpose for which the society in question was established. The CBY Circular No. 33989 of June 1, 2002, and Circular No. 91737 of November 24, 2004, ordered banks to abide by the enhanced controls regulating the opening and management of the accounts of charities. This was in addition to keeping these accounts under continuous supervision in coordination with the Ministry of Labor and Social Affairs.

During 2004 the FIU and the CBY have been very active in enlightening the public and the financial sector, including money services businesses and money laundering reporting officers, about the proper ways and means of detecting and reporting suspicious financial transactions. They have done so through public forums and workshops. In addition, the AMLC has prepared an anti-money laundering procedural directory that will be distributed to all public and private financial institutions. The directory explains how to monitor and report suspected money laundering cases.

Yemen is one of the original signatories of the memorandum of understanding governing the establishment of the Middle East and North Africa Financial Action Task Force (MENAFATF). The MENAFATF is a FATF-styled regional body that promotes best practices to combat money laundering and terrorist financing in the region. It was inaugurated in November 2004 in Bahrain by 14 Arab countries. Yemen is a party to the 1988 UN Drug Convention, and has signed, but not yet ratified, the UN Convention against Transnational Organized Crime. Yemen is a party to the Arab Convention for the Suppression of Terrorism.

The Government of Yemen is making progress in enforcing its domestic anti-money laundering program. The passage of the 2003 anti-money laundering legislation represents a significant first step in meeting international standards. However, development of the FIU and international cooperation with criminal investigations are still in the initial development stages. The Central Bank of Yemen is still organizing its enforcement mechanism. Its effectiveness will demonstrate the authorities' commitment to ending money laundering. Yemen should also examine the prevalence of alternative remittance systems such as hawala and trade-based money laundering. As a next step, Yemen should enact specific legislation with respect to terrorist financing and forfeiture of the assets of those suspected of terrorism. It should ratify the UN Convention against Transnational Organized Crime. It should also become a party to the UN International Convention for the Suppression of the Financing of Terrorism.

Zambia

Zambia is not a major financial center. To the extent that money laundering is a concern in Zambia, reports indicate that proceeds of narcotics transactions and money derived from public corruption are the major sources of laundered money. Law enforcement officials also indicate that bulk cash smuggling is a concern.

The Prohibition and Prevention of Money Laundering Act of 2001 makes money laundering a criminal offense, stiffens penalties for financial crimes, requires financial institutions to report suspicious transactions to regulators and retain transaction records for a period of ten years, allows seizure of assets related to money laundering, and increases the investigative and prosecutorial powers of the Drug Enforcement Commission (DEC). It also establishes an Anti-Money Laundering Authority that is chaired by the attorney general and includes the heads of Zambia's principal law enforcement agencies, Revenue Authority, and Central Bank. The DEC has the responsibility for investigating money laundering offenses. When regulatory agencies have reason to suspect money laundering, they must report this to the DEC, which acts as the enforcement arm of the anti-money laundering authority, and make relevant records available to investigators. The law authorizes investigators to seize property when they have reasonable grounds to believe that it is derived from money laundering. Following a conviction under the anti-money laundering law, the court may order the forfeiture to the state of property seized during an investigation.

The anti-money laundering law does not contain specific provisions on the financing of terrorism; the Government of the Republic of Zambia (GRZ) does have the authority to order financial institutions to freeze assets, but this can be difficult if there is no evidence of a domestic crime. Zambia lacks comprehensive and reliable mechanisms for freezing the assets of terrorist organizations.

In 2003, the GRZ established an anti-money laundering unit under the DEC. The main purpose of the unit is to lead efforts within the GRZ to counter money laundering and enforce the Prevention of Money Laundering Act. In the same year, three officers of a commercial bank were tried and convicted for money laundering offenses. In 2004, the DEC conducted numerous investigations of money laundering, resulting in several arrests under the 2001 anti-money laundering statute. Trials in these cases are pending. The penalty for money laundering is imprisonment for a term not exceeding ten years and/or a fine.

In 2003, Zambia signed the Eastern and Southern African Anti-Money Laundering Group (ESAAMLG) memorandum of understanding. In 2004, Zambia's Central Bank was an active participant in ESAAMLG activities. Zambia is not a signatory to the UN International Convention for the Suppression of the Financing of Terrorism or the UN Convention against Transnational Organized Crime. Zambia is a party to the 1988 UN Drug Convention.

The Government of Zambia should establish a fully operational financial intelligence unit in accordance with international standards. Zambia should become a party to the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime. Zambia should also criminalize terrorist financing and implement counterterrorist financing regulations that comport with the FATF recommendations, including the Special Recommendations on Terrorist Financing

Zimbabwe

Zimbabwe is not a regional financial center and is not considered to be at significant risk for money laundering. However, it faces a serious problem with official corruption, which generates substantial funds that need to be concealed.

Narcotics-related money laundering was previously criminalized in Zimbabwe's Anti-Money Laundering Act. In 2004, the Government of Zimbabwe passed the Anti-Money Laundering and Proceeds of Crime Act. The new Act applies the anti-money laundering law to all serious offenses. It requires banks to maintain records sufficient to reconstruct individual transactions for at least six years. The 2004 Act mandates a prison sentence of up to five years for a money laundering conviction. The 2004 Act also addresses terrorist financing and authorizes the tracking and seizing of assets. Given the Government's history of using the legal system selectively and aggressively to target political opponents, the new Act has raised human rights concerns, although its use to date has not been associated with any reported due process abuses nor provoked any serious public opposition. However, the Government also has yet to make much use of the new law.

Over the past year, the Government has arrested many prominent Zimbabweans for activities it calls "financial crimes." Most of these "crimes" involve violations of currency restrictions that criminalize the externalization of foreign exchange activities conducted by many Zimbabwean businesses with substantial volumes of imports or exports (i.e., transferring assets offshore). To date, the Anti-Money Laundering Act has not been employed in the selective prosecution of individuals for such "crimes."

When requested, the banking community has generally cooperated with the Government in the enforcement of other laws involving tracking of assets, such as laws restricting the externalization of foreign currency. The banking community and Central Bank also have cooperated with the U.S. in global efforts to identify individuals and organizations associated with terrorist financing.

Zimbabwe is a party to the 1988 UN Drug Convention and has signed, but not yet ratified, the United Nations Convention against Transnational Organized Crime. Zimbabwe has yet to sign the UN International Convention for the Suppression of the Financing of Terrorism. Zimbabwe joined the Eastern and Southern African Anti-Money Laundering Group (ESAAMLG), a FATF-style regional body, in August 2003. However, Zimbabwe has yet to sign the ESAAMLG Memorandum of Understanding (MOU).

The Government of Zimbabwe should become a party to both the UN International Convention for the Suppression of the Financing of Terrorism and the UN Convention against Transnational Organized Crime. It should sign the MOU for the Eastern and Southern African Anti-Money Laundering Group (ESAAMLG) and participate actively in that body.
